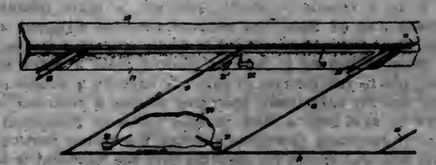
1,752,955. CARTRIDGE CUT-OUT. THEO LANG, Munich, Germany, assignor to the Firm Hans Trinkl Uhren- und Apparatefabrik G. m. b. H., Augsburg, Bavaria, Germany. Filed Aug. 7, 1925, Serial No. 48,828, and in Germany Aug. 11, 1924. 11 Claims. (Cl. 200—116.)

1. A cartridge having contacts at opposite ends thereof and a cut-out therein including a spring actuated contact bolt, a spring actuated locking hook for securing said bolt in contact position, a block of insulating material in which said contact bolt is guided, and a heating wire wound around said block of insulating material and controlling said locking hook.

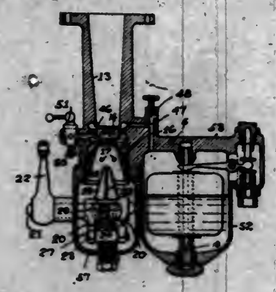
1,752,956. APPARATUS FOR SPRAYING PULVERULENT MATERIAL. RUDOLF LEX, Cologne, Germany, assignor of one-half to Karl Zeyen, Cologne, Germany. Filed May 19, 1928, Serial No. 279,043, and in Germany Apr. 21, 1927. 7 Claims. (Cl. 221—61.)



1. A sprayer, comprising a container having an outlet port, a movable plunger within said container and having means normally closing said port, air supply means communicating with said outlet port, means operated by said air supply means for moving said plunger thereby to uncover said port, and means for restoring the plunger to port-closing position.

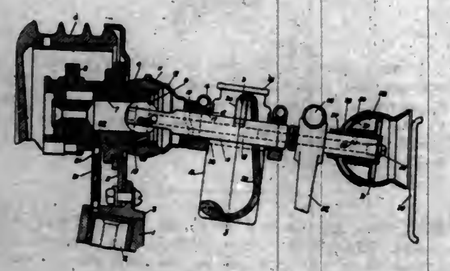
1,752,957. ELECTRICAL CONNECTION. IRA E. MCCABE, Chicago, Ill. Filed Jan. 17, 1929. Serial No. 333,035. 4 Claims. (Cl. 173—259.)

1. An electrical connection for lead wires comprising a post provided at one end with an upstanding flange having a portion of the flange cut away and having a slot formed in the flange adapted to receive a terminal lug, and a binding screw adapted to secure a terminal lug, when so inserted, to the post.



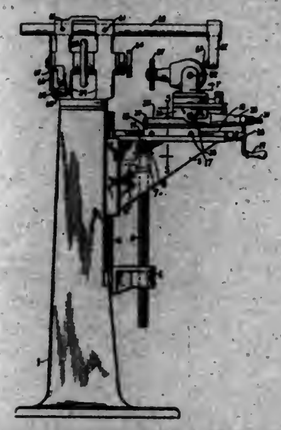
1,752,958. RAILROAD SYSTEM FOR LEVEE CONSTRUCTING. ROBERT H. MCWILLIAMS, Memphis, Tenn. Filed July 11, 1928. Serial No. 291,849. 14 Claims. (Cl. 104—26.)

1. The combination in a railroad system for levee construction, of a track extending along the levee adjacent



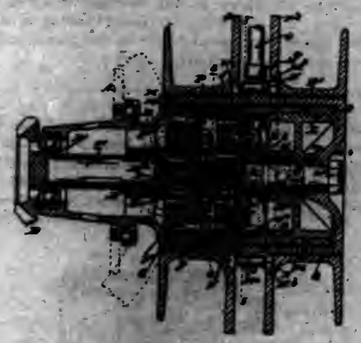
the top of the same, an approximately parallel track adjacent the levee, a track connecting the first and second tracks, power means in connection with said connecting track for elevating a train, a fourth track adjacent the third track also connecting the first and second tracks, and means in connection with said fourth track for keeping a train under control while being lowered along the same.

1,752,959. CARBURETOR FOR INTERNAL-COMBUSTION ENGINES. FRANCIS MONIER, Neuilly-sur-Seine, France. Original application filed Oct. 31, 1922, Serial No. 598,084, and in France Nov. 5, 1921. Divided and this application filed Oct. 15, 1924. Serial No. 743,649. 2 Claims. (Cl. 261—72.)



1. In combination, a carburetor, an intake pipe, a fuel chamber associated with said carburetor and normally closed to the atmosphere, means for producing points of greater and less depression in said intake pipe, means for conducting fuel from said chamber to the point of greater depression of said intake pipe, means forming a communicating passage leading from the space above the liquid level in said chamber to a point of less depression in said intake pipe, correcting devices for admitting a small quantity of outside air into said intake pipe between said points of depression for varying the depression therein, and means for adjusting the capacity of said correcting devices.

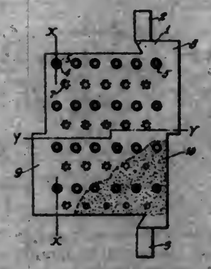
1,752,960. MAGAZINE LUBRICATING MEANS FOR VEHICLE PARTS. CORNELIUS T. MYERS, Avenel, N. J. Filed May 9, 1924. Serial No. 711,962. 9 Claims. (Cl. 184—7.)



9. In a vehicle, a wheel pivot pin, a brake operating means and at least one support therefor adjacent said pin, the combination with said brake operating means, of a member having a passage leading from a point near said pin to the interior of said one support, a hollow control rod for said brake operating means, a reservoir carried by said rod, a wick in said reservoir positioned to convey lubricant therefrom through the hollow portion of said rod, and means for insuring that the lubricant is conveyed to the brake operating means and to the passageway of said member leading to the point adjacent said pin.

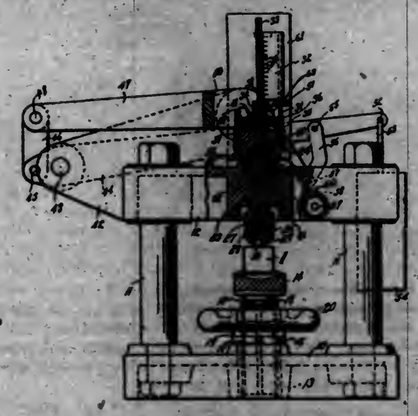
1,752,961. UNIVERSAL GRINDER. EDD C. OLIVER, Adrian, Mich. Filed Apr. 7, 1927. Serial No. 181,722. 6 Claims. (Cl. 51—166.)

1. In apparatus of the character described, a standard, a table vertically adjustable on the side of the standard, a head secured to the standard and having a part extending over the table adapted to hold the work to be ground, a swivel base movable horizontally on the table parallel to the longitudinal axis of the work to be ground, a table movable horizontally on the swivel base, a second swivel base movable in a horizontal plane at a right angle to the movement of the horizontally movable table, a U shaped bracket mounted in vertical position on the second swivel base, an electric motor pivotally mounted in the said bracket to swing on a horizontal axis and provided with an extending shaft, a grinding wheel secured to the said shaft, manually operable means for turning the work while being ground, an index plate adapted to be turned with the work and provided with a series of apertures arranged in a circle about the center thereof, and a spring pressed dog adapted to engage in the said apertures to limit rotation of the work.



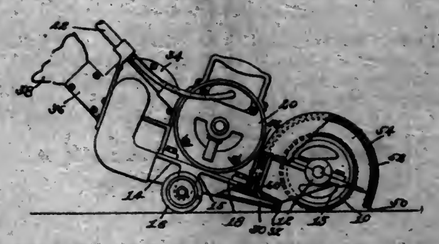
1,752,962. WINCH ATTACHMENT FOR TRACTORS. RALPH B. OTWELL, Detroit, Mich., assignor to Detroit Harvestor Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 2, 1927. Serial No. 230,508. 6 Claims. (Cl. 254—166.)

1. In a pulley and clutch mechanism, a rotatable driving sleeve, a pair of spaced winding pulleys slidably mounted on the sleeve, a flange extending outwardly from the sleeve for disposition between the pulleys, a plurality of laterally



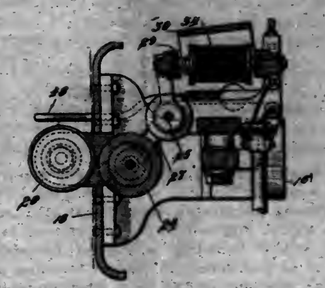
extending driving pins projecting in opposite directions from the sides of said flange, the opposed faces of the pulleys having spaced arcuate shaped grooves arranged circumferentially for receiving the respective pins, a shoulder at one end of each groove against which the respective pin engages, and means for manually shifting the pulleys alternately into engagement with the lateral pins to selectively rotate the pulleys simultaneously with the sleeve.

1,752,963. GRID FOR CHEMICAL STORAGE BATTERIES. PARISINO PETTINELLI, Savona, Italy. Filed Apr. 30, 1928. Serial No. 274,152. 4 Claims. (Cl. 136—51.)



1. As a new article of manufacture, a storage battery grid embodying a sheet metal plate both faces of which are coated with active material, said plate being provided with integral staggered perforated bosses positioned alternately on opposite sides of the plate and extending through said coating to form keys whereby the coating is retained on said plate, said plate being bent intermediate its ends to cause each end portion of the plate to overlie the other end portion thereof with the bosses which extend from the inner face of each overlying portion bearing against the corresponding face of the other overlying portion to accurately space said portions apart.

1,752,964. MEASURING DEVICE. MAURICE N. PRANGE, Detroit, Mich., assignor to Jesse B. Kincaid, Detroit, Mich. Filed Sept. 28, 1925. Serial No. 59,182. 7 Claims. (Cl. 265—12.)

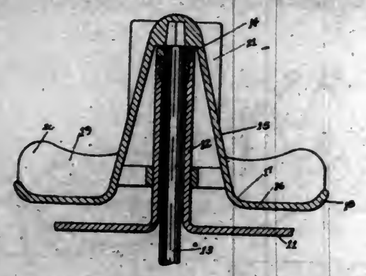


1. In a measuring device, a supporting table and a work support located beneath said table, a work-engaging means including an element slidably mounted in said table, a second element sleeved upon the lower end of the element aforesaid and capable of limiting movement relative thereto upon engagement with the workpiece, indicating mechanism carried by the first mentioned element, and a rod slidably mounted in said first mentioned element, and displaceable by said second element for actuating said indicating mechanism.

1,752,965. FLOOR-FINISHING MACHINE. ALEXANDER ROBERTSON, Atlantic, Mass. Filed June 7, 1928. Serial No. 283,615. 4 Claims. (Cl. 51—176.)

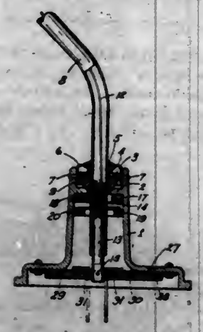
1. A floor finishing machine having, in combination, a frame, a floor finishing member rotatably mounted upon the frame, motor driven means for rotating said member about its own axis, and a suction device mounted upon the frame and provided with suction nozzles disposed immediately in front and in the rear of said floor finishing member and adjacent the floor.

1,752,966. CLOTH GUIDING AND STRETCHING DEVICE. ETHELBERT A. RUSDEN, Nayatt, R. I., assignor to The Textile-Finishing Machinery Company, Providence, R. I., a Corporation of Rhode Island. Filed May 6, 1929. Serial No. 360,714. 15 Claims. (Cl. 26—66.)



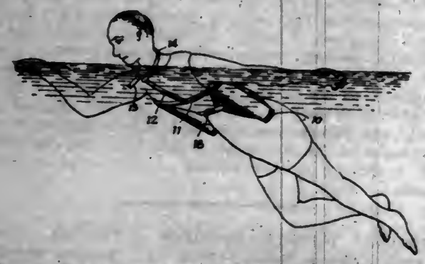
2. In a web stretching machine, a pair of opposed guide roll units, each unit comprising a pair of nip rolls arranged to engage the margins of the material on opposite surfaces thereof, said rolls being mounted to be relatively moved to and from web nipping position, electromagnetic means for relatively moving said rolls to control nipping position, a source of relatively high voltage alternating current, means converting said current into a low voltage direct current, means connecting said electromagnetic means in the direct current circuit, a feeler member positioned to be engaged by the edge of the cloth, and switch means in said electromagnetic circuit responsive to the movement of said feeler for controlling the energizing or deenergizing of said electromagnetic means.

1,752,967. WASHING-MACHINE AGITATOR. THEODORE SIMMONS, Mount Vernon, N. Y., assignor to Altorfer Brothers Company, East Peoria, Ill., a Corporation of Illinois. Filed May 27, 1926. Serial No. 111,983. 5 Claims. (Cl. 259—101.)



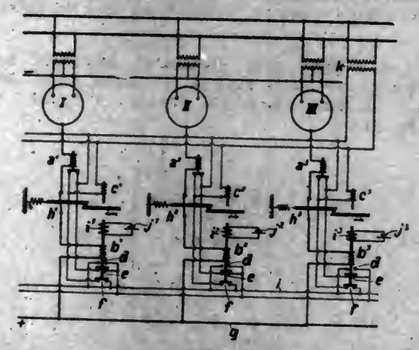
1. In a washing machine the combination with a container of an agitator supported within said container and having a conical wall, a bottom portion and an out-

wardly curved connection therebetween, ribs extending radially along said bottom, ribs extending vertically along



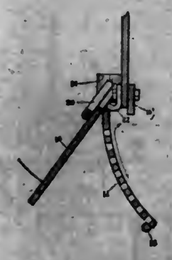
said wall and spaced vertically from said radial ribs, the width of said vertical ribs decreasing from the top thereof downwardly.

1,752,968. LOCK. ANTHONY R. SMITH, Elyria, Ohio, assignor to Steel and Tubes, Inc., Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 28, 1928. Serial No. 265,325. 16 Claims. (Cl. 70—127.)



1. Automobile gear shifting apparatus comprising gear shifting means, a housing, a gear shifting lever pivoted in the housing for pivotal movement at all times, and an electrical switch disposed within and secured to the housing, the switch including a contact breaking member adapted to be maintained in contact breaking position in all pivotal positions of the lever when suitably engaged by said lever.

1,752,969. SWIMMER'S BUOY. WILSON R. DENBO, Jackson, Mich. Filed July 12, 1928. Serial No. 292,200. 2 Claims. (Cl. 9—21.)

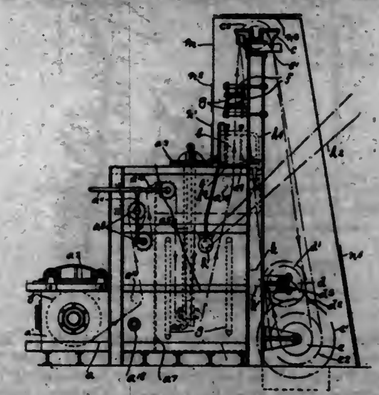


2. A swimmer's buoy comprising spaced apart wings, air tubes secured to the wings, an adjusting strap connecting the wings at the rear and an adjusting strap connecting the wings at the front of the buoy for definitely positioning the tubes beneath the arm pits and in longitudinal alignment of the body of the wearer.

1,752,970. ELECTRICAL PROTECTIVE APPARATUS. WERNER WALTY, Ennetbaden, Switzerland, assignor to A. G. Brown Boveri & Cie., Baden, Switzerland, a Joint Stock Company of Switzerland. Filed Feb. 12, 1926, Serial No. 87,853, and in Germany Feb. 16, 1925. 6 Claims. (Cl. 175—294.)

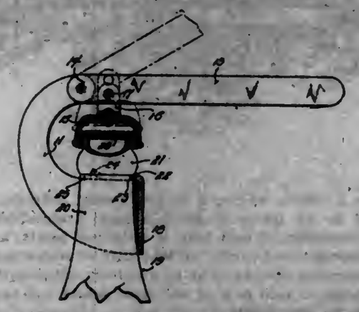
1. In combination, an electric supply line, a plurality of current sources connected in parallel to said circuit, a circuit breaker for each of said sources for disconnecting the same from said line, overload relay means associated with each circuit breaker for tripping the same in response to excess current flow from the respective source to said line, and a reverse current relay means associated with each of said circuit breakers for preventing tripping of the circuit breakers associated with the sources to which no reverse current flow takes place, said relay means being so arranged that in absence of reverse current flow through any one of said circuit breakers, overload in any of said circuit breakers will cause the same to be tripped.

1,752,971. FEED GRINDER. CHARLES D. AMMON and ELMER W. WILCOX, Lincoln, Nebr.; said Wilcox assignor to said Ammon. Filed Jan. 29, 1929. Serial No. 335,918. 6 Claims. (Cl. 83—11.)



1. A grinder including a comminutor and a screen within a casing, said casing being provided with an opening for the insertion and withdrawal of said screen, and a hinged closure for the opening of said casing, said closure being adapted to exert a leverage action on said screen during the closing movement thereof.

1,752,972. IMPREGNATING PAPER FOR INSULATION OF ELECTRIC CABLES AND APPARATUS THEREFOR. CHARLES JAMES BEAVER, Bowdon, England, assignor to W. T. Glover and Company Limited, Manchester, England. Filed Mar. 16, 1929, Serial No. 347,700, and in Great Britain Mar. 7, 1928. 1 Claim. (Cl. 91—46.)



Apparatus for the purpose of impregnating a long strip of fibrous material with electrically insulated material,

comprising a tank adapted to contain the impregnating material in a liquid form and to be hermetically sealed, means for producing and maintaining a vacuum in such tank, a slot being formed in the exit end of such a tank adapted for passing a strip of material out of the tank, a supplemental tank disposed above said first mentioned tank and communicating therewith through said slot and

adapted to contain a quantity of the insulating material, a pump adapted to pump liquid from the main tank into the supplemental tank, an overflow from the supplemental tank discharging through an adjustable valve into the main tank and means for drawing the paper from a drum through the said liquid and out of the main tank via the slot and supplemental tank.

1,752,973. BOTTLE CAPPER. SELWYN R. BLACKSTONE, Milwaukee, Wis., assignor, by mesne assignments, to Blackstone Inventions, Inc. Filed Feb. 14, 1929. Serial No. 339,907. 10 Claims. (Cl. 226—84.)

8. In a bottle capper the combination of a bottle neck receiver, comprising a piece of sheet metal bent intermediate its ends to form a saddle for embracing the bottle neck, an inturned flange at the top of said saddle forming a bottle neck seat, the bottom of said saddle being arranged for contact with the bottle, a pair of spaced arms extending upwardly from said saddle, a capping die, and a member rockably connected with said arms and die for effecting a capping pressure.

1,752,974. CABLE. CHARLES R. BOGGS, Waban, Mass., assignor to Simplex Wire and Cable Company, Boston, Mass., a Corporation of Massachusetts. Filed Dec. 27, 1928. Serial No. 328,741. 5 Claims. (Cl. 173—267.)

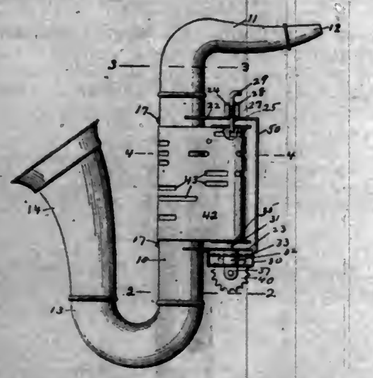
2. A cable which comprises an insulated conductor, a non-metallic armor tape wound helically about the conductor with the convolutions thereof overlapping, the tape having a crown extending lengthwise along one edge, the crowned portion of each convolution overlying a portion of the adjacent convolution.

1,752,975. FORCE-FEED LUBRICATING DEVICE. IRVING COWLES, Chicago, Ill., assignor to Union Bank of Chicago, trustee, Chicago, Ill., a Corporation of Illinois. Filed Sept. 22, 1927. Serial No. 221,198. 5 Claims. (Cl. 184—7.)

1. A lubricant measuring device of the type defined comprising a casing equipped with a reciprocable spring-held fluid pressure responsive valve element adapted to shut off flow through said casing following discharge of a substantially measured volume of lubricant therefrom, a pipe fitting connecting said casing with lubricant supply piping and a threaded sleeve in said fitting adjustable axially of said casing and affording a stop against which said valve element is normally held by said spring, said adjustable member determining the operative stroke of said valve-element.

1,752,976. FLEXIBLE CONDUIT ASSEMBLY AND METHOD OF MAKING SAME. IRVING COWLES, Detroit, Mich., assignor to Union Bank of Chicago, trustee, Chicago, Ill., a Corporation of Illinois. Filed Jan. 30, 1929. Serial No. 336,072. 3 Claims. (Cl. 285—84.)

1. A flexible conduit comprising a flexible hose portion and a metallic coupling including means lying within the bore of the hose maintaining the latter in substantially normal condition against contracting pressure on the surrounding hose wall, a coupling body and an outer shell element rigid with said body, said shell element and said means defining an annular chamber having an end wall against which the hose end abuts, said annular chamber including a substantially cylindrical mouth portion of a length approximating the thickness of the hose wall and of less diameter than the outer diameter of the hose and



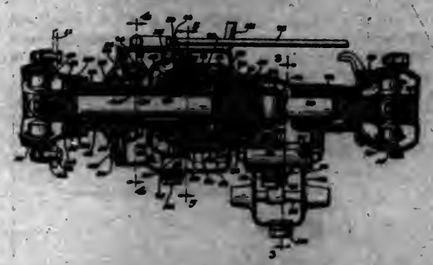
said chamber including an inner tapered portion terminating at said end wall and of larger diameter than said mouth portion.

1,752,977. BOXING GLOVE. FRANK DIETERLE, Utica, N. Y., assignor to Ken Wel Sporting Goods Co., Inc., Utica, N. Y., a Corporation of New York. Filed Nov. 26, 1929. Serial No. 409,925. 7 Claims. (Cl. 2—18.)

1. A boxing glove comprising an unobstructed palm portion, an end portion secured thereto and a finger grip disposed within the interior of the glove and being secured therein at a point at approximately the junction of the palm portion and the end portion.

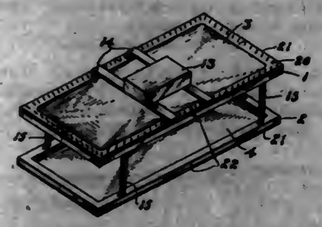
1,752,978. TOY. HENRY O. DROTNING, New York, N. Y. Filed Apr. 12, 1929. Serial No. 354,560. 11 Claims. (Cl. 84—93.)

1. In a toy, a casing shaped like a saxaphone and having a straight portion in which is a series of aligned holes, a series of cells within the casing having openings registering with the respective holes, reeds in the cells, means for movably supporting a perforated sheet on the casing adjacent the holes, and means operable in one position for moving the sheet to cause the perforations to register with selected holes to allow wind in the casing to vibrate the reeds appurtenant with selected holes and movable in another position for rewinding the sheet.



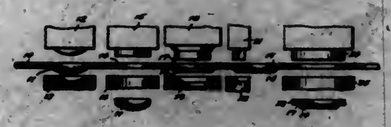
1,752,979. RETURN APPARATUS. WILLIAM EHRHART, Lancaster, Pa. Filed June 8, 1928. Serial No. 283,821. 5 Claims. (Cl. 107—6.)

1. Apparatus of the character stated comprising feeding mechanism, an endless conveyor travelling in one direction to receive material fed, a second conveyor travelling in an opposite direction to receive un-used material from the first mentioned conveyor, an endless chain carrying a plurality of buckets for conveying un-used ma-



terial from the last mentioned conveyor back to said feeding mechanism, and means operatively connected between said chain and buckets for always maintaining the open ends thereof in a direction facing said feeding mechanism.

1,752,980. AUXILIARY TRANSMISSION. HENRY FORD, Dearborn, Mich., assignor to Ford Motor Company, Dearborn, Mich., a Corporation of Delaware. Filed Apr. 24, 1929. Serial No. 357,647. 7 Claims. (Cl. 74—84.)



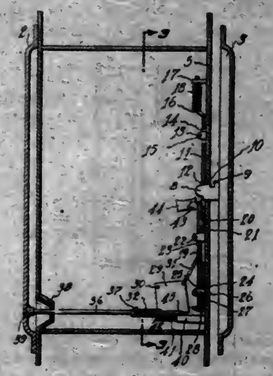
1. In a vehicle having a pair of spaced universal joints secured to its frame member, a main transmission disposed forwardly of said pair of universal joints, a torque tube disposed rearwardly of said pair of universal joints and supported thereby, and an auxiliary transmission disposed between said pair of universal joints and supported entirely by said joints.

1,752,981. SOUND REPRODUCER. EDWARD FREUND, Long Beach, N. Y. Filed Apr. 12, 1929. Serial No. 354,537. 13 Claims. (Cl. 181—31.)

1. A sound reproducer having in combination, a pair of cone-shaped fabric diaphragms, said diaphragms being joined together at the apexes of the cones, two frames between which said cones are held taut, and struts between said frames for securing same in spaced relation.

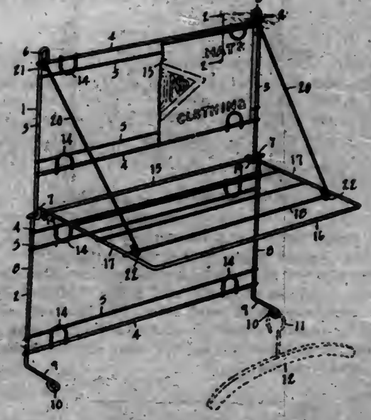
1,752,982. METHOD OF PRODUCING SPRING RINGS. WALTER F. HEROLD, Upper Montclair, N. J., assignor to The Bassick Company, Bridgeport, Conn. Original application filed July 6, 1926, Serial No. 120,672. Divided and this application filed Dec. 27, 1926. Serial No. 157,258. 6 Claims. (Cl. 10—86.)

4. The method of manufacturing split spring rings from flat sheet metal, consisting in forming the ring opening in the sheet, and imparting a non-flat cross-sectional shape to an annular portion of the ring before blanking from the sheet, transversely cutting the ring area to produce a split before blanking from the sheet, and blanking the ring in annularly spaced relation to said non-flat portion.



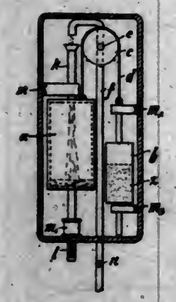
1,752,983. CASTER. WALTER F. HEROLD, Upper Montclair, N. J., assignor to The Bassick Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Dec. 5, 1927. Serial No. 237,660. 10 Claims. (Cl. 16—39.)

1. In a support, a floor engaging element including a pintle, pintle receiving means adapted to be secured to a furniture leg or the like, a split spring ring adapted to be expanded and contracted, ring supporting means carried by said pintle receiving means having an annular pocket opening outwardly, and means carried by said ring and interlockingly engaged in said pocket and whereby said ring is rotatably retained with respect to said supporting means, said ring being adapted to retain said pintle with respect to said pintle receiving means.



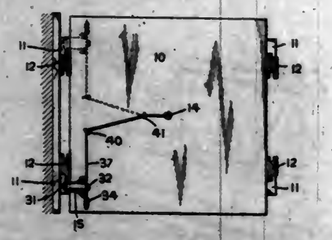
1,752,984. PARCEL RECEIVER. ROBERT F. W. HESS, Detroit, Mich. Filed June 9, 1928. Serial No. 284,210. 7 Claims. (Cl. 232—1.)

1. A parcel receiver comprising a box having doors in opposite walls thereof, a keeper carried by one of said doors, a latch slidably supported adjacent said door and adapted to engage said keeper, a device adapted to lift said latch from said keeper, linkage operable by the other door for operating said device, said linkage including two relatively slidable members, means for locking one of said members to the end of the other, and means for establishing a slip connection between said members,



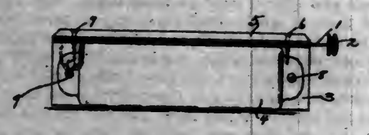
whereby the two members may be caused to move together, or one freely of the other to impart no motion to said device.

1,752,985. DISPLAY RACK. JAMES COOPER HUFFMAN, Battle Creek, Mich. Filed Jan. 7, 1929. Serial No. 330,747. 9 Claims. (Cl. 211—106.)



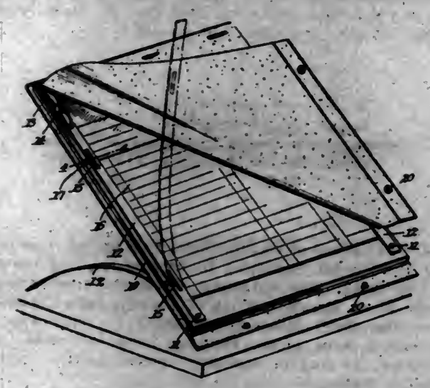
1. In a structure of the class described, the combination of top and bottom frame members each comprising end members and spaced pairs of longitudinal bars, the outer of said pairs of longitudinal bars being disposed in spaced relation to the ends of the end members, the upper ends of the end members of the top frame being conformed to provide suspending loops, the lower ends of said top frame end members terminating in forwardly turned eyes, a supporting rod secured to the upper ends of the end members of the bottom frame and engaged with the eyes on the lower ends of the end members of the upper frame, U-shaped panel holders secured in opposed pairs to the outer of the pairs of longitudinal bars with their bight ends in overlapping relation to the inner longitudinal bars, a shelf comprising end members and longitudinal bars secured thereto, the rear ends of said shelf end members terminating in eyes engaged with said connecting rod, and struts having eyes at their inner ends engaging one of the longitudinal bars of the upper frame and hooks at their outer ends engageable with one of the longitudinal bars of the shelf.

1,752,986. AUTOMATIC CISTERN FOR LIQUIDS. OTTO GRABTZER, Zurich-Zollikon, Switzerland. Filed Jan. 19, 1929, Serial No. 333,734, and in Switzerland Jan. 21, 1928. 4 Claims. (Cl. 219—38.)



1. An automatic cistern for liquids, comprising a movable liquid container, a counterweight connected therewith, a liquid supply pipe, an electrical heater arranged between said container and said pipe, a valve associated with said pipe for controlling the flow of liquid therethrough, and means operating to close or open said valve on movement of said container due to the filling or emptying thereof.

1,752,987. SAFETY CATCH. ISAK HANSEN, New Rochelle, N. Y. Filed Feb. 12, 1929. Serial No. 339,321. 3 Claims. (Cl. 187—86.)



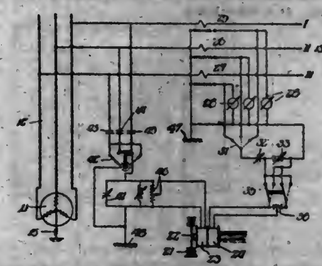
2. A safety catch for a lift comprising a housing, a bolt extending therethrough, said bolt having a head and a shoulder adjacent said head, a grip member carried on said shoulder, a second shoulder and a lever carried thereon, means associated with said lever for holding said grip member in operative position and additional means associated with said lever for moving said grip member to an inoperative position.

1,752,988. HARMONICA. WILLIAM J. HAUSSLER, Brooklyn, N. Y. Filed Aug. 27, 1927. Serial No. 215,826. 3 Claims. (Cl. 84—377.)

1. A harmonica having a body portion having a recess and provided with chambers opening into the front wall thereof, reeds associated with the said chambers, a metal plate having perforations corresponding to the openings of the said chambers and secured to the open face of the said body, said plate having an elongated slot at one end thereof, a slide mounted upon the said metal plate, guide means holding the said slide upon the front face of the body portion, said slide having an opening therein which registers with the said elongated slot, and a spring located in said recess in the said body, said spring having a portion thereof extending through said elongated slot and engaging the said slide, said slide having openings adapted to register with said chambers.

1,752,989. WRITING BOARD. CHARLES C. HENNESSY, Indianapolis, Ind. Filed June 20, 1927. Serial No. 200,143. 7 Claims. (Cl. 281—44.)

1. The combination of a substantially flat elongated body, rivets extending through the body in spaced relation adjacent one extremity of the same, a pair of curved flexible straps held in place by each rivet one strap being located on each side of the body, and fastening elements located in spaced relation at the other extremity of the body for securing the free ends of the flexible straps against the body, substantially as set forth.

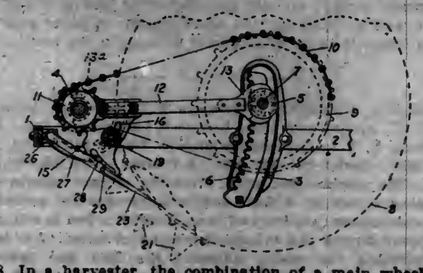


1,752,990. WEATHER STRIPPING. GEORGE E. JEANDHEUR, Great Neck, N. Y. Filed Jan. 4, 1929. Serial No. 330,203. 15 Claims. (Cl. 20—69.)

1. A weather stripping comprising an elongated elastic body portion, means disposed longitudinally within the same serving to neutralize longitudinally the elastic qualities of said body portion, and means carried by and on said first-named means for preventing longitudinal movement of said first-named means relative to said body portion, substantially as specified.

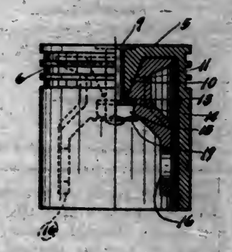
1,752,991. APPARATUS FOR DETECTING GROUNDS. JAKOB KOPELIOWITSCH, Baden, and JOSEF STOECKLIN, Zurich, Switzerland, assignors to A. G. Brown Boveri & Cie., Baden, Switzerland, a Joint Stock Company of Switzerland. Filed Dec. 8, 1926, Serial No. 152,881, and in Germany Dec. 11, 1925. 2 Claims. (Cl. 175—183.)

1. The combination with an alternating-current transmission line having two line phases operating at relatively low frequencies and having a grounding choke coil connected to a neutral point between said line phases, of a device for ascertaining a ground on one of said lines; said device comprising means for deriving a harmonic current component of a particular frequency corresponding to the intensity of the harmonic currents flowing in the faulty line phase, and means for deriving a harmonic current component of the same frequency corresponding to the harmonic voltages between said faulty line phase and the other line phase, said means being arranged to cause the phase angle between said harmonic current



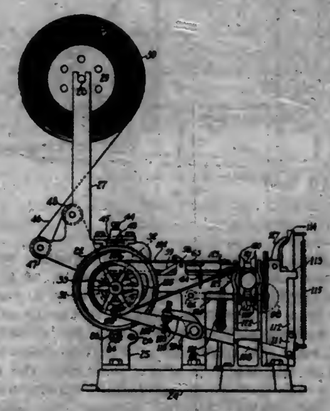
components to be different than 90°, and means for actuating said device in response to the additive or subtractive effect of said harmonic current components.

1,752,992. DISK WHEEL. HARRY W. KRANZ, Cleveland, Ohio, assignor, by mesne assignments, to The Cleveland Welding Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 3, 1924. Serial No. 741,829. 3 Claims. (Cl. 301—11.)



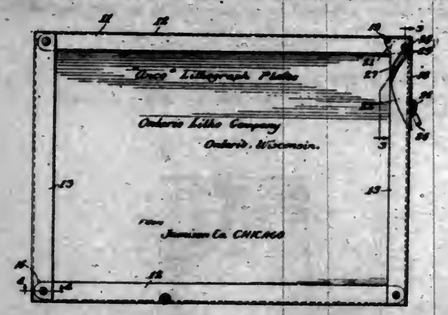
1. The combination with a disk having a channeled periphery and provided with an outwardly projecting shoulder at one point at the outer edge of said channeled periphery, of a demountable tire carrying rim having a relatively deep central inwardly projecting portion adapted to seat in the channel of the periphery and spaced clamps connected to the disk and adapted to engage the inwardly projecting portion of the rim and tension the same upon the wheel body.

1,752,993. SCRAPER FOR HARVESTER MAIN WHEELS. ROBERT C. LIVESAY, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Mar. 25, 1927. Serial No. 178,288. 8 Claims. (Cl. 280—158.)



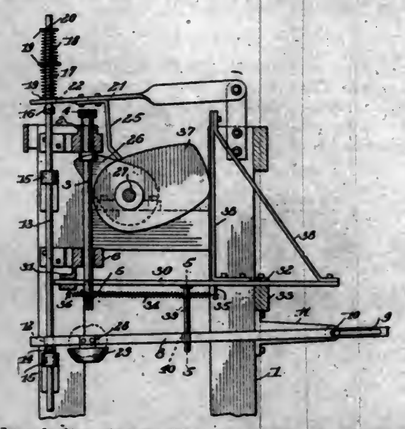
8. In a harvester, the combination of a main wheel, a frame supported thereon and adapted to be raised or lowered, means operable to raise or lower the frame, a scraper supported on the frame and means actuable by raising or lowering the frame to hold said scraper against the tread surface of the wheel, with substantially unvarying pressure irrespective of the raising or lowering of the frame.

1,752,994. PISTON. HOWARD MALLOY, Alma, Mich. Filed May 10, 1928. Serial No. 276,604. 1 Claim. (Cl. 74—108.)



A piston comprising a core formed with a centrally disposed depression, and spaced apart legs having bearings formed therein, a self centering shell mounted on said core, and formed with a centrally disposed conical shaped shoulder adapted to snugly fit in said depression, a bolt for securing the shell on the core, the lower end of said core being counterbored to accommodate a lock washer and nut, and a plate detachably secured to the core for preventing displacement of said nut.

1,752,995. CYLINDER-FORMING MACHINE. WILSON R. MYERS and BERNHARD O. OPITZ, Portland, Oreg., assignors, by mesne assignments, to Ice Cream Smack Corporation, a Corporation of Delaware. Filed Mar. 1, 1927. Serial No. 171,702. 14 Claims. (Cl. 92—36.)

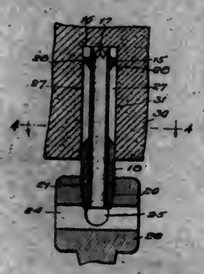


1. A machine for making paper cylinders having, in combination, a pair of cutoff rolls for feeding a web of paper and partially cutting same into required lengths; a rotatable mandrel around which said partially severed sheet can be wound; presser rolls adapted to bear against said mandrel while paper is being wound thereon; web means for feeding said paper toward said mandrel and adapted to release said paper as soon as it is held by said presser wheels; a crimping arm for turning an over-hanging edge of paper inwardly against said mandrel; a recessed head in one end of said mandrel beyond which said paper projects; a bottom forming head for turning said inturned edge against said recessed head; and means for removing the formed cylinder from said mandrel.

1,752,996. PACKAGE. ERNEST C. PAGEL, Chicago, Ill., assignor, by mesne assignments, to Signode Steel Strapping Company, a Corporation of Delaware. Filed June 22, 1925. Serial No. 38,657. 7 Claims. (Cl. 206—60.)

1. A shipping frame for goods of the class described, comprising four channel members pivotally connected together with the end of one channel member engaging between the side flanges of another channel member, the ends of the inner channel member or members being rounded whereby said frame can be knocked down for bringing all of said frame members into substantial parallelism, and means for fastening said frame over the goods.

1,752,997. FRUIT-PARING MACHINE. JOHN W. PRABB, Rochester, N. Y. Filed Feb. 20, 1928. Serial No. 255,510. 4 Claims. (Cl. 146—51.)

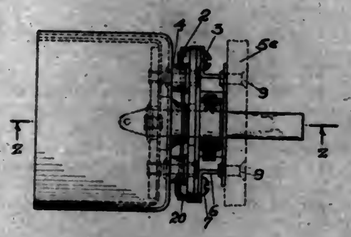


1. In a fruit paring machine, the combination with relatively rotary holding and paring elements, of a feeding device embodying a fruit support having a rectilinear movement from a receiving position to one in alinement with the holding element and means for actuating the support toward the holder in a relatively transverse direction while the holder is alined therewith, the bud and stem axis of the fruit being maintained substantially parallel to that of the holding element throughout the operation.

1,752,998. METHOD OF REPLACING HALOGEN GROUPS IN ORGANIC COMPOUNDS BY AMINO GROUPS. KARL H. T. PFISTER, Tacony, Pa., assignor to Rohm & Haas Company, a Corporation of Delaware. Filed Dec. 23, 1925. Serial No. 77,268. 5 Claims. (Cl. 260—130.5.)

1. The process which comprises the steps of fusing an aromatic organic compound containing at least one halogen atom and at least one nitro group not in the meta position to such halogen atom, and causing the fused compound to react with a substance of the urea type.

1,752,999. ANCHORING DEVICE. JOHN H. PHILLIPS, Chicago, Ill. Filed May 29, 1925. Serial No. 33,774. 2 Claims. (Cl. 85—2.4.)

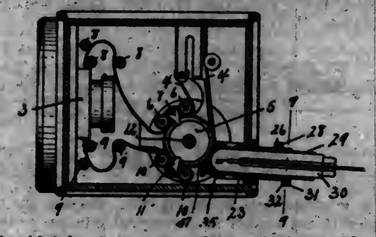


2. An anchor device comprising a tubular shell having drill teeth formed at one end thereof and having external pipe threads cut in the other end thereof, the initial portion of said threaded end being tapered to frictionally engage a chuck and the toothed end being weakened to permit expansion thereof.

1,753,000. WOOD PRESERVATION. HAROLD W. WALKER, Edgewood Arsenal, Md. Filed Oct. 26, 1925. Serial No. 65,038. 1 Claim. (Cl. 99—12.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928, 370 O. G., 757.)

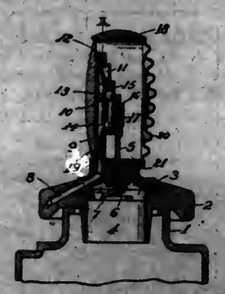
A process for treating wood comprising impregnating the wood only with arsenic trioxide carried in an aqueous solution of ammonia, withdrawing the excess solution from the wood, heating and drying the impregnated wood and recovering the ammonia evolved.

1,753,001. CONDENSER. MORRIS H. BENNETT, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed July 7, 1927. Serial No. 203,899. 6 Claims. (Cl. 175—41.5.)



1. In a vernier condenser, a stator comprising a single semi-cylindrical element, a rotor plate within said stator and similarly formed, a frame member on which said stator is mounted, a shaft carrying said rotor, a bearing on said rotor shaft comprising a conical bushing mounted thereon, a spring member on said frame member having a conical seat, and a collar on the shaft on the opposite side of said frame for maintaining said bushing in the seat.

1,753,002. CAMERA. THEODORE WILLARD CASE, Auburn, N. Y., assignor to Case Research Laboratory, Inc., Auburn, N. Y., a Corporation of New York. Filed Aug. 22, 1924. Serial No. 733,560. 8 Claims. (Cl. 88—16.2.)

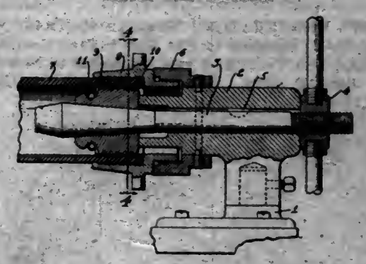


1. The combination with a moving picture camera including a casing, a feed and take-up sprocket mounted for continuous rotation and around which a film is adapted to move during the taking of moving pictures, of a tube penetrating the casing adjacent the feed and take-up sprocket, a lamp within the tube, means for varying the

light rays emanating from said lamp in accordance with sound waves, a jaw holder block mounted on the inner

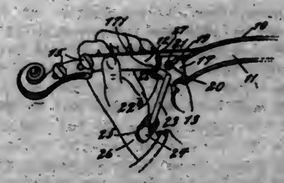
end of said tube, jaws mounted on said jaw holder block and forming between them a narrow slot for the passage of light rays from said lamp to said film.

1,753,003. RADIATOR CAP. FREDERICK G. FOLBERTH and WILLIAM M. FOLBERTH, Cleveland, Ohio. Filed July 5, 1927. Serial No. 203,414. 6 Claims. (Cl. 110—109.)



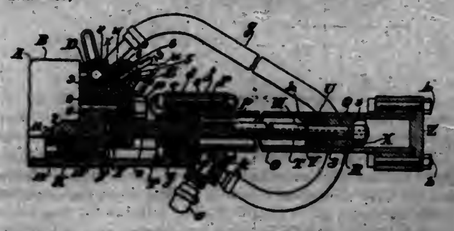
1. In combination with an internal combustion motor, a thermostat actuated by the temperature of the cooling fluid thereof, a valve moved by said thermostat, and a sound responsive device actuable by the passage of atmospheric air and controlled by said valve.

1,753,004. DISPLAY DEVICE. LAWRENCE S. GEER, New York, N. Y., assignor to Gustav H. Frommann, Concord, N. Y. Filed May 7, 1928. Serial No. 275,654. 13 Claims. (Cl. 211—156.)



1. A device of the character described comprising a transverse member, a foldable supporting member movably connected at one end to the front of said transverse member to move on a vertical axis, and cooperating means on said transverse member and at the other end of said supporting member for locking said members together in adjusted position, substantially as specified.

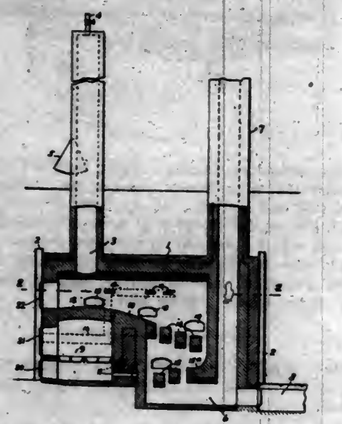
1,753,005. METHOD OF UNITING TUBULAR MEMBERS. FRANK R. GRADY, Caldwell, N. J., assignor to Eureka Fire Hose Manufacturing Company, Jersey City, N. J., a Corporation of New Jersey. Filed Aug. 5, 1926. Serial No. 127,250. 3 Claims. (Cl. 29—88.2.)



1. The method of uniting tubular members which comprises disposing a portion of one tubular member between a metal ring and a second tubular member having annular recesses, forcing the metal ring laterally against the first mentioned tubular member by pressure applied at spaced intervals whereby the ring becomes corrugated and forces the first mentioned tubular member against the recessed portion of the second tubular member.

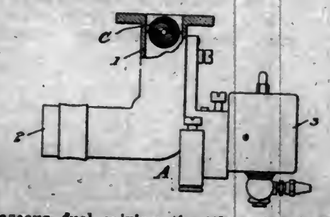
1,753,006. WRIST SUPPORT. HENRY HAAF, Mount Vernon, N. Y. Filed Jan. 13, 1928. Serial No. 246,412. 4 Claims. (Cl. 84—328.)

1. A wrist support for a violin having a portion formed for attachment to the neck of a violin, means for attaching said support to the neck of the violin, and a bracket projecting from said support and extending in a direction from the instrument to engage the wrist of the player when the violin and the arm and hand of the player are held in correct positions.



1,753,007. DRILL-FEEDING DEVICE. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 17, 1927. Serial No. 233,856. 8 Claims. (Cl. 121—9.)

1. The combination with a rock drill having a back head and a shell, of a piston rod secured to the back head and having a piston thereon, a feeding cylinder secured to the shell, a supply passage in the piston rod to convey pressure fluid to the rearward end of the feeding cylinder, a fluid supply line in constant communication with the cylinder forwardly of the piston, a throttle valve in the back head controlling the pressure fluid to the drill, means for ad-

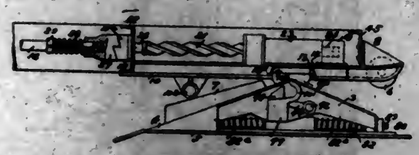


mitting a source of fluid supply to said throttle valve, and a second throttle valve in the back head adapted to selectively communicate said first mentioned throttle valve with the supply passage in the pisten rod or to communicate the said supply passage with the atmosphere.

1,753,008. INCINERATOR. HERBERT HEITMAN, Woodhaven, N. Y., assignor to The Fred'k Page Contracting Company, New York, N. Y., a Corporation of New York. Filed Jan. 28, 1929. Serial No. 335,427. 5 Claims. (Cl. 110—17.)

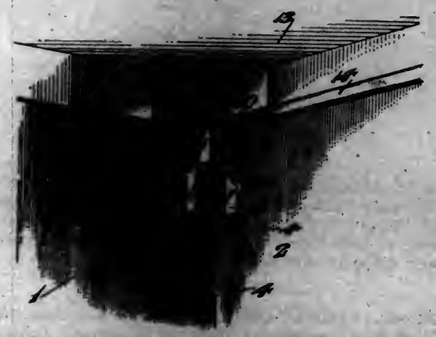
1. In an incinerator the combination of an enclosed chamber having through the front portion of its roof a charging inlet arranged to exclude air and having at the lower part of its rear portion a stack flue, a fire box arranged at the front portion of the chamber beneath the inlet, a bridge wall between the flue and fire box, a series of spaced arches spanning the fire box and providing a platform over the fire box for primary heating and combustion and a second series of spaced arches spanning the stack flue and providing a circuitous path over the stack flue for secondary heating and complete combustion, and a duct for the introduction of secondary air into the interior of the chamber above the arches to aid complete combustion.

1,753,009. MIXING THROTTLE VALVE. HARRY W. HESS, Los Angeles, Calif., assignor to Carburetor Control Company, Los Angeles, Calif., a Corporation of California. Filed Feb. 9, 1927. Serial No. 166,958. 2 Claims. (Cl. 48—180.)



1. A gaseous fuel mixing throttle valve including a spherical member provided with a central plane member, and spirally arranged vanes extending from said central plane member.

1,753,010. MOLDABLE COMPOSITION. ADAM HOCHE, Lynn, Mass., assignor to Litmo Adhesive & Products Company, Lynn, Mass., a Corporation of Massachusetts. Filed Oct. 11 1922. Serial No. 593,881. 11 Claims. (Cl. 106—22.)

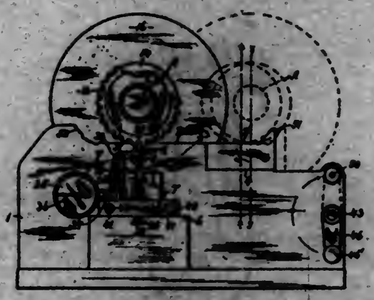


1. A composition moldable under heat and pressure comprising cupra-ammonium, a resinous body and a filler.

1,753,011. TRACTOR TRAILER. CHARLES H. LAND, Detroit, Mich., assignor of one-half to William H. Wilson, Detroit, Mich. Filed Oct. 17, 1928. Serial No. 312,992. 14 Claims. (Cl. 280—33.1.)

13. In a tractor-trailer combination, wherein the trailer is coupled to the tractor in superposed relation to the latter; a fifth wheel adapted to effect the coupling relation, comprising a lower non-rockable skid member, having a permanent upwardly inclined guide member surface of wedge-shape form, attached to the frame of the tractor; an upper fifth wheel member carried by the trailer, tiltable in transit upon the apex of the wedge-shape portion of the lower fifth wheel member of the tractor; and means for coupling the upper and lower fifth wheel members together to effect a coupling relation between the tractor and trailer.

1,753,012. BRACKET FOR CABINETS. ALBERT H. LEVENE, Newark, N. J., assignor to De Luxe Metal Furniture Company, a Corporation of Pennsylvania. Filed July 10, 1926. Serial No. 121,510. 1 Claim. (Cl. 248—19.)



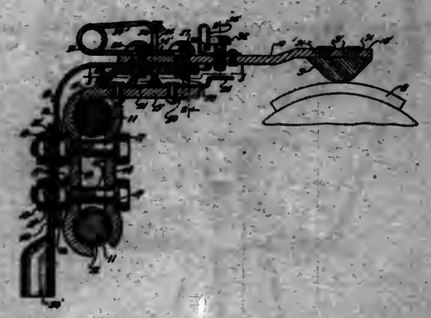
A reversible shelf locking clip comprising a vertical body portion, bottom, oppositely disposed lugs integral with and extending at right angles to said body portion, a hook member integral with said body portion and extending above one of said lugs, an upper lug integral with and extending at right angles to one side of said body portion, said upper lug being oppositely disposed with respect to the bottom lug on that side of said body portion, and an upper, set back, flange integral with and extending at right angles to the top of said body portion.

1,753,013. CONDUCTOR-HOLDING CLIP. ELMER S. LINDMARK, New York, N. Y. Filed Mar. 31, 1928. Serial No. 266,443. 2 Claims. (Cl. 173—251.)

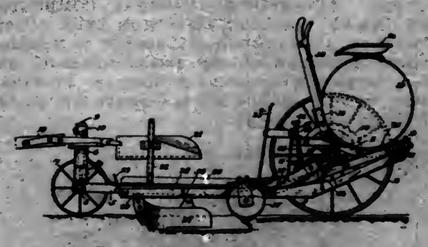
1. A conductor-holding clip comprising a flat blade having a penetration end, a spring tongue having one of its ends secured to said blade near said penetration end, said tongue extending toward the other end of the blade and diverging from the latter, the free end of said tongue being turned toward said blade to provide a seat cooperable with the opposed part of the blade to hold a conductor, and an insulating strip lying against the side of said blade toward said tongue and having one end bent upon itself to receive the conductor, said other end of said blade being clinched around the other end of said insulating strip.

1,753,014. GEAR-TESTING MACHINE. CHARLES H. LOGUE, Syracuse, N. Y., assignor of one-half to Conrad O. Hersam, Philadelphia, Pa. Filed Aug. 22, 1928. Serial No. 301,300. 7 Claims. (Cl. 73—51.)

1. The herein described method of testing the accuracy of gear teeth comprising rolling the gear in mesh with a master tooth and bringing it to rest out of engagement with the master tooth, then moving the gear bodily without rotating it in the direction of rolling motion a distance corresponding to the distance between the centers of adjacent gear teeth on the pitch circle of the gear, and then re-rolling the gear into mesh with the master gear along said pitch circle.



1,753,015. PRECIPITATING SYSTEM. ALEXANDER GRANT MCGREGOR, London, England. Filed May 4, 1928. Serial No. 275,082. 10 Claims. (Cl. 75—18.)

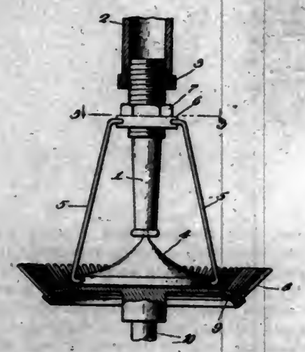


9. A process for the precipitation of metals from liquids by contact with a precipitating body wherein successive batches of precipitating body are disposed in series in graduated age, the liquid is passed first to the oldest batch of precipitating body and thence successively through batches of decreasing age to the newest batch thereof, and as precipitation progresses fresh batches of precipitating body are disposed at one end of the series and old batches cut out from the other whereby each batch is progressively treated with solution of increasing strength.

1,753,016. ELECTRIC SWITCH. EARL F. MEKELBURG, Milwaukee, Wis., assignor to Union Electric Manufacturing Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 11, 1927. Serial No. 167,444. 1 Claim. (Cl. 200—166.)

An electric switch, comprising a supporting means having a pair of contacting portions, a right-angular clamping arm engaging said contacting portions and having an outwardly extending tongue at one end thereof, the outer end portion of said tongue being formed with opposed recesses, a cooperating clamping arm also engaging said contacting portions, a fulcrum strip mounted on said right-angular clamping arm and having a stop portion at the outer end thereof, a lever arm having one end portion pivotally carried between said fulcrum strip and said clamping arm, and provided with downwardly extending guide lugs engaging in said opposed recesses in the outwardly extending tongue to prevent lateral and endwise movement of the lever arm, an upstanding link clamped between said fulcrum strip and said clamping arm, contact mechanism carried by said lever arm, a spring removably interposed between a portion of the link member and the contact mechanism for yieldingly holding the contact mechanism in an inner position, an independent contact lug carried at the outer end of said contact mechanism, a terminal member, conducting means, one end thereof being connected to said contact mechanism, and a common means for bringing the clamping arms into clamping engagement with the supporting means, and for securing the terminal member to one end portion of the conducting means.

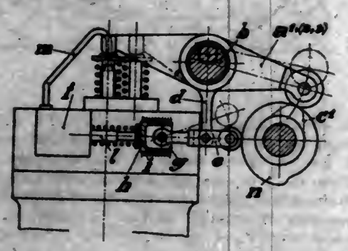
1,753,017. TRANSPLANTER. THEODORE H. OPPENHEIM, Coldwater, Ohio, assignor to The New Idea Spreader Company, Coldwater, Ohio, a Corporation of Ohio. Filed May 18, 1928. Serial No. 278,796. 14 Claims. (Cl. 111—62.)



1. In a transplanter, the combination of a main frame comprising a pair of side members, front and rear ground wheels for the main frame, a furrow-opener disposed behind the front wheels and between said side members, a sub-frame connected to the main frame and to which the furrow-opener is secured, devices in front of the rear wheels and behind and spaced from the furrow-opener for pushing the soil around the roots of plants deposited into the furrow, a frame connected at the rear end thereof to the main frame and to the front end of which said devices are secured, and a seat mounted on one of the side members between the front and rear wheels for carrying an operator in a position so he may drop the plants between the side members and deposit them directly into the furrow between said opener and devices.

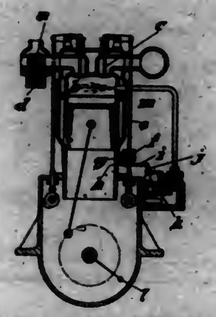
1,753,018. TREATING VULCANIZED OILS. ALLEN F. OWEN, Jackson Heights, N. Y., assignor to The Naugatuck Chemical Company, Naugatuck, Conn., a Corporation of Connecticut. Filed Oct. 1, 1926. Serial No. 139,019. 7 Claims. (Cl. 134—17.)

2. The method of incorporating factice into an aqueous dispersion of rubber which comprises dispersing the factice in a water miscible liquid and mixing the dispersion of factice with an aqueous dispersion of rubber.



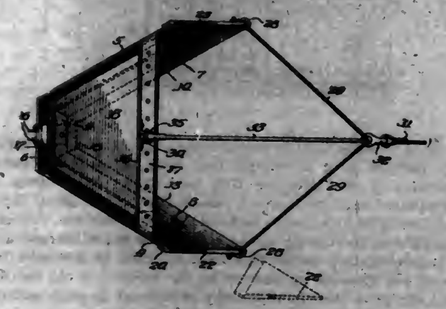
7. As a new product, a latex containing dispersed factice.

1,753,019. MEANS FOR SPRAYING LIQUIDS. HARRY W. PAGE, Wauwatosa, Wis. Filed Oct. 1, 1927. Serial No. 223,477. 4 Claims. (Cl. 299—63.)



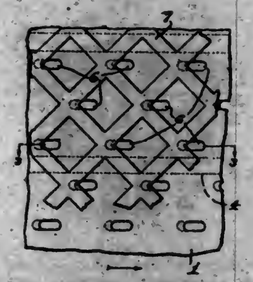
1. In a liquid spraying mechanism, a stationary conical table, means for discharging water upon the same, an annular beater in the form of a frustum of a cone having its long axis coincident with the corresponding axis of the table surrounding the table, means for rotating said beater, and means adjusting the beater and the table relatively to each other in the direction of length of the central axis of the table.

1,753,020. REVERSIBLE INTERNAL-COMBUSTION ENGINE OF THE FUEL-INJECTION TYPE. GUSTAV PIELSTICK, Augsburg, Germany, assignor to Maschinenfabrik Augsburg-Nuernberg Aktiengesellschaft, Augsburg, Germany, a Corporation of Germany. Filed Oct. 8, 1925, Serial No. 61,246, and in Germany Oct. 20, 1924. 7 Claims. (Cl. 123—41.)



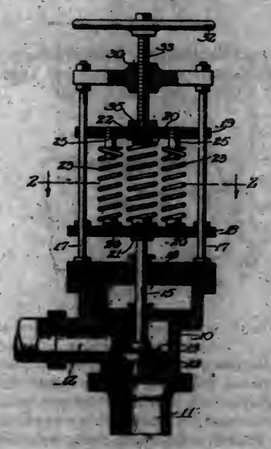
1. In an internal combustion engine of the character described, a cylinder, valve mechanism including inlet and exhaust valves therefor, means for operating said valve mechanism, pumping means having a pump plunger for supplying fuel to the said cylinder and controlling the time of fuel injection, operating means for said fuel-pumping means including forward and reverse cams for driving said pump plunger, and means for simultaneously varying the operative functioning of the valve mechanism and the fuel-pumping means to effect forward or reverse operation of the said engine.

1,753,021. PROCESS AND APPARATUS FOR STARTING INTERNAL-COMBUSTION ENGINES. WILHELM RIEHM, Augsburg, Germany, assignor to the Firm: Maschinenfabrik Augsburg-Nuernberg Aktiengesellschaft, Augsburg, Germany, a Corporation of Germany. Filed Apr. 11, 1925, Serial No. 22,827, and in Germany Apr. 15, 1924. 8 Claims. (Cl. 123—182.)



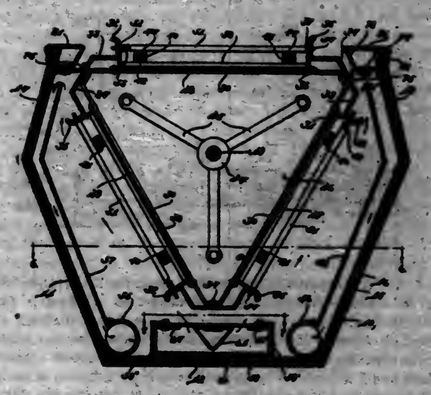
1. The process of starting a high-pressure internal combustion engine of the constant-pressure-cycle type operating on heavy fuel with self ignition which comprises the steps of cranking the engine with cylinder compression relieved and at the same time heating the suction air, and then switching on the usual compression when a suitable speed is attained.

1,753,022. SCRAPER. WILLIAM K. ROBBINS, Chicago, Ill., assignor, by mesne assignments, to Ira J. Wilson, Chicago, Ill. Filed Feb. 21, 1924. Serial No. 694,236. 10 Claims. (Cl. 37—147.)



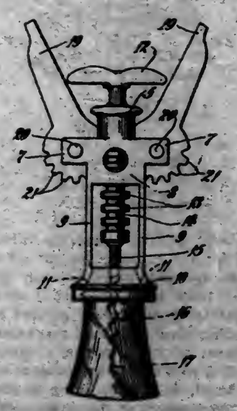
1. The combination, with a scraper body comprising forwardly diverging side walls connected at their rear ends by a transverse rear wall, the bottom of said scraper between said side and rear walls remaining substantially open, of drag means connected with the forward ends of said side walls, a member rigidly attached to said body near the forward end thereof, and a rigid link providing an adjustable thrust connection between said member and said drag means for retaining said scraper in its operative position.

1,753,023. CENTRIFUGAL BASKET. EUGENE ROBERTS, Hastings, N. Y., assignor to The Western States Machine Company, Salt Lake City, Utah, a Corporation of Utah. Filed Apr. 6, 1928. Serial No. 268,064. 3 Claims. (Cl. 210—76.)



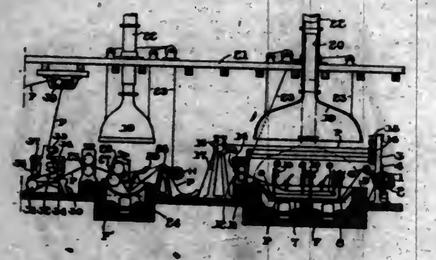
1. A centrifugal basket whose peripheral wall is provided with elongated openings extending in the circumferential direction of the basket, the rear walls of said slots having their inner edges forwardly offset in relation to the outer edges thereof whereby accumulation of the sticky content of the liquid against said wall is prevented.

1,753,024. VARIABLE PRESSURE OR RELIEF VALVE. FREDERICK J. RODS, Chicago, Ill., assignor to Marquette Tool & Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 25, 1927. Serial No. 186,272. 4 Claims. (Cl. 137—53.)



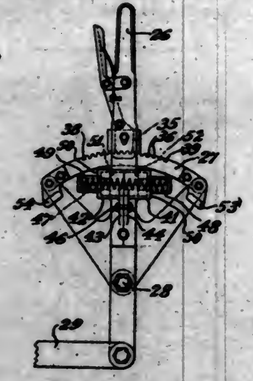
1. A valve, a member connected with the valve and movable therewith, a second member co-operating with the first said member and spaced therefrom, guides upon which said members are movable, a plurality of resilient resistance pressure creating elements independent of each other and disposed between said members, said elements being freely accessible exteriorly of the valve casing and of different stress or strain creating capacity, some of said elements being normally inactive with respect to the valve, a support connected with the said guides, and an adjusting element connected with the support and engaging the second said member for moving it towards the first said member for successively rendering the said elements active with respect to the valve whereby the resistance of the valve may be varied at will.

1,753,025. CURTAIN DRIER AND STRETCHER. CLAUDE L. ROOSEVELT, Detroit, Mich. Filed May 28, 1928. Serial No. 281,010. 3 Claims. (Cl. 34—17.)



1. In a curtain stretcher and drier: an outer casing; fluid distributing means in said casing at the lower side thereof and communicating, exteriorly thereof, through an opening; outlet conduits in said casing communicating with the interior of said casing, adjacent the upper side thereof; a curtain supporting member rotatably mounted in said casing; and means for sealing said casing at the sides of said supporting member for preventing escape of fluid therefrom.

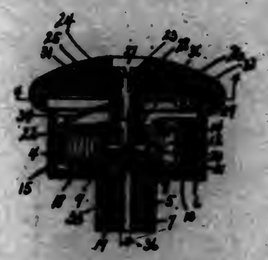
1,753,026. CORK EXTRACTOR. DOMINICK ROSATI, Chicago, Ill. Filed Oct. 29, 1928. Serial No. 315,646. 2 Claims. (Cl. 65—49.)



1. A stopper puller comprising a tubular body having an elongated bore at one end and an alining socket at the opposite end that is adapted to engage a bottle neck, an integral rotatable member having means to rotate the same on its upper end and having a stopper entering screw at its lower portion, said member being provided with integral transverse parallel ribs intermediate said means and screw, the ribbed portion of said member having free longitudinal and rotational movement in the bore of said body, and oppositely disposed toothed elements journaled on said body and entering the bore thereof to engage said ribs for withdrawing a stopper.

1,753,027. APPARATUS FOR MAKING ASPHALT ROOFINGS. EIKICHI SAKUMA, Tokyo Fu, Japan. Filed Feb. 24, 1928, Serial No. 256,791, and in Japan Mar. 14, 1927. 4 Claims. (Cl. 91—46.)

3. In combination, an open topped coating tank adapted to contain melted asphalt, means to conduct a fabric web through said tank, means to support said sheet after passing through the tank in position above the hot asphalt, a ventilating hood over the tank and above the supported sheet, and means to raise and lower said hood, said hood being normally spaced from the tank to provide for the admission of drying air.

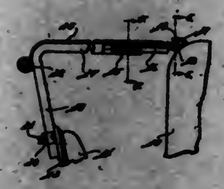


1,753,028. LOCOMOTIVE VALVE GEAR. CHARLES J. SCUDDER, Scranton, Pa. Filed Sept. 23, 1927. Serial No. 221,580. 1 Claim. (Cl. 121—142.)

The combination with a locomotive valve gear including a reverse lever for varying the cut off of the valves, and a quadrant for the reverse lever having notches for latching said lever so as to hold it at desired points of cut off, of yieldable abutments carried by the reverse lever and extending forwardly and rearwardly thereof for resisting movement of the lever in a direction to effect maximum cut off, a stop for each abutment secured to each end of the quadrant, said stops being so located as to be engaged during movements of the lever toward lengthened cut off positions and to yieldingly position the lever at desired normal cut off, said quadrant being blank for positions of cut off longer than the desired normal operating cut off.

1,753,029. CIRCUIT CLOSER. WILLIAM SPARKS and LLOYD ELMER JOHNSON, Jackson, Mich., assignors to The Sparks-Withington Company, Jackson, Mich., a Corporation of Ohio. Filed May 18, 1926. Serial No. 109,908. 5 Claims. (Cl. 201—48.)

2. A circuit closer including a casing, an insulation lining within the casing, a resistance within the lining, a cap secured to the casing for rotary and axial movement, a disk contact secured on the under surface of the cap, a contact finger electrically connected to the disk contact and extending below it and rotatable with the cap to vary its position with respect to the resistance, said contact finger being also movable with the cap dur-



ing axial movement of the latter to close the circuit at various points along said resistance, and the said disk contact adapted to be brought into circuit closing relation with the casing by further depression of the cap to short circuit the resistance.

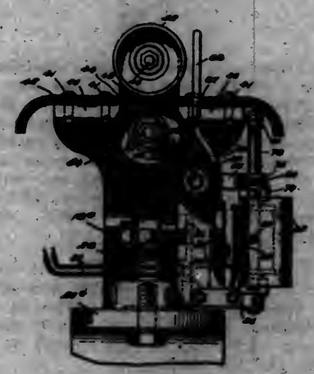
1,753,030. PHENOL-CARBOHYDRATE RESIN AND METHOD OF MAKING SAME. JAMES MCINTOSH, Norristown, Pa., assignor, by mesne assignments, to Continental-Diamond Fibre Company, Newark, Del., a Corporation of Delaware. Original application filed Aug. 12, 1920, Serial No. 403,125. Divided and this application filed Jan. 22, 1924, Serial No. 687,877. Renewed Jan. 27, 1930. 18 Claims. (Cl. 260—2.)

1. A synthetic resin consisting of a hard, dense, lustrous, infusible, insoluble resinous solid constituting the final product of the reaction of a phenol and starch.

1,753,031. DETACHABLE VEHICLE TOP. HOMER STACKS, Detroit, Mich. Filed Aug. 30, 1928. Serial No. 302,926. 1 Claim. (Cl. 296—99.)

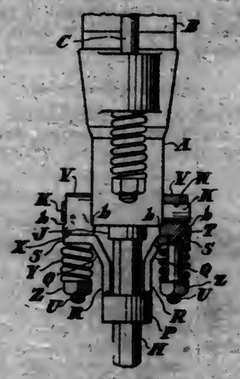
In a detachable seat top of the class described adapted for use with a vehicle body having a fixed top and a seat back positioned rearwardly thereof: a transversely extending member mounted on the upper surface of said fixed top adjacent its rear side formed substantially U-shaped in cross section and opening toward the rear; a plurality of spaced studs projecting upwardly from the upper surface of the lower side of said member; a rearwardly projecting supporting member at the opposite ends of said transversely extending member; and a curtain supporting member telescoping with said rearwardly projecting members; and a curtain stretchable over said members, said curtain being secured at its forward edge to said studs, the edge of said curtain lying in the channel of said U-shaped member.

1,753,032. DOLL. CHARLES STEIN and WILLIAM M. HELLER, Atlantic City, N. J. Filed Dec. 6, 1928. Serial No. 324,172. 8 Claims. (Cl. 46—40.)



1. An arrangement for dancing figures comprising two bodies joined together in dancing posture each with flexible legs, ending in feet, and means for suspending

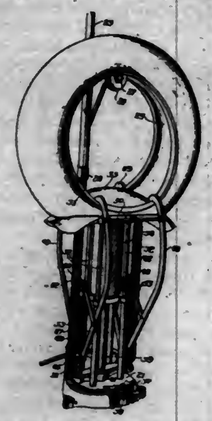
such figures for rotation about a vertical axis and imparting up and down movement to them, the feet being



free to contact with a horizontal surface and the suspending means permitting bodies and legs to turn and sway together.

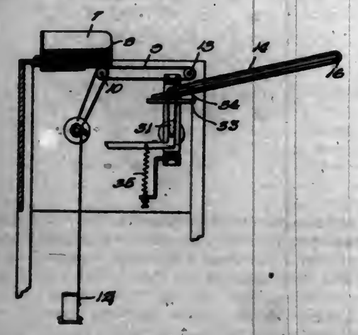
1,753,033. AUTOMATIC STRETCHING AND GUIDING APPARATUS. ANTONIO A. M. TAVEIRA, Providence, R. I., assignor to The Textile-Finishing Machinery Company, Providence, R. I., a Corporation of Rhode Island. Filed Sept. 15, 1928. Serial No. 306,107. 19 Claims. (Cl. 26—66.)

1. An automatic stretching and guiding apparatus for web material in open form, comprising a frame extending transversely of the travel of said material, a pair of guide roll standards mounted on said frame to be near each edge of said material, manually operable means to adjustably space said standards from each other on said frame, means to adjust the angularity of said standards from the perpendicular to the direction of material travel obliquely towards said direction of travel, an upper guide roll rigidly mounted on ball bearings on the upper end of each standard adapted to extend towards the center line of material travel over said material, means to raise each upper guide roll from normal position including an eccentric bushing attached to each roll shaft and a lock nut for securing each eccentric bushing in set position, a shaft pivotally mounted on ball bearings on each standard parallel to each upper guide roll and offset from the plane thereof having sets of lever arms projecting forwardly and rearwardly from each side thereof, a lower rubber covered weighted guide roll mounted on ball bearings on each set of forwardly projecting lever arms in substantially the plane of mounting of each upper guide roll and adapted to extend under said material, an armature mounted on each set of rearwardly projecting lever arms, an electromagnet rigidly mounted on each standard below said armature, a guider plate mounted on each standard parallel to the direction of material travel having a central slot therein for the nip of the upper and lower guide rolls, a balancing weighted electromagnet protective casing also mounted on each set of rearwardly projecting lever arms, means attached to each set of rearwardly projecting lever arms adapted to abut the lower edge of the guider plate to limit the drop of the lower guide roll comprising a plurality of rods adjustably mounted on said lever arms, each set of rearwardly projecting lever arms and attachments being slightly less in weight than each forwardly projecting set of lever arms and lower weighted guide rolls to normally permit each lower guide roll to drop to a position out of contact with the upper guide roll, a source of high voltage alternating current, a rectifier-transformer unit connected to said source of high voltage alternating current and to each respective electromagnet to transform said current into a low voltage direct current, an electric contact switch connected to said rectifier transformer unit and to each electromagnet, including a fixed contact and a resilient contact member having a feeler finger mounted on the outer end thereof adapted on contact of the web material therewith to break the switch connection to deenergise the respective electromagnet to permit said opposite expanding guide roll unit to align the material and draw the material away from said feeler finger to permit it to spring back to again close the switch to complete the circuit to energise the electromagnet to again raise the lower guide roll in nipping position to expand the cloth.



1,753,034. STEEL RETAINER. FLOYD H. THOMAS, Milan, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Dec. 21, 1927. Serial No. 241,557. 1 Claim. (Cl. 121—32.)

In a steel retainer for rock drills, the combination of a front head provided with flat surfaces on opposite sides of its front end, cylindrical trunnions disposed on the flat surfaces, a drill steel in the front head having a collar, bearing blocks pivoted on the trunnions and having surfaces bearing against the flat surfaces of the front head, bolts integral with the bearing blocks and extending forwardly of the trunnions, a yoke for partly embracing the drill steel forwardly of the collar and having a pair of side arms for attaching said yoke to the front head, said yoke and side arms being formed from a sheet metal blank, said side arms extending rearwardly from the ends of the yoke, outwardly extending flanges on the ends of the side arms and having apertures to receive the bolts, straight portions on the side arms adjacent the yoke and parallel to the drill steel adapted to slidably engage the



collar to prevent accidental oscillation of the yoke from the retaining position, shoulders on the bearing blocks to engage the end of the front head for holding the yoke in the retaining position, and springs on the bolts to absorb the blows of the drill steel against the yoke.

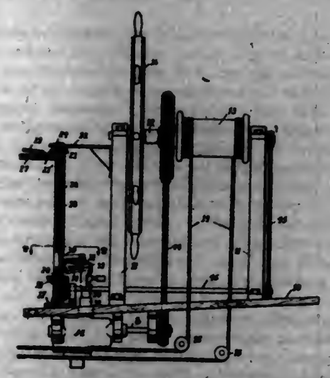
1,753,035. TIRE-CASING SPREADER. GAILARD E. WEAVER and EDWARD W. KELLEY, Springfield, Ill., assignors to Weaver Manufacturing Company, Springfield, Ill., a Corporation of Illinois. Filed July 16, 1927. Serial No. 206,358. 10 Claims. (Cl. 154—9.)

1. In a tire-casing spreader, the combination of a pair of oppositely-facing tire-casing spreader-hooks, a first means to support a tire-casing with the gap between its margins in substantial register with the ends of said hooks, a second means to cause said casing and hooks to approach one another relatively and to cause such hooks to enter said gap and engage the margins of the tire-casing, and a third means tending to hold said hooks in register with said gap and controlled by the deformation resistance offered by the casing to cause said hooks to separate and spread the casing on further action of said second means.

1,753,036. MAIL-SORTING APPARATUS. TIMOTHY W. WILLIAMSON and ROBERT R. GENTRY, Hollywood, Tenn. Filed Apr. 20, 1928. Serial No. 271,681. 5 Claims. (Cl. 214—11.)

1. A mail sorting apparatus of the class described comprising a conveyor adapted to initially receive the mail, a discharge conveyor arranged to receive the mail from the discharge end of said first named conveyor, means for pivotally mounting the receiving end of said discharge conveyor for vertical swinging movement, means for pivotally supporting said first named means for horisontal swinging movement, an operating lever adapted for effecting either a vertical or horisontal movement of said conveyor, a control arm engageable with said lever for regulating the vertical adjusting movement of the conveyor, and a keyboard for said control arm having a plurality of manually actuated keys adapted for selectively moving the arm in a predetermined manner with respect to said lever whereby to control the extent of adjustment thereof.

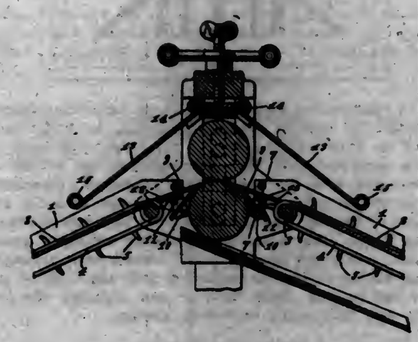
1,753,037. AXLE FOR SELF-PROPELLED VEHICLES. BERTIS H. URSCHEL, Bowling Green, Ohio, assignor to Urschel Engineering Company, Bowling Green, Ohio, a Corporation of Ohio. Filed Mar. 7, 1928. Serial No. 259,799. 2 Claims. (Cl. 301—124.)



1. An axle for a vehicle comprising a tubular member having oblong end portions, the major axis of the end portions extending substantially vertically, the top and bottom sides of the end portions being cylindrical in form and the sides of the end portions being substantially plane, the top and bottom having holes and bearing members fitting the said holes and the inner surfaces of the said sides of the end portions.

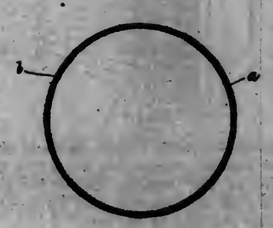
1,753,038. SLIDE-WAY FOR WINDOW PANES. DESIRE H. VAN HOVE, Royal Oak, Mich. Filed July 12, 1928. Serial No. 292,092. 2 Claims. (Cl. 296—145.)

1. A slideway for a window pane comprising a sheet metal body of channel cross section, the outer edges of the arms of said body member being directed inwardly, a tubular rubber cushion disposed longitudinally on the inner side of one arm of said body member against the inwardly directed portion at its outer edge, and a felt covering for said body member arranged over said cushion member, the edges of said covering being folded rearwardly over the outer side of the arms of said body member and lapped upon the web thereof.



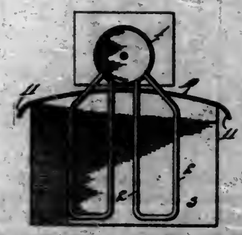
1,753,039. STEERING GEAR. LLOYD VAN HORN ARMSTRONG, Upper Montclair, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Aug. 2, 1928. Serial No. 297,033. 4 Claims. (Cl. 114—16.)

4. A follow up control apparatus for imparting predetermined angular movements to a driven shaft, of a power



shaft connected to said driven shaft and a reversible motor for driving the same, a manually operative rotary valve for said motor adapted to control the directional movements of the same; a plate on said valve having a slot therein and means slidable in said slot responsive to minute directional movements of the driven shaft for automatically closing the valve.

1,753,040. SAFETY ATTACHMENT FOR WRINGERS. JOHN BEITLER, Brentwood, Pa. Filed Apr. 21, 1928. Serial No. 271,827. 3 Claims. (Cl. 68—32.)

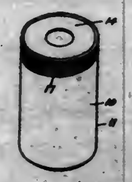


1. In combination with a wringer, means for conveying clothes to the wringer, means for conveying clothes from the wringer, means for driving both conveying means from one of the rolls of the wringer, guards attached to the upper part of the wringer, one at each side thereof and extending outwardly and downwardly over the inner portions of the conveying means, members bridging the space between the upper ends of the conveying means and the lower roll of the wringer and means for yieldingly supporting the members with their upper portions against the lower roll of the wringer.

1,753,041. GROMMET FOR PNEUMATIC TIRES. PIERRE MARCEL BOURDON, Paris, France, assignor to Michelin et Cie., Clermont-Ferrand, France, a Corporation of France. Filed July 25, 1928, Serial No. 295,220, and in France Aug. 1, 1927. 1 Claim. (Cl. 140—111.)

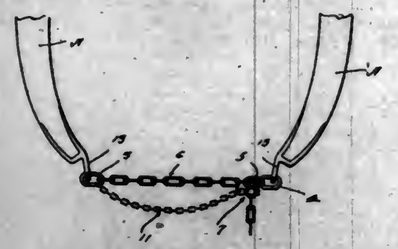
A bead reinforcement for pneumatic tires having a circularly curved wire therein with its ends approaching each other, a connecting sleeve open at its opposite ends and adapted to freely and slidably receive the ends of the wire to permit of the free flexing of the wire in the expansion and contraction of the ring formed by the wire, said sleeve adapted to maintain the free ends of the wire in alignment during the relative movement of the ends of the wire.

1,753,042. REFRIGERATION COIL. CHARLES MANDELL BRENNER, Shreveport, La. Filed Apr. 12, 1929. Serial No. 354,683. 6 Claims. (Cl. 62—95.)



1. The combination with a refrigerating unit including a boiler with refrigerant containing tubes depending therefrom, of a drip protector for said tubes mounted between said boiler and the upper portions of said tubes, and spanning the space between the tubes and projecting over and beyond them.

1,753,043. ELECTRIC MEASURING INSTRUMENT. HOWARD BUTLER, Four Oaks, England. Filed Mar. 23, 1928, Serial No. 264,186, and in Great Britain Apr. 1, 1927. 1 Claim. (Cl. 171—95.)

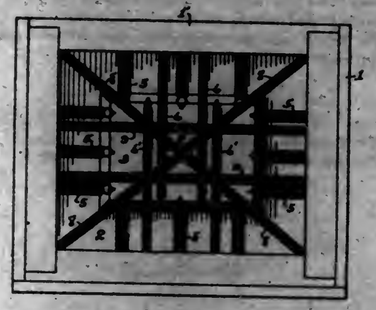


An instrument for indicating electric battery charge comprising in combination a movable indicator, electromagnetic means adapted to actuate said indicator, a dial relative to which the said indicator moves to indicate the condition of the battery, means whereby definite conditions, as low, medium and fully charged conditions, of the battery are indicated by the position of the indicator relative to the dial, suppression means associated with said indicator adapted to withhold the indicator against movement until a predetermined battery condition has been reached, said electro-magnetic operating means for said indicator comprising a moving iron fixed to the movable indicator, a fixed iron, an actuating coil adapted to be placed in circuit with the battery being tested and adapted to create a magnetic field about said irons when current passes through said coil and so similarly magnetize by induction the irons, whereby they repel one another and actuate the indicator to an extent depending on the condition of the said battery, an automatically operating compensating winding included in the wiring of the instrument and adapted to enable the instrument to register the true condition of the battery irrespective of the boosting of the voltage due to excessive rate of charging, said compensating winding being placed concentrically with respect to the said actuating coil and being such that the magnetic field set up thereby when an electric current flows through it opposes the magnetic effect of the actuating coil on the indicator.

1,753,044. RECEPTACLE FOR USE IN MANICURING. GENE GORDON CULVER, St. Louis, Mo. Filed May 22, 1929. Serial No. 365,069. 6 Claims. (Cl. 132—73.)

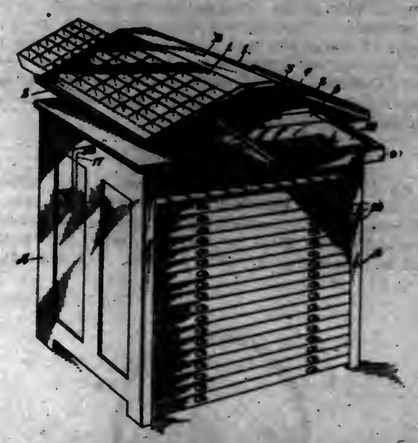
6. In a manicuring implement of the character described, a receptacle for the tip of the finger adapted to receive a treating fluid and having in a wall thereof an opening defined by a flexible resilient margin having engagement with the inserted finger perfecting the seal of the receptacle, and a removable cap for the receptacle having means for sealing the receptacle to prevent the escape of fluid therefrom.

1,753,045. HAME CONNECTER. ALBERT J. ELLIS, Bolton, N. C. Filed Apr. 15, 1929. Serial No. 355,277. 2 Claims. (Cl. 54—26.)



1. In a structure of the class described, in combination, a pair of complemental hame sections provided at their lower ends with eyes, open links detachably connected with said eyes, a chain connected at one end with one link, a ring connected with the remaining link, the free end of said chain being adapted to extend down through said ring, and a keeper adapted for detachable engagement with the free end portion of said chain, together with a secondary retaining chain for said keeper connected to one of the links.

1,753,046. FUSE. ALFRED L. EUSTICE, Chicago, Ill. Filed Dec. 1, 1921. Serial No. 519,159. 17 Claims. (Cl. 200—121.)

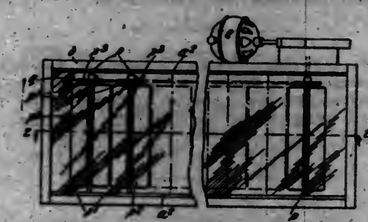


1. An electric fuse comprising a substantially closed receptacle having a sight opening and a fusible element mounted within said receptacle, said fusible element having a plural odd number of restricted portions, the central one of which is located substantially symmetrically with the remainder of said restricted portions, said central restricted portion being located directly in front of said sight opening to be readily visible through said sight opening.

1,753,047. SHOCK ABSORBER. HERBERT FROMM, Hamburg, Wis. Filed Apr. 5, 1929. Serial No. 352,856. 3 Claims. (Cl. 155—50.)

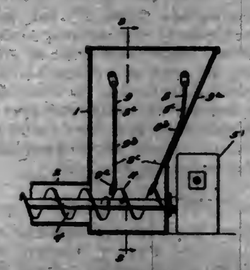
1. In combination with a seat and its supporting frame, a plurality of tension springs connecting an under portion of the seat with the sides of the frame, a number of springs connected with the central part of the bottom of the seat and with the sides of the frame and forwardly and rearwardly extending springs connected with the under face of the seat and with the front and rear portions of the frame, the latter springs being arranged above the last mentioned springs, and transversely arranged springs having their ends connected with the sides of the frame and passing under the seat and engaging the forwardly and rearwardly extending springs.

1,753,048. ADJUSTABLE TOP FOR TYPE CABINETS. MERRITT W. HAYNES, Cranford, N. J., assignor to American Type Founders Company, Jersey City, N. J., a Corporation of New Jersey. Filed Dec. 10, 1928. Serial No. 325,015. 4 Claims. (Cl. 276—44.)



1. The combination with a type cabinet, of a separate top above the cabinet, means for adjusting the top vertically relative to the cabinet, means for securing the top at any desired adjustment, and an inclined drawer movable through one end of the top.

1,753,049. ILLUMINATIVE ADVERTISING APPARATUS. JACK DAVID HENDERSON, London, England, assignor to Moving Colour Signs Limited, London, England, a British Company. Filed Apr. 2, 1929, Serial No. 351,966, and in Great Britain June 26, 1928. 8 Claims. (Cl. 40—130.)



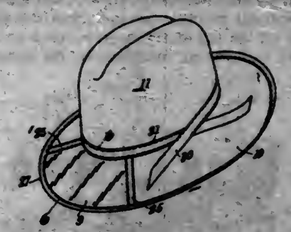
1. An advertising sign consisting of a stencil through which light passes to illuminate it, means for reflecting

the light, a plurality of rotatable spindles, strips of transparent coloured material supported on said spindles

and arranged in the path of the light, and means for rotating said spindles to cause rotation of said strips so as to repeatedly change the colour of said sign.

1,753,050. STOKER ATTACHMENT. ROBERT H. S. HUGHES, Baltimore, Md. Filed Apr. 6, 1929. Serial No. 353,189. 4 Claims. (Cl. 110—110.)

1. In a stoker, a fuel hopper having sheet metal walls, a fire pot, a pipe leading from the former to the latter, a screw conveyer in the hopper and pipe and means for vibrating one of the hopper walls at one side of the axis of the conveyer comprising a resilient member secured to said wall and extending downwardly through the hopper into position to be moved and tripped by the convolutions of the conveyer, said member, while being moved to the tripping position, adapted to put said wall under strain.



1,753,051. ASSEMBLY UNIT. HUGO JUNKERS, Dessau, Germany. Filed May 28, 1929, Serial No. 366,634, and in Germany June 8, 1928. 2 Claims. (Cl. 144—288.)

1. An assembly unit comprising a templet of plane lattice work, means on said templet for securing thereto members of the structure to be assembled, said means being adapted to be displaced transversely with respect to said templet, a gauge on each one of said means, and means on said templet for checking the proper position of said gauges.

1,753,052. HAT. JAMES LAKE, Jr., Brooklyn, N. Y. Filed Sept. 18, 1929. Serial No. 393,384. 3 Claims. (Cl. 2—175.)

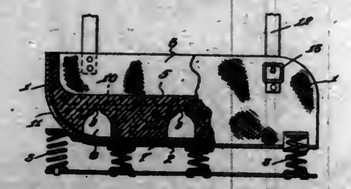
1. The process of manufacturing a visor hat, which comprises forming an upstanding flange at the inner curved edge of a segmental visor piece, securing said visor piece down over the brim of the hat with the

upstanding flange bearing against and secured to the base of the crown and then removing the underlying portion of the brim beneath the attached visor piece.

1,753,053. APPARATUS FOR LEARNING CORRECT BOW WORK FOR STRINGED INSTRUMENTS. JOSEPH BRAUNSTEIN-LOSKANT, Basel, Switzerland. Filed Feb. 2, 1929, Serial No. 337,046, and in Switzerland Mar. 3, 1928. 2 Claims. (Cl. 84—283.)

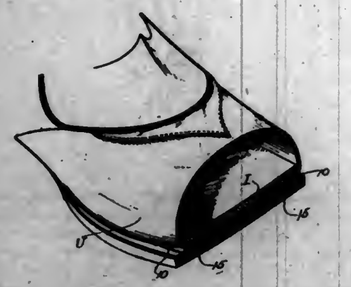
1. An apparatus for learning correct bow work for stringed musical instruments, consisting of a single bridge member to be adapted on the belly thereof, having deep longitudinal grooves for the strings and ribs between said grooves and in the ribs between said grooves notches situated in the same transverse line above the bottom of said grooves so as to constitute a transverse guide path for the bow running at right angle to the strings, in order to compel the pupil to guide the bow correctly.

1,753,054. CASE AND CONTAINER. SIEGFRIED G. MARSHUTZ and PHILLIP SOCKETT, Los Angeles, Calif., assignors to The Atlas Leather Products Corporation, Los Angeles, Calif., a Corporation of California. Filed Mar. 5, 1929. Serial No. 344,205. 4 Claims. (Cl. 206—5.)



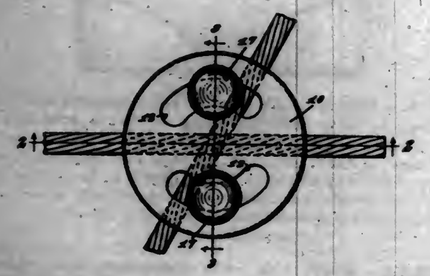
1. In a case, the combination of a flap provided with one element of co-operative fastening means; a strip fitted within said case and provided intermediate its ends with a recess; a block snugly fitted into and spanning said recess, said strip and block being adapted to be received in said case so that said block will be positioned in rear of the case fastening means when the flap is closed.

1,753,055. KNEE PAD. ROY MATHESON, Hollis, Okla. Filed Apr. 2, 1928. Serial No. 266,763. 1 Claim. (Cl. 2—24.)



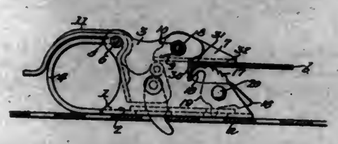
A device of the class described comprising a member of trough shape with one end closed, a frame connected with

the bottom of said member, a plurality of coil springs having their upper ends connected with the frame, a flat frame connected with the lower ends of the springs, straps connected with the member for fastening the same to the knee portion of the leg of the user, a resilient pad in the member, said pad having openings in its bottom portion



forming air chambers and said pad having transverse and longitudinal passages therein connected with the chambers and passing through the edges of the pad and the trough-shaped member having slots in its walls for exposing the outer ends of the passages whereby air can be drawn into the chambers and expelled therefrom while the device is in use.

1,753,056. SHOE WELT. CHARLES H. MERROW, Brockton, Mass. Filed July 1, 1929. Serial No. 375,119. 1 Claim. (Cl. 36—78.)

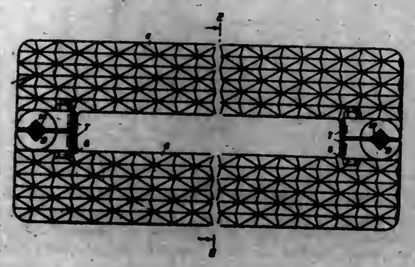


A shoe welt comprising a unitary strip of material having when applied to the shoe an outer visible extension and an inner invisible extension of different thicknesses, the outer extension being of uniform thickness throughout its width and being the thinner, each of said extensions being free from laminæ, one face of the strip being plane, the opposite face of the strip at the invisible extension and adjacent the junction of the extensions having a stitch-receiving groove.

1,753,057. CLAMP. MARION C. MORRIS, Rosemary, N. C. Filed Aug. 5, 1929. Serial No. 383,493. 2 Claims. (Cl. 24—135.)

1. A clamp for intersecting lines comprising a pair of gripping elements, said elements having line receiving grooves and central depressions to accommodate the intersecting portions thereof, and means establishing connection between said elements to bind the immediate and intersecting portions of the lines therebetween.

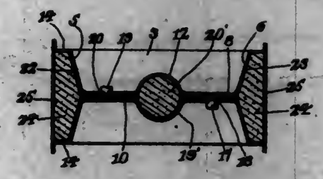
1,753,058. TOGGLE. CHARLES S. MORRISON, Elkins Park, Pa., assignor to Proctor & Schwartz, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 10, 1928. Serial No. 298,785. 5 Claims. (Cl. 24—250.)



1. The combination in a toggle of a body portion, a pair of spaced jaws carried by and movable toward said body portion and movable toward each other to grip a sheet of material between the jaws, and a stop carried by one of said jaws and extending toward the other of said jaws, said stop being movable with said jaws toward said body portion and adapted when said jaws are in the material gripping position to prevent the gripped material from engaging the body portion of the toggle.

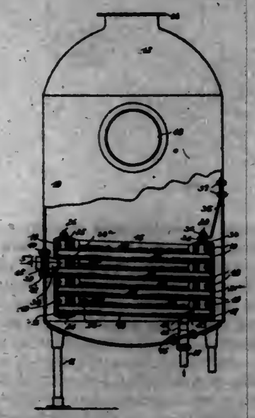
1,753,059. PRODUCTION OF PHOTOGRAPHIC IMAGES. HUMPHREY DESMOND MURRAY, London, England, assignor of one-half to Norton and Gregory Limited, London, England. Filed Sept. 14, 1929, Serial No. 392,744, and in Great Britain July 14, 1928. 4 Claims. (Cl. 95—88.)

1. A process for preventing deterioration of diazotypes which comprises treating the diazotype paper after exposure with an alkali hypophosphite.



1,753,060. SHIP'S PILOT LADDER. ANDREW MYERSTUEN, Seattle, Wash. Filed May 8, 1928. Serial No. 276,174. 1 Claim. (Cl. 228—58.)

As a new article of manufacture a step for a ladder, said step being channelled upon its under side and having its upper surface roughened to constitute a tread, angular bracket members integral with said step, each bracket member being provided with a groove adapted to receive one of the supporting side members of the ladder and with means coacting with the groove to lock the side members against movement with respect to the bracket.



CARNEGIE LIBRARY OF ATLANTA

1,753,061. MOLD. GEORGE E. NAGEL, Columbus, Ohio. Filed May 18, 1929. Serial No. 362,699. 7 Claims. (Cl. 25—121.)

4. A mold comprising a pair of oppositely disposed abutting sections of like form and each including a body portion closed at its rear and open at its front and formed of side and end walls, said walls inclining outwardly from their inner towards their outer ends, a laterally extending flange integral with the outer ends of said walls and co-extensive with said body portions, the closed rear of said body portion formed with an outwardly directed bridge piece connecting the side walls thereof together, said bridges coacting to provide a molding chamber and the walls and flange of one body portion coacting with the walls and flange of the other body portion to provide side and end molding cavities, said molding chamber opening into said side molding cavities, said closed rear of said body portion having coacting means for retaining said sections in abutting engagement.

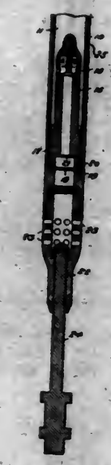
1,753,062. LIQUID-PROCESSING APPARATUS. EDGAR B. NICHOLS and ULYSSES G. TODD, Rochester, N. Y., assignors to The Pfaudler Co., Rochester, N. Y., a Corporation of New York. Filed Jan. 27, 1926. Serial No. 84,048. 10 Claims. (Cl. 257—205.)

4. A liquid processing apparatus comprising a liquid container, a series of horiontal curved pipe lengths in the lower portion of said container and having openings through the ends thereof, certain of said pipe lengths being curved in opposite directions from certain other pipe lengths, seats formed about said openings, means comprising a tie rod passed through said openings for detachably securing said pipe length seats together with said openings in communication with one another to form headers at opposite ends of said pipe lengths, and supply and discharge connections communicating with said headers respectively, and extended through the walls of said container.

1,753,063. CONCRETE FOOT FOR WOODEN POLES. FRITZ NITZSCHE, Karlsruhe, Germany. Filed Jan. 14, 1924. Serial No. 686,171. 4 Claims. (Cl. 72—84.)

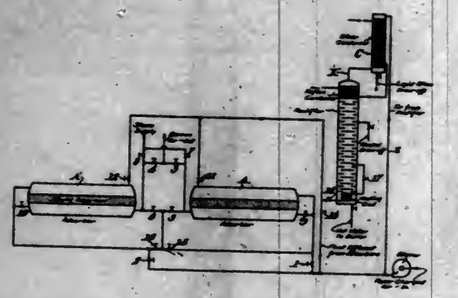
1. A concrete supporting base for wooden poles, comprising a two part foot, means connecting the parts of the foot so that they form a single post, the foot being formed as a hollow body.

1,753,064. ELECTRICAL PLUG AND SOCKET. WILLIAM NONNENMAN, St. John, New Brunswick, Canada. Filed Mar. 22, 1928. Serial No. 263,757. 2 Claims. (Cl. 173—343.)



1. In an electric plug and socket, a socket provided with longitudinal chambers having lateral recesses forming inwardly facing shoulders and with longitudinal contacts having lateral ears extending into the recesses and engaging the shoulders, and a plug slidable and turnable in the socket and provided with contacts having lateral ears for engaging the shoulders of the socket and the ears of the socket contacts when the plug is turned in said socket.

1,753,065. CRUTCH ATTACHMENT. THOMAS E. PAYNE, Toledo, Ohio. Filed July 26, 1929. Serial No. 381,231. 2 Claims. (Cl. 135—53.)

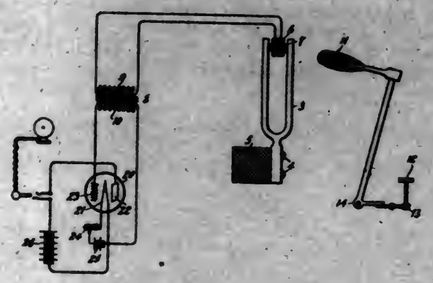


1. An attachment for a crutch comprising a ferrule, a pair of tubular telescopic members, the upper one of which is detachably connected with the ferrule, a tip on the lower end of the other member, spring means for resisting movement of the lower telescopic member in the upper one and a second pair of telescopic members placed within the first pair and enclosing the spring and forming an air chamber.

1,753,066. FORMATION SAMPLER. GERALD A. POOLE and SCOTT G. FORNEY, Fort Worth, Tex., assignors to Gulf Production Company, Houston, Tex., a Corporation of Texas. Filed Apr. 20, 1929. Serial No. 356,766. 7 Claims. (Cl. 166—1.)

1. In a device of the character described, the combination of a tubular member having a chamber therein, an outlet valve through which air may be exhausted from the chamber, an automatically operable inlet valve for said chamber, a breakable closure in the bore of said tubular member normally preventing access of fluids through said member to said inlet valve and chamber, and a plunger loose in said member for rupturing said closure upon impact against the bottom of a well.

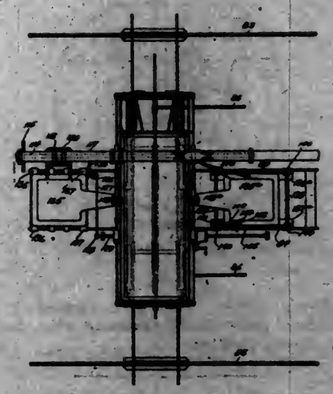
1,753,067. RECOVERY OF ADSORBABLE SUBSTANCES. ARTHUR B. RAY, Bayside, and GEORGE T. FELBECK, Mount Vernon, N. Y., assignors to Carbide and Carbon Chemicals Corporation, a Corporation of New York. Filed May 26, 1926. Serial No. 111,800. 4 Claims. (Cl. 252—4.)



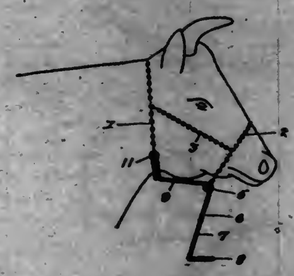
1. The process of recovering condensible vapor from a mixture containing non-condensible gas, which comprises flowing the mixture through a bed of solid absorbent and a gas space adjacent thereto, whereby condensible vapor is taken up by the absorbent; interrupting the current; clearing said gas space of non-condensible gas by flowing condensible vapor through said space, but not through the absorbent; and then distilling vapor from the absorbent into said space, and withdrawing it from said space substantially free from non-condensible substances.

1,753,068. AIRSHIP. HUGH J. ROSS, Cliffwood, N. J. Filed May 14, 1929. Serial No. 362,944. 9 Claims. (Cl. 244—6.)

1. An airship of the class described comprising a fuselage, gas bags on the fuselage, motor driven propellers to the sides of the fuselage, means for rockably mounting the motor driven propellers on vertical axis and for controlling the same from the interior of the fuselage, motor driven propellers on the upper rear part of the fuselage and mounted on vertical axis, and means associated therewith for controlling them from interiorly of the fuselage, a motor with a front propeller mounted on the front top of the fuselage and having its axis inclined upwardly and forwardly.



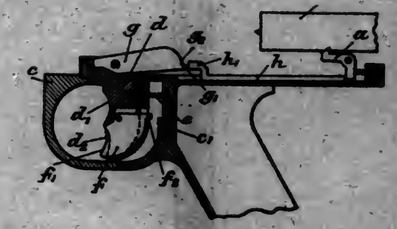
1,753,069. METHOD OF AND APPARATUS FOR EMPLOYING TUNING FORKS TO GENERATE AUDIO FREQUENCY CURRENT AS A MEDIUM FOR SOUND. MAX SCHUMM, Port Jefferson, N. Y. Filed July 5, 1928. Serial No. 290,502. 3 Claims. (Cl. 84—409.)



1. The method of producing a musical note which consists in vibrating a magnetised tuning fork whose period of vibration corresponds to the period of vibration of the desired note to vary the reluctance of a magnetic circuit including said tuning fork and the core of an electromagnet thereby generating an electric current in the winding of said magnet, the frequency and amplitude of said current being dependent upon the period of vibration of the tuning fork, in amplifying the current thus generated, and in applying the current thus amplified to the terminals of the winding of an electro-mechanical sound reproducer to reproduce the musical note emitted by the tuning fork.

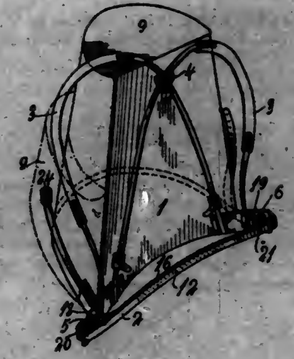
1,753,070. PANEL-ASSEMBLING APPARATUS. WALTER M. SCHWARTZ, ALMA J. HARRISON, and JOHN L. FAGAN, Philadelphia, Pa., assignors to Proctor & Schwartz, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 1, 1928. Serial No. 274,809. 15 Claims. (Cl. 219—4.)

1. In a panel assembling apparatus, the combination of a frame adapted to receive the elements of a panel in definite relation to each other, a secondary carriage for supporting said frame, a primary carriage for supporting said secondary carriage, means for moving said secondary carriage relative to said primary carriage and to said welding units, and means for moving said primary carriage relative to said welding units whereby the assembled panel elements may be welded together at predetermined points.



1,753,071. COW POKE. CORTS J. SPENCER, Dundee, N. Y. Filed Aug. 6, 1928. Serial No. 297,790. 1 Claim. (Cl. 119—141.)

A cow poke designed to be attched to the nose band and throat strap of a halter, formed from a metal rod which is rounded upon itself to provide an eye for the reception of the halter nose band and to provide arms which extend at opposite angles from said eye, the depending arm having its end extending at an outward angle to provide a finger and the horizontal arm having its end bent to provide a laterally extending arched portion which comprises inner and outer members that have their ends rounded to provide eyes to be adjustably engaged by the throat strap of the halter, and the remainder of said latter arched portions being in contact with each other.



1,753,072. TRIGGER APPARATUS FOR THE SINGLE AND CONTINUOUS FIRE OF AUTOMATIC FIREARMS. LOUIS STANGE, Sommerda, Germany, assignor to Rheinische Metallwaaren- und Maschinenfabrik, Duesseldorf-Derendorf, Germany, a Corporation of Germany. Filed June 14, 1929, Serial No. 370,894, and in Germany Nov. 9, 1928. 5 Claims. (Cl. 42—8.)

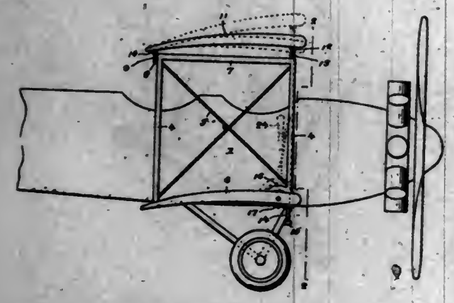
1. In a trigger apparatus of automatic firearms in combination a breech piece, a spring actuated sear for locking said breech piece, a trigger member for single fire movably arranged in a guard, a second trigger member for

continuous fire also arranged movably in said guard, means for connecting said trigger members with said sear and means for locking said sear in its withdrawn position.

1,753,073. BUCKET AND EQUIPMENT FOR CARRYING SAME. EINAR TRÖPTEN, Sulitjelma, Norway. Filed Sept. 25, 1928, Serial No. 308,231, and in Norway Aug. 5, 1927. 3 Claims. (Cl. 224—11.)

1. In combination with a bucket to be carried on the back, a carrying equipment comprising a single strap member, one holding member attached at the upper part of the bucket, a holding member attached at each side of the lower part of the bucket for receiving said strap member to be held thereby in such a manner that the middle portion of the strap extending between the said lower holding members takes the character of a hip-band for the bucket carrying equipment, another strap connected with said middle portion of the carrying strap and means for fastening said last mentioned strap to opposite ends of the lower portion of the bucket.

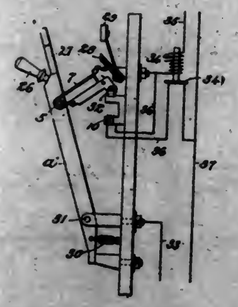
1,753,074. TRIP CASING SPEAR. GODFRIDUS HENDRIKUS CLERKX VAN KEULEN, The Hague, Netherlands, assignor to De Bataafsche Petroleum Maatschappij, The Hague, Netherlands. Filed Sept. 17, 1928, Serial No. 306,565, and in the Netherlands June 19, 1928. 7 Claims. (Cl. 294—86.)



1. In a trip casing spear, the combination of a central wedge-shaped body, gripping slips adapted to be forced radially outwards by upward movement of said body, an annulus adapted to exert upward pressure upon the slips and keep the same in inoperative position, a spring adapted to exert upward pressure upon the said annulus, means for locking said annulus against axial movement relative

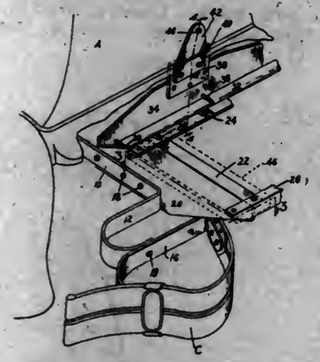
to said body, a central push bar adapted to exert downward pressure upon said annulus so as to displace it

against the action of said spring and cause it to be tripped, and means operable from above whereby downward pressure can be exerted upon said bar.



1,753,075. AEROPLANE WING. CHARLES W. VINCENT, Kingston, Pa. Filed Nov. 2, 1929. Serial No. 404,340. 1 Claim. (Cl. 244—12.)

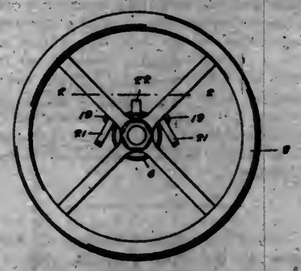
Substantially rectangular skeleton frames removably secured to the sides of an aircraft, lower supporting wings fixed to the frames, upper control wings having their rear ends hingedly secured to the frames, bars movable through the front elements of the frames and pivotally secured to the control means and having lower rack surfaces, said bars having headed ends for limiting the movement thereof through the frames, toothed wheels having shafts journaled through the frames, an operating lever for each of the shafts arranged in the cockpit of the aircraft, segmental racks and hand operated pawls for the levers engageable with the racks, and said levers having socket ends to receive the inner ends of the shafts therein.



1,753,076. SWITCH-ACTUATING MECHANISM. GEORGE H. WHITTINGHAM, Baltimore, Md., assignor to Monitor Controller Company, Baltimore, Md., a Corporation of Maryland. Original application filed Dec. 8, 1926, Serial No. 153,304. Divided and this application filed Feb. 9, 1929. Serial No. 338,717. 8 Claims. (Cl. 175—337.)

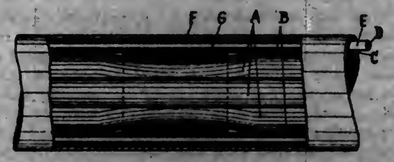
1. A switch-operating mechanism comprising a relatively long operating lever, a holding magnet and an armature for the magnet pivoted adjacent the free end of the lever and having a sliding connection with a part on the free end of the lever whereby the rocking movements of the lever are imparted to the armature, said lever and armature each adapted to swing toward the pivotal axis of the other when said lever is moved to

switch closing position, said part adapted to lie close to the fulcrum point of the armature when the lever is in switch-closing position.



1,753,077. TRUNK AND LUGGAGE RACK. WILLIAM W. WILSON, Sioux City, Iowa, assignor to Karl-Keen Manufacturing Company, Inc., a Corporation of Delaware. Original application filed Sept. 16, 1929, Serial No. 392,960. Divided and this application filed Oct. 19, 1929. Serial No. 400,876. 9 Claims. (Cl. 293—55.)

1. In combination with an automobile having a pair of rearwardly extending bumper supporting arms, a carrying rack comprising a pair of side plates secured to said arms and extending upwardly therefrom, transverse means of connection between said plates to serve as the carrier, a brace rod extending between said bumper supporting arms, an intermediate supporting element connected to the automobile body and extending in opposite directions therefrom towards the ends of said brace rod whereby the carrier is braced and supported through the medium of said brace rod and connection with the intermediate portion of the automobile body.

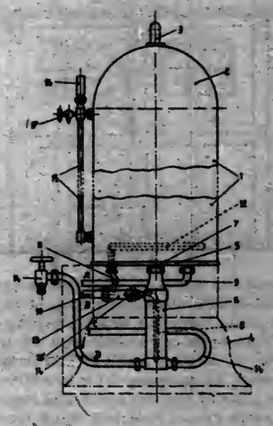


1,753,078. SWITCH FOR DIRECTIONAL SIGNALS. ELMER L. YOCUM, Shamokin, and RALPH T. WARDROP, Bear Gap, Pa. Filed Mar. 6, 1929. Serial No. 344,812. 1 Claim. (Cl. 200—59.)

In a motor vehicle, a switch casing located on the steering column thereof adjacent the steering wheel, a switch in the casing comprising upper and lower members, rods on which the members slide, spring means for forcing the members toward each other, a bridging member carried by the lower member, a pair of contacts bridged by said member when the lower member is depressed, a block arranged between the two members, a shaft passing through the casing and connected with the block adjacent one end of the block, a handle connected with the outer end of the shaft and extending upwardly when the

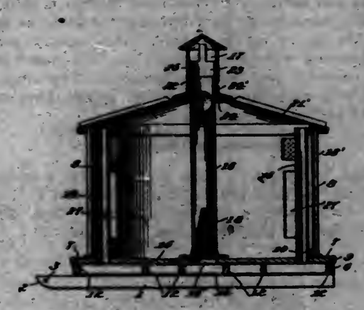
switch is in closed position and a depending part on the steering wheel for engaging the handle when the wheel is turned to cause the same to move the switch to open position.

1,753,079. SUBMARINE CABLE WITH PRESSURE-PROTECTING COVERING. GEORG ZAPF, Riehlerwall, Cologne, Germany, assignor to Felten & Guilleaume Carlswerk Actiengesellschaft, Cologne-Mulheim, Germany. Filed Sept. 12, 1928, Serial No. 305,542, and in Germany Oct. 31, 1927. 3 Claims. (Cl. 173—266.)



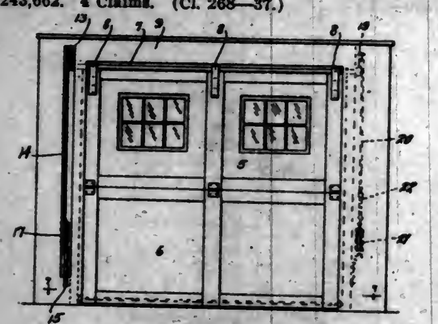
1. A submarine cable having a pressure protecting covering constituted by profile wires or strips forming a tube and means between the core of the cable and the said pressure protecting covering for increasing the friction between them.

1,753,080. OPTICIAN'S PLIERS. ARTHUR J. ZWILLING, Valley Stream, and JACOB FAIST, Glendale, N. Y. Filed Mar. 26, 1927. Serial No. 178,686. 1 Claim. (Cl. 81—3.6.)



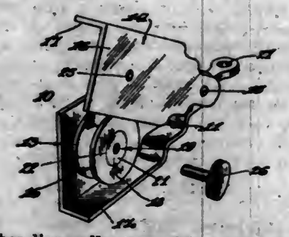
In combination, an optician's pliers comprising a pair of pivoted jaw members including handle portions and coacting jaws, said jaws having coacting longitudinal grooves, V-shaped in cross section, formed in the respective cooperating jaw faces, and having a plurality of pairs of coacting grooves extending transversely from said longitudinal grooves to opposite sides of said jaw members, the meeting side portions of the jaw members opposite each pair of transverse grooves presenting a closed wall at the juncture of the latter with said longitudinal grooves, whereby the plier jaw members include a plurality of right angular grooves for selective use with eye-glass bridge-pieces of different length, each of said right angular grooves including a longitudinal portion adapted to receive the shank of an eye-glass bridge-piece with four point contact and another portion of said bridge-piece with rounded engaging surfaces, to firmly grip said bridge-piece on closing said jaws.

1,753,081. AUTOMATIC APPARATUS FOR THE RAPID PRODUCTION OF AERATED WATER. CARLO DENOSSI, Turin, Italy. Filed Nov. 14, 1927, Serial No. 233,189, and in Italy Nov. 26, 1926. 2 Claims. (Cl. 225—21.)



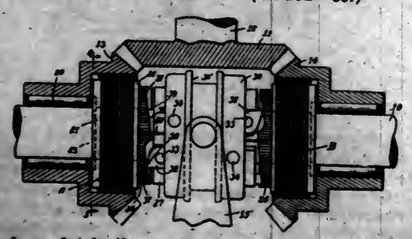
1. An automatic apparatus for the rapid production of aerated water comprising in combination, a vessel for the water to be aerated, a hollow base for said vessel, an aerator located in said base and permanently connected with the bottom of said vessel, a tube provided with capillary holes axially arranged within the aerator, a gas supply conduit connected with said tube, a controlling valve in the gas conduit, a conduit for feeding the water to be aerated to said vessel, a valve in the water conduit, a conduit for the direct delivery of the aerated water, a distributing cock, in the last named conduit and a conduit provided with a control valve for filling the bottles, said valves being in alinement on one side of said base.

1,753,082. BROODER HOUSE. ELMER C. DICKEY, Kokomo, Ind. Filed June 16, 1927. Serial No. 199,245. 7 Claims. (Cl. 119—21.)



1. A brooder house of the character described, comprising a plurality of sled runners, a metallic pan fixedly seated upon said runners, a series of joists disposed upon said pan, a flooring secured to the joists, an annular housing supported by said flooring, and a plurality of air inlets disposed within the housing adapted to receive fresh air from below the flooring and discharge the air near the upper part of the housing.

1,753,083. DOOR-OPERATING MECHANISM. ALFRED C. FARR, Upland, Ind., assignor of one-fourth to No-Greef Products, Incorporated, Muncie, Ind., a Corporation of Indiana. Filed Dec. 30, 1927. Serial No. 243,662. 4 Claims. (Cl. 268—37.)

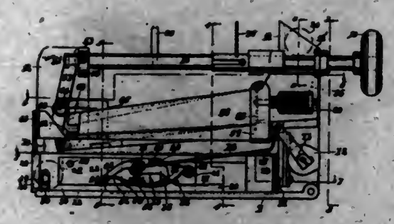


1. In a device of the class described comprising a vertically suspended door mounted for upward swinging movement, a rock shaft journaled to a supporting structure at the opposite side edges of the door and fixedly secured to the upper edge of the door, a bell crank carried at one end of said rock shaft, an operating lever operatively connected to one of the arms of the bell crank and means connected with the opposite arm of said bell crank for securing the door in uppermost position.

1,753,084. CLOTHESLINE PULLEY. ADOLPH KAPPEL, Brooklyn, N. Y. Filed Oct. 31, 1927. Serial No. 230,063. 3 Claims. (Cl. 254—197.)

1. A clothes line pulley comprising a housing open at one end embodying a pair of coacting pivotally connected sections, a bearing extending inwardly from one of said sections and having a threaded bore therein, a pulley wheel rotatably mounted on said bearing, the other of said sections having an opening therein for registry with said threaded bore when said sections are in a closed position, and a threaded stud passing through said opening and coacting with said threaded bore for maintaining said sections in a closed position.

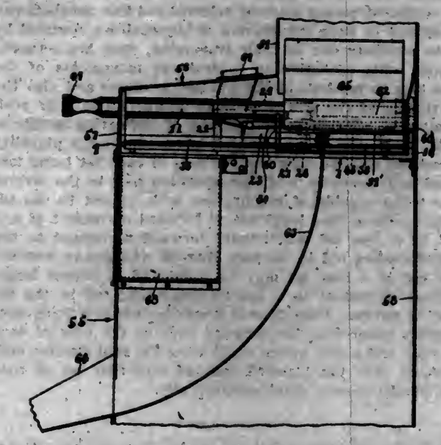
1,753,085. CLUTCH. JUEL L. PETERSON, Rockford, Ill., assignor to Rockford Drilling Machine Co., Rockford, Ill., a Corporation of Illinois. Filed Sept. 28, 1927. Serial No. 222,558. 9 Claims. (Cl. 192—69.)



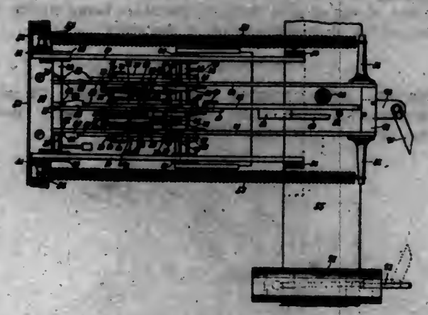
1. In a clutch, the combination with a shaft, of clutch discs on said shaft arranged for cooperation with other clutch discs, actuating means shiftable relative to the shaft to bring the discs together in clutched relation, a pressure plate for pressing the discs together, a ring between the pressure plate and the actuating means for operating the plate from the actuating means, and a pivoted lever disposed for operation by the actuating means arranged to be swung to a clutch engaging position so that a part thereof bears against the ring to press the discs into clutched relation, said ring having a spiral cam face on the side thereof facing the lever, whereby in the turning of the ring any undesired clearance between the lever and the ring is arranged to be taken up to compensate for wear in the clutch.

1,753,086. CORN SHAVER. GEORGE G. NIEDOMANSKI, Washington, D. C. Filed July 23, 1927. Serial No. 207,927. 1 Claim. (Cl. 30—23.)

A corn shaver comprising a substantially rectangular holder formed from a single piece of material and including a bottom wall having an opening therein, spaced parallel side walls and end walls disposed between the side walls, one of said end walls extending upwardly and rearwardly, a wedge-shaped element located within the holder and extending from one edge of the opening to the upper edge of the other end wall, and a non-flexible cutting blade located within the holder and secured to the upper inclined face of the wedge-shaped element.



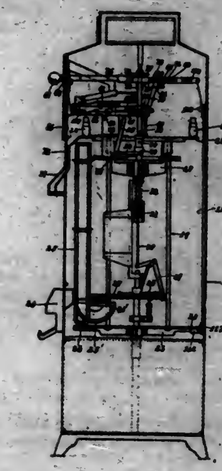
1,753,087. COIN-CONTROLLED MECHANISM. CLIFTON W. NIXON, New York, N. Y. Filed June 7, 1926. Serial No. 114,112. 14 Claims. (Cl. 194—92.)



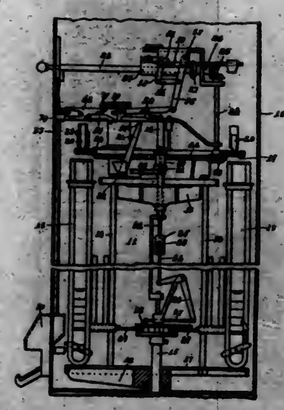
1. Coin-controlled mechanism including an operating shaft having a coin passageway; a coin-carrier having a coin-seat; a chute for conducting the coin from said passageway to said coin-seat; locking means for the coin-carrier arranged to be controlled thereby and to be held in released position upon the lodgment of a coin in said coin-seat; and an operative connection between said operating shaft and said carrier.

1,753,088. VENDING APPARATUS. CLIFTON W. NIXON, New York, N. Y. Filed June 7, 1926. Serial No. 114,113. 10 Claims. (Cl. 312—67.)

5. In vending apparatus, a supporting frame; a movable operating shaft and a fixed shaft carried thereby; a delivery frame forming an open pocket mounted near one end to slide and swing on said fixed shaft; resilient means for positioning said delivery frame; and means on the operating shaft for establishing an operative connection with said delivery frame, substantially as described.



1,753,089. CONTROL MECHANISM FOR COIN-CONTROLLED MACHINES. CLIFTON W. NIXON, New York, N. Y., assignor to Nixon Vending and Change Making Machines, Inc., New York, N. Y., a Corporation of Delaware. Filed June 7, 1927. Serial No. 197,075. 25 Claims. (Cl. 294—78.)

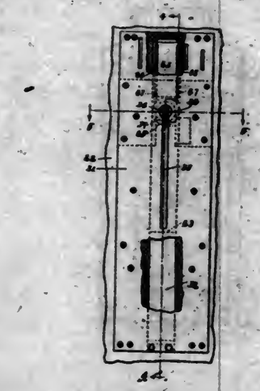


1. Control mechanism of the kind set forth comprising a movable carrier structure; and power transmission means supported thereby including a coin clamping slide and means for varying the position of the slide relatively to the carrier structure consequent upon movement of the carrier structure.

1,753,090. VENDING AND CHANGE-MAKING MACHINE. CLIFTON W. NIXON, New York, N. Y., assignor to Nixon Vending and Change Making Machines, Inc., New York, N. Y., a Corporation of Delaware. Filed June 7, 1927. Serial No. 197,076. 22 Claims. (Cl. 194—2.)

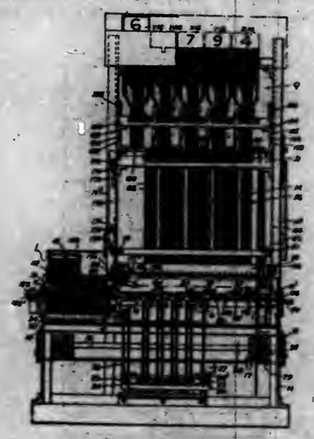
17. In a machine of the kind set forth, means for locking a magazine structure against turning movement comprising a keeper device on the structure; a pivoted spring tensioned lever having means for interlocking with said keeper device and tending normally to effect an interlocking action with said keeper device; a second pivoted spring tensioned lever arranged to cooperate with the first and tending normally to arrest the interlocking tendency thereof; and means for moving the second lever in a direction to permit the first lever to be called into action.

1,753,091. CONTROLLING MECHANISM FOR DISPENSING MACHINES. CLIFTON W. NIXON, New York, N. Y. Filed July 11, 1928, Serial No. 291,824, and in Great Britain July 18, 1927. 18 Claims. (Cl. 194—72.)



1. In a machine of the character described, an actuating mechanism, a transmission connecter in the form of a carrier, means affording a separable connection for operating said carrier by said mechanism, and means dependent for its action upon the operation of said carrier for separating said separable connection whereby entirely to release said carrier from the control of said mechanism.

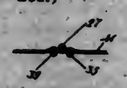
1,753,092. HANDLE-CONTROLLED SLOT CLOSURE. CLIFTON W. NIXON, New York, N. Y. Filed June 21, 1928, Serial No. 287,154, and in Great Britain July 13, 1927. 12 Claims. (Cl. 312—35.)



1. In a machine of the character described, consisting of a retaining structure having an elongated opening in which an operating element is arranged for movement, a plate slidably associated with said retaining structure, and

a disk on said operating element having rotary association with said plate, said plate and disk being controlled by

said operating element and arranged to keep said opening closed irrespective of the position of said operating element therein.



1,753,093. CALCULATING MACHINE. CHARLES DONOVAN ROWLEY, London, and WILLIAM JACKSON, Brighton, England, assignors to The Autokal Syndicate Limited, London, W. I., England, a British Company. Filed July 9, 1925, Serial No. 42,608, and in Great Britain July 28, 1923, and July 17, 1924. 72 Claims. (Cl. 235—61.)

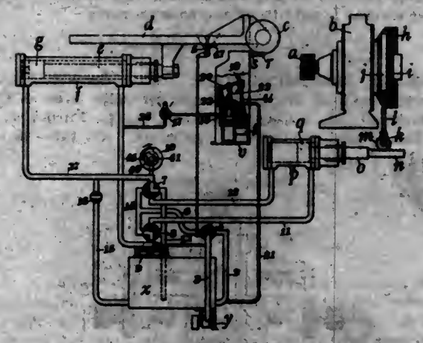
22. A calculating machine for performing multiplication comprising in combination, a plurality of sets of individually movable indicating members which as a whole occupy a fixed position relative to other parts of the apparatus the sets being arranged in groups adapted to function respectively for the several denominations in the indication of partial products, a plurality of sets of rod-like members which can slide individually in the direction of their length and also be swung in a direction transverse to their length, these sets of rod-like members being arranged in a plurality of groups functioning with respect to different denominations, means comprising sets of cams operative to effect a swinging of selected rod-like members, means for moving the sets of rod-like members and the sets of cams relatively so that the cam sets will be positioned adjacent to and capable of being successively operative on the several groups of rod-like members, means for traversing the sets of rod-like members into positions so successively adjacent to the groups of indicating members that selected rod-like members which have been swung by cam operation can register with and when caused to slide can impart movement to indicating members, and key-actuated means whereby selected rod-like members can be caused to slide irrespective of the position occupied by these members due to their traversing, such key-actuated means being operative to control the movements of the cam sets in relation to the rod-like members and also the traversing of the sets of rod-like members and their positioning in relation to the groups of indicating members.

38. In a calculating machine in combination a plurality of sets of rod-like members the rods of each set being longitudinally movable, and corresponding rods in the several sets being capable of registration with respect to the adjacent rods so that longitudinal forward movement of any rod in a rear set will impart forward movement to the corresponding rod in advance thereof, and means whereby any rod in a rear set may be positioned to impart longitudinal movement to a non-corresponding rod in the set next in advance thereof, said means including a transverse member connecting the forward ends of the rods of each rear set and a cam operative to move the said member endwise, so that the forward ends of said rear set of rods are simultaneously displaced laterally.

1,753,094. PAPER CLIP. GUIDO M. SACERDOTE, Bayside, N. Y. Filed Dec. 27, 1927. Serial No. 242,746. 19 Claims. (Cl. 24—261.)

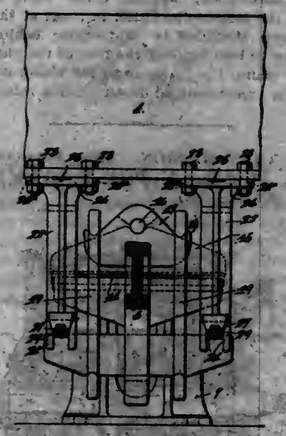
1. A device of the class described, formed from a single piece of metallic wire bent to form two clamping members and an extensible head composed of two members, each connecting one of the sides of one of said clamping members to the opposite side of the other, the sides of each clamping member being in close proximity with corresponding sides of the other, at least part of the clamping portion of one of said clamping members being within the plane of the clamping portion of the other.

1,753,095. ATTACHMENT FOR PIPESTEMS. CHARLES SCHEER, Silverton, Colo. Filed May 13, 1927. Serial No. 191,169. 1 Claim. (Cl. 131—12.)



The combination with a mouth piece for a smoking pipe, said mouth piece being provided with an enlarged portion at its outer end, and with a channel extending across the bore of the mouth piece, of a resilient cup-shaped member surrounding and frictionally engaging the enlarged portion, leaving openings into the cup from the ends of the channel, the inner walls of the cup-shaped member being spaced from portions of the mouth piece adjacent to the enlarged portion.

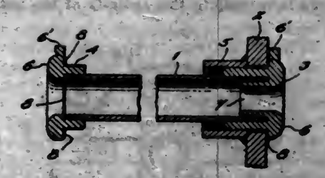
1,753,096. METAL CUTTING AND GRINDING MACHINE. JOHN WILDSMITH SHARRY, Handsworth, Birmingham, England, assignor to The Gear Grinding Company Limited, Birmingham, England. Filed Oct. 5, 1926, Serial No. 139,697, and in Great Britain Nov. 13, 1925. 7 Claims. (Cl. 51—233.)



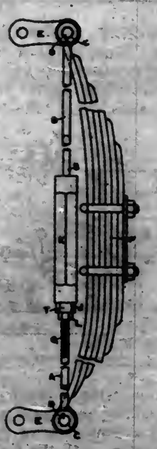
1. A machine of the kind described comprising a plurality of reciprocable members, tool holding and work

holding mechanisms alternately operated by said reciprocable members, a plurality of fluid motors for alternately reciprocating said members, one motor for each member, conduit for supplying fluid under pressure alternately to said motors, a rotary distributing valve in said conduit

for alternately connecting said motors to reciprocate said members, fluid operated means for rotating said valve and escapement means operable by said members alternately for releasing said valve and permitting its actuation by said fluid operated means.



1,753,097. RAILWAY-TRACK SCALE. MORTON HULL STARR, Rutland, Vt., assignor to The Howe Scale Company, Rutland, Vt., a Corporation of Vermont. Filed Dec. 10, 1927. Serial No. 239,167. 2 Claims. (Cl. 265—71.)

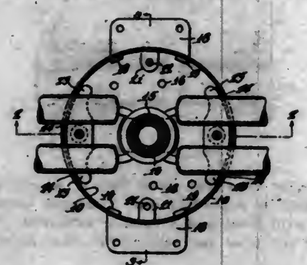


1. In a railway track scale, the combination of a bridge including a beam, and a suspension therefor including a main lever, independent bridge supporting posts depending from the beam and suspended from the main lever, means for adjustably and rigidly securing the posts to the beam, and separate means for independently adjusting the posts vertically relative to the lever.

1,753,098. FLUE BUSHING. JOSEPH C. TATAREK, Jamestown, N. Dak. Filed Sept. 12, 1925. Serial No. 56,094. 1 Claim. (Cl. 285—53.)

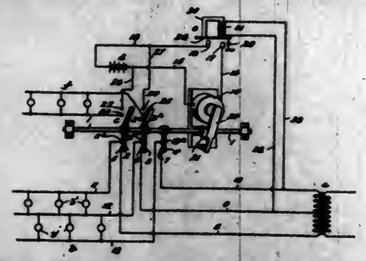
In combination with a flue sheet having a plain hole therein and an internally threaded sleeve surrounding the hole and fastened to the inner face of the sheet, the internal diameter of said sleeve being of smaller diameter than the hole, a bushing passing through the hole and externally threaded to engage the sleeve, a flue extending into the bushing and threaded thereto, said bushing having an exterior head, the outer face of which is rounded to be engaged by a beading tool, a wrench engaging projection on said head and a tubular extension formed integral with the head and passing into the end of the flue.

1,753,099. SHOCK-ABSORBING DEVICE FOR MECHANICALLY-PROPELLED VEHICLES. JOHN WILLIAM TURNER, HARVEY WOOD, and EDGAR MANN, Halifax, England. Filed Sept. 10, 1927, Serial No. 218,748, and in Great Britain Sept. 23, 1926. 2 Claims. (Cl. 267—28.)



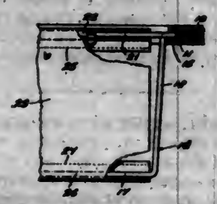
2. A vehicle shock absorber comprising, in combination, a leaf spring, two rods, respectively, connected to opposite ends of the leaf spring, one of said rods having a threaded end portion, and the other having a plunger connected thereto, a casing or barrel having one end engaging said threaded rod, and its other end loosely surrounding said plunger and the other of said rods, a variable means of resistance in the form of two coil springs having different torsional strength confined between said plunger and one end of the casing for absorbing normal and excessive shock imparted to the leaf spring, yieldable means confined between the other end of said casing and said plunger for absorbing the expansive movement of the plunger, said casing being bodily rotatable to adjust the axial length of the rods, and a nut connected to said threaded rod and engaging the outer adjacent end of said casing for maintaining the latter in axial adjusted position.

1,753,100. COMBINATION OUTLET BOX. ERICH WALTER, Atlantic City, N. J. Filed Feb. 6, 1926. Serial No. 86,537. 1 Claim. (Cl. 247—21.)



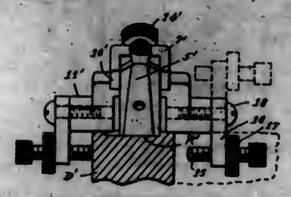
An outlet box comprising a body having a marginal wall provided at diametrical opposite portions with two remote slots and an intermediate slot, said marginal wall of the box adapted to be extended through a building

wall to which the box is to be attached, plates secured in recesses of the building wall and positioned diametrically opposite each other, each of said plates having ears at its opposite ends and provided with a central ear intermediate the end ears, the central intermediate ear extending through the intermediate slot radially of the box and pro-



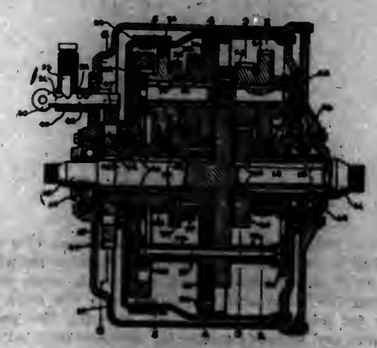
vided with means for attaching a suspending fixture canopy thereto, the end ears passing through the remote slots and being bent over in opposite directions to hold the box rigid in position in the building wall, while an edge of the plate between the ears engages with the outer surface of the wall of the box.

1,753,101. EMERGENCY ELECTRIC-LIGHTING SYSTEM. GEORGE H. WHITTINGHAM, Baltimore, Md., assignor to Monitor Controller Company, Baltimore, Md., a Corporation of Maryland. Filed Feb. 20, 1928. Serial No. 255,776. 2 Claims. (Cl. 171—97.)



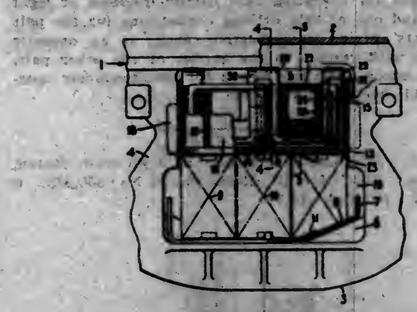
1. The combination with a main current source, an auxiliary current source and main and auxiliary house lighting systems, of a double throw switch normally connecting said main system with the main current source, a magnet adapted, when energized, to move said switch to disconnect the main system from the main current source and connect the auxiliary system with the auxiliary current source, a circuit from the latter source including the coil of said magnet, and a relay controlled by current from the main current source adapted to close the circuit of the magnet when the main current fails and to open the magnet circuit when the current from the main current source is restored.

1,753,102. AWNING. HAROLD E. WILLIAMS, Carthage, Mo. Filed Aug. 23, 1926. Serial No. 131,081. 2 Claims. (Cl. 156—15.)



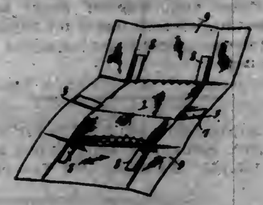
1. In a vehicle sun and rain shield of the non-collapsible type, a frame comprising a tubular back member, and a single rod bent to form a front member substantially parallel to said back member, and rearwardly extending resilient side members, the rear portions of said side members being bent outwardly, then upwardly, and then inwardly, to provide a pair of vertical glass run engaging members and a pair of spaced opposed inturned ends which are slidably received within said tubular back member; and a cover secured to said front and back members.

1,753,103. RECESSING TOOL. JOHN HERBERT ABRAMSON, Rockford, Ill., assignor to Greenlee Bros. & Co., Rockford, Ill., a Corporation of Illinois. Filed Dec. 8, 1928. Serial No. 324,656. 4 Claims. (Cl. 145—26.)



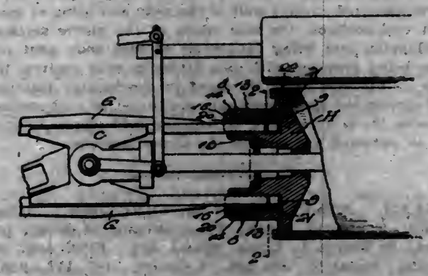
1. A tool for the purposes described comprising a chisel, and a guide frame adjustably and detachably mounted on the chisel, said frame having a part extending therefrom, the free end of which is arranged to ride on the surface of the work adjacent the place to be cut whereby to insure smooth and uniform cutting, and said frame having portions arranged to engage opposite sides of the chisel to keep the frame in proper relation thereto, the adjustable detachable connection between the frame and chisel comprising a screw adjustably threaded in the chisel and extending from the face thereof, said frame having a keyhole slot provided therein for detachable engagement therein of said screw, the said frame being arranged to fulcrum on the face of the chisel in front of said slot, and another screw threaded in said frame behind said slot and arranged to bear against the face of the chisel whereby not only to clamp the frame onto the chisel but maintain the same in a predetermined depth guiding relation thereto.

1,753,104. TRANSMISSION. ZENO ALEXANDER, Kansas City, Mo. Filed June 17, 1929. Serial No. 371,540. 10 Claims. (Cl. 74—84.)



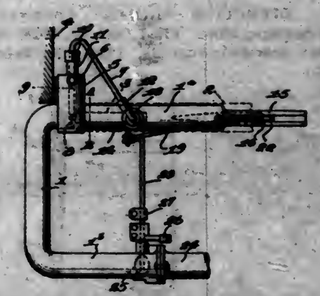
1. A transmission comprising driving and driven members, an epicyclic gear train operatively connecting the two to provide for relative changes of speed between the same, an inert member operatively connected with an element of said train to be accelerated by it beyond the speed of either member upon any relative change of speed between the two, and means to arrest the movement of said element in one direction but permit it in the other.

1,753,105. RAILWAY TRUCK. DONALD S. BARROWS, Rochester, N. Y. Filed June 14, 1928. Serial No. 285,471. 15 Claims. (Cl. 105—187.)



1. A railway truck having a side frame formed with compression and tension members, bolster guide columns connecting intermediate portions of said members, springs disposed between said columns, a spring cap associated with said frame and formed with pockets adjacent and between the columns thereof, swinging means suspended in said pockets, and a bolster supported on said swinging means and adapted to move laterally thereon.

1,753,106. SURGICAL DRESSING. CLARENCE W. BARTH, Newburgh, N. Y. Filed Feb. 10, 1928. Serial No. 253,386. 3 Claims. (Cl. 128—268.)

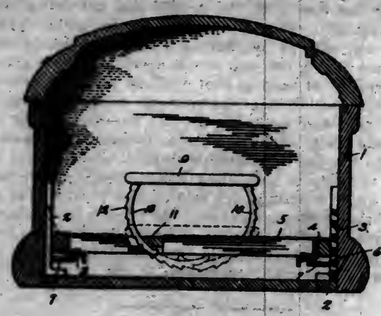


1. A surgical dressing comprising a multiply body of gauze, means for securing such body in position over a wound including a plurality of relatively narrow members permanently connected to the body and projecting from two opposite edges thereof, one face of each of said projecting portions being provided with an adhesive coating, and a readily detachably covering for the adhesive coated faces of said projecting portions, for the purpose described.

1,753,107. CROSSHEAD-GUIDE ANCHOR. CLARENCE JAMES BLACK, North Little Rock, Ark. Filed May 12, 1928. Serial No. 277,309. 1 Claim. (Cl. 287—103.)

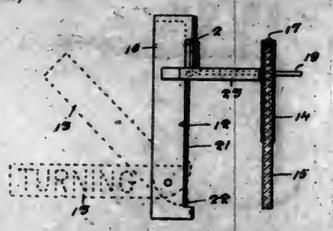
An assemblage of the class described comprising a body having an elongated socket of rectangular cross section, said body being formed also with transversely alined slots opening through two opposed sides of said socket, a third side of said socket being beveled and disposed in outwardly diverging relation with the fourth side thereof, a block of rectangular cross-section having a longitudinal groove in one side, said groove having a dove-tail shaped inner end, a bar having one end snugly received in said groove, the extremity of said end of the bar being of dove-tail shape for interlocking engagement with the dove-tail shaped inner end of the groove and interlocked with said block, said block and bar end being disposed in said socket with said bar end in contact with said fourth side of said socket, the side of said block opposite said groove being beveled and contacting with said beveled third side of said socket, said beveled side of said block being provided with an outwardly facing shoulder near the inner ends of said slots, and a transverse wedge in said slots abutting said shoulder to hold said block snugly in the socket.

1,753,108. CARBURETOR. AAGE NIELS BONDESEN, Copenhagen, Denmark. Filed Nov. 30, 1925. Serial No. 72,354. 1 Claim. (Cl. 261—52.)



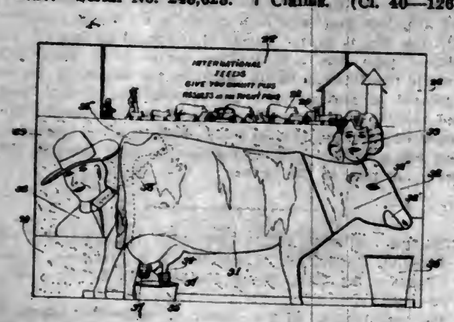
A petrol carburetor for internal combustion engines, comprising a U-shaped carburetor pipe having one branch for the inlet of fuel and air, provided with an elongated slot for arrangement against and alongside the exhaust pipe of the engine so that part of the surface of the pipe is exposed to the interior of the branch, an inlet jet for fuel opposite the slot, an inlet for air, a valve body to control said air inlet, the other branch of said pipe being arranged to be connected to the motor inlet manifold and being provided with a mixture throttle valve, said air valve and said mixture throttle valve being operatively connected together so that when the air and throttle valves are open motor suction draws fuel through the inlet as a fine spray and atomizes same and also draws in air which together with the fuel is heated due to the exposed surface of the exhaust pipe, the said interconnected valve body and throttle providing a means whereby the supply of air is regulated to conform with the consumption of fuel, and said branch having a baffle arranged therein opposite the elongated slot, and against which baffle the fuel impinges, thus being further atomized before passing through the carburetor pipe to the motor.

1,753,109. ADJUSTABLE COT AND HEADREST FOR BURIAL CASKETS. JAMES B. COLE, Memphis, Tenn. Filed Nov. 12, 1928. Serial No. 318,844. 1 Claim. (Cl. 27—12.)



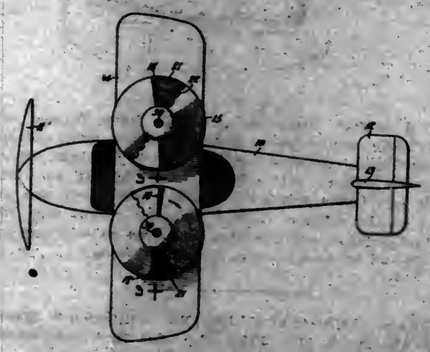
The combination with a casket, of supporting plates, a cot mounted for up and down adjustment between the plates, means carried by the cot for engaging the plates to support the cot at a desired elevation within the casket, said means and plates cooperating to permit upward movement of the cot relative to the casket but to prevent downward movement of said cot, a head rest, opposed arcuate

toothed strips pivotally connected to the head rest and slidable within one end portion of the cot, and means cooperating with the toothed strips for supporting the



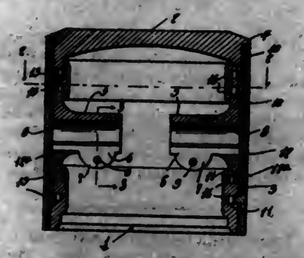
head rest at a desired elevation relative to the cot, said strips being foldable toward each other and within the cot when the head rest is lowered.

1,753,110. DIRECTION SIGNAL. CONWAY DARNEY, Crystal Springs, Miss. Filed Oct. 31, 1928, Serial No. 316,208. Renewed Aug. 24, 1929. 4 Claims. (Cl. 116—52.)



1. In a direction signal for automobiles, a signal device, a housing for said device, means to attach the housing to the outside of an automobile, a pivotally mounted operating rod having one end operatively connected with the signal device and its opposite end extending into the automobile, and means included in the housing to limit pivotal movement of the operating rod in opposite directions to regulate the degree of movement of the signal device and provide different signals.

1,753,111. DEVICE FOR DEPICTING RURAL SCENES. CHARLES S. DERNBACH, Wausau, Wis. Filed Dec. 30, 1927. Serial No. 243,623. 7 Claims. (Cl. 40—126.)



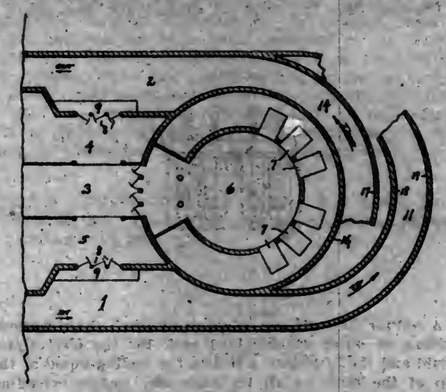
1. In a device for depicting rural scenes a pair of sidewise opposed, travelling endless carriers, one provided with means to represent spaced vehicles and the other provided with means to stimulate live stock and a person, a travelling endless carrier disposed at right angles with respect to the other of said carriers and provided with advertising matter, driving connections for the first mentioned carriers, means operated from one of said driving connections for operating that carrier disposed at right angles, and one of said driving connections for the pair of carriers driving its respective carrier in an opposite direction with respect to the carrier of the other pair, and a common operating means for simultaneously operating said driving connections.

1,753,112. AIRPLANE. GEORGE R. ENGLEDOW, Raton, N. Mex. Filed Mar. 27, 1929. Serial No. 350,383. 0 Claims. (Cl. 244—15.)

1. A device of the character described, including a rotating apertured disk, deflector means associated adjacent the apertures thereof, means for adjusting the size of said apertures, and means for adjusting the angle of said deflector means.

1,753,113. RINGLESS SELF-EXPANDING PISTON. GEORGE FLOYD, Portsmouth, Ohio. Filed July 29, 1926. Serial No. 125,765. 2 Claims. (Cl. 74—108.)

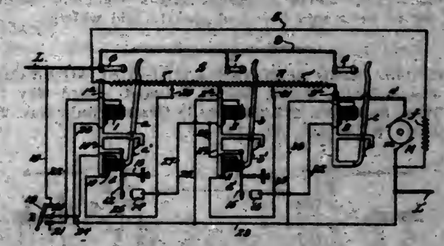
1. A piston comprising a hollow cylindrical body provided with circumferential grooves in its lateral wall, a sleeve mounted on said wall of the body and being of more than two sections, the side edges of the sleeve sections overlapping and being tangential of said body said sections being provided with ribs fitting in said grooves, the ends of the ribs being arranged in overlapping relation, and corrugated spring elements positioned in said grooves between the bottom walls thereof and said ribs and exerting an outward pressure on the sleeve sections.



1,753,114. SEWING-MACHINE THREADER. ALLAN MCC. FLUHARTY, Miami, Fla., assignor of fifteen per cent to George L. Dixon, Miami, Fla. Filed Aug. 22, 1928. Serial No. 301,360. 4 Claims. (Cl. 112—225.)

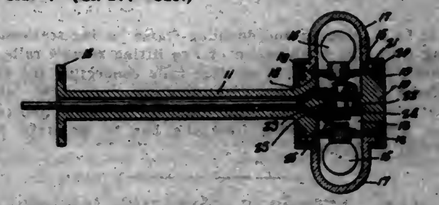
1. In a sewing machine, a needle-threader comprising a swingably mounted bar having at the end thereof a semi-conically shaped member, a plate hingedly connected to the bar and provided with a semi-conically shaped member adapted to be alined with the first mentioned semi-conically shaped member to provide a guide for a thread to the eye of a needle, the hinged plate being movable away from the bar to form a space between the semi-conically shaped members for releasing the thread after

the needle has been threaded, and cooperating means on the bar and hinged plate for gripping the needle and for aligning the thread guide with the eye of said needle, the means on the hinged plate being movable away from the means on the bar to release the thread from the threader and the bar from the needle when the hinged plate is moved away from the bar.



1,753,115. RAMP STRUCTURE. WILLIAM F. GOODRICH, Detroit, Mich. Filed Mar. 5, 1928. Serial No. 259,065. 7 Claims. (Cl. 20—1.18.)

1. A pair of ramps, comprising substantially continuously non-intersecting spirally arranged surfaces oppositely inclined and having spaced parallel axes within the curvatures of the ramps.



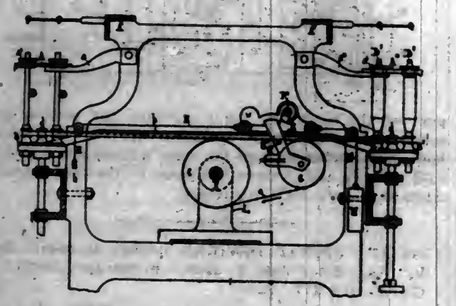
1,753,116. ELECTRIC-MOTOR STARTER. WILLIAM T. HOLMES, Baltimore, Md.; Daisy N. Holmes, executrix of said William T. Holmes, deceased, assignor to Monitor Controller Company, Baltimore, Md., a Corporation of Maryland. Filed Jan. 7, 1928. Serial No. 245,156. 5 Claims. (Cl. 172—288.)

1. The combination with a supply circuit, of a motor starter comprising a starting resistance, main and auxiliary contactors, magnets for closing the contactors, said magnets having circuits independent of the armature circuit of the motor, a relay comprising a switch member adapted to close the circuit of the magnet of the auxiliary contactor and a magnet having windings in parallel with

part of the resistance for controlling the movement of said member, said main contactor adapted to normally hold said member close to the relay magnet and to release said member and connect the same to the supply circuit when said main contactor closes.

1,753,117. SIGNAL DEVICE. ROBERT HOSKING, Berkley, Va. Filed Jan. 4, 1929. Serial No. 330,247. 1 Claim. (Cl. 177—329.)

In a signal lamp, a body having an opening therethrough, means to mount the body, an electric bulb extending outwardly from the opening at each end of the body, a globe for the bulb, an annular rib extending within the body opening at right angles to the axis of said opening, insulated plates secured upon opposite sides of the rib, binding posts extending through the plates and providing securing means for said plates, a conductor wire secured to one end of each post, and a spring contact secured to the other end of each post for engagement by each of the bulbs.

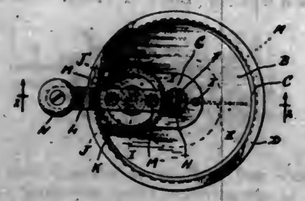


1,753,118. CONTROLLING PRESSURE GAUGE. SVEN A. F. JOHANSSON and ARVID O. DAHLSTRÖM, Stockholm, Sweden. Filed July 20, 1927, Serial No. 207,236, and in Sweden Apr. 23, 1927. 1 Claim. (Cl. 50—8.)

A pressure controlling gauge having a body and an air inlet and an air outlet, a valve controlling said inlet, a piston having a bore and air passage opening into said bore from the opposite ends of said piston, a spring having one end engaging said piston, an internally threaded cylinder engaging the opposite end of said spring, a regulating element rotatably mounted in one end of said body, a threaded extension on said regulating element cooperating with said threaded cylinder, a valve in each end of said piston bore normally closing said air passages, a spring extending between said valves for seating the same, a spindle connecting one of said piston valves with said inlet valve, a stem on the second of said piston valves projecting from said piston, and a whistle in said regulating

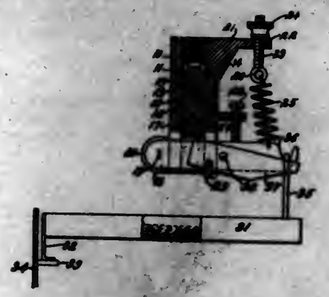
element having a projecting end adapted to engage the said stem of said second piston valve and unseat the same when the pressure in said body rises to a predetermined point and moves said piston against the action of the spring engaging the one end of the piston, said inlet valve being thereby moved to permit only a negligible amount of air to enter said bore and operate said whistle.

1,753,119. RING SPINNING AND DOUBLING FRAME. JAMES JOLLY, Deane, Bolton, England. Filed May 11, 1928, Serial No. 277,056, and in Great Britain Nov. 29, 1927. 9 Claims. (Cl. 118—47.)



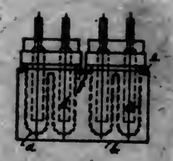
3. In a spinning and doubling frame having stationary ring rails, the combination of two lifting spindle rails, a plurality of transverse carriage rails connecting the two spindle rails, carriages traversing the transverse rails, one to each rail, a bar connecting the carriages, and tension pulleys suspended from the bar to maintain the driving bands taut.

1,753,120. DYESTUFFS CONTAINING CHROMIUM. HANS KIMMERER, Mannheim, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Apr. 13, 1928, Serial No. 269,875, and in Germany May 14, 1927. 3 Claims. (Cl. 260—12.)



1. As new articles of manufacture, chromiferous dyestuffs fast to washing, milling and light, which are the chromium compounds of the azo-dyestuffs from diazotized o-aminonaphthols and sulfo-phenyl-methyl-pyrazolones.

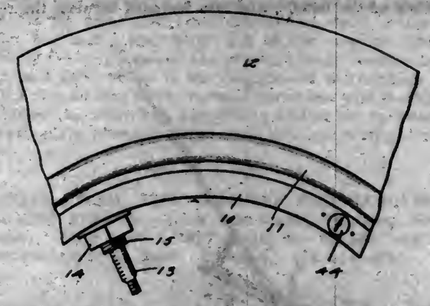
1,753,121. MIXING BOWL. ROBERT M. KERR, Detroit, Mich., assignor to Detroit Dental Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 25, 1929. Serial No. 349,841. 2 Claims. (Cl. 259—108.)



1. In a mixing bowl comprising a flexible bowl proper having a flaring mouth, a rigid cover forming a re-enforcement for said bowl and having a flaring portion for fitting within said mouth, a mixing blade beneath said cover of a contour substantially corresponding to that of the inner wall of the bowl, a shaft on which said blade is mounted projecting upward through said cover, a crank handle eccentric to said shaft and a step-up gearing from said crank handle to said shaft arranged parallel to the plane of said cover and within the recess formed by said flaring flange.

1,753,122. WATER FOUNTAIN. REUBEN KIELSMEIER, Baldwin Park, Calif. Filed Nov. 16, 1928. Serial No. 319,917. 5 Claims. (Cl. 137—68.)

1. An automatic valve comprising a valve body having inlet and exhaust ports at its ends, a valve member carried within the inlet port, said body having a communicating passage between the ports, a stem for the valve extending through the passage into the exhaust port, a block mounted within the exhaust port, a movable arm adapted to retain the block in juxtaposition to the stem, an operating lever carried by the arm to actuate the block to unseat the valve, and a water pan suspended from the lever for actuating the lever and adapted to move said arm when the lever is moved a predetermined amount to permit seating of the valve.



1,753,123. CELL FOR ELECTROLYZING SOLUTIONS OF ALKALI CHLORIDES. EDOUARD KREBS, Oslo, Norway. Filed May 4, 1927, Serial No. 188,795, and in Germany Mar. 15, 1926. 1 Claim. (Cl. 204—58.)

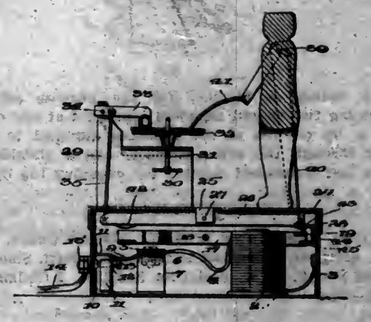
A cell for electrolyzing solutions of alkali chlorides comprising an outer unsubdivided tank for the electrolyzed liquid and the hydrogen, a trough for sealing liquid at the top of the tank on all its sides and trough extending across the tank and connected to the aforesaid trough, and electrolyzing units in the tank each consisting of an anode carrying cell top, a cathode and a diaphragm adjacent thereto, said cathode and diaphragm folded to form two adjacent pockets in which two anodes are supported from said top, said units being supported by the trough in the gas space of the outer tank.

1,753,124. AUTOMOBILE TIRE LOCK. JOSEPH LAURO, South Miami, Fla., assignor of one-half to Raphael Ragozzino, Miami, Fla. Filed Aug. 21, 1928. Serial No. 301,137. 3 Claims. (Cl. 70—90.)

1. In combination with a rim, a tire having a tube projecting therethrough, a securing element engaging said tube, locking means carried by the rim, means operable to place the locking means in and out of engagement with

said tube consisting of a locking member, relatively movable slides, and levers connected to said locking member and to said slides.

1,753,125. GARTER. MAX LEDERMAN, New York, N. Y. Filed Aug. 23, 1928. Serial No. 301,597. 1 Claim. (Cl. 241—6.)

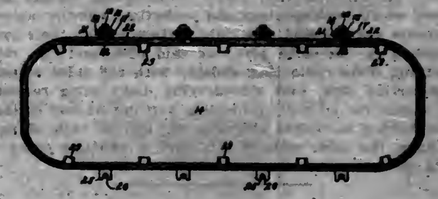


A garter, including a substantially rectangular body of cloth having concave sides, a stud connected with said body near each of two of the corners of the body, hose supporting members connected to the opposite corners of the body, an encircling band connected to one corner of the body and disengageably connected to the stud at the opposite corner, and a shirt-holding member connected to each of said studs, extending in an opposite direction to the hose supporting members, each of said shirt-holding members having means for gripping part of the shirt, for preventing the shirt from moving upward.

1,753,126. GUIDE DEVICE. ARTHUR LEE LIGON, Fort Stockton, Tex. Filed Feb. 23, 1928. Serial No. 256,369. 7 Claims. (Cl. 308—3.)

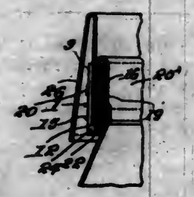
1. A guide device for reciprocating members comprising a guide yoke formed to provide spaced parallel guide members interconnected at one of the ends thereof and supported at their interconnected ends from one side of a reciprocating member, and a fixed part engaged by said guide member for reciprocating movement relative thereto.

1,753,127. ELECTRIC TOY. ARD L. MACKLIN, Detroit, Mich. Filed Apr. 22, 1927. Serial No. 185,861. 8 Claims. (Cl. 46—49.)



3. An electric toy including a casing, electro-magnetic actuating means mounted in said casing, a cover removably mounted on the casing, a movable figure carried by the cover, an armature carried by the cover in position to be actuated by the electro-magnetic actuating means, and means positively connecting said armature with the movable figure.

1,753,128. METHOD OF RECOVERING ALKALI. RALPH H. MCKEE, New York, N. Y. Filed Oct. 24, 1924. Serial No. 745,712. 4 Claims. (Cl. 23—48.)



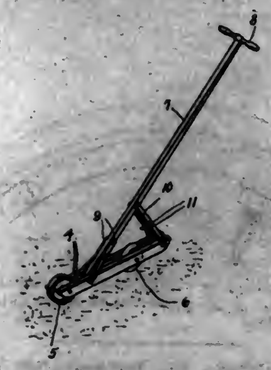
3. A process of the character described which comprises removing the excess water by filtration from a mixture of black ash residue and calcium carbonate sludge, and passing the resulting product through a heated zone.

1,753,129. DETACHABLE CONNECTION AND CLAMP. WILLIAM M. MOLDEN, Lake Charles, La., assignor of one-half to Earl C. Reid, Lake Charles, La. Filed Apr. 4, 1928. Serial No. 267,376. 1 Claim. (Cl. 121—194.)

A seal for the oil pans of engine crank cases comprising a channel member seated upon its closed side on the upper edge of the pan to accommodate the depending flange of the crank case within its open side, a packing carried within the open side of the channel engaging said flange, and spouts formed upon the inner side walls of the channel to drain the lubricant from the flange and packing within the pan.

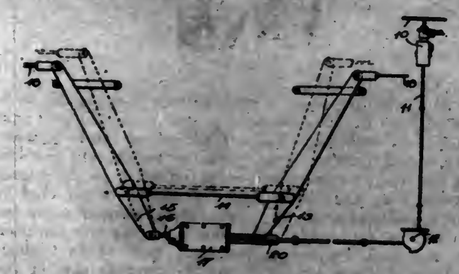
1,753,130. COLLAR BUTTON. DANIEL NACHTIGAL, Hibbing, Minn. Filed May 31, 1929. Serial No. 367,545. 3 Claims. (Cl. 24—100.5.)

1. A button or fastener for the purpose set forth, comprising two spaced members connected at one of their ends, a lip on one of the members designed to be received through the other member, and a slidable latch on the last mentioned member for engaging the lip.



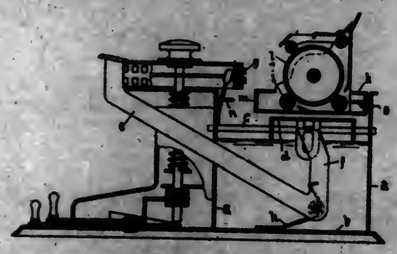
1,753,131. RESILIENT WHEEL. GEORGE ORBIN, Smock, Pa., assignor of one-half to Nick Franchetti, Smock, Pa. Filed Nov. 9, 1928. Serial No. 318,233. 2 Claims. (Cl. 152—28.)

2. A resilient wheel comprising a hub-carried disk having openings spaced outwardly from its center and spaced apart circumferentially, coiled compression springs disposed within said openings and projecting laterally beyond opposite sides of said disk, said springs having their axes disposed in the same plane as said disk, and two rim-carrying disks contacting slidably with the sides of said hub-carried disk, said rim-carrying disks being recessed to receive the laterally projecting portions of said springs and having shoulders abutting one end of each of said springs, the other ends of said springs abutting edges of said openings.



1,753,132. EDGE TRIMMER. ADAM RUEBEL, Ithaca, N. Y. Filed May 21, 1928. Serial No. 279,397. 1 Claim. (Cl. 97—227.)

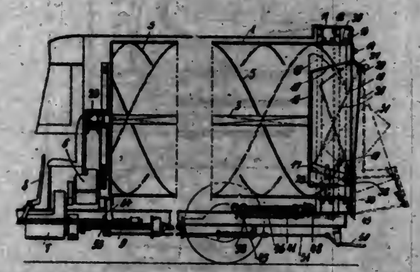
In a lawn edging implement of the class described, a frame embodying a pair of spaced parallel runners, a surface engaging roller rotatably mounted between the forward ends of the runners, a rotary cutting disc mounted between the intermediate portions of the runners, an upwardly and rearwardly inclined handle fastened at its lower ends between the runners at a point intermediate the roller and cutting disc, together with a downwardly and rearwardly inclined brace fastened to the intermediate portion of the handle, and also fastened between the rear



ends of the runners at a point in rearwardly spaced relation from the cutting disc, whereby the rear ends of the runners may be urged into ground engaging contact constituting a guide for the cutting disc.

1,753,133. HAND BRAKE. WILLIAM H. SAUVAGE, New York, N. Y., assignor, by mesne assignments, to Royal Railway Improvements Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 9, 1925. Serial No. 7,960. 31 Claims. (Cl. 188—198.)

28. In combination with the foundation brake rigging of a railway vehicle having truck brake levers and cylinder levers, a manually actuated regulator positioned at approximately one end of the car, and connecting means from said regulator to one of said cylinder levers.

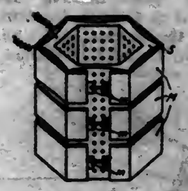


1,753,134. FEED DEVICE FOR THE CARRIAGE OF TYPEWRITING MACHINES. MAX SCHMID, Nuremberg, Germany. Filed Jan. 15, 1929, Serial No. 332,648, and in Germany Apr. 13, 1928. 1 Claim. (Cl. 197—89.)

A feed device for the carriage of typewriting machines in which the platen is moved for printing the types towards

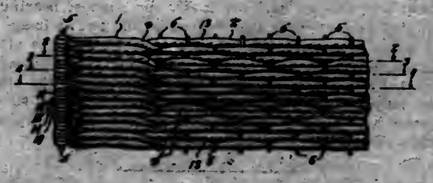
the types arranged on an endless rubber band or the like, comprising in combination with the machine frame the type disc and the platen, a paper carriage having perforations in its front and rear longitudinal walls, a front wedge pin, and a rear wedge pin on the machine frame opposite the long sides of the paper carriage co-operating with said perforations in the long side of the carriage in such a manner that at the forward movement said carriage is shifted the width of a perforation and at the backward movement the distance between two adjacent perforations.

1,753,135. DOOR FOR VEHICLES FOR REMOVING HOUSE REFUSE. PAUL SCHUBERTH, Augsburg, Germany. Filed June 1, 1927, Serial No. 195,643, and in Germany Oct. 21, 1926. 4 Claims. (Cl. 214—67.)



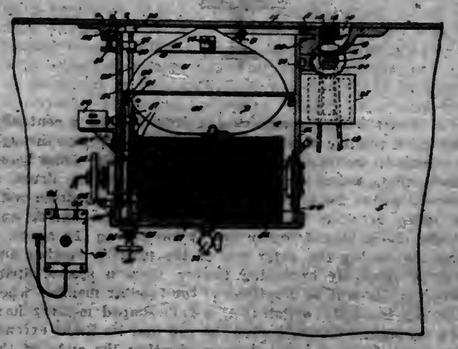
2. In power driven vehicles for removing house refuse, comprising a rotatable drum, a lid suspended, so that it bears against the rear open end of said drum, a conical projection on said lid, an outer closing wall on said lid forming a closed hollow space in the said conical projection of said lid and having an aperture, a door suspended in said aperture so that it can be pressed into said hollow space in the lid, a packing ring on the inner side of said closing wall of the lid, a sliding ring on the rear end of said drum the outer edge of said packing ring fixed on the lid and its inner edge turned towards said sliding ring of said drum, means for raising the inner edge of said packing ring, and means for pressing said lid against the open end of said drum.

1,753,136. MOUNTING DEVICE FOR SEED PLANTERS. PETER SCRIMGER, Detroit, Mich. Filed Jan. 20, 1926. Serial No. 82,433. 3 Claims. (Cl. 111—89.)



1. In a device of the character described, the combination with a planter having an upwardly extending pivotally mounted operating lever adapted to be reciprocated to discharge seeds therefrom, of a vehicle having an axle and wheels, a cam rotatable with said wheels, a rock shaft, means for supporting said rock shaft from the axle of said vehicle, means for oscillating said rock shaft as said cam rotates, an arm fixed on said rock shaft, a support pivotally arranged on the extremity of said arm, said planter held pivotally by said support to swing back on engaging the ground and adapted to be moved up and down by the movement of said rock shaft, a fixed crossbar against which the operating rod rests and which forces said rod forward as the planter swings back to discharge seeds therefrom, and spring means for tending to hold said planter in a vertical position.

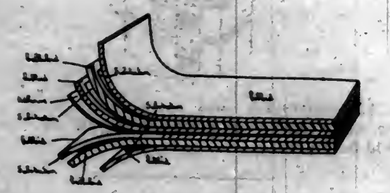
1,753,137. ELECTROSTATIC LOUD-SPEAKER. GEORG SEIBT, Berlin-Schoneberg, Germany. Filed Aug. 8, 1927, Serial No. 211,544, and in Germany Aug. 12, 1926. 7 Claims. (Cl. 179—111.)



1. An electrostatic loud speaker, comprising a fixed prism, and vibrating coverings covering the external faces of said fixed prism.

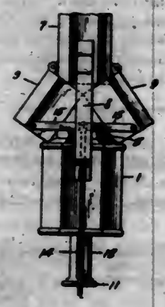
1,753,138. PADDING WITH SELVEDGE. EUGENE N. SITTON, La France, S. C. Filed May 20, 1929. Serial No. 364,593. 3 Claims. (Cl. 139—383.)

1. A padding for use on the rollers of ironing machines comprising a thickly woven padding formed of warp threads, a plurality of weft strands arranged one over the other with a plain weave, said strands having an end portion of substantial length through which no warp threads cross to provide an end portion of less thickness than the main body of the padding, the ends of the respective weft threads each being looped, and having a single warp strand extending through said loop.



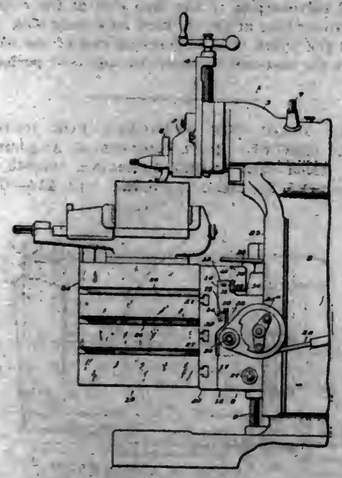
1,753,139. SIGNAL AND COMMUNICATION MECHANISM FOR SUNKEN SUBMARINES. HERMAN C. STANGER, Fort Ann, N. Y. Filed July 13, 1928. Serial No. 292,431. 9 Claims. (Cl. 114—16.5.)

1. In combination with a submarine, of a casing in the submarine, a reel and a buoy housed in the casing, a cable wound about the reel and connected with the buoy, a cover



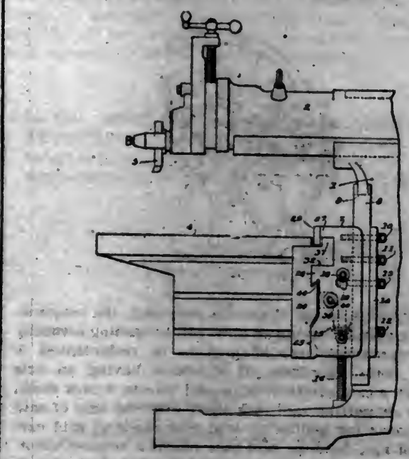
for the casing forming part of the wall of the submarine, means for hingedly mounting the cover, chain and sprocket means for opening and closing the cover, rods rotatably mounted in the casing and accessible interiorly thereof and threadedly engageable with the cover to lock the same in a closed position, means for limiting the upward and downward sliding movement of the rod.

1,753,140. MULTICOLOR CINEMATOGRAPH AND OTHER FILMS. JOHN EDWARD THORNTON, London, England, assignor to John Owden O'Brien, Manchester, England. Filed May 5, 1924, Serial No. 711,255, and in Great Britain May 18, 1923. 5 Claims. (Cl. 88—16.4.)



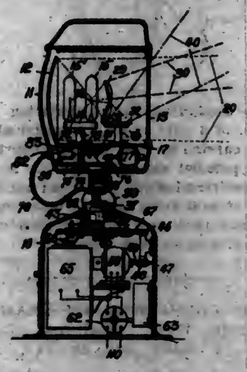
1. A multi-color picture-positive having four component images in two half pictures and comprising two thin transparent supports of half thickness, one support bearing a half picture containing two component images, an image in one color upon each side of said support, and the other support bearing a half picture containing two component images, an image in one color upon each side of the other thin support, the two transparent supports being superimposed with the two half pictures assembled and disposed within one picture area and cemented together.

1,753,141. GAS BURNER. FLOYD WYATT, Whittenberg, Tex. Filed Dec. 26, 1928. Serial No. 328,561. 3 Claims. (Cl. 158—99.)



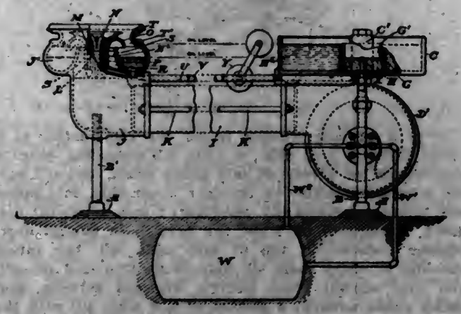
3. A gas burner comprising a drum having a centrally arranged tubular part passing longitudinally therethrough to form an air passage, the inner end of the drum being perforated, means for introducing gas into the drum, a barrel, means for connecting the barrel to the drum with a space between the adjacent ends of the barrel and drum, doors hinged to the barrel for closing the space, a cap for closing the outer end of the tubular member and having inwardly extending fingers thereon spaced apart whereby air will be admitted to the tubular member when the cap is partly withdrawn, a yoke-shaped member having its bight connected with the cap and its limbs extending over the doors and links connecting the ends of the limbs with the doors whereby the doors and cap will be moved to open position when the yoke-shaped member is pulled outwardly.

1,753,142. GUIDE RAIL FOR SHAPING MACHINE WORKTABLES. WILLIAM F. ZIMMERMANN, Maplewood, N. J., assignor to Gould & Eberhardt, Newark, N. J., a Corporation of New Jersey. Filed Jan. 9, 1925. Serial No. 1,384. 8 Claims. (Cl. 90—38.)



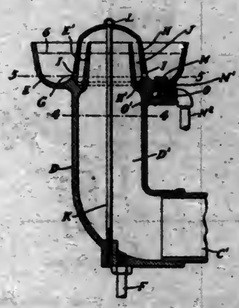
8. In a shaper having a reciprocating tool-carrying ram and a work-table, the combination comprising a cross-rail having at its upper edge a solid undivided guide plate and at its lower edge a thrust bearing plate, said guide plate affording, at its top, bottom and rear sides, bearing surfaces adapted respectively to support the weight of the worktable and to prevent outward and upward movement thereof and said thrust bearing plate preventing inward movement of the lower part of said table; and a screw shaft located wholly at one side of said guide plate and between the guide plate and said thrust bearing plate for moving the table along the rail.

1,753,143. SHAPING-MACHINE WORK-TABLE CROSS-RAIL GUIDE. WILLIAM F. ZIMMERMANN, Maplewood, N. J., assignor to Gould & Eberhardt, Newark, N. J., a Corporation of New Jersey. Filed Oct. 29, 1927. Serial No. 229,542. 12 Claims. (Cl. 90—38.)



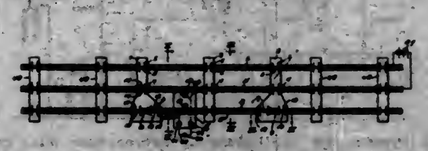
2. A machine tool combining a cross-rail; a table horizontally adjustable therealong, said rail comprising a lower substantially vertical bearing plate, a horizontally projecting ledge affording above the centerline of said table a relatively wide table seat, and an overhanging member projecting downwardly toward said ledge; a portion on said table engaging said bearing plate, said table also having portions adapted to rest upon said table seat and to project upwardly behind and engage said overhanging member.

1,753,144. UNATTENDED BEACON. PRESTON R. BASSETT, Brooklyn, N. Y., assignor, by mesne assignments, to Sperry Gyroscope Company, Inc., a Corporation of New York. Filed June 20, 1928. Serial No. 646,651. 8 Claims. (Cl. 240—1.)



1. In a beacon, a source of light, means for reflecting all of the light at the rear of said source to form a beam, and a plurality of condensers for utilising various portions of the light at the front of said source to project a plurality of beams at progressively increasing angles to said first beam.

1,753,145. OIL FEEDING AND BURNING APPARATUS. ALBERT E. GRANT, New York, N. Y., assignor to Grant Heat Machine Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 11, 1928. Serial No. 253,581. 4 Claims. (Cl. 158—92.)

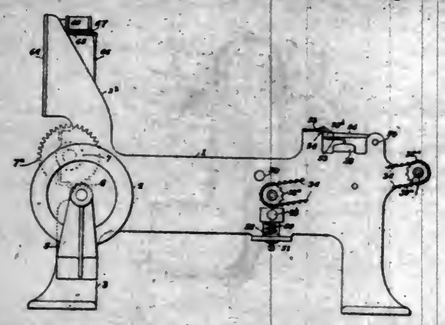


1. A device of the character described comprising a motor, an air pump and two oil pumps driven thereby, a large burner and a small burner located adjacent thereto which serves to generate heat and also as a pilot light for the large burner, a chamber for oil in communication with the large burner and a chamber for oil in communication with the small burner; the level of the oil in said first chamber being maintained above that of the level in the second named chamber, one of said pumps acting to supply oil to both of said chambers and one acting to return the surplus oil from said chambers to the source of supply.

1,753,146. OIL-BURNING APPARATUS. ALBERT E. GRANT, New York, N. Y., assignor to Grant Heat Machine Corporation, New York, N. Y., a Corporation of Delaware. Filed Mar. 15, 1928. Serial No. 261,740. 6 Claims. (Cl. 158—92.)

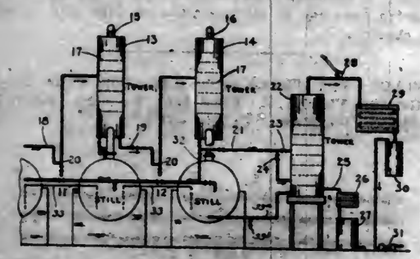
3. A burner-head of the character described comprising a casing having a central passage for air extending to the top thereof, and having an uncovered annular combustion chamber for oil surrounding said passage, the top edge of which is located in alignment with the upper end of said air passage, a cap covering said central passage the inner sides of which contribute to form an annular passage for air leading to said annular chamber near the lower end thereof; said construction embodying a plurality of oil passages leading thru the bottom of said annular chamber into same, and porous heat-refractory material thru which the oil must pass located in said passages to serve as wicks and serving to prevent sudden excessive quantity of oil from flowing into said combustion chamber.

1,753,147. TOY TRACKAGE. LEVIN GESSFORD HANDY, Mountain View, N. J. Filed Sept. 18, 1926. Serial No. 136,359. 9 Claims. (Cl. 246—31.)



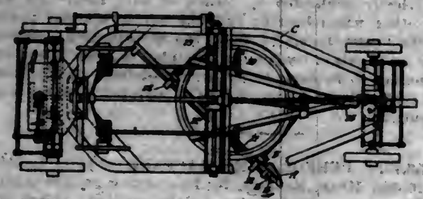
1. As an article of manufacture, an electric toy track section intended to be attached to or removed from track forming relation with the other electric toy track sections in the usual manner, said section being made up of spaced wheel bearing rails and an intermediate insulated third rail with cross ties by which all of the rails are mechanically connected together for unitary handling, all of the rails having means at their ends by which they may be readily mechanically connected in track forming relation with adjacent ends of other toy track sections, and one of the wheel bearing rails having a portion of its length electrically connected by means of said cross ties with the other wheel bearing rail but having another portion of its length insulated from the first portion and from said other wheel bearing rail adapted thereby to serve as a contact to be engaged by the wheels of a passing train for controlling a shunt circuit in parallel with the train circuit.

1,753,148. PERFORATING MACHINE AND THE LIKE. ROBERT HEAD, Yonkers, N. Y., assignor to The Aeolian Company, a Corporation of Connecticut. Filed July 29, 1924. Serial No. 728,856. 19 Claims. (Cl. 164—115.)



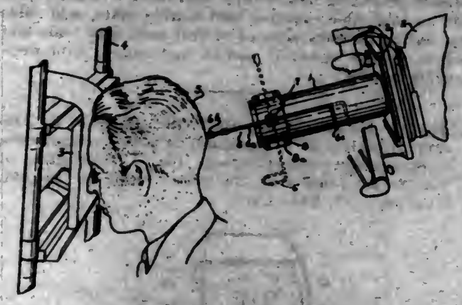
6. In combination, means for supporting and driving a perforated master record, a conically pointed selector

finger, said perforations of the master record and said conical point being of such relative size that the point can pass well into but not wholly through said perforations, said conically pointed selector finger being supported to trail longitudinally along the traveling record



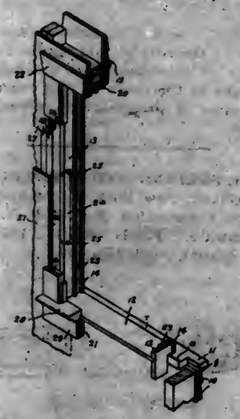
in contact therewith and, as it trails, to be movable to enter and exit from successive aligned perforations in said master record and also to be freely movable laterally in following said record to enable said conical point to enter fully into the several perforations of said record so as to be in effect supported thereby.

1,753,149. DISTILLATION OF HYDROCARBONS. HENRY H. HEWETSON, Elizabeth, N. J., assignor to Standard Oil Development Company, New York, N. Y., a Corporation of Delaware. Filed June 25, 1923. Serial No. 647,515. 8 Claims. (Cl. 196—99.)



6. Process for distillation of hydrocarbon oils, comprising flowing an oil through a series of distilling zones, passing vapor from each zone to a corresponding rectification zone wherein liquid and vapor fractions are produced, passing the liquid fractions to the next rectification zone and rectifying the liquid therein.

1,753,150. DITCH CUTTER FOR GRADERS. DANIEL C. HINDS, Sioux Falls, S. Dak., and ORVILLE Q. HINDS, Chicago, Ill., assignors to Ryan Manufacturing Corporation, Chicago, Ill., a Corporation of Illinois. Filed Apr. 23, 1926. Serial No. 104,059. 5 Claims. (Cl. 37—143.)



1. A ditch shaper for graders including a plowing member of suitable marginal shape with upper and lower cutting edges, and means for detachably securing it against the front face of a reversible mold board at an end thereof so as to use either cutting edge.

1,753,151. X-RAY CENTERING DEVICE. SIDNEY ISRAEL, Houston, Tex. Filed Mar. 5, 1929. Serial No. 344,167. 9 Claims. (Cl. 250—94.)

8. In X-ray apparatus, the combination with an X-ray confining tube, of a pair of pins diametrically disposed on and rotatably carried by said tube, a centering device having a pair of parallel side bars slidable in said pins one end of said bars terminating in an end bar slidable on the lower surface of said tube, and the other end of said bars terminating in a knob centrally disposed with respect to the longitudinal axis of said tube.

1,753,152. BUILDING WINDOW FRAME. JOHN G. JONSON, Seattle, Wash. Filed Apr. 17, 1926. Serial No. 102,614. 2 Claims. (Cl. 20—11.)

1. In a building window frame, the combination of a pulley stile on each side; a main sill extending beneath and beyond the bottom of said pulley stiles, said sill having a raised shoulder on the rear upper side, said upper side sloping downwardly outwardly; and a sub-sill disposed as respects its front end portion in partial overlapping position on top of said main sill, the raised shoulder of which main sill extends up into said sub-sill, and said sub-sill being entirely disposed between said pulley stiles, whereby a portion of said main sill with the raised shoulder extends laterally beyond said pulley stiles, so that water is prevented from entering rearwardly of said shoulder on that portion of the main sill disposed laterally of said pulley stiles.

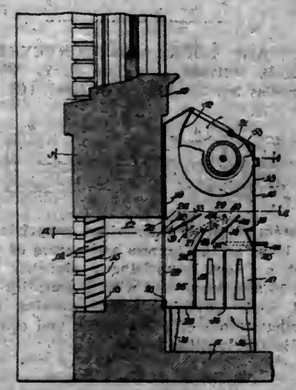
1,753,153. APPARATUS FOR THE WINDING OF ENDLESS BANDS. LUDWIG KOLM, Berlin, Germany, assignor to Aktiengesellschaft "Kolmag," Glarus, Switzerland. Filed Dec. 29, 1928, Serial No. 329,102, and in Germany Feb. 18, 1928. 6 Claims. (Cl. 88—18.7.)

1. A device for winding an endless longitudinally perforated band formed into a multi-layered roll having a looped portion extending from the inner to the outer periphery thereof, comprising, a feed sprocket having teeth adapted to engage said perforations, means supporting said sprocket for freely suspending said roll therefrom with the teeth thereof engaging said perforations, where-

by rotation of said sprocket feeds said band by positive action and rotates said roll to simultaneously unreel and reel said band, band directing means positioned in spaced relation to the outer periphery of said roll for returning said band thereto, and guide means for maintaining in alignment the band layers constituting said roll.

1,753,154. HEADLESS SET SCREW. MARTIN L. MARTUS, Woodbury, Conn. Filed Feb. 24, 1927. Serial No. 170,519. 2 Claims. (Cl. 85—1.)

1. A headless expandible set screw of the character described including a solid lower end portion having a portion of its peripheral surface tapered and the remainder thereof threaded, a socket in its upper end portion, a longitudinal slot in the side of the screw opening and extending only to the depth of the socket, and an inner annular tapered top end portion surrounding the open end of the socket and adapted to be expanded into locking engagement with its seat by the correspondingly tapered end portion of a similar screw when positioned thereagainst, either one of said screws being capable of use as a set-screw or as a locking member.

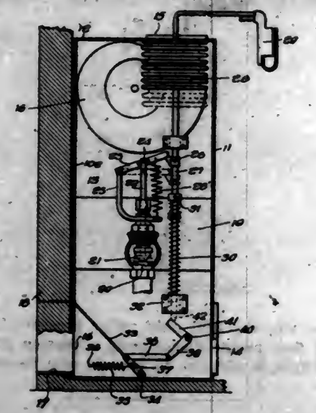


1,753,155. SHIP'S WHISTLE. CHESTER B. MILLS, Brooklyn, N. Y., assignor, by mesne assignments, to Sperry Gyroscope Company, Inc., a Corporation of New York. Filed Sept. 25, 1924. Serial No. 739,787. 11 Claims. (Cl. 116—4.)

1. A signal for ships and the like comprising a sound-producing mechanism adapted to be actuated by fluid under pressure for producing sound without visibility, a source of fluid under pressure, means adapted to become visible when mixed with said fluid under pressure, means whereby said fluid under pressure may be supplied to said mechanism and to said first means in the same operation,

and means whereby said fluid under pressure is effective upon said first means during only a portion of the time that said fluid is effective to operate said mechanism.

1,753,156. HEATING AND VENTILATING APPARATUS. GERALD E. OTIS, Moline, Ill., assignor to The Herman Nelson Corporation, Moline, Ill., a Corporation of Illinois. Filed May 25, 1927. Serial No. 193,979. 8 Claims. (Cl. 257—137.)

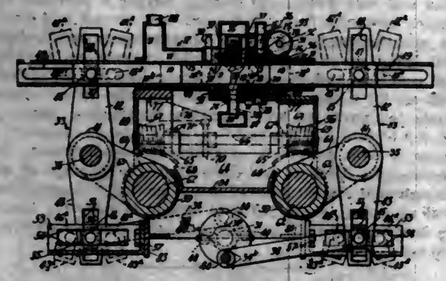


3. A heating and ventilating apparatus adapted to be placed within a room to be heated, and including in combination, a housing having top and bottom walls and front and rear walls, said housing having a partition extending upwardly from the bottom wall thereof and dividing said housing into separate compartments, said bottom wall being provided with an inlet communicating with said chamber, and the other compartment being provided with an inlet communicating with outside air at atmospheric temperature, said partition terminating short of the top of said housing and defining a mixing chamber; a source of heat supply in said heating compartment; interconnected dampers for controlling the passage of air through said compartments; and a suction fan associated with an outlet in the top wall of said housing for inducing discharge of the air passing through said housing into said room.

1,753,157. HEATING AND VENTILATING APPARATUS. GERALD E. OTIS, Moline, Ill., assignor to The Herman Nelson Corporation, Moline, Ill., a Corporation of Illinois. Filed Feb. 4, 1929. Serial No. 337,367. 11 Claims. (Cl. 236—38.)

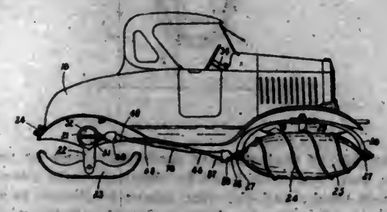
1. In an apparatus of the character described, the combination with a housing having a recirculating inlet for

indoor air and an inlet for outdoor air, and an outlet through which said air is discharged into an indoor compartment; heating means arranged within said housing; and co-ordinated regulating mechanism for controlling



said heating means, said indoor air inlet, and said outdoor air inlet, said means serving upon operation to restrict the heat output of the heating means and the ingress of recirculated air coincidentally with the admission of outdoor air into said housing.

1,753,158. AIR LOCK AND CONVEYER SYSTEM. WILLIAM D. PHILIPS, Brooklyn, N. Y. Filed May 13, 1926. Serial No. 108,990. 8 Claims. (Cl. 34—12.)



1. A system of the kind described comprising a treating room, air locks at the ingress and egress of the treating room, each air lock comprising a plurality of compartments out of alignment and with a plurality of self closing doors, and conveying means passing through the plural compartments of the air lock and converging into proximity in the treating room.

1,753,159. INTERNAL-COMBUSTION ENGINE. BURNHAM C. STICKNEY, Hillside, N. J. Filed Oct. 23, 1926. Serial No. 143,580. 13 Claims. (Cl. 123—48.)

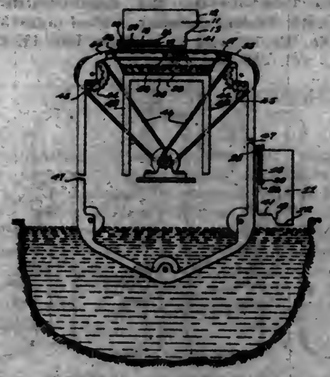
3. An internal combustion engine including a crank-shaft, a plurality of pairs of pistons, the pistons of each pair working in a cylinder extending transversely of the crank-shaft, each cylinder having midway thereof an explosion chamber, means including a set of levers of the first order on each side of the engine for connecting the pistons on said side to the crank-shaft, swingable arms upon which said sets of levers are fulcrumed, said arms enabling the fulcrums of the levers to be shifted to change the lengths of piston-strokes, a rotatable hub on each side of the engine connecting all the arms on said side, a shaft extending transversely of said hubs and having worms meshing with worm-segments on said hubs, and means including a pinion on said shaft, a rack meshing therewith, and a handle or lever connected to the rack for revolving said shaft at will.

1,753,160. AUTO SLED. SAMUEL N. STOWELL, Yuba City, Calif., assignor of one-fourth to Esther A. E. Rattray, Marysville, Calif. Filed Mar. 5, 1929. Serial No. 344,397. 1 Claim. (Cl. 180—8.)

In an auto sled of the character described, comprising in combination a chassis; runners supporting the rear end of said chassis; rotatably journalled drums supporting the forward end of said chassis; a differential housing supported from the rear end of said chassis; a transverse shaft journalled in said housing; a main drive shaft connecting from a motor and having one end geared to transmit driving power to said transverse shaft; a stub drive shaft supported in each end of said housing; a telescopic drive shaft connection intermediate its respective drum and its respective stub drive shaft and having a universal connection therewith; a clutch mechanism carried at each end of said transverse shaft; a drive connection between the stationary portion of each of said clutch members and its respective stub drive shaft; a movable portion of each of said clutch members being mounted in reciprocal keyed relationship to said transverse shaft and normally in engaged position and a means for reciprocating last said portions individually without disengaging the other of said portions.

1,753,161. PEN-POINT ALLOY. JOHN E. WOODWARD, Brooklyn, N. Y., assignor to Messrs. Kastenhuber & Lehrfeld, New York, N. Y., a Partnership consisting of Charles F. Kastenhuber, William F. Lehrfeld, and Hugo R. Lehrfeld. Filed Dec. 19, 1927. Serial No. 241,278. 5 Claims. (Cl. 75—1.)

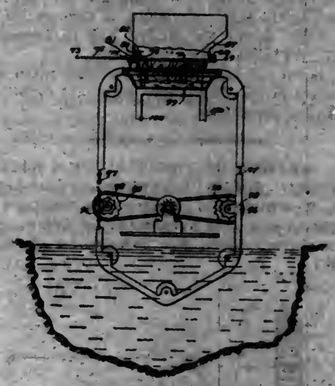
5. An alloy comprising 5–15% of a metal of the tungsten group; 1 to 5% of a metal of the nickel group; 5–15% of platinum; and 70–85% of osmium.



1,753,162. ALLOY. JOHN E. WOODWARD, New York, N. Y., assignor to Kastenhuber & Lehrfeld, New York, N. Y., a Partnership of Charles F. Kastenhuber, William F. Lehrfeld, and Hugo R. Lehrfeld. Original application filed Dec. 19, 1927, Serial No. 241,278. Divided and this application filed May 22, 1929. Serial No. 365,232. 4 Claims. (Cl. 75—1.)

4. An alloy comprising 10–20% of a metal of the tungsten group; 2–8% of a metal of the nickel group; and 70–85% osmium.

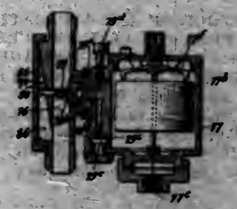
1,753,163. WATER HOIST. THOMAS C. SPELLING, New York, N. Y. Filed Dec. 12, 1928. Serial No. 325,622. 14 Claims. (Cl. 198—143.)



1. In an apparatus of the character described, the combination with a container having horizontal slots in

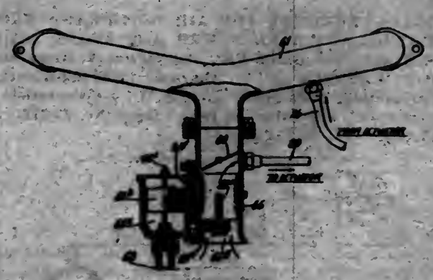
the sides thereof and an open bottom portion, of a sliding door for the bottom portion, and means for operating the sliding door through the slots in the sides of the container including pivoted catches near the path of movement of the container, substantially as and for the purpose described.

8. In a machine of the character described, a container for liquids, the forward end of the container being formed with relatively upper and lower openings, and flexible flap valves for said openings, one arranged to open inwardly and the other outwardly, substantially as and for the purpose described.



1,753,164. WATER HOIST. THOMAS C. SPELLING, New York, N. Y. Filed Feb. 25, 1929. Serial No. 342,658. 17 Claims. (Cl. 198—143.)

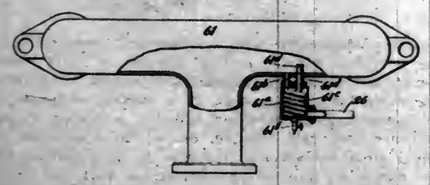
1. In an apparatus of the character described, a container for liquids having an open discharge portion and a slotted end wall, and a sliding closure for the discharge portion adapted to move through said slotted end wall in opening the discharge portion, in combination with sealing means at the slotted end portion of the wall cooperatively related to the sliding closure to prevent leakage therebetween.



8. In an apparatus of the character described, a container for liquids having a bottom discharge opening, a closure therefor, and means adapted to be controlled by the liquid discharging from the container for directing said discharging liquid to the intended zone of escape.

1,753,165. APPARATUS FOR OPERATING SUCTION-ACTUATED DEVICES IN CONNECTION WITH THE SUCTION PASSAGES OF INTERNAL-COMBUSTION ENGINES. CALEB S. BRAGG, Palm Beach, Fla., and VICTOR W. KLIESRATH, Port Washington, N. Y., assignors to Bragg-Kliesrath Corporation, Long Island City, N. Y., a Corporation of New York. Filed Mar. 16, 1925, Serial No. 15,732. Renewed Jan. 5, 1929. 12 Claims. (Cl. 123—127.)

1. The combination with an internal combustion engine, provided with a suction passage, a main carburetor for the engine communicating therewith and a throttling valve for said passage, of a suction actuated device comprising an actuator cylinder, a piston therein and controlling valve mechanism, an air connection extending from the actuator cylinder to said suction passage, means for preventing interference with the operation of the engine, or stalling it if idling, by the operation of the suction actuated device, comprising a separate and independent carburetor for the air withdrawn from the suction actuated device located in said air connection and provided with a float chamber, a float and liquid fuel control valve connected therewith, the space above the liquid in the float chamber being in communication with the atmosphere, a jet nozzle connected with said float chamber for supplying fuel to the air passing through said air connection and means for equalising the pressure on the discharge orifice of the jet nozzle and in said float chamber to prevent flooding the separate carburetor and the air connection, when the suction actuated device is not in operation.

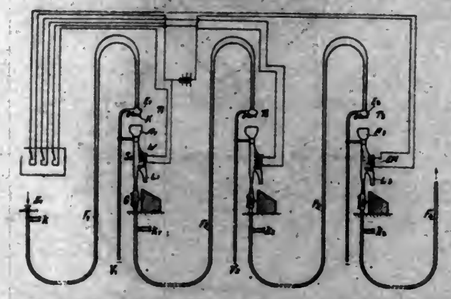


1,753,166. METHOD OF AND APPARATUS FOR OPERATING SUCTION-ACTUATED DEVICES IN CONNECTION WITH THE SUCTION PASSAGES OF INTERNAL-COMBUSTION ENGINES. CALEB S. BRAGG, Palm Beach, Fla., and VICTOR W. KLIESRATH, Port Washington, N. Y., assignors to Bragg-Kliesrath Corporation, Long Island City, N. Y., a Corporation of New York. Filed May 5, 1925, Serial No. 28,104. Renewed July 13, 1929. 10 Claims. (Cl. 123—198.)

1. The combination with an internal combustion engine provided with a suction passage for supplying an explosive mixture to the engine cylinders, means for supplying the normal charge forming explosive mixture to said passage, and a throttle valve for controlling said passage, of a suction actuated device connected with said suction passage between the throttle valve when in normal, closed, or partially closed operative position, and

the engine cylinders, and provided with a higher pressure fluid inlet, means for delivering a portion of said explosive mixture to said inlet to effect the operation of the suction actuated device, and for withdrawing the said mixture through the connection between the suction actuated device and said portion of the suction passage when the throttle valve is in position to produce rarification therein.

1,753,167. METHOD OF AND APPARATUS FOR OPERATING SUCTION-ACTUATED DEVICES IN CONNECTION WITH THE SUCTION PASSAGES OF INTERNAL-COMBUSTION ENGINES. CALEB S. BRAGG, Palm Beach, Fla., and VICTOR W. KLIESRATH, Port Washington, N. Y., assignors to Bragg-Kliesrath Corporation, Long Island City, N. Y., a Corporation of New York. Filed June 16, 1925. Serial No. 37,407. Renewed July 13, 1929. 12 Claims. (Cl. 123—198.)

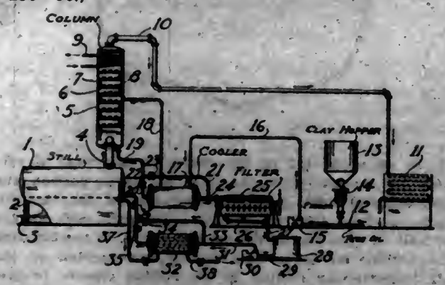


1. The combination with an internal combustion engine, provided with a suction passage communicating with the engine cylinder, or cylinders, a carburetor connected thereto for supplying the normal charges for the engine cylinders at all speeds, a throttle valve for controlling said passage, a suction actuated device, and a suction pipe connecting it with said passage, of a receptacle interposed between said suction pipe and the said suction passage, and a capillary medium within said receptacle for holding said liquid fuel collected from said suction passage, and effecting the carburetion of the air withdrawn from the suction actuated device before it reaches the suction passage to prevent interference with the operation of the engine or stalling it if idling, by the operation of the suction actuated device, said capillary medium having portions projecting from the upper end of said receptacle into a portion of said suction passage adjacent to the engine cylinder, or cylinders, and a portion projecting from the lower end of said receptacle into a vertically disposed portion of said suction passage, adjacent to the carburetor, for collecting liquid fuel from the charge forming mixture and automatically draining said receptacle of excess liquid fuel so collected thereby in excess of its ability to hold the same.

1,753,168. FUELIZER FOR AIR WITHDRAWN FROM SUCTION-ACTUATED POWER ACTUATORS. CALEB S. BRAGG, Palm Beach, Fla., and VICTOR W. KLIESRATH, Port Washington, N. Y., assignors to Bragg-Kliesrath Corporation, Long Island City, N. Y., a Corporation of New York. Filed May 28, 1925. Serial No. 33,375. 21 Claims. (Cl. 261—69.)

1. Means for carbureting air withdrawn from a suction operated power actuator to the suction passage of an internal combustion engine acting as a source of suction, comprising a hollow body having an air passage therethrough, a fuel supply inlet to said hollow body, a valve for controlling said inlet, and a diaphragm member constructed to pass quantities of air ineffectual to affect the operation of the engine if unfuelized, said diaphragm flexed only by abnormal quantities of air traversing said air passage to directly open said fuel valve.

1,753,169. TUBULAR POSTAL SECTION. WILHELM HÖHNE, Berlin-Charlottenburg, Germany, assignor to Deutsche Telephonwerke und Kabelindustrie Aktiengesellschaft, Berlin, Germany. Filed Jan. 31, 1929. Serial No. 336,538, and in Germany Dec. 11, 1925. 17 Claims. (Cl. 243—6.)

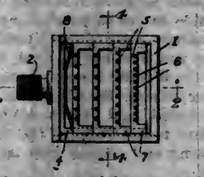


1. A tubular despatch system comprising a plurality of separate sections, separate means at the points of division of the sections for supplying actuating fluid to each of said sections, the adjacent ends of said sections being so arranged that a carrier moves from one section into the succeeding section in one direction under the force of inertia alone, and switches at the division points of said sections for deflecting a carrier from said sections, said switches being located in said sections adjacent the admission ends thereof.

1,753,170. PROCESS FOR INTRODUCTION OF IODINE INTO PYRIDINE DERIVATIVES. GERD KOCHENDÖRFER, Frankfort-on-the-Main, Germany, assignor to Deutsche Gold & Silver Scheideanstalt, vormals Roessler, Frankfort-on-the-Main, Germany, a Corporation. Filed Feb. 1, 1926, Serial No. 85,387, and in Germany Jan. 24, 1925. 6 Claims. (Cl. 260—42.)

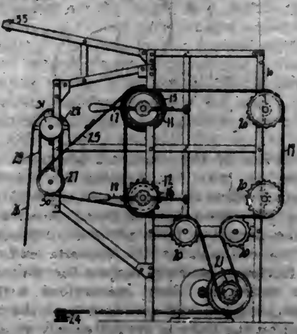
1. Process for the iodation of an α-substituted pyridine, which consists in reacting iodine with said pyridine under weakly alkaline conditions.

1,753,171. METHOD OF TREATING OILS WITH FINELY-DIVIDED SOLID MATERIAL. NATHANIEL E. LOOMIS, Westfield, N. J., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed June 12, 1928. Serial No. 284,850. 4 Claims. (Cl. 196—96.)



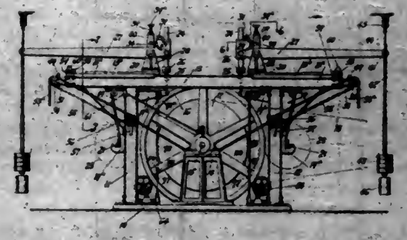
1. The method of treating crude oil, with or without a preliminary topping, which comprises introducing a mixture of crude oil and clay into the mid-portion of a group of rectifying zones, withdrawing liquid bottoms containing suspended decolorizing clay from the said group of rectifying zones, filtering said liquid bottoms to separate clay therefrom, conducting the filtered bottoms into a body of oil maintained at a temperature at which hydrocarbon vapors are evolved and conducing the evolved vapors into the said group of rectifying zones at or near the lower portion thereof.

1,753,172. CONSTRUCTION OF CLOSED VEHICLE BODIES. THOMAS PAUL LOHERMAN, Detroit, Mich. Filed Dec. 15, 1926. Serial No. 155,000. 1 Claim. (Cl. 296—137.)



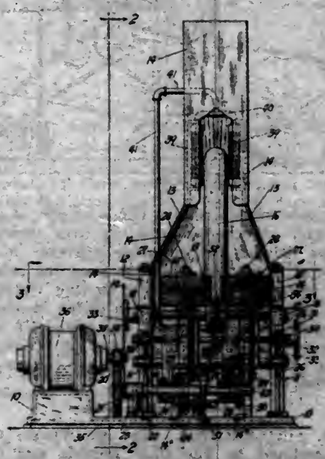
In combination with a roof frame and a deck covering therefor; a channel bearing member mounted on said roof frame; a flexible retaining member secured to the edge of said deck cover and engageable in said channel and removable from said channel only upon deformation from its normal shape; and a metallic reinforcing member embedded in said retaining member and normally resisting deformation of said retaining member from its normal shape and locking said retaining member against removal from said channel.

1,753,173. PRINTING CHASE. PAUL M. POPE, New York, N. Y., assignor to A. Kimball Company, New York, N. Y., a Corporation of New York. Filed July 20, 1927. Serial No. 207,051. 5 Claims. (Cl. 101—391.)



1. A printing chase comprising a rectangular frame having inner walls of equal length, the exterior of said frame being provided with means to support the chase in a fixed position in a printing machine, and each of the inner walls of said frame being straight from end to end thereof, but shaped from top to bottom to receive and support type bars of a length to extend from one inner wall to the opposite inner wall whereby said type bars may extend across said chase and be supported thereon in any position in either of two directions.

1,753,174. STRIP-PULLING DEVICE. RONALD F. RUSSELL, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 6, 1927. Serial No. 211,216. 2 Claims. (Cl. 242—55.)

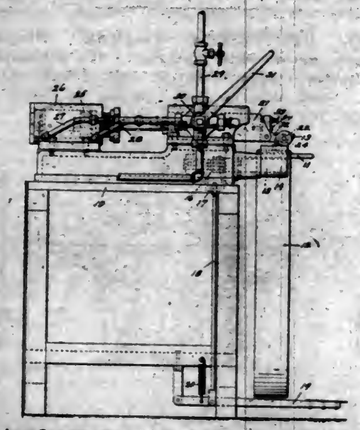


2. In combination with a strip material carrying liner, means for removing a strip from said liner by imparting intermittent jerks to the strip material to break adhesion thereof to the liner, means for passing said liner adjacent said strip removing means, and means operated by the passage of the liner for rotating said strip removing means.

1,753,175. TIRE-TESTING MACHINE. WILLIAM C. STEVENS, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 27, 1924. Serial No. 702,344. 40 Claims. (Cl. 73—51.)

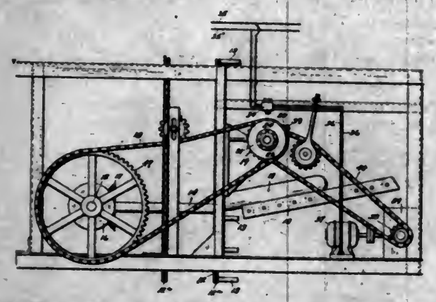
1. A tire-testing machine comprising a rotary drum, a mounting for a tire normally holding the tire away from the drum, means for urging the tire relatively against the surface of the drum, and means adapted to be actuated by movement of the tire to release the first means when the tire bodily moves a predetermined distance relatively toward the drum.

1,753,176. METHOD AND APPARATUS FOR DRYING ARTICLES. WILLIAM C. STEVENS, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Dec. 4, 1924. Serial No. 753,853. 8 Claims. (Cl. 34—26.)



1. That method of drying articles of torus shape which comprises rotating the articles while directing one blast of air against their outer peripheries and other blasts of air over their sides.

1,753,177. BENDING MACHINE. WILLIAM C. STEVENS, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 18, 1926. Serial No. 136,288. 6 Claims. (Cl. 153—25.)

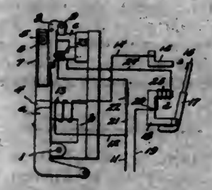


1. Apparatus for bending valves on tubes, said apparatus comprising means for supporting a tube therein,

means for clamping the valve in fixed position on the support, said means comprising arms movable into valve embracing relation, a bending roller provided with valve

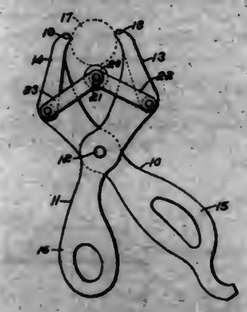
embracing flanges movable over the support, said support and said roller being adjustable relatively toward and from each other and toward and from the clamping arms.

1,753,178. SAFETY CLUTCH FOR TIRE CONVEYERS. FREDERICK H. TENNEY, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 3, 1926. Serial No. 99,486. 4 Claims. (Cl. 192—129.)



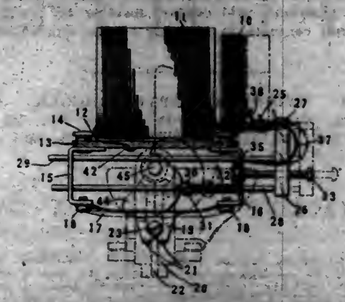
1. The combination with a tire conveyer, of an elevating conveyer arranged to pick up tires therefrom and means for driving the elevating conveyer including a prime mover, a friction clutch between the prime mover and the elevating conveyer, the driving clutch member having a cam thereon, the driven clutch member having a radially movable pin therein, and means for cutting off power to the prime mover adapted to be actuated by movement of the pin outwardly by the cam due to relative rotation of the clutch members.

1,753,179. CONNECTER. ROY O. WEATZ, Cleveland, Ohio, assignor to The Ohio Electric and Controller Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 16, 1925. Serial No. 2,783. 2 Claims. (Cl. 173—363.)



1. A connecter of the character set forth comprising a pair of telescoping shells adapted to be detachably connected together, an insulating sleeve positioned within each of said shells, a contact support positioned within one of said sleeves and having a bore therein, a spring secured in said bore and projecting from said support, a contact member carried by the said spring, a plurality of flexible conductors connecting said contact member and contact support, a contact member positioned within the other of said sleeves and adapted to engage the first mentioned contact member when the shells are connected, means for securing said sleeves against relative movement within said shells and means for detachably connecting said shells together.

1,753,180. SWITCH-ACTUATING MECHANISM. GEORGE H. WHITTINGHAM, Baltimore, Md., assignor to Monitor Controller Company, Baltimore, Md., a Corporation of Maryland. Filed Dec. 8, 1926. Serial No. 153,304. 5 Claims. (Cl. 175—375.)



3. An alternating current switch operating mechanism comprising a main magnet, a holding magnet, an operating lever movable to closed position by the main magnet, a holding armature movable to closed position by said operating lever and adapted to hold the latter in closed position while the holding magnet is energized, a normally open switch for closing the circuit of the main magnet, a magnet for closing said switch, a circuit including the coils of the latter magnet and of the holding magnet, and means for opening and closing said latter circuit.

1,753,181. FUSE TONGS. HAROLD D. GRINNELL, Pittsfield, Mass., assignor to The G. C. A. Manufacturing Company, Pittsfield, Mass., a Corporation of Massachusetts. Filed Sept. 26, 1928. Serial No. 308,406. 2 Claims. (Cl. 81—3.8.)

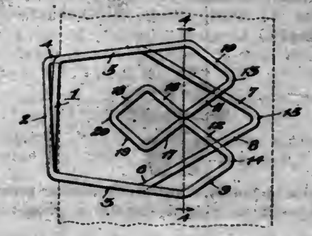
1. In a device of the character described, in combination, a pair of jaws for gripping an object and auxiliary gripping means carried on and operated by the jaws for moving the object into gripping position, said auxiliary means including links pivotally connected to each other at one end and at the opposite end to opposite jaws and having a bearing surface for contact with the object, the links and their connections with the jaws being so proportioned and arranged that the bearing surface carried by the links is approximately at all times the same distance from the points of engagement of the jaws with the object as the said points of engagement are from each other.

1,753,182. VARIABLE COUPLING DEVICE. LLOYD A. HAMMARLUND, Rockville Center, N. Y., assignor to The Hammarlund Manufacturing Company, Inc., a Corporation of New York. Filed Nov. 28, 1927. Serial No. 236,199. 5 Claims. (Cl. 171—119.)

1. A construction of the character described comprising two end brackets, two insulating strips connecting said brackets, a coil having one wall supported between said strips and a yoke connecting said brackets opposite said strips.

1,753,183. CASTER. WILFRED G. JOHNSON, Elyria, Ohio, assignor to The Colson Company, Elyria, Ohio, a Corporation of Ohio. Filed Dec. 17, 1927. Serial No. 240,698. 3 Claims. (Cl. 16—39.)

1. In a caster mechanism, a caster wheel, a mounting therefor comprising a bearing, a caster stem swivelly supported by the bearing on the mounting, said stem having an upper threaded portion, a shoulder on the stem portion disposed adjacent the bearing, a collar adapted to be seated on the shoulder, a second collar disposed on the threaded end of the stem, said collars both having convergingly tapered outer surfaces and a pair of expander elements interposed between the tapered surfaces of the collars, each of said elements comprising a resilient sheet metal stamping having a perforated central portion adapted to be telescoped over the stem end and a plurality of integral wings extending from the same side of the central portion in like angular relation thereto, the ends of the wings of one of said collars of each of said elements adapted to be cammed outwardly by the tapered outer surfaces of a different one of said collars, said expander elements being disposed between the collars with their central portions pressed together by the longitudinal pressure exerted on the ends of the wings by the collars, said stem, said collars and said elements adapted to be projected within the tubular leg of an article of furniture and to have the ends of the wings pressed outwardly by the collars upon rotation of the stem, one of said collars being held against longitudinal movement in a direction away from the other collar.



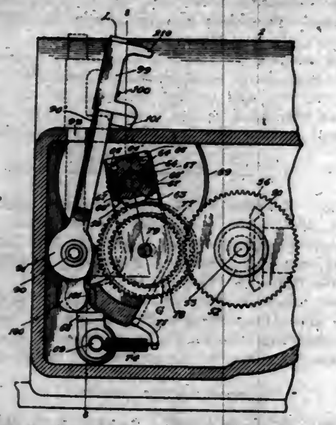
1,753,184. TREATMENT OF GUAYULE, ETC. DAVID SPENCE, Norwalk, Conn., assignor to Intercontinental Rubber Company, New York, N. Y., a Corporation of Delaware. Filed May 8, 1926. Serial No. 107,830. 21 Claims. (Cl. 18—50.)

1. The method of treating guayule or other rubber-bearing plants, etc., which comprises subjecting the same after harvesting and before treatment for the extraction of rubber therefrom to the action of a stabilising agent which will prevent the deterioration of the rubber in the plants.

1,753,185. EXTRACTION OF RUBBER FROM GUAYULE, ETC. DAVID SPENCE, Norwalk, Conn., assignor to Intercontinental Rubber Company, New York, N. Y., a Corporation of Delaware. Filed May 12, 1926. Serial No. 108,700. 18 Claims. (Cl. 18—50.)

1. The improved method of extracting rubber from guayule and other rubber-bearing plants, etc., which comprises subjecting the plants to mechanical extraction of the rubber therefrom in the presence of stabilising agents.

1,753,186. BILL HOLDER. LAWRENCE E. BAER, Attleboro, Mass., assignor to Baer & Wilde Company, Attleboro, Mass. Filed July 18, 1929. Serial No. 379,147. 1 Claim. (Cl. 24—261.)

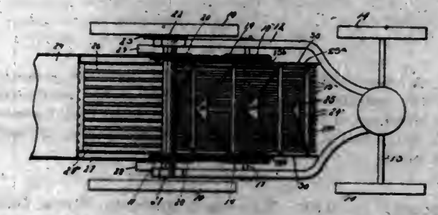


A bill holder formed of a single piece of wire bent to form a pair of jaws and a pair of bases which latter centrally intersect one another, the sides of one of the jaws being extended to form a V-shaped free end therefor and the sides of the other jaw being bent to form a free end for the latter composed of a pair of spaced V-shaped members, the V-shaped end of the first named jaw extending beyond said free end of the second jaw and having its extremity disposed in registry with the space between said V-shaped members, the sides of the said V-shaped end of the first jaw extending across the spaces between the legs of the V-shaped members, the inner legs of the V-shaped members being extended toward the bases of the jaws and formed with a finger tip rest and open clamping member.

1,753,187. WINDING MACHINE. MARTIN B. GROUT, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed July 1, 1925. Serial No. 40,823. 12 Claims. (Cl. 74—58.)

1. A machine of the character described including a rotatable shaft, a transverse shaft and a plurality of pinions secured to said transverse shaft, means connecting said rotatable shaft and said transverse shaft for rotating said transverse shaft, a plurality of hangers pivotally supported on said transverse shaft, gears rotatably supported by said hangers engaging said pinions and adapted to be driven by said pinions, a second transverse shaft, a plurality of gears rotatably supported on said

second shaft, and means including a slidably supported lever adapted to be moved into engagement with said



hangers for moving the gears supported by said hangers into engagement with said gears on said second transverse shaft for driving the same.

1,753,188. VARIABLE RESISTANCE. JOHN L. HOWIE, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 17, 1926. Serial No. 155,357. 8 Claims. (Cl. 201—55.)

7. A device including a resistance member provided with conducting contacts molded therein, a phenol condensation product fused with said resistance member and said contacts to form a unitary cup-shaped supporting member, and a contact member having one end composed of a plurality of depending legs adapted to engage associated mechanism for maintaining said contact member in its adjusted positions, said contact member for variably engaging said contacts to variably change the effective resistance.

1,753,189. CYLINDER POTATO DIGGER. GEORGE BACKER, Shamokin Dam, Pa. Filed Nov. 23, 1927. Serial No. 235,191. 3 Claims. (Cl. 55—59.)

1. A potato digger comprising a frame, traction wheels supporting the rear of said frame, guide wheels supporting the front of said frame, a shaft adjustable substantially vertically in said frame, a cylinder revolubly mounted on the shaft and including hubs, spokes radiating therefrom, cross bars at the outer ends of the spokes and strips mounted in spaced relation on said bars, scoops mounted on the cross bars and projecting from the cylinder, and means to transmit motion from the traction wheels to the cylinder.

Adjudicated Patents

(C. C. A. Ohio.) Fulton patent, No. 971,838, for process of making tubular metal walls, *Held* infringed. *Bishop & Babcock Mfg. Co.* v. *Fulton Co.*, 37 F. (2d) 293.

(C. C. A. Mich.) Rousso patent, No. 1,157,046, for towel cabinet, *Held* valid and infringed. *Rousso* v. *First Nat. Bank*, 37 F. (2d) 281.

(D. C. Ill.) Gans patent, No. 1,195,923, for water-softening apparatus, claims 1 to 5 *Held* invalid. *Permutit Co.* v. *Graver Corporation*, 37 F. (2d) 285.

(C. C. A. Mich.) Olson patent, No. 1,295,578, for towel cabinet, claim 1 *Held* invalid, claims 3 and 5 *Held* not infringed. *Rousso* v. *First National Bank*, 37 F. (2d) 281.

(C. C. A. Pa.) Kissock reissue patent, No. 16,896, for process of making alloy steel, *Held* invalid. *Kissock* v. *Duquesne Steel Foundry Co.*, 37 F. (2d) 249.

Classification Bulletin No. 61

Classification Bulletin No. 61 Jan. 1 to Dec. 31, 1929, is now available and may be purchased from the Superintendent of Documents, Government Printing Office, at 10 cents a copy.

Adverse Decisions in Interference

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,629,496, J. Fraser, Foot-actuated valve, decided March 8, 1930, claims 1 and 3.

Pat. 1,633,152, W. Witte, Process of finishing fabrics and to the fabric and composition, decided February 18, 1930, claims 1, 2, 3, 4, 5, 6, and 7.

Pat. 1,671,728, L. E. La Brie, Brake shoe, decided February 17, 1930, claims 1, 2, and 9.

Pat. 1,717,083, H. B. Arnold, Carrier signal system, decided February 17, 1930, claims 1, 2, 3, and 5.

Final decision in interference has been rendered against the following trade-mark:

T. M. 257,884, Wheat flour, W. E. Fuller, doing business as Walter E. Fuller Flour Company, Boston, Mass. Registered June 18, 1929. Decided March 18, 1930.

Interviews with Examiners

RULE 18. Interviews with Examiners concerning applications and other matters pending before the Office must be had in the Examiners' rooms at such times, within office hours, as the respective Examiners may designate; in the absence of the Primary Examiners, with the assistant in charge. Interviews will not be permitted at any other time or place without the written authority of the Commissioner. Interviews for the discussion of pending applications will not be had prior to the first official action thereon.

NOTICE

COPYING CLAIMS FROM PATENTS

Counsel prosecuting applications for patents are advised that in presenting any claim or claims copied or substantially copied from a previously issued patent there must be added a clear statement setting forth the origin of the claim or claims and the identifying data of the patent, since otherwise counsel may be deemed to be seeking, obviously improperly, to obtain a claim or claims to which the applicant is not entitled under the law without an interference, or the Examiner may be led into making an action different from what he would have made had he been in possession of all the facts. Examiners are directed to promptly call the personal attention of the Commissioner to any failure of counsel to follow the above indicated procedure.

THOMAS E. ROBERTSON,
Commissioner.

Condition of Applications Under Examination at Close of Business March 28, 1930

(Total number of applications awaiting action, excluding Trade-Mark Division, 116,670; Trade-Mark Division, 1,537. Oldest new case, May 17, 1929; oldest amended, May 10, 1929. The dates given are 1929 except where † indicates 1930.)

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

SLATTERY *v.* LARNER

No. 2,149. Decided December 30, 1930

[36 F. (2d) 298]

1. INTERFERENCE—PRIORITY—RIGHT TO MAKE THE CLAIMS. *Held* that the claims in issue when properly constructed do not read upon the disclosure of the L. application and that S. is entitled to the award of priority.

2. SAME—ISSUE—CONSTRUCTION OF CLAIMS. "It is true that an applicant need not at the time of filing application, necessarily be conscious of every function which his device can perform in order to claim it, and in interference proceedings 'claims should be given as broad a meaning as their terminology will reasonably permit.' *Sherman* v. *Hagemann*, 301 O. G. 1052, 51 App. D. C. 378. But this principle should not, we think, be stretched so as to apply to a case where there is such manifest difference in structures, and claims, as appears to exist in the instant case."

APPEAL from the Patent Office. Reversed.

Mr. W. T. Estabrook and *Mr. A. J. Hudson* for Slattery.

Mr. F. A. Bower for Larner.

GARRETT, *J.*:

This is an interference case in which Slattery has appealed from the action of the Board of Patent Appeals on October 8, 1927, affirming a decision of the Examiner of Interferences according priority in favor of Larner to an invention relating to "valves, particularly hydraulic valves of the pressure operated plunger type."

The devices involved in the controversy appear to be contemplated as being for use in water pipes or conduits of large dimensions, some of as much as 14 feet in diameter, installed in filtering plants, irrigation plants, hydroelectric plants and other hydraulic works.

The pertinent history of the actions out of which the issues grew is that on July 22, 1919, Larner filed an application, No. 312,559, making certain claims. On June 1, 1920, Slattery filed application which ripened into Patent 1,483,991 on February 19, 1924, while the Larner application was still pending. On January 19, 1925, Larner copied as claims the five counts which are in issue, same being taken from the Slattery patent and added to his original application of July 22, 1919. On March 17, 1925, Larner filed application containing the claims as a division of the earlier application, it being a duplicate of the specifications and drawings of the parent application, and this divisional application was substituted in the interference.

The counts in issue are five in number and correspond to Slattery's claims 1, 2, 4, 5, and 6. No. 1 reads as follows:

In combination with a conduit, a valve comprising a casing, a hollow member within the casing having a plunger, means for shifting said plunger to open and close the valve, and means independent of the means for opening and closing the valve and extending to the exterior of the valve for maintaining within said hollow member substantially the same pressure that exists on the nose of the plunger.

The other four counts cover the same structure in slightly different language, and it is not deemed necessary to quote them verbatim. Count 4 is apparently broader than the others in that it does not contain the word "independent," and No. 5 speaks specifically of an "equalizing pipe." Otherwise, the meaning of all the counts seems to be identical.

The assignments of error, in substance, submit two general questions: First, whether Larner had the right to make the claims forming the counts of the interference, and, second, whether he was estopped by any of the facts shown, or by law, from making said claims.

The primary matter within the jurisdiction of this court is, of course, that of priority. The proofs of dates of conception and reduction to practice sustain the statement that the dates of Larner are prior to those of Slattery. This Slattery concedes, and did the dates constitute the only element to be considered, the question would be entirely answered and in Larner's favor. But there is a second element of the first factor, as we have stated the issues, and that is the insistence that Larner did not have—

> a sufficient basis in the specification of his application * * * to support the subject matter of the claims * * * when said claims are made in Larner's application.

The contention upon the latter point revolves about the question of whether the pipe 34, shown in the Slattery drawing, so differs in its functioning or in its application to the functions performed, from pipe 12, shown in the Larner drawing, as to preclude it being covered by the Larner specification while being covered in the Slattery specification.

The Board of Appeals in its decision describes the respective structures and their functioning as follows:

> The invention of both parties relates to hydraulic valves of the pressure operated plunger type. Slattery moves his plunger 17 to open or closed position by hydraulic pressure applied to the piston 23 in a cylinder 22 located in the chamber A of the valve. Slattery provides an "equalizing pipe 34" which the specification states is "to maintain the same pressure on the inner side of the valve plunger as exists on the nose of the plunger."
>
> Larner's valve has a similar plunger 5 movable by hydraulic pressure but his means for moving it differs specifically from that of Slattery. The Larner specification states—
>
> "The main valve 5, is operated by control valves 10 and 11, for example, in either of two ways. Ports or connections 8 and 9, are either connected to a drain or otherwise discharge against atmospheric pressure; or they are connected to an independent pressure system carrying a pressure higher than that in the main valve. In the first case the plunger 5, is moved to open position by exhausting the chamber 6, through port 8, and is closed by exhausting chamber 7, through port 9. In the second case the plunger is moved to open position by admitting higher pressure to chamber 7, through port 9, and is closed by admitting higher pressure to chamber 6, through port 8. The valves 10 and 11, are normally

closed, and they are alternately opened to move the plunger, but as soon as the plunger has completed its stroke they are closed.

"Larner has a pipe 12 similar to Slattery's pipe 34 connecting the valve chamber with the conduit beyond the closing position of the plunger. The question in controversy involves the structure and function of this by-pass pipe."

The Board then continues:

Slattery contends first, that the pipe 12 of Larner is not independent but a part of his means for opening and closing the valve. It is true that during the movement of the plunger the size of the chamber in the valve back of the plunger changes and there is flow of water through the pipe 12 into or out of said chamber. The same is likewise true of appellant's pipe 34. Moreover, Larner does not describe his pipe 12 as a part of his means for opening and closing his valve. In our opinion the term independent as used in the counts is as applicable to Larner's pipe 12 as it is to Slattery's pipe 34.

Slattery further contends that Larner's pipe 12 does not have the function of "maintaining within said hollow member substantially the same pressure that exists on the nose of the plunger," as called for in the count. Larner's specification states that his pipe 12 is provided to prevent the pressure on the nose of the plunger from becoming lower than in the chamber 6 when the valve is open which would result in closing the valve. The Law Examiner has carefully analyzed this matter. He finds that in both Larner's and appellant's devices there will be a flow of water in the pipe when the plunger is opened or closed and a temporary disturbance of the pressure in the devices of both parties. We agree with his conclusion that the term "maintains * * * substantially the same pressure * * *" in the claim is to be construed broadly and is properly applicable to Larner's device as well as that of appellant.

It seems to us that in so holding, the tribunals in the Patent Office have failed to give recognition to a difference in the functioning of the structures, or in the application of the pipes to the functions intended to be performed by the structures, which difference we think is entitled to recognition in Slattery's favor. This difference lies in the fact that in Slattery's structure the pipe 34 is a "means independent of the means for opening and closing the valve, etc." as claimed in typical count 1, supra, while in the Larner structure the pipe 12 is connected to an operating chamber.

The effect of this independent means in operation appears to be that of maintaining within the hollow member in which the valve is constructed substantially the same pressure as that which exists on the nose of the plunger, this being accomplished by reason of the fact that one end of the pipe 34 in Slattery's structure is connected to the exterior of the valve, while the relatively corresponding end pipe 12 in Larner's structure is connected with a chamber in the valve itself. The Slattery arrangement thus equalizes the pressure and affects the opening and closing of the valve in a manner different from the operation applied by the Larner arrangement.

We feel assured from the record in the case that at the time of filing his parent application appellee did not contemplate or expect the performance of the same function in the same way by his pipe 12, as Slattery expected from his pipe 34. The Larner specifications and claims do not specifically disclose any such purpose, while those of Slattery appear to us clearly to do so. It is true that an applicant need not at the time of filing application, necessarily be conscious of every function which his device can perform in order to claim it, and in interference proceedings "claims should be given as broad a meaning as their terminology will reasonably permit." *Sherman* v. *Hagemann*, 301 O. G. 1052, 51 App. D. C. 373. But this principle should not, we think, be stretched so as to apply to a case where there is such manifest difference in structures, specifications, and claims, as appears to exist in the instant case.

Under this view of the case it does not appear to be necessary that we should pass upon the question of estoppel raised in the second part of Slattery's contention as we have stated it, supra.

For the reasons given the decision of the Board of Patent Appeals is reversed.

Reversed.

U. S. Court of Customs and Patent Appeals

MORGAN *v.* DRAKE, HUBBELL, AND CONRADSON.

No. 2,781. Decided December 30, 1929

[36 F. (2d) 511]

INTERFERENCE—PRIORITY—RIGHT TO MAKE THE CLAIMS. Record reviewed and *Held* to establish that M. has no right to make the claims in issue in his reissue application since the invention claimed was not disclosed in his original patent, and that he is not entitled to the award of priority.

APPEAL from the Patent Office. Affirmed.

Mr. C. T. Hawley for Morgan.

Mr. G. H. Kennedy, jr., for Drake et al.

GARRETT, *J.*:

This is a three-party interference proceeding involving alleged "useful improvements in grinding machines," being machines particularly for the grinding of internal surfaces.

On February 3, 1921, appellant filed an application in the Patent Office seeking a patent which was granted April 28, 1925, being No. 1,535,831, and on January 20, 1926, he filed an application for a reissue of No. 1,535,331, presenting therein claims corresponding to certain claims in a patent issued to one Prentice Conradson on April 21, 1925, being Patent No. 1,534,301, and prayed that an interference be declared between said Conradson patent and his (Morgan's) reissue application. At the time of the filing of this Morgan reissue application the Conradson patent was already involved in an interference proceeding with a pending application of Conradson's co-appellees, Alden M. Drake and Roy D. Hubbell, Serial No. 528,118, filed January 9, 1922. On March 8, 1926, following the filing of Morgan's reissue application the interference No. 53,010 was reformed and Morgan was added as a third party.

November 2, 1926, the Law Examiner rendered a decision dismissing the motions of Drake & Hubbell and Conradson to dissolve the interference and on December 1, 1926, the Commissioner denied a petition by them to exercise his supervisory authority. No testimony was taken in the case and on January 29, 1927, the Examiner of Interferences rendered his final decision awarding priority of invention to Myles Morgan, the senior party, and appellant herein. The junior parties thereupon appealed to the Board of Appeals, who, on December 12, 1927, rendered a decision reversing the Examiner of Interferences and denying priority of invention

to Morgan. The matter thus comes before us upon appeal from the decision of the Board of Appeals.

The counts of interference as set forth in the official declaration are as follows:

1. A grinding machine having, in combination, a carriage having an idle position and a position in which it reciprocates, a piston and cylinder unit for moving said carriage, a control valve connected to a source of pressure fluid and to said piston and cylinder unit, a valve operating device, means on said carriage for moving said device when the carriage is in its reciprocating position to automatically reverse said valve and effect reciprocation of said carriage, and means on the carriage for operating said device when the carriage is at its idle position to move said valve to its natural or inactive position and thereby stop reciprocation of said carriage.

2. A grinding machine having, in combination, a slidably mounted carriage, pressure fluid means for reciprocating said carriage including a control valve, a lever for operating said valve, and a stop on said carriage arranged to engage said lever and move said valve to neutral position to discontinue the movement of said carriage.

3. A grinding machine having, in combination, a reciprocatory carriage having an idle position and an operative position, pressure fluid means for moving said carriage including a control valve, an operating device for said valve, means on said carriage to actuate said operating device when the carriage approaches its idle position to move the valve to neutral position, and separate means on said carriage which automatically comes into operative relation to said operating device in the movement of said carriage from idle to operative position for automatically reciprocating said operating device to reverse said control valve and thereby effect continuous reciprocation of said carriage in its operative position.

4. A machine of the character described having, in combination, a carriage having an operative position and an idle position remote from said operative position, and mechanism arranged to reciprocate the carriage in its operative position, to return the carriage to its idle position and to automatically stop the carriage at its idle position.

It was the opinion of the Board of Appeals of the Patent Office that the original Myles Morgan patent failed to disclose the subject matter of his reissue claims and that he, therefore, had no right to make said claims, and in so holding the Board reversed the finding of the Law Examiner upon that question. It is essential that we pass upon this in determining the issue of priority. If Morgan had no right to make the claims in his reissue application, because their features were not properly disclosed, as required in the administration of the patent laws, in the patent upon which the reissue was filed then he can not be given priority. Obviously it is not necessary in interference cases to consider dates of conception and reduction to practice until it has been definitely determined that the thing conceived and reduced to practice is so similar in structure to the thing which it is sought to have declared an interference as that both conceptions read upon the count.

Section 4916 of the Revised Statutes, U. S. C. A., Title 35, section 64, provides:

Whenever any patent is wholly or partly inoperative or invalid, by reason of a defective or insufficient specification * * * if the error has arisen by inadvertence, accident or mistake and without any fraudulent or deceptive intention, the Commissioner shall * * * cause a patent for the same invention and in accordance with the corrected specification to be reissued * * * but no new matter shall be introduced into the specification, nor in the case of a machine patent shall the model or drawings be amended except each by the other.

The words, "the same invention" used in the statute, supra, received a construction by the Supreme Court of the United States in the case of *Parker & Whipple Co.* v. *Yale Clock Co.*, 41 O. G. 811, 123 U. S. 100, which has since been uniformly followed. Walker on Patents 5th ed. p. 299, section 233, discussing this decision says that it established the meaning of the phrase "the same invention" to be:

Whatever invention was described in the original Letters Patent, and appears therein to have been intended to be secured thereby * * *. Therefore, no reissue claim can stand any longer upon a model alone, nor even alone upon a drawing of an original patent, and indeed, neither models, drawing nor descriptions, nor all of them together, can support a reissue claim except where the description in the original Letters Patent shows that the invention covered by that claim was intended to be secured in the original.

The issue in this case has been rendered somewhat complex by the fact that in the patent specifications of Myles Morgan, No. 1,535,831, reference was made to certain prior patent applications of his father, Ralph L. Morgan, and with his reissue application Myles Morgan filed several drawings which did not appear with those of his original upon which Patent No. 1,535,831, was granted, but are substantially reproductions of drawings in the Ralph Morgan application. The original Myles Morgan patent shows one sheet of drawings containing four figures; his reissue application shows four sheets containing eleven figures. These seven extra figures are taken from the Ralph L. Morgan application. The specifications in the reissue application have likewise been added to by the inclusion of matter explanatory of these seven figures, which added specification matter covers eight pages of the record.

It is insisted by appellant that these additional drawings taken from the Ralph L. Morgan application (which as we understand it matured into Patent No. 1,633,557) and the added pages in the specifications, presented no "new substantive matter", but constituted—

merely an amplification of the disclosure of certain old elements, not in themselves new with Myles Morgan nor specifically claimed by him, but entering as old elements into the new combinations of the counts in issue, and included in the Myles Morgan invention and disclosure by specific reference to the Ralph Morgan application, now patented, and also by necessary implication.

Appellees, however, construe this act as being an introduction of new matter such as is expressly forbidden by the words of the statute:

No new matter shall be introduced into the specification, nor in the case of a machine patent, shall the model or drawings be amended, except each by the other.

They insist that by accepting this added matter, Rule 88 of the Patent Office, based upon the statute, and the statute itself were violated, and that it was error—

to indicate as allowable in said reissue application any claims that are dependent on said drawings for a disclosure of the said subject matter.

The Law Examiner, after saying:

The primary examiner held that the details contained in another case (evidently the Ralph Morgan patent) referred to in the patent application (of Myles Morgan) were in substance in the application,

adds:

Conceding that Myles Morgan is entitled to the benefit of the references to Ralph Morgan * * *. Recourse to the added description and illustration is * * * permissible to ascertain the functions of stop 78.

The Board of Appeals, however, says in its decision:

It is also our view that the additional drawings and amplified specifications appearing in the reissue application constitute new matter in the application. If there had been a clear indication in the original (Myles) Morgan patent that the invention of the interference counts was sought to be protected in the patent but was imperfectly illustrated and described that fact might justify the additional illustration and description. But we think there was no lack of illustration and description in the

original (Myles Morgan) patent of the invention which appears to have been intended to be secured by the patent. (Words in parenthesis inserted by us.)

The effect of this holding by the Board, stated in general terms, would appear to be that drawings and supplemental specification matter can be taken from other applications and patents for use in a reissue application but only in cases where the patent upon which the reissue application is based clearly discloses that the very subject matter (in this instance of the interference counts) was sought to be protected in the patent, and the sole function of such added matter is to supply defects in illustration and description. We think this a proper limitation. To give the added matter any broader scope or function would be to expand the statute beyond its purpose and intent.

The subject matter of the interference count must clearly have been disclosed in the patent upon which the reissue application is based, and it must clearly appear that the reissue applicant sought to secure protection of this particular subject matter in his original application just as he seeks it in the reissue application, and that his original patent failed to give this full protection for some one or more of the specific reasons which the statute mentions, such as inadvertence, accident, mistake, or other ground, recited in R. S. 4916, U. S. C. A., section 64.

This we think is the indisputable meaning of the statute, and this interpretation follows the doctrine of *Parker & Whipple Co.* v. *Yale Clock Co.*, supra, which doctrine is stated in numerous other cases many of them to be found cited in the "Notes of decision" under 35 U. S. C. A., section 64.

We do not mean to hold that the reissue provision of the law should be harshly construed or unduly limited, but, upon the other hand, neither the patent tribunals nor the courts have authority to expand or amplify these provisions beyond their plain meaning naturally construed.

Applying this rule to the facts of the instant case it does not appear to us that appellant can prevail. That which is sought in the reissue application does not seem to us to be—

> the same invention described in his original Letters Patent, and appearing therein as intended to be secured thereby.

Even if the supplemental matter contained in the drawings taken from the Ralph L. Morgan patent and the specifications based thereon were admitted as proper, we should still be of this same conclusion, under the facts appearing in the case.

We quote at length from the decisions of the Board of Appeals:

> As previously noted the interference counts originated in the Conradson patent and ordinarily the patent would be considered in reaching a conclusion as to the meaning and scope of the counts. The Conradson construction, however, is quite complicated while the Drake and Hubbell construction is relatively simple and readily understood. Since no question is raised as to the reading of the counts on the Drake and Hubbell construction with the same meaning that they have in the Conradson patent, the meaning and scope of the counts will be determined by a brief reference to the Drake and Hubbell disclosure.
>
> Count 1 includes first a carriage having an idle position and a position in which it reciprocates. The carriage is shown in Figures 1 and 2, the idle position being that in which the stop 48 is effective, the position in which the carriage reciprocates being that measured or limited by the stops 46 and 47, all of the stops being shown in Figure 2. The count then recites a piston and cylinder unit for moving the carriage. This feature is shown in Figure 1. The control valve next included in count 1 is designated 8 connected to a shaft 28 on the outer end of which is a lever 34 capable of movement in various directions and releasably interlocked with another lever 40 extending into the path of travel of the stops 46, 47, 48. During the normal operation of the device alternate engagement of the upper end of lever 40 by stops 46 and 47 on the carriage will as stated in the count automatically reverse the valve and effect reciprocation of the carriage. However, if it is desired to allow travel of the carriage to the so called idle position where it may be stopped, lever 34 is disengaged from lever 40 manually and the carriage allowed to advance so as to bring the latter lever into the field of stop 48 with consequent actuation of valve lever 34 by contact therewith of pin 50 carried by lever 40. The actuation of lever 34 in the manner indicated moves valve 8 into a neutral or inactive position and thereby stops reciprocation of the carriage.
>
> Count 2 does not include the means for controlling the movement of the carriage in the position in which it reciprocates but includes a lever controlled valve brought into neutral position to stop the movement of the carriage, the lever being actuated by a stop on the carriage.
>
> Counts 3 and 4 are drawn along lines generally similar to counts 1 and 2, count 3 being like count 1 and count 4 like count 2. All of the counts include definite limitations to stopping the carriage and counts 1 and 3 recite in greater or less detail the general organization of the carriage reciprocating and controlling mechanism.
>
> Coming now to a consideration of the Morgan reissue application and the grounds of appeal generally stated above it is our conclusion that if the question of same invention is to be determined by a comparison of the claims of the original Morgan patent with the interference counts the invention of the patent and that of the interference issue is not the same. • • • The three claims of the original Morgan patent are directed to the combination of a reciprocating table, a work-holding head and a cover or guard for the head so mounted and connected that the cover will be automatically opened when the table moves to retracted position. Claims 1 and 2 of the patent are limited solely to the combination just referred to. They do not include either directly or by implication the stopping of the table. Claim 3 is generally the same as claims 1 and 2 in so far as the specific limitations to cover or guard construction are concerned. Claim 3 in addition to the limitations as to cover or guard construction specifies a limiting stop for determining the retracted position of the reciprocating tables. As above noted there is in claim 3 no limitation to stopping the table and the stop broadly included might be a reversing stop for effecting reciprocation of the table. The decision of the Law Examiner states on page 6 thereof that if the validity of the Morgan reissue application were dependent on claiming more than is described and claimed in the original patent the earlier leading cases relating to the issues would justify a holding that such reissue as is presented here, if granted, would be invalid. But the Law Examiner suggests that later decisions of the courts are more liberal and are controlling here. The Law Examiner cites in support of this conclusion the cases of *In re Briede*, 1906 C. D., 677 and *In re Heroult*, 1907 C. D., 521. It is sufficient to note here that in both the cited cases there was a clear disclosure of the subject matter claimed and in one of them it was held that the invention claimed in the reissue was in substance and effect the same invention as that claimed in the original patent. In the original Morgan patent the essential and vital element of all the claims was the cover or door. In the claims of the Morgan reissue application with which we are concerned there is no hint of this vital and essential element but a distinctly different combination is claimed. Touching the disclosure of the original Morgan patent aside from the claim we fail to find any basis for the claims of the reissue application involved in interference. • • • The only construction shown and described in the original Morgan patent which remotely relates to the invention involved in interference, under the interpretation placed on the patent by counsel for Morgan, is the stop 73 mounted on the carriage and described in line 99 and following of page 1 of the specification of the original Morgan patent. • • • It will be noted that the matter just quoted does not state that the contact of the stop 73 with the arm 74 stops the movement of the work table. Not only is this true but there is no explanation of the manner in which the parts function. • • • Morgan realised when he filed the reissue application that there was no sufficient basis in the original patent for the claims copied from the Conradson patent. Three sheets of drawings were added to the single sheet constituting the illustration of the original patent and the specification of the reissue was correspondingly amplified. The added drawings correspond to certain of the drawings of the Ralph L. Morgan application • • •. The amplification of the specification of the original Morgan patent included a detailed description of the mechanism for controlling the reciprocation of the work-table and also specific statements that contact of stop 73 with arm 74 on lever W stops the movement of the work-table. • • • The drawings of the reissue application do not disclose except by implication the relation of the stop 73 to the stops which control the ordinary reciprocation of the work-table. • • • We note a distinction between a mere disclosure of an invention and an indication that the invention was intended to be protected by the patent. Even if it be admitted that the invention of the claims under consideration can be spelled out of the specification and drawing of the original patent, and we think it cannot, that is not the same thing as an indication that the patent sought to protect the invention in question. • • • It is our view that lines 11 to 25, page 2, of the original Morgan patent describe automatic reversal of the carriage. No good reason is seen why stop 73 will function differently from stop 76. • • • In any event there is too much uncertainty about the operation of the stop 73 of the Morgan reissue application to justify an award of priority in favor of Morgan. Where a party seeks through a reissue application to secure in award of priority over a regularly issued patent or an application clearly disclosing the subject matter in controversy there should be no uncertainty as to the nature of the disclosure of the reissue application. In our judgment certainty of disclosure of the subject matter in issue is not present in the Morgan application.

From our examination of the various drawings, claims and specifications we see no error in the Board's findings of fact and we think they have correctly stated the applicable law and have properly distinguished the instant case from the authorities cited by appellant.

The decision of the Board of Appeals is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

IN RE PRICE AND RIPSCH

No. 2,206. Decided December 30, 1929

[36 F. (2d) 482]

PATENTABILITY—AIR-DRIVEN IMPLEMENT.

Claims for an air-driven implement or tool: *Held* patentable over the prior art since the complete structure as claimed is not shown by any of the patents cited nor the modification of any one of them to obtain that structure suggested by the others.

APPEAL from the Patent Office. Reversed.

Mr. H. A. Toulmin and *Mr. H. A. Toulmin, Jr.*, for Price and Ripsch.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

GARRETT, *J.*:

This is an appeal from the Board of Patent Appeals affirming the decision of the Examiner rejecting claim 7 of appellant's application for patent for air-driven implements or tools, which decision of the Board was rendered February 23, 1928.

The claim in issue reads:

> In an implement of the character described, a rotor comprised of a solid shaft and a rotor body carried thereby, and having a series of longitudinal air chambers in the body, each chamber having an inlet and one or more outlet ports, and having also a series of piston chambers, a piston in each chamber, and a port between each piston chamber and air chamber, and a series of lubricant chambers and reservoirs with ports between them.

The Board cited as references: Darlington, 1,041,040, October 15, 1912; Mills et al., 1,053,055, February 11, 1913; Hauer, 1,102,742, July 7, 1914, Overly 1,104,070, July 21, 1914; Gressle et al., 1,322,107, November 18, 1919.

In its decision the Board states that the patents to Darlington and Mills are merely cited to show other motors having lubricating chambers to supply lubricant to the rotor and that these are not as pertinent as the other patents cited. The Board also found that no lubricating means are disclosed in the patent to Overly; no lubricant chambers called for by the claim of Hauer, and that the rotor of Gressle et al. has a series of lubricant chambers which are independent of each other but not connected with ports between them.

The analytical statement of the claim in issue, made in the brief of appellant asserts the presence of the following elements:

A. Solid shaft.
B. A rotor body having:
1. A series of longitudinal air chambers.
2. An inlet port for each air chamber.
3. One or more outlet ports for each air chamber.
4. A series of piston chambers.
5. A piston in each chamber.
6. A port between each piston chamber and air chamber.
7. A series of lubricant chambers.
8. A series of reservoirs.
9. Ports between the lubricant chambers and the reservoirs.

The Solicitor for the Patent Office during argument supplied the court with a reading which was prepared to show the elements identified in appellant's disclosure and the references. This reading we quote in full:

> After each element the first parentheses contain the reference numeral identifying the element in appellant's disclosure and the second parentheses the corresponding reference numeral of the reference patent.
>
> Claim 7. In an implement of the character described a rotor (4) (4 of Hauer) comprised of a solid shaft (21) (*shaft in bushing 11 of Hauer*) and a rotor body (4) (4 of Hauer) carried thereby, and having a series of longitudinal air chambers (27) (13 of Hauer, Fig. 5), in the body, each chamber having an inlet (28) (left end of 13 of Hauer, Fig. 5, unnumbered) and one or more outlet ports (29) (14, 14 of Hauer), and having also a series of piston chambers (30) (8 of Hauer, Fig. 2) a piston (31) (7 of Hauer) in each chamber, and a port (32) (25 of Hauer) between each piston chamber and air chamber, and a series of lubricant chambers (37) and reservoirs (39) (23 of Gressle et al. are both chambers and reservoirs) with ports (38) (no corresponding element in reference but held uninventive between them. (Italics ours.)

It will be noted that we have italicized the words "shaft in bushing 11 of Hauer" in the foregoing quotation. This element seems to be a pivotal feature of the controversy, and unless it can be held to be identical, in the sense of the patent law, with the "solid shaft" of appellant we do not find in any of the references any anticipation of said shaft.

The language of the Hauer specification relative to this element is:

> The rotary motor member may be mounted upon a shaft; but I preferably form said member with front and rear journals integrally therewith of less diameter than the body thereof as shown. A motor journal bearing member 9 is seated in one part of the casing 3 and a removable bushing 10 is preferably provided to carry the rear journal of the rotary motor member; and a removable bushing 11 seated in an opening in the head of the other part of said casing is provided to carry the front journal of said rotary motor member. Said front journal portion projects through said head and is screw-threaded at 12 to attach a tube cleaner or other tool to be driven.

No one of the Hauer claims uses the word "shaft," and the member called for in them as the one upon which the rotary motor is mounted (being evidently the member or part bearing in the bushing) is otherwise designated and described. The only place in the specifications or claims where the word shaft occurs is as quoted, supra.

In the specifications of appellant we find the following relative to the shaft claimed in No. 7:

> Referring now to the rotor we would state that it is composed of a central shaft 21 having at each end a ball-bearing ring 22 mounted to rotate on the balls 23 held in ball races 24 secured in any convenient manner, respec-

tively, in the handle section 1 and the driven shaft section 3 as best seen in Figures 1 and 5. This shaft 21 may be integral with the rest of the rotor or be a separate shaft, fitted firmly in the body 4 of the rotor and held by a key 21^a.

The Board of Appeals held:

To connect Gressle's rotor with a solid shaft as shown in Hauer and connect the lubricant chambers with each other by passages not disclosed in Gressle would not, in our opinion, involve invention. Or, stating it in another way, to introduce into Hauer or Overly the lubricating chambers of Gressle would not involve invention.

In answer to this finding of the Board of Appeals, appellant argues:

'Suppose the alleged solid shaft of Hauer were introduced into the rotor body of Gressle, what would the resulting structure be? It is noted that the shaft of Gressle is hollow, and through this hollow shaft the actuating fluid is fed. Suppose that this shaft were solid, as the alleged Hauer shaft, there would be no possible means of providing the rotor with actuating fluid. All means of fluid access to the rotor would be absolutely destroyed. It seems that this substitution, suggested by the Board, would reduce the Gressle device to a mass of unrelated parts, and would render the suppositious structure absolutely inoperative and worthless.

Suppose, for instance, that the shaft of Hauer were not solid, and in fact, it is not solid, and it were introduced into the rotor body of Gressle. In this case, if the rotor shaft is integral with the rotor, the result would be the Hauer device, but if the shaft and the rotor are not integral there would be produced another Gressle device without the Gressle means to control the admission of air to the rotor; there would be no flat sides on the rotor shaft. In neither case would appellant's device be produced.

A close analysis of the claim 7 shows that it calls for a rotor containing a solid shaft, the rotor body having the nine separate and distinct cooperating features as given, supra, and the claim is drawn to the structure of a rotor which includes the features that are essential to make it operable including means for lubrication.

The solid-shaft feature of the claim does not appear in any of the references cited. Its only suggested equivalent is an element contained in the Hauer patent and referred to in the brief in behalf of the Commissioner as "the part bearing in the bushing." It does not seem to us, from our understanding of the functioning of the machine, that this element is the mechanical equivalent of the shaft of the claim.

We think it is correctly stated by appellants that the complete structure set out in the claim is not shown by any of the patents cited, nor does it appear that the structure of one can be so modified by substituting features or elements in the structure of the other as to produce the machine claimed by appellants. It does not seem to us that the element referred to as the one "bearing in the bushing" of the Hauer patent could be substituted for the shaft of the claim or vice versa so as to produce an operative device, without further and very material modification.

An examination of the drawings and specifications leads us to the conclusion that appellants have produced a rotor body mounted on a solid shaft which body has features or parts in combination for lubrication and operation not shown in the references cited and containing invention as expressed in the claims, for which patent should be allowed.

The decision of the Board of Patent Appeals is therefore reversed.

Reversed.

U. S. Court of Customs and Patent Appeals

IN RE NISSEN

No. 2,175. Decided December 30, 1929

[36 F. (2d) 434]

PATENTABILITY—METHOD OF KNITTING STOCKINGS AND KNITTED STOCKING BLANK.

Claims for a method of knitting stockings with low sole sides and for a knitted stocking blank *Held* unpatentable over the prior art.

APPEAL from the Patent Office. Affirmed.

Mr. B. G. Foster for Nissen.

Mr. T. A. Hostetler for the Commissioner of Patents.

LENROOT, *J.*:

This is an appeal from the decision of the Board of Appeals rejecting the claims of appellant, nine in number, six of which are method claims and three product claims. They relate to stockings and the method of making the same.

Claims 1 and 7 are illustrative of the two groups of claims and read as follows:

1. The method of knitting stockings with low sole sides, which consists in knitting a flat full-fashioned leg blank with opposite heel reenforcements, knitting spaced heel extensions to said reenforcements, knitting to the inner side edges of said heel extensions spaced sole-heel sections that taper outwardly and knitting a foot top section to and between the said sole sections.

7. A knitted stocking blank comprising a flat knitted leg having reenforcements in its opposite lower corners and outwardly extending heel extensions joined to the lower edges of said reenforced corners, sole strips knitted to the lower edges of said heel extensions and having their inner rear corners joined to the inner lower corners of the heel reenforcements, the rear portions of said sole strips tapering forwardly and outwardly, and a foot top section knitted to and between the sole sections and to the lower end of the leg between the reenforcements.

The references cited are: Gee, 924,605, June 8, 1909; Landenberger, 1,111,658, September 22, 1914; Smith, 1,120,419, December 8, 1914.

Appellant's application discloses a stocking and method of making the same in which the heavy sole of a full-fashioned stocking can be made low at the sides while at the same time the heel and toe are properly reinforced at the points of wear.

Appellant, in carrying out the claimed method, knits a full-fashioned leg blank with opposite heel reenforcements and spaced heel extensions. These spaced heel extensions are then bent outward, so that the inner edges of the extensions will be in line with the lower end of the leg section proper and then knitting to the lower edge of the leg section a foot top, and sole-heel sections to the spaced heel extensions above mentioned. The sole-heel sections taper outwardly and downwardly, producing the low sole sides referred to in claim 1. Toe sections are knitted as extensions of the sole-heel sections and the latter sections increase in width as they approach the toe sections, the foot top section being correspondingly lowered. Claims 1 to 6 inclusive are directed to the method, while claims 7, 8 and 9 are for the stocking produced by the method of the preceding claims.

In its decision the Board of Appeals said, with regard to the method claims:

Generally speaking, a stocking having reinforced heel, sole and toe portions with low sides similar to that claimed here is disclosed in the patent to Smith cited by the Examiner, the particular part relied on being that disclosed in Figure 6 of the drawing of the patent. In the patent the stocking is produced by circular as distinguished from flat full fashioned knitting.

* * * * * * *

The Landenberger patent discloses a flat full fashioned stocking leg blank with opposite heel reinforcements and spaced heel extensions in all substantial respects like that disclosed in appellant's Figure 1. The patent also shows a sole, toe and foot top knitted to the leg and heel blank, but the manipulative steps employed in the knitting are not disclosed.

The Gee patent discloses in Figures 4, 5 and 6 the manner in which sole-heel, foot top and toe portions are connected to a leg and heel-blank and the specification of the patent states, see line 21 and following of page 3, that the heel web may be knit with heavy or reinforced yarn. We think it is not unwarranted to assume that both Gee and Landenberger would knit the heel, sole and toe portions of stockings with reinforced yarn. In any event it is our view that patentability of the claims on appeal can not be predicated on reinforcing any part of a stocking where reinforcement may be found necessary.

With respect to the method claims appellant contends that the various steps recited therein are not disclosed in the prior art. It is our view that, aside from the manipulation of the yarn to produce the low sole sides, the steps employed by appellant are the conventional steps in flat full fashioned knitting and are disclosed in the patents to Landenberger and Gee. We do not think it is material to the pertinency of the Gee patent as a reference that the leg portion of the stocking blank is knitted by circular knitting. Gee recognizes, see line 123 and following page 3 of the specification, that it is common practice to knit stocking blanks on flat knitting machines. For special reasons the patentee, in the disclosed embodiment of the invention, preferred to knit the leg portion of the stocking on a circular machine. There is a clear disclosure in the Gee patent of the steps of swinging outward the heel cheeks 12^a, 12^b and knitting to them the foot and toe sections 23, 23 with a foot top 22 knitted to the lower edge of that part of the leg blank between the heel cheeks. The Gee patent also discloses the seaming of the various portions of the stocking together from the toe to the top of the leg portion along a longitudinal median line. As heretofore noted there is a suggestion in the Gee patent of the employment of reinforcing yarn in the heel portion of the stocking and we again express our belief that in the present development of the art of knitting stockings there is nothing inventive in reinforcing any part of a stocking where it may be found necessary or desirable.

If any question exists as to the fact that the steps of appellant's method, aside from those employed to produce the low sole sides, are conventional, reference may be had to the publication "Full-Fashioned Knitting Machines," copyright 1920, pages 11 and 12 of the publication. A copy of the publication may be found in Division 21 of this Office. So far as the limitation in the method claims to the step which results in the production of low sole sides is concerned we think that limitation is responded to by the Smith patent and particularly Figure 6 of the patent with the description relating thereto. The description is contained between line 90 of page 3 and line 4 of page 4. It seems to us to be uninventive to apply the low sole side feature of the circular knit stocking of Smith to a flat full fashioned stocking blank such as would be produced by the processes of the Gee and Landenberger patents. The steps in claims 5 and 6 of increasing the width of the sole strips and decreasing the width of the foot top section as the toe section is approached were features included in the claims appealed in companion case Serial No. 467,550 although the language of the claims in the two cases is not the same. We think the method claims 1 to 6 inclusive were properly rejected as lacking invention over the prior art.

Appellant does not dispute in his brief, nor did he upon the argument, that the various steps of his method, aside from those employed to produce the low sole sides, are conventional as found by the Board of Appeals, but he does contend that he is the first person who has ever shown to the knitting art how to produce low soles in full-fashioned hosiery, and that while low soles are old in the prior art in circular-knitted hosiery, it nevertheless involves invention to produce them in full-fashioned hosiery.

This is the sole question before us so far as the method claims are concerned. The Board found upon this question that the Smith patent disclosed the low sole side feature both in the specification and drawings in a circular-knit stocking; that in the Landenberger and Gee patents the steps employed by appellant are disclosed except as to the manipulation of the yarn to produce the low sole sides, and that as to such manipulation the method as explained in the Smith patent suggests the method found to be lacking in the Landenberger and Gee patents.

Appellant contends that the Smith patent carries no such suggestion; that it discloses an entirely different method of manufacturing which could not be applied to the flat-knitting methods of Landenberger and Gee. We are unable to adopt this view. The Smith patent clearly discloses the method of producing low sole sides in circular knitting. The Board of Appeals held that, applying the method of Smith in producing the low sole sides to the methods of Gee and Landenberger in producing full-fashioned stocking blanks would not constitute invention, and that such combination is substantially what is covered by appellant's application, so far as method of production of low sole sides is concerned.

We agree with this conclusion of the Board.

As to the article claims, 7, 8, and 9, we agree with the Board that they lack invention over the stocking shown in the Smith patent. The distinction between the two articles lies in method rather than structure. While these claims describe the article as a knitted stocking blank, if there be no invention in the completed stocking, merely calling the article a blank, because the final step toward completion has not been taken, does not bring it within the scope of invention.

The decision of the Patent Board of Appeals is affirmed.

Affirmed.

Disclaimers

1,562,119.—*Lewis C. Myers*, Freeport, and *George F. Handley*, Glendale, N. Y. TYPEWRITING MACHINE. Patent dated November 17, 1925. Disclaimer filed March 25, 1930, by the assignee, *Royal Typewriter Company, Inc.*

Hereby disclaims the following claims, to wit:

"23. In a typewriting machine embodying type bars which occupy an oblique position when at the printing point and an abutment for limiting the movement of said bars to such position, the combination of a carriage having case shift movement, supports therefor, a platen supported by said carriage and means for mounting said supports for adjustment as a unit in an oblique direction independent of the case shift movement to afford full impressions of the type bars on the platen.

"24. In a typewriting machine embodying type bars which occupy an oblique position when at the printing point and an abutment for limiting the movement of said bars to such position, the combination of a carriage, having case shift movement, supports therefor, a platen supported by said carriage, and means for adjusting said supports as a unit in an oblique direction independent of the case shift movement to afford full impressions on the type bars on the platen."

"28. In a typewriting machine, the combination of swinging type bars which occupy an oblique position when at the printing point, a platen mounted for case shift movement, supports therefor, and means for mounting said supports on the main frame of the machine for adjustment as a unit in an oblique direction independent of the case shift movement to afford full impressions of the type bars.

"29. In a typewriting machine, the combination of swinging type bars which occupy an oblique position when at the printing point, a platen mounted for case shift movement, supports therefor, and means for adjusting said supports on the main frame of the machine as a unit in an oblique direction independent of the case shift movement to afford full impressions of the type bars.

"30. In a typewriting machine, the combination of swinging type bars which occupy an oblique position when at the printing point, a platen mounted for case shift movement, supports therefor, means for adjusting said supports on the main frame of the machine as a unit in an oblique direction independent of the case shift movement to afford full impressions of the type bars, and means for holding the supports in adjusted position."

1,692,661.—*Marsden O. Hutto*, Detroit, Mich. COMBINED ABRASIVE AND CARRIER. Patent dated November 20, 1928. Disclaimer filed March 26, 1930, by the assignee, *Hutto Engineering Company, Inc.*

Hereby enters this disclaimer to all of the claims of said specification, which disclaimer is in the following words, to wit: hereby disclaims as to each of the said claims any and all abrasive and holder assemblies except wherein the stone is permanently positioned by the self-hardening material or solder in the holder with the working face or abrading surface in the position referred to in each claim by a form or mold casting operation and the self-hardening material or solder is employed in a substantial amount so as to form a spacer between all the adjacent surfaces of the stone and the holder.

1,706,627.—*Albert D. McGibbon*, Plainville, Conn. ELECTRIC SWITCH. Patent dated March 26, 1929. Disclaimer filed March 19, 1930, by the assignee, *The Trumbull Electric Manufacturing Co.*

Hereby enters this disclaimer as to the subject matter of claims 6 and 7 of said patent except as the said claims are construed to cover a construction in which the stationary contacts and the movable switch member are located on the front of the insulating body and the crank is mounted at the rear of the body with a connector passing through the body from the front to the rear.

Interference Notice

U. S. PATENT OFFICE, *Washington, Mar. 19, 1930.*

Washoff Products Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of George A. Hornbecker, 99 Wheeler St., Waterville, Conn., for registration of a trade-mark and trade-mark registered October 28, 1924, No. 190,851, to Washoff Products Company, Lima, Ohio, and a notice of such declaration sent by registered mail to said Washoff Products Company, at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Washoff Products Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

TRADE-MARKS

OFFICIAL GAZETTE, APRIL 8, 1930

[VOL. 393. No. 2]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for " under the ten-year proviso " are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1

Raw or Partly-Prepared Materials

Ser. No. 292,760. TENNESSEE MINERAL PRODUCTS CORPORATION, Spruce Pine, N. C. Filed Nov. 22, 1929.

MINPRO FELDSPAR

No claim is made to the word "Feldspar" except as associated with the other feature of the mark.
For Ground Feldspar.
Claims use since 1925.

Ser. No. 294,735. THE MICHIGAN CITY TANNING COMPANY, Michigan City, Ind. Filed Jan. 13, 1930.

CORDOLUX

For Leather.
Claims use since Nov. 1, 1928.

Ser. No. 295,369. CARL FREUDENBERG, INCORPORATED, Boston, Mass. Filed Jan. 30, 1930.

Odin

For Leather.
Claims use since 1922.

Ser. No. 295,727. DICKINSON FUEL COMPANY, Charleston, W. Va. Filed Feb. 7, 1930.

EVERHOT

For Coal.
Claims use since Oct. 15, 1929.

Ser. No. 295,860. NORTHWESTERN LEATHER COMPANY TRUST, Boston, Mass. Filed Feb. 10, 1930.

NOWESCO

For Leathers.
Claims use since on or about October, 1926.

Ser. No. 295,861. NORTHWESTERN LEATHER COMPANY TRUST, Boston, Mass. Filed Feb. 10, 1930.

RUSSIDE

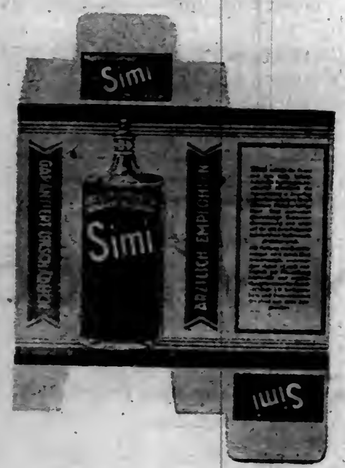
For Leathers.
Claims use since on or about October, 1926.

Ser. No. 295,905. MICHAEL MILLER FUR DYEING CORPORATION, New York and Brooklyn, N. Y. Filed Feb. 11, 1930.

FUCHIA

For Fur Skins.
Claims use since Oct. 3, 1929.

Ser. No. 296,252. BACMO-POSTMAN CO. INC., New York, N. Y. Filed Feb. 20, 1930.



DOVELLE

For Glove Leather,
Claims use since about January, 1925.

CLASS 6

Chemicals, Medicines, and Pharmaceutical Preparations

Ser. No. 268,266. BERLINER COSMETISCHES LABORATORIUM BERZINSKI & RICHTER, Berlin, Germany. Filed June 19, 1928.

No claim is made to the outline of the carton or to any of the wording appearing on the drawing except the word "Simi." No claim is made to the representation of the bottle shown on the drawing apart from the rest of the features shown.

For Skin Balm, Perfumes, and Complexion Lotions, Creams, and Powders.

Claims use since Mar. 11, 1927.

Ser. No. 279,191. ANTHONY M. ODOM, Jr., doing business as Hemostat Products Co., Jackson, Miss., assignor to Minnie May La Grove, Blackwell, Okla. Filed Feb. 11, 1929.

Hemostat

No claim being made to the word "Hemostat" apart from the mark shown on the drawing.

For Preparation for Use in Operations for Tonsilitis and Adenoids, for Cuts of All Kinds, Teeth Extractions, Bleeding Gums, Bleeding or Oozing Surfaces, and Hemorrhages of the Bowels and Bladder.

Claims use since June 15, 1928.

Ser. No. 279,512. PETER WENNER, Bozeman, Mont. Filed Feb. 16, 1929.

Wenner Piles Preparation

The portrait shown on the drawing is that of the applicant and no claim being made to the words "Piles Preparation" apart from the mark shown on the drawing.

For Preparation for Piles in Liquid and Capsule Form.

Claims use since Aug. 1, 1927.

Ser. No. 283,420. THE SILICA GEL CORPORATION, Baltimore, Md. Filed May 2, 1929.

SILICA GEL

The word "Silica" apart from the mark as shown is disclaimed.

For Hard, Solid, Vitreous Adsorbent Material Consisting of Dried Silicic Acid.

Claims use since Dec. 31, 1928.

Ser. No. 284,075. MYRURGIA S. A., Barcelona, Spain. Filed May 15, 1929.

MORISCA

For Perfumes and Face Powder.

Claims use since June, 1917.

Ser. No. 286,939. KARLSRUHER PARFÜMERIE- & TOILETTE-SEIFEN-FABRIK F. WOLFF & SOHN G. M. B. H., Karlsruhe, Germany. Filed July 11, 1929.

No claim is made to the exclusive right to the use of the word "Pine" apart from the mark shown.

For Toilet Preparations, Toilet Water, and Bath Salts.

Claims use since 1906.

Ser. No. 287,683. EUGENE VON SCHALLERN, doing business as Schallern's Drug Store and Von Schallern Drug Co., Ripon, Wis. Filed July 25, 1929.

VON SCHALLERN'S

ORANGE BROMO

No claim is made herein to the words "Von Schallern's" nor to the words "Orange Bromo" except in connection with the trade-mark as shown.

For Effervescent Powdered Salt for the Relief of Headache, Neuralgia, and Sour Stomach, and as an Aid to Digestion.

Claims use since Jan. 1, 1929.

Ser. No. 287,744. I. G. FARBENINDUSTRIE AKTIENGESELLSCHAFT, Frankfort-on-the-Main, Germany. Filed July 27, 1929.

Vanillose

For Odoriferous and Aromatic Chemicals Used in the Preparation of Perfumes and Flavoring Extracts.

Claims use since about March, 1929.

Ser. No. 289,046. JOHN SALVO, doing business as F. J. Salvo & Son, St. Louis, Mo. Filed Aug. 26, 1929.

NORTH POLE

The trade-mark as used and as illustrated in the drawing consists of a black background bordered with red, including the initial letters "N" and "P," the remaining letters of the mark being white.

For Antifreeze Mixture for Automobiles.

Claims use since Sept. 1, 1928.

Ser. No. 289,068. LOUIS FEINSTEIN, doing business as Scientific Research Laboratories, Los Angeles, Calif. Filed Aug. 27, 1929.

UVALE

For Digestive Tonic.

Claims use since Aug. 12, 1929.

Ser. No. 290,026. KOTEX PHARMACAL COMPANY, Maspeth, N. Y. Filed Sept. 20, 1929.

KOTEX

For Vaginal Suppositories and Antiseptic.

Claims use since Oct. 23, 1928.

Ser. No. 290,286. ABRAHAM KAHANE, Winnipeg, Manitoba, Canada. Filed Sept. 26, 1929.

Fluid-d'or

The word "Fluid" is disclaimed except in the association shown.

For Chemical Preparations: Pine-Needle-Extract Bath Tablets Used for Invigorating and Stimulating Effect and to Relieve Rheumatism, Sciatica, and Insomnia; Medicated Foot-Bath Tablets Used to Relieve Burning and Tired Sensation in Feet and Excessive Perspiration; Assorted Odors of Perfumed Bath Tablets Used for Invigorating and Stimulating Effect and to Relieve Rheumatism, Sciatica, and Insomnia; Disinfecting Solution Used for General Disinfecting Purposes.

Claims use since Jan. 1, 1927.

Ser. No. 291,586. THE SILICA GEL CORPORATION, Baltimore, Md. Filed Oct. 25, 1929.

SILICA GEL

The word "Silica" apart from the mark as shown is disclaimed.
For Hard Solid Vitreous Adsorbent Material Consisting of Dried Silicic Acid.
Claims use since Aug. 1, 1929.

Ser. No. 291,631. MODERN PHARMACAL CO. INC., New York, N. Y. Filed Oct. 26, 1929.

PERFO KOLA

No claim being made to the exclusive use of the word "Kola" apart from the mark as shown in the drawing.
For Tonic and Preparation for the Treatment of Nervous Diseases and Indigestion.
Claims use since December, 1928.

Ser. No. 291,918. FRIEDA HEMPEL INC., New York, N. Y. Filed Nov. 2, 1929.

FRIEDA HEMPEL

For Cosmetics—Namely, Toilet Creams, Toilet Lotions and Astringents, Face Powder, Liquid Face Powder, Dusting Powder, Lip Sticks, Preparations for Darkening the Eyelashes and Eyebrows, Rouges.
Claims use since Aug. 1, 1929.

In the drawing the shading represents the color green.
For Medicinal Preparation for Treatment of Stomach Disorders.
Claims use since about Sept. 10, 1929.

Ser. No. 293,448. HUBERT B. ROUSH, doing business as Roush Drug Company, Humeston, Iowa. Filed Dec. 9, 1929.

ZOOM

For Inhalant for the Treatment of Head Colds, Hay Fever, Nasal Catarrh, Asthma, Sinus and Bronchial Affections.
Claims use since Nov. 4, 1929.

Ser. No. 293,774. GULF STATES CHEMICAL CO., INC., Harlingen, Tex. Filed Dec. 17, 1929.

The word "Brand" which is shown in the drawing as part of the trade-mark is hereby disclaimed as being part of the trade-mark.
For Agricultural Insecticides Such as Bordeaux Mixture, Tomato Dust, Oil Emulsion, Lime Sulphur Solution, Sulphur, Calcium Arsenate, etc.
Claims use since Jan. 1, 1927.

Ser. No. 293,970. HOLLYWOOD LABORATORIES, INC., Iowa City, Iowa, and Hollywood, Calif. Filed Dec. 21, 1929.

The words "Crème" and "Hollywood" are disclaimed apart from the other features of the mark constituting the drawings.
For Skin Cream.
Claims use since Oct. 21, 1929.

Ser. No. 294,305. STABAVITE SYNDICATE LIMITED, London, England. Filed Jan. 3, 1930.

RUFLI

For Medicinal Preparations for the External Treatment of Rheumatism, Arthritis, Lumbago, Sciatica, Chilblains, and Kindred Uric-Acid Complaints.
Claims use since Aug. 2, 1929.

Ser. No. 295,108. SUTE MATSU ENDO, doing business as Royal Laboratories, Honolulu, Territory of Hawaii. Filed Jan. 21, 1930.

RL

For Hairdressing.
Claims use since March, 1922.

Ser. No. 295,281. E. R. SQUIBB & SONS, New York, N. Y. Filed Jan. 27, 1930.

CORIS

For Mouth Wash.
Claims use since Jan. 22, 1930.

Ser. No. 295,669. FIRST NATIONAL STORES INC., Boston and Somerville, Mass. Filed Feb. 6, 1930.

FINAST

For Baking Soda, Baking Powder, Starch, Starch Tablets, Borax, Ammonia, Blueing, Chlorate of Lime, Fly Spray, Disinfectants, Witch-Hazel, Peroxide of Hydrogen, Salt, Potash, Bay Rum, Cream of Tartar, and Tooth Paste.
Claims use since Oct. 26, 1926.

Ser. No. 295,672. MOE GOLDMAN, doing business as Kake-O-Lax Products, Atlanta, Ga. Filed Feb. 6, 1930.

KAKE-O-LAX

No claim is made to the word "Kake" apart from the mark as shown.
For Laxatives Made in Cake or Cookie Form.
Claims use since Nov. 1, 1929.

Ser. No. 295,723. BALDAUF DRUG COMPANY, Milwaukee, Wis. Filed Feb. 7, 1930.

Superbo

For Compound to be Used in the Treatment of Chapped Hands, Face, and Lips, for Liquid Shampoo, Talcum Powder, Aftershaving Lotion, Cold Cream, and Tooth Paste.
Claims use since Dec. 15, 1918.

SUPER BLACK

No claim is made to the word "Black" apart from the mark shown in the drawing.
For Carbon Black to be Used for General Purposes.
Claims use since Dec. 30, 1929.

Ser. No. 295,853. ANDERS LANDOREN, Yonkers, N. Y. Filed Feb. 10, 1930.

NO-PYR-OL

For Antirheumatism Oil.
Claims use since Jan. 7, 1930.

Ser. No. 295,893. EGYPTIAN PRODUCTS CO., Newark, N. J. Filed Feb. 11, 1930.

RA-BRAND

No right to registration is claimed on the word "Brand" apart from the mark shown on the drawing.
For Hair-Coloring Preparation and Hair-Shampoo Preparation.
Claims use since Nov. 9, 1929.

Ser. No. 295,921. APOTHECARIES HALL COMPANY, Waterbury, Conn. Filed Feb. 12, 1930.

MONT BLANC

For Laundry Blue, Soda Used as a Laundry Detergent, and Stripper Used for Stripping Colors from Clothes.
Claims use since 1924.

Ser. No. 295,935. THE DAUG PRODUCTS CO., INC., Long Island City, N. Y. Filed Feb. 12, 1930.

Dermacol

For Skin Lotion.
Claims use since May 12, 1913.

Ser. No. 295,973. CLARA BELLE ATKIN, Duluth, Minn. Filed Feb. 13, 1930.

Kansoil

For Preparation for Use in Growing Hair.
Claims use since January, 1930.

Ser. No. 296,279. LABORATOIRE DE PHARMACOLOGIE, INC., New York, N. Y. Filed Feb. 20, 1930.

GÉLODELBIASE

For Ampoules Containing Magnesia in Assimilable Form Used as a General Biological Stimulant.
Claims use since Feb. 10, 1930.

Ser. No. 296,281. LEWIS BROS., INC., New York, N. Y. Filed Feb. 20, 1930.

VITALIS

Applicant is the owner of registered Trade-Mark No. 181,584.
For Hair Tonic.
Claims use since Nov. 15, 1929.

Ser. No. 296,299. J. EARL THAYER, doing business as O-Tas-O Products Company, Sidney, Nebr., and Denver, Colo. Filed Feb. 20, 1930.

OTASO

For Preparation for Use in Treating Head Colds, Chest Colds, Hay Fever, and Nasal Catarrh or Sinus Trouble.
Claims use since Oct. 1, 1929.

Ser. No. 296,304. HENRY N. WILHELM, Memphis, Nebr. Filed Feb. 20, 1930.

MAN-O-WAR

For Compounds Used for External Application to Horses for Relief of Fistula and Pole-Evil.
Claims use since Feb. 17, 1930.

Ser. No. 296,426. HARRY KESSINGER, doing business as The Harry Kessinger Company, Houston, Tex. Filed Feb. 24, 1930.

Arvotane

For Laxative Preparation in Tablet Form.
Claims use since Oct. 26, 1929.

Ser. No. 296,439. PHARMACAL MANUFACTURING CO., Cleveland, Ohio. Filed Feb. 24, 1930.

NOREA

For Pyorrhea Solution.
Claims use since January, 1930.

Ser. No. 296,479. JOHN R. CALDWELL, doing business as The Pioneer Products Co., Steubenville, Ohio. Filed Feb. 25, 1930.

Ex-Z-mol

For Ointment for the Treatment of Skin Diseases.
Claims use since May 12, 1922.

Ser. No. 296,543. NORTH AMERICAN DYE CORPORATION, Mount Vernon, N. Y. Filed Feb. 26, 1930.

Dywhite

For Bluing.
Claims use since about Feb. 14, 1930.

Ser. No. 296,555. THERMATOMIC CARBON COMPANY, Pittsburgh, Pa. Filed Feb. 26, 1930.

P-33

For Carbon Black Used for Various Industrial Purposes and Especially for Compounding with Rubber.
Claims use since Oct. 4, 1926.

Ser. No. 296,597. JAMES W. HILL, doing business as J. W. Hill, Memphis, Tenn. Filed Feb. 27, 1930.

The lining on the heart appearing on the drawing indicates the color red.
For Ointments for the Treatment of Piles.
Claims use since Feb. 19, 1930.

CLASS 11

Inks and Inking Materials

Ser. No. 295,507. CLYDE DEAN, doing business as Dean Ink Company, Chicago, Ill. Filed Feb. 3, 1930.

E-Z RITE

For Writing Ink.
Claims use since Mar. 1, 1929.

CLASS 12

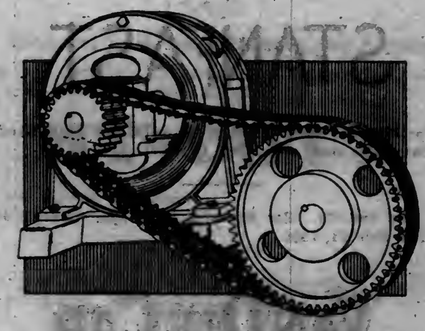
Construction Materials

Ser. No. 294,558. AMERICAN ASPHALT TILE CORPORATION, New York, N. Y. Filed Jan. 9, 1930.

HANOTILE
Asphalt Tile Flooring
Built like a Highway ~ for Wear

No claim being made to the exclusive use of the words "Asphalt Tile Flooring Built Like a Highway for Wear" apart from the mark as shown in the drawing.
For Asphalt Flooring and Roofing Materials.
Claims use since Jan. 2, 1930.

Ser. No. 295,642. SAWYER GOODMAN COMPANY, Marinette, Wis. Filed Feb. 5, 1930.



SATINETTE

For Hardwood Flooring.
Claims use since Jan. 22, 1930.

CLASS 13

Hardware and Plumbing and Steam-Fitting Supplies

Ser. No. 249,075. LINK-BELT COMPANY, Chicago, Ill. Filed May 16, 1927.

No claim is made to the representation of the machine shown apart from the mark as shown. The background in the drawing is shaded to indicate the color red.
For Chains, Chain Belts, and Parts Thereof.
Claims use since Jan. 1, 1927.

Ser. No. 291,902. ROBERT BARTHOLOMEW, doing business as The Bartholomew Manufacturing Company, Scotch Plains, N. J. Filed Nov. 2, 1929.

Little Cherub

For Metal Nursing-Bottle Warmers.
Claims use since Oct. 7, 1929.

CLASS 14

Metals and Metal Castings and Forgings

Ser. No. 293,921. FIFTH-STERLING STEEL COMPANY, McKeesport, Pa. Filed Dec. 20, 1929.

CENTER FREE

The words "Center Free" are disclaimed apart from the mark shown.
For Steel Bars of Various Shapes and Sizes, Forgings and Blocks, Discs, and Pieces of Steel.
Claims use since Dec. 7, 1929.

Ser. No. 295,282. STANDARD BRAKE SHOE & FOUNDRY COMPANY, Pine Bluff, Ark. Filed Jan. 27, 1930.

STANFAST

For Finished Steel Castings—Namely, Cast-Steel Bands.
Claims use since about Jan. 1, 1930.

Ser. No. 296,379. ZIV STEEL & WIRE CO., Chicago, Ill. Filed Feb. 21, 1930.

VANDIECAR

For Tool and Die Steel.
Claims use since Jan. 10, 1930.

CLASS 15

Oils and Greases

Ser. No. 284,482. "YACCO" S. A. F., Paris, France. Filed May 21, 1929.

YACCO

For Lubricating Oils and Greases.
Claims use since Dec. 20, 1920.

Ser. No. 293,499. WEST INDIA OIL COMPANY, Bayonne, N. J. Filed Dec. 10, 1929.

No claim is made to the representation of a candle and container, the representation of the package, or to the printed language appearing in the drawing with the exception of the word "Ideal."
For Candles.
Claims use since Nov. 30, 1929.

Ser. No. 295,670. FIRST NATIONAL STORES INC., Boston and Somerville, Mass. Filed Feb. 6, 1930.

FINAST

For Candles.
Claims use since Oct. 26, 1926.

CLASS 16

Paints and Painters' Materials

Ser. No. 284,335. E. F. HIGGINS LABORATORIES, INC., Brooklyn, N. Y. Filed May 20, 1929.

NACRETONE

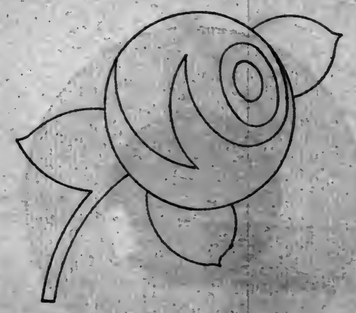
For Base-Coat Lacquers, Finishing Lacquers, and Lacquer Thinners.
Claims use since July 17, 1928.

Ser. No. 292,201. CRAFTEX COMPANY, Boston, Mass. Filed Nov. 9, 1929.

For Painters' Wall Sizings, Painter's Colorings and Glazes, Interior and Exterior Texture Paint for Walls and Woodwork, Water Paint, Oil Paint, Plastic Paint, a Powder for Mixing with Water to Produce a Water or Plastic Paint, and a Paste for Mixing with Water to Produce a Water and Plastic Paint.
Claims use since Oct. 20, 1927.

Ser. No. 292,756. STONE & TAR PRODUCTS CO., Brooklyn, N. Y. Filed Nov. 22, 1929.

PAINT-POINT PRODUCTS



No claim is made to the words "Paint Point Products" apart from the mark shown on the drawing.
For Paints in Dry Form.
Claims use since about Oct. 1, 1929.

Ser. No. 293,234. RICH ART COLOR CO., INC., New York, N. Y. Filed Dec. 4, 1929.

RICH ART

For Artists' Materials—Namely, Show-Card Colors, Air-Brush Colors, Oil Colors in Tubes, Fabric Colors, Oils, and Varnishes.
Claims use since Sept. 1, 1926.

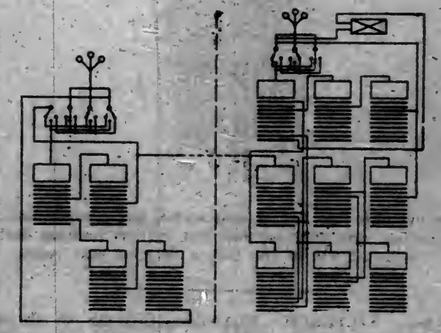
REISSUES

APRIL 8, 1930

17,636. WIRE-TWISTING DEVICE. PETER BIGHETTI, San Francisco, Calif. Filed Nov. 18, 1929. Serial No. 406,968. Original No. 1,698,689, dated Jan. 8, 1929. Serial No. 257,849, filed Feb. 29, 1928. 9 Claims. (Cl. 140—118.)

1. A mechanic's tool comprising a carpenter's brace frame with a shank at the forward end thereof, a wire clamping jaw operatively mounted on said shank, an operating handle extending from said jaw, and ratchet means on said brace frame adapted to engage said handle to hold said jaw in clamped position, and clamping means on said shank cooperating with said jaw adapted to kink said wire in clamping the same.



17,637. EMERGENCY HEATER. WILLIAM ALLEN BROWN, Philadelphia, Pa. Filed Dec. 15, 1926. Serial No. 326,392. Original No. 1,620,432, dated Mar. 8, 1927, Serial No. 45,536, filed July 23, 1925. 10 Claims. (Cl. 219—45.)

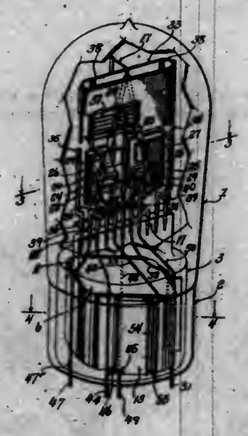
7. In a combined convection heater and lighting lamp, a support, a vertically disposed heating unit carried by said support, a flue surrounding and assembled in spaced relation with said heating unit to directly heat the air substantially throughout the length of said flue, and an electric light mounted in proximity to said flue, said unit and light being so assembled and controlled as to give heat or light or both, simultaneously or independently.

17,638. AUTOMATIC TELEPHONE SYSTEM. HERBERT M. FRIENDLY, Chicago, Ill. Filed Aug. 24, 1927. Serial No. 215,247. Original application filed Feb. 17, 1921, Serial No. 445,761. Renewed Nov. 8, 1926. Original No. 1,627,844, dated May 10, 1927. 121 Claims. (Cl. 179—27.)

1. In a telephone system, a calling station, means under the control of said calling station for extending a talking connection to a called station, means for then extending the connection to include a second called station, and

means whereby either called station can thereafter disconnect the other from said connection with the calling station.

17,639. FLEXIBLE TRANSMITTING DEVICE. GEORGE P. LUCKEY, Lancaster, Pa., assignor, by mesne assignments, to American Cable Company, Inc., New York, N. Y., a Corporation of Delaware. Filed Mar. 7, 1929. Serial No. 345,121. Original No. 1,427,829, dated Sept. 5, 1922, Serial No. 528,554, filed Jan. 11, 1922. 11 Claims. (Cl. 74—39.)

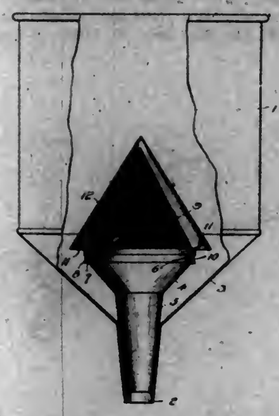


1. In a flexible transmitting device, a casing comprising longitudinally extending members of a material adapted to offer substantial resistance to compression in the direction of the axes of said members, and means constraining said members against relative displacement other than relative longitudinal movement when the casing is bent.

17,640. ELECTRON-DISCHARGE DEVICE. ARISTOTE MAVROGENIS, Milwaukee, Wis. Filed June 7, 1929. Serial No. 369,252. Original No. 1,638,499, dated Aug. 9, 1927, Serial No. 78,876, filed Jan. 2, 1926. 27 Claims. (Cl. 250—27.5.)

1. A unitary electron discharge device including an evacuated vessel having a relatively large hollow neck,

CARNEGIE LIBRARY OF ATLANTA



said device including an audion, a thermionic rectifier, and a thermionic current limiting device all mounted within

the evacuated portion of said vessel, and a condenser cooperating with said rectifier and current limiting device and mounted within the hollow neck of said vessel.

17,641. FILTERING FUNNEL. CHARLES R. OWENS, Washington, D. C. Filed Feb. 14, 1930. Serial No. 428,524. Original No. 1,739,559, dated Dec. 17, 1929, Serial No. 342,228, filed Feb. 23, 1929. 1 Claim. (Cl. 210—157.)

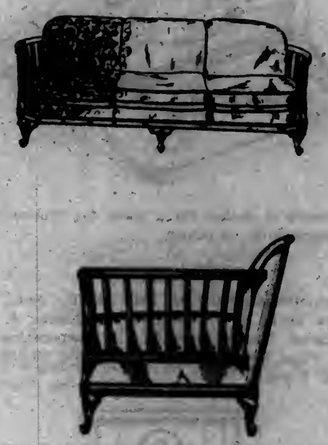
A filtering element for funnels of the type including a body having an outlet, and an upwardly flared section immediate the outlet and body, said filtering element including a spout having a sealing cooperation with said outlet of the funnel, an upwardly flaring portion extending from the upper end of the spout, said flaring portion extending in spaced parallel relation to the flared section of the funnel to thereby provide a relatively deep downwardly and inwardly inclining sediment trap open only at the upper end, a conical screen carried by the flaring portion of the filtering element, and a hood of

conical form supported to overlie and cover the screen other than at the lower end of the hood, the plane of the exterior of the hood being substantially at right angles to the flaring section of the funnel whereby the incoming liquid is directly intercepted by the flaring section of the funnel and directed therefrom to and beneath the hood and through the screen without disturbing the material in the comparatively deep sediment trap.

DESIGNS

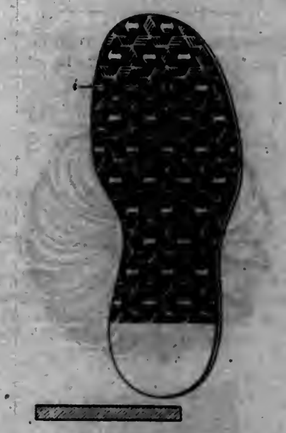
APRIL 8, 1930

80,872. GRILLE. GEORGE W. ACKERMAN, New York, N. Y. Filed Nov. 16, 1929. Serial No. 33,475. Term of patent 14 years.



The ornamental design for a grille substantially as shown.

80,873. COMBINED AIRPLANE AND THERMOMETER. FRANK ALESSI, Brooklyn, N. Y., assignor to Vincenzo Nava, Brooklyn, N. Y. Filed Jan. 8, 1930. Serial No. 34,014. Term of patent 14 years.

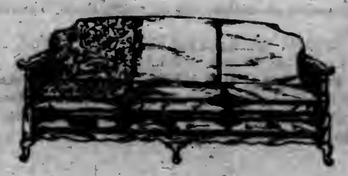


The ornamental design for a combined airplane and thermometer, substantially as shown.

80,874. DAVENPORT OR LIKE ARTICLE. OTTO ANDREAS ANDERSON, Chicago, Ill., assignor to Zangerle & Peterson Company, a Corporation of Illinois. Filed Dec. 4, 1929. Serial No. 33,645. Term of patent 3½ years.

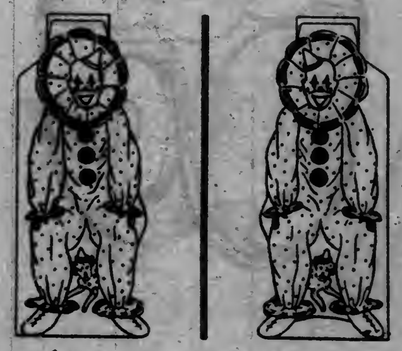
The ornamental design for a davenport or like article, as shown and described.

80,875. SHOE SOLE. ALLAN S. BANNISTER, Providence, R. I., assignor to Revere Rubber Company, Providence, R. I., a Corporation of Rhode Island. Filed Dec. 3, 1929. Serial No. 33,628. Term of patent 14 years.



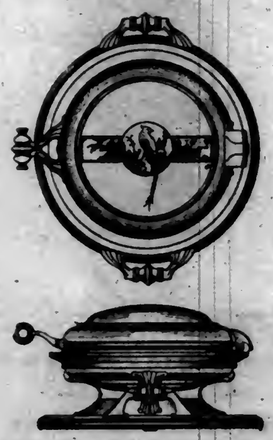
The ornamental design for a shoe sole as shown.

80,876. SHOE SOLE. ALLAN S. BANNISTER, Providence, R. I., assignor to Revere Rubber Company, Providence, R. I., a Corporation of Rhode Island. Filed Dec. 3, 1929. Serial No. 33,629. Term of patent 14 years.



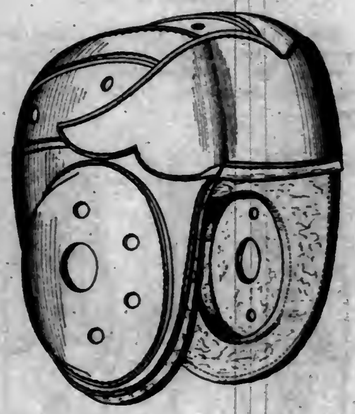
The ornamental design for a shoe sole as shown.

80,877. DAVENPORT OR LIKE ARTICLE. WILLIAM FREDERICK CHRISTIANSEN, Chicago, Ill., assignor to The Zangerle and Peterson Company, a Corporation of Illinois. Filed Dec. 16, 1929. Serial No. 33,801. Term of patent 3½ years.



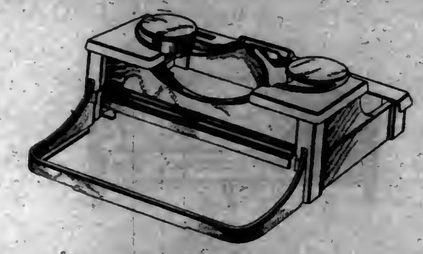
The ornamental design for a davenport or like article, as shown and described.

80,878. TOY WHISTLING CLOWN. ARCHIBALD D. COWAN, Fulton, Ill., assignor to Patent Novelty Company, Fulton, Ill., a Corporation of Illinois. Filed Jan. 13, 1930. Serial No. 34,123. Term of patent 3½ years.



The ornamental design for a toy whistling clown, as shown.

80,879. WAFFLE IRON. FREDERICK J. CROSS and HOWARD H. SCHOTT, Rochester, N. Y., assignors to Robeson-Rochester Corporation, Rochester, N. Y., a Corporation of New York. Filed July 22, 1929. Serial No. 32,166. Term of patent 3½ years.

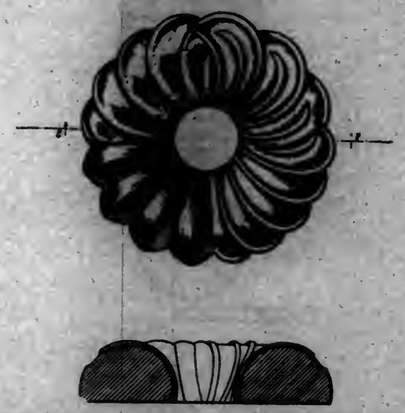


The ornamental design for a waffle iron, substantially as shown.

80,880. FOOTBALL HELMET. ARTHUR DICKMAN, Cincinnati, Ohio, assignor to The P. Goldsmith Sons Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Nov. 29, 1929. Serial No. 33,582. Term of patent 7 years.

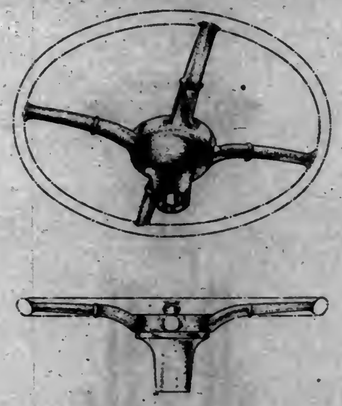
The ornamental design for a football helmet substantially as shown.

80,881. A MASK FOR TYPEWRITING MACHINES. BERNARD J. DOWD, Hartford, Conn., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 11, 1930. Serial No. 34,098. Term of patent 14 years.



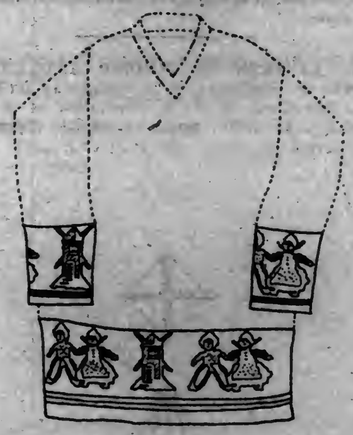
The ornamental design for a mask for typewriting machines, substantially as shown.

80,882. RADIOCABINET OR THE LIKE. NOEL S. DUNBAR, New York, N. Y., assignor to Thomas A. Edison, Incorporated, West Orange, N. J., a Corporation of New Jersey. Filed Dec. 29, 1928. Serial No. 29,454. Term of patent 7 years.



The ornamental design for a radiocabinet or the like, as shown.

80,883. CONFECTION. MAURICE DUSHEK, Chicago, Ill. Filed Aug. 29, 1929. Serial No. 32,618. Term of patent 7 years.

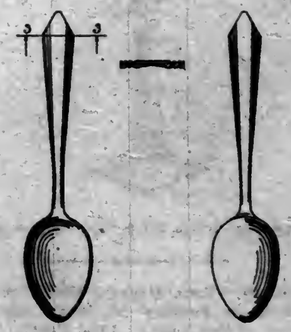


The ornamental design for a confection as shown.

80,884. HUB FOR STEERING WHEEL. HARLEY J. EARL, RALPH W. PEW, and JOHN J. TJAARDA, Detroit, Mich., assignors to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed July 8, 1929. Serial No. 31,972. Term of patent 14 years.

The ornamental design for a hub for steering wheel, substantially as shown.

80,885. SWEATER OR ARTICLE OF SIMILAR NATURE. AUGUST EGERER, Great Neck, N. Y., assignor to S. Augstein & Co., New York, N. Y. Filed Dec. 20, 1929. Serial No. 33,871. Term of patent 7 years.



The ornamental design for a sweater, or article of similar nature, as shown.

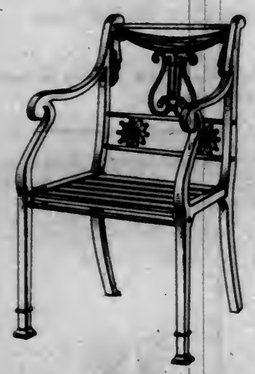
80,886. RADIOPANEL. HAROLD F. ELLIOTT, Camden, N. J., assignor to Victor Talking Machine Company, a Corporation of New Jersey. Filed Sept. 20, 1929. Serial No. 32,807. Term of patent 14 years.

The ornamental design for a radiopanel as shown.

80,887. SPOON OR ANALOGOUS ARTICLE. ALFRED J. FLAUDER, Bridgeport, Conn., assignor to Weidlich-Sterling Spoon Co., Bridgeport, Conn., a Partnership consisting of Louis Weidlich, Frank B. Weidlich, and William Weidlich. Filed Nov. 20, 1929. Serial No. 33,504. Term of patent 7 years.

The ornamental design for a spoon or analogous article substantially as shown.

80,888. INSECT REPELLENT. JOHN GLOVER, Chicago, Ill. Filed July 18, 1929. Serial No. 32,107. Term of patent 14 years.

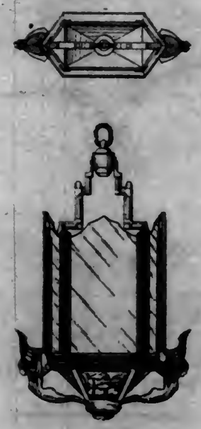


The ornamental design for an insect repellent, substantially as shown.

80,889. CIGAR LIGHTER. SAMUEL E. GUINN, Johnson City, Tenn. Filed Apr. 12, 1929. Serial No. 30,868. Term of patent 3½ years.

The ornamental design for a cigar lighter, as shown.

80,890. CHAIR. EMIL HAUSER, New York, N. Y., assignor to Marcy Foundry Co., Perth Amboy, N. J., a Corporation of New Jersey. Filed Feb. 6, 1930. Serial No. 34,421. Term of patent 7 years.



The ornamental design for a chair, as shown.

80,891. SETTEE OR SIMILAR ARTICLE. EMIL HAUSER, New York, N. Y., assignor to Marcy Foundry Co., Perth Amboy, N. J., a Corporation of New Jersey. Filed Feb. 6, 1930. Serial No. 34,422. Term of patent 7 years.

The ornamental design for a settee or similar article, as shown.

80,892. CHANDELIER OR SIMILAR ARTICLE. OTTO HOFFMANN, Woodhaven, N. Y., assignor to Art Fixtures, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 22, 1930. Serial No. 34,220. Term of patent 3½ years.

The ornamental design for a chandelier or similar article as shown.

80,893. LANTERN OR SIMILAR ARTICLE. OTTO HOFFMANN, Woodhaven, N. Y., assignor to Art Fixtures, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 22, 1930. Serial No. 34,221. Term of patent 3½ years.

The ornamental design for a lantern or similar article as shown.

80,894. LIGHTING FIXTURE OR SIMILAR ARTICLE. OTTO HOFFMANN, Woodhaven, N. Y., assignor to Art Fixtures, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 22, 1930. Serial No. 34,223. Term of patent 3½ years.

The ornamental design for a lighting fixture or similar article as shown.

80,895. GEM SETTING. HARRY G. KAUFMAN, New York, N. Y. Filed Nov. 11, 1929. Serial No. 33,401. Term of patent 7 years.

The ornamental design for a gem setting as shown.

80,896. GEM SETTING. HARRY G. KAUFMAN, New York, N. Y. Filed Nov. 11, 1929. Serial No. 33,402. Term of patent 7 years.

The ornamental design for a gem setting as shown.

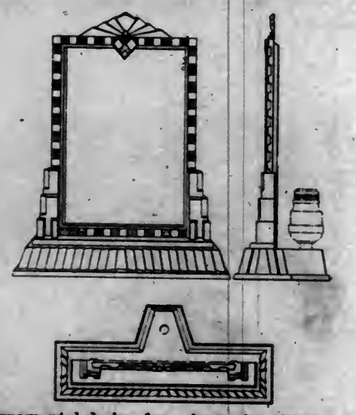
80,897. GEM SETTING. HARRY G. KAUFMAN, New York, N. Y. Filed Nov. 11, 1929. Serial No. 33,403. Term of patent 7 years.

The ornamental design for a gem setting as shown.

80,898. GEM SETTING. HARRY G. KAUFMAN, New York, N. Y. Filed Nov. 11, 1929. Serial No. 33,404. Term of patent 7 years.

The ornamental design for a gem setting as shown.

80,899. COAT. DOROTHY LONG, New York, N. Y., assignor to Franklin Simon & Company, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 24, 1930. Serial No. 34,273. Term of patent 3½ years.



The ornamental design for a coat substantially as shown and described.

80,900. COAT. DOROTHY LONG, New York, N. Y., assignor to Franklin Simon & Company, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 1, 1930. Serial No. 34,373. Term of patent 3½ years.

The ornamental design for a coat substantially as shown and described.

80,901. FRAME FOR PICTURES, MIRRORS, AND THE LIKE. JACK MANOIL, Brooklyn, N. Y. Filed Jan. 18, 1930. Serial No. 34,184. Term of patent 3½ years.

The ornamental design for a frame for pictures, mirrors and the like as shown.

80,902. BOTTLE. GEORGE N. MAS, Washington, D. C., assignor, by mesne assignments, to Jesse T. Dowling and G. Ridgely Sappington, trustees. Filed May 2, 1927. Serial No. 21,815. Term of patent 14 years.

The ornamental design for a bottle, as shown.

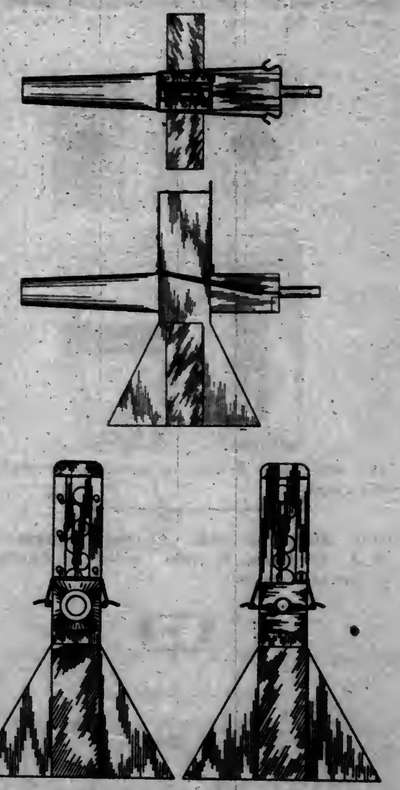
80,903. LAVATORY. JOSEPH R. MAYHEW, Decatur, Ill., assignor to Mueller Co., Decatur, Ill., a Corporation of Illinois. Filed Jan. 14, 1930. Serial No. 34,124. Term of patent 7 years.

The ornamental design for a lavatory, substantially as shown.

80,904. TOY. ERNEST S. MILES, Media, Pa. Filed Aug. 10, 1929. Serial No. 32,374. Term of patent 3½ years.

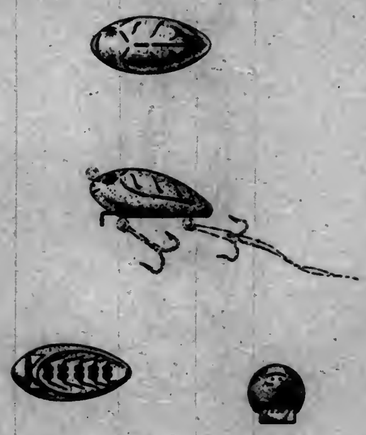
The ornamental design for a toy, as shown.

80,905. SHOE. CHARLES MORALI, New York, N. Y., assignor to Delman, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 24, 1929. Serial No. 33,911. Term of patent 3½ years.



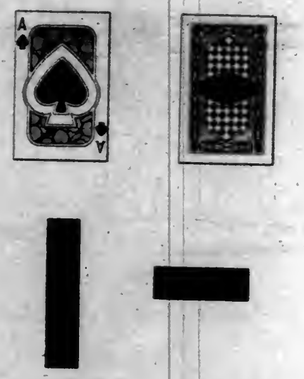
The ornamental design for a shoe as shown.

80,906. TICKING. BENJAMIN S. NASH, Short Hills, N. J., assignor to The Stearns & Foster Company, Lockland, Ohio, a Corporation of Ohio. Filed July 24, 1929. Serial No. 32,176. Term of patent 7 years.



The ornamental design for ticking substantially as shown.

80,907. TOY MACHINE GUN. MERRILL R. PATTISON, Seattle, Wash. Filed Dec. 26, 1929. Serial No. 33,920. Term of patent 7 years.



The ornamental design for a toy machine gun, as shown.

80,908. ARTIFICIAL BAIT. UE C. PEMBERTON, Seffner, and JOSEPH B. JOHNSON, Tampa, Fla. Filed Nov. 4, 1929. Serial No. 33,336. Term of patent 7 years.

The ornamental design for an artificial bait as shown.

80,909. CARTON OR SIMILAR CONTAINER. FREDERICK W. PETERSON, Brooklyn, N. Y., assignor to Horton Sweets Co. Inc., Ridgefield, N. J., a Corporation of New York. Filed Oct. 29, 1928. Serial No. 28,085. Term of patent 3½ years.

The ornamental design for a carton or similar container as shown.

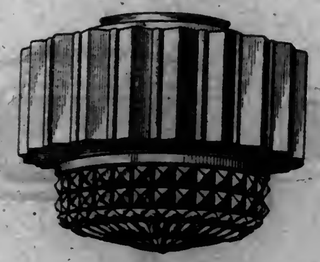
80,910. SHOE BUCKLE. SAMUEL M. RIKER, Chester, N. J. Filed Jan. 31, 1930. Serial No. 34,363. Term of patent 7 years.

The ornamental design for a shoe buckle, as shown.

80,911. LIGHTING FIXTURE OR ARTICLE OF SIMILAR NATURE. ISIDOR ROSENBLATT, Brooklyn, N. Y. Filed Dec. 4, 1929. Serial No. 33,636. Term of patent 3½ years.

The ornamental design for a lighting fixture, or article of similar nature, as shown.

80,912. LIGHTING FIXTURE OR ARTICLE OF SIMILAR NATURE. ISIDOR ROSENBLATT, Brooklyn, N. Y. Filed Dec. 4, 1929. Serial No. 33,637. Term of patent 3½ years.



The ornamental design for a lighting fixture or article of similar nature, as shown.

80,913. LIGHTING FIXTURE OR ARTICLE OF SIMILAR NATURE. ISIDOR ROSENBLATT, Brooklyn, N. Y. Filed Dec. 12, 1929. Serial No. 33,765. Term of patent 3½ years.

The ornamental design for a lighting fixture or article of similar nature, as shown.

80,914. GLOBE FOR LIGHTING FIXTURES. ISIDOR M. SCHAFFER, Brooklyn, N. Y., assignor to Max Schaffer Co., Inc., a Corporation of New York. Filed Feb. 6, 1930. Serial No. 34,441. Term of patent 3½ years.

The ornamental design for a globe for lighting fixtures substantially as shown.

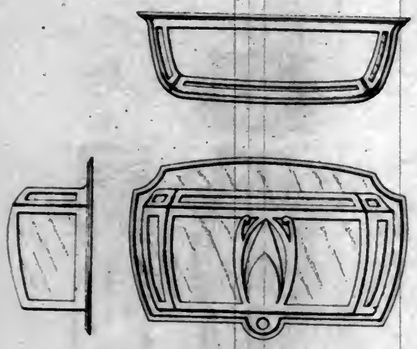
80,915. REAR CORNER LIGHT FOR AN AUTOMOTIVE VEHICLE. WILLIAM SCHNELL and WILFRED H. HOLLINDALE, Detroit, Mich., assignors to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 7, 1929. Serial No. 33,368. Term of patent 7 years.

The ornamental design for a rear corner light for an automotive vehicle substantially as shown.

80,916. DECORATIVE TOY POODLE DOG. ANNA SOFF, Brooklyn, N. Y. Filed Mar. 26, 1929. Serial No. 30,626. Term of patent 3½ years.

The ornamental design for a decorative toy poodle dog, as shown.

80,917. JAR OR SIMILAR CONTAINER. WALTER D. TEAGUE, Forest Hills, N. Y., assignor to Turner Glass Corporation, Terre Haute, Ind., a Corporation of Indiana. Filed Jan. 27, 1930. Serial No. 34,312. Term of patent 14 years.



The ornamental design for a jar or similar container as shown.

80,918. JAR OR SIMILAR CONTAINER. WALTER D. TEAGUE, Forest Hills, N. Y., assignor to Turner Glass Corporation, Terre Haute, Ind., a Corporation of Indiana. Filed Jan. 27, 1930. Serial No. 34,313. Term of patent 14 years.

The ornamental design for a jar or similar container as shown.

80,919. CONTAINER FOR USE IN AUTOMOBILE INTERIOR FITTING OR SIMILAR ARTICLE. GERTRUDE E. THOMPSON, Elgin, Ill., assignor to Van Sicklen Corporation, Elgin, Ill., a Corporation of Delaware. Filed Jan. 7, 1930. Serial No. 34,037. Term of patent 7 years.

The ornamental design for a container for use in automobile interior fitting or similar article as shown.

80,920. CONTAINER FOR USE IN AUTOMOBILE INTERIOR FITTING OR SIMILAR ARTICLE. GERTRUDE E. THOMPSON, Elgin, Ill., assignor to Van Sicklen Corporation, Elgin, Ill., a Corporation of Delaware. Filed Jan. 7, 1930. Serial No. 34,038. Term of patent 7 years.

The ornamental design for a container for use in automobile interior fitting or similar article as shown.

80,921. CONTAINER FOR USE IN AUTOMOBILE INTERIOR FITTING OR SIMILAR ARTICLE. GERTRUDE E. THOMPSON, Elgin, Ill., assignor to Van Sicklen Corporation, Elgin, Ill., a Corporation of Delaware. Filed Jan. 7, 1930. Serial No. 34,039. Term of patent 7 years.

The ornamental design for a container for use in automobile interior fitting or similar article as shown.

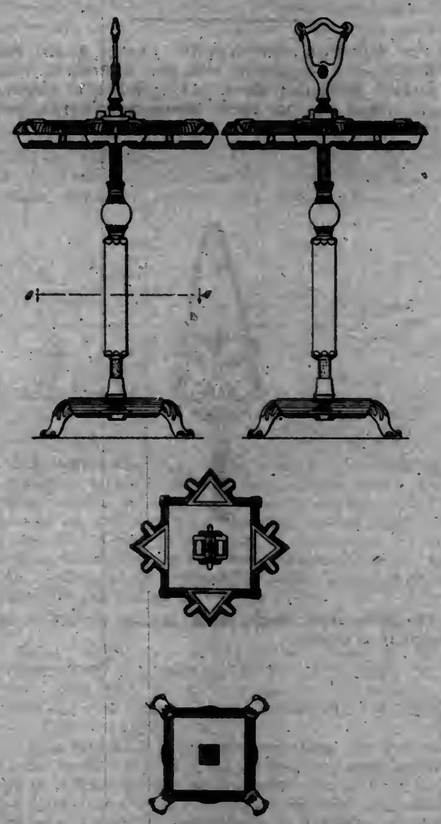
80,922. CONTAINER FOR USE IN AUTOMOBILE INTERIOR FITTING OR SIMILAR ARTICLE. GERTRUDE E. THOMPSON, Elgin, Ill., assignor to Van Sicklen Corporation, Elgin, Ill., a Corporation of Delaware. Filed Jan. 7, 1930. Serial No. 34,040. Term of patent 7 years.

The ornamental design for a container for use in automobile interior fitting or similar article as shown.

80,923. CONTAINER FOR USE IN AUTOMOBILE INTERIOR FITTING OR SIMILAR ARTICLE. GERTRUDE E. THOMPSON, Elgin, Ill., assignor to Van Sicklen Corporation, Elgin, Ill., a Corporation of Delaware. Filed Jan. 7, 1930. Serial No. 34,041. Term of patent 7 years.

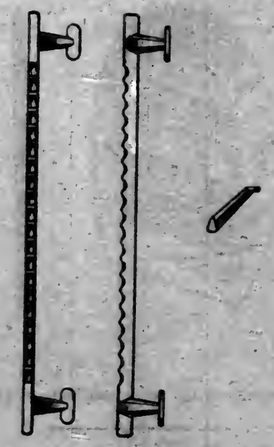
The ornamental design for a container for use in automobile interior fitting or similar article as shown.

80,924. CONTAINER FOR USE IN AUTOMOBILE INTERIOR FITTING OR SIMILAR ARTICLE. GERTRUDE E. THOMPSON, Elgin, Ill., assignor to Van Sicklen Corporation, Elgin, Ill., a Corporation of Delaware. Filed Jan. 7, 1930. Serial No. 34,042. Term of patent 7 years.



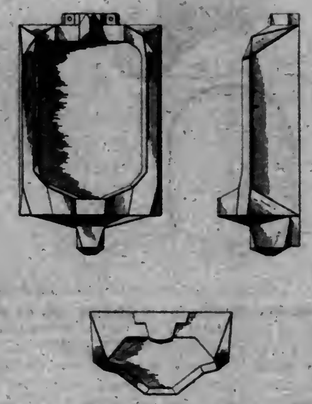
The ornamental design for a container for use in automobile interior fitting or similar article, as shown.

80,925. SMOKING STAND OR SIMILAR ARTICLE. ARTHUR VON FRANKENBERG, New York, N. Y., assignor to Frankart, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 20, 1930. Serial No. 34,195. Term of patent 7 years.



The ornamental design for a smoking stand or similar article, substantially as shown.

80,926. SMOKER'S STAND. CHAUNCEY E. WALTMAN, Chicago, Ill., assignor to I. Teger, doing business as Imperial Lamp Mfg. Co., Chicago, Ill. Filed Jan. 22, 1930. Serial No. 34,217. Term of patent 3½ years.



The ornamental design for a smoker's stand as shown.

80,927. GRASP BAR. MAXIMILIAN STANISLAW WEBER, Chicago, Ill. Filed May 15, 1929. Serial No. 31,240. Term of patent 14 years.

The ornamental design for a grasp bar as shown.

80,928. URINAL. PERRY COKE SMITH, Bronxville, N. Y., assignor to The Trenton Potteries Company, Trenton, N. J., a Corporation of New Jersey. Filed Dec. 2, 1929. Serial No. 33,609. Term of patent 14 years.

The ornamental design for a urinal, as shown.

80,929. SHOE SOLE. CECIL C. TUCKER, Trenton, N. J., assignor to Essex Rubber Company, Trenton, N. J., a Corporation of New Jersey. Filed June 26, 1929. Serial No. 31,835. Term of patent 7 years.

The ornamental design for a shoe sole as shown.

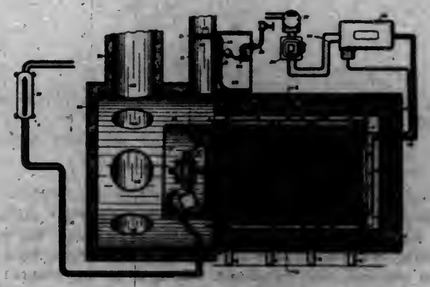
80,930. BATHING CAP. HARRY A. BAUMAN, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Feb. 4, 1930. Serial No. 34,400. Term of patent 14 years.

The ornamental design for a bathing cap as shown.

80,931. RADIOCABINET. FRANK C. BURTON, Chicago, Ill., assignor to Grisby-Grunow Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 12, 1929. Serial No. 32,888. Term of patent 7 years.

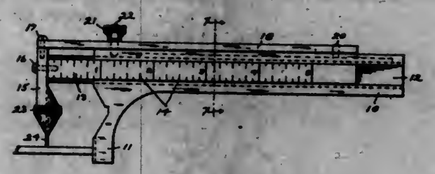
The ornamental design for a radio cabinet as shown.

80,932. TAG FOR CONTAINERS. LEON A. DANCO, Fairfield, Conn., assignor to McKesson & Robbins, Incorporated, Bridgeport, Conn., a Corporation of Connecticut. Filed Oct. 12, 1929. Serial No. 33,019. Term of patent 14 years.



The ornamental design for a tag for containers substantially as shown.

PATENTS



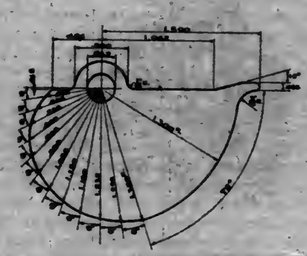
GRANTED APRIL 8, 1930

1,753,190. AUTOMATIC ELECTRIC-HEATING APPARATUS. FRANK W. ANDREWS, Fort Wayne, Ind. Filed Mar. 18, 1929. Serial No. 347,938. 6 Claims. (Cl. 219—39.)

1. In an apparatus for generating and transferring heat the combination of a fluid containing receptacle having a central elongated passage therethrough, a heat-absorbing fluid in said receptacle, means for heating said heat-absorbing fluid, a plurality of tubes extending across said central passage and having open communication with said fluid in said receptacle, means for passing a heat-absorbing fluid through said passage in said receptacle, a means for conducting said heat-absorbing fluid thus passed to a place to be heated.

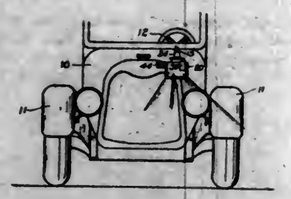
1,753,191. COMBINATION RULE GAUGE. THOMAS L. B. ARMSTRONG, Poughkeepsie, N. Y. Filed Dec. 15, 1928. Serial No. 326,366. 2 Claims. (Cl. 33—42.)

1. A combination rule gauge, comprising a body portion formed with a headed end and provided with a longitudinal groove in the body thereof, an arm slidably mounted in said groove, a marking member detachably secured to the end of said arm, a rod secured to said marking member in a detachable manner and to said body portion in an adjustable manner, and means for locking the same in an adjusted position.



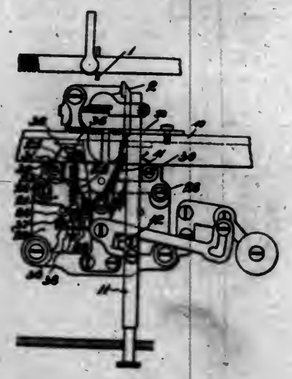
1,753,192. HEATING APPARATUS. JOHN E. BELL, Brooklyn, N. Y., assignor to Power Specialty Company, New York, N. Y., a Corporation of New York. Filed Dec. 19, 1922. Serial No. 607,781. 6 Claims. (Cl. 122—481.)

1. In a furnace housing wall comprising a row of side by side brickwork pillars spaced apart to form vertical slots in a lower portion of said wall open at their inner edge to the interior of the furnace chamber, said pillars carrying a part of the weight of the housing wall above said pillars, superheater elements comprising vertically disposed straight elongated tube portions arranged one in each of said slots, each of said tube portions being encased in metallic sections which unite to substantially fill the width of the slots, a metal bar at the rear of



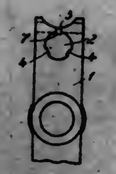
each slot comprising a portion closing the outer edge of the slot, connections between the casing elements and the bars, and external casing providing an enclosed space between said bar portions and the casing, and a packing of refractory material in said space.

1,753,193. CONDENSER. MORRIS H. BENNETT, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Oct. 23, 1926. Serial No. 143,573. 4 Claims. (Cl. 175—41.5.)



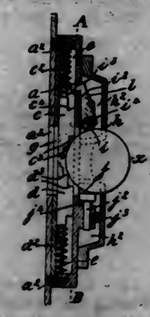
1. A variable electrical condenser having stator plates and rotor plates arranged to cooperate with the stator plates, said rotor plates each having its peripheral edge formed to a compound curve such as to give the condenser substantially a straight line frequency characteristic over one part of the angular movement of the rotor where the capacities are small and to give said condenser a characteristic according to some other law over another part of its angular movement, where the capacities are large, said compound curve forming a plate area substantially equal to the area formed by the equivalent straight line frequency curve for the angular and the capacity ranges of the condenser.

1,753,194. STEERING RANGE FOR AUTOMOBILES. CHARLES W. ANDERSON, Milan, Ohio. Filed Mar. 22, 1929. Serial No. 349,065. 2 Claims. (Cl. 240—7.1.)



1. In combination, a motor vehicle, having a hood and a steering wheel, a lamp casing mounted adjacent the forward and upper part of the hood and substantially in alignment with the center of the steering wheel, said casing having a reflector therein, a lamp positioned within the casing, a reflector having an opening directly above the lamp, and said casing having a hollow extension projecting upwardly therefrom, and having an opening at the top thereof whereby light may be emitted vertically from said extension, a lense carried by the casing at the forward end of said reflector, and a shield carried by the casing outside the lens and acting to direct some of the rays of light downwardly and across the front of the hood.

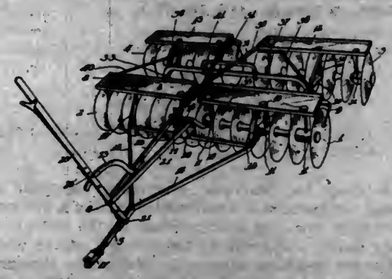
1,753,195. SPEED-CONTROLLING MEANS FOR TYPEWRITER CARRIAGES. ERNEST WILLIAM BACHE and JOHN GRICE, West Bromwich, England, assignors to George Salter and Company Limited, West Bromwich, England. Filed Apr. 20, 1928, Serial No. 271,604, and in Great Britain June 21, 1927. 4 Claims. (Cl. 197—64.)



1. In a typewriting machine, the combination with a spring-driven paper-carriage, of a vertical shaft geared to the said paper-carriage, an escapement wheel, a sleeve slidably keyed to the shaft, a clutch member on the sleeve adapted to connect the paper-carriage to the escapement wheel when the sleeve is lowered, a second clutch member on the sleeve, a gear-wheel loose on the said shaft but adapted to be connected thereto by the second clutch member only when the sleeve is raised to disconnect the paper-carriage from the escapement wheel, a worm-wheel in driven connection with the said gear-wheel on the shaft, and a speed-controlling wormed shaft meshing with and adapted to be rotated by the said worm-wheel.

1,753,196. INTERNAL-COMBUSTION ENGINE. ERNST BECKER, Berlin-Charlottenburg, Germany, assignor to Siemens & Halske Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed Apr. 17, 1928, Serial No. 270,694, and in Germany Apr. 27, 1927. 4 Claims. (Cl. 74—38.)

4. A divided crank-shaft having at least at one end of its crank-pin a detachable connection with the pertaining crank-arm, said connection comprising a boss at said pin end, said crank-arm having a boring adapted to receive said boss and being split at its end in axial direction of said boring, said boring having two axially directed keys protruding from its periphery and being integral with the crank-arm, said keys being spaced apart substantially 120° and being symmetrically disposed opposite the split portion of the crank-arm, said boss having two corresponding key ways adapted to engage said keys, and means for clamping the split arm portion together.

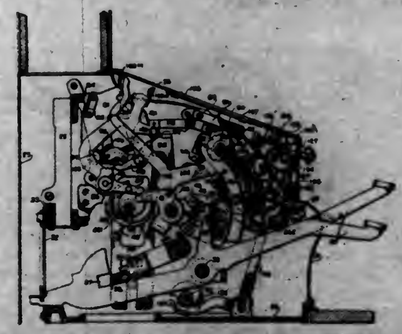


1,753,197. COIN-IN-THE-SLOT MACHINE. WILLIAM HENRY BEDDARD, Small Heath, England. Filed Apr. 3, 1928, Serial No. 266,931, and in Great Britain Apr. 13, 1927. 7 Claims. (Cl. 194—102.)

1. In a coin-in-the-slot machine, the combination with a coin entrance proper and movable pieces normally covering said entrance proper and slidable to open the entrance by the edge pressure of the coin thereagainst, of diameter testing devices arranged in front of said pieces and associated therewith to allow only the correct diameter coin to pass.

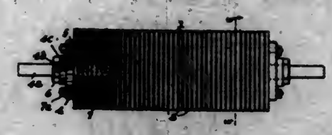
1,753,198. DISK HARROW. JOSEPH E. BODA, Moline, Ill., assignor, by mesne assignments to Minneapolis-Moline Power Implement Company, Minneapolis, Minn., a Corporation of Delaware. Filed Jan. 22, 1928. Serial No. 614,181. 13 Claims. (Cl. 55—83.)

1. A frameless tandem disk harrow having right and left front gangs, right and left rear gangs, draft connections for the front gangs, means for angling the front gangs, a pivotal draft connection between the right gangs, a pivotal draft connection between the left gangs, a spac-



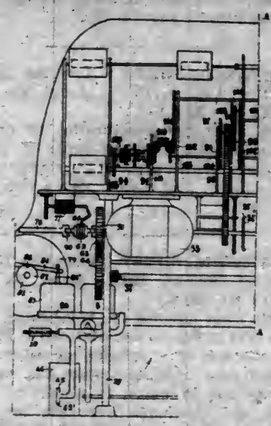
ing bar between said draft connections, an angling connection between the right gangs, and a angling connection between the left gangs.

1,753,199. FUELING SYSTEM. THEODORE BOSSARD, Salt Lake City, Utah, assignor to Bossard Products Company, Inc., a Corporation of Utah. Filed Apr. 16, 1928. Serial No. 270,231. 1 Claim. (Cl. 261—72.)



In a fueling system comprising a float chamber, in which a float controls the level of the liquid therein, mounted with the lower end thereof below the level of the bottom of the fuel supply tank; screens made of woven metal, carried in said float chamber with one portion thereof submerged in fuel at all times; pipes connecting said screens with a carburetion device one of which pipes is of smaller diameter to be used as an idling pipe; and another pipe completely surrounding the first mentioned pipes carrying preheated air over said pipes and discharging it within the float chamber where it is used to mix with the gas vapors and carried through the first mentioned pipes to the carburetion device and thence to the engine.

1,753,200. CASH REGISTER. RAYMOND B. RICH, Ilion, N. Y., assignor to Remington Arms Company, Inc., a Corporation of Delaware. Filed Aug. 27, 1924. Serial No. 734,498. 16 Claims. (Cl. 235—130.)



1. In a cash register, the combination with a plurality of printing totalisers, a printing mechanism common to both printing totalisers for printing the totals therefrom, means under the control of a lock for printing from one totalizer and a supplemental lock acting jointly with the first mentioned lock for controlling the printing from the remaining totaliser.

1,753,201. FABRIC-RUBBING ROLLER. PAUL EDLICH, Delawanna, N. J. Filed Mar. 29, 1928. Serial No. 265,618. 9 Claims. (Cl. 26—27.)

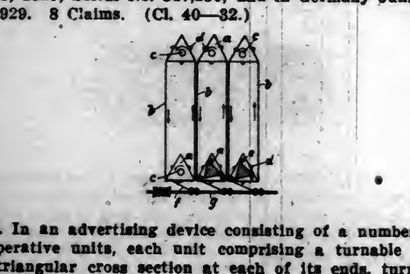
1. A fabric rubbing roller comprising a core and a rubbing body consisting of a series of leaves penetrated by and flexible with respect to the core and held to rotate therewith without compression of the series lengthwise of the axis of the roller.

1,753,202. WEIGHING AND RECORDING MACHINE. JULES GOETZMANN, Paris, France. Filed Apr. 30, 1926. Serial No. 105,682, and in France May 11, 1925. 11 Claims. (Cl. 265—7.)

1. An automatic balance for indicating and recording the weight, the unit price and the total price of goods placed on the scale of the balance, as well as for recording the number of weighings and indicating the amount of takings obtained within a definite time, said balance comprising a beam pivoted intermediate its ends, one of the arms of said beam being arranged to support the goods to be weighed and the other arm being provided with a weight pan for supporting additional counterbalancing weights, said latter arm including two parallel rods, a poise adapted to travel along said rods, nut and screw mechanism connected to said poise for shifting the same, an electric motor for operating said screw, means controlled by the movement of said beam for automatically starting and stopping said motor, means controlled by the movement of said poise for reversing said motor, a revolution counter operatively associated with said screw and graduated to indicate the weight of the goods placed on said scale, means operated by said poise at the end of its travel in one direction for placing additional counterbalancing weights upon said weight pan to permit the carrying out of the weighing operation, said reversing means operating automatically to return said poise along said screw the required distance to complete the weighing operation, the movements of said beam upon removal of the weighed goods operating automatically, through control of said motor, to return said poise to starting position, means for removing said additional weights as said poise returns to starting position, means for de-energizing said motor when said poise reaches its starting position, and total-price, unit-price and recording mechanism associated with said revolution counter.

1,753,203. ADVERTISING DEVICE. BERNHARD HOETGER, Worpswede, near Bremen, Germany. Filed Mar. 15, 1929, Serial No. 347,250, and in Germany Jan. 23, 1929. 8 Claims. (Cl. 40—32.)

1. In an advertising device consisting of a number of cooperative units, each unit comprising a turnable slat of triangular cross section at each of its ends, turning pivots for the said slats, an apron carrying advertising matter passing over said slats, catch pins carried at the ends of the slats near the points of the triangular cross section, a resilient member having a hooked end to grip and move said catch pins, and means to move said resilient member so as to turn said slats and thereby advance the apron upon the slats by another step.



1,753,204. STENCIL SHEET. SHINJIRO HORII, Tokyo, Japan. Filed Aug. 4, 1927. Serial No. 210,728. 2 Claims. (Cl. 41—38.6.)

1. A stencil sheet for stencilization by pressure, comprising a base of thin Japanese paper of the maximum felting and grease-proofing qualities, consisting of highly hydrated bast fibres, and coated with a coating material impermeable to ink.

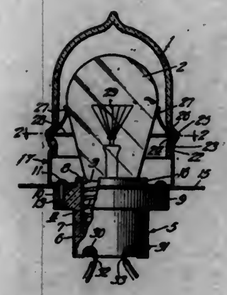
1,753,205. STENCIL SHEET. SHINJIRO HORII, Tokyo, Japan. Filed Dec. 31, 1927. Serial No. 244,049. 3 Claims. (Cl. 41—38.6.)

1. A stencil sheet adapted for stencilizing by pressure, comprising a base of fibrous material coated with a coating material, consisting of a solution of esters of polysaccharides, other than cellulose acetate and starch acetate, which are insoluble in water, in admixture with a tempering agent, and aluminum hydroxide, the latter being dispersed in the solution forming a homogeneous suspensoid.

1,753,206. DIE-SINKING OR ENGRAVING MACHINE. JOHN E. JOHNSON, Aurora, Ill. Filed Nov. 19, 1928. Serial No. 320,420. 1 Claim. (Cl. 90—13.2.)

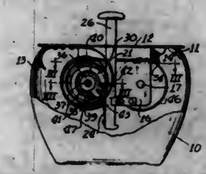
In a mechanism of the class described, the combination of a horizontally movable carriage, a support for the same, means for guiding the carriage in a horizontal plane, a tool-supporting member pivotally mounted on the carriage and movable upward and downward upon a horizontal axis, a tool rotatively mounted on and movable with said pivoted tool-supporting member, a guiding stylus on and movable with said pivoted tool-supporting member and adapted to engage a pattern for guiding the tool with respect to the material to be operated upon, and driving means on and movable with said carriage and connected with the tool, for rotating the same.

1,753,207. CLASP FOR JEWELRY. JACQUES KREISLER, New Rochelle, N. Y. Filed Aug. 8, 1928. Serial No. 298,336. 9 Claims. (Cl. 24—77.)



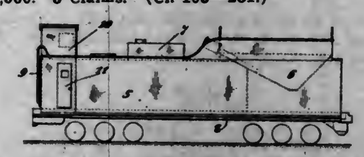
1. A clasp for bracelets, comprising separable slide and snap members, said slide member having a flat bottom portion with inwardly bent portions at the sides to frictionally embrace opposite marginal edges of the bracelet and further yieldable means to frictionally engage the mid transverse portion of the bracelet between the first means.

1,753,208. BRAKE SHOE. LUDGER E. LA BRIE, South Bend, Ind., assignor to Bendix Brake Company, South Bend, Ind., a Corporation of Illinois. Filed Dec. 5, 1928. Serial No. 323,612. 7 Claims. (Cl. 188—250.)



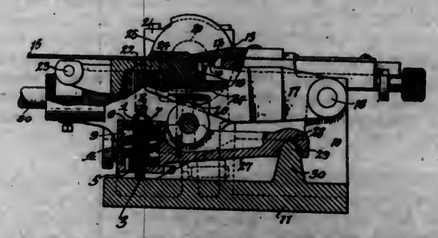
1. A channel-shaped brake shoe comprising two parts, each with a radial portion and a circumferential flange, the two circumferential flanges being superposed and the two radial portions being of unequal width and forming the sides of the channel.

1,753,209. LAMP AND LAMP HOOD AND CONNECTION FOR ELECTRIC SIGNS. WILLIAM L. LAIB, Oak Park, Ill. Filed Sept. 24, 1928. Serial No. 308,059. 5 Claims. (Cl. 240—128.)



1. In a device of the class described, the combination of a glass lamp hood having an annular rim adapted to encircle a lamp bulb, a cup-shaped hood-supporting member having an annular rim in engagement with the annular rim of said hood, means on the engaged rim portions of said hood-supporting member and hood, for securing the same in engagement with each other, and resilient means attached to the inner side of the annular rim portion of the hood and supported by the same in engagement with a hood-encircled peripheral portion of such lamp bulb, and adapted to resist the rotation of the hood and hood-encircled lamp bulb relatively to each other.

1,753,210. WASTE RECEPTACLE. HERBERT J. MELVILLE, Chicago, Ill. Filed Dec. 5, 1927. Serial No. 237,702. 3 Claims. (Cl. 131—51.)

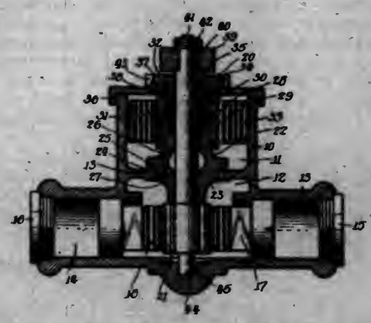


1. The combination with confronting rolls, relatively fixed shafts for carrying said rolls, means for yieldably supporting said rolls in confronting relation, means for actuating said rolls to extrude refuse therethrough and simultaneously effect the extinguishment thereof, and ratchet means operatively associated with said actuating means to impart intermittent movement in one direction to said rolls responsive to said actuating means.

1,753,211. LOCOMOTIVE TENDER. JOHN E. MUHLFELD, Scarsdale, N. Y. Filed Jan. 21, 1929. Serial No. 372,560. 5 Claims. (Cl. 105—231.)

1. A tender for locomotives comprising an extended under frame, a tender body supported upon said extended under frame, and a cabin at the rear end of the tender body affording a compartment for housing members of the train crew.

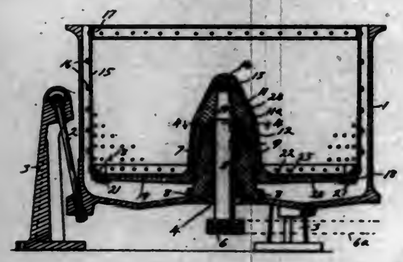
1,753,212. FOLDING MACHINE. FREDERICK E. MUNSCHAUER, Buffalo, N. Y., assignor to Niagara Machine and Tool Works, Buffalo, N. Y., a Corporation of New York. Filed July 3, 1928. Serial No. 290,242. 4 Claims. (Cl. 153—16.)



1. A folding machine including a folding blade; a folding bar adapted to bend material around said blade; a clamping jaw which is adapted to move toward and from said blade and which is pivotally connected with said folding bar; a rotary cam turning with said folding bar; an abutment engaged by said cam; an arm supporting said abutment and pivoted at one of its ends and provided at its opposite end with a pocket; a lower screw nut capable of vertical movement in said pocket but held against turning; an adjusting screw working in said nut and resting on a fixed part; a follower adjustably mounted in the upper part of said pocket; and a spring interposed between said nut and follower.

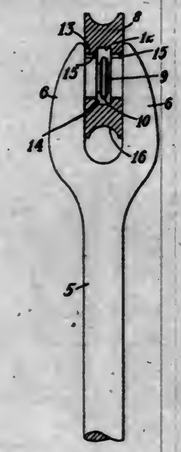
1,753,213. RADIO AERIAL. EMIL NEINFELDT, St. Paul, Minn. Filed Feb. 6, 1928. Serial No. 252,202. 1 Claim. (Cl. 250—33.)

A radio aerial comprising a globular wire cage, an electroconductive column with base means adapted to be attached to a fixed object, said cage mounted concentric about the upper part of said column and comprising a series of wires radiating from the upper part of the column, each wire in semi-circular formation and in a vertical plane, each said wire extending inwardly at its lower part and fixed to the column, and each wire extending outwardly from said lower fixed part thence downwardly and inwardly in open loop formation and its extremity in proximity to said column, said lower fixed part comprising an integral horizontal flange on the column formed with a perimetral groove to be engaged by the lower parts of the wires and a ring arranged to hold said wires in the groove.



1,753,214. DOORCHECK. DAVID R. LASIER, Chicago, Ill., assignor to Norton-Lasier Company, Chicago, Ill., a Corporation of Illinois. Filed June 9, 1928. Serial No. 284,158. 1 Claim. (Cl. 16—62.)

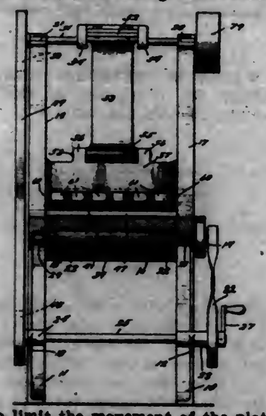
In a closing and checking device of the type having an integrally formed casing constituting a fluid cylinder and a spring compartment, the combination of an apertured partition dividing said casing into said cylinder and spring compartment, and an apertured outside wall for substantially closing said spring compartment, disposed in opposed relation to said partition, a spindle and bearing assembly extending through said spring compartment with the one end of said spindle extending beyond said wall and the other end of said spindle extending beyond said partition and into said cylinder, said spindle and bearing assembly being mounted in the aperture of said partition and extending into the aperture of said wall but spaced from and out of supporting contact therewith, said spindle



and bearing assembly having spaced bearing surfaces located adjacent said outside wall and adjacent said partition respectively and having sealing means located between said bearing surfaces.

1,753,215. EXTRACTOR. ALFRED PARTLOW, Lincoln Park, Mich., assignor to Vorclone Corporation, Milwaukee, Wis., a Corporation of Delaware. Filed Mar. 31, 1928. Serial No. 266,408. 26 Claims. (Cl. 210—76.)

13. An extractor basket having an opening at its bottom for the discharge of its contents, and comprising a hinged door controlling said opening, means for normally holding said door closed and drive means for said basket carried by said door.

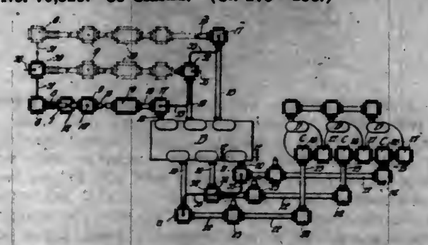


1,753,216. GUY ROD AND METHOD OF MAKING IT. CHARLES L. PEIRCE, Jr., Pittsburgh, Pa., assignor of one-half to Hubbard and Company, a Corporation of Pennsylvania. Filed May 1, 1929. Serial No. 359,578. 9 Claims. (Cl. 29—148.)

1. A guy rod having a bifurcated end, a stub shaft formed on the inner surface of each furcation, a weld joining said stub shaft to form a single cross member and a cable receiving annulus having spaced bearing faces formed in the bore thereof for engaging said cross member on opposite sides of said weld.

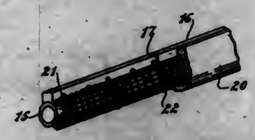
1,753,217. DOUGH-CUTTING MACHINE. TADEUSZ PIEKOS, West Lynn, Mass., assignor of one-half to Scepan Baczewski, Lynn, Mass. Filed Apr. 20, 1928. Serial No. 271,421. 2 Claims. (Cl. 107—26.)

1. In a dough cutting machine, a cutter head comprising a plurality of circular cutting members arranged concentric to each other in spaced relation and having screw threaded engagement with the head to be readily removable, movable plates of a shape to substantially fit the spaces between the concentric cutters, and each plate having a hollow stud, pins having heads retained in the



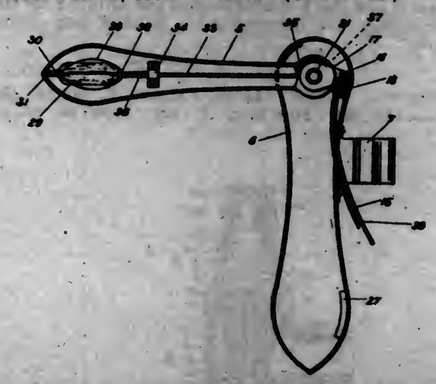
hollow studs to limit the movement of the plates, springs beneath the plates for normally urging the plates toward the cutting edges of the members to free from the members the objects cut thereby, and fillers in the openings in the studs to preserve the continuity of the surface of the plates.

1,753,218. SNAP-FASTENER SOCKET. DANIEL I. REITER, New York, N. Y. Filed July 12, 1928. Serial No. 292,219. 1 Claim. (Cl. 24—218.)



A snap fastener socket comprising a resilient stud-engaging wire, and a holder and attaching element therefor consisting of a single piece of metal having a closed, flat-bottomed central, cup-like portion of relatively large diameter to serve as a thumb-piece support, and sounding device, pointed marginal prongs spaced in a circular series about said cup-like portion to serve as attaching means, and inturned prongs alternating with certain of said attaching prongs to serve as a part of the means whereby the stud-engaging wire is retained in the holder and attaching element.

1,753,219. BUS AND SWITCH STATION. ALLEN M. ROSSMAN, Chicago, Ill., assignor, by mesne assignments, to Rossman Patents, Incorporated, Chicago, Ill., a Corporation of Illinois. Filed Nov. 20, 1925. Serial No. 70,819. 35 Claims. (Cl. 175—298.)

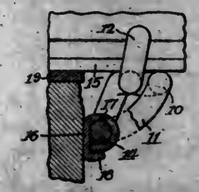


15. A multi-phase alternating current bus and switch station comprising a compact, permanent network of single phase power conductors and apparatus, all live power conducting parts being continuously sheathed in a grounded fluid tight metal sheath.

1,753,220. TRACK FOR USE IN FURNACES. LLOYD J. STANBERY and NELSON T. BRANCH, Toledo, Ohio, assignors to The Surface Combustion Company, Inc., Toledo, Ohio, a Corporation of New York. Filed Feb. 4, 1929. Serial No. 337,481. 8 Claims. (Cl. 263—6.)

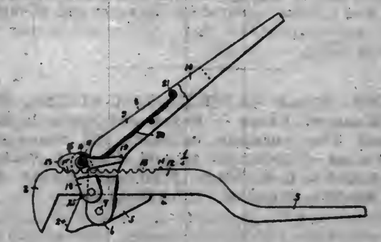
1. A track for use in furnaces comprising a rail, a support for the rail having a passage for cooling medium extending lengthwise thereof, and a heat-insulating jacket encasing the rail except for the work contacting portion thereof.

1,753,221. AUTOMOBILE SIGNAL. ERNST TELTZ, Chicago, Ill. Filed Oct. 3, 1927, Serial No. 223,650. Renewed Feb. 10, 1930. 1 Claim. (Cl. 116—53.)



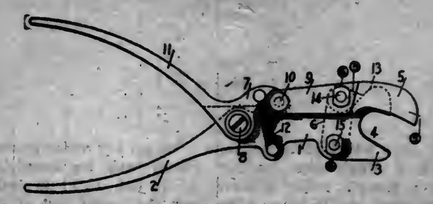
In a device of the class described in combination with a vehicle a semaphore arm, a housing for said arm adapted to be fastened to the vehicle, the arm being pivotally mounted in its housing, an actuating lever, a housing therefor mounted adjacent the driver's seat of the vehicle, the lever being pivotally supported in said housing, a segment also pivotally mounted in said housing and adapted to be engaged and to be pivoted by said actuating lever, a cable, one end of said cable being fastened to the segment and the other end to the semaphore arm, means on the actuating lever for engaging the segment and for moving it in one direction, means in the semaphore housing for urging the semaphore arm and the segment connected therewith into neutral position and means on the housing for the actuating lever for preventing accidental movement of said lever.

1,753,222. MOTION-PICTURE-PROJECTING DEVICE. ANDREW J. TIMONEY, New York, N. Y., assignor of one-half to Harold Williams and Gus Durkin, New York, N. Y. Filed May 6, 1929. Serial No. 360,894. 1 Claim. (Cl. 88—24.)



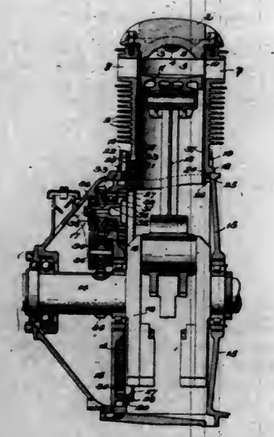
In combination with the optical system of a motion picture machine for projecting film having decentered images, an attachment comprising a combined prismatic and cylindrical lens positioned intermediate the objective lens and the gate of the machine, said combined lens serving to shift projected images to the center of a screen and spread the images laterally to cover the entire screen.

1,753,223. RAIL ANCHOR. ARNOLD H. TOLD, Chicago, Ill., assignor to Chicago Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 31, 1928. Serial No. 329,545. 11 Claims. (Cl. 238—330.)



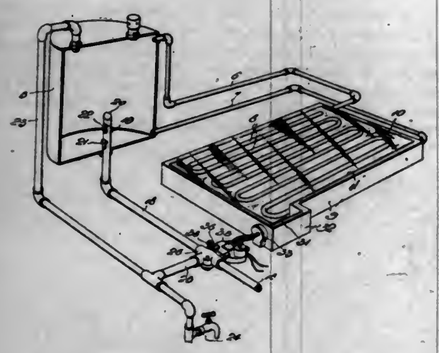
1. A spring-clamp rail anchor comprising a cross-bar having integral flange-engaging portions, and a separate foot-piece mounted on the cross-bar having a flat tie-abutting face of extended area, the anchor being adapted to be sprung into position on the rail base with said tie-abutting face spaced substantially below the bottom of the rail base and in front of the cross-bar and the flange-engaging portions.

1,753,224. WRENCH. CLINTON DE WITT WAGNER, Cedar Rapids, Iowa. Filed May 31, 1929. Serial No. 367,550. 6 Claims. (Cl. 81—79.)



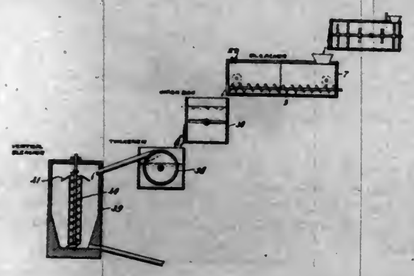
1. A wrench of the character described comprising a shank having a fixed jaw, a lever handle having an angular bifurcated portion straddling the first shank, a slidable jaw pivoted between the bifurcated portion of said lever and a fulcrum in line of said shank to which said lever is pivoted, links connected to said fulcrum, and carrying adjusting means for said slidable jaw.

1,753,225. PRUNING SHEARS. FRANK L. WALTER, Dayton, Ohio; Margaret M. Walter executrix of said Frank L. Walter, deceased. Filed Feb. 26, 1925. Serial No. 11,709. 3 Claims. (Cl. 30—11.)



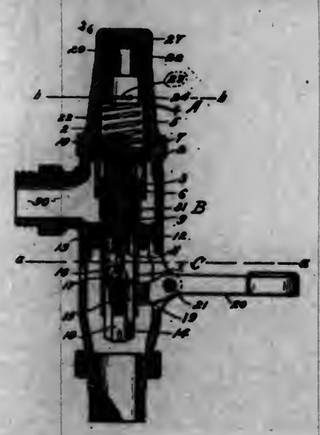
1. Shears of the character described comprising a member having a part forming a work support, a blade to cooperate with said work support, a link to connect said blade with said member, eccentric pivot pins for connecting said link with said blade and said member, said pivot pins being adjustable to adjust said blade with relation to said work support, and means for actuating said blade.

1,753,226. INTERNAL-COMBUSTION ENGINE. RAYMOND WARR, Ithaca, N. Y. Filed May 24, 1927. Serial No. 193,939. 14 Claims. (Cl. 123—55.)



1. A radial engine having a sleeve valve in each cylinder, each valve having a flat and a conical cam surface and gear teeth on its inner end, a driving gear in the crank case in mesh with said gear teeth and having a conical roller surface in engagement with said conical cam surfaces, and a guide mounted on the inner end of each cylinder and engaging said flat cam surface of the corresponding valve.

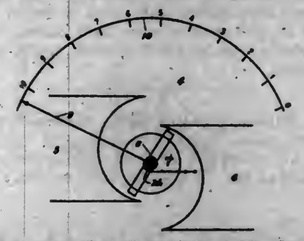
1,753,227. SOLAR WATER-HEATING SYSTEM. HENRY A. WHEELER, FRANK J. BENTZ, and JAMES L. MASON, Miami, Fla., assignors, by direct and mesne assignments, of three-fourths to said Frank J. Bents and one-fourth to L. E. Bents. Filed Aug. 22, 1928. Serial No. 301,370. 9 Claims. (Cl. 126—271.)



1. In a water heating system, a closed hot water storage tank, a supply pipe leading to said tank for supplying water thereto under pressure while hot water is being discharged, a discharge pipe from the upper end of the tank through which hot water may be discharged, means for preventing flow of water to the tank through said supply pipe, conducting means for permitting discharge of hot water from the tank by gravity when said flow-preventing means is closed, and a valve for then admitting air to the tank and for later venting said tank while refilling.

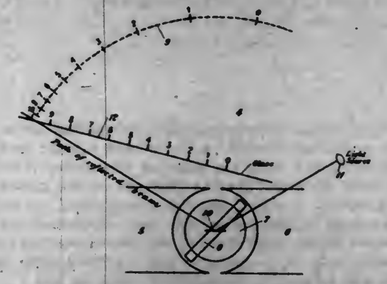
1,753,228. METHOD OF AND APPARATUS FOR BLEACHING PAPER PULP. ROBERT B. WOLF, New York, N. Y., and RAYMOND P. HILL, Glen Rock, N. J. Filed Oct. 23, 1928. Serial No. 314,439. 19 Claims. (Cl. 8—2.)

1. The method of bleaching paper pulp which comprises advancing a substantially non-fluid and quiescent mass of pulp and bleaching reagent and agitating the mass periodically, and discharging the bleached pulp continuously.



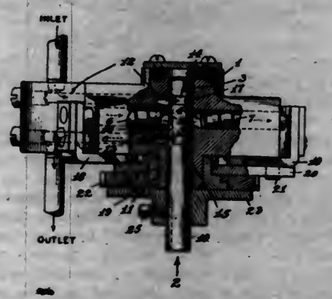
1,753,229. FLUSH VALVE. ALFRED E. WOLFF, Kansas City, Mo. Filed Sept. 27, 1927. Serial No. 222,891. 4 Claims. (Cl. 137—93.)

1. A valve of the character described, comprising a sectional body portion, means for removably connecting the sections, a rotatable valve housing within the body portion, said body portion having a groove defining a passage-way, said valve housing having a tapered slot adapted to register with the groove to establish communication between the valve housing and valve body to allow liquid to pass into the valve housing, a valve operating in the valve housing and manually controlled means for moving the valve member to control the amount of liquid passing through the valve body.



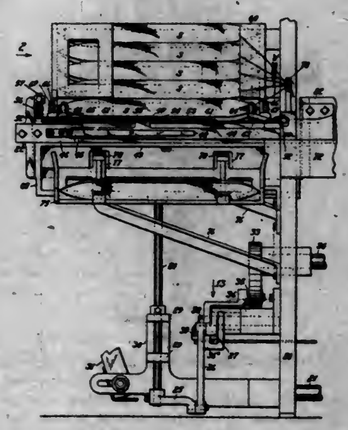
1,753,230. METER. FRED H. BEST, Westfield, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Feb. 25, 1928. Serial No. 257,018. 2 Claims. (Cl. 179—175.)

1. A meter having a movable coil through which flows a current to be measured, a pointer associated with the coil, a scale having uniform graduations throughout corresponding to transmission units which are logarithmic functions of the current to be measured, said scale being arranged along arcs subtending the angle of movement of said coil, and pole pieces positioned up either side of the coil, said pole pieces being so arranged with respect to the coil and being so shaped as to provide an air gap through which the coil moves and which air gap varies



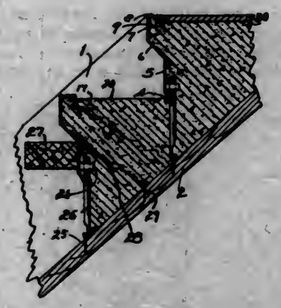
in such a manner that the pointer will move a substantially uniform distance at any part of the scale in response to a change in current corresponding to a transmission unit.

1,753,231. METER FOR TRANSMISSION TESTING. FRED H. BEST, Westfield, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Feb. 25, 1928. Serial No. 257,019. 4 Claims. (Cl. 179—175.)



1. A meter having a rotatable coil through which flows current to be measured, an indicator movable with said coil, a source of light projecting rays centered on the indicator, and a scale having substantially uniform graduations, said scale being positioned in such angular relation to the normal position of the indicator that the beam of light emanating from said indicator will increase in its degree of movement per scale unit as its deflection is advanced along the scale until a maximum movement of the light beam is obtained at its most advanced position.

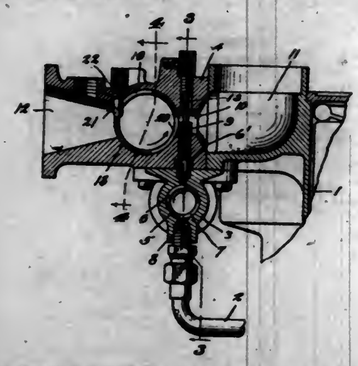
1,753,232. PUMP. JULIUS BRENZINGER, Fairfield, Conn., assignor to The Max Ams Chemical Engineering Corporation, Bridgeport, Conn., a Corporation of Connecticut. Filed Mar. 30, 1926. Serial No. 98,475. 4 Claims. (Cl. 103—174.)



1. A pump including: a casing, a pump chamber therein, a valve chamber intersecting the pump chamber and dividing it into two portions, a rotating valve in said valve chamber, two oppositely reciprocating pistons one for each portion of the pump chamber, a yoke connecting the two pistons, an eccentric, a connecting member between the eccentric and the yoke, a rotating member surrounding a concentric portion of the eccentric, and transmission means surrounding the valve to drive the rotating valve and the eccentric from the rotating member.

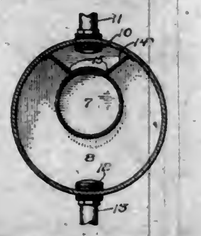
1,753,233. SHUTTLE-CHANGING LOOM. AUGUSTIN J. CHEVRETTE, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed June 8, 1927. Serial No. 196,878. 11 Claims. (Cl. 139—289.)

1. In a shuttle-changing loom, a lay, a stationary shuttle magazine located approximately in vertical alignment above the normal position of the running shuttle when the lay is at back center, a drop box frame having an upper regular shuttle box and a lower auxiliary shuttle box, weft-controlled mechanism to raise and lower said boxes, the lowest shuttle in said magazine being positioned substantially in said regular shuttle box when the latter is raised and at back center, and being removed from said magazine in a substantially horizontal forward direction by forward movement thereof in unison with said lay and effected thereby.



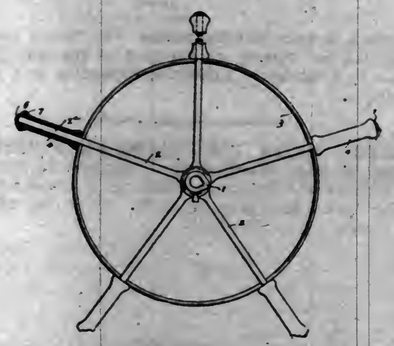
1,753,234. METAL RISER AND NOSING FOR CONCRETE STEPS. SETH A. COPE, San Francisco, Calif. Filed Sept. 12, 1927, Serial No. 218,918. Renewed Sept. 10, 1929. 1 Claim. (Cl. 72—96.)

A device of the class described comprising a sheet metal strip having a portion of the bottom edge bent backwardly, a vertical portion, a portion bent forwardly at an



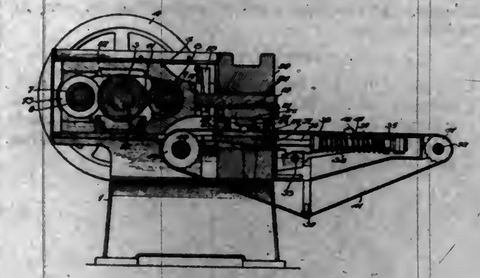
angle therefrom, a second vertical portion, a horizontal portion bent back from said second vertical portion, a portion bent down from said horizontal portion, a series of holes in said bent down portion adapted to receive reinforcing wires, a plurality of clips fixed to said angle portion, holes in said clips to receive reinforcing wires, a pair of threaded nuts fixed to said first vertical portion, threaded bolts in said nuts, said bolts adapted to extend to the bottom board of a stair frame, and means to attach the lower ends of said bolts to said bottom board.

1,753,235. CARBURETOR. RALPH A. DUFF, Nebraska City, Nebr. Filed May 10, 1924. Serial No. 712,387. 1 Claim. (Cl. 261—47.)



A carburetor including a body having a fuel intake port, an air inlet, and an outlet for communication with an intake manifold, there being a restricted passage between the air intake and the outlet, valved means for spraying fuel across the current of air flowing through the passage, a sleeve valve mounted for rotation between said passage and the outlet, there being opposed slots in the valve movable into and out of register with the passage and outlet respectively thereby to control the flow of fuel to the outlet, means outside of the carburetor body for limiting the rotation of the valve to full closed or open position, there being a notch in one wall of the outlet slot in the valve adapted to be positioned to permit flow of mixture through the valve when the valve is in full closed position, thereby to allow idling of an engine supplied by the carburetor, and a pin adjustable into and out of the notch when the valve is in full closed position, thereby to control the flow of mixture through the notch to the outlet when the valve is in full closed position, the inlet slot of the valve having a reduced extension for maintaining communication between the restricted passage and the interior of the valve when the valve is in full closed position.

1,753,236. LIQUID-COOLING SYSTEM. DAVID H. EBINGER, Columbus, Ohio, assignor to The D. A. Ebinger Sanitary Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Nov. 11, 1927. Serial No. 232,698. 4 Claims. (Cl. 62—141.)

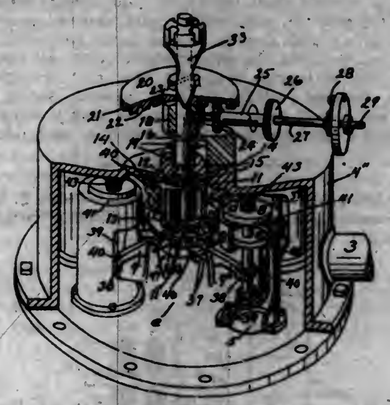


1. In a cooling device, a casing open at one end, a detachable closure for the open end of said casing, a cooling unit carried by said closure and situated longitudinally within said casing, the longitudinal axis of said cooling unit being situated above the longitudinal axis of said casing, a liquid intake in the top of said casing above said cooling unit, and a liquid outlet at the bottom of said casing below said cooling unit, said intake and outlet being disposed in substantially registering vertical planes.

1,753,237. WHEEL STRUCTURE. ERNEST E. EINFELDT, Davenport, Iowa, assignor to French & Hecht, Incorporated, a Corporation of Iowa. Filed Dec. 29, 1927. Serial No. 243,281. 5 Claims. (Cl. 74—33.)

2. In a wheel structure, the combination of a hub, spokes connected thereto, a rim seated against and connected integrally with the sides of the spokes inward of their outer ends and leaving portions of the spokes projecting beyond the rim, handles surrounding the projecting portions of the spokes and seated against the rim, and heads on the outer ends of the spokes bearing against the outer ends of the handles and confining them on the spokes and in positive engagement with the rim.

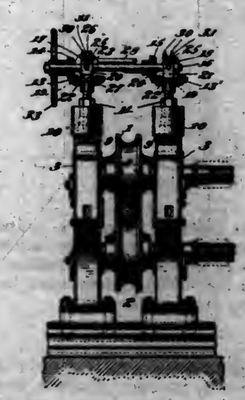
1,753,238. COMPRESSING MACHINE. LOUIS E. ENDSLEY and EDWARD V. CORFF, Chicago, Ill., assignors to Grip Nut Company, Chicago, Ill., a Corporation of Illinois. Filed June 9, 1922. Serial No. 566,955. 14 Claims. (Cl. 10—72.)



3. In a device of the kind described, a compression block, a cooperating wedge member therefor, and means for positively reciprocating said wedge member, in combination with a cooperating anvil member, means for vertically lifting the anvil member a distance measured by the thickness of the article operated upon, resilient means for so operating the lifting member, positive means for retracting the lifting member, a conveyor arranged to deliver the articles between the block and the anvil, and means for operating the conveyor with a step by step movement.

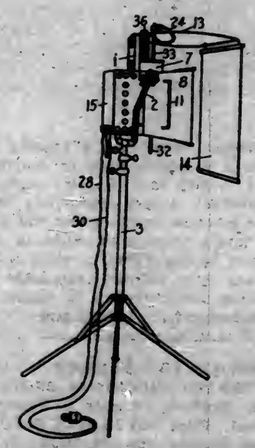
1,753,239. CAP STRUCTURE FOR COLLAPSIBLE TUBES. FREDERICK L. FOX, Washington, D. C. Filed May 3, 1926. Serial No. 106,845. 18 Claims. (Cl. 221—60.)

1. In combination, a collapsible tube for containing fluent material having a neck formed with a ring-shaped discharge opening, a closure cap slidably carried by said neck and having a discharge opening in concentric relation to said ring-shaped discharge opening in the neck, and means for seating the closure cap on the neck, to close said ring-shaped discharge opening against communication with the opening in said cap.



1,753,240. FLUID-DISTRIBUTING APPARATUS. WARREN HOWELL and GARDNER SHERBURNE, Pasadena, Calif. Filed Aug. 28, 1926. Serial No. 132,236. 8 Claims. (Cl. 137—78.)

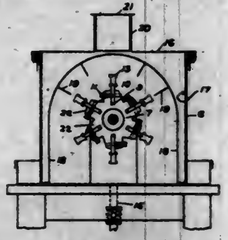
1. The combination with a meter, of a chamber connected to receive fluid passing through the meter, and provided with a series of outlets to discharge such fluid from the chamber; valves for said outlets respectively; means to yieldingly hold the valves closed; valve opening means operated by the meter and adapted to open the valves successively, and to hold one valve open while reaching position to open a succeeding valve; and snap action means to open the succeeding valve just before the valve opening means leaves the preceding valve free to be automatically closed.



1,753,241. WELDING-ROLL SCREW DOWN. JOHN J. KENNEDY, Pomeroy, Pa., assignor to Bethlehem Steel Company. Filed Dec. 11, 1926. Serial No. 154,113. 2 Claims. (Cl. 80—58.)

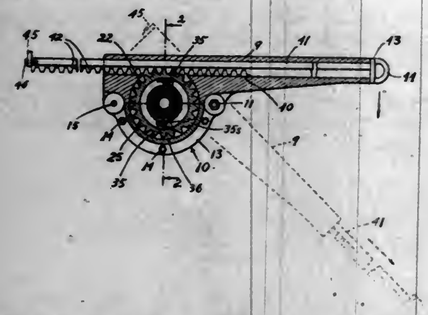
1. A screw down for a rolling mill comprising roll adjusting screws, separate transmission connections between the screws and a control shaft, the control shaft being journaled in bearings movably mounted on the adjusting screws, a cam rotatably mounted on one of said bearings, and engaging a support on one of the adjusting

screws, whereby rotation of said cam elevates said bearing to disengage the control shaft and one of the adjusting screws.



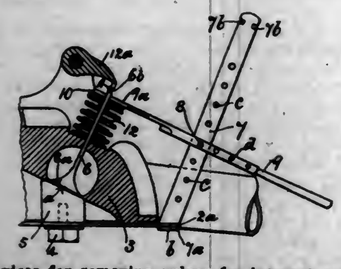
1,753,242. ARC LAMP. LAWRENCE C. LEOTY, Dayton, Ohio. Filed Feb. 26, 1925. Serial No. 11,745. 9 Claims. (Cl. 176—51.)

1. In an arc lamp, separate supporting devices for two carbons, one of said devices comprising a clutch to engage its carbon and support the same normally in spaced relation to the other carbon, a solenoid having a coil connected in circuit with said carbons and a core slidably mounted in said coil so that the vibrations imparted thereto by an alternating current passing through said coil will vary as the magnetic strength of said coil varies and means for so connecting said core with said clutch that the vibrations imparted to said core when said coil has substantially its full magnetic strength will not affect said clutch but the vibrations imparted to said core when said magnetic strength of said coil has decreased to a predetermined extent will actuate said clutch to gradually feed its carbon toward said other carbon.



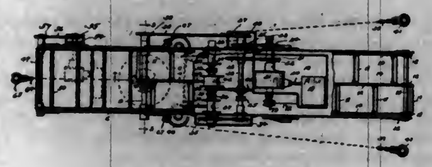
CARNEGIE LIBRARY OF ATLANTA

1,753,243. MATRIX-CLEANING MACHINE. DANIEL L. LIDDLE, Washington, D. C. Filed Feb. 6, 1928. Serial No. 252,320. 3 Claims. (Cl. 141—1.)



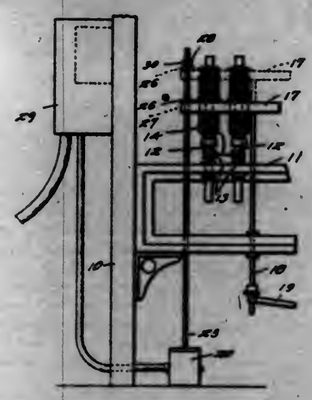
1. In a matrix cleaning machine, a rotatable shaft, a spider on the shaft, bars on the spider, screws removably holding the bars in place, means for holding matrices on the bars, a tank for holding a fluid below the shaft, and means for rapidly rotating the shaft.

1,753,244. UNSCREWING ATTACHMENT FOR DRILL PIPE. ARTHUR E. MARTOIS, Compton, and ROBERT D. PEARSON, Los Angeles, Calif. Filed Feb. 16, 1929. Serial No. 340,624. 2 Claims. (Cl. 81—57.)



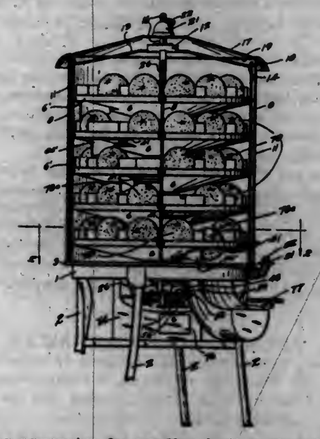
2. A pipe wrench comprising a housing adapted for mounting upon a rotatable pipe, or coupling, gripping means adapted to grip said pipe or coupling and comprising a gear-wheel, a rack operatively engaging said gear-wheel, and a hollow handle within which said rack is slidable, said handle forming an extension of said housing and said rack having a portion which projects beyond said housing and is at all times accessible for the purpose of attaching means thereto to impart a combined traction and swinging force to said rack.

1,753,245. DEVICE FOR REMOVING THE VALVES FROM INTERNAL-COMBUSTION ENGINES. DANIEL NEAL, Otley, England, assignor to James Whitehead, Otley, England. Filed July 18, 1928, Serial No. 293,757, and in Great Britain Aug. 16, 1927. 1 Claim. (Cl. 29—86.3.)



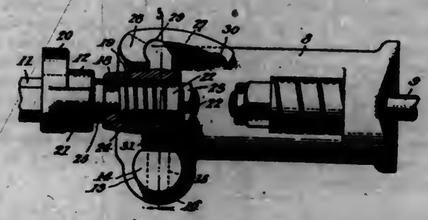
In devices for removing valves for internal combustion engines, a base piece having adjusting slots as described, a block mounted to be adjusted along one slot, a lever-support formed to be adjusted along the other slot in the base piece, said lever-support having a series of openings formed in it to permit the adjustment of the hand lever thereon, a hand lever having bifurcations at one end and a handle at the other end with a series of pivotal openings to permit the adjustment of said hand lever and means for pivoting said lever upon its support.

1,753,246. LOADING MACHINE. NORTON A. NEWDICK, Columbus, Ohio, assignor to The Coloder Company, Columbus, Ohio, a Corporation of Delaware. Filed Jan. 19, 1927. Serial No. 162,142. 6 Claims. (Cl. 198—11.)



1. In a loading machine, a portable base unit, a gathering conveyor connected with said base unit, a delivery conveyor carried by said base unit and having the forward portion thereof arranged beneath the discharge end of said gathering conveyor in receiving relation with respect thereto, a pedestal casting arising from said base unit, a vertical shaft carried by said delivery conveyor and turnable in said casting, said casting being provided with a guide opening, a motor driven reel mounted on said base unit and the cable connected with said reel and extending rearwardly from the base unit through the guide opening provided in said pedestal casting, the rear end of said cable being connected with a rearwardly disposed anchor mounted independently of said machine.

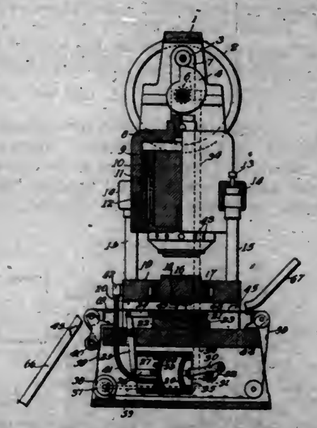
1,753,247. SPINNING STOP MOTION. FLOYD T. NOAH, Greensboro, N. C. Filed Feb. 16, 1929. Serial No. 340,591. 4 Claims. (Cl. 118—5.)



1. In a spinning machine stop motion, the combination with the motor driven spindles and the vertically movable traverse thereof, of an electric circuit including said motor, a switch in the circuit including contact members, a reciprocable member normally bridging the contacts to maintain the circuit, and means on the traverse for engaging and moving the reciprocable member to break the circuit and stop the machine.

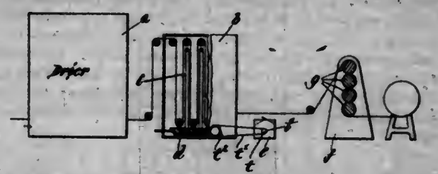
1,753,248. FRUIT-VENDING APPARATUS. HARRY G. NUTT, Altadena, Calif., assignor, by mesne assignments, to Selector Corporation, Salt Lake City, Utah, a Corporation of Utah. Filed Feb. 8, 1928. Serial No. 252,889. 8 Claims. (Cl. 312—94.)

1. In an apparatus for vending fruit, a plurality of fixed supporting members disposed one above another and inclined downwardly toward the center thereof, and a plurality of fruit conveying devices each provided with a plurality of impelling elements defining fruit-receiving compartments above the respective supporting members and operable to move fruit placed in said compartments around above said supporting members, each of said supporting members being provided with one opening of sufficient size to permit passage of a fruit therethrough, said conveying devices being adapted to permit fruit so moved over one of said openings to fall therethrough, and said openings in successively higher supporting members being successively displaced, in the direction of movement of the impelling elements, by an angular distance equal to the angular distance between successive compartments of said fruit impelling elements.



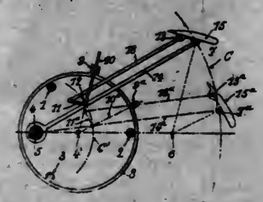
1,753,249. TOOL RETAINER. GUSTAV C. PEARSON, Denver, Colo., assignor to Gardner-Denver Company, Denver, Colo., a Corporation of Delaware. Filed Mar. 14, 1929. Serial No. 347,126. 5 Claims. (Cl. 121—32.)

1. The combination with a tool holder, of a swinging carrier, a pivotal mounting for the carrier, and on which it has a yielding mounting, a device with which the carrier yieldingly interfits to hold it in different positions, and a tool retainer movable with the carrier and having a yielding mounting thereon.



1,753,250. DEFLECTING MACHINE. WILLIAM E. SHARP and GEORGE F. SANDSTROM, Chicago, Ill., and GEORGE H. RIDLON, South Whitley, Ind.; said Sandstrom and Ridlon assignors to said Sharp. Filed Mar. 5, 1925. Serial No. 13,280. 19 Claims. (Cl. 10—72.)

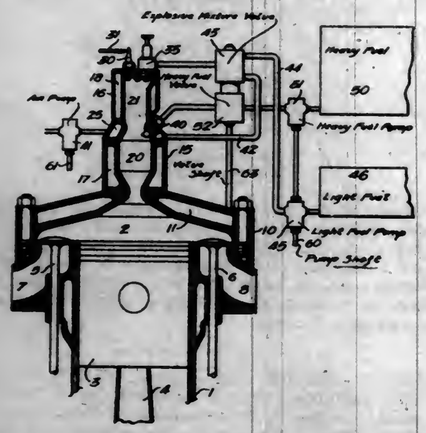
3. In a device of the kind described, a suitable frame provided with a vertically movable ram slidably mounted therein, means for raising said ram and permitting it to fall, adjustable means for cushioning the fall of the ram, and a hammer member carried by the ram, said hammer member being adjustable longitudinally of the ram, in combination with a cooperating block adjustably mounted in the frame, means for resiliently maintaining the block



in its adjusted elevated position, an anvil piece arranged below the block, means for actuating said anvil piece to bring a nut placed thereon in snug contact with the block, a feed chain for bringing the nuts one by one in position upon the anvil piece to be operated upon, and means for actuating the feed chain in synchronism with the raising of the ram.

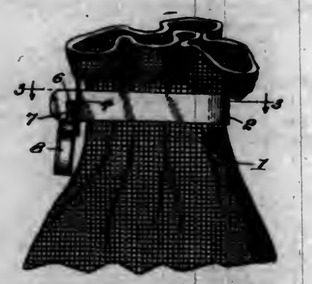
1,753,251. METHOD AND APPARATUS FOR FINISHING FABRICS. IVAR L. SJÖSTRÖM, North Andover, Mass., assignor to Manufacturers' Machine Company, North Andover, Mass., a Corporation of Massachusetts. Filed Oct. 3, 1925. Serial No. 60,825. 15 Claims. (Cl. 26—47.)

1. In the process of finishing cloth by drying with heat, and calendering the combination with said process of the step of continuously cooling and dampening the cloth in the course of the passage of the cloth from the drying medium to the calender.



1,753,252. TURBINE-WHEEL PROPELLER AND MOTOR. CARL BRUNO STRANDGREN, Le Vesinet, France. Filed Feb. 17, 1928, Serial No. 255,160, and in France Feb. 25, 1927. 5 Claims. (Cl. 170—25.)

1. A turbine wheel for working in a fluid in relative motion thereto, comprising in combination a rotary mem-

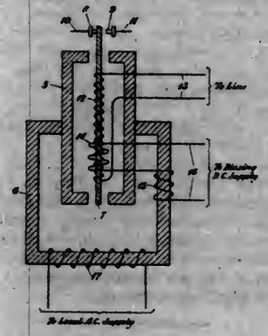


ber, a number of oscillating members pivoted to said rotary member about axes parallel to the axis of rotation of said rotary member, rigid members extending in a substantially radial direction and respectively pivoted to said oscillating members, cross-members respectively pivoted to said rotary member and to said rigid members, guide members rigidly secured to said cross-members respectively and rotary guiding means cooperating with said guide members respectively and whereby the axes of the latter are caused to constantly intersect at a single point.

1,753,253. INTERNAL-COMBUSTION ENGINE AND METHOD OF OPERATING SAME. ADOLPH A. TACCHELLA, Berkeley, Calif., assignor to Theodore E. Hammond, Los Angeles, Calif. Filed Sept. 4, 1923. Serial No. 660,961. 9 Claims. (Cl. 123—31.)

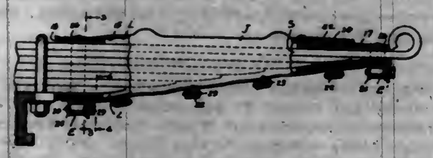
1. A method of burning a gaseous mixture to produce power, which comprises: producing a definite volume of compressed air substantially free from fuel gas or fuel vapor; vaporizing heavy fuel to produce a definite volume of heavy fuel vapor under pressure and adjacent to said compressed air; producing a definite volume of explosive mixture from a fuel having a materially lower flash point than said heavy fuel; and blowing said heavy fuel vapor into said compressed air by exploding said explosive mixture.

1,753,254. LOCKED LAUNDRY BAG. GEORGE F. THAXTON, Savannah, Ga. Filed Apr. 6, 1928. Serial No. 268,004. 1 Claim. (Cl. 24—30.5.)



The combination with a mesh laundry bag, of means for sealing the mouth thereof, said means comprising a substantially U-shaped clasp formed from spring metal, the free ends of the arms of the clasp being normally engaged and exerting a tension toward each other, said substantially U-shaped clasp being designed to be arranged about the mouth of the bag, a metallic plate having a centrally disposed slot therein for receiving the free ends of the arms, said free ends having openings therein to receive the hasp of a lock to retain the plate on the arms and a key for said lock and said lock and key having corresponding identification indicia thereon.

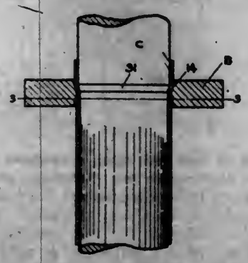
1,753,255. PROCESS OF PRODUCING CELLULAR BUILDING MATERIAL. GEORGE MILLER THOMSON, Caledonia, Ontario, Canada, assignor, by mesne assignments, to Canada Gypsum and Alabastine, Limited, Paris, Ontario, Canada. Filed Dec. 20, 1926. Serial No. 156,060. 3 Claims. (Cl. 82—73.)



1. A process of making cellular building material comprising hydrating calcined gypsum, and homogeneously distributing throughout said hydrated mass bubbles of substantially uniform size by mechanical agitation in a way to preclude the incorporation therein of volumes of air from the atmosphere other than those admitted to form said uniform bubbles during the mixing process.

1,753,256. ALTERNATING-CURRENT RELAY. VAUGHN P. THORP, Riveredge, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Feb. 16, 1924. Serial No. 693,313. 4 Claims. (Cl. 175—335.)

4. A relay comprising a divided yoke, an extension for magnetically connecting the divided portions of the yoke, an armature movably mounted between the portions of the yoke, a coil associated with the said extension, a second coil associated with said extension, means independently associated with each coil for independently impressing thereon alternating currents in phase with each other for creating an operating flux and a polarizing flux in said yoke and armature, said fluxes coacting to cause said armature to move in the same direction during both the positive and negative half cycles of alternating current wave, and means serially connected in circuit with said extension and armature for biasing said armature to its spacing contact.

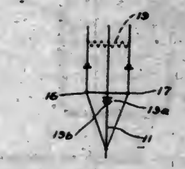


1,753,257. SPRING BOOT. ALFRED R. ULP, Pasadena, Calif. Filed Jan. 18, 1927. Serial No. 161,860. 9 Claims. (Cl. 267—37.)

6. In a spring boot, flexible members adapted to house a portion of a spring, and clamping elements embracing

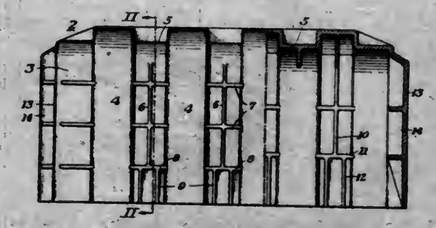
the members and comprising straps each having one end secured to one of the members, and a device for coiling the opposite end to constrict the strap into clamping relation to the members, said device comprising a frame, a shaft journaled in the frame and having heads on its ends, a portion of the shaft being split to receive the strap ends and to permit a reduction in the diameter of one of the heads to allow it to be passed through and locked in a portion of the frame, a ratchet wheel fixed on the shaft and a pawl pivoted on the frame having a protuberance engaging the members in a manner to utilize the expansive action of the members in maintaining the pawls in a position to lock the wheel against rotation in one direction.

1,753,258. METHOD OF FORMING AND KNURLING METAL BODIES. OSCAR U. ZERK, now, by judicial change of name, Oscar Ulysses Zerk, Cleveland, Ohio, assignor, by mesne assignments, to Alemite Corporation, Chicago, Ill., a Corporation of Delaware. Filed Apr. 16, 1923. Serial No. 632,331. 3 Claims. (Cl. 205—8.)



2. The method of forming a tubular body fluted over a portion of its length, having two inside and two outside diameters of approximately the same thickness throughout its length in a single operation, which comprises placing a blank having substantially the larger diameter, on a mandrel, forcing the smaller end of said mandrel and a portion of said blank through a fixed, gently tapering die provided with a toothed bore, whereby the section of the blank passing through the die is reduced and fluted, leaving the upper blank portion of the original inside and outside diameters untouched by said die.

1,753,259. IMPERVIOUS COMPRESSED-FLUID CONTAINER. ARTHUR C. BADGER, Newton, Mass. Original application filed Feb. 13, 1924, Serial No. 692,468. Divided and this application filed Oct. 21, 1925. Serial No. 64,047. 5 Claims. (Cl. 220—3.)

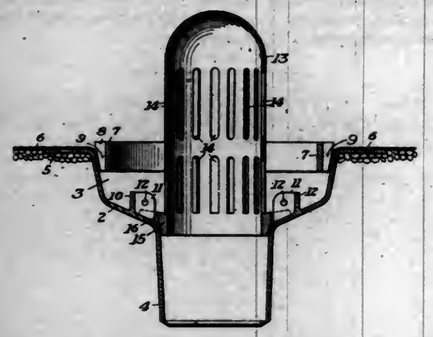


1. A gas container or cartridge adapted to serve as a source of fluid pressure containing a compressed charge of matter which is a gas at ordinary atmospheric temperature and pressure, composed of an originally separate metal body and cover which have been integrally and homogeneously welded together with the charge inside them and conjointly forming an imperforate shell completely enveloping such charge.

1,753,260. RADIOTUBE. CHARLES FREDERICK WILLIAM BATES, Cleveland Heights, Ohio. Filed June 16, 1927. Serial No. 199,192. 14 Claims. (Cl. 250—27.)

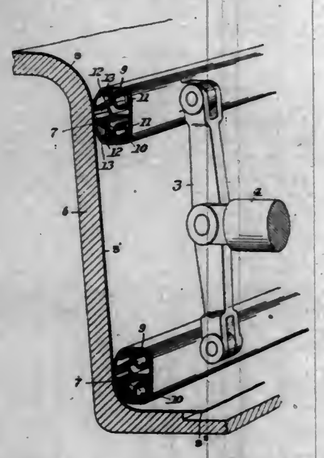
14. The combination with a radio tube having a base, an envelope and electrodes within the envelope including a filament, three terminals at the top of the envelope, two of which are joined to opposite ends of the filament, the third terminal being joined to a mid-point of the filament, and means including a source of direct current in series between the third terminal and the mid-point of the filament for balancing out pulsations in the filament voltage, and additional means for balancing out pulsations, comprising a high resistance connecting said first two terminals and having its mid-point connected with the third terminal.

1,753,261. ANNEALING BOX. ARTHUR M. CAPPER, Pittsburgh, Pa., assignor to Duquesne Steel Foundry Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 9, 1928. Serial No. 260,809. 1 Claim. (Cl. 263—49.)



An annealing box having alternate reversely arranged channel portions formed in its walls and having a bracing structure between some of the alternate channels, said bracing structure including a vertical web terminating in a transverse web spaced above the bottom of the box, and a plurality of parallel webs out of alinement with said vertical web extending from said transverse web to the bottom of the box.

1,753,262. ROOF DRAIN. JOHN C. CROMWELL, Columbus, Ohio, assignor, by mesne assignments, to The Testite Company, a Corporation. Filed Aug. 19, 1924. Serial No. 732,898. 1 Claim. (Cl. 182—31.)



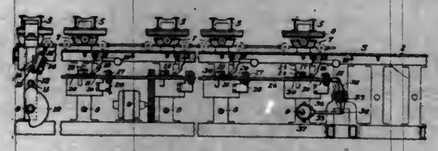
In a roof drain, a drainage cup adapted to be embedded in a roof and formed with a lower portion for

cooperation with a drain pipe, upwardly projecting lugs formed in the bottom of said cup, a strainer having a

lateral projecting flange shaped to cooperate with said lugs, and means cooperating with said lugs for holding the strainer in position.

1,753,263. WELDING APPARATUS AND METHOD OF WELDING. JOHN C. CROMWELL, Columbus, Ohio, assignor to The Steel Sanitary Company, Alliance, Ohio, a Corporation of Ohio. Filed Mar. 18, 1927. Serial No. 176,568. 8 Claims. (Cl. 113—59.)

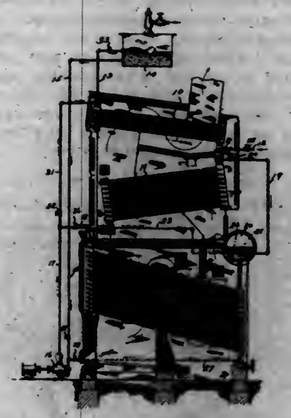
1. In a welding apparatus, a plurality of relatively movable welding sections, each having a continuously extending welding slot formed therein, and means for maintaining said sections in cooperative relationship to the article to be welded, with the sections in abutting end to end relationship to provide a continuous substantially uniform welding zone throughout the entire length thereof.



1,753,264. SCREEN AND HANGER THEREFOR. ELMER A. DAVIS, Detroit, Mich. Filed June 25, 1926. Serial No. 118,436. 4 Claims. (Cl. 156—14.)

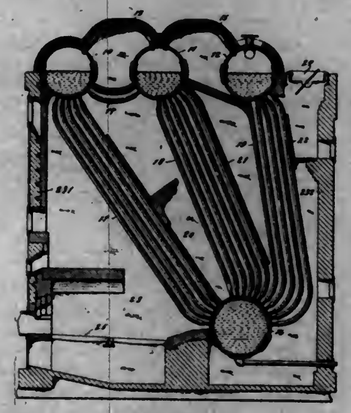
3. In a screen frame of the class described comprising side and end rails having a transversely extending slot formed in the edge of a pair of opposite rails: a bar slidably mounted on each of said rails, an operating link swingably connected at one end to said bar and provided at its opposite end with a longitudinally extending slot terminating at one end in an enlarged opening, a pair of head bearing supporting members adapted for mounting in a window frame in spaced relation, said enlarged opening in said operating link permitting the entry of said head therethrough and said elongated slot in said operating link preventing the passage of said head therethrough, said bar having an elongated slot adjacent each and communicating with a transversely extending slot, said transversely extending slot registering with the transversely

extending slot in said rail upon movement of said bar a predetermined distance in one direction, said transversely extending slots being adapted for the reception of said supporting members, said longitudinally extending slots in said bar being adapted for the reception, upon movement of said bar in one direction, of said head bearing supporting members for locking said frame on said supporting members.



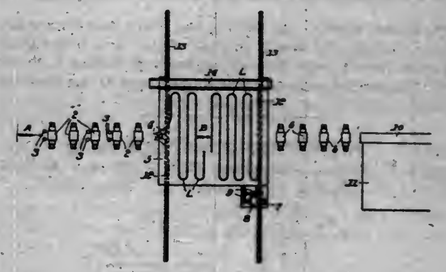
1,753,265. BLOCK-PRINTING MACHINE AND METHOD OF OPERATING THE SAME. DANIEL S. HOLT, New Brunswick, N. J., assignor to Armstrong Cork Company, Lancaster, Pa., a Corporation of Pennsylvania. Filed Sept. 23, 1927. Serial No. 221,449. 60 Claims. (Cl. 101—199.)

1. In a block printing machine through which material to be printed is intermittently advanced in sections and having a plurality of printing heads to be controlled, a normally operative latch mechanism for holding each of such heads inoperative, a common releasing mechanism for operating the several latches, an electromagnet for each such head for selectively causing the releasing mechanism to release the latches controlling the operation of the several heads, and a selector for controlling the magnets adjustable to selectively prevent the printing on any one or more sections in the material in the machine.



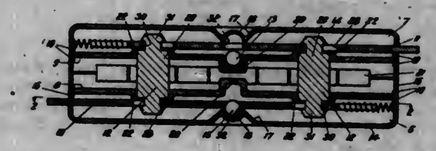
1,753,266. STEAM BOILER AND ECONOMIZER AND METHOD OF OPERATING THE SAME. DAVID S. JACOBUS, Jersey City, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Mar. 25, 1922. Serial No. 546,671. 18 Claims. (Cl. 122—406.)

1. The method of operating a steam boiler and its economizer connected thereto, which consists in normally feeding water forwardly through the economizer to the boiler without circulation, and in circulating the water by gravity between the boiler and enonomizer in the direction opposite to that in which it normally flows during a layover period when the temperature of the gases passing over the economizer is subnormal and while the water in the boiler is hot.



2. In combination, a steam boiler, an economizer, a feed-water inlet connected to the economizer and a connection between the boiler and the economizer arranged to permit water from the feed-water inlet to pass through the economizer into the boiler in the normal operation of the boiler, and valved connections between the boiler and the economizer, said connections operating when the valved connections are open, to permit hot water from the boiler to flow from the boiler to and through the economizer and back to the boiler in a direction the reverse of the flow of water in the normal operation of the system, the connections between the economizer and the boiler being made to the boiler below the normal water level therein.

1,753,267. STEAM BOILER. DAVID S. JACOBUS, Jersey City, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Dec. 19, 1924. Serial No. 756,867. 3 Claims. (Cl. 122—302.)

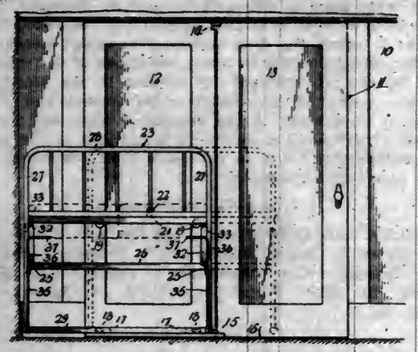


1. In a high pressure steam boiler, two spaced drums each provided with openings, a bank of water tubes the ends of which are adapted to enter the openings of the respective drums in a plurality of circumferential and longitudinal rows, the portions of the drums entered by said tubes being of substantially uniform thickness, each tube being reduced in external diameter at one end at least where it enters the drum sufficient in extent lengthwise of the tube to permit sufficient movement of the reduced end of the tube through its opening in the associated drum to permit of the insertion of the opposite end of the tube in its opening in the associated drum and its removal therefrom, the intermediate portions of the tubes being relatively large to provide a relatively small gas flow area therebetween.

1,753,268. ROLLING MILL. LANE JOHNSON, Ingram, Pa., assignor to United Engineering & Foundry Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 21, 1928. Serial No. 294,373. 2 Claims. (Cl. 80—46.)

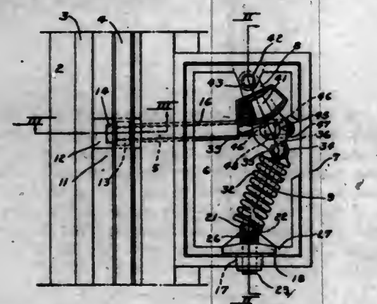
1. In combination with spaced-apart mill stands arranged in alinement, a traveling support between the mill stands, the support being movable out of the path of the material issuing for one of the mill stands, and a run-out trough adapted to lie between said mill stands and extend from one to the other thereof, the run-out trough being movable into alinement with the mill stands substantially simultaneously with the movement of the traveling support out of alinement therewith.

1,753,269. RECEPTACLE FOR RAZOR BLADES. FREDERICK W. KIRSTEN, Blue Island, Ill. Filed July 16, 1927, Serial No. 206,298. Renewed Nov. 6, 1929. 5 Claims. (Cl. 206—16.)



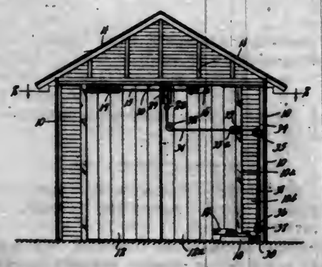
1. In a receptacle for safety razor blades two box like halves, means common to said halves for holding safety razor blades in a certain position in said receptacle, and means in each half for engaging said first mentioned means and for preventing accidental movement of said halves relative to each other.

1,753,270. DOOR BED. CHARLES F. KOLB, Chicago, Ill. Filed June 27, 1924. Serial No. 722,668. 1 Claim. (Cl. 5—171.)



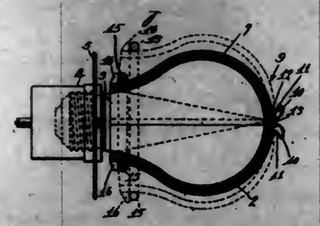
In a structure of the kind described, the combination of a support and a frame member laterally movable thereon, a pair of spaced apart grooved rollers fixed to the support, a downwardly facing channel member secured to

said frame member and having one of its flanges engaged with said grooved rollers, a device on said support between said rollers and engaging with the top web of



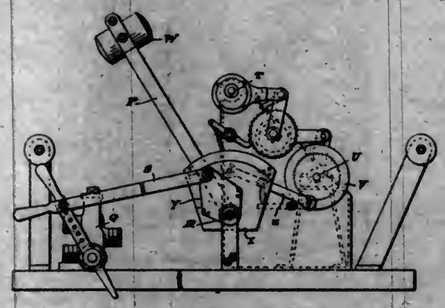
said channel member for holding the frame member against lateral tipping, and means on said support and frame member respectively near the bottom ends providing a thrust receiving bearing between said support and frame member.

1,753,271. SWITCH-THROWING MECHANISM. CLARENCE C. KOENS, Johnstown, Pa. Filed May 4, 1927. Serial No. 188,664. 11 Claims. (Cl. 246—318.)



1. In a spring toggle mechanism, a frame comprising a guide, a toggle element, supporting means for the toggle element cooperating with said guide and having a detent therein, and a pin cooperating with said detent and a portion of said supporting means for preventing relative movement therebetween.

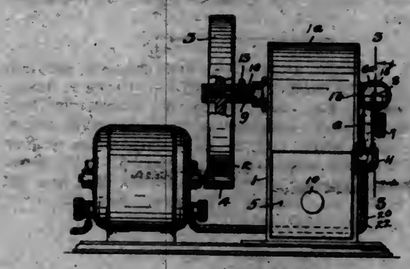
1,753,272. DOOR-OPERATING DEVICE. EMIL KROHN and VICTOR A. LILLQUIST, Duluth, Minn., assignors of one-third to Axel W. Bjorklund, Minneapolis, Minn. Filed June 27, 1927. Serial No. 201,902. 5 Claims. (Cl. 268—62.)



1. A door operating device having in combination with a wall, and a pair of oppositely swinging doors hinged thereto, a bracket secured to one of said doors and projecting inwardly therefrom, a link connecting said bracket to the other door, a bracket secured to said last mentioned door, a guide member extending through said wall adjacent the pintle axis of said last mentioned door and having its inner end curved toward the free end of said doors when in closed position, said guide member having a guide channel therein, a flexible member comprising freely revoluble spaced rollers connected together by freely swinging links extending through said guide channel, a bracket secured to said last mentioned door having an end thereof extending into said guide channel and secured to one end of said flexible member, and manually operated means disposed at some distance from said door at the outer side thereof connected to said flexible means for pulling and pushing upon the same for closing and opening said doors respectively.

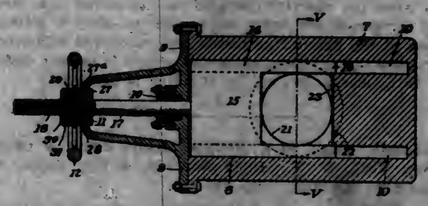
1,753,273. LAMP HOOD FOR ELECTRIC LAMPS. WILLIAM L. LAIB, Oak Park, Ill. Filed July 21, 1926. Serial No. 123,979. 1 Claim. (Cl. 240—100.)

In a lamp hood of the class described, the combination of a pair of cup-shaped hood members formed of glass of a suitable color and adapted to permit the passage of rays of light therethrough, said pair of hood members having peripheral marginal portions normally in abutting engagement with each other, said pair of hood members forming a sectional lamp hood having an open end and a closed end, for enclosing a lamp bulb, an integral hinge member on and projecting from the end marginal portion of each of said cup-shaped hood members respectively, at the closed end of the hood said projecting hinge member being of identical form and having diverging outer end portions normally spaced apart and adapted to permit relative movement of said cup-shaped hood members, a metallic connecting hinge member on and forming a flexible connection between said hinge members, and resilient connecting means on and adapted to form a yielding connection between the opposed open end portions of said cup-shaped hood members.



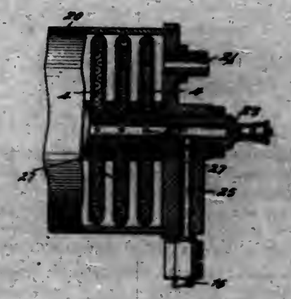
1,753,274. VALVE-OPERATING MECHANISM FOR WATER-GAS PLANTS. JAMES LOWE, Auckland, New Zealand. Filed Apr. 8, 1927, Serial No. 181,980, and in New Zealand Jan. 20, 1927. 5 Claims. (Cl. 137—144.)

1. A mechanism for periodically controlling the automatic operation of a gas generating plant including, in



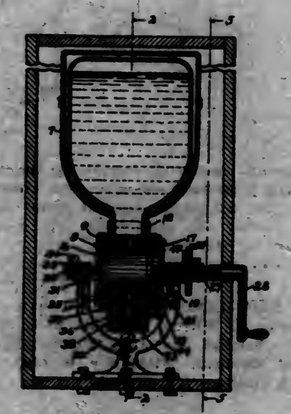
combination, a control valve, a pivotally mounted lever connected thereto, reduction gearing including pawl and ratchet mechanism for actuating said lever for a portion of its movement, and a weight carried by said lever for actuating the same for the remaining portion of its movement to effect a rapid opening and closing of said valve at periodic intervals.

1,753,275. ATTACHMENT FOR PENCIL SHARPENERS. OLOF A. NARVESUD, Minneapolis, Minn. Filed Oct. 11, 1926. Serial No. 141,001. 2 Claims. (Cl. 200—52.)



1. An attachment for a motor driven pencil sharpener having an opening in which the pencil is inserted to be sharpened, comprising a bracket having a barrel portion, an arm extending from said barrel portion having an apertured lug, means extending through said lug for attaching said bracket to said sharpener, said bracket having a portion extending laterally from said barrel portion, a plunger slidably mounted in said portion and connected to one terminal of the motor, a member disposed in said portion and connected to the other terminal of the motor and spaced slightly from said plunger, a coiled spring disposed in said portion normally holding said plunger in position spaced from said last mentioned member, said plunger projecting into said barrel whereby when a pencil is inserted in said barrel said plunger will be moved longitudinally and will engage said last mentioned member to close the motor circuit and start the motor and said circuit will be opened when said pencil is withdrawn.

1,753,276. VALVE FOR WELLS. THOMAS QUINN and JOHN F. AITES, Rimersburg, Pa. Filed June 15, 1927. Serial No. 198,910. 2 Claims. (Cl. 251—59.)

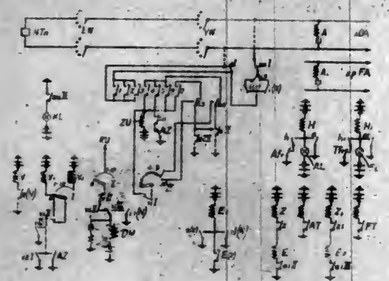


1. A valve structure comprising a valve gate having a guiding projection thereon, substantially an entire outer edge of the gate and projection lying in the same plane, said structure having a chamber therein for the reception of the valve gate, and a pocket formed in a wall of the chamber and extending in the direction of movement of the valve gate, said projection sealing the pocket against the admission of dirt when the valve gate is in its open position.

1,753,277. PREPARED AUTOMOTIVE-ENGINE FILTER CLOTHING. ERNEST J. SWENTLAND, Hazleton, Pa. Filed Dec. 6, 1923. Serial No. 678,897. 10 Claims. (Cl. 210—204.)

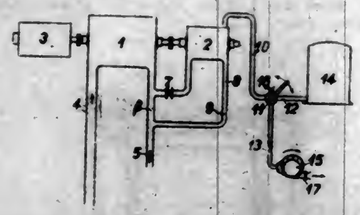
1. A prepared filter, for use with an internal combustion engine, comprising a filter element having a preformed bed of filter aid rubbed into the filtering surface thereof.

1,753,278. LIQUID-DISPENSING APPARATUS. ROBERT WESTBERG and ERZA TIMM, Oakland, Calif., assignors of one-third to Paul R. Lindale, San Francisco, Calif. Filed May 2, 1925. Serial No. 27,403. 5 Claims. (Cl. 221—106.)



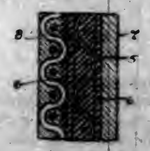
4. In a liquid vending apparatus, a container for liquid, a cock provided with a horizontally disposed hollow vending plug rotatable about its axis and carrying said container, a shaft on said plug, and a fixed support engaging said shaft whereby said cock and container may be rotated about said valve axis to a position in which a major portion of said container is below the level of said valve axis.

1,753,279. TELEPHONE SYSTEM. OTTO ANDERS, Berlin, Germany, assignor to Siemens & Halske Aktiengesellschaft, Wernerwerk, Siemensstadt, near Berlin, Germany. Filed July 11, 1927, Serial No. 204,681, and in Germany July 23, 1926. 13 Claims. (Cl. 179—27.)



1. In a telephone system, an automatic switch, a calling device for controlling the operation of said switch,

means for connecting said calling device to said switch, and means operative independent of the operation of said switch and responsive to a setting operation of said



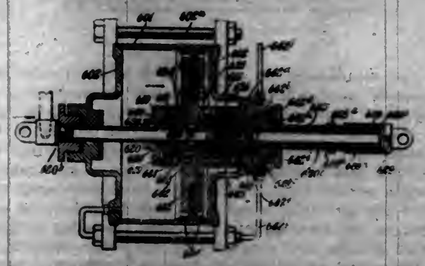
calling device under certain predetermined conditions, providing said setting operation is to a particular position, for preventing the operation of said switch.

1,753,280. COMPRESSOR APPARATUS. ADOLF BAUMANN, Baden, and ADOLF MEYER, Kusnacht, near Zurich, Switzerland, assignors to Aktiengesellschaft Brown Boveri & Cie., Baden, Switzerland, a Joint Stock Company of Switzerland. Filed Feb. 19, 1926, Serial No. 89,272, and in Germany Apr. 6, 1925. 12 Claims. (Cl. 230—1.)

1. Compressing apparatus comprising the combination with a rotary compressor, of a vacuum chamber, means for closing the compressor against influx of air, and means for putting the compressor into communication with the vacuum chamber.

1,753,281. BAG MANUFACTURE. EDWIN O. BARSTOW and ARTHUR C. WHITE, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a Corportion of Michigan. Filed Nov. 9, 1925. Serial No. 67,785. 2 Claims. (Cl. 229—55.)

2. A moisture-proof bag made from a sheet including an intermediate layer of scrim impregnated with pitch, and a layer of burlap and one of paper, not thus impregnated, adherent to the outer and inner sides, respectively, of said intermediate layer.



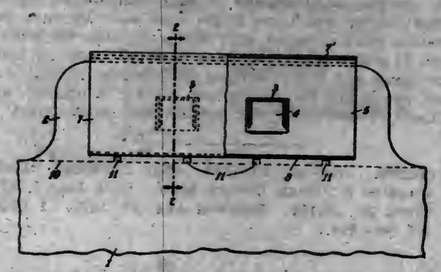
1,753,282. TRAFFIC-SIMULATING TOY. SAMUEL I. BERGER, Newark, N. J. Filed July 14, 1928. Serial No. 292,662. 12 Claims. (Cl. 104—173.)

1. A toy of the class described, including a platform having a slot therein, movable members on the platform, an endless cable beneath the platform, a pair of pulleys around which the cable runs, means connecting the mov-

able members to the cable through said slot, means for driving one pulley, and yielding means mounting the other pulley.

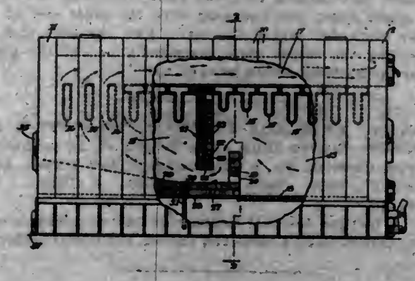
1,753,283. POWER ACTUATOR FOR BRAKE MECHANISM OF AUTOMOTIVE VEHICLES. CALEB S. BRAGG, Palm Beach, Fla., and VICTOR W. KLIESRATH, Port Washington, N. Y., assignors to Bragg-Kliesrath Corporation, Long Island City, N. Y., a Corporation of New York. Original application filed Mar. 5, 1925, Serial No. 13,183. Divided and this application filed Aug. 30, 1926, Serial No. 132,868. Renewed June 22, 1928. 15 Claims. (Cl. 121—41.)

2. In a power actuator, the combination with a cylinder closed at both ends, a piston in said cylinder, controlling valve mechanism for the actuator located in said piston, and means for connecting the cylinder with a source of suction and with a source of higher pressure fluid under the control of said valve mechanism, of an auxiliary suction passage connected with the cylinder on both sides of the piston, an auxiliary valve controlling said auxiliary suction passage, and provided with a part extending into the cylinder in position to be engaged by the piston when in retracted position, to open and hold said auxiliary valve in open position, a valve actuating part extending through the piston, an operator operated device connected therewith, and a retracting spring interposed between the valve actuating part and the piston, and so calibrated that when the operator operated part is moved in a direction to operate the valve mechanism to effect a working stroke of the piston, the piston will be moved sufficiently to release the auxiliary valve and permit it to seat, before the valve mechanism of the actuator is actuated.



1,753,284. HEEL FOR SHOES. DAVID BERTRAM CROPP, New York, N. Y. Filed Nov. 21, 1927. Serial No. 234,841. 2 Claims. (Cl. 36—35.)

1. In an article of foot wear, a skeletonized heel composed of compressible material and comprising an open U-shaped member conforming to the desired contour and provided with a free open space within the limits of said member, the inner surface of said open U-shaped member being beveled from the shoe-contacting face to

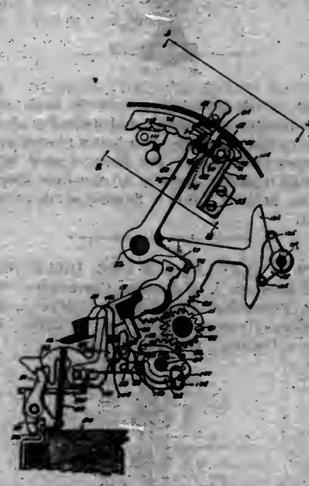


the wear or tread surface, the surface of said bevel facing the wear or tread face of said heel and of such a pitch that the compression and expansion of the material of said member expels any accumulation of matter from within the open portion of said U-shaped member, and one end of said open U-shaped member being prolonged and extended beyond the other end of said member to produce at one end of the heel an arch-supporting projection.

1,753,285. INDEX TAB FOR RECORD GUIDES. ELMER W. DAVIS, Newton, Mass., assignor, by mesne assignments, to Remington Rand Inc., Buffalo, N. Y., a Corporation of Delaware. Filed Jan. 9, 1929. Serial No. 331,197. 13 Claims. (Cl. 129—16.8.)

1. A record guide comprising a body member having a tab extending therefrom, a clip secured to said tab, and a transparent sheath disposed on said clip and cooperating therewith to form pockets to receive index cards or inserts, said clip and sheath lying outside the general outline of said body member.

1,753,286. FURNACE. JAMES RUSSELL DOHERTY, Oak Park, Ill. Filed Aug. 1, 1927. Serial No. 209,861. 2 Claims. (Cl. 122—225.)

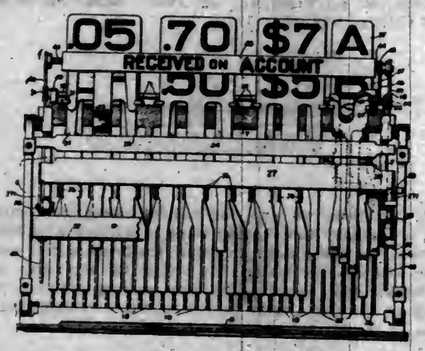


1. In a furnace, a combustion chamber in the front portion thereof, a grate in said chamber, a bridge wall upstanding from the rear of said grate, a water curtain rearwardly of said bridge wall and depending therebelow to provide a baffle, air conducting means associated with said water curtain and discharging air therefrom below the top level of said bridge wall, and a secondary combustion chamber to the rear of said water curtain and said bridge wall, there being apertures in said bridge wall beneath the lower level of said water curtain to admit the passage of combustion vapors directly to said secondary combustion chamber.

1,753,287. METHOD AND MEANS FOR APPLYING RADIUM EMANATION. GIOACCHINO FAILLA, New York, N. Y. Filed May 15, 1925. Serial No. 30,450. 6 Claims. (Cl. 174—177.)

1. Apparatus for applying radium emanation comprising a capillary tube having walls containing a sufficient quantity of heavy metal to reduce the primary beta radiation with another material to reduce the secondary beta radiation while passing the hard gamma radiation, the ends of said tube being sealed to retain radium emanation in the bore of the tube.

1,753,288. CASH REGISTER. FREDERICK L. FULLER, Ilion, N. Y., assignor to Remington Arms Company, Inc., a Corporation of Delaware. Original application filed Nov. 19, 1918, Serial No. 263,125, and in Great Britain Sept. 12, 1919. Divided and this application filed Apr. 27, 1926. Serial No. 104,989. 35 Claims. (Cl. 235—130.)

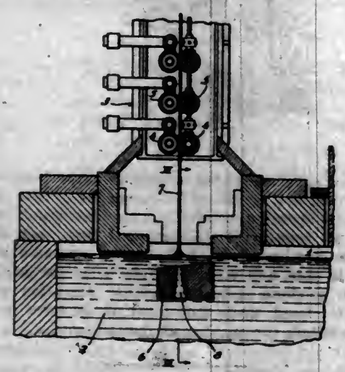


1. In a cash registering machine, of the type having a cash drawer and means for releasing the drawer when the machine is operated, a control lever and means connected thereto so constructed and arranged that when the lever is in one position the machine may be operated when the drawer is open and when the lever is in the second position the machine is locked against operation until the drawer is closed, while movement of the lever to a third position effects the opening of the drawer.

1,753,289. CASH REGISTER. FREDERICK L. FULLER, Ilion, N. Y., assignor to Remington Arms Company, Inc., a Corporation of Delaware. Original application filed Nov. 19, 1918, Serial No. 263,125, and in Great Britain Sept. 12, 1919. Divided and this application filed Apr. 28, 1926. Serial No. 105,065. 24 Claims. (Cl. 235—28.)

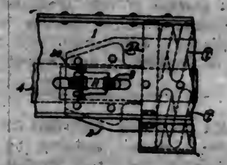
1. In a cash register, the combination with a plurality of amount keys, indicators therefor, a series of special

keys, each operable in conjunction with a plurality of said amount keys, and a plurality of indicators operated by the



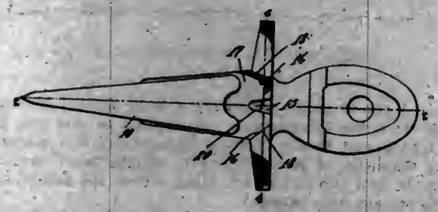
special keys for obscuring and exposing the amount indicators and designating which special key has been operated.

1,753,290. TOOTHBRUSH. LYNUS O. GRAVES, Tabernash, Colo. Filed Nov. 30, 1928. Serial No. 322,658. 3 Claims. (Cl. 15—135.)



1. A tooth brush comprising a brush back; two parallel rows of bristles arranged longitudinally of said back, the bristles in the opposite rows being placed at an angle so as to cross each other; the back of said brush being provided with a cavity opening to the face thereof under said crossing bristles; and a flexible strip covering said paste cavity.

1,753,291. APPARATUS FOR DRAWING SHEET GLASS. HOWARD L. HALBACH, Clarksburg, W. Va., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Apr. 4, 1928. Serial No. 267,241. 4 Claims. (Cl. 49—17.)



4. The combination with a drawing tank communicating at one end with a melting tank and a machine for drawing a glass sheet continuously from the drawing tank with the plane of the sheet transverse to such drawing tank, of a draw bar extending transversely of the bath beneath the sheet with a longitudinal vertical slot therethrough, said bar having its top surface inclined upwardly from the side of the bar remote from the melting tank to its other side.

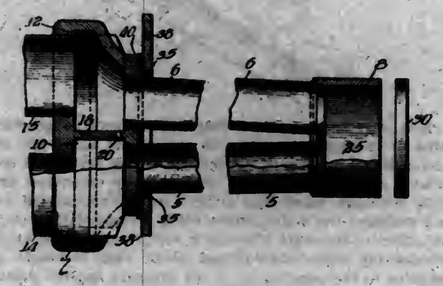
1,753,292. POSITIVELY-LOCKED COUPLER CROSS KEY. ALBERT P. HOUSHOLDER and HENRY M. KELLY, St. Louis, Mo. Filed Aug. 27, 1926. Serial No. 131,870. 2 Claims. (Cl. 85—7.)

1. A locking device for a coupler cross key, said cross key being provided with an aperture near one of its ends, said locking device comprising a rigid member adapted to seat in said aperture, and having portions adapted for location longitudinally of said aperture at opposite sides thereof which are longer than said aperture, said member being provided with bifurcated ends, the arms of each of said ends being adapted to extend above and below the upper and lower surfaces, respectively, of said cross key, and means for locking said member in position with respect to said cross key, substantially as described.

1,753,293. GUARD FINGER AND LEDGER PLATE. CHARLES F. HOVER, Conrad, Mont. Filed June 5, 1925, Serial No. 35,194. Renewed Aug. 27, 1929. 1 Claim. (Cl. 56—311.)

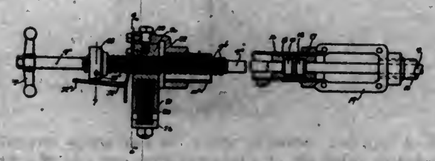
A guard finger having a ledger plate seat having rearwardly converging underbeveled side walls, a ledger plate on the seat having its rear end formed with rearwardly converging and beveled side walls engaged beneath the side walls of the seat, said rear end of the ledger plate having a notch the innermost portion of which normally lies forwardly of the seat to permit introduction of a ledger plate prying tool, and resilient means carried by the guard finger and engaging with the other end of the ledger plate for urging the latter into the seat and for projecting the ledger plate rearwardly out of the guard finger upon lifting action by such tool.

1,753,294. FUEL FOR INTERNAL-COMBUSTION ENGINES. ROBERT JOHN, Long Branch, N. J., assignor to Arjon Chemical Co., a Corporation of New Jersey. Filed July 27, 1926. Serial No. 125,830. 4 Claims. (Cl. 44—9.)



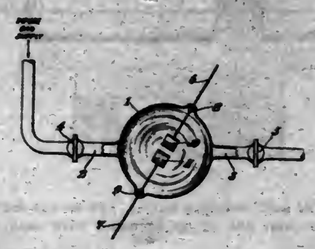
1. A fuel for internal combustion engines comprising a hydro-carbon having dissolved therein antimonytrichloride.

1,753,295. METHOD OF FORMING RADIATOR ELEMENTS. JOHN KARMAZIN, Detroit, Mich. Filed May 7, 1925. Serial No. 28,538. 8 Claims. (Cl. 113—118.)



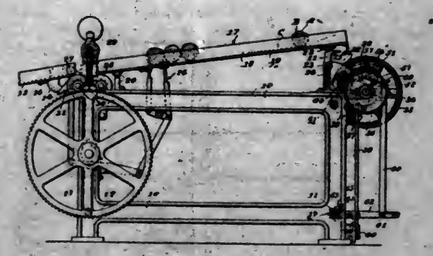
1. The method of making a radiator comprising the step of forming tubular projections from and integral with a metal strip whose width is approximately equal to the length of a finished element by forming successive depressions at each side of the center in diverging directions and cutting said strip into radiator elements of the same width as the thickness of the radiator to be formed.

1,753,296. HEATER COIL. CHARLES C. MCDERMOTT, Chicago, Ill. Filed Mar. 10, 1926. Serial No. 93,776. 1 Claim. (Cl. 22—203.)



The method of joining a tube to a head member which comprises supporting the tube as an insert in the mold for the head member, melting the material of the head member at a temperature below but near the melting temperature of the material of the tube, pouring the molten head member material into the mold and directly upon the inserted part of the tube and casting the head member directly upon the tube to produce a substantially integral and substantially homogeneous joint between the head member and the tube without distorting the interior of the tube.

1,753,297. THROTTLE-OPERATING MECHANISM. NEAL T. MCKEE, Bronxville, N. Y., assignor to American Throttle Company, Inc., New York, N. Y. Filed Sept. 30, 1927. Serial No. 223,041. 8 Claims. (Cl. 137—139.)

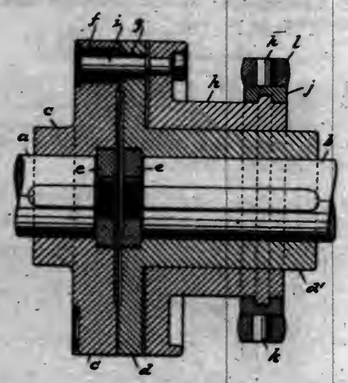


1. In a locomotive having valve means located at the smoke-box end of the boiler to control steam flow from the boiler, means to operate said valve means comprising in combination a rod for operating said valve means and extending back from it to the cab, a member associated with said rod and extending from a point near the front end of the boiler to the cab, its front end being rigidly secured relatively to the boiler and its remaining portions being free to expand and contract independently of the boiler, the rear portion of the rod being jointed to the main portion to permit rotary but not longitudinal movement between the two, said rear portion being provided with a screw thread and means to rotate it, the member having a corresponding segmental thread less than 180 degrees; and resilient means normally tending to keep the two threads in engagement and when compressed to permit their disengagement and a consequent free longitudinal movement of the rod.

1,753,298. PURIFYING RARE GASES. RICHARD E. MESSER, Jersey City, N. J., assignor to New Process Metals Corporation, Newark, N. J., a Corporation of New Jersey. Filed Jan. 3, 1927. Serial No. 158,580. 6 Claims. (Cl. 204—31.)

1. Apparatus for purifying rare gases having in combination a container holding the gases during purification, two misch metal electrodes therein and means causing an electric discharge to take place in the gases in the container between said electrodes.

1,753,299. RUBBER-TUBE-TRIMMING MACHINE. WILLIAM NICHOLAS, Bridgeport, Conn., assignor to The Black Rock Manufacturing Company, Bridgeport, Conn., a Corporation of Connecticut. Original application filed July 18, 1923, Serial No. 652,267. Divided and this application filed June 5, 1925. Serial No. 35,144. 20 Claims. (Cl. 164—69.)

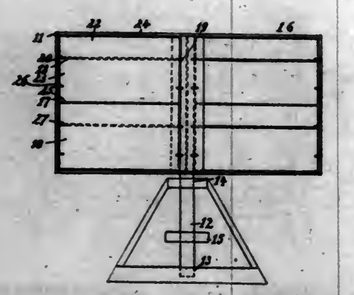


1. In a trimming machine, means for trimming the ends of rubber tubes or the like upon mandrels, and including a pair of cutting knives, a rotatable cylindrical support adapted to support and rotate said tubes in epicyclic rolling contact therewith, means adapted to support the ends of said mandrels, and having adjustable means adapted to receive different sized mandrels, and means for moving said supporting means about the axis of said roll to move said tubes into and out of relation with said cutting knives.

1,753,300. DISCONNECTING COUPLING. ARVID PATTERSON, Trenton, N. J., assignor to De Laval Steam Turbine Company, Trenton, N. J., a Corporation of New Jersey. Filed Mar. 5, 1927. Serial No. 172,940. 2 Claims. (Cl. 192—67.)

1. A coupling for rotary members comprising coupling halves fixedly carried by said members respectively and provided with apertures arranged to be brought into

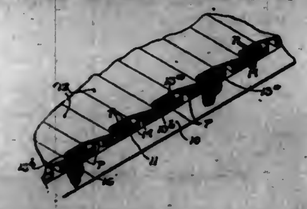
alignment, a flexible bushing in the aperture in one of said coupling halves, a pin slidably mounted in the aperture



in the other of said coupling halves, and means for sliding said pin into and out of engagement with said flexible bushing.

1,753,301. TESTING METALLIC COATINGS. KARL PITSCHNER, Bridgeport, Conn., assignor to American Chain Company, Inc., a Corporation of New York. Filed Dec. 22, 1926, Serial No. 156,510. Renewed May 16, 1928. 13 Claims. (Cl. 23—230.)

9. A process of producing a record of the presence of holes in material in sheet form on a base of different material which comprises applying to said sheet a vehicle detachable therefrom and carrying a substance reactive to one of said materials.

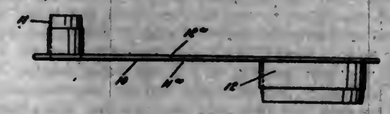


1,753,302. WIND ROTOR. KARL RAMM, New Britain, Conn. Filed Sept. 21, 1926. Serial No. 136,824. 3 Claims. (Cl. 170—27.)

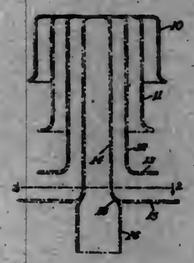
1. In a wind rotor, a vane mounted for swinging between the vertical wind-resisting position and the horizontal inactive position and having a supporting pintle at the outer end, a strut structure opposed to the outer edge portion of said vane and provided with a bearing for said pintle, the part of said strut structure on the wind or air pressure contacting face of said vane being relatively extended for the purpose of enhancing the wind or air pocket effect of the strut structure in cooperation with the adjacent edge portion of the vane.

1,753,303. ROOFING. RICHARD S. REYNOLDS, Louisville, Ky., assignor to United States Foil Company, Louisville, Ky. Filed Oct. 26, 1925. Serial No. 64,887. 1 Claim. (Cl. 108—17.)

A roofing strip adapted to be made in rolls comprising a pliable but relatively thick treated fabric body portion, and a relatively thin metallic sheet of the same width as said body and adhering to the surface of said body portion, said body portion and said sheet having parallel longitudinal complemental scores providing edge sections adapted to be articulated to interlock with the adjacent articulated edge sections of strips of like material to effect a weatherproof joinder therebetween, the texture of the laminated and scored strip being such that when fasteners are being inserted through said overlapping and interlocking edge sections, said body portion may be unarticulated or in angular position in relation to said edge section so as to uncover the interlocked edge section of contiguous strips, the material of said body extending over such fasteners when said strip is in its articulated and laid position, the body portion being treated with a material effective to create a hermetic seal of said strips at the interlocking edges thereof and about said fasteners responsive to the application of the pressure applied thereto during laying.



1,753,304. WALL BED. NEIL SINCLAIR, Oakland, Calif., assignor to Rip Van Winkle Wall Bed Company, Inc., Oakland, Calif., a Corporation of California. Filed July 18, 1927. Serial No. 206,483. 18 Claims. (Cl. 5—170.)



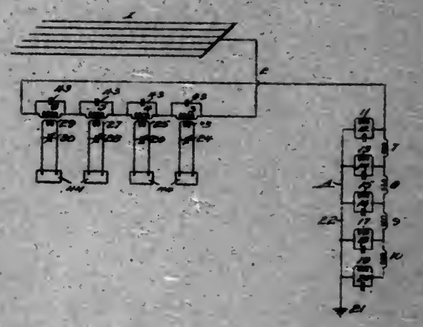
1. A wall bed, means by which the wall bed is vertically pivoted to swing out of a doorway from one side of a wall to the other side, a door for said doorway, means by which the door is carried by the bed structure and is laterally shiftable thereon.

1,753,305. TIRE-FLAP HOLE MEASURING AND CUTTING PUNCH. HERBERT J. SPALDING, Akron, Ohio. Filed Mar. 8, 1928. Serial No. 260,109. 1 Claim. (Cl. 164—80.)

A device for locating and punching a valve hole in a strip of material to form a tire flap, comprising a flat shank, and a punch mounted on the shank adjacent one end thereof, said punch projecting from one face of the shank, said shank being provided with a marking on the other face thereof for locating the punch with respect to the end of the strip.

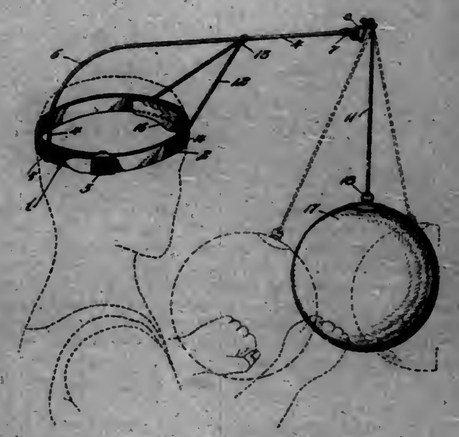
1,753,306. METAL WHEEL MANUFACTURE. ERNEST H. ARNOLD, Cleveland, Ohio. Filed June 22, 1925, Serial No. 38,718. Renewed Aug. 31, 1929. 10 Claims. (Cl. 29—174.)

1. The method of forming a tubular metal spoke for a vehicle wheel which comprises shaping a thin metal disc by a series of successive drawing operations into a product comprising a cylindrical body having an open end surrounded by a peripheral flange, and a closed end, deforming said flange into a hollow, prismatic extension of said cylinder, tucking in the stock at the sides of the said prismatic extension lateral of the wheel, along lines longitudinal of the spoke while supporting the said extension within and without the same, pressing the sides of the tucks together to thereby reduce the hub end of the body and reinforce it without deforming the sides thereof.



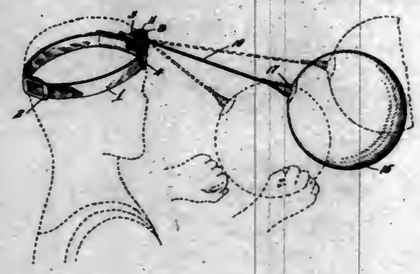
1,753,307. METAL SPOKE AND ITS MANUFACTURE. ERNEST H. ARNOLD, Cleveland, Ohio. Filed Dec. 10, 1925, Serial No. 74,509. Renewed Aug. 30, 1929. 11 Claims. (Cl. 29—174.)

1. A tubular metal wheel spoke having an open-end enlarged extension head rectangular in cross section, the corners of the head being reinforced by inturned plaits of its own material.



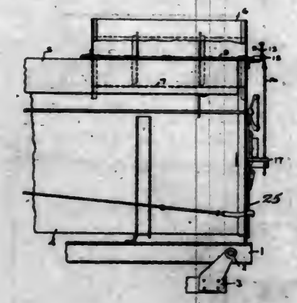
6. The method of making a metal vehicle wheel spoke comprising, providing a tubular body with an open-end enlarged extension therefrom on an axis in alinement with that of the said body, tucking in the material of the said extension on four lines spaced in pairs in said extension longitudinal of the spoke and to varying depth decreasing from the open end outwardly, and exerting inward pressure at the external surfaces of the extension between the lines of each pair and between the pairs and on substantially longitudinal planes to result in a hub end of the spoke having uniform width transverse of the wheel but tapered inwardly in the plane of the wheel.

1,753,308. RADIO RECEIVING SYSTEM. LOUIS COHEN, Washington, D. C., assignor, by mesne assignments, to Federal Telegraph Company, a Corporation of California. Filed Oct. 2, 1925. Serial No. 60,120. 4 Claims. (Cl. 250—9.)



1. In a multiplex radio receiving system comprising an antenna-ground circuit, a circuit system connected in series with the said antenna, said circuit system consisting of a number of sections, each section comprising a series of inductance and a pair of tuned circuits, each tuned circuit including an inductance shunted by a condenser, said tuned circuits all being connected together and disposed in series in said antenna and ground circuit to effect a multiple tuning of the antenna, a plurality of separate receiving circuits associated with the said antenna and independent of the aforesaid sections, each of said receiving circuits being adjusted for resonance for one of the frequencies within the range of frequencies for which the antenna system is tuned, and separate detectors and amplifiers associated with each of said receiving circuits.

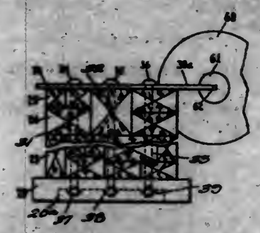
1,753,309. EXERCISING APPARATUS. HENRY O. COSTELLO, Providence, R. I. Filed Jan. 23, 1928. Serial No. 248,817. 4 Claims. (Cl. 272—76.)



1. An exercising apparatus comprising a frame having a band to be secured to the head of the user and provided with an arm extending to a point forwardly of and above the user, and an inflated ball resiliently supported from said forwardly extending arm.

1,753,310. EXERCISING BALL AND SUPPORT THEREFOR. HENRY O. COSTELLO, Providence, R. I. Filed Jan. 3, 1929. Serial No. 330,098. 7 Claims. (Cl. 272—76.)

7. In a device of the character described, a flexible head-band adapted to be secured to the head of the user, a longitudinally extensible elastic member, an inflated ball secured to one end of said longitudinally extensible elastic member, and means for securing the opposite end of said longitudinally extensible elastic member substantially directly to the said head-band at a point above and between the eyes of the user, whereby the ball upon being struck by the user will move outwardly from the face of the user and be returned directly towards the face of the user and substantially along the line of vision of the user through longitudinal elongation and contraction of said longitudinally extensible elastic member.



1,753,311. PORTABLE CONCRETE MIXER. REGINALD A. DADDISMAN, San Francisco, Calif., assignor to Barrymore Concrete Mixer Corporation, San Francisco, Calif., a Corporation of California. Filed Nov. 7, 1927. Serial No. 231,414. 3 Claims. (Cl. 88—73.)

1. In a concrete mixer of the portable type, an open top mixing trough longitudinally arranged on a motor truck, a cement bin only mounted above one end of and extending across the trough leaving the remainder of the trough unobstructed and readily available for the dumping therein of rock and sand, and means for discharging the contents of the cement bin into the trough, said trough provided with a discharge gate for closing during the mixing of concrete therein.

1,753,312. INTERNALLY-CLAMPED COMPOSITE PIEZO-ELECTRIC ACOUSTIC DEVICE. ALEXANDER MCLEAN NICOLSON, New York, N. Y., assignor, by mesne assignments, to Federal Telegraph Company, a Corporation of California. Filed Jan. 11, 1927. Serial No. 160,359. 7 Claims. (Cl. 179—110.)

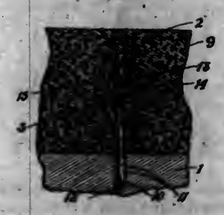
1. An acoustic device comprising, in combination, a composite piezo-electric device comprising a plurality of chemically and optically similar piezo-electric crystals, means for clamping said crystals in a single entity, said clamping means passing internally through said plurality of crystals, said crystals being so arranged that piezo-

electric torsional vibrations of said individual components may be integrated, and an acoustic diaphragm secured to said composite device at a point of maximum piezo-electric response in a manner such that torsional vibration of said device effects vibrations of said diaphragm.

1,753,313. NONINTERLINKING NUT-LOCK WASHER. HARRY G. NORWOOD, Baltimore, Md., assignor to The Positive Lock Washer Company, Newark, N. J., a Corporation of New Jersey. Filed May 8, 1928. Serial No. 276,058. 3 Claims. (Cl. 151—36.)

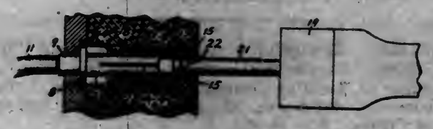
3. In a spring lock washer having a transverse split along a diameter of the washer and the ends, adjacent the split, offset a predetermined amount in opposite directions to give the spring effect, said ends being tapered and ending in enlarged portions which are bent bodily at the end of the taper in a direction opposite to that of the offset so that the ends overlap or intercept the opening between the ends of said offset portions, each of said enlarged portions having gripping edges on opposite sides of the washer.

1,753,314. HAIRDRESSING DEVICE. LOUIS M. NOTO, Chicago, Ill. Filed Nov. 28, 1928. Serial No. 322,469. 4 Claims. (Cl. 132—38.)



1. The herein described hair dressing device comprising an inherently resilient split clamping band and a longitudinally extending elastic strap element detachably secured cooperatively on the outer face of said band and being constantly under tension and normally in yieldable contact throughout with said band when applied.

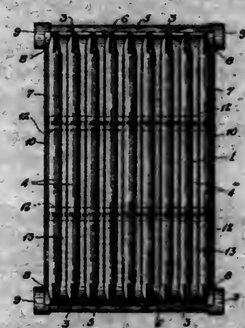
1,753,315. VANITY CASE. GASTON PARENT, Paris, France. Filed Feb. 2, 1929. Serial No. 337,129. 6 Claims. (Cl. 132—83.)



6. A vanity case comprising a rear portion having a partial lower front wall, a main compartment connected to said partial wall, said main compartment being held perpendicular to said rear portion, an insert located in and connected to said main compartment, a cover hingedly connected to said main compartment, guide flanges connected to the underside of said main compartment, a lower slidable compartment having means adapted to cooperate with said guide flanges, said lower compartment having a lateral partition near the rear wall thereof to form a pocket for holding a receptacle, a lipstick receptacle adapted to be located in said pocket, one of the side walls of said lower compartment having an opening adapted to permit the entry of said receptacle, said lipstick receptacle having a longitudinal slot and a lipstick holder slidably mounted therein, said holder having a guide pin projecting through said slot, the bottom wall of said lower compartment having a recess adapted to receive said pin, the bottom of said lower compartment being substantially flush with the bottom of said rear portion, the said cover when in the closed condition being substantially flush with the top of said rear portion.

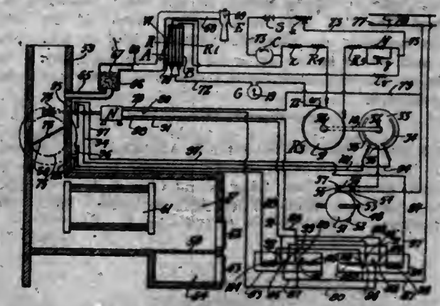
1,753,316. CONTRACTION-JOINT STAKE. ROBERT R. ROBERTSON, Chicago Heights, Ill. Filed May 18, 1929. Serial No. 364,166. 17 Claims. (Cl. 94—17.)

1. A contraction joint stake comprising a channel cross sectioned body cut to afford a tapered tip at one end and having the opposite end bent over upon itself and offset with a portion of the bent over section projecting beyond one side of the body portion of the stake to afford a wing member.



1,753,317. QUICK-BREAK SWITCH. EDWARD M. ROTHEN, New York, N. Y., assignor to Russell & Stoll Company, New York, N. Y., a Corporation of New York. Filed Dec. 2, 1926. Serial No. 152,105. 1 Claim. (Cl. 173—363.)

A switch consisting of a plug, provided with a groove therein, a fixed tube for receiving said plug, a sleeve slidable on said fixed tube, a flange on said sleeve to rengaging within said groove and a spring carried by said sleeve and tending to move the same from connection with said plug.



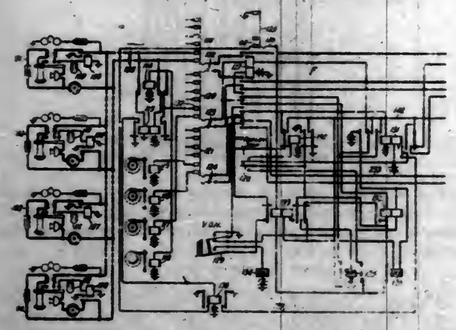
1,753,318. HEAT-EXCHANGE APPARATUS. CLARENCE E. SAFFORD, Cleveland, Ohio, assignor to Alton H. Greeley, Cleveland, Ohio. Filed May 12, 1925. Serial No. 29,680. 8 Claims. (Cl. 257—189.)

2. In a heat exchange apparatus, the combination of a pair of sides folded, bent and welded to produce parallel corrugations being substantially semi-cylindrical between their ends, the ends of said inner portions of the corrugations being curved outwardly until they constitute parallel flanges at the closed ends of said corrugations, the length of the end edges of the sides remaining the same, and trough-shaped strips united to and bridging the spaces between the flanges, the side edges of the sheets being

united and bent to form troughs which extend between the ends of said trough-shaped strips, and coupling members united to said sides at the meeting points of said troughs.

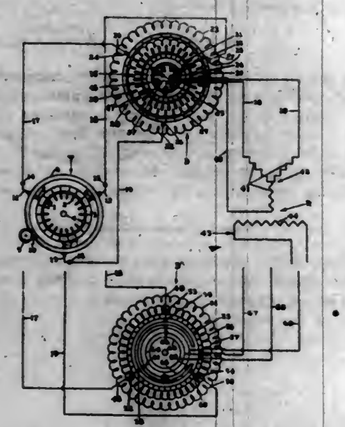
1,753,319. CONTROL OF PROPORTIONS OF COMPONENTS OF GASEOUS MIXTURES. WILLIAM R. SCHOFIELD, Jr., and ROBERT D. MILNER, Philadelphia, Pa., assignors to Leeds & Northrup Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 7, 1924. Serial No. 697,484. 12 Claims. (Cl. 236—1.)

1. A control system comprising means responsive to the thermal conductivity of a mixture of fluids, control mechanism controlled by said means, a member controlling the proportion to each other of the fluid components of said mixture, a motive device controlling said member and controlled by said control mechanism, and means for periodically interrupting the operation of said motive device.



1,753,320. TOY. BERNICE SQUIER and BLANCHE SQUIER, Battle Creek, Mich. Filed Feb. 4, 1929. Serial No. 337,223. 2 Claims. (Cl. 46—45.)

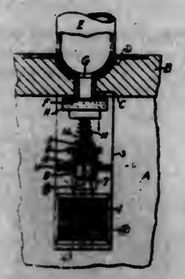
2. In a toy, the combination of a body element including integral leg parts, said body element comprising a casing of flexible material and a filling of fibrous material, bearing blocks arranged at the lower end of said leg parts and enclosed within said casing and partially



embedded in said filling material, said casing and bearing members having alined holes therein, spindles arranged through said alined holes, and rollers on the ends of said spindles.

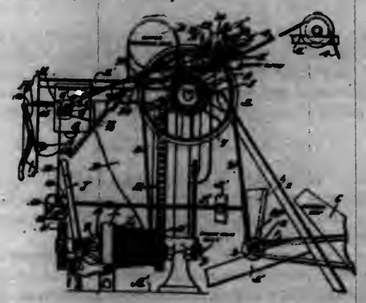
1,753,321. TELEPHONE-EXCHANGE SYSTEM. RAY L. STOKELY, Floral Park, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 4, 1927. Serial No. 210,535. 10 Claims. (Cl. 179—9.)

1. In a telephone system, a party line, relays, one at each of two substations, said relays being responsive to current of opposite polarity, operating circuits for said relays, the operating circuit of one relay including one side of the line and the operating circuit of the other relay including the other side of the line, and circuits closed by said relays in operating for applying potential to the side of the line opposite the side over which the relay is operated.



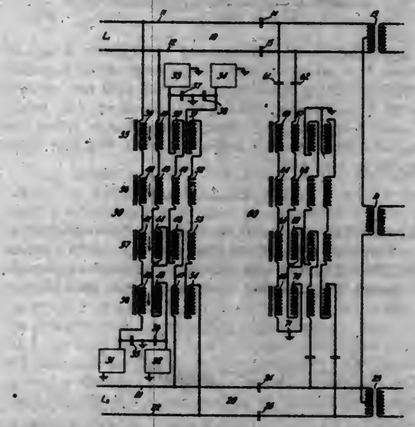
1,753,322. PHASE-CHANGING APPARATUS. HARRY L. TANNER, Brooklyn, N. Y., assignor to Ford Instrument Company, Inc., Long Island City, N. Y., a Corporation of New York. Filed Dec. 9, 1924. Serial No. 754,738. 5 Claims. (Cl. 172—288.)

1. In a phase changing apparatus, a polyphase stator, polyphase leads connected therewith, a rotor having suitable windings and commutating means connected with said windings, a set of brushes connected with said polyphase leads and coacting with the commutating means so that current supplied through said leads will turn said rotor, a second set of brushes coacting with said commutating means for supplying polyphase current therefrom and means for producing relative displacement between the sets of brushes to change the phase relations between the currents supplied to and delivered by the brushes.



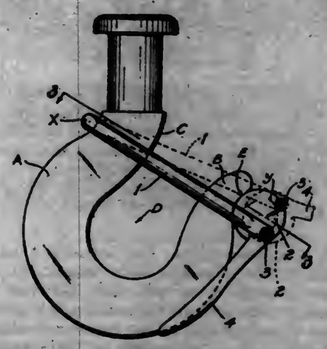
5. In a phase changing apparatus, a polyphase stator, polyphase leads connected therewith, a rotor having a plurality of windings, a plurality of commutating means severally connected to said windings, input brushes connecting said leads with said commutating means, output brushes coacting with another of said commutating means, and means for producing relative displacement between said input and output brushes to change the phase relations between them.

1,753,323. MAGNETIC ACTION FOR PIPE ORGANS. HARRY F. WATERS, St. Louis, and VERNIE ROY BROWN, University City, Mo., assignors to Magnetic Organ Action Company, University City, Mo., a Corporation of Missouri. Filed Oct. 17, 1928. Serial No. 312,986. 8 Claims. (Cl. 84—339.)



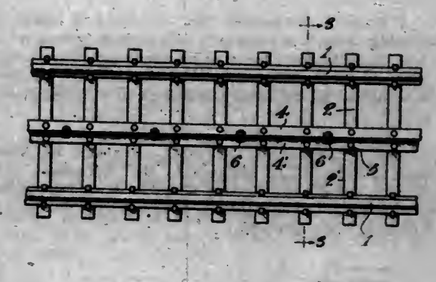
8. A valve action for pipe organs comprising an electro-magnetic element provided with a core adapted to be magnetized on energization of said electro-magnetic element, a support for said electro-magnetic element, an arm extended from said support, an armature movable through an opening formed through said arm and having a flange spaced apart from said arm, said support and said arm being magnetically connected with each other and said elements being magnetically connected to said electro-magnetic element, whereby, said support and said arm constitute the magnetic return of the electro-magnetic element and are, therefore, magnetized when the electro-magnetic element is energized, said armature on energisation of the electro-magnetic element being attracted first by said core and then by said arm attracting said flange, a rod extended from said armature, a valve mounted on said rod, and a guide member for said rod.

1,753,324. AUTOMATIC CONCRETE-MIXING MACHINE. GEORGE EVANS WEBB, Milwaukee, Wis., assignor to Koehring Company, Milwaukee, Wis., a Corporation. Filed Aug. 13, 1928. Serial No. 299,318. 18 Claims. (Cl. 88—73.)



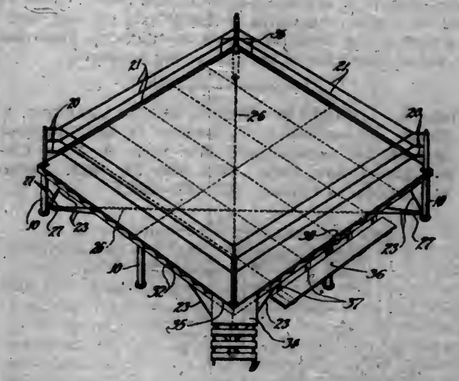
1. In a concrete mixing machine of the class described, the combination with a mixing drum and charging and discharging means therefor, of control instrumentalities for automatically causing the operation of both the said means, operative connections between the control instrumentalities and charging means whereby the operation of said control instrumentalities is rendered dependent on said charging means, and means associated with the charging means operable from the control instrumentalities for automatically initiating action of the charging means, said automatic means being movable out of operative position whereby operation of the charging means is rendered non-automatic.

1,753,325. RETARDATION-COIL SYSTEM. HORACE WHITTLE, Maplewood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 28, 1928. Serial No. 250,163. 7 Claims. (Cl. 179—3.)



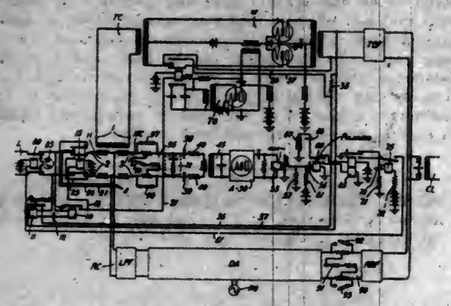
1. In a phantomed telephone system, a pair of side circuits, means for simultaneously superposing alternating current signals and direct current signals on said circuits, and means to aid in separating said signals comprising a retardation coil associated with each line wire of each side circuit, said retardation coils each having portions of their windings disposed on a plurality of common cores to produce the same flux linkage for changes of current in any of said coils, the windings on certain of said cores being reversed to neutralise inductive coupling between the coils.

1,753,326. SAFETY GUARD FOR HOOKS AND THE LIKE. JOHN C. YINGLING, Belleville, Ill. Filed Dec. 28, 1927. Serial No. 242,062. 6 Claims. (Cl. 24—241.)



1. A safety guard for hooks and the like comprising a yoke loosely mounted on a hook and arranged to embrace portions of the jaws of said hook in a manner to cause said yoke to be removably extended across the throat of the hook to prevent accidental passage through said throat of the element engaged by the hook, a seat formed on a jaw of the hook, means comprising a cam rotatably attachd to an end of said yoke and arranged in contact with said seat whereby said yoke may be rigidly attached to said hook to prevent accidental displacement thereof with respect to the throat of the hook, and a handle associated with said cam to permit convenient movement thereof, said handle being shaped to correspond to the contour of a portion of the hook to permit said handle to contact closely with said hook portion.

1,753,327. INDUSTRIAL RAILWAY TRACK. GEORGE D. BALDWIN, New York, N. Y. Filed Apr. 28, 1929. Serial No. 357,366. 5 Claims. (Cl. 238—10.)

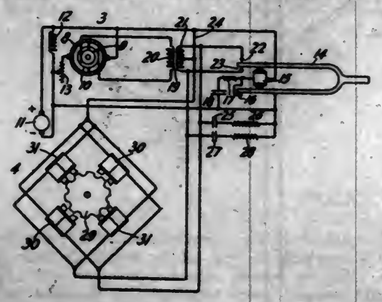


1. In a railway track a longitudinal section comprising a rail, supporting members fastened to said rail, a rigid means connecting the ends of said supporting members and adapted to be fastened to a similar member.

1,753,328. KNOCKDOWN FIGHT RING. LEW BARNES, Chicago, Ill. Filed Feb. 15, 1929. Serial No. 340,078. 7 Claims. (Cl. 272—8.)

1. A device of the kind described comprising a plurality of hollow standards having lateral flanges at their upper ends, a platform formed in knock-down sections resting upon said flanges, posts telescopically mounted in said standards and extending above said platform, and guard-ropes stretched between said posts.

1,753,329. ELECTRIC SIGNALING SYSTEM. HAROLD S. BLACK, Montclair, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 16, 1927. Serial No. 219,907. 11 Claims. (Cl. 179—2.5.)



1. A network comprising four circuits and means for connecting them in biconjugate relationship, means in one of said circuits for transmitting messages therethrough to said connecting means, and signal means, responsive to call signals, in the circuit conjugate to said one circuit.

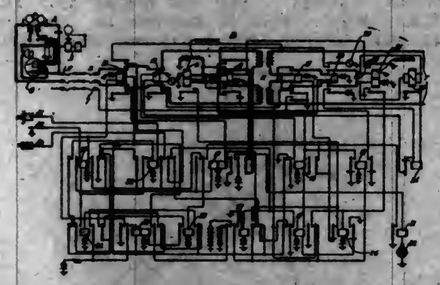
1,753,330. METERING DEVICE. HERBERT E. BRAGG, East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 22, 1928. Serial No. 307,756. 3 Claims. (Cl. 171—95.)

1. In combination a direct reading voltage indicator comprising a gas filled reservoir a pair of electrodes located therein, a calibrated scale on said reservoir one of said electrodes constituting a central axis for said reservoir, and means exclusive of said electrodes for producing an initial ionization of the gas in said reservoir.

1,753,331. CONSTANT-SPEED DRIVE. ALLISON A. CLOKEY, Rutherford, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed May 29, 1926. Serial No. 112,463. 4 Claims. (Cl. 172—293.)

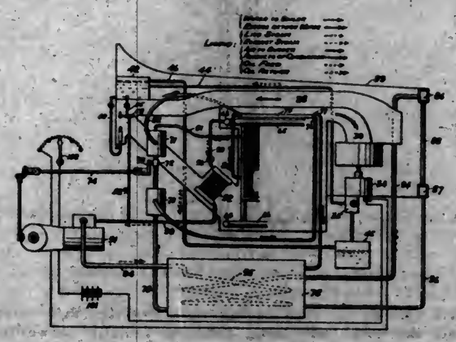
2. A device to be driven at a constant speed with minimum hunting in combination with driving means comprising a driving machine mechanically coupled to the device, an impulse motor also coupled to the device, a source of current to establish the speed of said device, and connections whereby said source supplies current to said driving machine to control the speed thereof and to said impulse motor to drive it.

1,753,332. SPECIAL TILE FOR DRIP LEDGE. THOMAS G. COGHLAN, Elizabeth, N. J. Filed Jan. 27, 1927. Serial No. 163,907. 3 Claims. (Cl. 110—40.)



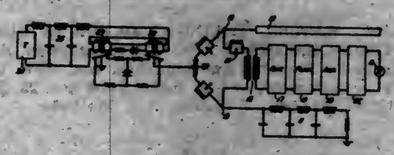
1. In a furnace, a stoker adapted to support a bed of fuel thereon and extending adjacent a wall of the furnace, and a ledge extending from the wall over said bed of fuel and spaced a substantial distance thereabove, the lower face of said ledge sloping downwardly away from the wall, whereby slag running down the wall will fall from said ledge on to said bed.

1,753,333. WELT. DAVID P. CUMMINGS, Newton Center, Mass. Original application filed June 6, 1927, Serial No. 196,771. Divided and this application filed Jan. 2, 1929. Serial No. 329,924. 5 Claims. (Cl. 36—78.)



1. A welt comprising a narrow strip of pile fabric having a woven body with long pile fibres woven into said body and impregnated throughout with a permanently flexible binder and compacted to extend in angular relation to the plane of said woven body, and having a surface coating coherent with said binder.

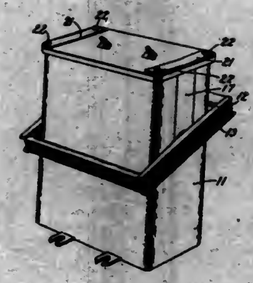
1,753,334. TELEPHONE SYSTEM. THOMAS V. CUBLEY, Brooklyn, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed May 10, 1928. Serial No. 276,653. 12 Claims. (Cl. 179—6.6.)



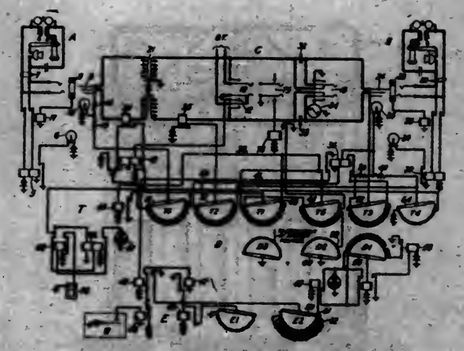
1. In a telephone system, two stations, a coin collect and refund device associated with one of said stations, means for establishing a connection between said stations, means responsive to the establishing of said connection for actuating said device to refund coins deposited therein, and means responsive to the release of said connection for actuating said device to collect coins deposited therein.

1,753,335. STEAM-POWER PLANT. FRANCIS I. DU PONT, Wilmington, Del., assignor to Delaware Chemical Engineering Co., Wilmington, Del., a Corporation of Delaware. Filed Apr. 18, 1921. Serial No. 460,996. 1 Claim. (Cl. 122—3.)

In a power plant, a furnace, a boiler arranged to be heated by the products of combustion from the furnace, a heat interchanger arranged to be heated by the products of combustion from the furnace and comprising two tubes, one of which is of relatively small cross-section and the other of which is of relatively large cross-section, joined together in external surface contact with each other, and means for causing liquid to flow from the supply through the larger tube of said heat interchanger into the boiler and for causing fluid to flow from said boiler through the smaller tube of said heat interchanger to the liquid supply, whereby the liquid entering the boiler is heated both by the fluid leaving the boiler and by the products of combustion.



1,753,336. DUPLEX TELEGRAPH SYSTEM FOR LOADED CABLES. JOHN J. GILBERT, Douglaston, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 31, 1927, Serial No. 244,025. Renewed July 12, 1929. 13 Claims. (Cl. 178—68.)

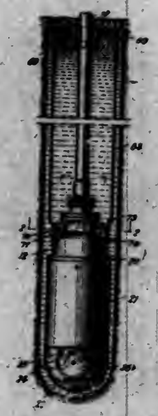


1. The method which comprises converting impulses of frequency corresponding to a given dot signaling frequency supplied by a telegraph transmission system into revised impulses of greater average time between voltage changes and containing useful energy of frequency at about the dot signaling frequency, and impressing said revised impulses upon the signaling conductor.

1,753,337. ADJUSTABLE INDUCTANCE COIL. FREDERICK J. GIVEN, East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed July 11, 1928. Serial No. 291,746. 4 Claims. (Cl. 171—342.)

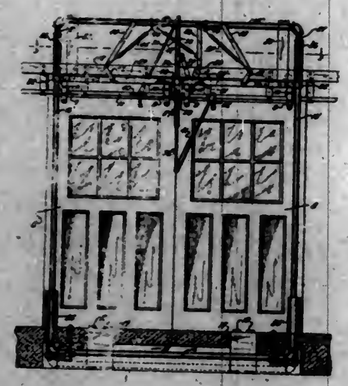
1. A variable balanced inductance coil having a plurality of winding sections, and a short-circuited coil of wire mounted for angular movement with respect to said coil in the field of said coil and symmetrically with respect to said winding sections, to vary the inductance of said winding sections simultaneously in the same proportion.

1,753,338. TELEPHONE-EXCHANGE SYSTEM. ALFRED E. HAGUE, West Orange, and GEORGE H. PETERSON, Bloomfield, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed May 9, 1928. Serial No. 276,248. 21 Claims. (Cl. 179—51.)



1. In a telephone exchange system, a plurality of lines terminating at a central office, a plurality of link circuits thereat for interconnecting said lines, signaling devices for said link circuits, a plurality of selector switches for actuating said signaling devices, and means controlled jointly by the operator and the subscriber on a connected line for actuating said selector switches to effect the operation of said signaling devices a predetermined period of time after the response of a subscriber to a connection between said lines.

1,753,339. EARTH-BORING MACHINE. JOHN K. HENCKEN, Brooklyn, N. Y. Filed June 16, 1928. Serial No. 285,839. 11 Claims. (Cl. 255—4.)



1. In an earth boring machine, an impact delivering unit comprising a rotatable member having an impact delivering

element pivotally connected thereto, means for actuating said rotatable element whereby said impact delivering

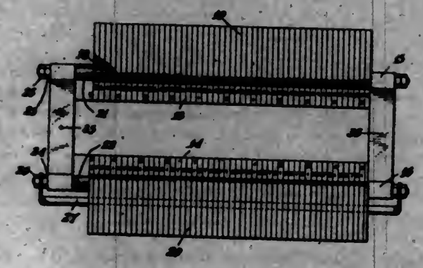
hammer is rotated about the axis of said rotatable member, and actuating means for bodily moving said unit about a perpendicular axis.

1,753,340. GARAGE-DOOR OPERATOR. ADAM HERR, Sheboygan, Wis. Filed July 11, 1927. Serial No. 204,947. 2 Claims. (Cl. 268—40.)

1. A garage door operator, comprising door sliding levers, a rectangularly shaped vertically movable intermediate member surrounding a door opening connected at its upper portion to said levers for moving the same, and a depressible track mounted in a drive-way and supported at one point by a lower portion of said intermediate member to lower the same upon being depressed, said track extending in the path of travel of a vehicle.

1,753,341. BRAIDER BOBBIN. ANTHONY HLAVAC, Chicago, Ill., assignor to Eber J. Hubbard, Berwyn, Ill. Filed Apr. 24, 1929. Serial No. 357,757. 6 Claims. (Cl. 242—118.)

1. A braider bobbin comprising a hub, end disks secured thereto, a reinforcing plate applied against the outer face of each disk, said disks and plates having registering axial openings, a core extending through said openings, and a wide tooth extending from each plate into its opening,

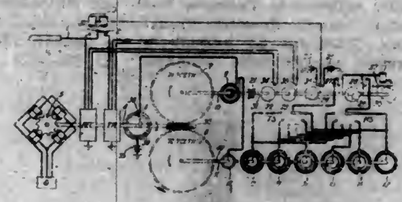


said core at its ends having slots receiving said teeth and the core ends being deflected radially outwardly against the outer faces of said plates.

1,753,342. REEL. EBER J. HUBBARD, Berwyn, Ill. Filed Feb. 25, 1928. Serial No. 256,653. 2 Claims. (Cl. 242—77.)

1. A spool or reel comprising a barrel and non-metallic heads secured thereto, and a sheet metal reinforcing tire structure for each head in the form of a narrow cylindrical band having inner and outer flanges extending radially to clamp against the inner and outer faces of the head adjacent to the head periphery, there being grooves in the head adjacent to its periphery to receive the flange ends whereby to secure the tire structure against radial displacement.

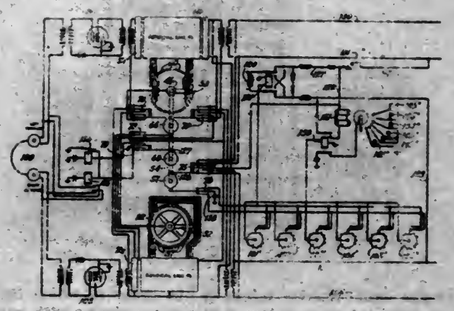
1,753,343. MASTER TESTING CARD FOR JACQUARD KNITTING MACHINES. FRANK HUG, Brooklyn, N. Y., assignor to Franklin Knitting Mills, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 22, 1924. Serial No. 751,570. 8 Claims. (Cl. 66—156.)



1. A master testing device for jacquard knitting machines and the like, comprising, in combination, a substantially rectangular frame comprising end and side members, and a set of testing fingers pivotally mounted on each of said side members.

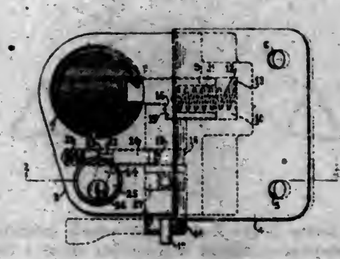
1,753,344. METHOD OF PRODUCING DRAWINGS. KARL K. KNECHT, Evansville, Ind. Filed June 1, 1926. Serial No. 112,932. 1 Claim. (Cl. 35—12.)

The method of producing a drawing composed of a series of lines whose length and direction follow a predetermined plan and whose delineation will produce a complete drawing, consisting in placing a ruler or straight-edge in successively differing positions on a sheet or chart having a blank surface provided with an indexed starting point and also flanked by irregularly placed indexed points or location, successive ones of the irregularly placed indexed points being intersected by the ruler or straight-edge while lying across said blank part, drawing a line of predetermined length and position on the blank surface from the indexed starting point on the blank surface when the ruler or straight-edge is thus used, and continuing this procedure, using other ones of the irregularly placed indexed points in conjunction with a terminus of the previously drawn line as the work advances, until the drawing has been completed on the blank surface of the sheet or chart.



1,753,345. TIMING CIRCUIT. WILLIAM A. KNOOP, Hempstead, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 9, 1928. Serial No. 260,444. 12 Claims. (Cl. 178—2.)

1. In a time switch comprising two normally open contacts in series in an electric circuit, the method of closing said circuit at long intervals which comprises closing one of said contacts periodically and closing said other contacts periodically at a time rate slightly different from that at which said first contacts are closed and at such a rate that the time between successive simultaneous closures is greater than the time between successive closures of each contact.

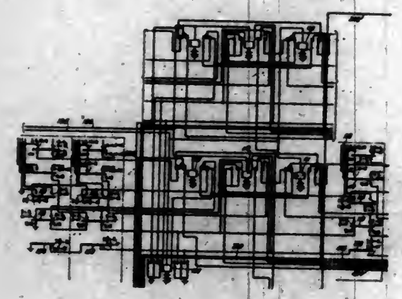


1,753,346. SOUND-RANGING SYSTEM. GEORGE R. LUM, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 19, 1928. Serial No. 646,804. 5 Claims. (Cl. 177—386.)

1. A submarine sound ranging system comprising a pair of telephone transmitters, a pair of line circuits, with which said transmitters are associated, a telephone receiver connected to the opposite end of each line circuit, two artificial lines adapted to be connected in said line circuits between the receivers and transmitters each having units of different values, and a manually operated switching mechanism for varying the number of units to

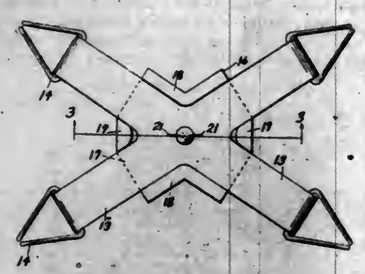
be included in said line circuits and having means operated by the movement of the said mechanism to interchange said artificial lines with relation to said line circuits.

1,753,347. LOCKING DEVICE FOR AUTOMOTIVE VEHICLES AND THE LIKE. GEORGE J. MEUER, Milwaukee, Wis., assignor, by mesne assignments, to Cutler-Hammer, Inc., a Corporation of Delaware. Filed Mar. 1, 1924. Serial No. 698,160. 4 Claims. (Cl. 70—127.)



1. The combination with a latch movable into and out of locking engagement with a steering column, of a switch adapted upon given movement of a part thereof in opposite directions respectively to make and break an ignition circuit, said make and break being effected with a snap action, and common operating means for said latch and said switch comprising a member having a plurality of cam surfaces adapted upon given movement thereof to effect proportionate movement of said latch and disproportionate movement of said switch part, said movements of said parts being correlated to insure locking positioning of said latch prior to breaking of said ignition circuit.

1,753,348. MONITORING SYSTEM. JAMES B. NEWSOM, Brooklyn, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed May 4, 1928. Serial No. 274,994. 26 Claims. (Cl. 179—27.)

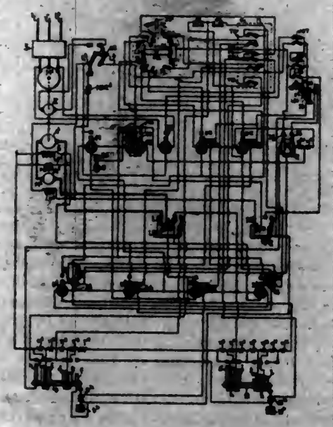


21. In a registering system, a registering device comprising a plurality of registers, means for setting said registers, a plurality of transfer relays, means responsive to the seizure of said registering device for operating all

of said transfer relays, and means responsive to the repeated operation of said setting means to successively de-

energize said transfer relays in the order in which they were operated to associate said setting means with each of said registers in turn.

1,753,349. TRACTION DEVICE. GEORGE W. PERKS, Akron, Ohio, assignor to John R. Gammeter, Akron, Ohio. Filed Feb. 1, 1927. Serial No. 165,091. 4 Claims. (Cl. 152—14.)

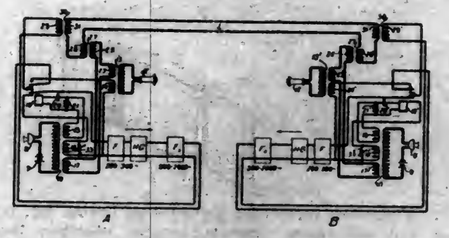


4. A traction device for vehicle wheels comprising an element adapted to extend transversely about a tire, said element being of flexible, resilient, non-metallic, strain-resisting material constructed in the shape of a cross, a metal cleat secured on the element, said cleat comprising a backing plate mounted under the element and projections on the plate extending beyond the traction surfaces of the element, and means for securing said cleat on the element.

1,753,350. NICKEL-PLATING APPARATUS. ALFRED B. SCHUPP, Richmond Hill, N. Y., assignor, by mesne assignments, to Moto Meter Gauge & Equipment Corporation, Long Island City, N. Y., a Corporation of Delaware. Filed Dec. 18, 1925. Serial No. 76,164. 6 Claims. (Cl. 204—5.)

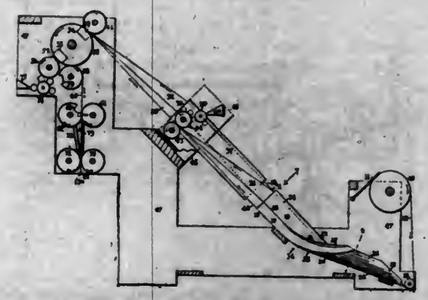
1. In a coating apparatus, the combination with a plurality of tanks including partitions between them of a carriage for conducting the objects to be coated through the tanks, an object support depending from the carriage, a double rail track supporting the carriage, wheels on the carriage running upon the rails of said track, a fixed rack between the rails of said track, a gear mounted on the carriage above the rack, and engageable with the rack for lifting the object support over the partitions between adjacent tanks and a guide at either side of said rack for bringing said pinion into register therewith.

1,753,351. MOTOR-CONTROL SYSTEM FOR ELEVATORS AND THE LIKE. EDWIN W. SEECKS, South Milwaukee, Wis., assignor, by mesne assignments, to Cutler-Hammer, Inc., Milwaukee, Wis., a Corporation of Delaware. Filed Dec. 29, 1926. Serial No. 157,789. 11 Claims. (Cl. 172—152.)



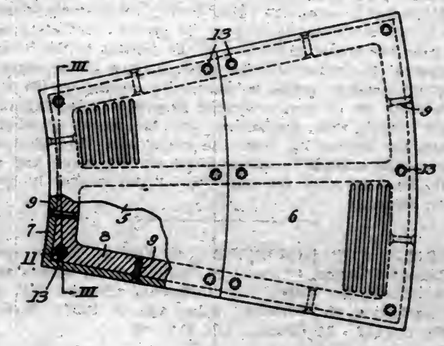
1. In combination, a reciprocating carrier, a motor for driving said carrier, means operable at any point in the line of travel of said carrier for initiating operation of said motor in reverse directions selectively, said means being also operable to initiate stopping of the motor, and means thereafter operable automatically in accordance with the position of the carrier to effect stopping of the motor by plugging, whereby the same is stopped with said carrier accurately positioned at a preselected point in its line of travel.

1,753,352. HAND OR ANGLE PIECE FOR DENTAL PURPOSES. HANS STARK, Berlin-Charlottenburg, Germany, assignor to Deutsche Gold- und Silberscheideanstalt vormals Roessler, Frankfort-on-the-Main, Germany. Filed Apr. 25, 1929, Serial No. 358,041, and in Germany Apr. 24, 1928. 7 Claims. (Cl. 32—11.)



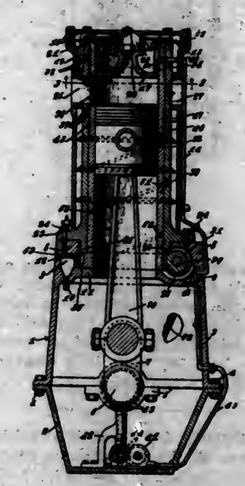
1. In a hand piece or angle piece for clamping drilling and grinding tools, particularly for dental purposes, a driven shaft having a driven gear thereon, and a driving shaft having a driving gear meshing with the driven gear, one of said shafts being free to move transversely of its own axis whereby the driving gear and the driven gear will automatically adjust themselves to favorable relative positions upon rotation.

1,753,353. ELECTRICAL SYSTEM FOR SECRET TRANSMISSION. JOHN C. STEINBERG, East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 18, 1927. Serial No. 226,857. 12 Claims. (Cl. 179—1.)



1. In a signaling system, a source of message waves, means for generating from said message waves noise waves having harmonics of said message waves, means for combining said noise waves with said message waves, and means at a distant receiving point for neutralising said noise waves while retaining the message waves.

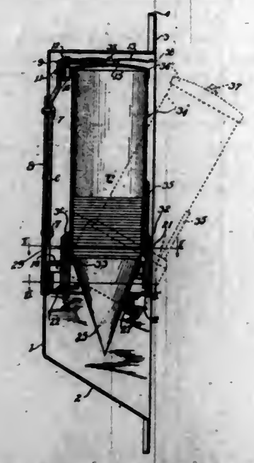
1,753,354. PAPER-BAG-MAKING MACHINE. BURNHAM C. STICKNEY, Hillside, N. J. Filed Nov. 26, 1927. Serial No. 235,784. 16 Claims. (Cl. 93—18.)



1. A former for longitudinally fluting a paper web, including superposed co-operative members between which the web is drawn lengthwise, and from which it is delivered in narrowed fluted condition, said former having a relatively broad intake portion and a relatively narrow riffled delivery portion, one of said superposed members having at its intake portion means for supporting the incoming web in smooth condition, each of said members having between its intake and delivery ends a set of web-fluting riffles placed diagonally of the general direction of travel of the web and extending towards the delivery portion of the former, the other of said superposed members provided with riffles complementary to the aforesaid riffles, and means for supporting said members with the riffles of each member protruding into the corresponding depressions of the other member, and with one member slightly spaced from the other so that all of said riffles co-operate to form a constricted undulatory web-guiding passage permitting free advance of the web.

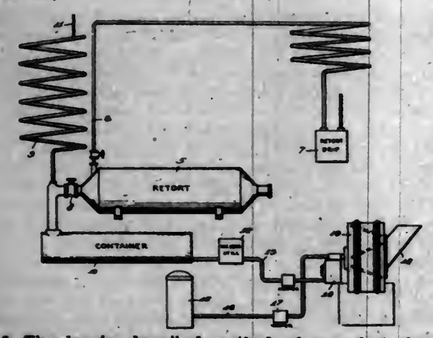
1,753,355. SCREEN STRUCTURE. SAMUEL BLAINE STINE, Osceola Mills, Pa. Filed Apr. 10, 1928. Serial No. 268,864. 5 Claims. (Cl. 209—399.)

1. Screen structure adapted for relative rotative movement with respect to a scraper, comprising an outer screen portion, and an inner screen portion of greater thickness than the outer portion.



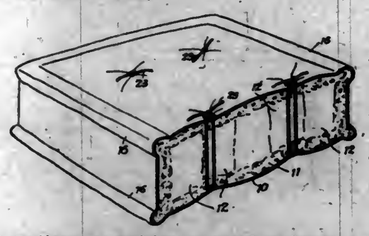
1,753,356. ROTARY SINGLE SLEEVE-VALVE MOTOR. EDWARD E. THISLER, Harrodsburg, Ky. Filed May 7, 1928. Serial No. 275,822. 1 Claim. (Cl. 123—80.)

In an internal combustion engine, a crank case having a worm chamber and provided with an oil outlet leading from the chamber to the interior of the crank case, a cylinder on the crank case, a cap on the cylinder and having an extension prolonged into the cylinder and spaced from the inner cylinder wall, a single sleeve valve journaled in the cylinder and extended at one end into the space between the inner cylinder wall and the outer surface of the extension, the inner surface of said end of the valve being in direct contact with the outer surface of the extension, and the outer surface of the valve being in direct contact with the inner cylinder wall, the valve having a port and being provided on its outer surface with oil-holding grooves disposed about the port, the valve being supplied on its inner surface with end and intermediate sets of circumferential grooves located on opposite sides of the said oil-holding grooves, the valve being equipped on its outer surface with a spiral groove extended from the intermediate set of circumferential grooves to the worm cham-



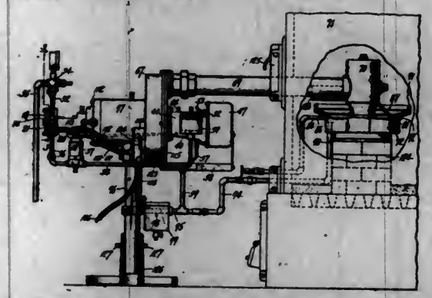
ber, a conduit having one end in communication with the interior of the crank case, the opposite end of the conduit discharging between the inner wall of the cylinder and the outer surface of the valve and into the end set of circumferential grooves, the valve having a transverse opening in the midst of the end set of grooves and carrying oil from the last-specified end of the conduit to the inner surface of the valve and the outer surface of the extension, the conduit having a branch discharging on the intermediate set of circumferential grooves and having another branch that discharges into the worm chamber, means for forcing oil from the crank case through the pipe to the conduit, a worm wheel on the valve, and a worm meshing with the worm wheel and located in the worm chamber.

1,753,357. CUP DISPENSER. ANDREW C. WOOD and RUDOLPH BARBS, Chicago, Ill., assignors, by mesne assignments, to Vortex Cup Company, Chicago, Ill., a Corporation of Delaware. Filed Apr. 1, 1927. Serial No. 180,112. 11 Claims. (Cl. 312—48.)



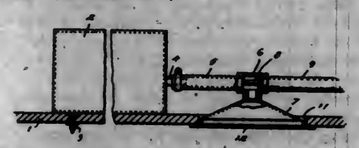
1. A cup dispenser comprising a housing adapted to be projected through a recess in a supporting wall and secured thereto, of a bracket mounted in said housing, a cup container pivotally supported on said bracket, and latch means on said bracket adapted to removably engage the container to hold the same in a dispensing position within said housing.

1,753,358. METHOD OF MANUFACTURING MEAT CURE. ERNEST H. WRIGHT, Kansas City, Mo. Filed Nov. 22, 1927. Serial No. 235,022. 7 Claims. (Cl. 99—1.)



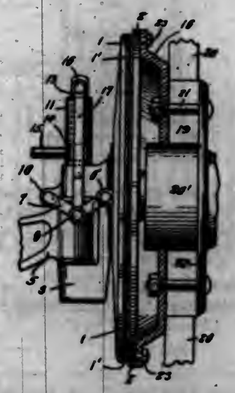
6. The herein described method of manufacturing a meat cure product, which consists of atomising the condensate resulting from the distillation of wood and forcibly discharging the same upon salt crystals, while agitating the salt in suspension.

1,753,359. MATTRESS. MICHAEL BECHIK, Memphis, Tenn. Filed Aug. 24, 1928. Serial No. 301,727. 2 Claims. (Cl. 5—355.)



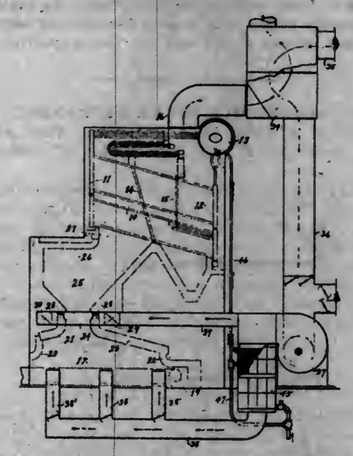
1. A mattress comprising an envelope having top, bottom and side fabric elements, parallel relatively inextensible straps at the top and bottom of the mattress extending across the mattress and secured at their ends to the lateral extremities of the adjacent cover elements, eyelets arranged in pairs laterally spaced from each other and more widely spaced from adjacent pairs said eyelets securing the straps to the cover elements the straps being slack between the pairs of eyelets, between the eyelets of each pair and between the sides of the mattress and the adjacent eyelets, and cords passed through opposed pairs of eyelets and tied at the outside of the mattress, substantially as set forth.

1,753,360. LIQUID-FUEL BURNER. JOHN MURTON BROWN, Irvington, N. J., assignor to Crystal Oil Burner Corporation, Irvington, N. J., a Corporation of New Jersey. Filed Apr. 9, 1928. Serial No. 268,429. 16 Claims. (Cl. 158—53.)



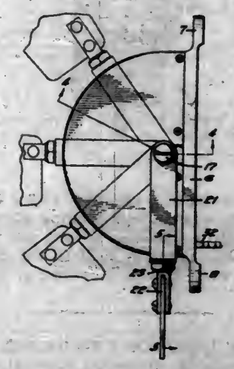
1. Combustion apparatus of the type described which comprises a burner having upwardly and outwardly directed burner ports arranged about a central axis and a retort mounted centrally above said burner, said retort having a central outlet pipe projecting from said burner upwardly into said retort, an inlet in a vertical wall of said retort, and a partition extending from said vertical wall above said inlet to said outlet pipe.

1,753,361. FIRE ALARM. JOHN S. CAWTHON, Beech Bluff, Tenn. Filed June 27, 1929. Serial No. 374,217. 3 Claims. (Cl. 116—106.)



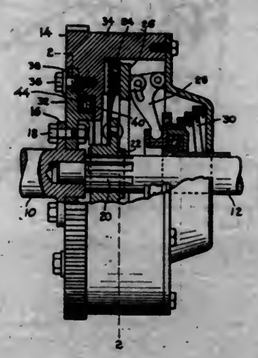
1. An alarm, comprising a compressed air receptacle, a combustible conduit connected and in communication at one end with the receptacle and having the other end closed, and sound means in the conduit adjacent the receptacle designed to be acted upon by air passing therethrough following rupture of the conduit, to create an audible signal.

1,753,362. BRAKE MECHANISM. STUART H. CLAPP, Washington, D. C., assignor, by mesne assignments, to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 20, 1925. Serial No. 17,029. 27 Claims. (Cl. 188—194.)



1. In a brake mechanism, including an axle, a wheel, a primary disk, means for mounting the primary disk for axial but nonrotatable movement, a secondary disk rotating with the wheel, and a series of toggles to move the primary disk into frictional contact with said secondary disk.

1,753,363. FURNACE AND METHOD OF OPERATING THE SAME. THOMAS G. COGHLAN, Elizabeth, and EINAR A. JOHNSEN, Mountain Lakes, N. J. Original application filed July 21, 1925, Serial No. 44,957. Divided and this application filed June 5, 1926. Serial No. 113,856. 15 Claims. (Cl. 122—1.)

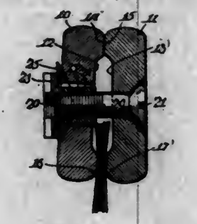


1. The method of operating a boiler furnace having a fuel grate in its lower part, which comprises heating all of the combustion air to a high temperature, dividing the heated air into two streams, reducing the temperature of one stream by transferring some of its heat to the boiler feed water, supplying the air of reduced temperature beneath the grate and supplying the heated air from the other stream to the gases rising from the fuel on the grate at a point above the grate.

1,753,364. SIGNAL DEVICE. DANIEL P. CORCORAN, Gridley, Calif. Filed June 25, 1929. Serial No. 373,490. 6 Claims. (Cl. 116—39.)

1. A signal device comprising a base, an indicator adapted to move pivotally on said base to any one of a plurality of selected positions, and means for revolving said indicator on its own axis during said pivotal movement.

1,753,365. FLYWHEEL. JOHN F. DAUKUS, Detroit, Mich. Filed Apr. 9, 1928. Serial No. 268,410. 4 Claims. (Cl. 74—6.)



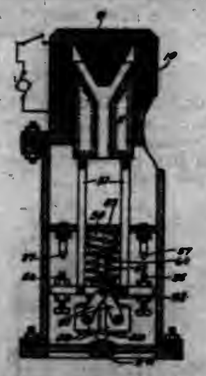
3. A fly wheel having a shaft portion and a weighted peripheral female clutch portion secured to the shaft portion to rotate therewith by yielding connections adapted to permit the weighted peripheral clutch portion to lag resistingly a limited distance, and rigid connections determining the extent of such lag.

1,753,366. BINDER FOR DOWN-HANGING SHEETS. HAROLD L. DE LISLE, Chicago, Ill. Filed Dec. 30, 1927. Serial No. 243,630. 8 Claims. (Cl. 129—167.)

1. A binder for down-hanging sheets comprising a pair of long and thin strip-like members face to face and formed trough-like interiorly in the longitudinal direction and

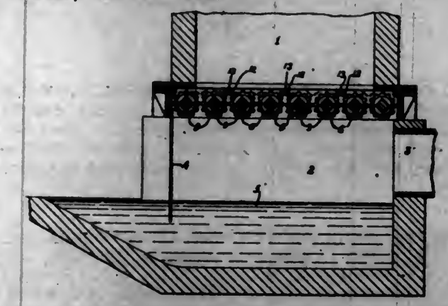
having fulcruming surfaces at their upper edge portions and binding surfaces at their lower edge portions respectively, and a plurality of bolts carried by one of said members intermediate the top and bottom edge portions thereof and projecting transversely of said members, with a nut on each of said bolts bearing against the other one of said

members for drawing the members toward each other for clamping sheets between said binding surfaces, at least one of said members extending at each end thereof beyond the sheet material normally held in the device whereby the device as a whole may be supported at its opposite end portions.



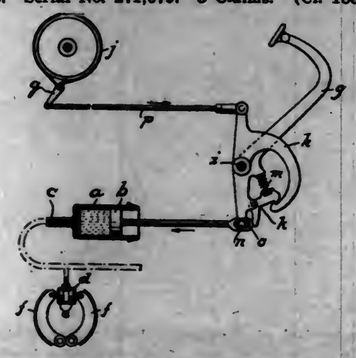
1,753,367. LEG REST FOR THE DRIVERS OF MOTOR CARS. HOWARD B. DICKENS, Endicott, N. Y. Filed July 30, 1928. Serial No. 296,193. 2 Claims. (Cl. 155—171.)

1. In combination with a vehicle seat, a pair of supporting members pivoted to the underside of said seat and extending upwardly adjacent thereto, a rest member pivotally supported at the upper ends of said support members and swingable therewith into and out of rest position along side of said seat and substantially below the level of said seat in one position.



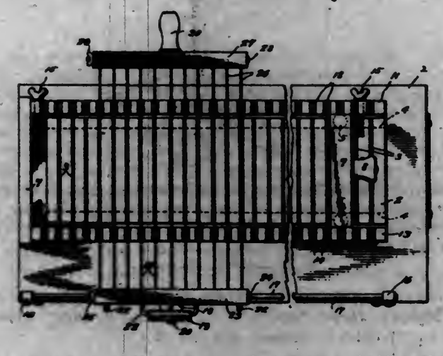
1,753,368. SUBAQUEOUS SOUND-PRODUCING DEVICE. ALARD DU BOIS-REYMOND, Plon, near Kiel, and WILHELM RUDOLPH, Kiel, Germany, assignors to Firm Signal Gesellschaft m. b. H., Kiel, Germany. Filed July 17, 1920, Serial No. 397,136, and in Germany Sept. 22, 1919. 7 Claims. (Cl. 177—386.)

3. A sound producing device comprising means for exerting a pull in a given direction, a reciprocating hammer provded with a surface adapted to be gripped, and means for operatively connecting said pulling means and said reciprocating hammer, including gripping means exerting a pressure normal to the motion of the pulling means, a



sound radiating means and means operated upon the release of the pulling means for forcing said hammer against said radiating means.

1,753,369. FURNACE GRATE. WILLIAM M. DUNCAN, Alton, Ill. Filed Sept. 17, 1926. Serial No. 136,052. 4 Claims. (Cl. 126—181.)



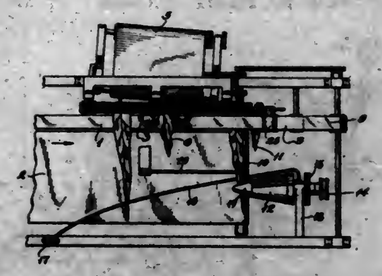
1. In a furnace grate, rotatable fuel-supporting members located adjacent to each other to form a grate, a driver whereby said adjacent members are rotated in opposite directions to force residual matter through the grate, and fuel-supporting baffles each located immediately above rising portions of two of the rotating fuel-supporting members.

1,753,370. AUTOMOBILE BRAKE MECHANISM. ELEUTHERE PAUL DU PONT, Montchanin, Del. Filed Apr. 21, 1928. Serial No. 271,679. 3 Claims. (Cl. 188—152.)

2. In combination, an hydraulic brake mechanism, a body of fluid arranged to actuate the brake mechanism when under pressure, means for exerting pressure on the body of fluid including a fluid displacing member and a manually operable lever connected thereto to move the member against the pressure of the fluid, a second brake mechanism, connections whereby the second brake mechanism may be actuated by manipulation of the lever, and means acting when the hydraulic brake mechanism is operative to render the connection inoperative upon manipulation of the lever.

1,753,371. BREAD SLICER. MICHAEL L. GEORGOPOULOS, West Palm Beach, Fla. Filed July 10, 1928. Serial No. 291,566. 5 Claims. (Cl. 146—189.)

1. A bread slicer having a slotted base, knife guides mounted on the base and having knife slots aligned with the first mentioned slots, and slicing knives mounted for sliding adjustment to a selected series of slots.

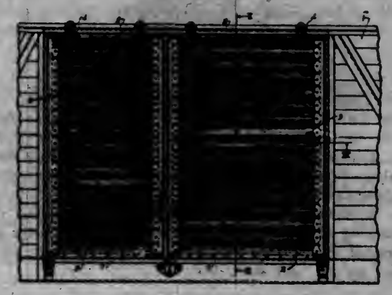


1,753,372. COMBINATION STOOL, LADDER, AND KITCHEN BLOCK. RICHARD G. GOSER, Alameda, Calif. Filed Mar. 26, 1928. Serial No. 264,597. 3 Claims. (Cl. 155—42.)

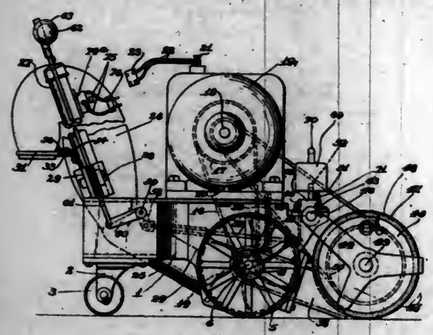
1. In a combination furniture of the character described, a stool comprising two side members and a top member, a series of steps supported by the two side members and leading to the top from in front, a block hinged to the rear edge of the top for swinging motion from a position on top of the stool to a concealed position between the sides of the same and a partition interconnecting the sides for bracing the same and for separating the steps from the block in its concealed position.

1,753,373. LEAF-HANDLING MACHINERY. JOSEPH GOUGH, Newark, N. J., assignor to Gough Stemming Machine Corporation, New York, N. Y., a Corporation of New Jersey. Filed Aug. 15, 1927. Serial No. 212,912. 13 Claims. (Cl. 131—57.)

1. The combination with leaf stemming mechanism including means against which the blades of the leaves are bunched as the stems of the leaves are extracted and for conveying the leaves from the stemming station, of means for grasping and pulling leaves from said means for conveying the leaves, the means for grasping and pulling the leaves being located out of the path of the properly stemmed leaves but within the path of the remainder of the leaves.

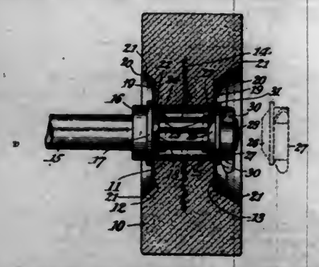


1,753,374. BOWL-HOLDING MEANS FOR LIGHTING FIXTURES. EDWIN F. GUTH, St. Louis, Mo. Filed June 13, 1928. Serial No. 284,930. 1 Claim. (Cl. 240—128.)



In a device of the character described, the combination, with a reflector and a bowl having a lip formed thereon, of a plurality of fixed lugs secured to the reflector to engage the lip of said bowl, there being an opening in the side of said reflector, a spring-actuated shaft mounted on the upper side of the reflector, the end of said shaft extending outwardly through said opening, thence downwardly and inwardly and forming a retaining clip, and having a spring mounted to hold said clip normally in engagement with said lip.

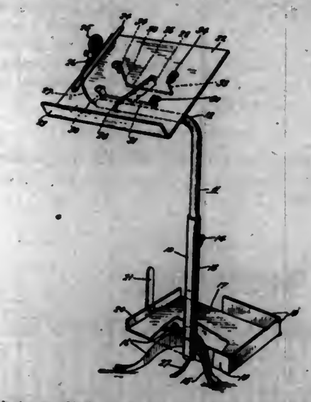
1,753,375. METAL CAR DOOR. FREDERICK C. HEINEN and WILLIAM W. DARROW, Chicago, Ill., assignors to Camel Company, Eau Claire, Wis., a Corporation of Illinois. Filed Feb. 6, 1926. Serial No. 86,896. 7 Claims. (Cl. 189—46.)



1. In a railway car door, a metal panel and sheaths enclosing the lateral margins of the panel, the outer margin of one sheath having an inwardly and forwardly bent flange, the outer margin of the other sheath having an outwardly and rearwardly directed flange.

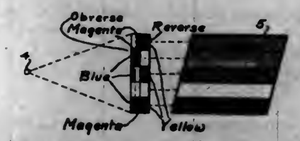
1,753,376. FLOOR-SURFACING MACHINE. GEORGE T. HILLS, Chicago, Ill., assignor, by direct and mesne assignments, to Muskegon Manufacturing Company, Muskegon, Mich., a Corporation of Michigan. Filed Nov. 7, 1927. Serial No. 231,412. 8 Claims. (Cl. 51—176.)

1. A floor surfacing device comprising a framework, rollers supporting the same, a driving motor on said framework, a dust collecting fan pivotally supported on said framework, a dust collecting hood connected with said fan, a surfacing drum unit removably engaged on said framework and co-acting with said dust collecting hood, a steering post mounted on said framework, a control switch on said steering post, means for connecting the same with said motor, a control mechanism connected with said finishing drum unit, a control handle pivotally mounted on said steering post and connected with said control mechanism to cause the pressure of the drum unit on the floor to be varied depending upon the operation of said pivoted handle, and means mounted on said steering post and on said pivoted handle for regulating the maximum pressure of said finishing drum unit.



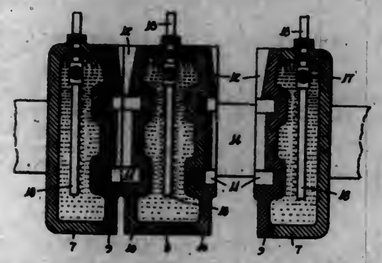
1,753,377. GRINDING WHEEL AND MEANS FOR MOUNTING THE SAME. THADDEUS A. JACKSON, Brooklyn, N. Y., assignor of one-half to William J. Skelly, New York, N. Y. Filed Jan. 28, 1928. Serial No. 250,243. 2 Claims. (Cl. 51—168.)

2. A grinding wheel having a central bore and opposite circular depressions provided with outwardly flaring straight circumferential walls, in combination with cheek plates shaped to intimately engage said walls and having conical sockets with central openings and unitary sleeves projecting inwardly from either end of said bore, an arbor and a clamping nut, each having a conical portion to fit said sockets and an extended circumferential flange bearing against the bottom of the recesses at the edge of said bore as shown and described.



1,753,378. UTILITY STAND. LUTHER M. JONES, Chicago, Ill. Filed Jan. 16, 1928. Serial No. 247,080. 3 Claims. (Cl. 45—62.)

2. A utility stand comprising a standard, a lateral arm at the upper end thereof having a transverse recess intermediate its ends, a bar having one end seated in said recess and extended laterally from said arm, a U-shaped strap the ends of which are secured to said bar

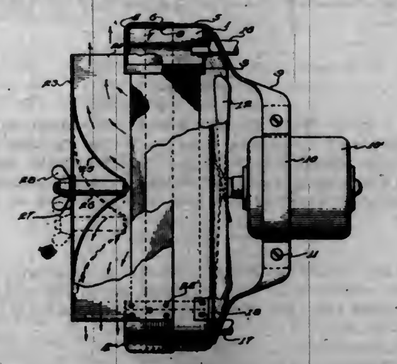


and the intermediate portion of which embraces said arm for clamping said bar to said arm, whereby said bar is immovably connected to said arm, and a table mounted on said bar.

1,753,379. COLOR PHOTOGRAPHY. WILLIAM V. D. KELLEY, Jersey City, N. J. Filed Nov. 9, 1925. Serial No. 67,734. 2 Claims. (Cl. 95—2.)

1. A photographic process which consists in forming a latent image in a light sensitized coating on one side of a transparent carrier, developing in acid diamidophenol, toning with an iron salt to a blue color and, after clearing with an aqueous bath of ammonium bromide and potassium bichromate, forming an image in the same coating and an image in a like coating on the other side of the transparent carrier and coloring said last formed images, one a magneta and the other a yellow, while preventing the coloring matter for one image from coming in contact with the other image.

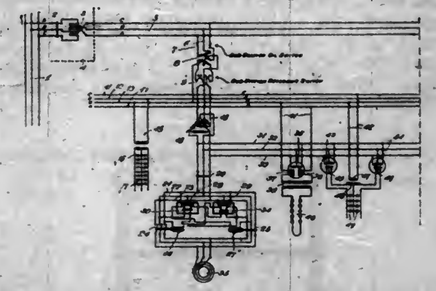
1,753,380. CHILLING MOLD. JAMES P. LEARY, Baltimore, Md., assignor, by direct and mesne assignments, to The Process Casting Company, Baltimore, Md., a Corporation of Maryland. Filed July 6, 1928. Serial No. 290,826. 3 Claims. (Cl. 22—177.)



2. A chilling mold comprising a hollow section having a chill plate with a mold cavity therein, and a cold fluid supply pipe entering said section and having spray nozzles therein for directing jets of cold fluid against the back of said plate.

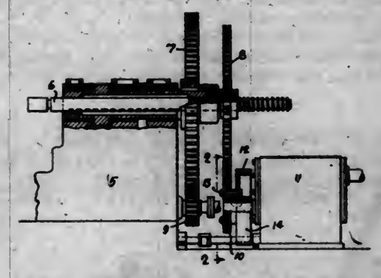
1,753,381. STORAGE-BATTERY ELECTRODE. SHERBURNE D. LEVINGS, Winnetka, Ill., assignor of one-third to Rufus N. Chamberlain and one-third to George R. Berger, Chicago, Ill. Filed May 11, 1926. Serial No. 108,218. 1 Claim. (Cl. 136—182.)

An electrode for storage batteries, comprising a portion having means for securing the electrode to the cover of a battery, a depending member integral with said portion and adapted to extend downwardly therefrom into the battery electrolyte, an insulated conductor cast into said portion, and a connector on said conductor, whereby said conductor may be readily disconnected from the circuit and said electrode may be removed from the cover.



1,753,382. AUTOMOBILE BODY HEATER. DANIEL T. MACLEOD, Milwaukee, Wis., assignor to Perfex Corporation, Milwaukee, Wis., a Corporation of Wisconsin. Filed Jan. 26, 1929. Serial No. 335,223. 4 Claims. (Cl. 257—137.)

4. A space heater comprising a radiator core and spaced tanks having offsets in opposite sides thereof, a shell on said radiator core comprising complementary sections having registering offsets therein for holding said sections together, the offsets of said shell sections engaging the offsets of said radiator tanks for securing said shell to said tanks, a fan associated with one of said shell sections for forcing a current of air through said radiator core, a shield on the other shell section extending across the face of said core, and a baffle slidably mounted on said shield for selectively proportioning the flow of heated air toward respectively opposite sides of the radiator.



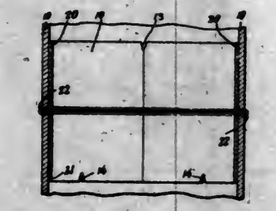
1,753,383. ELECTRICAL CONTROL SYSTEM. JOHN C. MCDONALD, New York, N. Y. Filed May 14, 1928. Serial No. 277,673. 2 Claims. (Cl. 171—97.)

1. In a power distribution and control system, a generator of polyphase current, a three wire distribution circuit connected to said generator, a four wire distribution circuit coupled with said three wire distribution circuit, a plurality of loads of different characteristics connected to selected phases of said four wire distribution circuit, means disposed between said generator and said three wire distribution circuit for reversing the sequence of the phase of the currents in said three wire distribution circuit, and independent means interposed between said three and four wire distribution circuits for reversing the

sequence of phase of the currents in certain of the phases of said four wire distribution circuit, while maintaining the continuity of at least one of the phases of said polyphase current independent of any change in condition of the other phase currents.

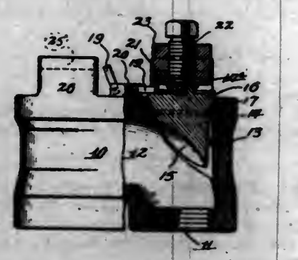
1,753,384. GEAR-BOX BRAKE. LOUIS G. MERRITT, Lockport, N. Y., assignor to Merritt Engineering & Sales Company, Inc., Lockport, N. Y., a Corporation of New York. Filed Nov. 4, 1926. Serial No. 146,133. 12 Claims. (Cl. 144—209.)

1. A power transmission for lathes, including means for driving a lathe spindle-rotating mechanism, toothed-gear means for driving a mechanism for axially shifting the lathe spindle, and means cooperating with said last-named driving means to retain the same against movement.



1,753,385. TOOTHBRUSH. ROBERT R. MYERS, Las Vegas, Nev., assignor to Clean-Be-Tween Tooth Brush Company, St. Louis, Mo., a Corporation of Delaware. Filed Nov. 19, 1927, Serial No. 234,457, and in Germany Nov. 22, 1926. 1 Claim. (Cl. 15—176.)

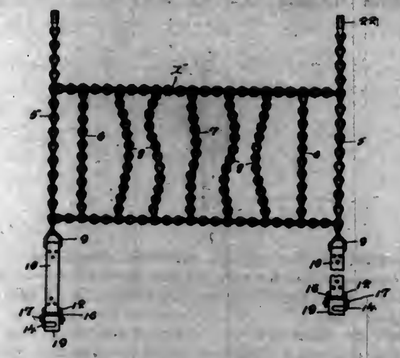
In a holding device, adapted for use with a toothbrush having a stud for detachable engagement by said device, a tubular outer end portion, the inner end of the tubular portion opening into a nut-receiving aperture, a handle, a sleeve formed by said tubular portion and extending beyond said aperture, said sleeve being crimped about a portion of the handle for securement of the handle to said tubular portion, a stud clamping member having a stud-receiving opening in its outer end, and a rearwardly extending slot leading from said opening and adapted to engage in said tubular outer portion, whereby the size of the stud opening may be decreased in diame-



ter, a threaded stud formed on the inner end of said clamping member, and a nut disposed in the aperture of the tubular portion and engaging said threaded stud.

1,753,386. PIPE SLEEVE. HARRY PALTROWITZ, New York, N. Y., assignor to Altmar Steel Products Company, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 6, 1927. Serial No. 217,588. 1 Claim. (Cl. 285—197.)

The combination of a pair of pipe sections, a pipe sleeve provided with an equatorial portion extending between and abutted by the ends of said pipe sections, said equatorial portion being compressed between the ends of said pipe sections when said pipe sections are subjected to pressure endwise of the length thereof, said pipe sleeve being further provided with portions fitting into adjacent ends of said pipe sections, said last mentioned portions of the pipe sleeve being provided with notches and forcibly urged outwardly against the interior walls of the pipe sections by means of the endwise pressure exerted by said pipe sections when assembled upon the outside surface of said pipe sleeve at the equatorial portion thereof.

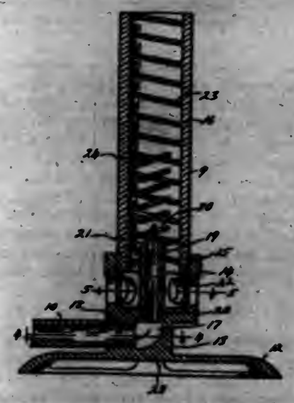


1,753,387. PIPE-BEND PLUG. ELWOOD K. PIERCE, Springfield, Ohio, assignor to The Ohio Steel Foundry Company, Lima, Ohio, a Corporation of Ohio. Filed Mar. 1, 1928. Serial No. 258,244. 3 Claims. (Cl. 137—76.)

1. In a pipe bend fitting having a curved inner passage, a plug closure having an inner surface curved to conform with and forming part of said curved passage, a locking piece for said plug engageable beneath upstanding portions of said fitting at opposite sides of said plug, and a hinged member on said fitting arranged to extend between said upstanding portions into interlocking engagement with said plug to position the latter in proper angular relation to said inner passage.

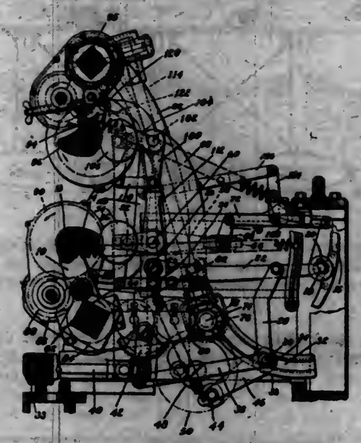
1,753,388. TIRE CHAIN. PETER SCHOLTUS, Detroit, Mich. Filed Mar. 19, 1928. Serial No. 262,670. 1 Claim. (Cl. 152—14.)

In a mud chain for a vehicle wheel with means for securing the chain thereto, said chain comprising side chains, cross chains secured to the ends of the side chains, equi-distantly spaced cross chains having their ends secured to the side chains between the cross chains first mentioned, the outermost chains of those second mentioned being of similar length, the intermediate cross chain being of a slightly greater length than the outermost cross



chains of those second mentioned, the remaining cross chains being arranged in pairs of the same length but of a greater length than the other cross chains, and the pairs of said remaining cross chains being disposed upon opposite sides of the intermediate cross chain.

1,753,389. BRIDGE FOR PIANOS. WILHELM SCHWECHTEN, Berlin-Lichterfelde, Germany. Filed Feb. 12, 1923, Serial No. 618,728, and in Germany Aug. 21, 1922. 6 Claims. (Cl. 84—212.)

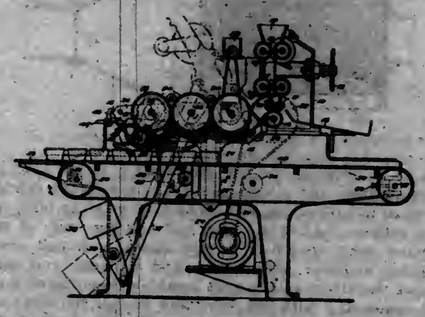


1. A device for a stringed musical instrument having a sound-board comprising a bridge having its mass substantially increased between the strings and the sound-board over that of a standard bridge to produce sounds of an improved timbre of tone, and strings bearing on said bridge.

1,753,390. FIRE KINDLER. FRANK A. TASCHNER, Detroit, Mich. Filed Oct. 27, 1927, Serial No. 228,984. Renewed Sept. 18, 1929. 4 Claims. (Cl. 158—10.)

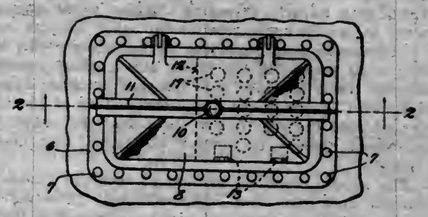
1. A gas burner comprising a base, a flow pipe removably secured to the base, a nozzle carried by the base, a casing removably secured to the base and surrounding the upper extremity of the nozzle, a coil mounted within the casing and a second coil mounted on the nozzle interiorly of the first mentioned coil.

1,753,391. LAST LATHE. LAURENCE B. TOPHAM, Wenham, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 15, 1928. Serial No. 299,690. 24 Claims. (Cl. 142—15.)



1. In a pattern copying machine, means for holding a block and a model, a tool, and a width grading mechanism arranged to co-operate with the model, the width grading mechanism being constructed and arranged to grade from a diameter of the model instead of from a radius comprised in the diameter.

1,753,392. EXCAVATING TOOTH. LESHER W. VAN BUSKIRK, Easton, Pa. Filed July 2, 1927. Serial No. 208,126. 3 Claims. (Cl. 37—142.)

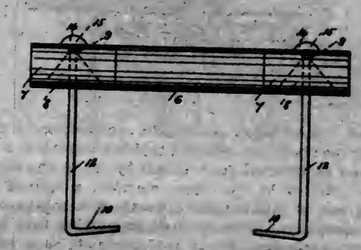


1. An excavating tooth tip having diverging wings and a rearwardly extending shank between the wings provided with contacting portions at its opposite sides to contact with the sides of a slot in a tooth base, said contacting portions terminating short of the juncture of said wings.

1,753,393. DOUGH-MOLDING MACHINE. FRANK H. VAN HOUTEN, Beacon, N. Y., assignor to Dutchess Tool Company, Beacon, N. Y., a Corporation of New York. Filed Sept. 17, 1926. Serial No. 136,121. 18 Claims. (Cl. 107—9.)

1. In a dough molding machine, the combination of a main frame, a series of drums journaled in said frame, a pressure plate carried by said main frame and having a dough supporting surface along which the dough travels while being operated upon by said drums, a shaft journaled in said frame, a gear on said shaft, a rack carried by the pressure plate and meshing with said gear, a rock arm fixedly mounted on said shaft, and a screw connected to said arm for rocking said shaft whereby the dough supporting surface of the pressure plate may be adjusted toward and from the peripheries of said drums.

1,753,394. THIEF-HOLE COVER. ORVILLE C. WATSON, Skiatook, Okla. Filed May 31, 1928. Serial No. 281,909. 1 Claim. (Cl. 220—57.)



A sample supporting tray for tanks, including a body portion formed of a length of sheet metal perforated to permit liquid to pass therethrough, a hinge connected with the body portion at one edge thereof, means for securing the hinge to the tank, an arm pivotally connected with the body portion at one side thereof, means for adjustably securing the arm to the tank to support the body portion in a horizontal plane.

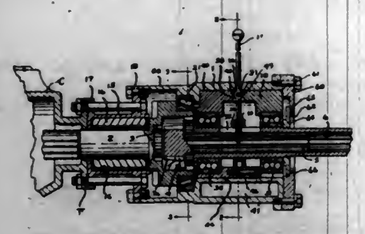
1,753,395. CLEANING COMPOUND. FREDERIC WILKES, Wilkinsburg, Pa. Filed Apr. 5, 1928. Serial No. 267,797. 1 Claim. (Cl. 87—5.)

A cleaning compound containing approximately:

	Per cent
Silicate of soda	33
Saturated borax water	66
Ammonia	1

1,753,396. STORAGE-BATTERY CARRIER. JAMES J. WITKOWSKI and WILLIAM L. LEEPER, Albion, N. Y. Filed June 12, 1928. Serial No. 284,802. 3 Claims. (Cl. 16—114.)

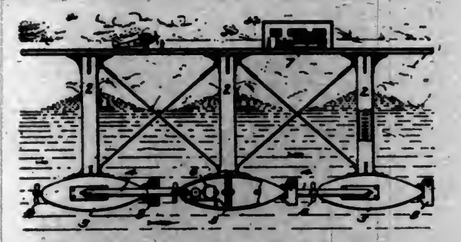
1. A carrier, comprising a handle having a longitudinal slot in one end portion, said slot being open at its bottom and having a clutch socket at its top, a hook provided with a shank which is slidable vertically in the said slot and which has a head which suspends the hook from the handle, said shank having also a projecting clutch portion which normally engages with the said socket and prevents the hook from rotating while the head is resting on the handle, said shank being rotatable in said slot when said clutch portion is disengaged from said socket and a hook suspended from the other end portion of the handle.



1,753,397. METHOD OF AND MEANS FOR FASTENING INTERIOR WALL PANELS TO AUTOMOBILE BODY FRAMES. HERBERT J. WOODALL and MEREDITH S. RANDALL, Detroit, Mich. Filed Oct. 31, 1927. Serial No. 229,828. 4 Claims. (Cl. 45—138.)

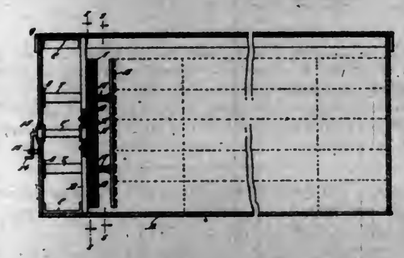
1. An automobile body wall structure including a frame provided with linearly extending angular panel supports disposed in spaced apart relationship, each support having a deformable leaf projecting normally outwardly angularly with respect to the frame and a panel superimposing the frame provided with inturned marginal flanges engaged over the angularly projecting leaves of the supports and held thereby toward the frame and outwardly with respect thereto to streach the panel taut across the frame.

3. The herein described method of securing panels to automobile door and other automobile body constructions having oppositely disposed and angularly extending leaves vertically disposed with respect to the door and operatively connected therewith one of which is deformable, the steps which comprise the positioning of a panel having inturned marginal flanges into interfitting relationship with said leaves and in subsequently bending the deformable angular leaf toward the frame structure and outwardly with respect to the panel to thereby draw the panel against the frame and stretch the panel across the frame.



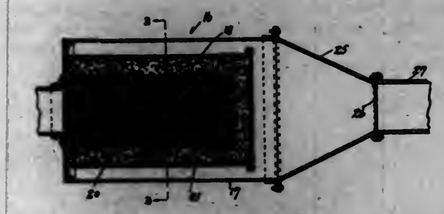
1,753,398. TRANSMISSION GEARING. CHARLES E. F. AHLM, Cleveland, and GEORGE M. SOULE, South Euclid, Ohio, assignors to Automotive Patent Holding Company, Cleveland, Ohio, a Corporation of Delaware. Filed Jan. 3, 1925. Serial No. 1,326. 6 Claims. (Cl. 74—58.)

1. In a transmission gearing in combination, a pair of rotatable members, one adapted to drive the other, a dental clutch and an internal gear carried by one of the members, a pinion carried by the other member, a splined sleeve carrying one of said rotatable members, a rolling bearing for the sleeve, an eccentric shell supporting said bearing and means extending within said eccentric shell comprising a pivoted lever for moving the eccentric to align the teeth of the pinion with the teeth of the clutch or gear and to subsequently cause the pinion to engage the clutch or gear.



1,753,399. OCEAN-GOING WATER CRAFT. WILLIAM R. BLAIR, Washington, D. C. Filed June 26, 1929. Serial No. 373,828. 2 Claims. (Cl. 114—0.5.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928, 370 O. G., 757.)

1. A sea going water craft comprising a plurality of supporting hulls, with propelling means, positioned in the water beneath the disturbed sea surface said hulls being arranged so that the propelling means of each hull will operate on water undisturbed by the propelling means

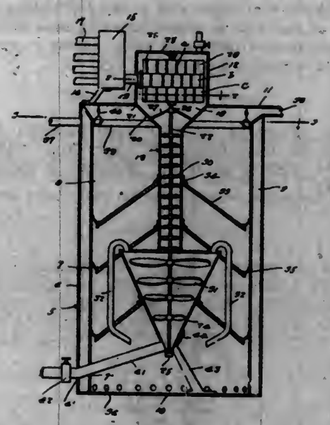


of the other hulls, struts extending upwards from each of said hulls to a position above the disturbed sea surface, and load carrying means supported by said struts.

1,753,400. PRESSING INSTALLATION FOR FREIGHT CARS. HOLMES BRYSON, Groveland, Fla. Filed Nov. 6, 1928. Serial No. 317,528. 3 Claims. (Cl. 105—369.)

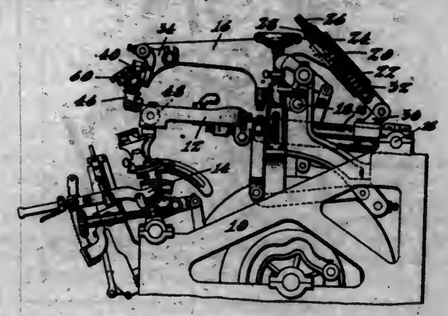
1. In a press for box cars, a support within one end of the car, a gear frame anchored to said support, a plurality of gears within the frame, means extending through one end of the car for rotating the gears, a press board between the remote end of the car and said gear frame, and cooperating means between the press board and said gears to cause the reciprocatory movement of the board in reverse direction, during the reverse rotation of said gears.

1,753,401. SAFETY APPARATUS FOR OIL-STORAGE TANKS. HENRY J. BUCKING, San Francisco, Calif. Filed Nov. 24, 1926. Serial No. 150,558. 2 Claims. (Cl. 220—88.)



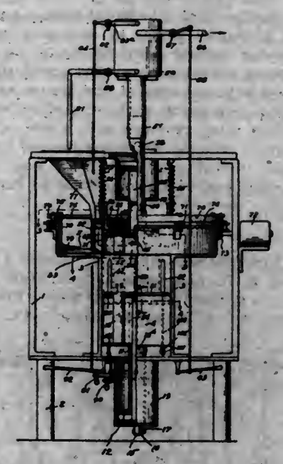
1. In a device of the type described, a casing having a screened inlet and a screened outlet, a screened cylinder mounted in said casing and connecting with the inlet end, said cylinder having a closed end and the wall of said cylinder being spaced from said casing, a second screen cylinder disposed withi said first cylinder and being spaced therefrom said second named cylinder having one end connecting with the inlet and having its other end closed by a screen, the space between the screened cylinders being filled with a fibrous material.

1,753,402. ELECTRIC MEASURING INSTRUMENT. MOSES E. CHENEY, Bayport, N. Y., assignor, by mesne assignments, to Moto Meter Gauge & Equipment Corporation, Long Island City, N. Y., a Corporation of Delaware. Filed Oct. 20, 1927, Serial No. 227,899. Renewed Dec. 7, 1929. 8 Claims. (Cl. 171—95.)



5. In an instrument of the character specified the combination of current coils arranged at an angle one to the other forming an open field between them with an armature positioned in said open field and a magnetic member adjacent said coils and armature and partially enveloping said coils, said magnetic member being arranged to form with said armature a path for the flux through said armature from each of said coils, said path substantially encircling said coils and open field.

1,753,403. OIL SEPARATOR. JOSEPH W. CUSHMAN, JOHN D. EVERETT, and CLINTON J. FARRELL, Vernon, Tex., assignors to John F. Merrick and W. A. Teague, Wichita County, Tex., R. E. L. Saner, said Farrell, and said Everett. Filed Mar. 30, 1929. Serial No. 351,398. 7 Claims. (Cl. 210—61.)

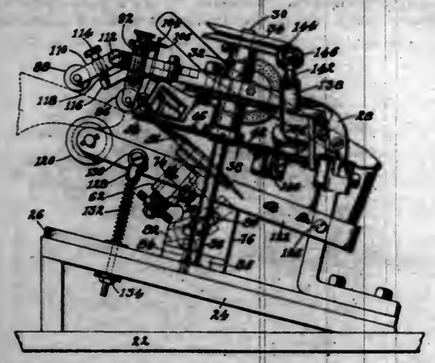


1. In a device of the class described, a cylindrical tank comprising a pair of spaced walls dividing the same into an inner and outer chamber, a receiving head formed on the top of the tank and provided with an opening, an intake funnel formed centrally of and depending from the top of the cylinder into said inner chamber and communicating with the opening in the receiving head, a trap formed on the lower end of said funnel, a shaft journaled in the funnel and extending into the head and trap, cutting blades on the shaft and located within the funnel and trap, a power wheel on the upper end of the shaft and adapted to rotate within said receiving head.

1,753,404. LEVELING MACHINE. HERMAN A. DAVENPORT, Brockton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 8, 1926. Serial No. 147,007. 14 Claims. (Cl. 12—34.)

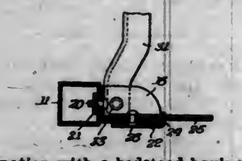
1. In a leveling machine, a tool arranged to pass progressively over and off the heel-seat of a shoe by relative movement of the tool and the shoe, and means positively connected to said tool and arranged to engage the bottom of the shoe to support the tool at approximately the level of the heel-seat after it has passed therefrom, whereby the tool may return to the heel-seat without undue pressure on the edge of said heel-seat.

1,753,405. APPARATUS FOR MOLDING PLASTIC BLOCKS AND THE LIKE. GEORGE C. DEBAY, Los Angeles, Calif. Filed June 8, 1927. Serial No. 197,346. 18 Claims. (Cl. 25—103.)



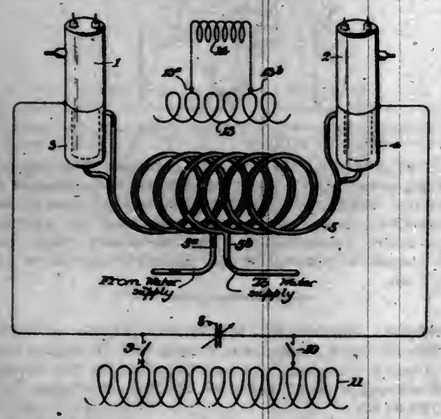
1. Apparatus of the character described comprising a mixing trough and a mold box adapted for movement in opposite directions relative to the mixing trough; the respective opposite movements of the mold box adapting it to receive plastic material from the mixing trough, and for convenient removal of the molded product from the mold box.

1,753,406. TRIMMING MACHINE. SIDNEY J. FINN, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 9, 1928. Serial No. 298,594. 21 Claims. (Cl. 12—33.5.)



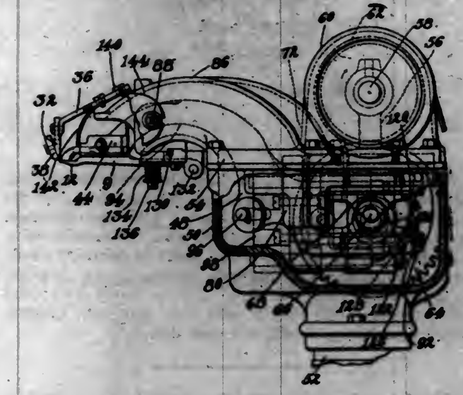
1. A machine of the character described comprising a flexible power-driven cutter the cutting edge of which ex-

tends lengthwise of its path of travel, and anti-friction rolls arranged to bear against opposite faces of said cutter



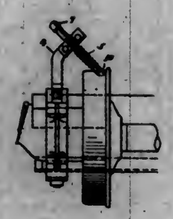
at points relatively to which the cutter moves and thereby to impart an abnormal curvature to the cutting edge of a work-engaging portion of the cutter.

1,753,407. BED-RAIL LOCK. STANLEY B. GAMBLE, Oakland, Calif. Filed Apr. 29, 1926. Serial No. 105,368. 2 Claims. (Cl. 5—294.)



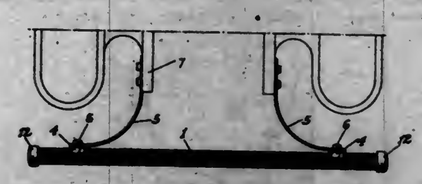
1. In combination with a bedstead having a post, a side rail therefor, a tongue carried by said post, one edge of said tongue being inclined with respect to the other edge thereof, a locking plate having a right angularly bent portion engageable with one edge of said tongue and an offset camming portion engageable with the inclined edge of said tongue, said rail being provided with a slot, a tongue on said bent portion lying in the plane thereof and forming a continuation thereof secured in said slot, and means extending through said camming portion for further securing said plate to the rail.

1,753,408. INDUCTANCE SYSTEM. LOUIS A. GEBHARD, Washington, D. C., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed Dec. 22, 1928. Serial No. 327,988. 8 Claims. (Cl. 175—359.)



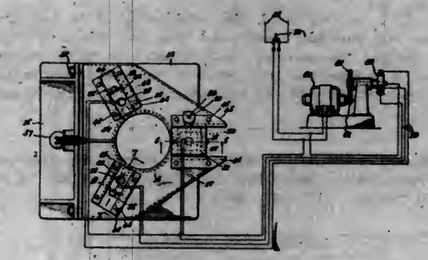
1. An inductance system comprising in combination a metallic member of helical form providing a double passage for the circulation of liquid and means provided at the electrical center of the inductance whereby said liquid may be admitted to said passage.

1,753,409. TACK-PULLING MACHINE. GEORGE GODDU, Winchester, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 19, 1926. Serial No. 102,965. 38 Claims. (Cl. 12—16.)



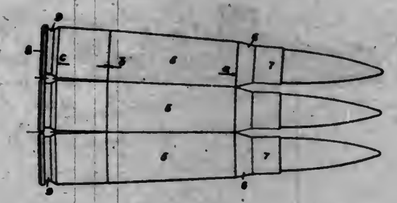
1. A tack pulling machine for successively withdrawing tacks arranged in a row in a boot or shoe having, in combination, tack pulling means comprising a jaw the forward end of which is sharpened to a single point to facilitate its insertion between successive closely spaced tacks in the row of tacks, and means for moving said jaw laterally of the row of tacks to insert said pointed end between successive tacks and then moving it away from the shoe in withdrawing a tack.

1,753,410. FLANGE OILING AND SAFETY DEVICE. GEORGE W. GRISMORE, Salt Lake City, Utah. Filed Sept. 26, 1928. Serial No. 308,469. 2 Claims. (Cl. 184—3.)



1. In a lubricator for wheel flanges, a tube supported above and at an angle with respect to the car wheel and directed toward the flange thereof, a spring influenced lubricant stick carried by the tube, movable therethrough and designed to contact with the flange of the wheel, a helical spring fixed on the tube, and a short compressible pipe screwed in the convolutions of the spring and disposed over the tube and projecting beyond the outer end thereof, and partly covering the projecting end of the lubricant stick.

1,753,411. RUBBER-COVERED SPRING BUMPER. CHARLES H. GUNN, Alameda, Calif. Filed Apr. 16, 1929. Serial No. 355,501. 5 Claims. (Cl. 293—55.)

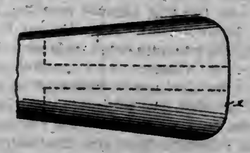


1. A bumper including a tubular body of resilient yieldable material, a stiffening bar mounted along the back of the body, and longitudinally spaced compression springs disposed in the body at intervals, between the bar and the front face of the body to resist inward deflection of said face.

1,753,412. ELECTRIC PACKER. MOSES A. HARRIS, Milford, Conn. Filed June 20, 1929. Serial No. 372,388. 9 Claims. (Cl. 259—72.)

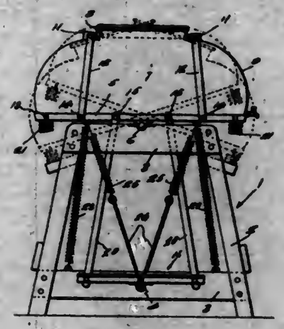
1. In an electric packer, a plurality of vibrators extending in a circle at spaced intervals about the device to be packed and positioned to strike the sides of the device, and means for energizing said vibrators in circular sequence.

1,753,413. CARTRIDGE CASE. JULIAN S. HATCHER, Philadelphia, Pa. Filed Mar. 9, 1928. Serial No. 260,481. 7 Claims. (Cl. 102—16.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928, 370 O. G., 757.)



7. A cartridge case, including a body, a rim greater than any diameter of the body yet within the trace of the forward portion of the body.

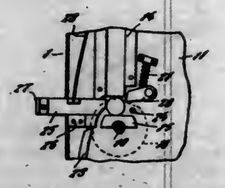
1,753,414. STRAIGHTEDGE. JOSEPH WILLIAM HELTZEL, Warren, Ohio. Filed Aug. 13, 1925. Serial No. 49,998. 2 Claims. (Cl. 94—45.)



1. A straight edge for use in the building in concrete surfacing structures comprising a tubular metal member of angular cross-section adapted to be placed on the surface of plastic concrete, and a handle having one end connected to said member between the ends of and at right angles with said member, for manipulating said member over the surface of the concrete.

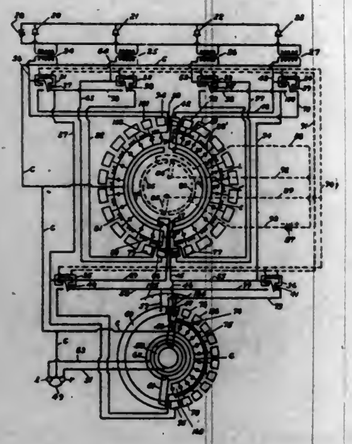
1,753,415. SHOE WITH INSTEP PADS. DONALD McKNIGHT HEPBURN, Philadelphia, Pa. Filed June 6, 1928. Serial No. 283,804. 3 Claims. (Cl. 36—54.)

1. A shoe comprising a pair of soft cushion pads supported one on each side of the "lacing slit" of the shoe, said pads being thinner at the outer edges than at the edges adjacent the lacing slit, and located so as to be longitudinally spaced when the shoe is laced and to rest on each side of the front bones of the instep, said pads arranged to hold the lace from exerting pressure on said front bones on the instep when the shoe is laced.



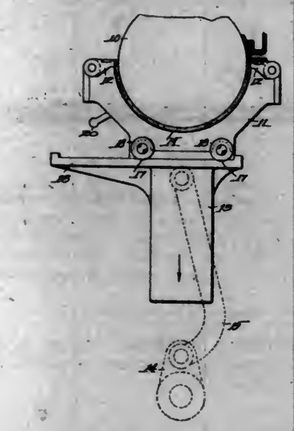
1,753,416. WASHING MACHINE. AVERY W. HIGGINS and SETH G. RUDD, Greensboro, N. C. Filed Oct. 20, 1928. Serial No. 313,854. 2 Claims. (Cl. 259—75.)

1. In a washing mechine, a stand, a substantially rectangular shaped frame mounted for movement on the stand, a closed receptacle having rounded end portions, means for securing the receptacle on the frame including pairs of links pivotally connected at their lower ends on the respective sides of the frame, locking bars mounted transversely between the upper ends of each pair of links and adapted to be forcibly engaged across the top of the receptacle, said locking bars being capable of swinging movement outwardly over the rounded ends of the receptacle to an inoperative position.



ATLANTA GA VOLUME

1,753,417. VENDING MACHINE. GEORGE HOPPE, Baltimore, Md. Filed Sept. 20, 1928. Serial No. 307,157. 1 Claim. (Cl. 194—61.)

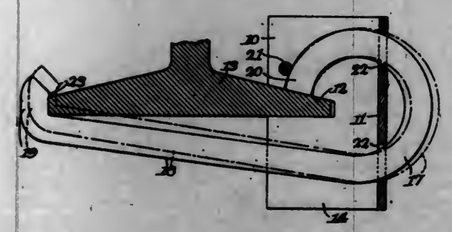


In a coin controlled locking means, a rotatable shaft, a disc secured on the shaft for rotation therewith and provided with a notch in its peripheral edge, said disc being formed with additional notches in its peripheral edge in a quadrant opposite the quadrant in which the aforementioned notch is located, a pivoted dog normally held in engagement with the first mentioned notch, a pawl normally held in engagement with one of the second mentioned notches, said elements cooperating to normally lock the shaft and the disc against rotation, a coin chute, the lower end thereof terminating adjacent the free end of the pivoted dog, a plate supported adjacent the disc below the lower end of the chute and to one side of the pivoted dog to provide a rest for a coin deposited in the chute, the free end of the pivoted dog being disposed in the path of movement of the coin when the same rests on the plate, a pin extending laterally from the disc and located adjacent the first mentioned notch for engagement with the coin, means for moving the coin along the plate to raise the pivoted dog to an inoperative position.

1,753,418. DIRECTION FINDING. BEVERLY R. HUBBARD, Higganum, Conn., assignor to Submarine Signal Corporation, Boston, Mass., a Corporation of Delaware. Filed Apr. 18, 1927. Serial No. 184,826. 11 Claims. (Cl. 177—386.)

1. In a system for determining the direction of a source of wave energy a plurality of receivers of wave energy, a plurality of compensating paths for bringing the energy received by the several receivers into the same phase, said paths having adjustable compensating lengths and feeding the energy of each receiver into the beginning of the compensating length at the next adjacent receiver and indicating means to indicate when said energy is in phase.

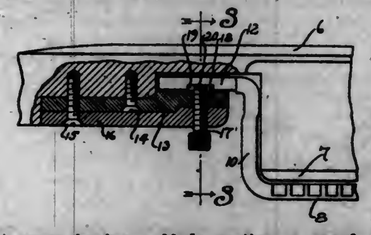
1,753,419. SEPARABLE CASTING BOX FOR STEREOTYPE PRINTING PLATES. JOHN A. ISBELL, Plainfield, N. J., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Mar. 4, 1927, Serial No. 172,599. Renewed Aug. 14, 1929. 5 Claims. (Cl. 22—2.)



1. In a casting mold, the combination with two mold parts, one movable toward and from the other, of means for guiding the movable mold member to move substantially in a direction transverse to its first named motion to expose its interior at the side of the other mold part.

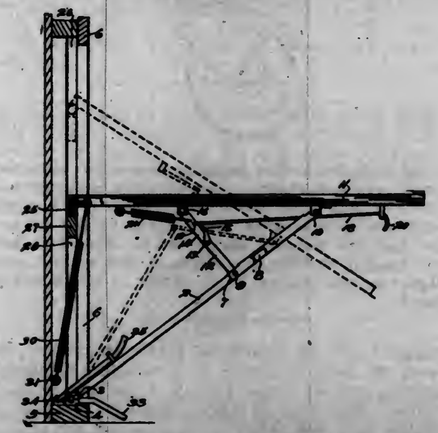
1,753,420. VEHICLE SPRING. JOSEPH N. JOHNSON, Irwin, Calif. Filed Feb. 23, 1926. Serial No. 90,129. 10 Claims. (Cl. 267—35.)

1. It will permit a greater vertical play or range than the usual type of spring.



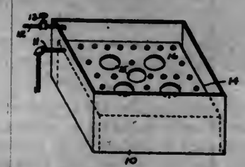
1,753,421. RAIL ANCHOR. LOUIS KADAR, Chicago, Ill., assignor to Chicago Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 18, 1929. Serial No. 340,746. 16 Claims. (Cl. 238—329.)

1. A rail anchor comprising a clip for gripping one of the rail base flanges, a spring loop adapted to extend about the same base flange and be compressed on installation to hold the clip in position, and a retaining bar for the spring loop adapted to engage the opposite base flange.



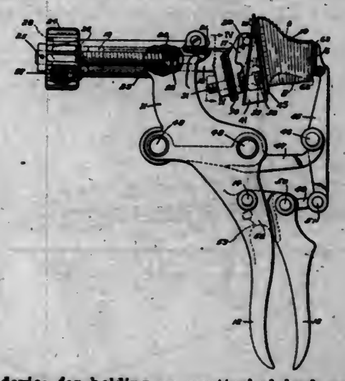
CARNEGIE LIBRARY OF ATLANTA

1,753,422. RAZOR. HARRY A. KAUFMANN, Highland Park, Mich. Filed Sept. 20, 1928. Serial No. 307,102. 9 Claims. (Cl. 30—12.)



1. A razor having a blade portion, a guard for the blade edge swingable over the edge on either side thereof thru an arc of approximately 180°, means normally restricting said swinging movement to position the guard slightly off center of the blade edge, on either side thereof, and permitting the full swinging movement when abnormal pressure is applied thereto tending to swing it, said means being fixedly positioned longitudinally of the blade.

1,753,423. BUILT-IN FURNACE. LOUIS A. KROSCHEL, deceased, Los Angeles, Calif., by Ellena R. Kroschel, administratrix, Albany, Oreg. Substitute of application Serial No. 107,155, filed May 6, 1926. This application filed May 20, 1929. Serial No. 364,668. 3 Claims. (Cl. 45—51.)



1. Wall furniture having, in combination, a set of guides, a board having trunnions sliding along in said guides, and a stabiliser connected to the board and having ends running in the guides and preventing side tilting of the board.

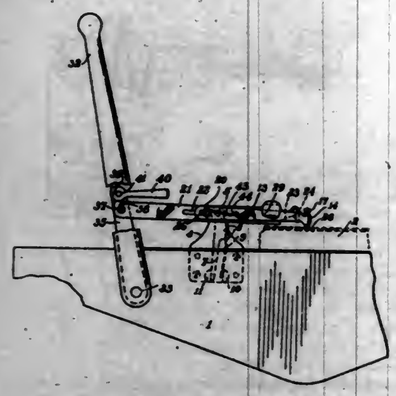
1,753,424. FLORIST'S WATER FOUNTAIN. CLEMENT J. LANTERNIER, Fort Wayne, Ind. Filed Apr. 5, 1929. Serial No. 352,787. 3 Claims. (Cl. 137—21.)

1. A water fountain comprising a tank, means to supply a flow of water through the tank at a controlled depth, and a removable support for water sprayers within the tank.

1,753,425. HEEL-CLAMPING DEVICE. LESTER S. MACDONALD, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Nov. 20, 1922. Serial No. 602,120. Divided and this application filed Feb. 8, 1928. Serial No. 251,682. 21 Claims. (Cl. 12—87.)

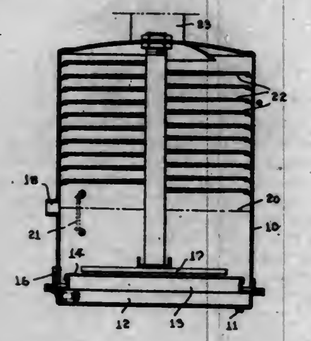
1. A device for holding an unattached heel comprising relatively movable jaws connected to each other in cooperative clamping relation and provided with plates one to engage the attaching face of a heel while the other engages the toplift face thereof, means carried by one of said jaws to adjust and maintain the plate thereof in various angular relations to the other one of said plates according to the wedge angle of the heel, and means for relatively moving said jaws to clamp the heel.

1,753,426. TIE-ROD FASTENING. STEPHEN PAUL, Lansing, Mich. Filed Mar. 22, 1926. Serial No. 96,593. 5 Claims. (Cl. 287—114.)



1. In a rod fastening of the character described, the combination with a rod having the end portion of the rod provided with a concave curving side, of a member having a passage for the rod, the said member having a cylindrical chamber formed in communication with the said passage and inclined thereto, a plug wedge movable lengthwise in the said chamber with respect to the rod, the end of the rod and one side of the wedge having curved surfaces in contact, and means for moving the plug wedge towards the end of the rod in contact with the wall of the chamber and end portion of the rod.

1,753,427. WADING TANK. JOHN H. PHILLIPS, Pittsburgh, Pa. Filed Aug. 26, 1927. Serial No. 215,584. 14 Claims. (Cl. 4—177.)



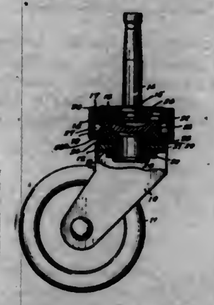
1. A tank structure comprising a flexible body portion, a framework therefor composed of pipe sections detachably connected, and means for detachably securing the said body portion to the framework, the framework extending from a plane above the upper edges of the body portions downwardly along the outer sides thereof.

1,753,428. INDEXING MECHANISM FOR CHASE PLATES AND PRINTING SEGMENTS. FRANK H. POEPPELMEIER, Dayton, Ohio, assignor to The Typographic Machines Company, Dayton, Ohio, a Corporation of Ohio. Filed Oct. 20, 1928. Serial No. 313,777. 10 Claims. (Cl. 276—3.)

1. In a device of the type described, a support, a chase plate on said support, a cam bar, means for imparting a forward and reverse movement to said cam bar, and an index pawl adapted to be actuated by said cam bar to index said chase plate.

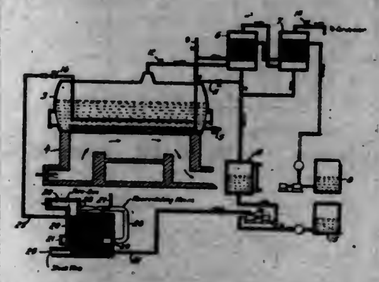
1,753,429. APPARATUS FOR PRODUCING FOAM. JOHN A. RICB, Berkeley, Calif., assignor to The Bubblestone Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 26, 1926. Serial No. 144,389. 19 Claims. (Cl. 261—122.)

1. In an apparatus for continuously forming a comminuted foam, a container, means to supply a foaming liquid to such container, means to supply subdivided air below the surface of said foaming liquid, and walls forming a circuitous passage to transport foam actuated by the air supply means away from the liquid.



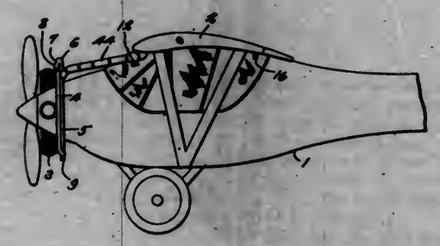
1,753,430. SHOCK ABSORBER. GEORGE GROSELLI, Dallas, Tex. Filed Apr. 14, 1928. Serial No. 270,053. 2 Claims. (Cl. 267—48.)

1. A vehicle spring attachment including a metal strip having U-shaped central bend and having its ends rolled to form eyes, a pair of U-shaped members having their closed ends received in said eyes, and having their free ends formed with eyes, sleeves between the last named eyes, bolts passed through the last named eyes, said sleeves being formed to engage one of the horizontal faces of a vehicle spring, and a screw threaded through



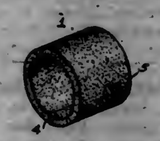
said U-shaped bend and engageable with the opposite horizontal face of the spring and having its head located at the open end of the U-shaped bend.

1,753,431. CASTER. WALTER F. HEROLD, Upper Montclair, N. J., assignor to The Bassick Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Feb. 14, 1929. Serial No. 339,802. 10 Claims. (Cl. 16—21.)



1. In a caster, a floor engaging element, an attaching element, and a ball-bearing assembly unit including relatively rotatable inner and outer ball-race members and antifriction balls between them, means carried by said inner ball-race member adapted to be secured to said floor engaging element, and means carried by said outer ball-race member adapted to be secured to said attaching element.

1,753,432. ART OF CRACKING HYDROCARBONS. EDWARD W. ISOM, Scarsdale, N. Y., assignor to Sinclair Refining Company, New York, N. Y., a Corporation of Maine. Filed May 25, 1927. Serial No. 194,002. 2 Claims. (Cl. 196—116.)



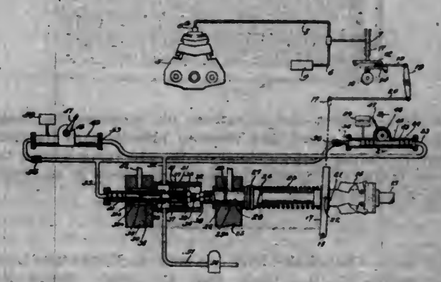
1. In cracking hydrocarbon oils in operations in which a flowing stream of oil is heated to a cracking temperature by heat exchange with hot products of combustion from a firebox in which fuel is burned, the improvement which comprises passing a stream of oil through a heating conduit and passing heating gases including hot products of combustion from a firebox in heat exchanging relation therewith whereby the oil is heated to a cracking temperature and the temperature of the heating gases is progressively reduced, withdrawing a portion of the heating gases from an intermediate point in the passage of the heating gases over the heating conduit at an intermediate temperature, recycling such withdrawn heating gases over the heating conduit in admixture with fresh hot products of combustion from the firebox, and discharging the remaining portion of the heating gases after further passage over the heating conduit and at a lower temperature than that at which the recycled heating gases are withdrawn.

1,753,433. AEROPLANE-WING HEATER. JAMES A. KIND, Petersburg, Va. Filed July 2, 1928. Serial No. 289,755. 3 Claims. (Cl. 244—31.)

3. The combination with an air craft including an engine and a wing, of an air conduit extended into the wing and including a member disposed in such relation to the engine as to be heated by the engine, the lowermost portion of said member being provided with a water trap, and the upper end of said member being provided with an air inlet.

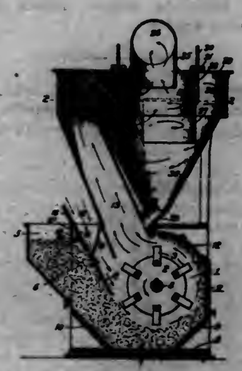
1,753,434. BEARING BODY AND METHOD OF MAKING SAME. WILLIAM H. KLOCKE, Woodhaven, N. Y., assignor to The Cleveland Graphite Bronze Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 6, 1927. Serial No. 217,658. 2 Claims. (Cl. 29—149.5.)

1. The method of making lined bearings which consists in forming a sheet into a cylinder having a pressure-tight butt joint, minutely roughening the inner surface thereof by a percussive action, tinning such surface, casting a layer of bearing metal on such roughened surface, and machining the outer and inner surfaces of the composite articles thus formed.



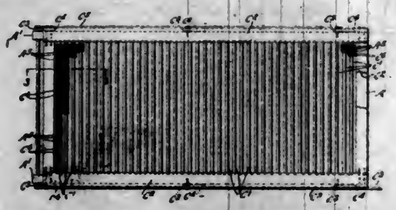
2. A cylindrically curved bearing blank having a surface provided with a multiplicity of minute irregularly arranged recesses produced by a percussive action.

1,753,435. METHOD OF MAKING LINED BEARINGS. WILLIAM H. KLOCKE, Woodhaven, N. Y., assignor to The Cleveland Graphite Bronze Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 9, 1928. Serial No. 245,814. 4 Claims. (Cl. 29—149.5.)



1. In a method of making lined bearings, the steps which consist in subjecting a strip of sheet metal to a percussive action to produce a multiplicity of minute irregular recesses therein, tinning said surface, and then casting a bearing material capable of alloying with tin over the tinned surface of said strip.

1,753,436. GOVERNOR CONTROL. CARL H. KNUDSEN, Brooklyn, N. Y. Filed Feb. 19, 1926, Serial No. 89,322. Renewed July 19, 1928. 18 Claims. (Cl. 264—3.)



1. A governor control including a governor spring comprising a hydraulically actuated piston in operative connection with the governor spring, means for directing liquid to said piston, a control and regulating device having a manually operated plunger, a valve member in operative connection with said piston, means for exposing one end of the plunger to the liquid directed to said piston, and the other end of said plunger being exposed to said valve member through a liquid having a source of supply controlled by said plunger.

1,753,437. MATERIAL REDUCING AND MEANS THEREFOR. HENRY G. LYKKEN, Minneapolis, Minn. Filed Nov. 13, 1925. Serial No. 68,750. 21 Claims. (Cl. 83—11.)

1. A device for reducing materials, comprising a reducing chamber, and a charging chamber having communication with the lower part of the reducing chamber for feeding the material from the charging chamber to said lower part of said reducing chamber, means for drawing air continuously through the chamber, and means for causing the air to reduce the material in the chamber to a finely divided state by erosion.

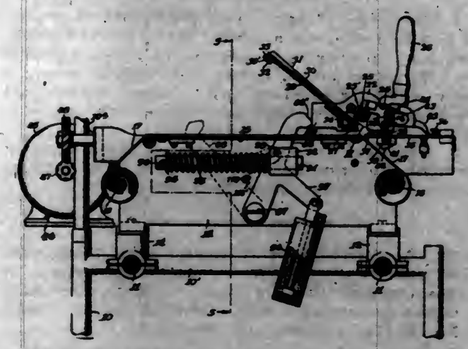
1,753,438. PATTERN BED FOR TYPECASTING MACHINES AND THE LIKE. CHESTER A. MACOMIC, Chicago, Ill., assignor to Patent Product Corporation of Chicago, Wilmington, Del., a Corporation of Delaware. Filed Dec. 15, 1928. Serial No. 326,179. 16 Claims. (Cl. 276—3.)

1. In a pattern bed, a pattern pin mounted for longitudinal displacement and recessed intermediate its ends, a bar extending perpendicular to the pin lying within the recess, means for moving the bar transversely to longitudinally displace the pin.

1,753,439. CLOTHESLINE. HARRY A. MARRABLE, Linoleumville, N. Y. Filed Aug. 13, 1928. Serial No. 299,371. 1 Claim. (Cl. 68—3.)

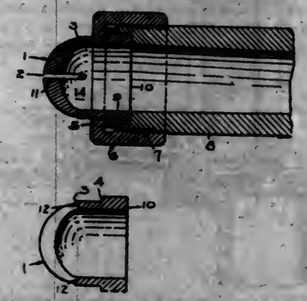
In a device for the purpose set forth, two oppositely disposed supporting frames carrying grooved wheels, each of said frames having its overlying members of T-shape formation with the arms of the T extending in the same direction, elements connecting the ends of the said overlying members of each frame, an endless clothes line trained around the grooved whels, an auxiliary clothes line having its ends secured to the clothes line, spaced short flexible elements connecting the auxiliary clothes line with the endless clothes line, whereby clothes supported on the auxiliary clothes line will thru the medium of the flexing of the ends of said auxiliary clothes line and likewise of the flexing of the short strands be held from entering the frames when the endless clothes line is moved around the grooved wheels.

1,753,440. METHOD OF DRILLING WELLS IN GAS FORMATIONS. NED O. MILLER, Amarillo, Tex. Filed May 17, 1927. Serial No. 192,001. 10 Claims. (Cl. 255—1.)



1. A method for drilling wells through gas formations comprising landing an outer casing above the gas formation, equipping said casing with means to prevent blowout, lowering an inner string through said means and continuing drilling below said casing, both said drilling and said lowering being accomplished while maintaining a pressure in said string sufficient to balance gas pressure encountered outside the string.

1,753,441. SCREW DRIVER. FRANK MORRHOUSE, Gloversville, N. Y. Filed Mar. 27, 1929. Serial No. 350,867. 2 Claims. (Cl. 145—75.)

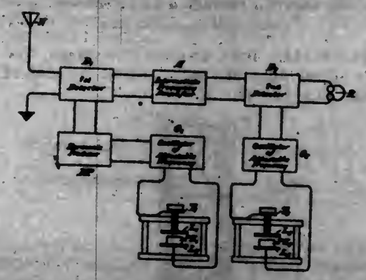


1. A tool construction comprising a handle having a longitudinal bore, a sleeve revolvably mounted within the bore of the handle having a rectangular bore, a ratchet driving connection established between the handle and sleeve, a detachable extension sleeve carried by the first mentioned sleeve forming a guide for tool shanks extended through the bore of said first mentioned sleeve, a locking element carried by the sleeves having engagement with the extension sleeve and tool shank, a ratchet member carried by and operable in conjunction with said extension sleeve and first mentioned sleeve, and an extension for the latter mentioned ratchet member operable at rightangles to and in conjunction with said handle.

1,753,442. DUPLICATING MACHINE. WILHELM K. MOLL, Chicago, Ill., assignor to Ditto, Inc., Chicago, Ill., a Corporation of Illinois. Filed Nov. 12, 1928. Serial No. 318,808. 22 Claims. (Cl. 101—133.)

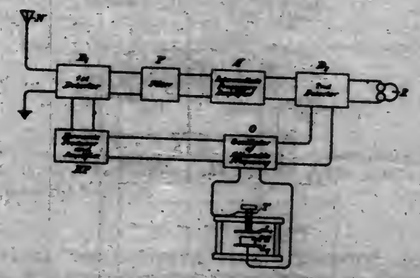
1. In a duplicating machine, the combination with a printing bed and a platen carriage reciprocable thereover, of a margin bar at one end of the bed, a fixed paper sheet stop on said margin bar, a shiftable paper sheet stop spaced from said fixed stop, and means actuated by the platen carriage for moving said shiftable stop into and out of operative position.

1,753,443. TIP FOR SPRAYING NOZZLES. JOHN D. MURRAY, San Francisco, Calif. Filed May 31, 1927. Serial No. 195,281. 12 Claims. (Cl. 299—153.)



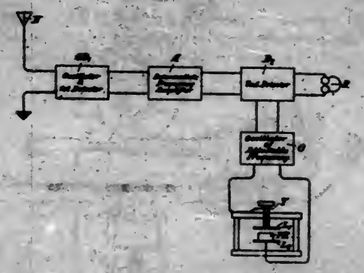
1. A tip for discharging fluids under pressure formed in the shape of a dome provided with a discharge slot, the walls of said slot having defining edges in register and being of maximum width at the center and diminishing in width in the same degree of gradation in each direction therefrom, said slot terminating in end walls that form an angle of less than ninety degrees with the longitudinal axis of the tip, in the direction of the flow of liquid.

10. A nozzle tip having a kerfed body portion, said kerf having opposing walls in relative parallelism, the respective outer and inner edges of each of said walls being defined by segments of a circle struck with equal radii from spaced points on the axial line of the kerf taken in direction of flow through the kerf.



12. A tip for discharging fluids under pressure, which tip is provided with a discharge orifice having oppositely disposed walls, means to create maximum resistance to the discharge of fluids through said orifice at a portion thereof between the ends of the orifice, and means to diminish the resistance to the discharge of the fluid in equal degrees in each direction from said portion of maximum resistance to the ends of said orifice, the opposed surfaces of said oppositely disposed walls of the discharge orifice being characterized by identity.

1,753,444. SIGNALING SYTEM. RUSSELL S. OHL, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 8, 1926. Serial No. 140,387. 3 Claims. (Cl. 250—20.)

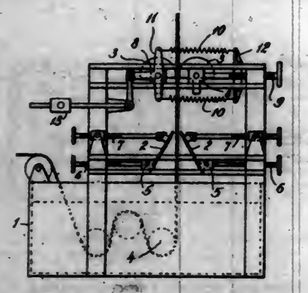


1. In a signaling system, the combination of means for receiving a band of signals of high frequency, two local oscillators, piezo-electric means for controlling and varying the frequency of said oscillators, means for producing a harmonic of the frequency of the first oscillator which will be similarly controlled and varied as to frequency by said piezo-electric means, means for beating said piezo-electrically controlled and varied harmonic of the first oscillator with the band of signals to produce a corresponding band of signals lowered in the frequency spectrum, and means for beating the piezo-electrically controlled and varied frequency of the second oscillator with the band of signals lowered in the frequency spectrum in order to accurately reproduce the original signals.

1,753,445. SIGNALING SYSTEM. RUSSELL S. OHL, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 8, 1926. Serial No. 140,388. 7 Claims. (Cl. 250—20.)

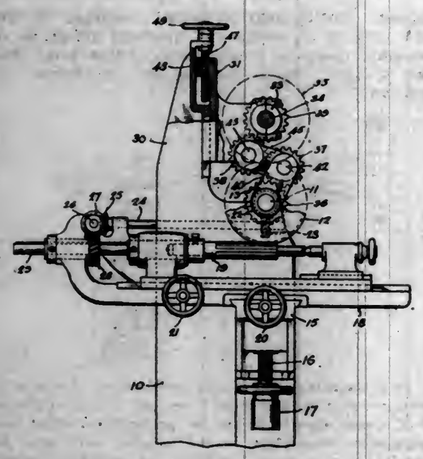
1. In a signaling system, the combination of means for receiving a band of signals of high frequency, an oscillator, piezo-electric means for controlling the frequency of said oscillator, said piezo-electric means including means to vary its vibratory characteristic in order to correspondingly vary the frequency of said oscillator, means for heating said piezo-electrically controlled and varied frequency with the band of signals of high frequency to produce a corresponding band of signals displaced in the frequency spectrum, and means for again beating the piezo-electrically controlled and varied frequency with the band of signals displaced in the frequency spectrum to derive and detect the original signals.

1,753,446. SIGNALING SYSTEM. RUSSELL S. OHL, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 8, 1926. Serial No. 140,389. 2 Claims. (Cl. 250—20.)



1. In a signaling system, the combination of means for receiving a side band of high frequency energy characteristic of speech signals, means for producing another band of signals corresponding to the received side band but changed in the frequency spectrum, an oscillator generating a wave to be beaten with the band of signals changed in the frequency spectrum, a piezo-electric structure connected to the oscillator for controlling the frequency of the generated wave, means for varying the vibratory period of the piezo-electric structure so as to correspondingly vary the frequency of the wave generated by the oscillator, and means for beating the piezo-electrically controlled and varied frequency of the oscillator with the band of signals changed in the frequency spectrum in order to accurately reproduce the speech signals.

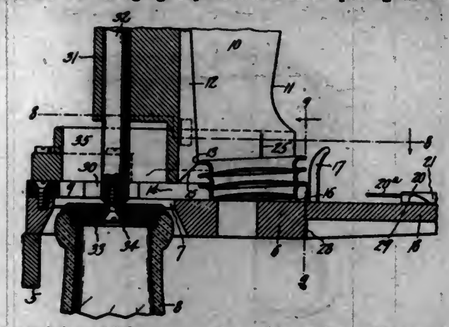
1,753,447. TREATING FABRICS. LE ROY SEIDELL and GEORGE B. JACK, Jr., New York, N. Y., assignors, by mesne assignments, to Jaton Manufacturing Corporation, Brooklyn, N. Y., a Corporation of New York. Filed June 10, 1925. Serial No. 36,107. 5 Claims. (Cl. 91—82.)



1. A pressure bar, for use in apparatus for impregnating sheet material, comprising a body portion having a

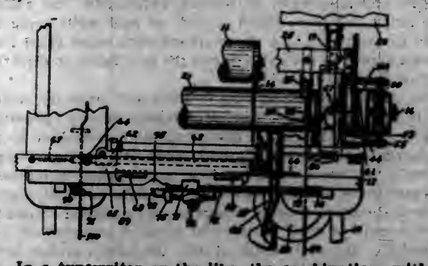
continuous convex edge adapted for engagement with sheet material moving thereover, the surface of the body portion on one side of said edge gradually receding from a plane tangent to the normal line of contact on said edge,

a concavity in the body portion on the other side of said edge concave with respect to said convex edge, and a convex surface on the body portion connecting the said concavity and the said convex edge.



1,753,448. MACHINE FOR TRUING GRINDING WHEELS. CHARLES S. SMITH, Milwaukee, Wis., by judicial decree of distribution and assignment to Galbraith Mayo Smith, trustee, Shorewood, Wis. Filed Jan. 20, 1926. Serial No. 82,562. 2 Claims. (Cl. 125—11.)

1. In a machine of the class described, a grinding wheel having a grinding surface constituted as a helix, a truing wheel having a surface complemental to that of the grinding wheel, means connecting the said wheels for rotation in unison, and means for exerting pressure by the truing wheel upon the grinding wheel.

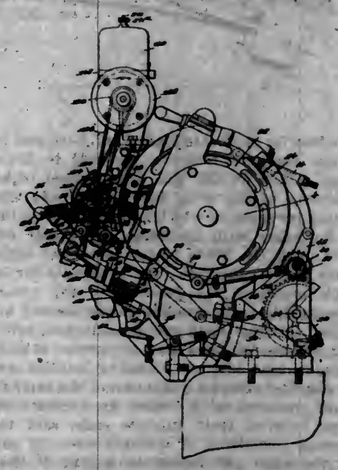


1,753,449. BOTTLE-CAPPING MACHINE. GEORGE W. SWIFT, Jr., Bordentown, N. J., assignor, by mesne assignments, to Bottle Cap Patents Company, Bordentown, N. J., a Corporation of New Jersey. Filed Feb. 25, 1928. Serial No. 256,890. 16 Claims. (Cl. 226—92.)

9. In a cap-applying machine, the combination with a cap-feeding table provided with an opening for applying caps to bottles presented to said opening, a hopper arranged above said cap-feeding table, said hopper being provided with a downwardly-enlarged opening on one side of its axis and an inclined surface on the opposite side of its axis for wedging caps toward said opening as they

descend in said hopper, and a slide reciprocable on said table for feeding caps to the cap-applying opening in said table.

1,753,450. CARRIAGE-RETURN MECHANISM. RUSSELL G. THOMPSON, Rochester, N. Y., assignor to Electromatic Typewriters, Inc., Rochester, N. Y., a Corporation of New York. Filed Sept. 16, 1925, Serial No. 56,737. Renewed Mar. 6, 1929. 2 Claims. (Cl. 197—65.)



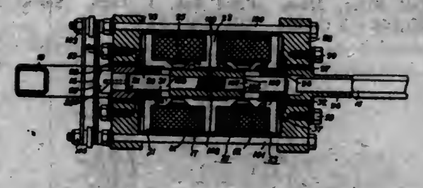
1. In a typewriter or the like, the combination, with a carriage and power-operated means for returning the carriage, of a buffer for arresting the carriage at the end of the return movement; a spring tending to return the buffer to fully operative position upon the subsequent feed movement of the carriage; and means operating automatically to prevent such return of the buffer until the carriage has been fed through a predetermined space.

1,753,451. WALL. JOHN EDMUND TONNELIER, New York, N. Y. Filed July 27, 1927. Serial No. 208,747. 16 Claims. (Cl. 72—44.)

1. A wall construction comprising two spaced walls each comprising a plurality of rows of blocks of hardened plastic material, the joints between the blocks of one row being staggered with respect to those of an adjacent row, each block being provided with holes extending substantially parallel to the face of said wall and to the ends of the blocks, the holes of a block of a given row being adapted to register with holes in the blocks of adjacent rows, first metallic members adapted to pass through the holes of adjacent rows, second perforated metallic members overlapping the joints between adjacent blocks of a given row and engaging said first metallic members, and third perforated metallic members extending between said spaced walls and engaging at their ends said first metallic members extending through the holes in the blocks located in the respective adjacent walls, binding together the respective blocks and rows of blocks in adjacent walls and the adjacent walls to each other.

1,753,452. SHOE MACHINE. LAURENCE E. TOPHAM, Wenham, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 15, 1927, Serial No. 175,460. Renewed June 28, 1929. 28 Claims. (Cl. 12—17.)

1. A machine for operating upon shoes having, in combination, a forepart edge tool, a shank edge tool, means for holding the tools alternatively in operating position, and a work feeding member making contact with the bottom of the shoe sole and adjustable to cooperate with either tool to feed the shoe past the tool.

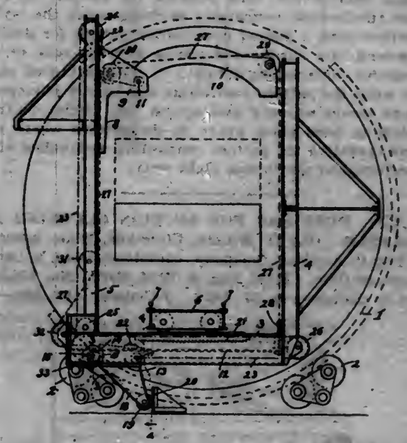


1,753,453. POSTING TRAY. RICHARD M. VAN VALKENBURGH, Kansas City, Mo., assignor, by mesne assignments, to Wilson-Jones Company, Chicago, Ill., a Corporation of Massachusetts. Filed June 6, 1927. Serial No. 196,909. 7 Claims. (Cl. 129—16.)

2. In a posting machine tray, a base, a pair of parallel rods disposed thereabove, a pair of wings adjustably carried by said rods and a pair of check members, mounted upon the base, one of said wings being anchored to said check members to limit the adjusting movement thereof along said rods.

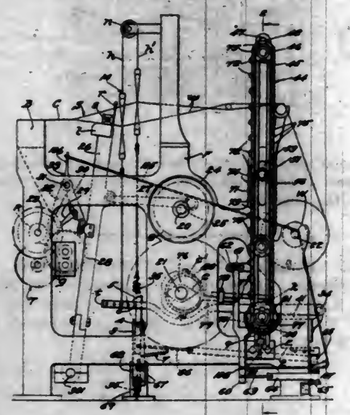
1,753,454. ELECTRIC PERCUSSIVE TOOL. CARL S. WEYANDT, Pittsburgh, Pa., assignor to Central Electric Tool Company, a Corporation of Pennsylvania. Filed Mar. 30, 1925. Serial No. 19,811. 9 Claims. (Cl. 172—126.)

1. An electric motor of the reciprocating type comprising two solenoids axially disposed upon a tubular frame, a bearing removably mounted on each end of the frame, and a core responsive to the two solenoids and comprising two parts, one being a magnetic element actuable by



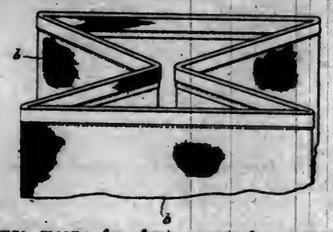
the solenoid flux and the other being a non-magnetic support therefor and serving as a shaft movable within and between the bearings.

1,753,455. BRAKE-LEVER CONNECTER BODY. LOREN L. WHITNEY, Hammond, Ind., assignor to American Steel Foundries, Chicago, Ill., a Corporation of Illinois. Filed Jan. 5, 1925. Serial No. 672. 4 Claims. (Cl. 78—81.)



2. The method of forming brake lever connecter bodies or the like, which comprise hammering the end of a flat blank to form an elongated cylindrical portion joined to the body of the blank, compressing the blank longitudinally to shorten said cylindrical portion and enlarging the base thereof and forming a shoulder thereon in a manner to convert said cylindrical portion into a truncated cone, removing the flash and then further shortening said truncated cone and enlarging its outer portion to produce a shortened and enlarged cylindrical finished end.

1,753,456. CAR-DUMPER CLAMP. ARTHUR F. CASE, Cleveland, Ohio, assignor to The Wellman-Seaver-Morgan Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 2, 1927. Serial No. 165,262. 24 Claims. (Cl. 214—55.)

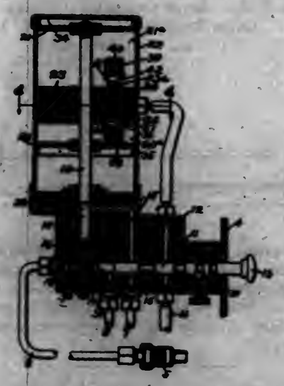


1. In a car dumper, a cradle adapted to receive a car and mounted for tilting movement to dump the same, a car clamp movably mounted on said cradle, oppositely disposed cables connected to said clamp, a member movably mounted on the cradle and connected to said cables, and releasable means for locking said member to the cradle to hold the clamp in car engaging position.

1,753,457. LOOM. JOSEPH THEXTON, Jr., and HENRY TOMLINSON, Fall River, Mass., assignors of one-fourth to Joseph E. Freeling and one-fourth to Frank Riley, Fall River, Mass. Filed Feb. 1, 1928. Serial No. 251,152. 7 Claims. (Cl. 139—24.)

1. A loom adapted to weave plain cloth having an attachment whereby it is adapted to weave a border comprising cords consisting of a plurality of picks alternating with plain weave, said attachment comprising means for restraining the harness at predetermined times while a plurality of picks are being laid to form one of the cords, a pattern controlling member consisting of a cam carrier, a plurality of cams carried by said carrier to actuate the restraining mechanism according to the pattern to be formed, a driving shaft, clutch mechanism on said shaft adapted to make and break driving connection with said cam carrier, means for actuating the clutch engaging mechanism to cause the cam carrier to be moved and to bring one of its cams into operative position to restrain the harnesses while the cord is being laid, means for holding the clutch engaged to advance the pattern controlling cam carrier during the restraint on the harnesses, means for holding the clutch engaged to advance the said cam carrier into position for another cam to actuate the harness restraining mechanism for the laying of another cord, a second cam carrier, means for driving said second cam carrier and means whereby said second cam carrier controls the duration of the continuous plain weave while the pattern controlling cam carrier is inoperative and means whereby said second cam carrier controls the shifting from plain weave to the pattern weave and renders operative the pattern controlling mechanism after a predetermined continuous plain weave.

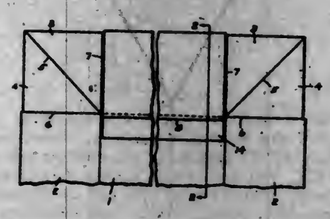
1,753,458. DUST BAG FOR SUCTION CLEANING APPARATUS. OLO C. WILLIS, Cleveland, Ohio, assignor to The P. A. Geier Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 8, 1924, Serial No. 730,837, and in Canada Aug. 31, 1923. 2 Claims. (Cl. 150—6.)



1. Closure means for dust receptacles, comprising a fabric container having an open mouth and a frame within said mouth further comprising hinged collapsible metallic members folded within the compass of two opposing principal members of said frame, said members being enclosed within the body of the fabric mouth, and means for sealing the mouth in approximately air tight relation when the frame is collapsed.

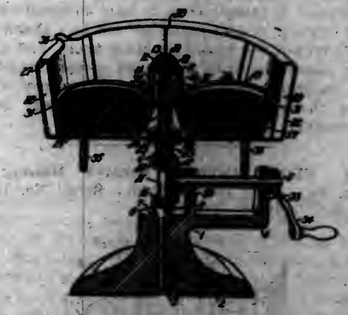
1,753,459. BLADE HOLDER AND HANDLE. JAMES A. GAFFNEY, New York, N. Y. Filed June 8, 1928. Serial No. 283,972. 1 Claim. (Cl. 30—9.)

A blade holder for perforate blades, cut, bent and formed from a single sheet of resilient material to provide a pair of arms joined at one end by a curved bight, the free end portions of the arms defining laterally disposed blade clamping jaws, one of which is provided with integral studs and the other with apertures, said studs adapted to extend through the blade perforations and engage in the apertures of the other jaw, and integrally formed interengageable means at the juncture of the arms with the jaws comprising an upstanding tongue having a laterally projecting terminal upon one of said arms, said other arm having an opening of a size to receive said tongue for maintaining said jaws in clamping relation and for permitting a limited relative separation of the same for the insertion and removal of a blade, by pressure exerted on the arms between their opposite ends, said interengageable means permitting of disengagement by pressure exerted on the arms and lateral movement of the same with respect to each other.



1,753,460. LUBRICATING SYSTEM. AMBRICO F. GARBARINO, Medford, Mass., assignor, by mesne assignments, to Alemite Corporation, Chicago, Ill., a Corporation of Delaware. Filed Dec. 30, 1926. Serial No. 157,927. 9 Claims. (Cl. 184—7.)

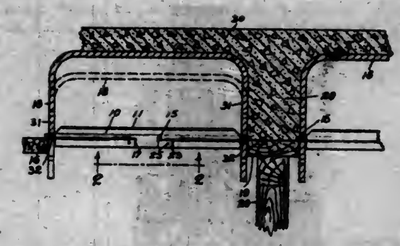
1. In a central lubricating system having a lubricant supply and a plurality of parts for receiving lubricant from said supply, a suction pump device comprising means providing a lubricant chamber of relatively small cross-section adapted to receive lubricant from the lubricant supply, a piston operable in said chamber, a cylinder



aligned with said chamber and divided into two sections, pistons in each of said sections connected to said first-mentioned piston for operation thereof, a source of suction supply, a valve device in said cylinder between said sections, said valve device operable by said pistons in said sections to control the admission of the suction and of the atmosphere at one side only of each piston and a push-button control for admitting or cutting off both the suction and the lubricant.

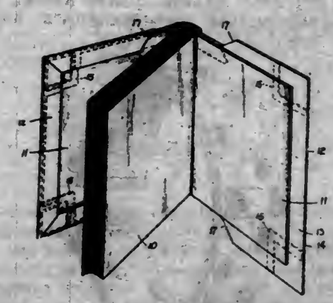
1,753,461. BOX. LOUIS H. GEBHART and STANLEY G. WISE, Dayton, Ohio, assignors to The Gebhart Folding Box Company, Dayton, Ohio, a Corporation of Ohio. Filed Sept. 28, 1927. Serial No. 221,576. 4 Claims. (Cl. 229—34.)

1. In a container, a bottom, side walls hinged thereto, corner flaps, and an end wall, an end flap hinged to and overlying the end wall and having an overlapping serrated part attached to the bottom of the container, said end flap being adapted to be detached from the portion thereof attached to the bottom of the container along a serrated line.



1,753,462. WATCH-CLEANING MACHINE. CHARLES H. GERRY, Kansas City, Mo. Filed Oct. 20, 1928. Serial No. 313,871. 6 Claims. (Cl. 141—1.)

2. In a device of the character described, a base, a vertical shaft rotatably mounted in the base, a pan having a central opening and rotatably mounted on the shaft, a plurality of baskets removably keyed to the shaft and suspended in the pan, and means rotatably supported by the base for rotating the pan and the shaft.

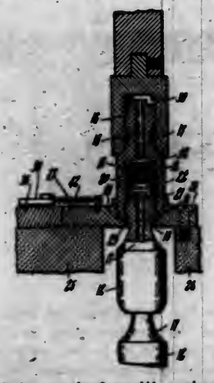


1,753,463. SPREADER FOR USE WITH METAL TILES. WILLIAM M. GOLDSMITH, Cincinnati, Ohio, assignor to The Goldsmith Metal Lath Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 24, 1927. Serial No. 177,922. 10 Claims. (Cl. 25—131.5.)

8. A spreader comprising a housing member having a way extending lengthwise therethrough, the housing having a second way intercepting the first mentioned way, the opposed sides of the housing having openings in them, said openings being disposed at opposite ends of said second way, and a pair of round rods in said first mentioned way, said rods having each an angular extension formed thereon, said extensions lying in and projecting from said second way, said extensions being adapted for entry in the openings at the ends of said second way, and

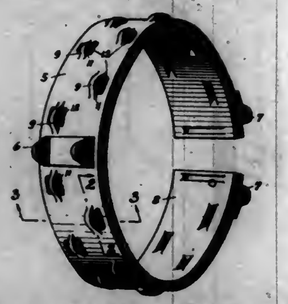
serving as handles for oscillating the rods in the first mentioned way and for reciprocating said rods in said first mentioned way whereby to project said rods outwardly from opposite ends of said housing and for withdrawing the rods into the housing, the handles, when lodged in the said openings, precluding reciprocation of the rods and means for locking the handles in said openings.

1,753,464. PROTECTIVE BOOK COVER. CHARLES W. GREENHILL, New York, N. Y. Filed June 1, 1929. Serial No. 367,753. 2 Claims. (Cl. 281—34.)



1. In combination, a protective book covering of rectangular shape and square corners and comprising superimposed layers of fabric material, and an angular fastening member comprising a narrow band of flexible metal interposed at each corner between said layers with its sides forming a rectangle with the corner of the covering at the corner, the arms of the metal being folded with the covering to secure the latter to the hook.

1,753,465. MEANS FOR MAKING FLEXIBLE TUBULAR CONDUITS. RAYNALDO P. JACQUES, Woonsocket, R. I., assignor to Adams Industries, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 30, 1928. Serial No. 273,914. 1 Claim. (Cl. 29—84.)

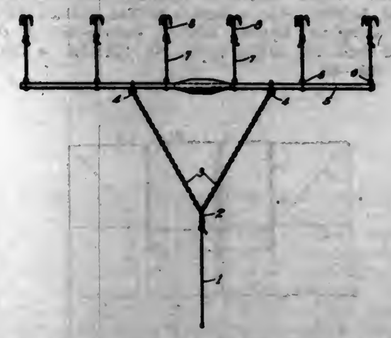


Means for flexibly connecting tubular conduit sections or units, each of which includes a relatively large cylindrical end portion, a relatively large bore therein, a contractible end zone thereon, constituting the mouth por-

tion of the bore, and a smaller end portion having a ball-shaped terminal, a reduced neck, and a smaller bore; said means comprising a supporting and forming die, composed of separable unyieldingly supported members, adapted to be closed upon and engage the neck of one unit, and support the terminal thereof, and having opposed concave forming faces, separated from said terminal by an annular converging space when the die is closed, the die faces being formed to support the end zone

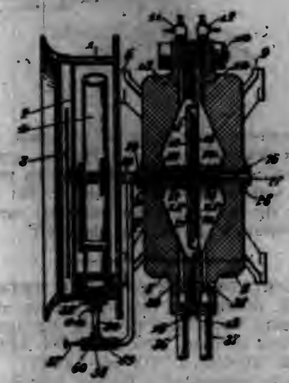
of another unit in a raised position above the die space, a pressing member movable toward and from the die and formed to bear on the neck of the raised unit and force the compressible end zone of the latter into said converging space, thereby forming a socket member confining the terminal of the die-supported unit, and permitting limited universal turning movements of the connected units, when the die is opened, and means for closing and opening the die.

1,753,466. FRICTION BRAKE. JOSEPH KEENEY, Media, Pa. Filed May 22, 1928. Serial No. 279,672. 5 Claims. (Cl. 188—259.)



1. A friction brake including a metallic band, a series of straps extending therefrom and forming loops, and a lining slitted to form straps disposed to register with the straps in the band and expanded therein and means for holding said straps in said loops.

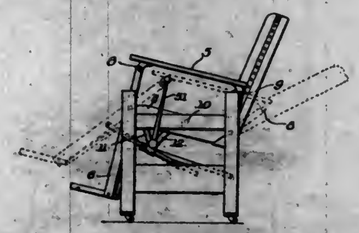
1,753,467. BRICK OR BLOCK FOR REGENERATORS. KARL KNIEPERT, Vienna, Austria. Filed Feb. 11, 1928. Serial No. 253,698, and in Austria Feb. 19, 1927. 3 Claims. (Cl. 72—15.5.)



1. A checkerwork for regenerators and the like, comprising courses of oblique parallelopipedic blocks each having a vertical opening therethrough of a shape corresponding to that of the block, the courses being staggered with respect to adjacent courses whereby a comparatively large portion of the upper face of each block is exposed through the opening of a block of the course above, so as to induce an eddy of the gases thereon, and to produce comparatively large vertical gas passages through the checkerwork.

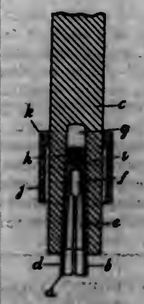
1,753,468. DRAG FOR RECOVERING DEAD BODIES AND THE LIKE. GEORGE R. MCALPINE, Oklahoma City, Okla. Filed Sept. 19, 1927. Serial No. 220,378. 1 Claim. (Cl. 294—66.)

A drag for recovering dead bodies, and the like, as described, comprising a metallic longitudinal tubular body having open ends, and having holding members suitably positioned thereon for balancing the draft on said body while in operation and for attaching drawing means thereto, a flexible metallic drawing member having its ends fastened to said holding means for drawing said longitudinal body, a swivel centrally disposed on said drawing member, cable means connecting said swivel and adapted for pulling said device, said swivel adapted for adjustably positioning said cable and said drawing member in varying suitable relationships, a plurality of tripointed barbed grabbing hooks each having a shank thereon, a plurality of pliant leaders each fastened at one end by eye-bolt holding means to said longitudinal body in spaced relation, and at the other end to a shank of one of the said tri-pointed barbed grabbing hooks, and a heavy weighting means centrally positioned on said longitudinal body for weighting said body in swift currents and for equalizing the two ends of said longitudinal body in active operation.



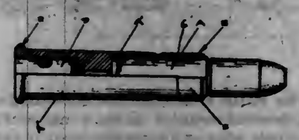
1,753,469. FLOW METER. WILLIAM MELAS, Philadelphia, Pa. Filed Dec. 6, 1926. Serial No. 152,051. 9 Claims. (Cl. 73—110.)

8. Flow-measuring apparatus comprising a housing, a wall dividing said housing into pressure chambers and



movable in response to difference of pressure, a tubular member having corrugated flexible wall structure connected to said wall, an instrument having a pressure-actuated element, means to apply pressure thereto comprising a liquid mass, and means to retain said liquid comprising said tubular member.

1,753,470. BEAUTY-PARLOR CHAIR. WILLIAM MEYER, Chicago, Ill. Filed Sept. 17, 1928. Serial No. 306,395. 9 Claims. (Cl. 155—26.)

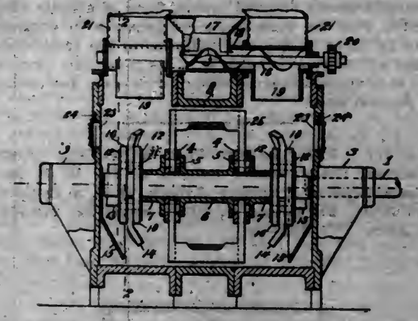


7. In combination, a supporting base, a seat pivotally mounted thereon, a back rest pivoted with respect to the seat, a pair of links for controlling the pivotal movement of the seat with respect to the base and of the back rest with respect to the seat respectively, selectively operated cam means for controlling said links, and a single hand operated lever for controlling said cam means.

1,753,471. TOOL-HOLDING SOCKET. WILLIAM ROBERT PAIGE, Broomhill, and JOHN HENRY HANSON, Holmlea, England. Filed Oct. 12, 1925, Serial No. 62,179, and in Great Britain Oct. 16, 1924. 1 Claim. (Cl. 279—103.)

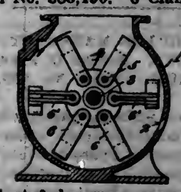
A tool holding socket member having the whole of its exterior conical, said conical portion being slitted for a portion of its length, said slits terminating in a transverse aperture, a cylindrical lower interior to said socket member and a tapered upper interior at least of as great length as the said lower interior and said socket member being capable of rotation in an interiorly tapered holder.

1,753,472. CARTRIDGE ADAPTER. ARTHUR W. PETERS, Rockford, Ill. Filed Aug. 8, 1928. Serial No. 298,233. 2 Claims. (Cl. 102—14.)



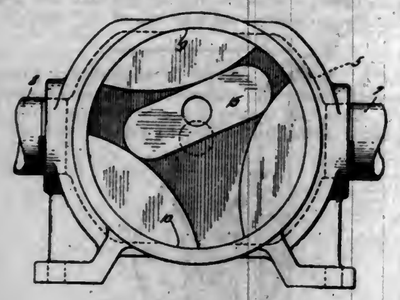
1. cartridge adapter comprising a body having a chamber in its forward end, the peripheral wall of said chamber being slit to make said wall resilient, an inwardly extending boss on said wall, two semi-cylindrical members adapted to be applied to a cartridge forwardly of the rim of the latter, said members having an annular shoulder adapted to lie close to the forward end of said body when the cartridge is inserted into said chamber, one of said members having a recess to receive said boss, and a firing pin slidably mounted in the rear end of the body.

1,753,473. ROTARY PIVOTED HAMMER. JOHN P. POLSTER, Alton, Ill., assignor to Illinois Stoker Company, Alton, Ill., a Corporation of Illinois. Filed Mar. 14, 1928. Serial No. 261,471. 8 Claims. (Cl. 83—11.)



1. A stirrup hammer comprising a bar head provided with a longitudinal opening, substantially radial, forming multiple bars, and a longitudinal web inclined rearwardly outward and extending slantingly toward the front forming a scoop adapted to deflect material outward through said opening.

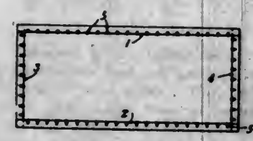
1,753,474. MILL PULVERIZER. JOHN P. POLSTER, Alton, Ill., assignor to Illinois Stoker Company, Alton, Ill., a Corporation of Illinois. Filed May 2, 1929. Serial No. 359,874. 6 Claims. (Cl. 83—11.)



1. A mill pulverizer comprising a horizontal cylindrical casing having an opening for feed and discharge near one end, and a rotor shaft having sets of pivoted hammers operatively mounted in said casing, the inner set being pulverizing hammers and the outer set being primary crushing hammers inclined inward and respectively disposed opposite the open circumferential spaces between said pulverizing hammers, substantially as described.

1,753,475. ROTARY PIVOTED HAMMER. JOHN P. POLSTER, Alton, Ill., assignor to Illinois Stoker Company, Alton, Ill., a Corporation of Illinois. Filed Aug. 5, 1929. Serial No. 383,490. 6 Claims. (Cl. 83—11.)

1. A rotary pivoted hammer comprising a bar head having substantially radial openings therethrough,—said openings being inclined across the head and forming herring-bone bars.

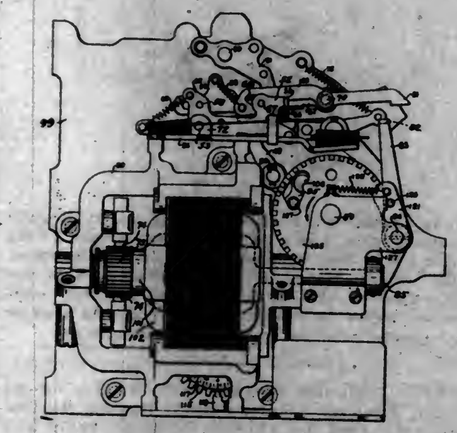


1,753,476. ROTARY PUMP OR BLOWER. JOSEPH R. RICHER, Oak Park, Ill. Filed June 29, 1927. Serial No. 202,261. 9 Claims. (Cl. 103—126.)

1. In a rotary pump, a rotor and a vane pivoted at its center on a stationary axis parallel to but spaced from the axis of the rotor, the said rotor including three equally spaced segmental wings having inwardly directed convex faces continuously engaging the vane, the vane having two flat and parallel edges constituting the major portion of its periphery and adapted to roll on the said convex faces, each such wing face being a portion of a cylindrical surface whose radius is six times the spacing between the axis of the rotor and the pivot axis of the vane.

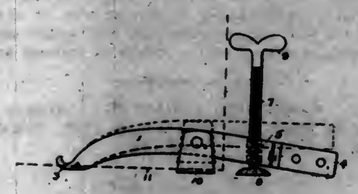
2. In a rotary pump, a rotor, and a vane pivoted at its own center on a stationary axis parallel to but spaced from the axis of the rotor, the rotor including three wings having inwardly directed convex faces of arcuate circular section, and the vane being continuously in engagement with all three of the said wing faces, the cross-sectional shape of the vane transverse of its pivot axis comprising two semi-circles concaved toward each other and connected by parallel lines.

1,753,477. VENTILATOR FOR WINDOWS. JOHN J. RITTER, Urbana, Ohio, assignor to The W. B. Marvin Manufacturing Company, Urbana, Ohio, a Corporation of Ohio. Filed Aug. 30, 1927. Serial No. 216,473. 4 Claims. (Cl. 156—38.)



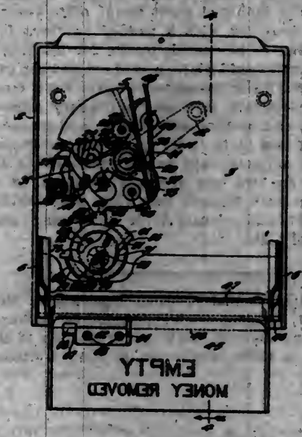
2. A sash and a plurality of integral prongs formed on the inner edges of said sash to receive the cloth, each prong being so bent as to receive the cloth on the outer portion only thereof and clamp the cloth to the face of the sash at a point removed from the metal forming the connection between the prong and the sash.

1,753,478. METHOD FOR MANUFACTURE OF DI-CALCIUM PHOSPHATE. ROBERT D. PIKE, Oakland, Calif. Filed Nov. 14, 1927. Serial No. 233,322. 2 Claims. (Cl. 23—109.)



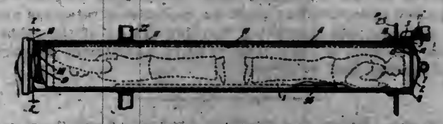
1. The process for utilising gaseous hydrochloric acid and producing available di-calcium phosphate, which consists in bringing gaseous hydrochloric acid into contact with a water suspension of pulverised phosphate rock, thereby decomposing the phosphate rock and taking into solution phosphoric acid and mono calcium phosphate, adding calcium carbonate to this solution to neutralize the first hydrogen ion of its free phosphoric acid and its hydrochloric acid, then precipitating di-calcium phosphate with calcium hydroxid, and separating the precipitate from the solution.

1,753,479. ELASTIC DRIVE FOR CASH REGISTERS. WILLIAM H. ROBERTSON, Dayton, Ohio, assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed Oct. 30, 1925. Serial No. 65,828. 24 Claims. (Cl. 192—150.)



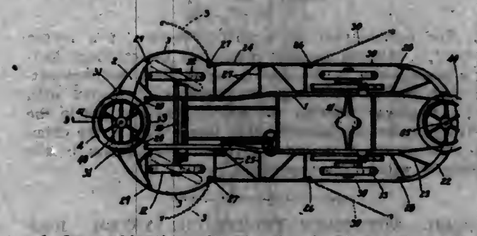
5. The combination of a main operating shaft, an electric motor for driving said shaft, a resilient driving connection between said motor and said shaft, a coupling member secured to said shaft, coupling shoulders on said member, pawl-carrying means directly connected to said resilient driving connection, coupling pawls on said pawl-carrying means adapted to cooperate with said coupling shoulders, means for causing said pawls to be disconnected from said coupling shoulders when said chaft is arrested, a switch to control a circuit through said motor, and means for automatically opening said switch after said coupling pawls have become disengaged from said shoulders.

1,753,480. DOOR SUPPORT. VALENTINE C. ROCHOLL, Fort Wayne, Ind. Filed Feb. 11, 1927. Serial No. 167,486. 6 Claims. (Cl. 254—131.)



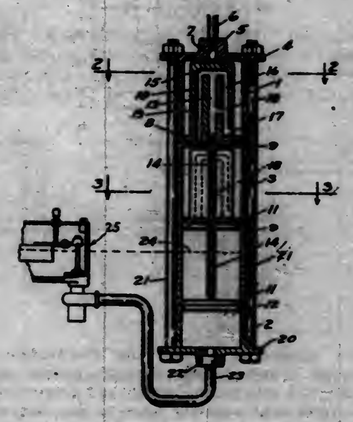
1. A device of the class described consisting of a frame, a swinging member mounted on the frame and adapted to engage the lower edge of a movable object to be supported, and revoluble means mounted on the frame and adapted, when rotated, to engage a fixed object and cause the frame to pivot at one end whereby the swinging member is caused to rise and exert an upward pressure on the object.

1,753,481. COIN-OPERATED VENDING MACHINE. FRANK J. ROWSE, Pawtucket, R. I. Filed Mar. 8, 1929. Serial No. 345,487. 20 Claims. (Cl. 194—1.)



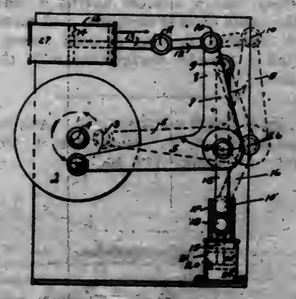
1. In a vending machine, the combination of coin-controlled mechanism, a receptacle for collecting the coins inserted in the machine, means for locking said receptacle in closed position to receive the coins, and means actuated by the unlocking of the coin-receptacle to lock the coin-controlled mechanism against operation.

1,753,482. RESCUE CAR. LAWRENCE Y. SPEAR, New London, Conn., assignor to Electric Boat Company, Groton, Conn., a Corporation of New Jersey. Filed Feb. 20, 1928. Serial No. 255,683. 2 Claims. (Cl. 114—16.7.)



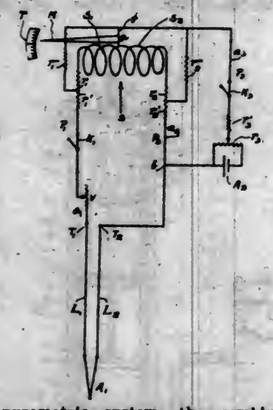
1. In a rescue car for use with submarine boats, a hollow body closed at one end and adapted for insertion into a torpedo tube, the body being provided at said end with means for effecting a water tight closure with the muzzle end of the tube, a removable water tight closure for the other end of the body, and signal means effective at the first mentioned end of the body and actuated by the closure for indicating when said closure is in position to close said other end of the body.

1,753,483. BUMPER STRUCTURE. EVIN STEVENS, Los Angeles, Calif. Filed May 27, 1929. Serial No. 366,228. 4 Claims. (Cl. 293—55.)



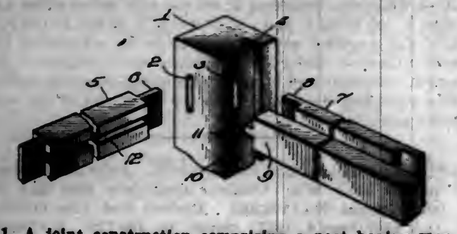
1. In combination with the chassis of an automobile, a non-resilient bumper member supported rigidly from the chassis and sloping rearwardly from each side of a central point to a point outside of the wheels, and a circular member resilient per se supported upon a vertical axis, of said bumper member, with its forward periphery in advance of the forward, central point of said front member.

1,753,484. CARBURETOR-FEED-RETARDING DEVICE. FRANK L. SUTTON, Seattle, Wash., assignor of one-half to Harry Maxwell Finney, Seattle, Wash. Filed Jan. 14, 1926. Serial No. 81,338. 3 Claims. (Cl. 137—112.)



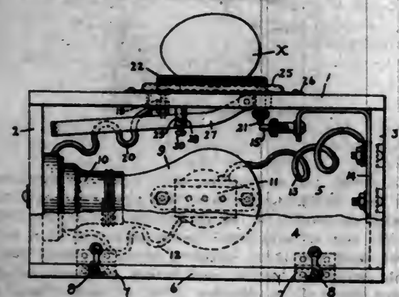
1. In a device of the class described, a plurality of cylindrical shaped casings, means for holding the said casings together in a vertical position, pipe connections at the upper and lower ends of the said device, projections extending upwardly from the intermediate casings, said projections having a plurality of vertical openings therein, all of which are connected at the top and two of which are open at the bottom, and one of which is closed at the bottom, and provided with an opening to the exterior of the said projection, and another opening about midway of its length, connecting it to one of the other openings, and a tube extending downward from the lower end of the said latter opening.

1,753,485. DEAD-CENTER DEVICE. JOHN H. TOWERS, Balsam Lake, Wis. Original application filed May 15, 1926, Serial No. 109,401. Divided and this application filed June 6, 1927. Serial No. 196,729. 3 Claims. (Cl. 74—20.)



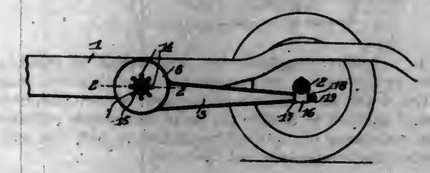
1. A device for overcoming dead centers comprising a rocker arm oscillating about a fixed pivot, an angle crank pivotally connected to the oscillating end of the rocker arm, one arm of said crank being connected to a rotary element, and the other adapted to be operated from a suitable source of power, and means acting to produce pressure upon the oscillating pivot of said crank, and means for reversing at will the direction of force of said means.

1,753,486. ELECTRICAL MEASURING APPARATUS. CHARLES TRAVIS, Philadelphia, Pa. Filed May 3, 1927. Serial No. 188,507. 4 Claims. (Cl. 73—32.)



1. In a pyrometric system, the combination of a thermo couple, a galvanometer having a current carrying coil connected to said thermo couple, and a source of electromotive force approximately equal to the electromotive force of the thermo couple connected to an intermediate point of said coil and to the thermo couple.

1,753,487. JOINT CONSTRUCTION. JENS VAALER, Chicago, Ill., assignor to The Clemetsen Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 13, 1926. Serial No. 141,248. 9 Claims. (Cl. 20—92.)



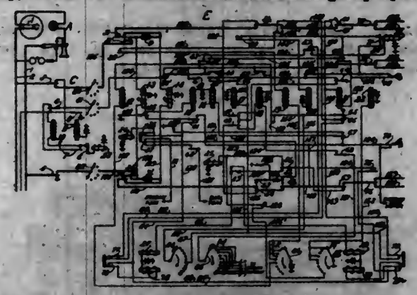
1. A joint construction comprising a post having mortises in two adjacent faces, an element having a tenon adapted to fit into one of said mortises, said element having a recess, and a member having a tenon adapted to fit into the other of said mortises, said member having a projection adapted to seat in said recess, said projection having a face in engagement with the adjacent face of the post.

1,753,488. EGG-TESTING DEVICE. AUGUST VESPERMAN, Schenectady, N. Y. Filed Mar. 1, 1929. Serial No. 343,595. 5 Claims. (Cl. 99—6.)

4. An egg testing device comprising in combination, a box provided with an opening in its upper wall, an electric lamp mounted in said box, a circuit for said lamp, a stationary contact member comprising one terminal of said lamp circuit mounted adjacent the opening in said box, a pivotally mounted sheet metal plate covering said opening and provided with a padded aperture forming a seat for an egg to be tested, means for limiting the upward movement of said plate, a contact member carried by said plate electrically connected in said lamp circuit and adapted to co-operate with said stationary contact member in closing and opening said circuit, and means for normally biasing said plate to its upper limit of movement to separate said contacts, said means comprising a U-shaped lever having its two legs pivotally mounted on an horizontal axis in such manner that their extremities constitute the short arm of said lever and engage the under surface of said plate.

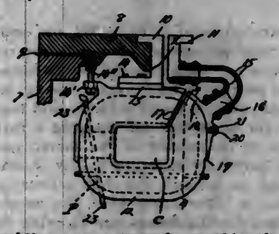
1,753,489. MOTOR VEHICLE SUSPENSION. ROBERT A. WEINHARDT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 4, 1926. Serial No. 92,254. 4 Claims. (Cl. 267—21.)

1. The combination with a motor vehicle frame and axle, of an arm connected at one end to the axle, a rubber block, retainers mounted on the frame and arm and having groove and rib connection with said rubber block, and an adjusting ring having axially and diagonally arranged grooves on its inner and outer peripheries respectively engaging corresponding teeth on one of said retainers and its support, said ring being movable axially of the rubber block to effect a concentric relative adjustment between said retainer and its support.



1,753,490. DUST COLLECTOR OR SEPARATOR. JOHN WHITMORE, Belfast, Ireland, assignor to Davidson & Company, Limited, Sirocco Engineering Works, Belfast, Ireland. Original application filed Jan. 15, 1926, Serial No. 81,369, and in Great Britain Dec. 5, 1925. Divided and this application filed Sept. 8, 1926. Serial No. 134,265. 12 Claims. (Cl. 183—83.)

1. The combination, in a dust collector, of a vortex chamber, a chimney passing completely therethrough having a passageway in the side of the chimney communicating with the vortex chamber and vanes associated with said passageway whereby the whirling flow of gas in the vortex chamber is converted into linear flow in the chimney without shock in order to effect a reduction in the resistance within the apparatus.

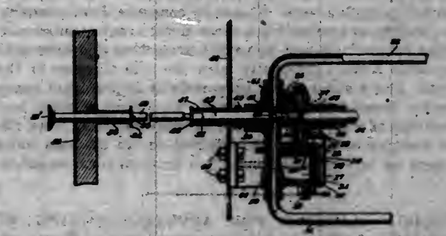


1,753,491. AUTOMATIC TELEPHONE SYSTEM. JOHN WICKS, Oak Park, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Feb. 11, 1925, Serial No. 8,848. Renewed July 12, 1928. 47 Claims. (Cl. 179—17.)

1. In an automatic telephone system, calling and called lines, means comprising switches controllable from said calling line for extending a connection to said called line, said switches being arranged in one large group of switches directly accessible to said calling line and a plurality of smaller groups of secondary switches accessible to said calling line through the banks of the switches of said first group, means in the switches of said first group operable

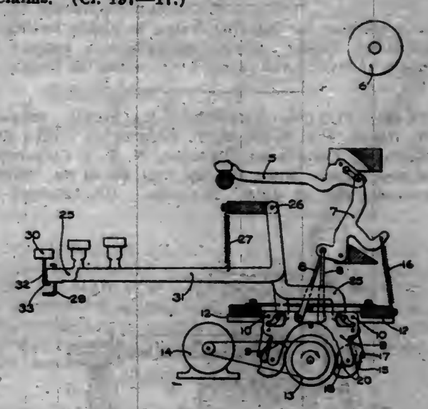
by the calling subscriber to select a group of said secondary switches, means in said first switch for automatically selecting an idle one of the switches of said selected group, and means in the first said switch operable by the calling subscriber for selecting a frequency of ringing current and for controlling its application to the called line.

1,753,492. WELDING APPARATUS. HERBERT A. WOOSTER, Kenton, Ohio, assignor to Swift Electric Welder Company, Detroit, Mich., a Corporation of Michigan. Filed June 1, 1926. Serial No. 112,966. 12 Claims. (Cl. 219—4.)



1. In a welding apparatus, the combination with primary and secondary coils, of an element constituting a protective covering for said primary coil integrally associated with said secondary coil, said element constituting a portion of the secondary circuit.

1,753,493. RATTLE WITH HANDLE HAVING FLEXIBLE SECTION. ARTHUR ZADEK, New York, N. Y. Filed Dec. 18, 1929. Serial No. 414,882. 3 Claims. (Cl. 46—46.)

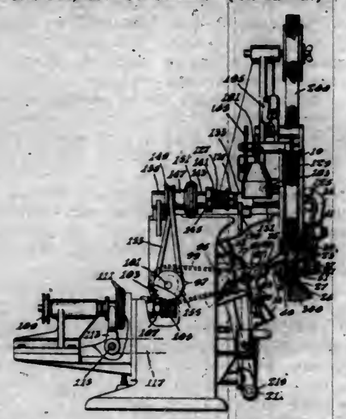


2. A rattle comprising a head portion with projecting pins at one end, and a handle comprising a flexible tubing bent about upon itself and the ends embracing the projecting pins of the head portion, and a rigid core for the tubing projecting to points short of the ends of the pins whereby the handle retains a flexible portion between the pins and the ends of the rigid core.

1,753,494. LUBRICATING SYSTEM. OSCAR ULYSSES ZERK, Chicago, Ill., assignor to Alemite Corporation, Chicago, Ill., a Corporation of Delaware. Filed Aug. 1, 1925. Serial No. 47,566. 5 Claims. (Cl. 184—7.)

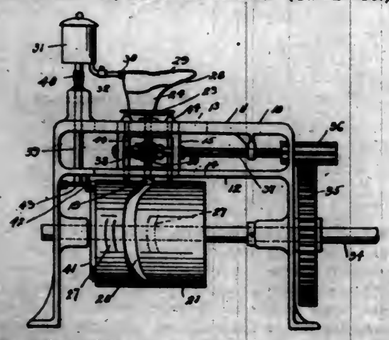
1. The combination with an automotive vehicle comprising a bearing, and an engine having a crank case, of a pump for receiving oil from said crank case, a body member having a longitudinal bore and two transversely extending bores communicating with each other and with said longitudinally extending bore, one of said transversely extending bores being enlarged to form a filter chamber, a filter for filtering the oil passing through said filter chamber, conduits for connecting the ends of one of said transversely extending bores with said oil pump and said crank case respectively, another conduit for connecting the discharge end of the other transversely extending bore with said bearing, a balanced valve slidable in said longitudinally extending bore for obstructing one of said transversely extending bores to cause oil to pass through said filter and into said bearing, and means for reciprocating said valve.

1,753,495. TYPEWRITING MACHINE. HAROLD F. BARDWELL, Rochester, N. Y., assignor to Electromatic Typewriters, Inc., Rochester, N. Y., a Corporation of New York. Filed Sept. 20, 1927. Serial No. 220,813. 2 Claims. (Cl. 197—17.)



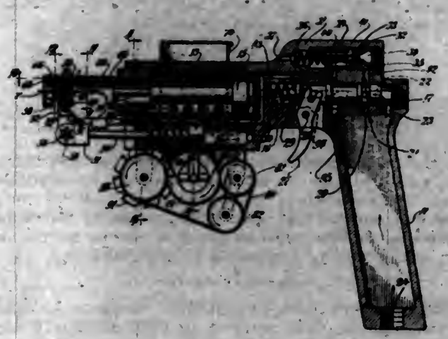
1. In a typewriting machine, the combination, with a type and a key, of power-mechanism controlled by the key and connected with the type to actuate the latter, said mechanism comprising a power roller, a cam cooperative with the power roller and having a plurality of lobes, and detent-mechanism, connecting the key and the cam and arranged to permit a complete rotation of the cam at each depression and release of the key.

1,753,496. CONCRETE-FLOOR CONSTRUCTION. FRANCIS M. BARTON, Chicago, Ill., assignor to George Thompson, Chicago, Ill. Filed Jan. 22, 1926. Serial No. 82,891. 2 Claims. (Cl. 72—66.)



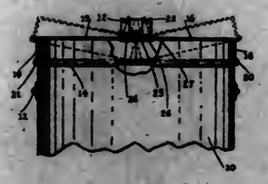
1. As a new article of manufacture, a hollow substantially rectangular form for use in concrete floor construction, said form comprising a sheet metal lower member consisting of a bottom and upwardly projecting and divergent side walls formed integrally with the side margins of the bottom, and a sheet metal substantially imperforate upper member formed separately from the lower member and consisting of a top and straight flanges depending from the side margins of the top and adapted to lap the side walls to form an interlocking connection between form-members.

1,753,497. MACHINE FOR APPLYING FOXING TO SHOES. LEWIS J. BAZZONI, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 8, 1926. Serial No. 126,889. 35 Claims. (Cl. 12—1.)



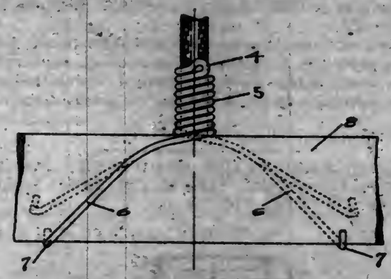
1. A machine for applying foxing to a shoe having, in combination, foxing applying mechanism, a support for a supply of foxing, and means for severing the foxing.

1,753,498. FOXING-CEMENTING MACHINE. STEPHEN W. BOURN, Providence, R. I., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 30, 1924, Serial No. 709,998. Renewed Mar. 13, 1929. 26 Claims. (Cl. 12—80.)



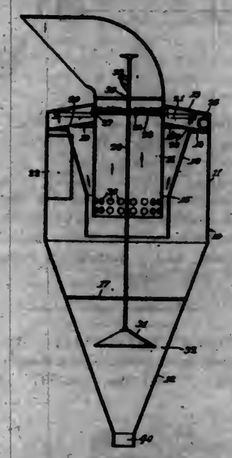
1. In a shoe surface coating machine, a support for the work, a fluid applying member for contacting with the work, means for rotating said support, and means driven in time with said rotating means for positively moving said support towards and from said member during the rotation thereof.

1,753,499. AUTOMATIC TACK HAMMER. WALTER D. BURGER, Forest Park, Ill. Filed Sept. 21, 1928. Serial No. 307,514. 11 Claims. (Cl. 1—46.1.)



1. In a device of the class described, the combination of a barrel, a hammer device mounted for reciprocation within the barrel, a magazine for the retention of tacks, feeding means associated with a magazine for selecting and arranging tacks, an arm sociated with said feeding means and mounted for movement for carrying a tack from the feeding means to the muzzle of the barrel, means at the muzzle of the barrel for engaging a tack so delivered, and means adapted to actuate the tack-delivering arm and hammer device in alternation with one another, and to operate the tack-feeding means for carrying tacks to the arm concurrently with a driving stroke of the hammer device.

1,753,500. CAN CLOSURE. JAMES K. BURLEIGH, Hastings-upon-Hudson, N. Y. Filed Aug. 24, 1927. Serial No. 215,178. 2 Claims. (Cl. 220—32.)

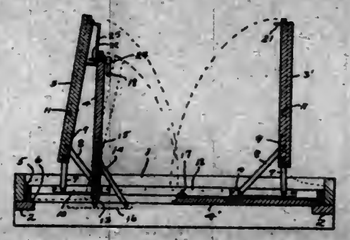


1. In combination with a can having an annular recess adjacent its open upper edge, of a cover composed of two like sections, hinge members connecting the cover sections, a beaded flange surrounding the sections, said flange adapted to engage within the can recess, means formed on each cover section adapted to engage within the can recess, and means formed on each cover section adapted to extend below the mating section between the hinge elements thereof.

1,753,501. SOCKET. EMIL CHRISTENSEN, Portland, Oreg. Filed Oct. 2, 1928. Serial No. 309,727. 1 Claim. (Cl. 248—37.)

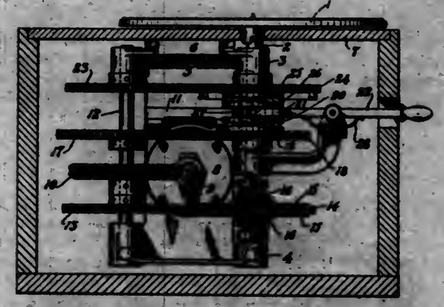
In a socket device for holding decorations: a wire doubled upon itself to form a loop and then coiled into a double threaded helix with said loop at the upper end thereof; oppositely disposed wire arms leading from each of said helical threads at the bottom of said helix; and hooks formed at the extremities of said arms.

1,753,502. DUST COLLECTOR. WILLIAM G. CLARK, Chicago, Ill. Filed Dec. 24, 1926. Serial No. 156,904. 8 Claims. (Cl. 183—84.)



1. In a dust collector, a cylindrical casing terminated in a tapered lower section, a pipe member suspended within said casing and having a cylindrical lower portion and a downwardly tapered upper portion, a vent pipe extending downward into said cylindrical portion and terminating short of the lower end of said member and spaced from the wall thereof, and having a plurality of apertures in the lower portion thereof.

1,753,503. BALL-WARPER TRAVERSE MECHANISM. HOWARD D. COLMAN, Rockford, Ill., assignor to Barber-Colman Company, Rockford, Ill., a Corporation of Illinois. Filed Apr. 19, 1928. Serial No. 271,203. 6 Claims. (Cl. 28—26.)

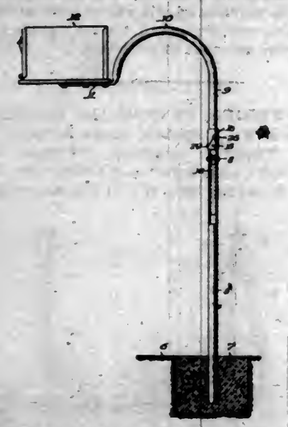


1. A ball warper traverse mechanism comprising a carriage, means for reciprocating said carriage, an arm pivoted on said carriage, a yarn guide on said arm, means having a groove extending along the path of said carriage, the ends of said groove being of cam formation, and cam engaging means connected to said arm and traveling in said groove, the cam portions of said groove being of such formation as to cause acceleration of the yarn guide as the carriage approaches the ends of its travel.

1,753,504. SWINGING WINDOW AND SCREEN MOUNTING. EARLE W. CUMMINGS, Santa Barbara, Calif., assignor to Watertite Casement Hardware Co., Santa Barbara, Calif., a Corporation of California. Filed Aug. 17, 1928. Serial No. 300,197. 11 Claims. (Cl. 20—52.)

1. A window sash provided with pivotal mountings adjacent one edge whereby it may be swung outwardly from a window frame, a screen frame positioned in the window frame to the inner side of said sash provided with pivotal mountings adjacent one edge whereby it may also be swung outwardly from said window frame, and means manually operable from the inside of the screen adapting said sash to be engaged and released from said screen at any point of swinging of the sash.

1,753,505. DRIVING MECHANISM FOR TURNTABLES OF TALKING MACHINES. JOHN W. DYER, East Orange N. J. Filed Jan. 14, 1929. Serial No. 332,480. 5 Claims. (Cl. 74—59.)



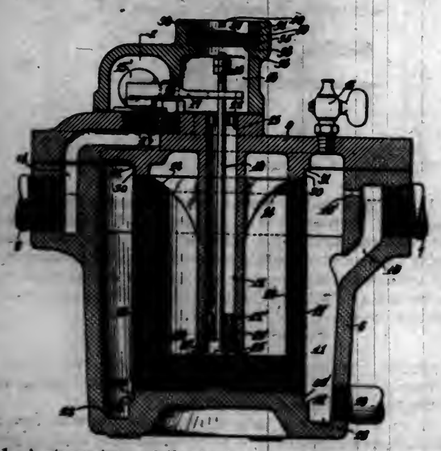
1. The combination with a turntable and a driven shaft connected therewith, of a driving shaft, friction means between the shafts for rotating the driven shaft, normally disconnected gearing between said shafts, and means for connecting said gearing whereby the driven shaft will be turned at a slightly higher speed with respect to said friction means.

1,753,506. MAIL-BOX SUPPORT. AUGUST W. FLORINE, Fort Atkinson, Wis. Filed May 26, 1928. Serial No. 280,797. 3 Claims. (Cl. 232—40.)

1. In a support, a pair of relatively rotatable axially alined members adapted to be arranged in a vertical position, a bearing member carried by one of said rotatable members and having a recess therein provided with angularly related cam surfaces, and a second bearing member carried by the other of said axially alined members and

ATLANTA

provided with a projecting portion lying in said recess and co-operating with the surfaces thereof whereby upon relative rotation of the axially alined members, one of the latter will be caused to rise, and stop means for limiting

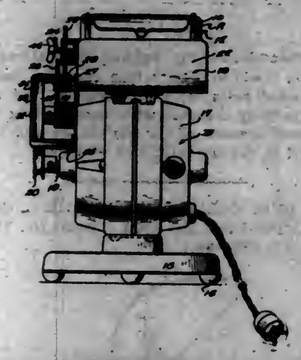


the degree of relative rotative displacement of said axially alined members, and spring means tending to draw said relative rotatable elements toward each other and to seat said projection in said recess.

1,753,507. METHOD OF PRODUCING ACTIVATED CARBON. OTTO FUCHS, Constance, Germany, assignor to Holzverkohlungs-Industrie Aktiengesellschaft, Constance, Baden, Germany, a Corporation of Germany. Filed Feb. 9, 1929, Serial No. 338,894, and in Germany Jan. 13, 1928. 2 Claims. (Cl. 252—3.)

1. The method of producing activated carbon which comprises reducing carbonized material to particles of approximately uniform shape, size, and specific weight, and treating the same with activating gases for a comparatively short period of time at a temperature of approximately 900° C.

1,753,508. STEAM TRAP. JAMES W. GARRETT, Philadelphia, Pa., assignor to Yarnall-Waring Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 6, 1927. Serial No. 211,058. 3 Claims. (Cl. 137—103.)



1. A steam trap of the bucket type and a fixed screen surrounding the bucket, spaced from the bucket and free from intermediate interior support between it and the bucket and protecting it from foreign matter.

1,753,509. METHOD OF SOLDERING. HARRY S. GEORGE, Massapequa, N. Y., assignor to Electro Metallurgical Company, a Corporation of West Virginia. Filed May 2, 1927. Serial No. 188,406. 3 Claims. (Cl. 113—112.)

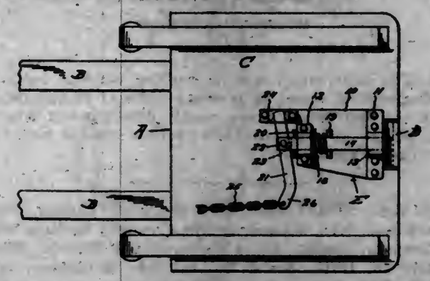
1. The process of soldering which comprises placing molten solder on a surface to be soldered, and applying to the molten solder a piece of a metal having the powerful deoxidizing action and low melting point of sodium.

1,753,510. RAZOR-BLADE SHARPENER. JOSEPH R. GIBSON, Chicago, Ill. Filed May 27, 1926. Serial No. 112,087. 5 Claims. (Cl. 51—80.)

1. The combination with a razor blade sharpener including a barrel from which the sharpening motions are derived, of a power operating device including a motor having an armature shaft, a support upon the casing of the motor for removably receiving the sharpener, a drive shaft operatively connected with the motor rotatably carried by the support, an expanding mandrel removably fitted in the barrel, and a detachable connection between the drive shaft and mandrel.

1,753,511. SUBAQUATIC DRILL. WILLIAM DUNCAN GRANT, Vancouver, British Columbia, Canada. Filed Apr. 13, 1927. Serial No. 183,567. 1 Claim. (Cl. 255—64.)

In a subaquatic drill the combination with a tubular drill rod to which an endwise reciprocating movement is imparted and to the lower end of which drill rod the drill head is secured, of two longitudinal ducts within the longitudinal aperture of the said drill rod and extending from the drill head to above water level, one of said ducts jetting water under pressure to adjacent the cutting face of said drill head, and the other said duct terminating in an upturned orifice adjacent the head of the drill, the said upturned orifice being adapted to deliver water under pressure upwards from the bottom end of the said drill rod whereby the efficiency of the upward water flow carrying the detritus from the vicinity of the cutting face may be improved.



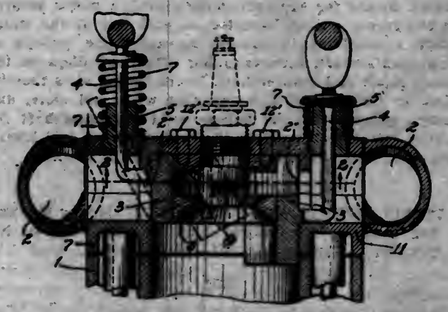
CARNEGIE LIBRARY OF ATLANTA

1,753,512. GATE OR DOOR OPENING APPLIANCE. WILLIAM J. HAMMOND, Plumas, Manitoba, Canada. Filed May 26, 1928, Serial No. 280,827, and in Canada May 5, 1928. 4 Claims. (Cl. 39—65.)

1. A vehicle actuated device for operating an endwise, shiftable closure member comprising a track located at some distance from the closure member and provided with hinged end extensions, a carriage mounted for endwise movement on the track, an operating member carried by the carriage and adapted to be engaged and shifted towards the closure member by a vehicle approaching the same, a suitably guided pulling line connecting the carriage to the closure member and adapted in the movement of the carriage towards the closure member to open said closure member and a suitably guided pulling line connecting the carriage with the closure member and adapted to reset the carriage in the subsequent closing of the closure member.

1,753,513. EXCAVATOR-DIPPER LATCH. ALFRED T. HANSEN, Green Bay, Wis. Filed July 7, 1927. Serial No. 204,011. 5 Claims. (Cl. 292—171.)

1. In an excavator dipper having a hinged door and provided with a keeper, a latch mounted on the door and cooperating with the keeper for normally maintaining the door closed, a pivoted lever connected with the latch for releasing the same, said lever having one end projecting laterally beyond the latch, the projecting portion of the lever being curved away from the free end of the door, and a flexible member connected with said projecting curved end of the lever for effecting movement thereof, the curvature of the lever preventing fouling of the flexible member thereupon and permitting it to slip off if engaged thereabout.



1,753,514. MOP. JAMES B. HARDIN, St. Louis, Mo. Filed Mar. 21, 1928. Serial No. 263,240. 1 Claim. (Cl. 15—139.)

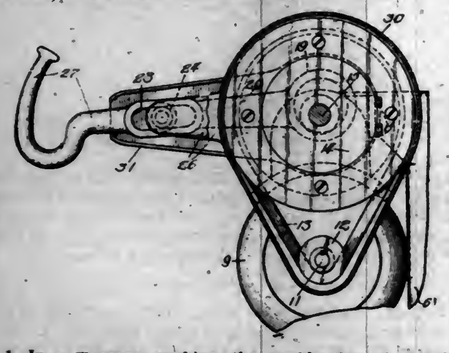
A mop comprising a mopping portion, a hollow handle providing a chamber adapted to receive cleansing fluid, a head to which said mopping portion is attached and with respect to which said handle is capable of telescoping movement, said head being located entirely outside of said hollow handle, a valve head fixedly supported by said

head, and a wall providing an end wall of said chamber and having a passageway formed therethrough which may be closed by said valve head, said handle being movable to move said wall away from said valve head to permit fluid to pass from said chamber through said passageway.

1,753,515. VALVE AND HEAD FOR GAS ENGINES. ALBERT C. HOECKER, St. Louis, Mo. Filed Dec. 1, 1926. Serial No. 151,936. 5 Claims. (Cl. 123—75.)

1. In a gas engine comprising a cylinder with a cylindrical head provided with inlet and exhaust ports, a cylindrical, segmental valve for each of said ports, said valves having a stem permanently attached thereto and said valves being of less circumference than the circumference of the inside of the cylinder so that while the stem and valve may be in one piece the stem may be inserted into operative position through the ports and through the head substantially as described.

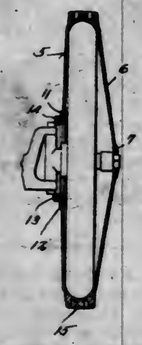
1,753,516. TREATING LIQUID PARTIAL-OXIDATION-PRODUCT MIXTURES AND PRODUCTS THEREOF. JOSEPH HIDY JAMES, Pittsburgh, Pa., assignor to Clarence P. Byrnes, trustee, Sewickley, Pa. Filed Mar. 7, 1921. Serial No. 450,401. 18 Claims. (Cl. 87—12.)



8. As a new article of manufacture, a sulphonated hydrocarbon product of partial oxidation containing artificially introduced chemically-combined oxygen.

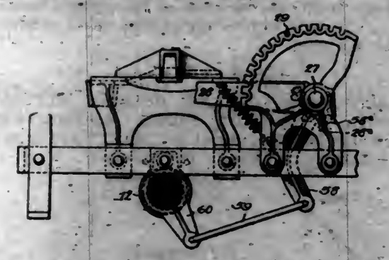
12. The method of treating the liquid product from the vapor-phase partial oxidation of hydrocarbons containing a plurality of different hydrocarbons containing artificially-introduced chemically-combined oxygen and including organic acids, consisting in sulphonating a part of said liquid product.

1,753,517. METHOD OF TREATING LIQUID PARTIAL-OXIDATION PRODUCTS. JOSEPH HIDY JAMES, Pittsburgh, Pa., assignor to Clarence P. Byrnes, trustee, Sewickley, Pa. Original application filed Mar. 7, 1919, Serial No. 281,197. Divided and this application filed July 2, 1925. Serial No. 41,225. 8 Claims. (Cl. 260—116.)



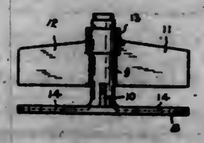
2. The method of treating a partial oxidation product of mineral oil containing aldehyde fatty acids, consisting in separating the free acids from the other constituents, and subjecting other constituents to partial oxidation with oxygen while in the vapor phase.

1,753,518. BODY-TREATMENT MACHINE. JOHN T. JANETTE, Chicago, Ill. Filed Nov. 19, 1928. Serial No. 320,830. 2 Claims. (Cl. 128—63.)



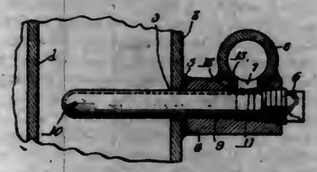
1. In a massage machine, the combination of a main frame, means for supporting the frame, a motor secured to the frame, pulleys mounted on each end of the motor shaft, a countershaft mounted in said frame, pulleys on said countershaft, belts engaging with the pulleys on the motor shaft and countershaft, levers having slots therein, pins on the main frame engaging with said slots, and means actuated by the pulleys on the countershaft for giving rotary movement to the inner ends of said levers, the outer ends of the levers having hooks or the like.

1,753,519. WHEEL AND TIRE COVER. HENRY KANNER, San Antonio, Tex. Filed Aug. 15, 1928. Serial No. 299,820. 1 Claim. (Cl. 301—37.)



A cover for motor vehicle tires, including a body portion formed of elastic material and having an opening to accommodate the hub cap of the wheel over which the cover is positioned, said cover including an inner side having an enlarged central opening, said inner side having slits extending to the central opening, metallic sections having upstanding ends, secured adjacent to the central opening, the ends of the metallic sections having openings to receive bolts to secure the metallic sections together, and said cover having a tread portion.

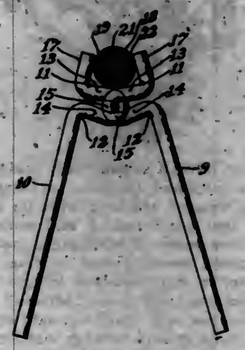
1,753,520. SEED PLANTER. LEE H. KAUFER, Rock Island, Ill., assignor to Rock Island Plow Company, Rock Island, Ill., a Corporation of Illinois. Original application filed July 19, 1920, Serial No. 397,166. Divided and this application filed Jan. 19, 1922. Serial No. 530,247. 1 Claim. (Cl. 74—58.)



In a device of the class described, a frame, an axle, a disk gear loosely mounted on said axle and having a plurality of sets of radially spaced concentric gear teeth fixed thereon, a stud shaft having bearing on said frame in fixed parallel relation with said disk gear, a driven gear slidably and non-rotatably mounted on said stud shaft, said driven gear having spur gear teeth adapted to have selective engagement with said sets of concentric gear teeth on the disk gear, sliding clutch means on said axle affording driving engagement between said axle and said disk gear, cam means concentric with said axle and abutting said stud shaft bearing for operating said clutch means, and means independent of said last named clutch means for shifting said driven gear.

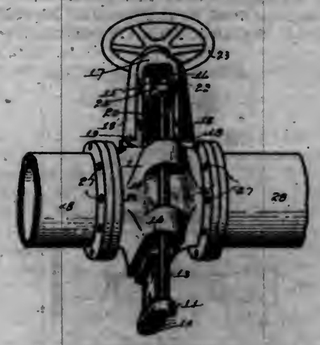
1,753,521. WASHING-MACHINE AGITATOR. HENRY S. LABISKY, Seattle, Wash. Filed Aug. 6, 1929. Serial No. 383,860. 4 Claims. (Cl. 259—101.)

1. The combination with a washing machine agitator having vertical vanes, of auxiliary vanes of greater depth than the first named vanes readily detached and attachable relative to said agitator at points removed from the first named vanes.



1,753,522. SPRAYING DEVICE. OLAF LARSEN, Fort Atkinson, Wis., assignor to The Creamery Package Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed July 10, 1926. Serial No. 121,534. 3 Claims. (Cl. 299—75.)

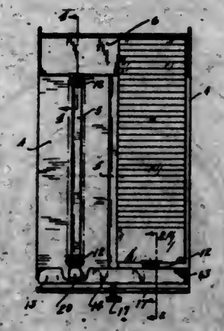
1. A device of the class described, comprising a tube adapted to receive a spray nipple and having a lateral opening for the entry of fluid thereinto, a spray nipple removably positioned in said tube and extending outwardly from one end thereof, said nipple having an opening therein communicating with the opening in said tube said tube having a longitudinal recess formed in its inner wall



terminating inwardly in a shoulder, a lug on said nipple shaped to snugly engage said shoulder within said recess and determine the longitudinal and circumferential position of said nipple, and a removable end closure for said tube effecting the retention of said nipple.

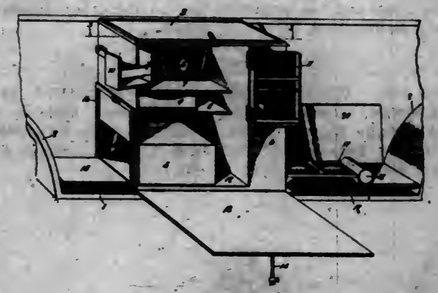
1,753,523. REENFORCEMENT-BAR SUPPORT. WILLIAM E. MATHEWS, Birmingham, Ala. Filed Nov. 17, 1928. Serial No. 320,180. 2 Claims. (Cl. 72—122.)

1. A reenforcement bar support comprising a pair of rods having U-shaped bends hooked together intermediate their ends to form a pivotal connection, said bends being turned at an angle to the long axis of the rods.



1,753,524. VALVE. FRED J. MAWBY, Hays Township, Charlevoix County, Mich. Filed Sept. 1, 1926. Serial No. 132,943. 2 Claims. (Cl. 251—55.)

1. In a device of the class described, a pipe having transversely disposed slots at opposite sides thereof in alignment with each other, a valve seat member detachably mounted on the outside of said pipe in position to close one of said slots, a gate valve slidable in the other of said slots adapted to close against said valve seat, a screw swivelly bearing against the outer side of said seat member, and connections threadedly engaged by said screw for actuating said gate valve.

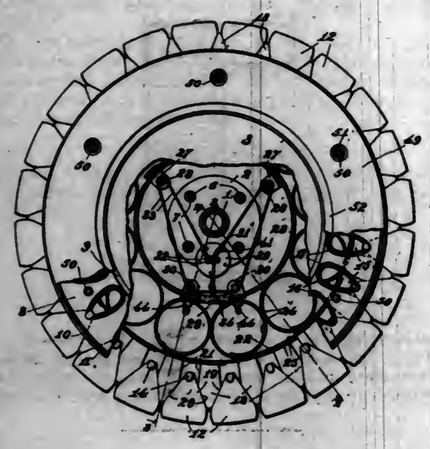


1,753,525. CARD-INDEX TRAY. MALCOLM MCDONALD, Orenco, Oreg. Filed Aug. 31, 1927. Serial No. 216,614. 3 Claims. (Cl. 129—16.)

1. In a device of the class described, the combination of a tray, guideways disposed longitudinally of the tray, the tray bottom being formed with an enlarged opening at one end of each of the guideways, an elevated body element at one end of the tray having a portion that is inclined to the horizontal when in normal position, fixed to the tray,

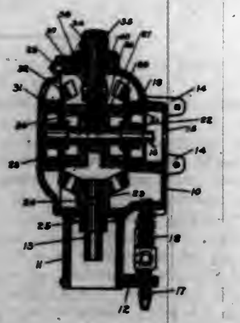
card-carrying yokes slidable within the guideways, an entrance end section having an inclined surface disposed intermediate its ends, means for locking the entrance end section and the yokes in intimate relation with each other.

1,753,526. CABINET KITCHEN. RODNEY W. MARTIN, Dayton, Ohio. Filed Nov. 24, 1925. Serial No. 71,162. 2 Claims. (Cl. 312—147.)



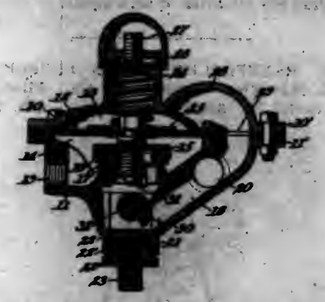
1. In a camper's culinary cabinet and the like, a housing having therein a utensil and equipment compartment accessible from the front of the housing, a food compartment of less height than the housing accessible from one side of the housing, said compartment being located at the bottom of the housing with the utensil and equipment compartment extending above and at one side of said food compartment, and a stove compartment extending from the bottom to the top of the housing at one end thereof and accessible from the side of the housing, and independent closures for the respective compartments, including a double door for the stove compartment, the sections of which are normally disposed in overlapping relation with one section hinged to the other, and the latter section hinged at its lower margin to the housing, said food, stove and equipment compartments being non-communicating with each other, and a closure door for the equipment compartment hinged to the housing at its bottom and opening downwardly and forwardly to form a table, said closure door being of greater area than the access opening of the equipment compartment and extending therebeyond into overlapping relation with the food and stove compartments.

1,753,527. RESILIENT WHEEL. LAWRENCE PAXTON MILLER, Philadelphia, Pa. Filed Aug. 1, 1927. Serial No. 209,736. 9 Claims. (Cl. 152—29.)



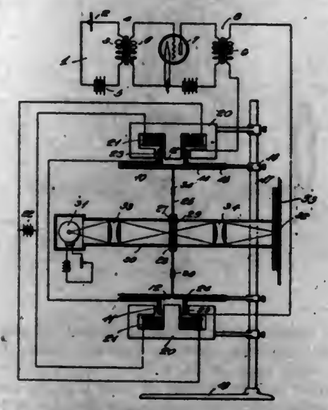
1. A wheel comprising a pair of disks, a plurality of oppositely disposed wedge shaped blocks arranged between

the outer edges of said disks and forming a deformable tread, a flexible ring engaging the inner ends of said blocks, a tension ring and a series of split rings interposed



between said flexible ring and said tension ring, said flexible ring being formed of integral extensions of said split rings and freely slidable one on the other, substantially as described.

1,753,528. WRINGER HEAD FOR WASHING MACHINES. JOHN NELSON, Newton, Iowa, assignor to Automatic Washer Company, Newton, Iowa, a Corporation of Delaware. Filed June 1, 1926. Serial No. 112,830. 1 Claim. (Cl. 74—59.)

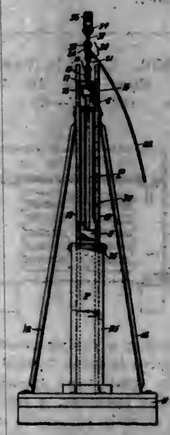


A wringer head for wringer rolls comprising a housing having the side opposite the wringer rolls removable, oppositely disposed bevel gears freely mounted in bearings in said housing and removable side, a horizontal shaft freely mounted in said gears and slidable therein, said shaft being adapted to clutch with the drive shaft of the wringer rolls, a clutch member slidably splined on said shaft, whereby said horizontal shaft and clutch member may be disengaged from said gears by the withdrawal of the horizontal shaft from the gears, a drive shaft pivotally mounted in the housing proper, a pinion pinned on said drive shaft and engaging said bevel gears, a clutch controlling shaft pivotally mounted in said housing, a manually operable handle, and releasable connecting means between the clutch controlling shaft and handle.

1,753,529. ACETYLENE GENERATOR. LAURENCE OLIPHANT, Trenton, N. J., assignor to Oxweld Acetylene Company, a Corporation of West Virginia. Filed Aug. 30, 1923. Serial No. 660,242. 9 Claims. (Cl. 187—53.)

9. In a relief valve, a substantially conical casing member having an inlet and an outlet, a substantially dome-shaped casing member arranged with its open end cooperating with the larger end of said conical member to provide a hollow vessel, a diaphragm firmly secured between said casing members and forming therewith two chambers, exterior wall members integral with each of said casing members and forming therewith a passage communicating between said chambers, said outlet being disposed in the walls of said passage intermediate the ends of said passage, a substantially cylindrical member disposed within and coaxial of said conical member and extending to meet the walls thereof, said cylindrical member having a valve seat at its open end, a valve cap, a valve stem securing said valve cap to said diaphragm and arranged to close said valve seat to provide two chambers in said conical member, and a cam cooperating with said valve stem and disposed in that one of said last-named chambers formed by the apex portion of the conical member.

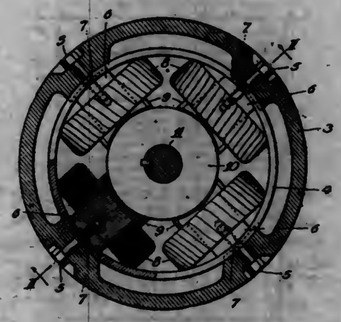
1,753,530. TALKING-PICTURE APPARATUS. FREEMAN H. OWENS, New York, N. Y. Filed July 13, 1927. Serial No. 205,440. 5 Claims. (Cl. 179—100.3.)



1. In a sound recording system, a film, a light source, a lens system for directing said light source upon said film, a frame member for supporting said lens system, a pair of shutter members slidably disposed in said frame member between said light source and said film, electromagnetic devices arranged to control said shutter members, and a series circuit connecting each of said electromagnetic devices for variably controlling the operation thereof in accordance with sound vibrations for correspondingly controlling the exposure of said film with respect to said light source.

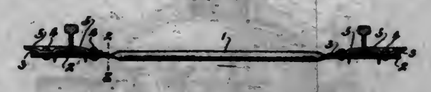
1,753,531. VITAMIN COMPOUND. ROBERT K. PRINCE, Westfield, Mass., assignor to Vitamin Food Co. Inc., New York, N. Y., a Corporation of Delaware. Filed Jan. 2, 1925, Serial No. 281. Renewed Oct. 8, 1928. 8 Claims. (Cl. 167—14.)

2. A pharmaceutical composition comprising a mixture of substances rich in vitamins, including vitamins A and C, with assimilable inorganic salts and endocrine gland substance.



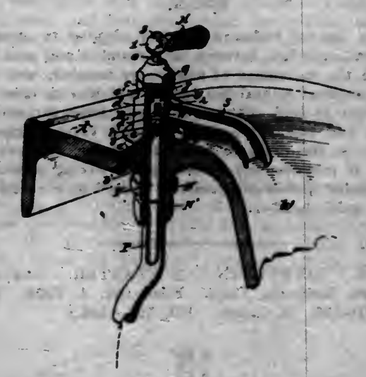
1,753,532. METHOD AND APPARATUS FOR TESTING RODS. WILLIAM L. REID and FRANK J. BASCOMBE, Lima, Ohio. Filed Sept. 20, 1921. Serial No. 501,920. 6 Claims. (Cl. 265—18.)

1. The method of testing rods, which consists in dropping the rod to be tested endwise and suddenly arresting its upper end, so as to impose a tensile shock on the rod by virtue of its momentum.



3. Apparatus for testing rods comprising means for releasably suspending the rod to be tested, and means cooperating with the upper end only of the rod for suddenly arresting it as it falls after release so as to produce a tensile shock on the rod by virtue of its momentum.

1,753,533. DYNAMO-ELECTRIC MACHINE. WILLIAM EDWARD RICHARD, Evansville, Ind., assignor to Sunbeam Electric Manufacturing Company, Evansville, Ind., a Corporation of Indiana. Filed July 22, 1927. Serial No. 207,628. 5 Claims. (Cl. 171—252.)

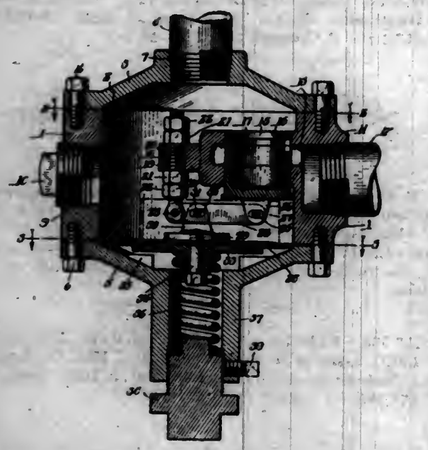


1. A dynamo-electric machine comprising a supporting frame constituting the principal portion of the external magnetic circuit of the machine, an annular member adapted to be disposed within said frame, a plurality of magnetizable pole-pieces, means for removably securing said pole-pieces within said annular member and means for removably securing said annular member within said frame independently of said first-mentioned securing means.

1,753,534. REENFORCED MINE TIE. JUSTUS J. ROSS, Huntington, W. Va. Filed Apr. 23, 1929. Serial No. 357,490. 3 Claims. (Cl. 238—10.)

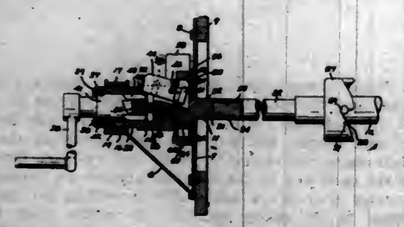
1. A mine tie formed of light metal, reenforcing plates applied to the upper surface of the tie so as to aid in supporting the rails to be mounted thereon, clips for securing the rails to the tie, and means for securing the plates to the tie and for pivotally mounting the clips on the plates.

1,753,535. FAUCET. LLOYD G. SCHIMMEL, Los Angeles, Calif., assignor to Perfection Faucet Mfg. Corporation, a Corporation of Nevada. Filed Mar. 9, 1927. Serial No. 173,989. 1 Claim. (Cl. 251—84.)



A faucet comprising an integral casing having a longitudinal bore therein open at one end and having an axial inlet and a lateral outlet, an integral valve body detachably held therein and having a head overlying the end of said casing and closing said bore and a portion threaded into the open end of the bore, an annular rib formed on the valve body below said outlet providing an annular chamber in the casing adjacent the outlet, ports being formed in said rib and longitudinal recesses formed in the valve body communicating with said ports, a disk valve engaging the end of the valve body and having ports therein, a stem rotatable in the valve body and connected with said valve, and an operating member on said stem for moving the valve ports to and from registration with the ports in said rib to regulate the passage of the fluid from the inlet to the outlet.

1,753,536. AUTOMATIC PRESSURE-CONTROL VALVE. JOHN C. SCOVEL, Jr., Chicago, Ill., assignor to The Creamery Package Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed July 6, 1926. Serial No. 120,592. 3 Claims. (Cl. 137—153.)



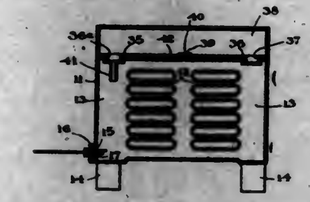
3. A device for automatically controlling evaporation pressure in a refrigerant evaporating container, compris-

ing a casing enclosing a chamber having an open inlet adapted for open communication with said container, a shelf mounted on the wall of said casing within said chamber, said shelf having a transverse valve way opening at both ends into said chamber and having an inner peripheral channel formed in said valve way, said channel opening outwardly of said casing to form an outlet from said chamber, a tubular slide valve operatively positioned in said valve way and controlling said channel, said tubu-

lar valve having endward notches adapted to open and close communication between said chamber and said channel with the movement of said valve member, said valve having constant lateral bearing in said way to close communication to said channel otherwise than through said notches, and means for operating said valve member responsive to the pressure in said chamber, whereby said passage is progressively closed by a lowering pressure in said chamber and is progressively opened by a rising pressure in said chamber.

1,753,537. SAFETY ENGINE STARTER. ALEXANDER TAYLOR, Redlands, Calif. Filed Oct. 4, 1928. Serial No. 310,225. 8 Claims. (Cl. 123—185.)

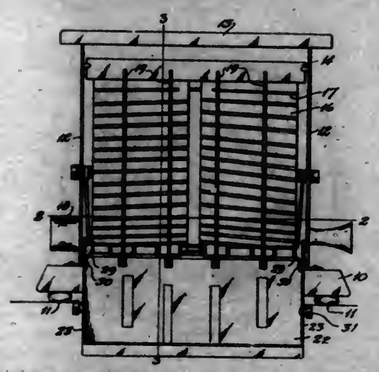
1. A starting mechanism for an internal combustion engine having a crankshaft, said mechanism comprising a stub shaft engageable with said crankshaft, a crank journalled and mounted for longitudinal movement in axial alignment with said stub shaft, a plurality of spline teeth on said crank adjacent the inner end thereof, a plate secured to the inner end of said crank defining the inner ends of the grooves between said teeth, a pawl pivotally mounted on said stub shaft in position to engage the teeth of said spline, means urging said pawl into engagement with said spline, means urging the crank outwards from the stub shaft, said plate being adapted to engage within a slot in the pawl and hold the crank against longitudinal displacement when the pawl is engaged with the spline, and means operable when the crank-shaft rotates in a reverse direction for withdrawing the pawl from engagement with the spline and plate.



1,753,538. CEMENT. BURR W. TUTTLE, Chicago, Ill. Filed Oct. 18, 1926. Serial No. 142,521. 4 Claims. (Cl. 106—8.)

1. A cement of the character set forth consisting of the following ingredients by measure, seven parts of asbestos, three parts of oxide of zinc, and four parts of iron filings mixed with sufficient shellac to make a paste.

1,753,539. PROCESS OF UNHAIRING HIDES AND SKINS. HARRY M. ULLMANN and EDWIN R. THEIS, Bethlehem, Pa. Filed Dec. 26, 1928. Serial No. 328,619. 4 Claims. (Cl. 149—3.)



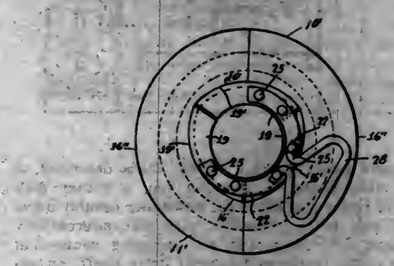
1. Process of unhairing hides which comprises soaking the hides in water containing pancreatin and thereafter liming the soaked hide.

1,753,540. RADIATOR. LOUIS H. VERONNEAU, Montreal, Quebec, Canada. Filed Aug. 19, 1927. Serial No. 214,181. 1 Claim. (Cl. 137—68.)

A radiator comprising a casing presenting a top wall, having a relatively large opening formed therein near each end and a relatively small vent opening formed therein intermediate said large openings, a feed water tank having its bottom wall directly supported on the top wall of said casing, the intermediate portions of the engaging walls of the casing and tank being spaced apart to place the vent opening of the casing in communication with the atmosphere, projections depending from the bottom wall of said tank and fitting in the relatively large openings formed in the top wall of said casing, one of said projections being provided with a pipe extension depending into said casing and affording the sole means of communication between the casing and the tank, said pipe extension functioning as a delivery pipe supplying water from the tank to the casing and being arranged to be sealed by the water in the casing when said water reaches a predetermined level.

1,753,541. TURNOVER TOASTER. GEORGE F. WEBB, Hamilton, Ontario, Canada. Filed Mar. 18, 1929. Serial No. 347,894. 4 Claims. (Cl. 53—5.)

1. In an electric toaster, a base, spaced standards extending up from the base, an inclined bread supporting

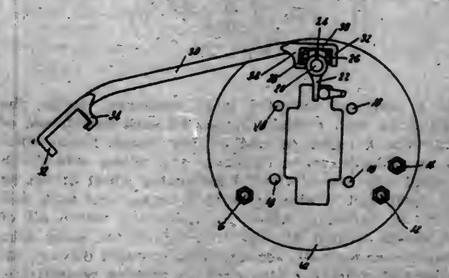


rack between said standards, a swinging crenellated finger bar supported from said standards and having its alternate crenellations movable between positions behind and in front of said rack, and means to actuate said bar.

1,753,542. ADJUSTABLE FASTENER FOR STORM WINDOWS. HENRY P. WELNA, St. Paul, Minn. Filed Jan. 29, 1929. Serial No. 335,846. 1 Claim. (Cl. 292—268.)

As a new product of manufacture, a storm window fastener of the class described comprising a storm window attaching bracket, an elongated arcuate slotted quadrant pivotally connected at one end to said bracket, a retaining fixture adapted to be fastened to the window frame, said fixture being of channel shaped cross section and formed with an elongated slot, a guide block slidable in said fixture and including a threaded stem extending through the slot in said fixture and through the slot in said quadrant, and a retaining nut carried by said threaded stem and cooperable with the quadrant to hold the quadrant in different adjusted positions.

1,753,543. COMPOUND SLIPS. ROBERT A. WILSON and CHARLES S. CRICKMER, Dallas, Tex., assignors to The Guiberson Corporation, Dallas, Tex., a Corporation of Delaware. Filed Dec. 6, 1926. Serial No. 152,776. 8 Claims. (Cl. 24—263.)

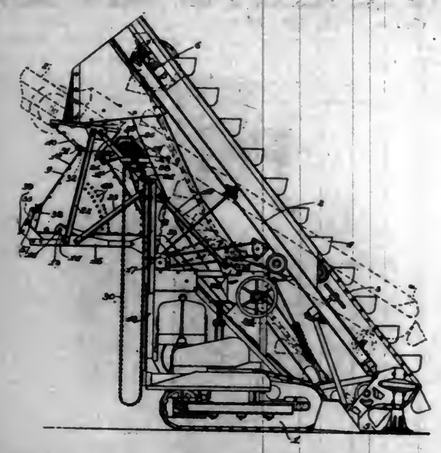


8. Compound slips comprising an outer jacket having a plurality of interior curvilinear faces formed on different radii of curvature from the outer face of the jacket, and a core comprising a plurality of interioriy toothed sectors having their outer faces separately curved on similar radii to seat upon the curved interior faces of the jacket, the outer walls and the inner walls of the jacket being inclined at different degrees.

1,753,544. CEDARIZING DEVICE. CAREY CARTER WINCHESTER, Brookhaven, Ga., assignor to National Cedarchex Corporation, Fulton County, Ga., a Corporation of Georgia. Filed Nov. 2, 1928. Serial No. 316,775. 2 Claims. (Cl. 299—24.)

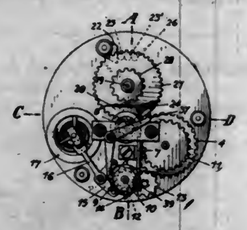
1. A dispensing device comprising a container having a neck, a movable support for said container, a block formed with a hollowed out portion adapted to contact said container to provide a non-leakable connection, spring means carried by said supporting means and adapted to contact said container and means for locking said support to maintain said spring in contact with the container to unite said container and supporting means into a unitary structure, whereby when the container is inverted the block will be saturated with the contents of the container and distribution thereof to the surrounding atmosphere effected.

1,753,545. ADJUSTING TOOL. GEORGE F. ALTICE and WILLIAM L. YOUNG, South Bend, Ind., assignors, by mesne assignments, to Bendix Service Corporation, Chicago, Ill., a Corporation of Illinois. Filed Dec. 22, 1927. Serial No. 241,758. 1 Claim. (Cl. 29—84.)



An adjusting tool adapted to embrace a transverse clamping bolt for an operating arm on a shaft, comprising a lever having two projections extending laterally on the same side of the lever, one being a flat and straight projection extending across one end of the clamping bolt, and the other being hook-shaped and formed with a socket to embrace a head or nut on the other end of the clamping bolt.

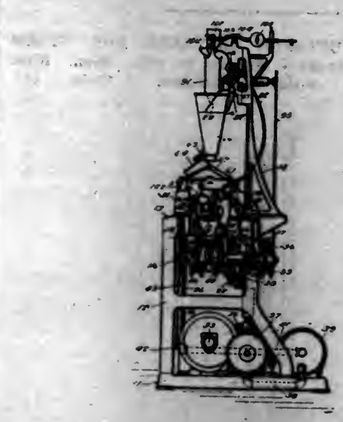
1,753,546. AUTOMATIC MEASURING HOPPER. HARRY H. BARBER, Aurora, Ill., assignor to Barber-Greene Company, Aurora, Ill., a Corporation of Illinois. Filed July 16, 1926. Serial No. 122,818. 18 Claims. (Cl. 214—1.)



1. The combination of a measuring hopper tiltably mounted, a receiver above said hopper in position to

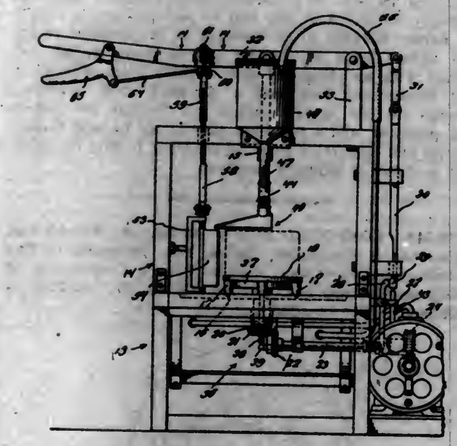
direct material into the same, means for tilting the measuring hopper for dumping its contents, said hopper

having a wall which extends in inclined position under the receiver during the dumping movement for deflecting material flowing from the receiver.



1,753,547. POSITIVE SPEED GAUGE. FRIEDRICH WILHELM GUSTAV BRUHN, Berlin-Wilmersdorf, Germany. Filed Jan. 26, 1927, Serial No. 163,793, and in Germany Feb. 15, 1926. 1 Claim. (Cl. 234—30.)

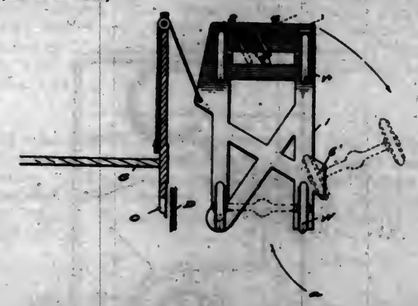
In a positively operated speed measuring device, the combination with a driving means for such mechanism, of clockworks, a clutch in said driving means, means operable by said clockworks to engage and release said clutch at equal intervals of time, a measuring wheel driven by said clutch and in directly toothed engagement with said clutch, an adjusting wheel, an indicating wheel, all of said wheels located directly adjacent on the same axis, spring means normally tending to return said driving, adjusting and indicating wheels to zero position respectively, a fixed positioning contact for said measuring wheel, driving contact members between said measuring and adjusting wheels and between said adjusting and indicating wheels, ratchet mechanism engaging the adjusting and indicating wheels controlled by the clockworks to stop and release said adjusting and indicating wheels respectively and recording and indicating means operated by said indicating wheels.



1,753,548. SALT-FILLING MACHINE. WILLIAM F. BUTLER, Hillside, N. J., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 8, 1922. Serial No. 534,902. 18 Claims. (Cl. 226—77.)

18. Apparatus for filling containers having in combination container-conveying means, container-filling means comprising a movable spout delivering to the conveyed containers, means for removing and replacing the covers of the containers respectively before and after said de-

livery, and connections whereby said spout is moved to filling position when said removing means has removed the cover of a container.

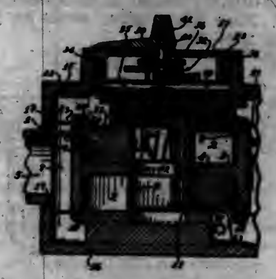


1,753,549. CAKE-ICING MACHINE. JAMES W. CATES, Coffeyville, Kans. Filed Oct. 16, 1928. Serial No. 312,779. 10 Claims. (Cl. 91—2.)

2. In a cake icing machine of the class described, a supporting table having a recessed top, a rotary disk seated in said recess and having a depending tubular drive shaft, said disk being provided with circumferentially spaced sockets, a prime mover, an operating connection between the prime mover and tubular drive shaft, an annular leg equipped cake carrier, the legs of which are provided with dowel pins removably seated in the sockets in said disk, a lifter head associated with said carrier and including a vertical stem slidable through said tubular drive shaft, and operating means for said stem.

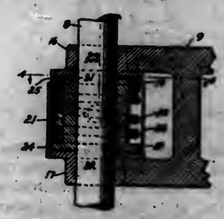
10. In a cake icing machine of the class described, a supporting table provided with a rotary disk, a cake carrier on said disk, a lifter head associated with said carrier, and operating means for said lifter head.

1,753,550. TURNTABLE. EGBERT C. COOK, Puente, Calif. Filed Sept. 17, 1928. Serial No. 306,598. 3 Claims. (Cl. 104—44.)



1. The combination with a door, of a turntable, a platform pivotally mounted at one side of one end thereof, said end being adapted to support one of the rear wheels of a motor vehicle, means on the platform for limiting the forward movement of a vehicle thereon, said platform being shiftable about its pivot by actuation of one of the rear wheels of said vehicle, and means operated by the platform while moving about its pivot for opening the door.

1,753,551. SHIRT. JOSEPH L. CORBI, Washington, D. C., assignor of one-third to Victor Galotta, Washington, D. C., and one-third to Henry Pizzutiello, Bronx, N. Y. Filed Mar. 5, 1929. Serial No. 344,510. 1 Claim. (Cl. 2—115.)



A shirt of the class described having means at the upper portion of its front part for simulating a vest worn over the shirt, such means comprising a pair of strips of lapel shape, each having its inner edge sewn to the shirt on each front half thereof, the strips extending from the upper part of the shoulder seam to the front edge of each half and each front part of the shirt having a slot therein extending upwardly at an incline from the front edge of each part for receiving the lower ends of a necktie, each slot being arranged at the inner edge of the lower portion of each strip.

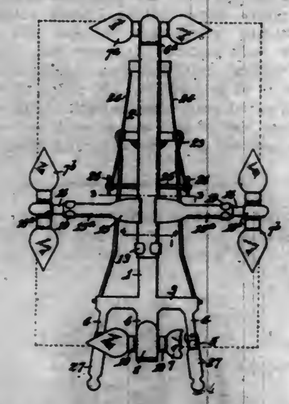
1,753,552. METER. MEAD CORNELL, San Francisco, Calif., assignor, by mesne assignments, to Lubrequipment Company, a Corporation of California. Filed May 14, 1929. Serial No. 363,016. 4 Claims. (Cl. 73—37.)

1. A meter for measuring fluids passing therethrough under pressure comprising a meter casing provided with a circular piston chamber, a piston within the chamber and of a diameter less than that of the chamber to permit a gyrating of the piston within said chamber, a ring bearing mounted for rotation centrally of said chamber, a connection between said ring and said piston, said connection being eccentric of the ring and axially of the piston, said piston being radially slotted, a bridge plate disposed vertically within the chamber and extending into said slot, said plate at its outer end fulcrumed to swing on a vertical axis, indicator mechanism operated by the movement of said piston, said casing provided with fluid inlet and outlet ports communicating with said chamber, one at each side of said bridge, said piston affording a valve for controlling the opening and closing of said ports.

1,753,553. ADJUSTABLE LAMP SUPPORT. MILES F. DEACH, Oakland, Calif. Filed May 31, 1927. Serial No. 195,876. 3 Claims. (Cl. 248—7.)

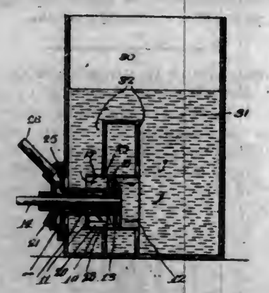
1. In combination with a standard, an arm arranged to extend generally radially from the standard and provided with spaced portions arranged to slidably receive said standard, a collar slidably fitting and adjustably fixed to said standard between said portions, a ring encircling said standard and collar between said portions, and means operative to simultaneously and resiliently engage said collar and ring with different of said portions.

1,753,554. ARMATURE-WINDING APPARATUS. FRED G. DEWEY, Anderson, Ind., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Original application filed Oct. 16, 1924, Serial No. 743,973, now Patent No. 1,622,185, dated Mar. 22, 1927. Divided and this application filed Nov. 13, 1926. Serial No. 148,285. 9 Claims. (Cl. 242—13.)



1. Apparatus for winding an armature having an open-slotted core comprising, in combination, clamping members for receiving the core and for rotating the core while guiding a wire into certain slots of the core; and means rotatable with the core for holding a portion of an armature active coil side out of a core slot while the coil is being wound in the core slots.

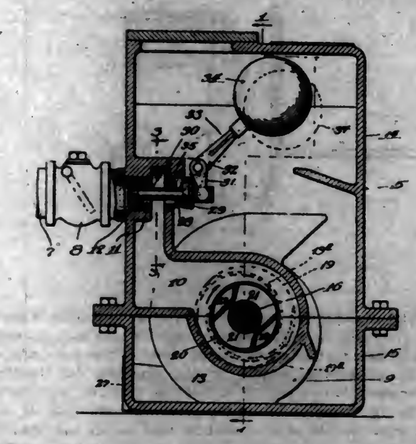
1,753,555. PICTURE HOLDER. ALBERT DORSEY, Martins Ferry, Ohio. Filed June 25, 1928. Serial No. 288,013. 5 Claims. (Cl. 40—146.)



1. A picture holder including a vertical member having means to engage the top and bottom edges of a picture, a

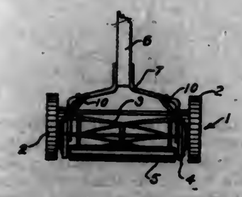
central member having a central loop formed to embrace opposite sides of the vertical member, means to adjustably secure said loop to the vertical member, arms at the ends of the central member, means to adjustably secure the arms to said ends of the central member, the outer

ends of the arms being extended inwardly to form seats for the side edges of a picture and being thence extended outwardly to form loops in conjunction with the outer sides of the seats, and decorative members having portions engaged in said loops so as to be supported thereby.



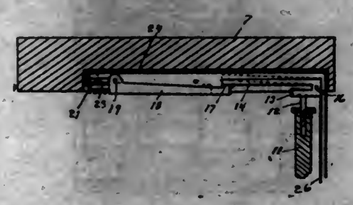
1,753,556. DISPLACEMENT APPARATUS. AUGUSTUS C. DURDIN, Jr., Chicago, Ill. Filed Aug. 2, 1926. Serial No. 126,496. 8 Claims. (Cl. 230—75.)

1. The combination of a casing having a stationary cylindrical wall forming a cylindrical chamber, said casing having also liquid inlet ports and fluid inlet ports leading to said chamber, and a discharge opening leading from said chamber, and rotatory means within said chamber for causing alternative slugs of liquid and fluid to flow through said channel without imparting centrifugal force to said liquid and fluid slugs, said means including an open sided channel extending in a circumferential direction part way around the rotatory means, the open side of said channel being closed by said stationary cylindrical wall.



1,753,557. VACUUM CONDENSATION PUMP. AUGUSTUS C. DURDIN, Jr., Chicago, Ill. Filed Feb. 23, 1928. Serial No. 256,164. 16 Claims. (Cl. 103—5.)

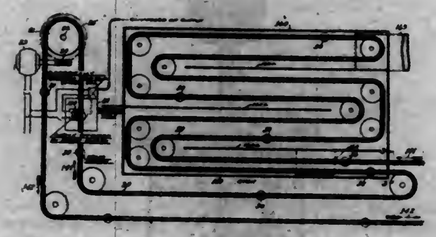
1. In a vacuum condensation pump, the combination of a tank, a return conduit from which water, air, and other condensates are discharged into the tank, a vacuum pump from which liquid is discharged into the tank and having an inlet passage in communication with said conduit, through a port between said inlet passage and conduit, a float operated valve for controlling said port, and



having a float controlled by the level of the liquid in the tank, and a water pump having its inlet communicating with said tank and discharging water therefrom.

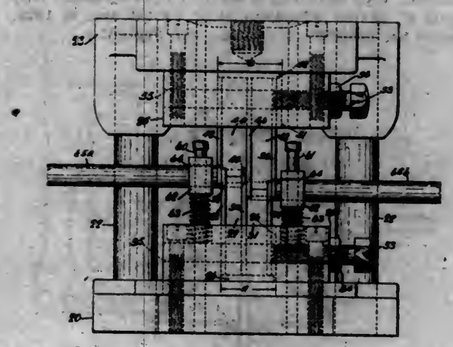
1,753,558. ATTACHMENT FOR LAWN MOWERS. WILL EDWARDS, Jacksonville, Ill. Filed July 23, 1928. Serial No. 294,619. 4 Claims. (Cl. 56—249.)

1. An equalizer for lawn mowers, comprising a plurality of strips of suitable material adapted to be secured at their lower ends to the rear portion of the frame of said lawn mower, said strips extending upwardly, their upper ends loosely engaging the bail of the handle of the mower, whereby the pushing force applied to said handle is distributed between the front and rear portions of the lawn mower frame and the rear end prevented from bucking up.



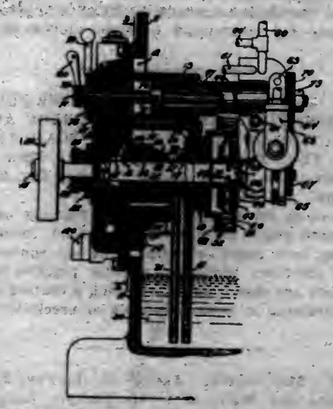
1,753,559. SADIRON. HARRY L. EICHNBROT, San Francisco, Calif. Filed July 2, 1928. Serial No. 290,010. 1 Claim. (Cl. 219—25.)

In a device of the type described a heating element positioned therein, and a handle positioned therein, a rod



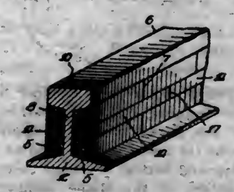
contacting said heating element and having its opposite extremity in close proximity to said handle, a switch lever pivotally mounted in said handle and adapted to be actuated by said rod, an operating lever pivotally mounted in said handle and adapted to contact said switch lever and means for moving said lever into and out of engagement with said switch lever by shifting the pivotal point of said tapering lever.

1,753,560. WORK-HANDLING APPARATUS. RODGER J. EMMERT, Dayton, Ohio, assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Sept. 28, 1925, Serial No. 58,980. Renewed Mar. 25, 1929. 19 Claims. (Cl. 198—19.)



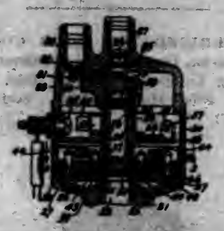
1. Work handling apparatus comprising, in combination, a conveyor including a hanger; an elevator adapted to receive a group of work pieces at one time and to lift the group up to the hanger; and means for securing the group to the hanger; and means automatically controlling the operation of the elevator in response to movement of the hanger relative to the elevator.

1,753,561. MACHINE FOR CUTTING WIRE AND THE INSULATION THEREOF. RODGER J. EMMERT, Anderson, Ind., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Oct. 29, 1925. Serial No. 65,688. 8 Claims. (Cl. 81—9.51.)



1. Apparatus for making electrical conductory leads from a length of insulated wire, comprising in combination, yieldingly mounted spaced blocks for supporting the insulated wire therebetween; means for moving the wire and blocks and adapted to sever the wire between the supporting blocks; and means for piercing the insulation adjacent the point of severance to facilitate removal of the insulation.

1,753,562. PUMP. JOHN P. FERRIS, Milwaukee, Wis., assignor to The Oilgear Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed June 20, 1927. Serial No. 199,925. 19 Claims. (Cl. 103—38.)

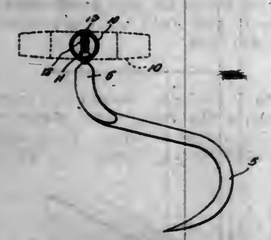


1. In a device of the character described the combination of a plate, a variable displacement pump supported thereby, driving means for said pump supported by and extended through said plate, and pump regulating means supported by said plate.

1,753,563. RAIL FILLER. ALBERT C. FISCHER, Chicago, Ill., assignor to The Philip Carey Manufacturing Company, a Corporation of Ohio. Filed Aug. 21, 1926. Serial No. 130,688. 11 Claims. (Cl. 238—9.)

1. A rail filler comprising a preformed section of a ductile compressible material, constructed and arranged to be inserted in position between the head and base of the rail, said section having a weakened portion so as to permit the sections to yield when hammered into said position, said weakened portion being shaped to receive a reinforcing member, which, when in position, will be interlocked therein and lock said section in position between the head and base of the rail.

1,753,564. IGNITION TIMER. JOHN T. FITZSIMMONS, Anderson, Ind., assignor to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Nov. 21, 1927. Serial No. 234,610. 5 Claims. (Cl. 200—31.)



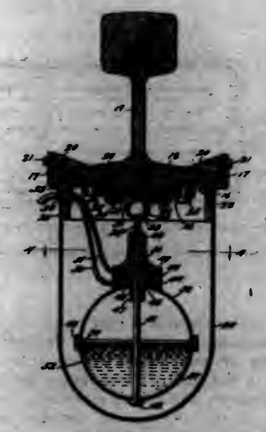
1. An ignition timer comprising, in combination, a drive shaft, a weight plate supported thereon, flat weights pivotally supported by the plate eccentric to its axis, a cam sleeve rotatable coaxially of the shaft, a flat plate at-

tached to the cam sleeve and having lever arms cooperating with the pivoted weights so that the sleeve will rotate as the weights move about their pivots, a flat plate attached to the cam sleeve and extending over the weights but spaced therefrom to permit the weights to pivot freely, and springs for restraining outward movement of the weights.

1,753,565. PROCESS FOR COATING PAPER-PULP VESSELS FOR THE PROTECTION THEREOF AGAINST THE ACTION OF MOISTURE, FAT, SOAP, AND THE LIKE. FRITZ FRANK, Berlin, Germany. Filed Oct. 26, 1925, Serial No. 65,043, and in Germany Oct. 27, 1924. 4 Claims. (Cl. 91—68.)

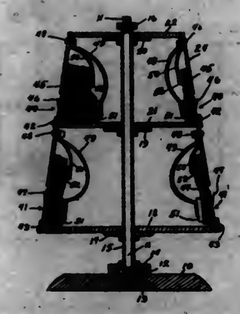
3. A process for the production of coatings on glazed and unglazed paper pulp and papier-maché, consisting in moistening said paper material with an aqueous solution of a substance having an alkaline reaction in which barium salts are dissolved and applying a coating of sizing liquor containing a medium capable of precipitating said salts.

1,753,566. BOX HOOK. ALFRED E. GANNON, JAMES F. MACNEIL, and WILLIAM J. MACLELLAN, Long Beach, Calif. Filed Nov. 7, 1928. Serial No. 317,748. 1 Claim. (Cl. 294—26.)



A box hook comprising a hook member having a shank provided with a reduced free end portion, said reduced end portion of the shank having a square enlargement above but near to its lower end, a tubular handle having alined central top and bottom openings through which said reduced end portion of the shank slidably extends, the bottom opening being square to snugly removably receive the square enlargement, stop means on the upper end of said reduced end portion of the shank to limit upward movement of the handle on the latter to a position wherein the enlargement is engaged in said square opening, and a spring interposed between the top of the enlargement and the top of the handle to yieldingly hold the latter upward, said handle being depressible for release from the enlargement and rotary adjustment on the shank of said hook member, and an external square recess in the top of the handle about the top opening to receive the stop means thereby providing a double means for holding the handle in fixed relation to the hook when the handle is in its upward position.

1,753,567. REFRIGERATOR-DOOR CONSTRUCTION. HARVEY D. GEYER, Dayton, Ohio, assignor to The Inland Manufacturing Company, Dayton, Ohio, a Corporation of Delaware. Filed Mar. 21, 1927. Serial No. 176,871. 5 Claims. (Cl. 20—35.)

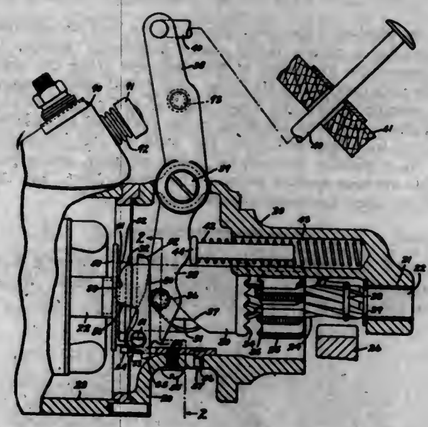


1. A heat insulating door comprising: a one-piece molded bituminous composition frame having a peripheral main flange integral therewith and forming a shoulder adapted to abut against the door opening, a peripherally extending gasket groove molded in the face of said shoulder, and an endless gasket of elastic material stretched around said frame and lying upon said shoulder and having a projecting portion seated in said groove, whereby said gasket is retained in place.

1,753,568. ELECTRIC SIGNAL AND SWITCH THEREFOR. ANTHONY HOROCHOWSKY, Elizabeth, N. J., assignor of one-fourth to Charles Lefchick, Elizabeth, N. J. Filed Sept. 24, 1928. Serial No. 307,799. 9 Claims. (Cl. 246—251.)

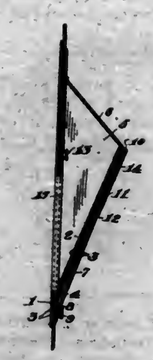
1. In an electric signal, a switch comprising a casing, said casing consisting of two sections, a circuit closing element in one of said sections, and means for imparting swinging motions to said casing, said circuit closing element being adapted to intermittently contact with the other section for intermittently closing the electric circuit.

1,753,569. BAG HOLDER AND BAG DISPENSER. WILLIAM W. IRVING, Charlotte, N. C. Filed Aug. 9, 1928. Serial No. 298,569. 4 Claims. (Cl. 312—61.)



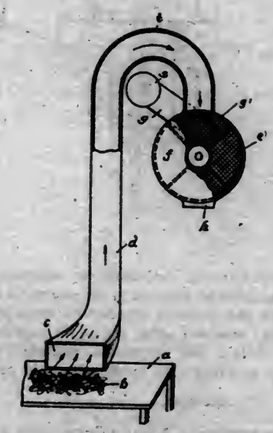
1. In a bag holding and dispensing device, a polygonal hollow member mounted for rotation on a base member, opposite side portions being hinged to permit admittance to the interior thereof, a plurality of holes in the side portions of said polygonal member thru which the bottom portions of paper bags are adapted to be pulled from the interior thereof, a spring-pressed follow member for forcing the bottom portions of the bags out thru the holes, and a spring-pressed member adapted to press against another portion of the bags to prevent wholesale withdrawal of the bags, and a ledge member secured at the outer bottom portion of each hole against which the bags are adapted to be pressed by the said follow member.

1,753,570. PIN. CLIFFORD G. KING, Providence, R. I. Filed Oct. 22, 1929. Serial No. 401,567. 6 Claims. (Cl. 24—161.)



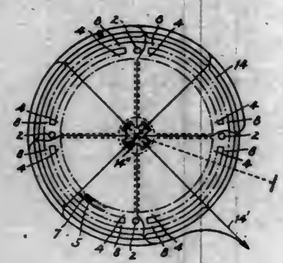
1. A pin having a relatively thick enamelled front plate, a pin-tongue of spring material bent upon itself and comprising an upper and a lower arm, a housing for the bent portion of said pin-tongue, a catch for the pointed end of said pin-tongue, and means for flexibly securing the bent portion of said pin-tongue to said front plate, the free end of said lower arm being flexibly secured to said front plate.

1,753,571. ENGINE-STARTING APPARATUS. JOHN W. LAWSON, Anderson, Ind., assignor to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Feb. 17, 1928. Serial No. 255,125. 33 Claims. (Cl. 74—7.)



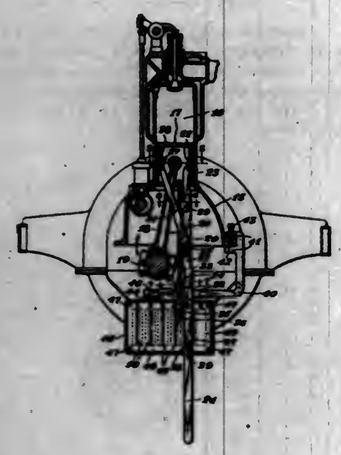
1. Engine starting apparatus comprising in combination, a motor, a shaft driven by the motor, means for connecting the shaft with an engine to be started and including a pinion connected with the shaft and movable into mesh with an engine gear and provisions whereby the pinion will be automatically demeshed from the gear when the engine starts, manually operated means for moving the pinion into mesh with the gear and having provisions for rotating the pinion while it is pressed against the gear, and means operable upon the release of the manually operable means for rotating the shaft.

1,753,572. PULLMAN-BERTH-CURTAIN VENTILATOR. LINN OLAF B. LINDSTROM, San Francisco, Calif. Filed Apr. 27, 1929. Serial No. 358,539. 1 Claim. (Cl. 98—5.)



A curtain ventilator consisting of a sufficiently flexible border and shutter, shutter supports of side cloth and air passage screen, with cord, cord loop and button to hold shutter open and buttons to hold shutter closed.

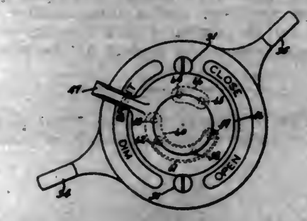
1,753,573. PROCESS AND APPARATUS FOR PREPARING RAW TOBACCO. VALENTIN LORENTZ, Dresden, Germany, assignor to United Cigarette Machine Company Aktiengesellschaft, Dresden, Germany. Filed Apr. 28, 1928, Serial No. 273,643, and in Germany Sept. 20, 1927. 16 Claims. (Cl. 131—60.)



1. A method of separating bundled tobacco leaves according to which a bundle of tobacco after having been untied is subjected to the separating action of a current of air of sufficient force to strip off the leaves from the bundle.

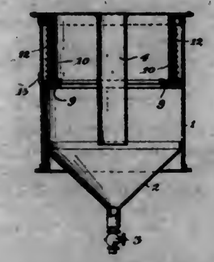
1,753,574. AERODROME. WILLIAM ARTHUR LOTH, Paris, France, assignor to Societe Industrielle des Procédés W. A. Loth, Paris, France, a Company of France. Filed Aug. 27, 1926, Serial No. 132,002, and in France Sept. 19, 1925. 2 Claims. (Cl. 244—2.)

1. An aerodrome of regular geometrical shape inscribed within a circle and including a peripheral underground gallery, underground shelters opening in said gallery, means of access to said gallery, and a circular electro-magnetic guide cable arranged adjacent said gallery.



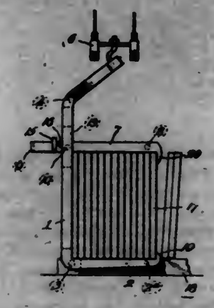
1,753,575. WEAR-INDICATING APPARATUS. STUART M. MILNE, Seattle, Wash. Filed Apr. 26, 1926. Serial No. 104,603. 6 Claims. (Cl. 81—3.)

1. In an apparatus of the character described, comprising a vibratile member adaptable for engaging a piston to be tested while the same is operatively mounted upon its connecting rod, whereby such piston is oscillated during reciprocation within its correlated cylinder, and means for detachably securing said member to said piston.



1,753,576. SWITCHING APPARATUS FOR STEERING-COLUMN CONTROLS. HARRY E. NORVIEL, Anderson, Ind., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Apr. 28, 1925. Serial No. 26,432. 5 Claims. (Cl. 200—4.)

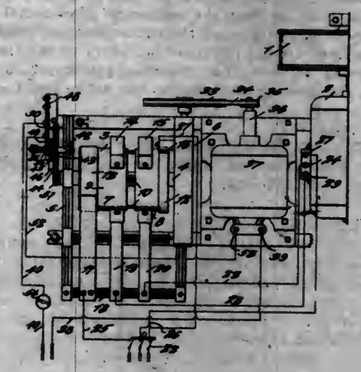
1. Electric switching apparatus for the steering column controls of an automotive vehicle comprising, in combination with a stationary metallic bracket mounted above the steering wheel hub, a metallic switch base supported by said bracket and providing a tubular recess and having a tubular extension surrounding the recess, a push-button switch received by said recess and having a movable contact cooperating with the end of said extension which



provides a switch contact grounded on the frame of the vehicle through the steering column, a switch lever journaled upon said extension, a movable contact carried by said lever, and a stationary contact insulatingly supported by said switch base.

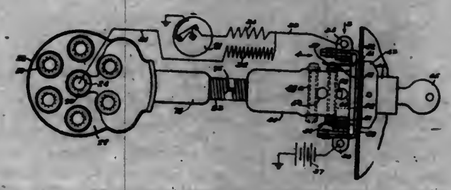
1,753,577. FILTERING AND DECANTING APPARATUS. CESARE PICCARDO, Genoa, Italy. Filed Aug. 21, 1928, Serial No. 301,085, and in Germany Feb. 18, 1928. 5 Claims. (Cl. 210—43.)

1. A filtering apparatus for filtration and decantation comprising a textile fabric easily detachably applied in the immediate proximity of the shell and along the shell of the apparatus, with its upper edge nailed upon an angle iron secured along the upper edge of the receptacle and with the lower edge adhering in the cavity of an annular bent U iron fastened upon the shell of the receptacle and there tightly fastened by means of sand, and a permeable element applied between the textile fabric and the shell to space the textile fabric from the shell.



1,753,578. PLATE-CONVEYING HOOK. GWYNNE RAYMOND, Kansas City, Mo. Filed Oct. 22, 1928. Serial No. 314,109. 2 Claims. (Cl. 294—67.)

1. A device of the character described, comprising a pair of substantially vertical right angle shaped similarly

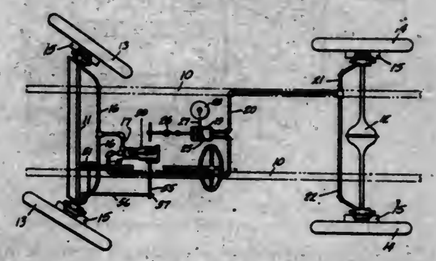


facing angle members connected together at their upper ends and having upturned hooks at the free ends of their lower or substantially horizontal arms, a pair of similar hooks relatively inverted with respect to the first-named members and adapted to extend substantially parallel with the lower arms of the latter and pivotally mounted on the vertical arms of the latter at an intermediate point in their length.

1,753,579. AUTOMATIC CONTROL FOR ELECTRIC SIRENS. MICHAEL REULE, Charleston, Ill. Filed July 3, 1926. Serial No. 120,479. 1 Claim. (Cl. 200—92.)

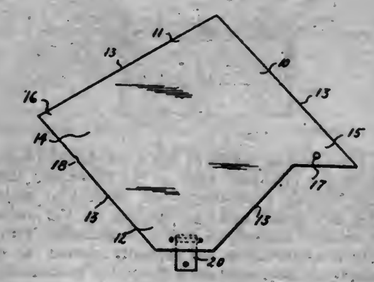
The combination with the drum shaft of an intermittent circuit closer, and a motor for operating the said shaft, of a circuit breaker comprising a shaft, a gear rotatable thereon, a pinion upon the drum shaft meshing with the said gear to impart rotary motion thereto, said gear being movable longitudinally of the shaft upon which it is mounted whereby to be shifted into and out of mesh with the pinion, and a spring mounted on the shaft and bearing against the gear for holding the same in position to mesh with the pinion, a contact disc carried by and insulated from the gear and having an interrupted portion, and contacts in circuit with the motor, one of the contacts engaging the disc in the path of movement of the interrupted portion thereof and the other contact engaging the disc at another portion thereof.

1,753,580. THEFT-PREVENTING DEVICE. HERMAN SCHWARZE, Pontiac, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 20, 1927. Serial No. 214,294. 8 Claims. (Cl. 200—19.)



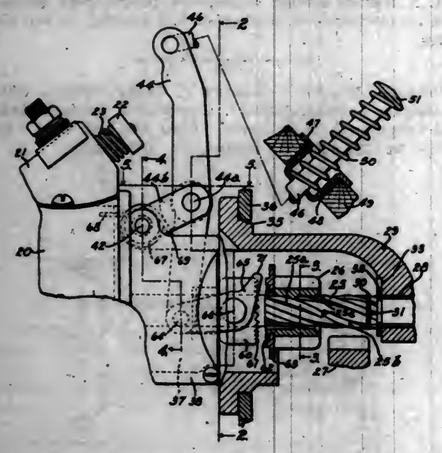
2. Theft preventing apparatus for automotive vehicles comprising an ignition distributor head having an ignition secondary terminal, a metal support for the head, a switch in the head for electrically connecting the head with the support to ground said secondary terminal, and key controlled means for closing the switch.

1,753,581. BEARING AND METHOD OF MAKING SAME. RALPH L. SEABURY, Toledo, Ohio, assignor to Delco-Remy Corporation, Anderson, Ind., a Corporation of Delaware. Filed July 3, 1926. Serial No. 120,541. 16 Claims. (Cl. 308—242.)



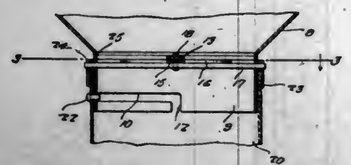
1. A bearing having a granular porous body portion and an electroplated bearing surface tending to seal the pores.

1,753,582. BRAKE. CHARLES R. SHORT, Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Mar. 28, 1924. Serial No. 702,540. 3 Claims. (Cl. 188—152.)



1. In fluid pressure brakes for dirigible vehicles having brakes upon the rear or drive wheels and brakes upon the front or directing wheels, all operable through conduits from a common pressure cylinder, means for regulating the braking effect upon the front wheels, said means comprising a valve in the conduit leading thereto, means acting to maintain said valve open during straight line progression of the vehicle, a cylinder with which said conduit communicates, a piston movable within said cylinder, and means operable by and in unison with steering movement of the vehicle for bringing about movement of said piston in a direction to increase the total volume of said conduit, and to cause said valve to close.

1,753,583. ROOFING. ALEXANDER S. SPEER, Buffalo, N. Y., assignor, by mesne assignments, to Certain-teed Products Corporation, a Corporation of Maryland. Filed Nov. 25, 1925. Serial No. 71,360. 11 Claims. (Cl. 108—33.)

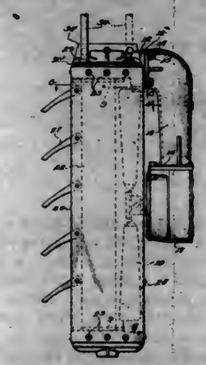


7. A securing means for roofing material comprising a thin metal strip attached to said material by a universal connection, thereby permitting universal adjustment of the material in respect to the strip after the securing means is fixed to a roof.

1,753,584. ENGINE-STARTING APPARATUS. WILFORD H. TESTER, Dayton, Ohio, assignor, by mesne assignments, to Delco Products Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Sept. 22, 1928. Serial No. 307,745. 5 Claims. (Cl. 74—7.)

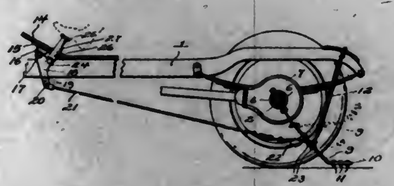
1. An engine starter drive comprising a rotatable driving member axially movable into engagement with a rotatable part connected with an engine to be started; and manually operable means for moving the driving member axially and for turning it when necessary to effect its engagement with the engine part, said means including a part movable along the axis of the driving member and adapted to apply a force to the driving member oblique and eccentric to its axis, an actuator having a portion connected with said part and mounted for movement transversely and longitudinally of the axis of the driving member, and a spring for resisting transverse movement of the actuator portion away from the axis of the driving member whereby the angle between said part and axis of the driving member will increase in response to continuing the movement of the actuator portion after the driving member meets with obstruction by the engine part before connecting therewith.

1,753,585. DISPENSING DEVICE. JAMES R. UMSTEAD, Huntington, W. Va., assignor to Forrest H. Brundage, Toledo, Ohio. Filed Oct. 23, 1928. Serial No. 314,381. 4 Claims. (Cl. 221—95.)



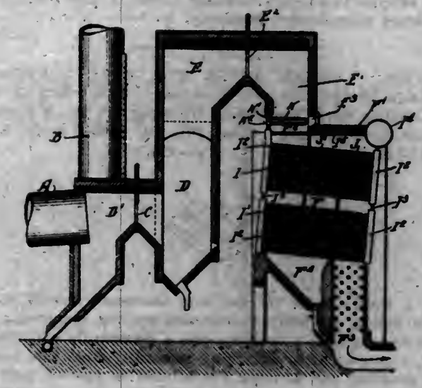
1. In a dispensing device of the class described, a container having a discharge neck at the lower end thereof, a cup for holding a predetermined amount of material, means for detachably securing the cup on the discharge neck exteriorly thereof, a valve mechanism arranged within the discharge neck for normally closing the same, and cooperating means between the valve mechanism and the cup when said cup is secured on the neck for moving the valve to an open position when the cup is rotated about the neck to permit the filling of the cup, a cross bar having one end extending through circumferential slots formed in the neck, a valve plate secured on the cross bar for movement therewith within the discharge neck, the upper edge of the cup being formed with a notch for receiving the projecting end of the cross bar.

1,753,586. MANUFACTURE OF THE RIMS OF MOTOR-VEHICLE STEERING WHEELS. GEORGE WARWICK, Birmingham, England. Filed Apr. 2, 1928, Serial No. 266,844, and in Great Britain Apr. 29, 1927. 4 Claims. (Cl. 153—2.)



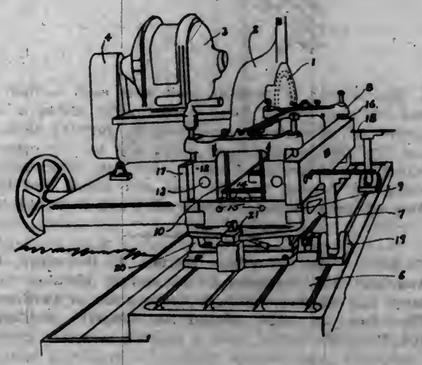
1. The method of forming a tubular steering wheel rim from a single metal strip consisting in fashioning the latter by rollers into a part-tubular formation having separated longitudinal edges, fashioning the shaped strip into a circular rim form, so that the separated longitudinal edges of the strip extend around the outer periphery, stamping up projections around the inner periphery of the rim by a tool passing between the separated peripheral edges of the rim, and subsequently closing the said edges together.

1,753,587. SPACE HEATER. FRED M. YOUNG, Racine, Wis. Filed Apr. 29, 1929. Serial No. 358,872. 4 Claims. (Cl. 257—137.)



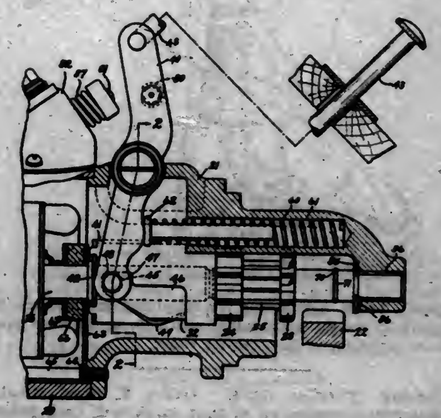
1. A device of the class described comprising upper and lower header tanks and a heat transferring core, portions of said tanks being extended rearwardly of said core in overhanging relation, side plates on said core having channel-shaped front edge portions, reinforcements extending longitudinally of said edge portions, air deflectors adjustably mounted on said reinforced edge portions, and means for passing a current of air through said core comprising a fan propeller partially enclosed by the overhanging tank portions and said side plates.

1,753,588. NONSKID BRAKE. JESSE W. BAILLIE, Newark, Ohio. Filed Nov. 5, 1928. Serial No. 317,205. 3 Claims. (Cl. 188—5.)



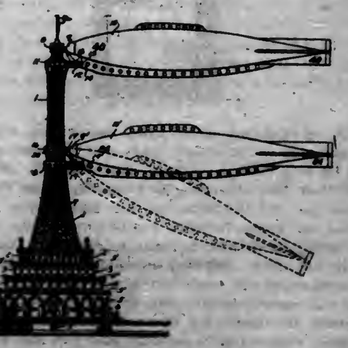
1. In a motor vehicle, the combination with the rear axle housing, of a brake member pivotally associated with said axle housing, means for holding said member normally off the ground, said brake member including a foot disposed at an angle to the main portion of the brake member, and provided with keyhole slots for the reception of pointed projections, and a plate connected with said foot and serving to keep said projections within said slots.

1,753,589. WASTE-HEAT BOILER. JOHN E. BELL, Brooklyn, N. Y.; Lola R. Bell executrix of said John E. Bell, deceased. Filed Oct. 1, 1923. Serial No. 665,702. 6 Claims. (Cl. 122—7.)



1. The combination in a waste heat boiler of the horizontal water tube type transversely baffled to provide a plurality of transverse passes for the heating gases, of means providing an inlet for the heating gases opening downward to the upper end of the transverse pass adjacent one end of the boiler, and common means for collecting dust separating out of the heating gases in said pass and the pass immediately adjacent thereto.

1,753,590. WORKHOLDER FOR BAR-GRINDING MACHINES. FREDERIC K. BENEDICT, Big Rapids, Mich., assignor to Covel-Hanchett Co., Big Rapids, Mich., a Corporation of Michigan. Filed Dec. 27, 1927. Serial No. 242,795. 2 Claims. (Cl. 51—217.)

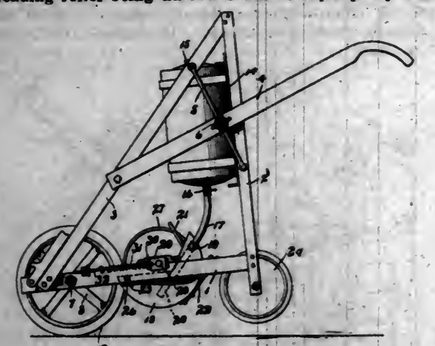


1. In a machine for face-grinding locomotive guides and similar work, a turn table having upright work-supporting cradles at its ends remote from its axis, each cradle provided with two oppositely directed pivotally mounted work-supporting bars, means for adjustably tilting each bar independently, means for clamping an end of a piece of work down upon a tiltable bar, an adjustable guage plate co-operatively associated with the work-supporting bar, and a pair of face gauges hinged at their bottoms to fixed supports near the ends of the work and adapted to be swept in the arc of a circle over the front face of the work, for the purposes set forth.

1,753,591. ENGINE STARTER. RALPH BERTSCHE, Jr., Anderson, Ind., assignor to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Nov. 15, 1928. Serial No. 319,697. 19 Claims. (Cl. 74—7.)

1. Engine starting apparatus comprising, in combination, a drive pinion movable endwise into mesh with a gear connected with the engine to be started, a pilot pinion adapted to mesh with the engine gear, manually operable means for causing the pilot pinion first to mesh with the engine gear and then the drive pinion, and a connection between the pilot pinion and drive pinion such that the drive pinion will be guided into mesh with the engine gear.

1,753,592. AIRSHIP TERMINAL. GILBERT BETANCOURT, Detroit, Mich., assignor to Aircraft Development Corporation, Detroit, Mich., a Corporation of Michigan. Filed May 9, 1927. Serial No. 189,962. 5 Claims. (Cl. 244—2.)



1. An airship mooring tower having a plurality of mooring stations at widely different elevations, one above the other, whereby the same tower may moor at the same time a plurality of ships, means for limited adjustability of height for each of the mooring means on the tower and a rotary loading platform at each at a fixed elevation.

1,753,593. ROAD MARKER. GEORGE W. BETTES, Sparta, Mich. Filed June 18, 1927. Serial No. 198,573. 5 Claims. (Cl. 91—50.)

3. A road marking machine comprising, a transfer roller having its periphery covered with paint holding material and adapted to ride over the surface of a road, a spreading roller having its periphery bearing against

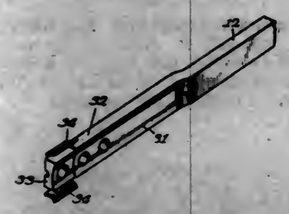
the periphery of the transfer roller the periphery of the spreading roller being narrower than the periphery of the

transfer roller, and means for supplying paint to the periphery of the spreading roller which in turn applies paint to the periphery of the transfer roller.

1,753,594. FLORAL CASE. JAYSON K. BOND, Milwaukee, Wis., assignor to Federal Asbestos & Cork Insulation Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed June 15, 1928. Serial No. 285,751. 2 Claims. (Cl. 312—116.)

1. A refrigerated show case, comprising bottom, top, rear and side walls, glazed doors and windows closing the front of said case, a vertical wall inwardly of the front of the case and extending downwardly from the top and terminating intermediate the top and bottom, said wall defining an upper forward compartment, the top of the same being open, and a main refrigerated compartment, and an angularly disposed multi-layered window between said compartments, the front of the case having an elongated rail thereadjacent, the arrangement being adapted to permit the mounting of an incandescent bulb within the upper compartment between said rail and the window for illuminating both compartments.

1,753,595. CORNER MITER FOR SCREEDS. JAMES HENRY BOWMAN, Bridgeport, Ohio, assignor to Wheeling Steel Corporation, Wheeling, W. Va., a Corporation of Delaware. Filed July 26, 1929. Serial No. 381,323. 6 Claims. (Cl. 72—125.)

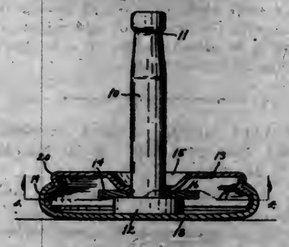


1. A corner miter for use with a screed having a centrally disposed rib comprising a body member formed of sheet metal, offset portions extending outwardly therefrom and at right angles to the body member and to each other, and a vertically disposed angular member secured to the body member and having its lower edges spaced from the inner edges of the offset portions, the offset portions being adapted to engage between the sides of said rib and the angular member having a part overlying the outer face of the screed.

1,753,596. CORNER MITER FOR BASE SCREEDS. JAMES HENRY BOWMAN, Bridgeport, Ohio, assignor to Wheeling Steel Corporation, Wheeling, W. Va., a Corporation of Delaware. Filed July 26, 1929. Serial No. 381,324. 5 Claims. (Cl. 72—125.)

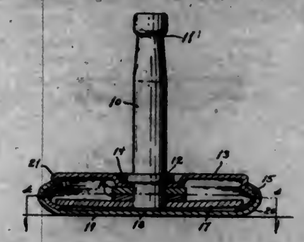
1. A corner miter for use with baseboard screeds having a hollow rib and an attaching portion comprising a body formed with a shoulder and a rearwardly extending part, a pair of arms extending outwardly from said body and shoulder and forming a continuation thereof, and a pair of fingers projecting outwardly from the rearwardly extending part and having their inner edges disposed spaced from the adjacent edges of the arms, the arms being adapted to be inserted within the hollow rib and the fingers being adapted to overlie and engage the outer face of the screed.

1,753,597. METHOD OF FORMING LOCK NUTS. HARLEY E. BURNS, Columbus, Ohio. Filed May 4, 1927. Serial No. 188,614. 4 Claims. (Cl. 10—86.)



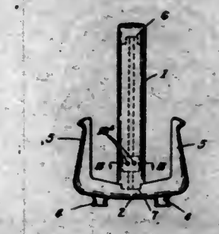
1. The method of forming lock nuts each having recessed top and bottom faces consisting of taking a rectangular bar of material, progressively forming said recessed top and bottom faces along the bar by opposed relatively reciprocating forming elements, progressively piercing the formed bar for each nut blank, and then cutting off each formed and pierced blank from the bar.

1,753,598. SHEET LATH. GEORGE A. BUTTRESS, Los Angeles, Calif., assignor to F. and B. Holding Company, Los Angeles, Calif., a Corporation of California. Filed Nov. 28, 1927. Serial No. 236,081. 6 Claims. (Cl. 72—116.)



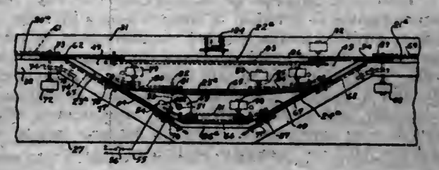
1. A fabricated rib lath, comprising a backing sheet, a series of spaced parallel ribs adhered to said backing sheet, and a facing sheet covering the outer faces and sides of said ribs and adhered thereto; said facing sheet extending between adjacent ribs in intimate superficial contact with the backing sheet throughout the area thereof extending between the ribs, and forming a flexible connection between said ribs; said backing sheet and facing sheet being projected beyond the marginal ribs to form flaps.

1,753,599. FURNITURE GLIDE. WALTER RALEIGH DARNELL, Long Beach, Calif. Filed July 13, 1927. Serial No. 205,384. 2 Claims. (Cl. 16—42.)



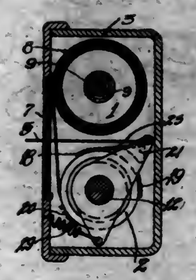
1. A furniture glide comprising a stem formed with an integral head at its lower end, a shell having a central aperture to receive said stem, the material of said shell being pressed into close engagement with said stem immediately above the head thereof, said shell being formed with a circumferential depending skirt, and a shoe having an upwardly extending wall pressed into frictional engagement with the outer surface of said skirt, said shell having at its inner periphery a substantially cylindrical flange embracing a portion of said stem and engaging at its lower end the head of said stem.

1,753,600. FURNITURE GLIDE. WALTER RALEIGH DARNELL, Long Beach, Calif. Filed July 13, 1927. Serial No. 205,385. 2 Claims. (Cl. 16—42.)



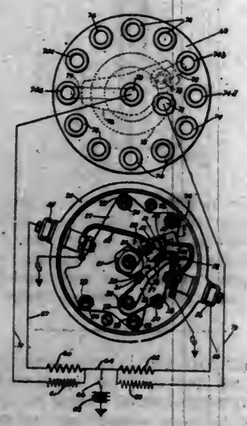
1. A furniture glide comprising a shoe having a peripheral upstanding wall, a shell formed with a central aperture and with a countersink concentrically thereof and with an annular plane surface of material and considerable width outside of said countersink, said shell being formed with a depending skirt adapted to fit within the wall of said shoe and having an inwardly directed lower marginal portion, a stem formed with a peripheral flange providing a shoulder spaced from its lower end, said stem extending through the aperture of said shell and arranged with its peripheral flange entirely received within said countersink, a spacing member mounted on said stem in engagement with the lower surface of the countersink of said shell, and a reenforcing disk on the lower end of said stem in engagement with said spacing member and also having its margin overlapping and resting upon the inwardly directed marginal portion of the skirt of said shell, said stem being upset against the lower face of said disk, whereby the stem, shell, spacing member and disk are rigidly assembled together, the wall of said shoe being pressed into frictional engagement with the outer surface of said skirt to assemble the shoe to said shell.

1,753,601. ELECTRIC HEATER. GEORGE EATON, Cleveland, Ohio, assignor, by mesne assignments, to Pan Electric Manufacturing Corporation, a Corporation of Ohio. Filed July 6, 1927. Serial No. 203,771. 21 Claims. (Cl. 219—19.)



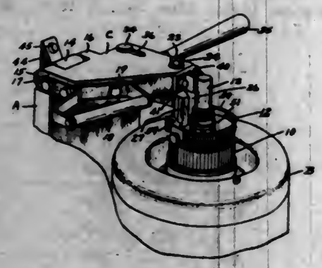
1. An electric heater comprising a preliminarily and completely formed integral, one-piece, main frame unit, an electric resistance, and a holder upon which said resistance is mounted, said holder having resilient means adapted for spring engagement with said frame for assembly of the same in said complete frame unit.

1,753,602. METHOD AND APPARATUS FOR DIRECTING THE SWITCHING OF RAILWAY CARS AT YARDS AND TERMINALS. LEON M. GIBBS, Chicago, Ill., assignor, by mesne assignments, to Teleswitch Corporation, a Corporation of Alabama. Filed Feb. 8, 1927, Serial No. 166,762. Renewed June 26, 1929. 43 Claims. (Cl. 104—26.)



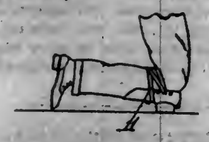
40. The method for indicating the position and movement of railway vehicles in a multiple track railway yard, which consists in providing separate indicia for the separate tracks in said yard, and causing the separate vehicles to present identifying indicia in association with the indicia for the tracks they occupy.

1,753,603. CHANGEABLE EXHIBITOR. WILLIAM J. GRAY, Eugene, Oreg. Filed Jan. 3, 1929. Serial No. 330,095. 3 Claims. (Cl. 40—90.)



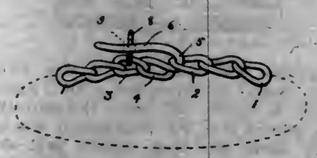
1. The combination with a spring controlled roller, an operating roller having stepped ratchets thereon, a shaft for the operating roller and a web connected to said rollers, of an operating lever pivoted on the shaft, reversible pawls carried by said lever for alternate co-action with said ratchets, and a spring for holding the lever in normal position.

1,753,604. IGNITION APPARATUS. HERMAN LEWIS HARTZELL, Anderson, Ind., assignor to Delco-Remy Corporation, Anderson, Ind., a Corporation of Delaware. Filed May 15, 1929. Serial No. 363,394. 9 Claims. (Cl. 123—148.)



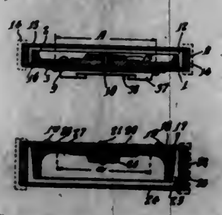
1. Ignition apparatus for multicylinder internal combustion engines comprising, in combination, a plurality of primary circuits, means adapted simultaneously to interrupt said circuits, said means comprising a pivoted breaker lever, a contact on said lever for each primary circuit, and a member insulatingly supporting a stationary contact for each primary circuit, the breaker lever being operable simultaneously to move its contacts out of engagement with the respective stationary contacts.

1,753,605. APPARATUS FOR ASSEMBLING ARMATURES. MORTIN HENNING, Dayton, Ohio, assignor, by mesne assignments, to Delco Products Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Oct. 9, 1928. Serial No. 311,395. 6 Claims. (Cl. 29—84.)



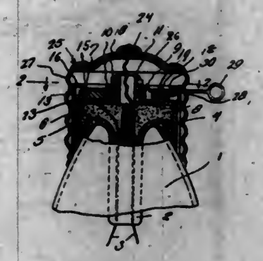
1. An apparatus for securing balance weights having formable parts to a retainer on a shaft to be balanced, comprising, in combination, a pivotally mounted support, means for holding each balance weight while being attached, a pair of movable members each having a jaw on one end for engaging the formable parts of the balance weights for securing the balance weights in place, and means for moving said members.

1,753,606. KNEELING PAD. WILLIAM HOLMES, Chicago, Ill. Filed Oct. 24, 1928. Serial No. 314,715. 8 Claims. (Cl. 2—24.)



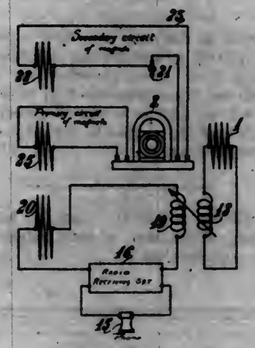
1. A one piece molded kneeling pad of resilient material including a knee receiving recess and having a suction cup for engaging a work surface, said pad having an aperture communicating with the interior of said cup and said recess disposed so as to be closed by the knee of the wearer for creating suction within said cup.

1,753,607. CHAIN HOOK. GUSTAV JOHNSON, Duluth, Minn. Filed June 21, 1929. Serial No. 372,721. 1 Claim. (Cl. 24—68.)



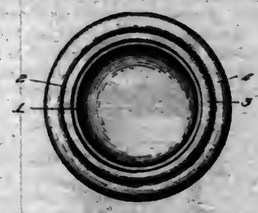
A terminal hook for chains having twin loops at one end one being open for selective engagement with links of one end of the chain and the other loop permanently attached to the opposite end of the chain, and a hook carried by the chain adjacent the terminal hook for locking engagement therewith.

1,753,608. MOLDING APPARATUS. LLOYD D. KAY, Los Angeles, Calif. Filed Jan. 30, 1928. Serial No. 250,602. 4 Claims. (Cl. 22—158.)



1. In molding apparatus for molding wheels or the like in a flask, a pattern having a plate in combination with an annular pattern member corresponding to the rim of the wheel permanently attached to the side of the plate, and a central pattern member removably attached to the plate corresponding to the central part of the wheel and matching with the annular pattern member to form joints on radial lines to form a complete pattern for the drag of the mold, a second pattern having a plate in combination with a second annular pattern member corresponding to the rim of the wheel permanently attached to the side of the second named plate, and a second central pattern member removably attached to the second named plate corresponding to the central part of the wheel and matching with the second named annular pattern member to form joints located on radial lines from the center of the pattern to form a complete pattern for the cope of the mold, said first named central pattern member and said second named rim member being constructed so that they will not match together to form joints of the pattern, and said second named central pattern member and said first named annular pattern member being constructed so that they will not match together to form joints of the pattern.

1,753,609. BASE CONSTRUCTION FOR ELECTRIC BULBS. AUGUST C. KOETH and SIEGFRIED REDEKER, Sunbury, and KURT MAHNKE, Williamsport, Pa. Filed Apr. 9, 1927. Serial No. 182,428. 3 Claims. (Cl. 176—31.)

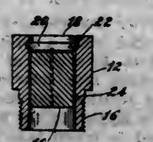


1. A device comprising an electric bulb having a filament therein, a base casing mounted on one end of said bulb, a contact member mounted on said casing, said casing having an arcuate projection thereon provided with a pair of shoulders, a rotatable member mounted on said base casing, a contact tongue and a locking tongue carried by said rotatable member, said contact tongue being adapted for frictional engagement with the contact member on the casing when in one position and said locking tongue cooperating with the arcuate projection for locking said rotatable member against rotation on said casing when in another position, said rotatable member being normally prevented from movement into locking position by the frictional engagement of said contact tongue and the contact member during the application of the device to a lamp socket and operable for movement into locking position upon removal of the bulb from the socket.

1,753,610. MEANS FOR ANNULLING THE EFFECT OF STRAY FIELDS ON RADIO RECEIVING SYSTEMS. WILLIAM ARTHUR LOTH, Paris, France, assignor to Societe Industrielle des Procedes W. A. Loth, Paris, France. Filed Oct. 3, 1923, Serial No. 666,395, and in France Sept. 7, 1923. 5 Claims. (Cl. 250—20.)

1. In a magnetic field or electro-magnetic wave receiving system including a loop antenna, an internal combustion engine having a magneto with primary and secondary winding, an emitting winding arranged in series with the primary winding of the magneto to induce in the antenna currents which are equal and in opposition to those induced by the primary current of the magneto.

1,753,611. TRAY. MELVIN S. LOWER, Barberton, Ohio, assignor to The Sun Rubber Company, a Corporation of Ohio. Filed Aug. 15, 1928. Serial No. 299,864. 2 Claims. (Cl. 215—12.)



1. A device of the character described, comprising a cup-shaped member of flexible rubber having a thick flange-like part around the exterior of the lower end, the bottom face of said member being concave, and a rigid receptacle fitting into the cavity in said member.

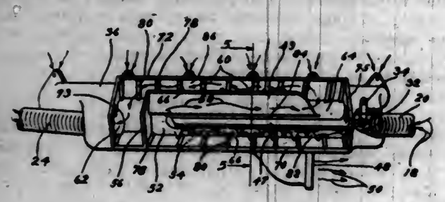
1,753,612. TANDEM-WHEELED AIRCRAFT. FLORIAN F. MANOR, Oshkosh, Wis. Filed July 23, 1927. Serial No. 207,965. 1 Claim. (Cl. 244—2.)

In an airplane capable of sustained flight, the combination of a body portion having an opening in the lower part thereof toward the rear of the body and having the lower part of the front curved upwardly and outwardly for a substantial distance, a single wheel mounted in the rear opening, a single steerable front wheel projecting from the upwardly curved front portion, and a driving motor and propeller carried by the outwardly curved front portion in advance of the front wheel.

1,753,613. GAS BURNER. PHILIP WM. MCCOY, Toledo, Ohio, assignor to The Surface Combustion Company, Inc., Toledo, Ohio, a Corporation of New York. Filed Jan. 10, 1929. Serial No. 331,540. 7 Claims. (Cl. 158—99.)

7. A gas burner comprising a cylindrical plug, a tubular body within which said plug is supported in concentrically spaced relation to provide a restricted annular feed passage for the gaseous mixture to be burned, said plug terminating short of the outlet end of said body whereby a shallow well is provided, the well being undercut below its top, the rim at the mouth of said well having substantially the same internal diameter as the outer wall of the feed passage.

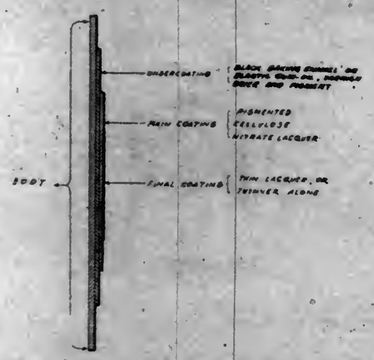
1,753,614. FLASH LIGHT ATTACHMENT. NICKOLAS MENOUSSIS, New York, N. Y. Filed Dec. 28, 1928. Serial No. 329,050. 3 Claims. (Cl. 240—10.5.)



1. In combination with a flashlight having a tubular casing, a concavo convex lens at one end of said casing and

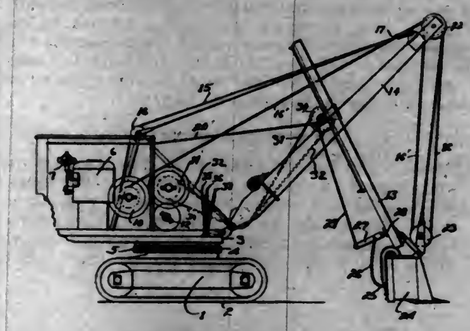
a source of light, guides located upon diametrically opposite sides of the casing, arms disposed longitudinally of the casing and movable in said guides, a concavo con-

vex lens mounted at the outer ends of the arms and positioned reversely with respect to the first mentioned lens, and means connecting the arms to move the same simultaneously and adjust the relative positions of the lenses.



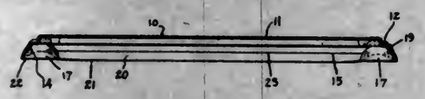
1,753,615. AUTOMOBILE HEATER. EARL BALFOUR MILLER, Brattleboro, Vt., assignor to Mastercrafts Corporation, Brattleboro, Vt., a Corporation of Vermont. Filed Nov. 21, 1925. Serial No. 70,551. 7 Claims. (Cl. 257—241.)

4. A heating device comprising a manifold for waste heated gases provided with a wall, means forming an external chamber with the outside of the wall, the external chamber being divided into sub-chambers connected together into zig-zag relation and each sub-chamber being formed in part by a portion of the wall, the waste heated gases being adapted to travel into the manifold against that portion of the inside of the wall corresponding to the portion of the said outside of the wall that forms part of one of the sub-chambers to heat the said portion of the said inside of the wall more than other parts of the manifold, air to be heated being adapted to travel first through one sub-chamber and then through the remainder of the external chamber.



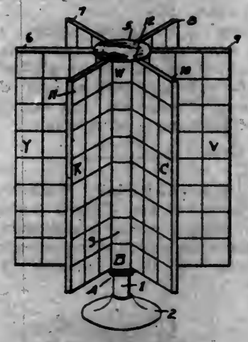
1,753,616. PROCESS OF FINISHING SURFACES WITH CELLULOSE NITRATE LACQUERS. HARRY C. MOUGEY, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed July 29, 1925. Serial No. 46,883. 9 Claims. (Cl. 91—70.)

1. A process of finishing vehicle body or other surfaces comprising applying thereto an adherent undercoating containing drying oil and pigment, drying said undercoating and applying thereto a main color coating of pigmented cellulose nitrate lacquer; the material of the undercoating



and the thinner of the lacquer having such properties that the undercoating, when properly dried, is only slightly softened by the lacquer.

1,753,617. ELECTROMAGNETIC HYDROCARBON ACCELERATOR. JOSEPH B. NEWTON, Roseville, Calif. Filed Feb. 23, 1927. Serial No. 170,167. 2 Claims. (Cl. 214—135.)



1. In a device of the class described, a power shovel, an engine, and control means for the different operations of said shovel, a slow speed governor for said engine, a series of electrical circuits operated by said control means, adapted to act on said slow speed governor to increase the acceleration of the engine in different degree for each of said control means.

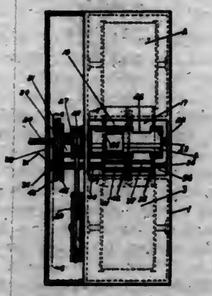
1,753,618. FROST SHIELD. EMIL T. NORBECK, Minneapolis, Minn. Filed Mar. 9, 1928. Serial No. 260,417. 9 Claims. (Cl. 20—40.5.)

1. A frost shield comprising a transparent celluloid member having the marginal portions thereof bent out of the plane of the body of said member to form a frame integral therewith, the edge of said member extending obliquely outwardly from said frame, and a flexible contact strip attached to said oblique edge and extending in the same direction as said edge.

1,753,619. COLOR CHART. JOHN E. NORBERG, San Francisco, Calif. Filed Feb. 1, 1928. Serial No. 251,052. 2 Claims. (Cl. 88—14.)

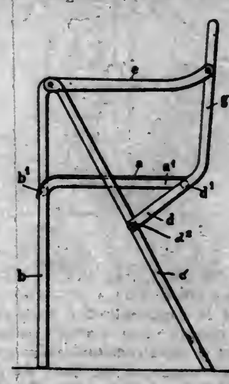
1. A color chart compris'ng a central core carrying gradations from white to black along its length, and a plurality of leaves secured thereto, each leaf carrying different hue gradations from a position on one edge of the leaf toward the three other edges.

1,753,620. ELECTRIC SWITCH. HARRY E. NORVIEL, Anderson, Ind., assignor to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Jan. 28, 1928. Serial No. 250,103. 5 Claims. (Cl. 200—155.)



1. An electric switch comprising, in combination, a main supporting plate carrying a bearing, an operating shaft journaled in the bearing and having a handle located on one side of the plate, a non-conducting contact carrier supported by the shaft on the other side of the plate, a bridging conductor carried by the carrier and having contact elements extending along the sides of the carrier, and a sub-assembly structure attached to the plate and comprising a non-conducting plate carrying terminals connected with leaf spring conductors engageable with the contact elements of the bridging conductor.

1,753,621. ELECTRIC SWITCH. HARRY E. NORVIEL and VANCE ECOFF, Madison, Ind., assignors to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Feb. 20, 1928. Serial No. 255,543. 10 Claims. (Cl. 200—11.)



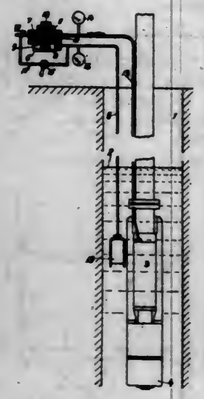
1. An electric switch comprising, in combination, a case having an end wall provided with stationary contacts, a movable contact rotatable within the case adjacent the stationary contacts, a plate rotatable adjacent the other end wall of the case, a spring located between the movable contact and plate and tending to urge the movable contact toward the stationary contacts and the plate against the case wall adjacent thereto, cooperating provisions provided by the plate and adjacent the end wall and cooperating with said spring to yieldingly maintain the plate in various positions of rotation, means drivingly connecting the contact and plate, and means for operating the plate.

1,753,622. PHOTOGRAPHIC CAMERA. FREEMAN H. OWENS, New York, N. Y., assignor to Owens Development Corporation, New York, N. Y., a Corporation of New York. Filed Oct. 8, 1926. Serial No. 140,289. 4 Claims. (Cl. 88—16.6.)

1. A photographic camera comprising a casing, two lenses therein, two strips of film in said casing, one adapted to move past each lens, a tubular shutter mounted for rotation between said lenses and film strips, means on said shutter for alternately uncovering said film strips, and means for alternately moving said strips, said movement taking place only when a strip is obscured from its lens by said shutter, said moving means comprising sprockets engaging said film, and mechanism for intermittently rotating said sprockets, and including a star wheel for each sprocket and means actuated on the rotation of the shutter for alternately engaging and rotating said star wheels.

1,753,623. PIECES OF FURNITURE CAPABLE OF BEING SUPERPOSED. JULIEN HENRI PORCHÉ, Paris, France, assignor to Societe des Meubles Superposables, Societe à Responsabilite Limitee, Gennevilliers, Seine, France. Filed Oct. 31, 1927, Serial No. 230,130, and in France July 2, 1927. 3 Claims. (Cl. 155—2.)

2. Pieces of furniture capable of being superposed and fitting into each other, comprising: a panel adapted to form

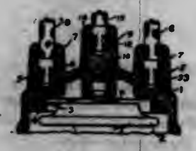


the seat of a chair,—two pairs of legs integral with each other in each pair, and formed at an angle to each other and secured on two of the opposite sides of the seat, the pairs of legs lying in planes parallel to each other,—a back comprising two posts integral with one of the pairs of legs of the chair.

1,753,624. ELECTRIC SWITCH. FRANK H. PRESCOTT, Anderson, Ind., assignor to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Jan. 28, 1928. Serial No. 250,126. 7 Claims. (Cl. 200—11.)

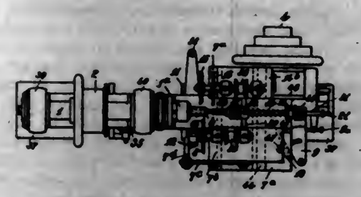
1. An electric switch comprising a rotatable contact carrier, a detent plate rotatable coaxially with the carrier, driving connections between the plate and carrier and permitting relative axial movement between the plate and carrier, a driving member connected with the carrier and plate through said driving connections between them, a case enclosing the carrier, plate and member, stationary contacts carried by a wall of the case, a movable contact attached to the carrier and engageable with the stationary contacts, means for urging the movable contact against the stationary contacts and for urging the detent plate toward another wall of the case, and cooperating projection-and-recess locating means provided by the case and detent plate.

1,753,625. REGULATOR FOR CONTROLLING FLUID PRESSURE IN SUBMERGED MACHINES. HARRY SAUVEUR, Hanover-Wulfel, Germany. Filed Dec. 20, 1927, Serial No. 241,439, and in Germany Aug. 11, 1927. 3 Claims. (Cl. 50—10.)



1. A device for controlling the fluid pressure in submerged machines comprising a regulator arranged above the ground and in communication with said machine to supply a fluid thereto; and a vessel submerged adjacent the machine and in fluid communication with said regulator to convey by means of the fluid the pressure of the liquid surrounding the machine directly to the regulator whereby said regulator will maintain a predetermined fluid pressure within the machine.

1,753,626. PROCESS FOR THE MANUFACTURE OF HORN-LIKE MATERIAL. JULIUS SCHLINCK and GEORG MÜNCHMEYER, Hamburg, Germany. Filed Feb. 17, 1926, Serial No. 88,962, and in Germany Feb. 21, 1925. 2 Claims. (Cl. 106—38.)

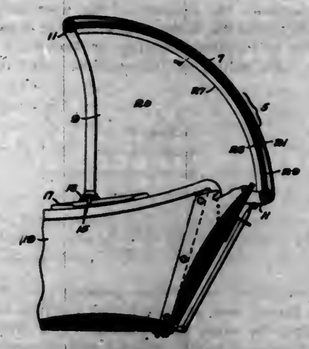


1. The process of preparing horn-like materials from casein which comprises treating the casein mixed with a hardening medium comprising the product of the treatment of paraformaldehyde with an acid selected from the group consisting of sulphuric acid and formic acid for the purpose of hardening said materials.

1,753,627. CABLE TERMINAL. WOLFGANG E. SCHWARZMANN, Longmeadow, and ADOLPH ROSNER, Springfield, Mass., assignors, by mesne assignments, to The Electric Auto-Lite Company, a Corporation of Ohio. Filed July 29, 1921. Serial No. 488,304. 3 Claims. (Cl. 173—269.)

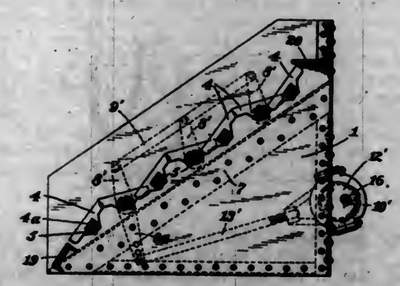
1. A socket fitting plug adapted to be attached to the end of an electric cable, comprising a tubular body portion having an open end adapted to receive the end of the cable, the sides of said body portion being adapted to snugly fit the sides of the cable; a prong integral with said tubular body portion, forming in part the closure for the opposite end thereof and adapted to enter the conducting portion of said cable as said cable is inserted into said body portion; means to reinforce said prong against distortion when said cable is so inserted; and means integral with the sides of said body portion adapted to close in upon said cable to prevent the removal of said cable when such removal is attempted.

1,753,628. MACHINE FOR MAKING SPOOLS OR BOBBINS. ERNST SCHWEIZER, Basel, Switzerland. Filed July 7, 1926, Serial No. 121,020, and in Switzerland July 11, 1925. 4 Claims. (Cl. 144—14.)



1. A machine for making wooden spools from a rod, having a rotating hollow shaft, means for clamping a rod therein, a rotating drill for drilling said rod, a narrow disc cutter, whereby only a fraction of the surface to be worked upon comes in contact with the cutter, and means for guiding said cutter both obliquely and parallel to the axis of said workpiece.

1,753,629. HOOD. HAROLD F. SHAW, Leominster, Mass., assignor to F. A. Whitney Carriage Company, Leominster, Mass., a Corporation of Massachusetts. Original application filed June 6, 1927, Serial No. 196,934. Divided and this application filed Jan. 6, 1928. Serial No. 244,837. 1 Claim. (Cl. 296—110.)



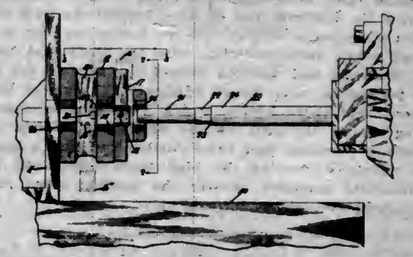
A baby carriage hood having a top and sides shaped from sheet metal as a self-contained unitary shell in the form of a cylindrical sector and rolled over to provide

channels along its edges, upholstery panels for the sides having opposite edge portions received in said channels,

and a panel for the roof overlying the edges of the side panels sprung in position between said edge portions and maintained in said channels by its inherent resiliency.

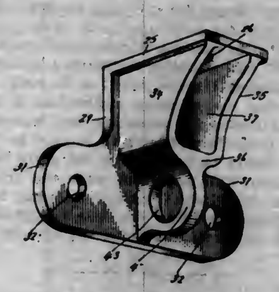
1,753,630. SCREENING MACHINE. ARTHUR D. VICKERMAN, Pueblo, Colo. Filed Mar. 3, 1928. Serial No. 258,965. 3 Claims. (Cl. 209—396.)

1. A grizzly type screening machine comprising a frame, two sets of rock shafts carried by the frame and disposed in a downwardly inclined plane, said shafts being alternately arranged, a series of rocker bars detachably secured to said shafts centrally of their length to form a screen bed, the bars on adjacent shafts being staggered and intermeshing and being approximately the width of the space between adjacent bars so that the bars on one shaft serve to wipe between the bars on adjacent shafts, rocker-arms secured to the outer ends of the shafts and projecting upwardly therefrom, the arms on alternate shafts being connected by links, the rocker-arms on the two shafts nearest the lower end being provided with downward extensions, connecting rods secured to the outer ends of said extensions, and means for simultaneously oscillating said connecting rods in opposite directions to thereby produce an undulatory motion along the screen bed.



1,753,631. CLOSURE ELEMENT. ROLLO F. WALTERS, Detroit, Mich., assignor, by mesne assignments, to United-Carr Fastener Corporation, Cambridge, Mass., a Corporation of Massachusetts. Filed July 14, 1927. Serial No. 205,741. 1 Claim. (Cl. 220—60.)

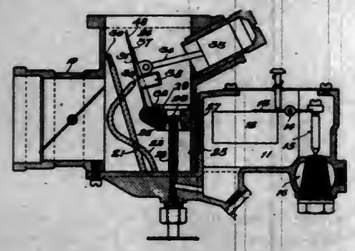
A closure button having at its under side an annular series of relatively narrow fingers flat in cross-section to permit bending upon straight lines where they join the closure button, each of said fingers having a relatively abrupt shoulder and a guiding portion extending toward



the axis of the closure button at an angle relative to a plane at right angles to the axis of the closure button as and for the purposes illustrated and described.

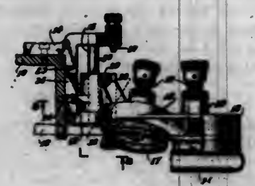
1,753,632. MACHINE FOR AND METHOD OF FINISHING BUSHINGS. HARRY M. WILLIAMS and CHARLES L. LEE, Dayton, Ohio, assignors to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed May 22, 1923. Serial No. 640,798. 6 Claims. (Cl. 29—90.)

5. The method of sizing a bushing of porous metallic material to a desired predetermined size, which consists in inserting therethrough an arbor having a diameter equal to the desired inner diameter of the bushing, then compressing the bushing on said arbor by passing the bushing through a die having the desired diameter while holding the bushing in fixed position relative to the arbor whereby burnishing of the inner surface of the bushing during the sizing operation is prevented.



1,753,633. CARLINE BRACKET. THERON H. WILLIAMS, Chicago, Ill., assignor, by mesne assignments, to Chicago-Cleveland Car Roofing Company, Chicago, Ill., a Corporation of Delaware. Filed May 31, 1923. Serial No. 642,425. 2 Claims. (Cl. 108—5.7.)

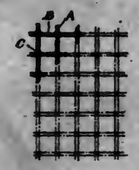
1. A carline bracket comprising, a carline engaging member; a side plate engaging member; a plurality of rigidifying parts for said carline and side plate engaging members; said rigidifying parts converging at their lower ends to provide a pulley supporting member.



CARNEGIE LIBRARY OF ATLANTA

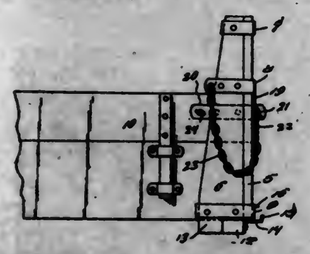
1,753,634. CARBURETOR. LOUIS C. WOLFE, Altoona, Pa. Filed Jan. 13, 1926. Serial No. 81,069. 3 Claims. (Cl. 261—41.)

1. A multiple jet carburetor having a main air passage, a segment shaped insert arranged in said air passage, a segment shaped insert arranged in said air passage and having a Venturi opening, a float chamber a sump chamber below the float chamber, a manually operated needle valve controlling communication between the float chamber and the sump, a low speed fuel nozzle communicating with said sump and projecting into said Venturi opening, a medium speed nozzle communicating with said sump and having its discharge end directed toward the wall of the main air passage adjacent the air intake opening, a high speed nozzle communicating with the sump and having its discharge end directed toward the axis of the main air passage, a valve hinged adjacent said segment shaped insert, said valve having a free edge portion normally lying against the wall towards which said medium speed nozzle is directed, said valve further carrying a housing for normally covering the high speed nozzle and being notched to normally uncover the medium speed nozzle, and cushioning means for said valve.



1,753,635. GRINDING DEVICE FOR MEAT-SLICING MACHINES. GEORGE RUE WOOD, Dayton, Ohio, assignor to Dayton Scale Company, Dayton, Ohio, a Corporation of New Jersey. Filed May 28, 1923. Serial No. 642,008. 13 Claims. (Cl. 51—248.)

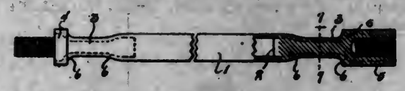
1. A grinder device for a slicing machine comprising a grinder assembly for a circular knife having its periphery guarded by a main guard, a supplemental guard carried by said assembly, said assembly including a grinder box with grinder mechanism therein, said box forming a guard for the knife when the grinding mechanism is in grinding position, and means for mounting said assembly to permit it to be laterally shifted with respect to the knife to bring the grinders to one side of the knife and the supplemental guard into alignment with the knife, said assembly when oppositely displaced bringing the grinders and the enclosed guarding box into alignment with the knife and the supplemental guard out of alignment therewith.



1,753,636. INTERTWISTED NET HAVING SQUARE-SHAPED MESHES. TAKEJIRO YAMAMOTO, Akashi, Hyogo, Japan. Filed Dec. 22, 1928, Serial No. 327,976, and in Japan Dec. 28, 1927. 1 Claim. (Cl. 96—23.)

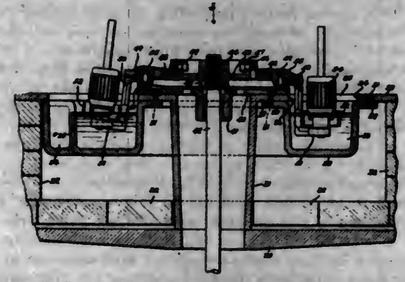
An intertwisted net comprising, in combination, a series of warp threads and a series of weft threads, all said threads consisting of two strands only, each warp thread intersecting with the weft threads so that the two strands of the warp thread continue in the same direction beyond the points of intersection, and at the points of intersection pass between the strands of the weft threads so as to interlock therewith without knotting or separate splicing, thereby preventing shifting of the warp and weft threads at said points of intersection; said interlocking

being accomplished as follows: passing strand number 1 of a warp thread over strands 3 and 4 of the weft thread, then passing the same warp strand under strands 3 and 2 and lastly over strand 3; passing strand number 2 of the samp warp thread under strand 4, over strand 1, under strand 3, over strand 4 and lastly under strand 4; strand 3 of the weft thread passing under strand 1, as stated, over strand 4, over strands 3 and 1, as stated, and under strand 1, as stated.



1,753,637. END GATE. CLOYD HAROLD ARNTZEN, Canton, Mo. Filed Mar. 9, 1928. Serial No. 260,506. 1 Claim. (Cl. 296—57.)

The combination with a wagon body having an end gate provided with a bottom and side wings, of a transverse cleat at the rear of the wagon body, tongues extending from the side wings for engaging behind the ends of the cleat when the gate is in raised position, outer, inner and intermediate brace bars embracing and secured to the bottom and side wings of the end gate, depending wear plates integrally formed with the intermediate brace bar and having slots for registering with slots in the bottom of the end gate and adapted to receive holding straps on the body for holding the end gate in place, a pair of rigidly mounted rearwardly projecting lugs carried by the inner bar, and located at longitudinally spaced points, and a pair of complemental right angularly shaped duplicate brackets secured to the rear end of the bottom of the wagon body, the lower edge of said end gate being removably fulcrumed in said brackets, said brackets having their horizontal portions provided with upwardly directed and outwardly curved cam-forming flanges, said lugs being engageable with said flanges and serving to produce a cam action for forcibly binding the lower end of the end gate firmly against the end of the wagon body, when the end gate is swung down, thereby providing a tight joint between the end gate and wagon body.



1,753,638. PROCESS OF MAKING COUPLINGS FOR SUCKER RODS AND THE LIKE. FRED W. AXTELL, Fort Worth, Tex. Filed Sept. 26, 1927. Serial No. 221,980. 4 Claims. (Cl. 29—148.)

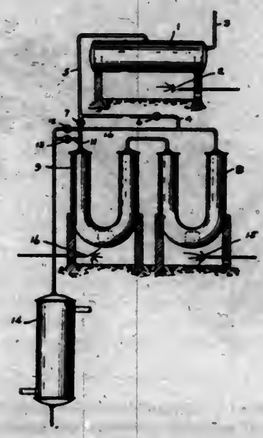
1. A process of making air and water tight pipe couplings for sucker rods which consists in selecting a pipe of required length, driving rods in the ends of the pipe, heating the pipe ends with the rods therein to welding point, upsetting the ends of the combined pipe and rods

to enlarge the same, reducing a portion of one of the enlarged members and threading to form the male coupling, and boring out the other enlarged member and threading it interiorly to form the female end of the coupling.

1,753,639. SOLDERING MACHINE. OLLIE V. BADGLEY, Anderson, Ind., assignor to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Mar. 3, 1927. Serial No. 172,479. 8 Claims. (Cl. 113—59.)

1. A device of the character described comprising, in combination, a heating oven, a tank in said oven, for containing molten solder at a certain level, a conveyor adapted to pass over said tank, supporting members attached to the conveyor, each including a depending arm provided with a platform portion substantially parallel with the surface of the solder and apertured to receive the shaft of an armature to hold said armature substantially upright with its commutator adjacent the solder, and means for dipping said members into the solder while maintaining the armature substantially upright.

1,753,640. ARMATURE-CONVEYING APPARATUS. RUSSELL W. BAKER, Anderson, Ind., assignor to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed June 29, 1928. Serial No. 289,261. 8 Claims. (Cl. 198—177.)

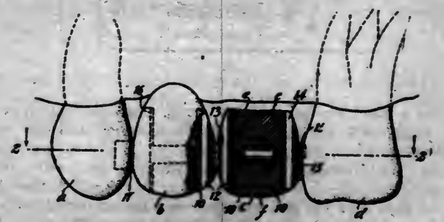


1. Apparatus for conveying dynamo armatures comprising in combination, a travelling support, and means pivotally attached to the support for holding substantially vertically an armature comprising an assembly of shaft, core and windings and having a part for directly receiving one end of the armature shaft.

1,753,641. METHOD OF BREAKING EMULSIONS. JOHN W. BECKMAN, Oakland, Calif. Filed Dec. 21, 1925. Serial No. 76,899. 8 Claims. (Cl. 196—4.)

1. The method of de-emulsifying a water-in-petroleum oil emulsion containing an emulsifying agent which consists of exposing said mixture to the action of living micro organisms adapted to destroy said agent as such.

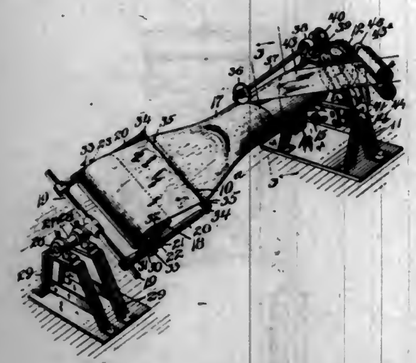
1,753,642. PROCESS AND MEANS FOR TRANSFORMING ORGANIC ACIDS INTO KETONES. JOHN W. BECKMAN, Oakland, Calif. Filed Feb. 23, 1928. Serial No. 256,468. 2 Claims. (Cl. 260—131.)



1. The process of transforming organic acids contained in a hydrocarbon mixture into ketones and aldehydes which consists in forcing an intimate contact of said mixture with a mass of pulverulent metal oxide while maintained at a temperature of below 300° C. whereby the said acid is decomposed forming salts of said metal in said mass, then heating said mass to a temperature above 300° C. and decomposing said salts whereby ketones and aldehydes are given off.

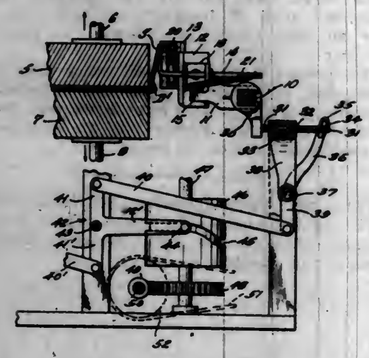
1,753,643. METHOD OF PROCESSING CEREAL GRAINS. JOHN W. BECKMAN, Oakland, Calif. Filed Mar. 20, 1929. Serial No. 348,664. 2 Claims. (Cl. 83—28.)

1. The process of treating cereal grains which consists in subjecting the grains to a solution of substantially one-quarter of 1% of sodium peroxide whereby the grains are bleached and the surface fats are extracted and then washing and drying the grains.



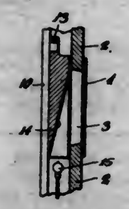
1,753,644. BIPROXIMAL TOOTH AND INTERLOCKING KEY. FRED EARLE BURDEN, Moncton, New Brunswick, Canada. Filed Nov. 28, 1927. Serial No. 236,245. 7 Claims. (Cl. 32—12.)

1. An artificial tooth formed with two sockets one each at the mesial and distal surfaces thereof, two intermediately joined bushings in said sockets presenting longi-



tudinal openings at the outer sides, posts in said bushings, and means on the posts to fasten the same to the crowns of abutment teeth, said sockets consisting of biproximal grooves traversing the mesial and distal surfaces for the entire distance presented by said surfaces between two opposite surfaces.

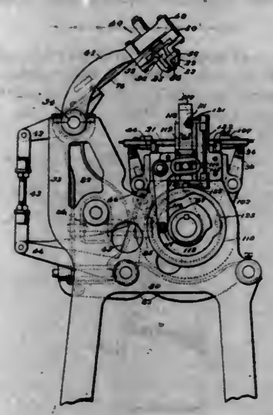
1,753,645. MACHINE FOR CUTTING BIAS STRIPS. WILLIAM H. CAMFIELD, Newark, N. J., assignor of one-half to Walter Prior, East Orange, N. J., and one-half to Walter Prior, jr., South Orange, N. J. Filed Apr. 18, 1924. Serial No. 707,366. 12 Claims. (Cl. 164—65.)



1. A machine for cutting bias strips comprising a rotatable cylindrical mandrel fixed against longitudinal movement and adapted to occupy and rotate with it a sleeve of fabric, a knife to cut said fabric to form a strip, and take-up means for pulling on the strip as it comes from the knife and to cause the sleeve to move longitudinally on the mandrel.

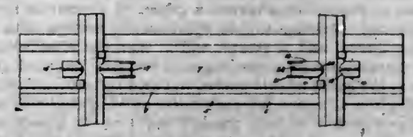
1,753,646. BOX-WRAPPING DEVICE. RAYMOND C. CUNNINGHAM, Seattle, Wash., assignor to Hincher Paper Box Co., Seattle, Wash., a Corporation of Washington. Filed Sept. 12, 1927. Serial No. 219,018. 1 Claim. (Cl. 93—54.)

In a machine for covering boxes, the combination with a form block having a box blank and side and end wall securing flaps mounted thereon, of reciprocatory wing bars, lap pressing plates mounted upon said wing bars and arranged to press projecting portions of the side wall flaps over the end wall flaps and spring regulated rods rendered operable by the travel of said wing bars for pressing and holding the side walls and flaps of the box blank against the form block, prior to and during the operation of the lap pressing plates.



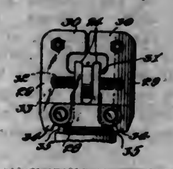
1,753,647. FRAMING-LIGHT MECHANISM. AUGUSTO DINA, Jersey City, N. J., assignor to International Projector Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 12, 1928. Serial No. 325,564. 11 Claims. (Cl. 88—19.)

1. In a motion picture projection machine having a projection aperture therein, the combination of a fire shutter adapted to close said aperture when said machine is not operating, said shutter being provided with a light reflecting surface on its inner side for reflecting light to illuminate said projection aperture, and a source of light projected on to said reflecting surface.



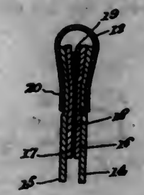
3. In a motion picture projection machine which is provided with a projection aperture, a film positioned in said machine and arranged to pass said aperture, a fire shutter adapted to close said aperture to protect said film when the machine is not running, said shutter being provided with a bevelled surface on the side thereof adjacent the film, and a lighting means associated with said shutter and cooperating with said bevelled surface for illuminating the top and bottom edges of said aperture to permit the framing of said film in said machine.

1,753,648. FOLDING MACHINE. WALTER L. DIXON, Boston, Mass., assignor to Reece Folding Machine Company, Boston, Mass., a Corporation of Maine. Filed Mar. 1, 1926. Serial No. 91,478. 9 Claims. (Cl. 223—15.)



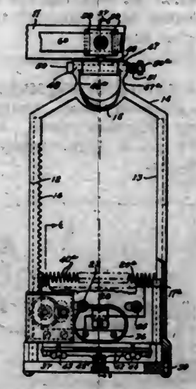
1. A folding machine for producing bellows or box folds or pleats in cloth or other blanks, having in combination a bed, a templet having opposite defining edges for the respective folds, a carrier therefor adapted to move toward and from the bed, means for shifting the templet to retract it longitudinally out of the enclosing folds, an overhanging shaping member spaced above the defining member, infolders adapted to thrust the material over the edges of the templet and thus form reverse folds between the bed and shaping member, and means for squeezing the folds after the retraction of the templet and infolders.

1,753,649. RAILROAD TIE. HENRY G. FILLER and HERBERT C. FILLER, St. Peter, Minn. Filed July 8, 1929. Serial No. 375,760. 1 Claim. (Cl. 238—101.)



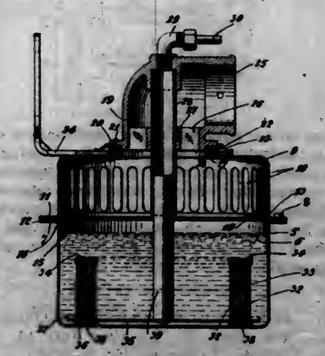
In combination, a tie having an abutment thereon for each track rail, said tie being provided with slots adjacent each abutment, a fastener for each rail, said fastener means comprising a plate having a rail engaging lip at one end, the opposite end of the plate being notched, a lug on the plate for engagement in the slot, and a pivotally mounted key member engageable within said notch for interposition between the plate and the tie and at one end of the corresponding slot, and being adapted for actuation to push the plate against the rail so that the same is centrally clamped between the adjacent abutment and the lip of the said plate, said key being provided with a notch at its free end.

1,753,650. ELECTRIC SWITCH. FRAZER W. GAY, Newark, N. J. Filed Sept. 10, 1927. Serial No. 218,643. 7 Claims. (Cl. 200—87.)



1. In an electric switch structure, in combination, cooperating make and break contact members and an electromagnet in operative relation to said contact members to become energized by current therethrough and also to exert force, and mechanical means for multiplying said force to firmly press said contact members one against the other when said electromagnet is so energized.

1,753,651. WINDSHIELD WIPER. ALEXIS F. GILLET, Omaha, Nebr., assignor to Jubilee Manufacturing Company, Omaha, Nebr., a Corporation of Nebraska. Filed May 29, 1929. Serial No. 367,055. 2 Claims. (Cl. 15—251.)



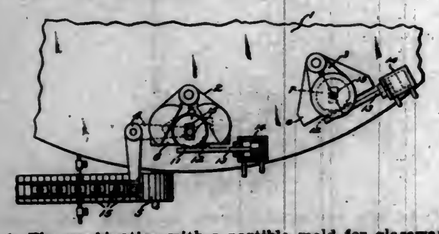
1. In a windshield wiper, a substantially U-shaped flexible and resilient sheath, long resilient outer wiping members carried in said sheath, shorter resilient wiping elements carried in said sheath and inwardly of the longer wiping element, a stiffening metal member having an enlarged inner edge portion disposed between the narrower elements, the outer edges of said elements and the reinforcing member being disposed in stepped relation, and said sheath being pinched together near its outer opened end to compress the resilient strip upon the reinforcing member.

1,753,652. HAIR-CUTTING APPARATUS. GEORGE GIRARD, New York, N. Y. Filed Feb. 25, 1928. Serial No. 256,854. 18 Claims. (Cl. 30—1.)

2. In hair cutting apparatus, in combination, a hair cutting mechanism, guiding means therefor adapted to be applied to the head, means for holding said guiding means in operative relation to the head so that said guiding means is close to the scalp adjacent the lower border portions of the latter and is spaced from the scalp at its upper end, and means responsive to movement of said cutting mechanism along said guiding means for actuating the mechanism.

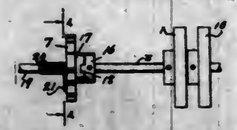
1,753,653. AIR FILTER. ALFRED M. GOODLOE, Bradford, Pa., assignor, by mesne assignments, to American Air Filter Company, Louisville, Ky., a Corporation of Delaware. Filed Dec. 10, 1926. Serial No. 153,996. 15 Claims. (Cl. 183—52.)

1. In combination with an air conduit having an inlet and an outlet leading to the point of utilization of filtered air; an air filtering medium associated with said conduit and normally isolated from air contact, and means responsive to a suction at the point of utilization to cause the air entering said conduit to flow through said filtering medium.



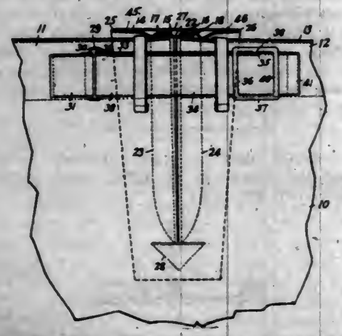
1,753,654. GOLF DRIVING MAT. MAYNARD D. HANSON, Portland, Me. Filed Apr. 26, 1929. Serial No. 358,276. 5 Claims. (Cl. 273—35.)

1. A golf driving mat having a recess formed in its upper surface, a flexible projection normally extending up-



wardly from the surface of the mat, a retaining member for the projection removably positioned in the recess and means carried by said member engageable with the lower edge of the projection for securing the same within the recess, said projection being adapted to entirely enter the recess upon being struck.

1,753,655. GLASS-FABRICATING MECHANISM. EVERETT O. HILLER, Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Jan. 3, 1928. Serial No. 244,066. 5 Claims. (Cl. 49—14.)



1. The combination with a partible mold for glassware, take-out mechanism and a receiver upon which said take-out mechanism deposits the ware, of means for properly positioning the ware with respect to the mold after it has been opened and before the ware is grasped by the take-out mechanism.

1,753,656. PRINTING TELEGRAPH. GEORGE S. HILTZ, Brooklyn, N. Y., and WILLIAM F. PURCELL, Hoboken, N. J., assignors to Stock Quotation Telegraph Company, New York, N. Y., a Corporation of New York. Filed Mar. 1, 1928. Serial No. 258,158. 3 Claims. (Cl. 178—39.)

1. In printing telegraphs, the combination of a type-wheel, an intermittently rotated shaft, a spring for rotating said shaft, a scape wheel yieldingly mounted on said shaft, a second shaft having movement relatively to the first mentioned shaft and carrying said typewheel, and a coupling for coupling the scape wheel to the last mentioned shaft, and constructed for relatively rotary movement on one direction of rotation.

1,753,657. ADJUSTABLE GARMENT CLOSURE. ISIDOR KAPLAN, New York, N. Y. Filed July 14, 1926. Serial No. 122,281. 3 Claims. (Cl. 2—237.)

2. In a garment, a pair of adjustable sections constituting the body portion of the garment and separated by a slit passing through and extending part-way of the length of the garment, said sections having straight edges adapted to meet in the most constricted position of the garment and adapted to be spread into angular position about the bottom of the slit as a vertex, a gusset of a separate piece of material, tapering to less width at the bottom than at the top thereof and of greater width, than the greatest possible distance between the edges of the slit, inturned portions at the edges of said gusset and said sections, stitching seaming the adjacent inturned portions of said gusset and sections together to form finished edges on the gusset and the sections at said slit, said gusset comprising a back panel of predetermined size in the constricted positions of the garment and edge portions folded upon said panel and said sections and substantially parallel thereto, a line of stitching terminating at the bottom of said slit, in spaced relation to said inturned portions and substantially parallel to the edge of the slit joining an edge portion of the gusset to the corresponding section, and permanent creases in said gusset at the folds between said panel and gusset edge portions for maintaining said panel and edge portions flat at all times and in approximately either one of two substantially parallel planes.

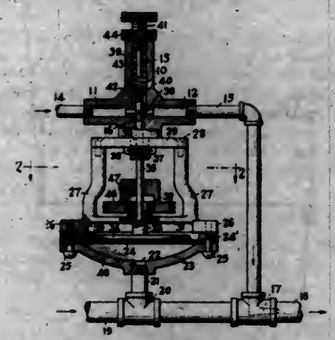
1,753,658. PROCESS FOR THE PREPARATION OF SULPHUR COMPOUNDS OF PYRIDINE. GERD KOCHENDOERFER, Frankfort-on-the-Main, Germany, assignor to Deutsche Gold & Silber Scheideanstalt vormals Roessler, Frankfort-on-the-Main, Germany, a Corporation. Filed Nov. 29, 1927, Serial No. 236,593, and in Germany Dec. 3, 1926. 6 Claims. (Cl. 260—42.)

1. A process for the preparation of a pyridyl sulfide comprising reacting a compound containing the group M—S—, wherein M is a monovalent metal, with a derivative of pyridine containing a halogen atom so as to react said metal with said halogen atom to form the metal halide and to attach the sulphur directly to the pyridine nucleus.

1,753,659. ANHYDROUS SOAP GELS AND METHOD OF MAKING SAME. VAMAN R. KOKATNUR, New York, N. Y. Filed May 13, 1926. Serial No. 108,985. 1 Claim. (Cl. 87—5.)

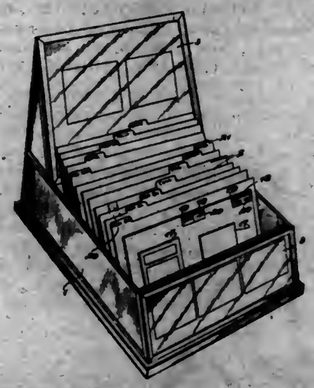
The method of making an anhydrous soap gel which comprises saponifying a glyceride with an anyhdrous alkali in a substantially anhydrous non-hydroxylic organic diluent which is a non-solvent and chemically inert with respect to the soap, and allowing the resulting anhydrous products and the diluent to congeal together.

1,753,660. CLOSURE-RETAINING MEANS FOR CONTAINERS. EDWARD P. LINCH, Philadelphia, Pa. Filed Oct. 15, 1928. Serial No. 312,433. 3 Claims. (Cl. 215—64.)



1. A neck wire for retaining means for fastening a closure for containers in closed position comprising a semicircular portion terminating at its opposite ends in coils and having curved quadrantal portions beyond said coils, the opposed ends of said quadrantal portions having outwardly projecting extensions which initially are located in divergent relation with respect to each other, the said extensions, when the ends of said quadrantal portions are moved into proximate relation to each other, being substantially parallel.

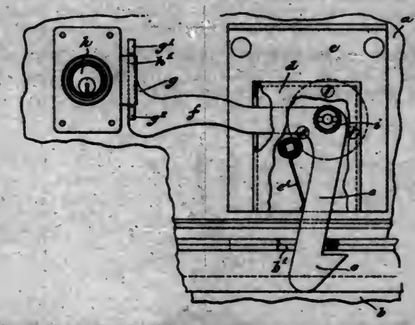
1,753,661. WATER SOFTENER AND METHOD OF PREPARING. WALTER N. MCCONKEY, Lima, Ohio. Filed Sept. 24, 1927. Serial No. 221,862. 10 Claims. (Cl. 210—23.)



1. As a new product, a liquid water softener containing aluminum hydroxide held in suspension in a water solution.

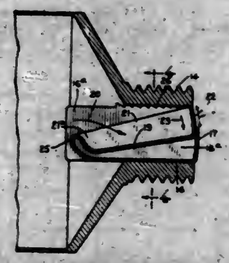
1,753,662. DIAPHRAGM VALVE. MAX MERKER, New York, N. Y. Filed Sept. 13, 1928. Serial No. 305,850. 18 Claims. (Cl. 137—78.)

18. In a diaphragm valve, a valve stem, means for rotating said stem for preventing sticking thereof, said means being ineffective to adjust the stem, and fluid pressure operated means for automatically adjusting said stem longitudinally, in response to the pressure on the valve diaphragm.



1,753,663. DISPLAY AND MERCHANDISING SYSTEM. ROBERT MILLER, Brooklyn, N. Y. Filed May 14, 1928. Serial No. 277,703. 2 Claims. (Cl. 206—73.)

1. A display cabinet comprising a receptacle, a bottom plate arranged within the receptacle and including a vertical front wall, a bottom wall inclining to the horizontal, and a rear wall inclining to the vertical, and display panels supported directly by the receptacle at a predetermined angular relation to the said front and rear walls of said bottom plate.



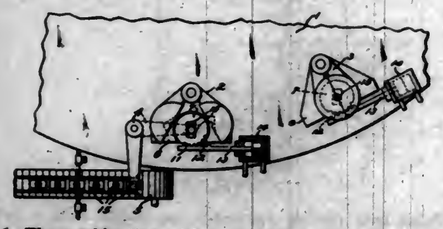
1,753,664. CENTER LOCK FOR COUNTERBALANCED ELEVATOR DOORS. CHARLES W. PEELLE, New York, N. Y., assignor to The Peelle Company, Brooklyn, N. Y., a Corporation of New York. Filed Dec. 12, 1924. Serial No. 755,445. 3 Claims. (Cl. 70—31.)

1. A center lock for counterbalanced elevator doors embodying therein the combination with a pair of oppositely and vertically movable door sections, of a manually operative latch member pivotally mounted upon the shaft side of one of said sections, an arm carried by, and extending at an angle to, said latch member, a keeper upon said arm having spaced keeper arms projecting at an angle to said arm, and a key controlled lock having a

bolt adapted to pass between said keeper arms to prevent movement of said latch member when it is engaged with its cooperating keeper, or to be withdrawn from between said arms to permit the engagement of said latch member with, or its disengagement from, its co-operating keeper.

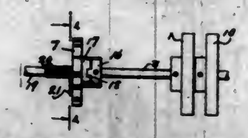
1,753,665. COLLAPSIBLE TUBE. WENDEL V. ROOS, New York, N. Y. Filed Nov. 24, 1928. Serial No. 321,679. 8 Claims. (Cl. 221—60.)

1. The combination of a collapsible tube, a unitary closure device disposed within the discharge orifice of said tube, said closure device comprising a relatively fixed element having an outer flange portion disposed adjacent the outer terminal of the discharge orifice, said flange portion extending in one dimension less than the corresponding dimension of the orifice to provide a clearance thereat and a relatively movable element having a body portion normally disposed obliquely to the direction of discharge flow of the medium within the tube, said relatively movable element further having a terminal flange portion normally extending to close said clearance, said body portion being arranged to be displaced upon application of pressure to the medium within the body of the tube and thereby displace its terminal flange portion to provide a discharge opening through said clearance and to return to normal position upon release of such pressure.



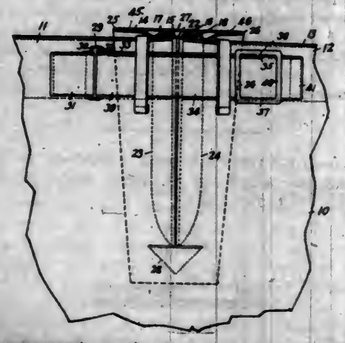
1,753,666. UMBRELLA, PARASOL, AND THE LIKE. AMBROSE RYDER, Carmel, N. Y. Filed Aug. 19, 1926. Serial No. 130,157. 13 Claims. (Cl. 135—20.)

8. In combination in a device of the character described, a plurality of ribs and a stick, a cover connected



wardly from the surface of the mat, a retaining member for the projection removably positioned in the recess and means carried by said member engageable with the lower edge of the projection for securing the same within the recess, said projection being adapted to entirely enter the recess upon being struck.

1,753,655. GLASS-FABRICATING MECHANISM. EVERETT O. HILLER, Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Jan. 3, 1928. Serial No. 244,066. 5 Claims. (Cl. 49—14.)



1. The combination with a partible mold for glassware, take-out mechanism and a receiver upon which said take-out mechanism deposits the ware, of means for properly positioning the ware with respect to the mold after it has been opened and before the ware is grasped by the take-out mechanism.

1,753,656. PRINTING TELEGRAPH. GEORGE S. HILTZ, Brooklyn, N. Y., and WILLIAM F. PURCELL, Hoboken, N. J., assignors to Stock Quotation Telegraph Company, New York, N. Y., a Corporation of New York. Filed Mar. 1, 1928. Serial No. 258,158. 3 Claims. (Cl. 178—39.)

1. In printing telegraphs, the combination of a type-wheel, an intermittently rotated shaft, a spring for rotating said shaft, a scape wheel yieldingly mounted on said shaft, a second shaft having movement relatively to the first mentioned shaft and carrying said typewheel, and a coupling for coupling the scape wheel to the last mentioned shaft, and constructed for relatively rotary movement on one direction of rotation.

1,753,657. ADJUSTABLE GARMENT CLOSURE. ISIDOR KAPLAN, New York, N. Y. Filed July 14, 1926. Serial No. 122,281. 3 Claims. (Cl. 2—237.)

2. In a garment, a pair of adjustable sections constituting the body portion of the garment and separated by a slit passing through and extending part-way of the length of the garment, said sections having straight edges adapted to meet in the most constricted position of the garment and adapted to be spread into angular position about the bottom of the slit as a vertex, a gusset of a separate piece of material, tapering to less width at the bottom than at the top thereof and of greater width, than the greatest possible distance between the edges of the slit, inturned portions at the edges of said gusset and said sections, stitching seaming the adjacent inturned portions of said gusset and sections together to form finished edges on the gusset and the sections at said slit, said gusset comprising a back panel of predetermined size in the constricted positions of the garment and edge portions folded upon said panel and said sections and substantially parallel thereto, a line of stitching terminating at the bottom of said slit, in spaced relation to said inturned portions and substantially parallel to the edge of the slit joining an edge portion of the gusset to the corresponding section, and permanent creases in said gusset at the folds between said panel and gusset edge portions for maintaining said panel and edge portions flat at all times and in approximately either one of two substantially parallel planes.

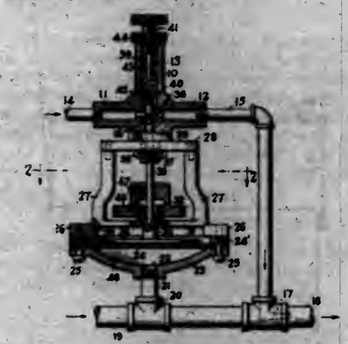
1,753,658. PROCESS FOR THE PREPARATION OF SULPHUR COMPOUNDS OF PYRIDINE. GERD KOCHENDOERFER, Frankfort-on-the-Main, Germany, assignor to Deutsche Gold & Silber Scheideanstalt vormals Roessler, Frankfort-on-the-Main, Germany, a Corporation. Filed Nov. 29, 1927, Serial No. 236,593, and in Germany Dec. 3, 1926. 6 Claims. (Cl. 260—42.)

1. A process for the preparation of a pyridyl sulfide comprising reacting a compound containing the group M—S—, wherein M is a monovalent metal, with a derivative of pyridine containing a halogen atom so as to react said metal with said halogen atom to form the metal halide and to attach the sulphur directly to the pyridine nucleus.

1,753,659. ANHYDROUS SOAP GELS AND METHOD OF MAKING SAME. VAMAN R. KOKATNUR, New York, N. Y. Filed May 13, 1926. Serial No. 108,985. 1 Claim. (Cl. 87—5.)

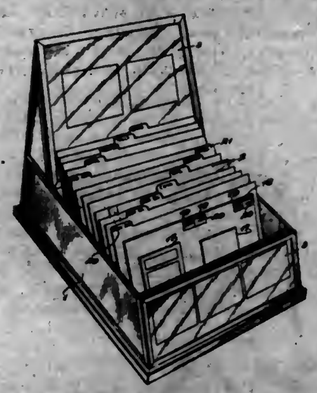
The method of making an anhydrous soap gel which comprises saponifying a glyceride with an anhydrous alkali in a substantially anhydrous non-hydroxylic organic diluent which is a non-solvent and chemically inert with respect to the soap, and allowing the resulting anhydrous products and the diluent to congeal together.

1,753,660. CLOSURE-RETAINING MEANS FOR CONTAINERS. EDWARD P. LINCH, Philadelphia, Pa. Filed Oct. 15, 1928. Serial No. 312,433. 3 Claims. (Cl. 215—64.)



1. A neck wire for retaining means for fastening a closure for containers in closed position comprising a semicircular portion terminating at its opposite ends in coils and having curved quadrantal portions beyond said coils, the opposed ends of said quadrantal portions having outwardly projecting extensions which initially are located in divergent relation with respect to each other, the said extensions, when the ends of said quadrantal portions are moved into proximate relation to each other, being substantially parallel.

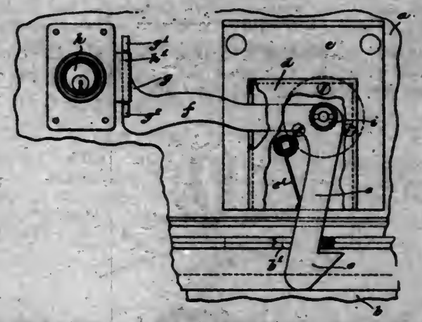
1,753,661. WATER SOFTENER AND METHOD OF PREPARING. WALTER N. MCCONKEY, Lima, Ohio. Filed Sept. 24, 1927. Serial No. 221,862. 10 Claims. (Cl. 210—23.)



1. As a new product, a liquid water softener containing aluminum hydroxide held in suspension in a water solution.

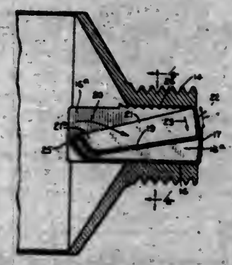
1,753,662. DIAPHRAGM VALVE. MAX MERKER, New York, N. Y. Filed Sept. 13, 1928. Serial No. 305,850. 18 Claims. (Cl. 137—78.)

18. In a diaphragm valve, a valve stem, means for rotating said stem for preventing sticking thereof, said means being ineffective to adjust the stem, and fluid pressure operated means for automatically adjusting said stem longitudinally, in response to the pressure on the valve diaphragm.



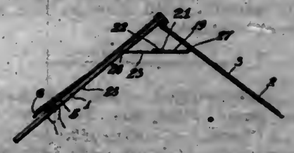
1,753,663. DISPLAY AND MERCHANDISING SYSTEM. ROBERT MILLER, Brooklyn, N. Y. Filed May 14, 1928. Serial No. 277,703. 2 Claims. (Cl. 206—73.)

1. A display cabinet comprising a receptacle, a bottom plate arranged within the receptacle and including a vertical front wall, a bottom wall inclining to the horizontal, and a rear wall inclining to the vertical, and display panels supported directly by the receptacle at a predetermined angular relation to the said front and rear walls of said bottom plate.



1,753,664. CENTER LOCK FOR COUNTERBALANCED ELEVATOR DOORS. CHARLES W. PEELLE, New York, N. Y., assignor to The Peelle Company, Brooklyn, N. Y., a Corporation of New York. Filed Dec. 12, 1924. Serial No. 755,445. 3 Claims. (Cl. 70—31.)

1. A center lock for counterbalanced elevator doors embodying therein the combination with a pair of oppositely and vertically movable door sections, of a manually operative latch member pivotally mounted upon the shaft side of one of said sections, an arm carried by, and extending at an angle to, said latch member, a keeper upon said arm having spaced keeper arms projecting at an angle to said arm, and a key controlled lock having a



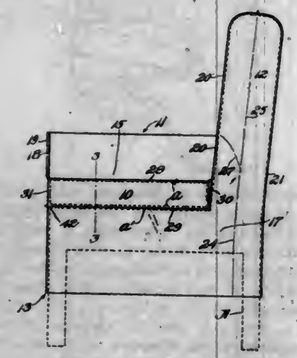
bolt adapted to pass between said keeper arms to prevent movement of said latch member when it is engaged with its cooperating keeper, or to be withdrawn from between said arms to permit the engagement of said latch member with, or its disengagement from, its co-operating keeper.

1,753,665. COLLAPSIBLE TUBE. WENDEL V. ROOS, New York, N. Y. Filed Nov. 24, 1928. Serial No. 321,679. 8 Claims. (Cl. 221—60.)

1. The combination of a collapsible tube, a unitary closure device disposed within the discharge orifice of said tube, said closure device comprising a relatively fixed element having an outer flange portion disposed adjacent the outer terminal of the discharge orifice, said flange portion extending in one dimension less than the corresponding dimension of the orifice to provide a clearance thereat and a relatively movable element having a body portion normally disposed obliquely to the direction of discharge flow of the medium within the tube, said relatively movable element further having a terminal flange portion normally extending to close said clearance, said body portion being arranged to be displaced upon application of pressure to the medium within the body of the tube and thereby displace its terminal flange portion to provide a discharge opening through said clearance and to return to normal position upon release of such pressure.

1,753,666. UMBRELLA, PARASOL, AND THE LIKE. AMBROSE RYDER, Carmel, N. Y. Filed Aug. 19, 1926. Serial No. 130,157. 13 Claims. (Cl. 135—20.)

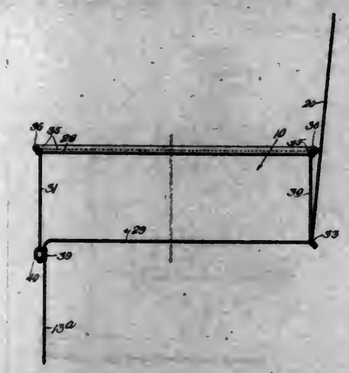
8. In combination in a device of the character described, a plurality of ribs and a stick, a cover connected



to said ribs and means for connecting said ribs and said cover to the stick, a plurality of sprenders and an operating member having a forked end portion pivotally connected to said stick, said spreaders having a connection with an intermediate part of said operating member.

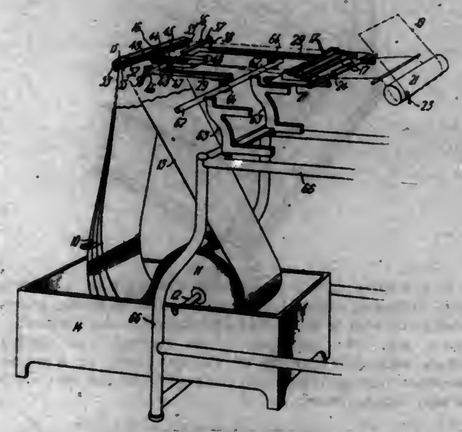
1,753,667. GARMENT HANGER. JACOB STUART SCHARF, New York, N. Y. Filed Dec. 10, 1926. Serial No. 154,002. 4 Claims. (Cl. 223—64.)

1. In a device of the class described, a garment hanger, comprising, a shoulder portion and a vertical supporting member attached thereto, said vertical member being formed of a substantially narrow plate having its upper portion transversely curved to a size sufficient to embrace the heel of a foot and operate as a shoe horn, said shoulder portion being adapted to function as a handle when the device is used as a shoe horn.



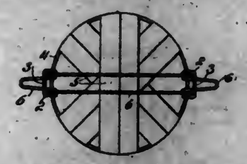
1,753,668. SLIP COVER. ABRAHAM A. SCHIMMEL, Brookline, Mass. Filed Mar. 30, 1929. Serial No. 351,347. 6 Claims. (Cl. 155—182.)

1. A slip cover for furniture made from flexible sheet material and comprising a cushion-inclosing box having a bottom wall; a back compartment, and two arm compartments communicating at their rear ends with said back compartment and extending forwardly from the latter at opposite sides of said cushion-inclosing box, said back compartment having a front wall whose lower end is connected with the back of said cushion box adjacent the bottom wall thereof so that said front wall is held by said box against upward displacement, and said arm compartments having inner side walls connected at their lower ends with the opposite sides of said box adjacent the bottom wall thereof so that they are held by said box against upward displacement.



1,753,669. SLIP COVER. ABRAHAM A. SCHIMMEL, Brookline, Mass. Filed May 20, 1929. Serial No. 364,381. 2 Claims. (Cl. 155—182.)

1. A slip cover for furniture made from flexible sheet material and comprising a cushion-inclosing box having a top wall, a bottom wall, two opposite side walls permanently connected with said top and bottom walls, a rear wall permanently connected with said top and bottom walls and also with the rear ends of said side walls, and a front wall permanently connected at its opposite ends with the front ends of said side walls and permanently connected at its top with said top wall; a back compartment, and two arm compartments communicating at their rear ends with said back compartment and extending forwardly from the latter at opposite sides of said cushion-

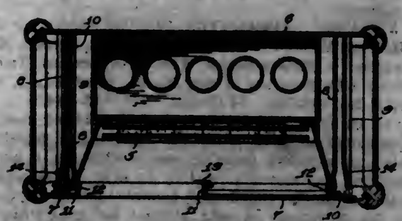


inclosing box, said back compartment having a front wall whose lower end is permanently connected with the back of said cushion box adjacent the bottom wall thereof so that said front wall is held by said box against upward displacement, and said arm compartments having their inner side walls connected at their lower ends with the opposite sides of said box adjacent the bottom wall thereof so that they are held by said box against upward displacement.

1,753,670. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 29, 1926. Serial No. 144,934. 11 Claims. (Cl. 197—126.)

1. In a billing machine provided with a letter-feeding carriage having a platen, the combination with a stationary web-supply-roll, of a web-supporting swingle-bar over which the web warps, said bar pivotally mounted between its ends on said carriage to support said web between said roll and said platen and to distribute the tension of the skewed web upon movement of said carriage, and side gages for the web upon said swingle-bar.

1,753,671. BASKET AND COVER THEREFOR. HAMBLEN A. TAYLOR, San Benito, Tex., assignor to J. O. Prentiss and L. S. Witte. Filed Jan. 30, 1928. Serial No. 250,388. 2 Claims. (Cl. 217—124.)

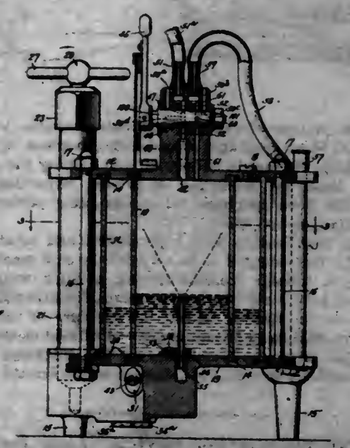


1. A basket cover having a top disposed, when in operative position on a basket, wholly between the bail handles thereof, and a pliable fastener extending clear across, fastened to and projecting outside opposite edges of the top and adapted to have its end portions extended respectively through said handles and to be bent thereover to hold the cover from upward movement, and arranged to engage both inner sides of each of said handles to hold the cover from lateral movement.

1,753,672. SOUND-AMPLIFYING DEVICE. HENRY W. THAYER, Chatham, N. J. Filed Oct. 10, 1928. Serial No. 311,450. 5 Claims. (Cl. 181—31.)

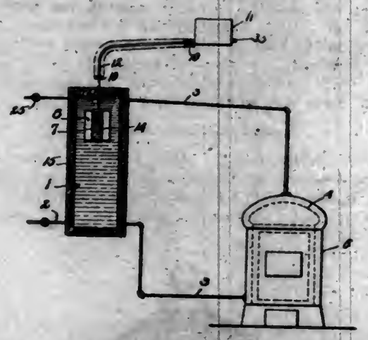
1. In a sound amplifying device comprising a plurality of spaced diaphragms centrally coupled for synchronous vibration and so as to provide resonance space therebetween having sound wave outlets adjacent to the margins of the diaphragms, a plurality of uniformly spaced distributing ribs affixed to the inner face of one of said diaphragms to radiate from its central portion toward but short of the margins thereof so as to vibrate therewith, said ribs being of tapering formation toward their outer extremities, and means connected with said latter diaphragm for transmitting to said diaphragms vibratory motion of the order of sound wave frequencies.

1,753,673. DOOR FOR RADIANT GAS HEATERS. AUGUSTUS F. THOMPSON, Huntington, W. Va. Original application filed May 21, 1928, Serial No. 279,288. Divided and this application filed July 2, 1929. Serial No. 375,412. 2 Claims. (Cl. 312—189.)



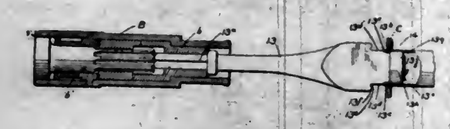
1. In combination with a cabinet having a door-opening in its front wall, a door-guiding-and-supporting channel at each side of said opening extending rearwardly into the cabinet, a door having its bottom edge throughout its length slidably mounted in each of these channels and equal to half the area of the door-opening, each door being provided with a stop-flange at a distance from its rear or inner end adapted to strike against and hinge upon an adjacent vertical flange carried by the cabinet and set back within the door-opening, whereby when the doors are drawn outwardly to the fullest extent and swung inwardly toward each other they will lie substantially flush with the front wall of the cabinet.

1,753,674. BIRD CAGE. ROSS L. TULLIS, New Haven, Conn., assignor to The Andrew B. Hendryx Company, New Haven, Conn., a Corporation of Connecticut. Filed Apr. 7, 1927. Serial No. 181,818. 9 Claims. (Cl. 119—17.)



5. A bird cage, comprising a body portion having horizontally disposed rails and vertically disposed spaced apart rods, one of said rails being disposed about the periphery of the cage body at the bottom edge thereof, a cup-shaped bottom for said cage having an upwardly extending flange about the periphery thereof and being adapted to receive the lower edge of said cage body, means to support the lower edge of said cage body spaced above said cage bottom a predetermined amount, and means hinged to said supporting means to lock said cage body upon said supporting means.

1,753,675. APPARATUS AND METHOD FOR TESTING GASES. ROBERT B. WASSON, Cranford, N. J. Filed Oct. 24, 1925. Serial No. 64,650. 34 Claims. (Cl. 23—256.)

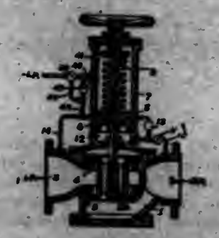


29. The process of determining the percentage of carbon dioxide present in gases, which consists in filling a chamber with a liquid, admitting gas to be tested to the chamber, thus displacing the liquid, injecting into the chamber a caustic solution and determining the resultant pressure of the gas in the chamber.

1,753,676. TEMPERATURE REGULATOR. LYMAN F. WHITNEY, Boston, Mass., assignor, by mesne assignments, to Stator Refrigeration, Inc., a Corporation of Delaware. Filed Mar. 10, 1927. Serial No. 174,212. 9 Claims. (Cl. 236—1.)

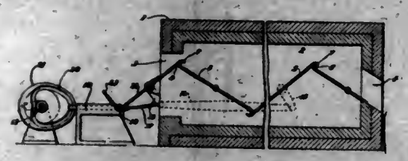
1. Apparatus for limiting the maximum temperature of a body comprising a chamber in heat-transfer relation to the body, the chamber containing liquid having a boiling point approximately said maximum temperature so as rapidly to evolve vapor when the temperature of said body reaches the maximum temperature, a conduit leading from the chamber to a gas reservoir, the conduit being arranged to dissipate heat throughout a substantial portion of its length, whereby said vapor is condensed and returned by gravity to said chamber, and gas in said reservoir and conduit at a pressure substantially to restrict said vapor to a portion of the conduit throughout a range of vapor pressures, whereby the height to which the vapor rises in said conduit, and therefore the rate of heat dissipation, varies in accordance with the temperature of said body.

1,753,677. METAL-WORKING PROCESS AND APPARATUS. ADOLPH C. ANDRESEN, New York, N. Y., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 7, 1926. Serial No. 127,732. 12 Claims. (Cl. 153—79.)



1. The process of securing a tubular member having a thick wall in an apertured head which comprises expanding the member, flaring its outer end, and calking the member to the head by producing a lateral impacting effect within the head aperture, said steps being performed in one continuous operation.

6. The combination with a percussive and rotative machine of a tool adapted to be actuated by said machine for securing a tubular member having a thick wall in an apertured head, said tool having means for expanding that portion of the member within the aperture of said head, means for flaring and beading the end of said member, and means for fixing and maintaining the thickness of the wall of said member at and adjacent to the beaded portion thereof.

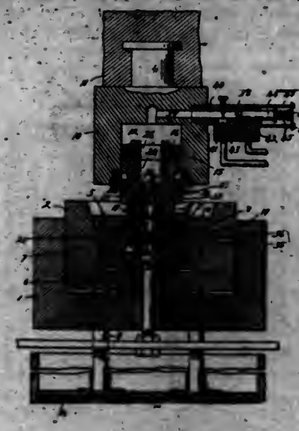


1,753,678. REGULATING DEVICE. ADOLF BARGEBOER, The Hague, Netherlands. Filed Sept. 25, 1926, Serial No. 137,775, and in the Netherlands July 27, 1926. 2 Claims. (Cl. 50—10.)

1. A device for regulating the adjustment of the main valve of pressure-reducing valves by means of a regulating pressure, which comprises a regulating piston, a regulating chamber below the piston, a regulating chamber above the piston, and means for regulating the pressure in each regulating chamber independently of the other, the regulating pressure in one regulating chamber reacting on said

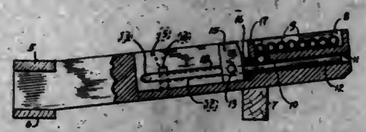
regulating piston corresponding to pressure variations below the predetermined low pressure and the regulating pressure in the other regulating chamber reacting on said regulating piston corresponding to pressures above said predetermined low pressure.

1,753,679. CONVEYER FOR HEAT-TREATING FURNACES. CHARLES A. BARRETT, Buffalo, N. Y. Filed Oct. 26, 1927. Serial No. 228,892. 4 Claims. (Cl. 214—18.)



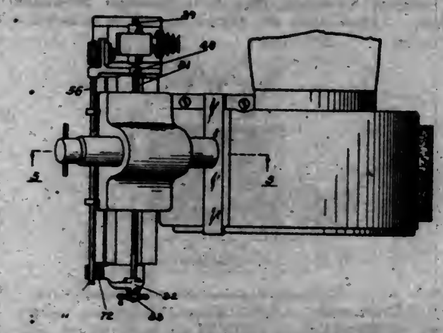
1. In a heat treating furnace having charging and discharge openings at the forward and rear ends respectively, a plurality of plate members mounted in transversely extending adjacent relation in said furnace with the opposite edges of each member curved in opposite directions, said curved edges of each plate member having overlapping interfitting cooperation with the edges of adjacent plate members, means for oscillating said plate members having connection with alternate plates independent of intermediate plates, and adapted to rock the alternate plates in a direction opposite to the intermediate plates during the oscillating movement, for feeding material supported on the plates from the charging to the discharge opening through said furnace, said curved edges causing material on said plates to move only in one direction, and means for providing a relative differential movement of alternate plates with respect to intermediate plates for maintaining said plates in substantially adjacent contacting relation throughout the oscillating movement thereof.

1,753,680. APPARATUS FOR EXPANDING CUP-SHAPED MEMBERS. JOSEPH E. BATZA, Detroit, Mich., assignor to Kelsey-Hayes Wheel Corporation, Detroit, Mich., a Corporation of New York. Filed May 2, 1927. Serial No. 188,372. 14 Claims. (Cl. 113—44.)



1. In an apparatus for expanding cup-shaped members, the combination with a die for receiving a cup-shaped member, of a holder movable toward said die, a plunger carried by and movable relative to said holder and engageable with the cup-shaped member, means dependent upon the movement of said plunger for controlling the passage of liquid into the cup-shaped member and the movement of said holder relative to said plunger, said

holder operating to force the liquid into the cup-shaped member to expand the same against said die, and means



operable when a predetermined pressure of the liquid exerted upon the cup-shaped member has been reached to automatically relieve this pressure.

1,753,681. TOY FIGHTING PLANE. CLAUDE S. BURNS, Salt Lake City, Utah. Filed Mar. 26, 1928. Serial No. 264,680. 6 Claims. (Cl. 124—14.)

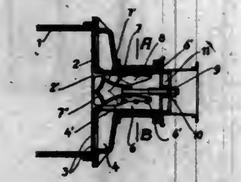
1. In combination, a member simulating the fuselage of an airplane, a guide passage for projectiles therein, the said passage opening at the anterior part thereof, means to propel projectiles through the said passage and an operator's seat simulating the elevator planes of an airplane.

1,753,682. TRUING MECHANISM. GEORGE W. BINNS, Cincinnati, Ohio, assignor, by mesne assignments, to Cincinnati Grinders Incorporated, Cincinnati, Ohio, a Corporation of Ohio. Filed Apr. 7, 1926. Serial No. 100,442. 6 Claims. (Cl. 125—11.)

2. Truing mechanism for purpose described, including a support, a truing tool reciprocable on the support, electrically operated means for shifting the tool on the support, a control switch therefor, means movable with the tool for automatic operation of the control switch, and additional means for manually operating said control switch.

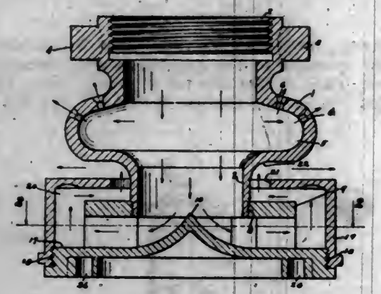
1,753,683. WIRE-SCREEN FRAME AND METHOD OF MAKING THE SAME. ROBERT E. BLACKBURN, Los Angeles, Calif. Filed Sept. 9, 1926. Serial No. 134,419. 6 Claims. (Cl. 140—109.)

1. A screen frame comprising metal stiles and rails, each of said stiles formed with an outwardly opening hollow bead and a flat flange extending edgewise from said bead, said flange and bead having an internal strain tending to bow the stiles edgewise from each other, said stiles being welded to rails having internal beads and edgewise outwardly extending flanges to resist the internal strain of the stiles; and a screen wire web strained on the beads of said stiles and rails; the tension of said web being resisted by the strain of the stiles.



1,753,684. TWO-WAY VALVE. LEON BLOCH, Cleveland, Ohio, assignor to The Republic Brass Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 11, 1926. Serial No. 93,910. 3 Claims. (Cl. 251—107.)

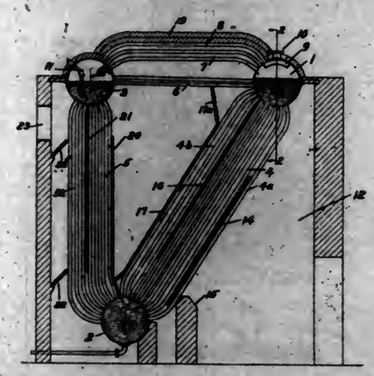
1. In a device of the kind described, a casing having a pair of inlet openings and a pair of outlet openings and a cylindrical portion having an opening in the lower end thereof, said opening being surrounded by an annular abutment, a hollow cylindrical valve arranged in said cylindrical portion and having an opening in the bottom thereof and also an opening in the side thereof, the end of said cylindrical valve being shaped to fit upon the abutment, a stem for operating said cylindrical valve, said valve having a screw thread engagement with the casing and whereby said valve can be rotated and moved longitudinally to bring the opening in the side of the valve into or out of register with either of the outlet open-



ings in the casing, the longitudinal axes of the said inlet and outlet openings lying in substantially the same plane.

1,753,685. DISCHARGE MEANS FOR TUBE OR BALL MILLS. PAUL BODENSTEIN, Magdeburg, Germany, assignor to the Firm Fried. Krupp Grusonwerk Aktiengesellschaft, Magdeburg-Buckau, Germany. Filed June 18, 1928, Serial No. 286,182, and in Germany June 27, 1927. 11 Claims. (Cl. 83—9.)

1. In a device for the wet grinding of material, a grinding drum coaxially arranged with a discharge chamber and a hollow trunnion, said drum and said chamber having a common perforated wall, and adjustable means within said discharge chamber for returning any desired portion of material from the chamber to the drum.

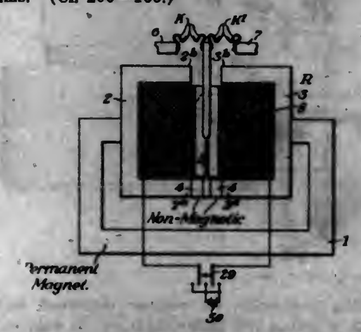


1,753,686. BASEMENT CIRCULATOR. CHARLES A. BORGESON, San Francisco, Calif., assignor of twenty-four and one-half per cent to George W. Mitchell and twenty-four and one-half per cent to Alva J. Lindersmith, San Francisco, Calif. Filed Sept. 26, 1927. Serial No. 222,169. 4 Claims. (Cl. 299—114.)

1. A basement circulator comprising a casing and housing having an annular unobstructed water outlet opening formed by them, means disposed within said housing for whirling the water, said casing having an outwardly-extending curved portion overlying the water outlet for directing the water outwardly, and a flat horizontal portion extending from the curved portion for projecting the water in an apron-like spray transversely to the axis of the circulator.

1,753,687. BOILER. GEORGE Y. BONUS, Chicago, Ill., assignor to Erie City Iron Works, Erie, Pa., a Corporation of Pennsylvania. Filed June 15, 1925. Serial No. 37,126. 6 Claims. (Cl. 122—302.)

1. In a boiler, the combination of a front drum; a rear drum, said drums being in the plane of the water level; a lower drum; a front bank of tubes connecting the lower and front drum; a rear bank of tubes leading to the rear drum in circuit between the lower drum and the rear drum; an upper bank of water tubes between the front and rear drums, said drums and banks of tubes forming an unobstructed ring path from the lower drum to the front drum, from the front drum to the rear drum and from the rear drum to the lower drum forming the main circuit for the water; a furnace; and baffles comprising a plurality of baffles operating on the front bank of tubes controlling the application of heat to the tubes com-

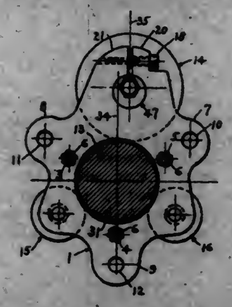


pelling an upflow of water in and throughout the front bank of tubes, a rearward flow of water in and throughout the upper bank of water tubes, and a downward flow of water in and throughout the rear bank of tubes.

1,753,688. TIRE MENDER. JOHN M. BOSCARDIN, Canaan, Conn. Filed Aug. 2, 1928. Serial No. 297,051. 2 Claims. (Cl. 152—26.)

1. A tire mender comprising a base plate, a second plate secured to said base plate, said second plate having teeth angularly disposed to said plate, a cover plate adjacent said second plate, said cover plate having a flange extending around its edges and overlapping said second plate, securing means passing through all the mentioned plates, for drawing the teeth on said second plate within the flange on said cover plate.

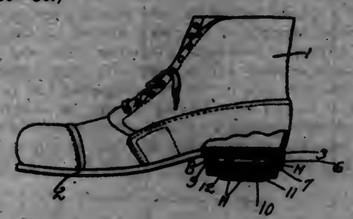
1,753,689. ELECTRICAL RELAY. PAUL N. BOSSART, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Nov. 27, 1928. Serial No. 322,242. 7 Claims. (Cl. 200—166.)



1. In a relay having a fixed member and an armature biased to a normal position but movable at times toward said member, a contact mechanism comprising two segments having cylindrical engaging surfaces, means including a spring for attaching one segment to said armature,

means including a spring for attaching the other segment to said fixed member, said springs being constructed in such manner that when the armature approaches said fixed member said segments roll upon each other in opposition to forces exerted by said springs upon said segments through substantially constant moment arms, and co-operating contacts carried by said two segments, respectively.

1,753,690. PROCESS OF MAKING WATERPROOF PAPER. GEORGE ARTHUR BROWN, Salem, Mass., assignor to Bennett, Incorporated, Salem, Mass., a Corporation of Massachusetts. Filed Oct. 23, 1926. Serial No. 143,801. 8 Claims. (Cl. 92—21.)



1. A process which comprises disintegrating a paper furnish comprising waste wax paper, dispersing the wax constituent thereof, fixing the dispersed material thereon by a coagulum, and running off on a paper machine.

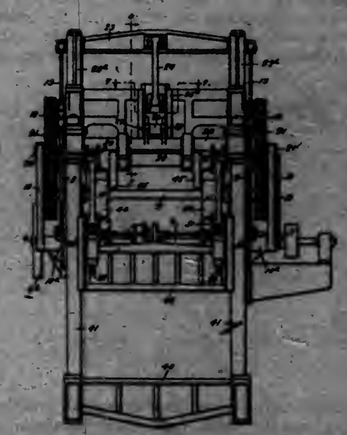
1,753,691. ROLLER BEARING. WILLIAM D. BURNS, Amenia, N. Y. Filed June 30, 1927. Serial No. 202,649. 2 Claims. (Cl. 308—203.)

1. In a roller bearing, the combination of two end frames, slidable over a shaft, each provided with a holding means, said frames split at the upper portion and having means holding two fixed guide rollers comprised of a tubular sleeve with a plurality of rollers therein between the said sleeve and a fixed shaft and one eccentrically adjustable load carrying roller offset from the vertical centerline of said bearing, said adjustable roller for operating with said split portion provided with a locking means all of which rollers being in contact with said shaft and in spaced relation to each other and the said shaft.

1,753,692. HEEL. ANDREW W. CARLSON, Spokane, Wash. Filed Mar. 20, 1928. Serial No. 263,072. 1 Claim. (Cl. 36—36.)

The combination with the heel portion of a shoe, of a holder comprising a nailing flange having nail holes and nails for permanently securing the holder to the heel portion of the shoe, an integral retaining flange for the holder having a rigid prong and a rubber heel engaged by said prong, a plurality of downwardly projecting flexible tongues struck from the retaining flange, and prongs on the lower free ends of said tongues engaging the rubber heel.

1,753,693. FOOD STRAINER. RUSSELL H. CARPENTER, Madison, Wis. Filed Mar. 30, 1927. Serial No. 179,590. 5 Claims. (Cl. 146—175.)



1. A food strainer comprising a sieve member; and a rotatable blade co-operating therewith, said blade being arranged at an acute wedging angle to said sieve with its rear edge contacting with the sieve on a rearwardly receding curve.

1,753,694. LEATHER-FINISHING COMPOUND. OLIVER F. W. CROMWELL, Ridgway, Pa. Filed Nov. 13, 1928. Serial No. 319,193. 1 Claim. (Cl. 149—6.)

A leather finishing compound consisting of a mixture of the following ingredients in the following approximate proportions:

	Parts
Crude oil	2
Sweet oil	2
Cod liver oil	2
Glycerine	1

1,753,695. DRAWING PRESS. JOHN E. DOBSON, Cleveland, Ohio, assignor to The Cleveland Punch & Shear Works Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 25, 1927. Serial No. 208,182. 14 Claims. (Cl. 113—88.)

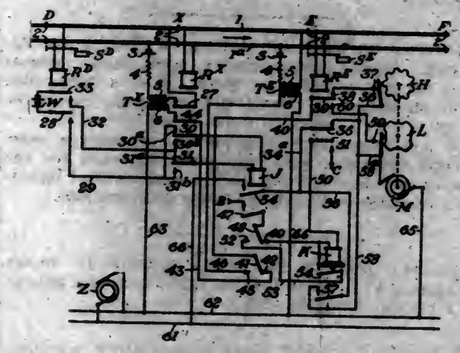
1. In a machine of the character described, the combination of a crank shaft, a reciprocating blank holder, a plunger working through the blank holder and operatively connected to the shaft, a sliding cross beam, and op-

erating connections between the shaft and the holder to reciprocate the latter, said connections including toggle means arranged to cause a dwell of the blank holder during the entire period of operation of the plunger on the blank, said toggle means including bell cranks the respective arms of which are operatively connected to the cross beam and to the crank shaft.

1,753,696. SLIDE FASTENER WITH ATTACHED RESILIENT SOCKET. PAUL E. FENTON, Thomaston, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Mar. 13, 1929. Serial No. 346,688. 1 Claim. (Cl. 24—77.)

A slide fastener with attached socket, comprising a plate slotted transversely at opposite ends and having an intermediate cross bar, and a resilient snap fastener socket member having a barrel open at both ends, one open end being flanged and provided with an inwardly extending bead, and a complemental stud member having a contracted neck which is engaged by the bead to effect a firm connection of the socket member and stud and the other open end of the socket member being upset and clinched upon the top of the cross bar, said flanged end being slotted or slitted transversely, the slots or slits extending partway into the barrel.

1,753,697. REFLECTING AND SCANNING APPARATUS. DELAMERE B. GARDNER, Los Angeles, Calif. Filed Sept. 17, 1928. Serial No. 306,338. 7 Claims. (Cl. 178—6.)



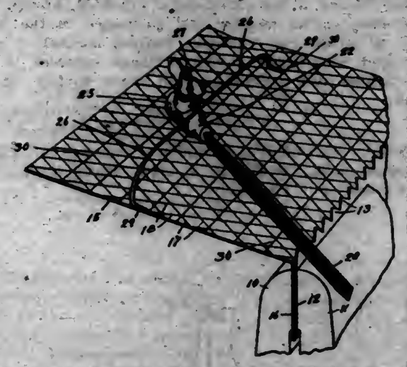
1. A reflecting and scanning apparatus including a plurality of rectangular units arranged side by side and secured together so as to form a helix, a reflector edge to each of said units, means for preventing the other edges and ends of said units from reflecting light, and other means for rotating said units for the purpose specified.

1,753,698. INSTRUMENT FOR DRAFTING IRREGULAR CURVES. ANTON GASPARICH, Oakland, Calif. Filed Nov. 11, 1927. Serial No. 232,677. 3 Claims. (Cl. 33—177.)

1. An instrument of the class described, comprising a plurality of parallel guide rods, bars adjustable on the rods, blocks rotatably connected with the bars, and having bores therein, heads pivotally mounted in the bores and having tubes fitted therein, a flexible rule, rods for supporting the rule, and means for adjustably connecting the supporting rods in the tubes.

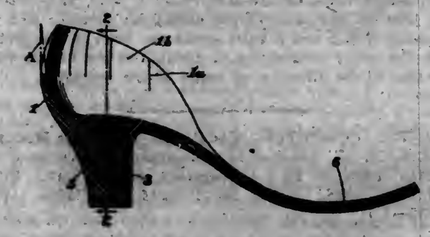
1,753,699. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. ROBERT M. GILSON, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Mar. 1, 1927. Serial No. 171,767. 11 Claims. (Cl. 246—34.)

1. In combination, a forward and a rear section of railway track, a track relay for each of said sections, a source of train controlling current for the rear section, means for connecting the source to the rear section when the track relay of the forward section is energized and the track relay of the rear section is de-energized, a relay, and means controlled by said relay for connecting said source to the rear section when the track relays of the forward and rear sections, respectively, are de-energized in succession.



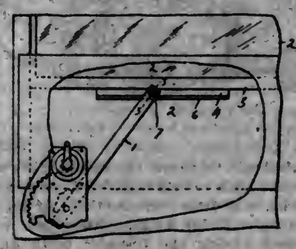
1,753,700. HANDLE STRUCTURE. GEORGE GRAFF, HOWARD B. HASKINS, and GEORGE E. GUNTHER, Toledo, Ohio, assignors, by mesne assignments, to The Dura Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 21, 1927, Serial No. 170,037. Renewed Sept. 16, 1929. 7 Claims. (Cl. 74—33.)

1. In a handle structure, the combination of a sheet metal body member of the plan outline of the finished handle having a forwardly extending boss and a sheet metal shell member fitting over said body member and having the rear face of its front engaging and positioned by said boss and also having means for securing said body and shell members to each other including a flange at the rear end of said shell member engaging the rear face of said body member.



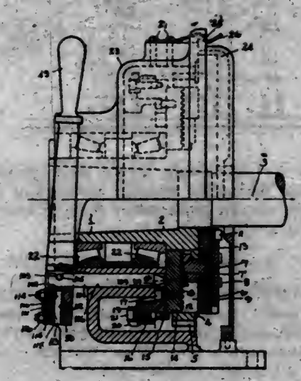
1,753,701. SAW-FILING GUIDE. CHARLES N. GRANT, Haverhill, Mass. Filed June 8, 1927. Serial No. 196,875. 2 Claims. (Cl. 76—36.)

1. A guiding device for a file, adapted for use in connection with a saw holding clamp and a flat surfaced table having indicating means extending in directions corresponding to the bevel to be formed on the saw teeth, and comprising a holder adapted to be mounted on the tip end of the file and having a pair of yieldable arms mounted thereon and arranged to extend oppositely in angular relation to the file, said arms having feet at their ends arranged for sliding engagement with the table in directions parallel to the indicating means thereof, and being adapted



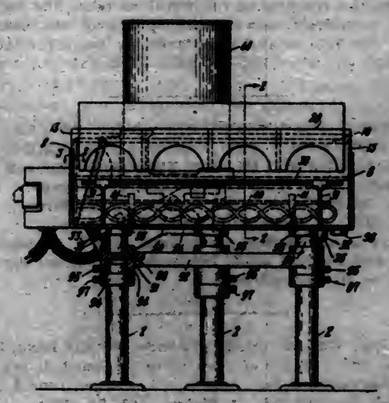
to yield to permit the file to be pressed downward between the teeth while held in approximate parallelism with the table.

1,753,702. ARTICLE OF SHOE MANUFACTURE AND METHOD OF MAKING THE SAME. RICHARD T. GRIFFITHS, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 12, 1928. Serial No. 305,440. 8 Claims. (Cl. 36—1.)



1. As an article of shoe manufacture, a one-piece body comprising heel, sole, and counter portions, said counter being provided with substantially vertically disposed cuts in its upper portion, and a binding strip along the upper edge of the counter.

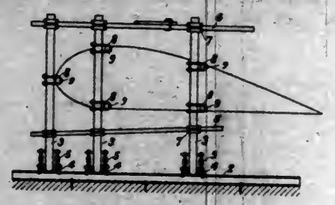
1,753,703. RETAINER FOR WINDOW REGULATORS. HOWARD B. HASKINS, Toledo, Ohio, assignor, by mesne assignments, to The Dura Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 18, 1927. Serial No. 184,747. 8 Claims. (Cl. 268—126.)



1. A device for operatively connecting a window to a window regulator lifter element, including a pin secured to the lifter element, a retaining member secured to and cooperating with the window to form a guide way for said pin and to normally hold said pin from longitudinal disengagement from the guide way, and a spiral spring for yieldably holding said pin from longitudinal movement relative to the guide way.

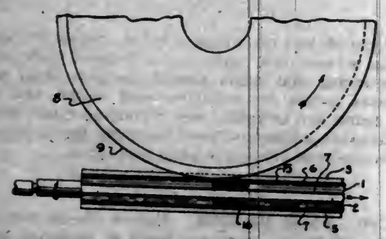
1,753,704. MACHINE FOR CUTTING OFF PIPES AND THE LIKE. RALPH E. HYDE, Cleveland, and DANIEL SCHAPPI, Lakewood, Ohio, assignors to The Oster Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 26, 1927. Serial No. 235,881. 17 Claims. (Cl. 164—60.)

1. A cut-off tool comprising a cutter, means for causing rotation between said cutter and a piece of work, means for advancing said cutter toward the axis about which it rotates, means for retracting said cutter, and automatic means for actuating said retracting means after a predetermined advance without reversing the direction of rotation between said cutter and such piece.



1,753,705. SHOE HEATER. MELVIN OSCAR JENNINGS, Lexington, Mass., assignor to Harry H. Beckwith, Brookline, Mass. Original application filed Nov. 12, 1923, Serial No. 674,314. Divided and this application filed July 14, 1928. Serial No. 292,732. 4 Claims. (Cl. 12—1.)

1. A shoe heater having a base comprising an open topped receptacle, one side of said receptacle being laterally extended outwardly to form a shelf, a removable cover for said receptacle constructed to rest on the upper edge of the opposite sides of said receptacle and extending in spaced relation over said shelf to define a vapor passage from said receptacle into which the end of a shoe may be placed, and a heater beneath said shelf.



CARNEGIE LIBRARY OF ATLANTA

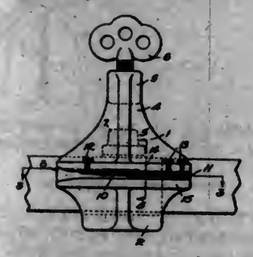
1,753,706. UNIT FOR ASSEMBLING LATTICE WORK. HUGO JUNKERS, Dessau, Germany. Filed May 28, 1929, Serial No. 366,633, and in Germany June 8, 1928. 6 Claims. (Cl. 144—288.)

1. A unit for assembling lattice work comprising an erecting stage, means for securing members of said work to said stage, and an independent templet adapted to be fitted to said members.

1,753,707. PROCESS OF GRINDING TOOTHED ARTICLES. FRED J. LAMBORN, Detroit, Mich., assignor, by mesne assignments, to Chrysler Corporation, a Corporation of Delaware. Filed Mar. 7, 1923. Serial No. 623,328. 6 Claims. (Cl. 51—278.)

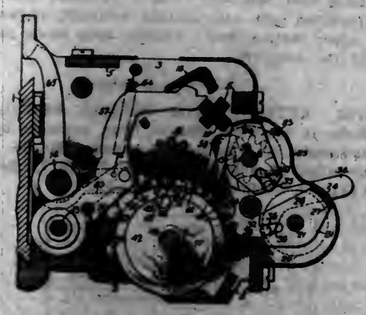
1. The process of grinding splined shafts which comprises positively rotating a splined shaft with its valley portion in contact with the helically formed peripheral grinding face of a rotating grinding wheel arranged with its axis transverse to the axis of the shaft, and in timed relation to the rotation of the wheel to cause the helix to enter succesively between the splines of the shaft to grind the valleys and simultaneously moving relatively the shaft and wheel longitudinally of the axis of the shaft.

1,753,708. SENSITIZED ELEMENT, PROCESS OF MAKING SAME, AND PROCESS FOR PRODUCING PHOTOGRAPHIC IMAGES THEREON. EDUARD EHRHARDT ERICH LEHMANN, Ellenburg, Germany. Filed Apr. 26, 1927, Serial No. 186,832, and in Germany Apr. 27, 1926. 3 Claims. (Cl. 95—6.)



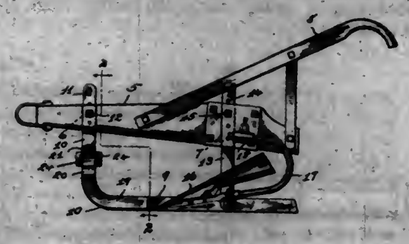
1. As a new article of manufacture, a photographic layer comprising a diazo compound of p-amino diphenyl amine or its derivatives.

1,753,709. CRANK SHAFT. JAMES THOMAS LONG, Bogalusa, La., assignor of twenty-five and one-half per cent to Bascom D. Talley, Bogalusa, La. Filed June 4, 1928. Serial No. 282,611. 1 Claim. (Cl. 74—38.)



A crank shaft, the outer surfaces of the bearing portions of the cranks thereof being cut away throughout their entire lengths, removable bearing members, each of the removable bearing members having a flange disposed at one end thereof, each removable bearing member having an opening, a threaded member extended through each removable bearing member and positioned in the crank shaft to secure the removable bearing member in position, and each crank having a flange adjacent to one end thereof and formed on the inner surface of the crank.

1,753,710. ENVELOPE OPENER. CHARLES A. MAYER, Boston, Mass. Filed June 8, 1928. Serial No. 283,893. 6 Claims. (Cl. 120—35.)

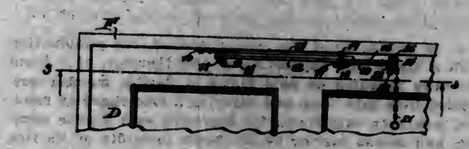


1. An envelope opener comprising a body, knife carrying jaws on one face thereof having an envelope end depressing spring and a knife above the level of the spring end, the latter terminating in advance of the former with relation to the direction of travel of the envelope.

1,753,711. COMPUTING MACHINE. LEE STARR MCCORN, Ilion, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Jan. 6, 1928. Serial No. 244,914. 6 Claims. (Cl. 235—1.)

2. In an algebraic totalizer, the combination with register gear wheels; dials for showing both positive and negative totals and a shutter construction; of an operating wheel at the right of the units register gear wheel, said operating wheel having the transfer tooth and locking surface of a Geneva transfer train; a Geneva pinion constituting another part of said Geneva train and acting to transfer movement from said operating wheel to said units wheel; a hand-operated lever in the plane of said operating wheel and geared thereto to turn said operating wheel in one direction for a negative total and in the opposite direction for a positive total; and means whereby said handle operates said shutter construction.

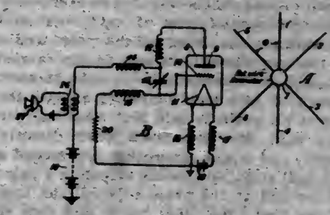
1,753,712. GUIDE FOR VINE CUTTERS. GEORGE LEE MCCREADY, Parksley, Va. Filed Feb. 24, 1928. Serial No. 256,558. 3 Claims. (Cl. 55—64.)



1. The combination with a vine cutter having a runner-bar to travel between the rows, of a guide-bar having a convex end to seat against the side of the runner-bar and means for clamping the convex end of the guide-bar at the side of the runner-bar.

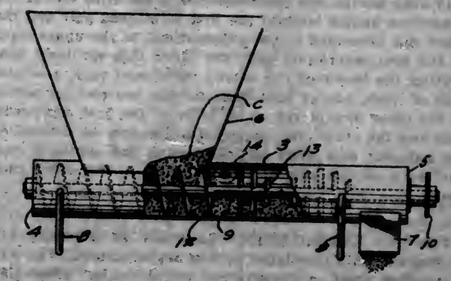
1,753,713. WINDSHIELD WIPER. HAROLD A. MCGOWAN, Davenport, Wash. Filed Mar. 11, 1929. Serial No. 345,999. 1 Claim. (Cl. 15—255.)

The combination in a windshield wiper with a U-shaped holder and spaced wiping sheets therein having free working edges, of a casing between the sheets and an electric heating element in the casing, said element having bent ends projecting beyond the casing, a loop strap on one side of the holder adjacent each end and a complementary slot for each strap at the other side of the holder for receiving the bent ends as described, and one end of the element being grounded while the other end is insulated from the holder.



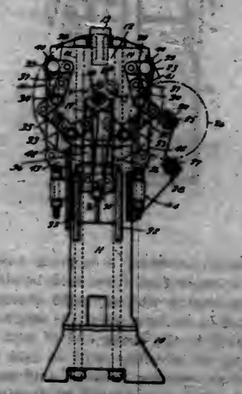
1,753,714. LATCH. EWALD MEININGHAUS, Lancaster, N. Y. Filed Jan. 25, 1929. Serial No. 335,038. 11 Claims. (Cl. 292—263.)

1. A latch for two relatively movable members, comprising an arm pivotally connected to one of said members, a second arm pivotally connected to the other member and said first arm, a catch bar movably mounted on one of said arms and spring means yieldingly holding said catch bar against the arm on which it is mounted, said catch bar being provided with a catch projection arranged in the path of the other arm and adapted to catch and hold said last named arm in fixed relation to the first arm.



1,753,715. SHORT-WAVE RADIO SIGNALING SYSTEM. RUSSELL S. OHL, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Apr. 16, 1925. Serial No. 23,639. 3 Claims. (Cl. 250—11.)

1. In a short wave radio signaling system, the combination with a source of ultra-high frequency signaling currents of a radiating system comprising a plurality of rods disconnected from the earth and in close proximity to the said source, each rod being tuned to the frequency



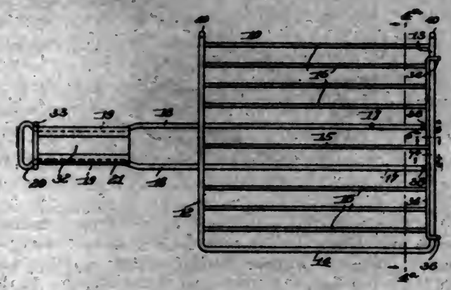
of the currents from the said source, and all of the said rods lying in the same plane and being spaced apart by the same angular distance.

1,753,716. MIXER FOR CEMENT. JACK M. OWEN, Long Beach, Calif. Filed Apr. 25, 1928. Serial No. 272,748. 4 Claims. (Cl. 83—73.)

1. A mixer for cement comprising a barrel, screw means for feeding the cement through a portion of the length of the barrel in a column occupying the full bore of the barrel, means for directing a stream of water across the said bore substantially at the end of the feeding means to cause the water to wash cement from a point adjacent the end of the screw means and to mix with the cement as the latter leaves the screw means, and means for mixing the cement and water and feeding it through the remainder of the barrel to a discharge opening in the latter.

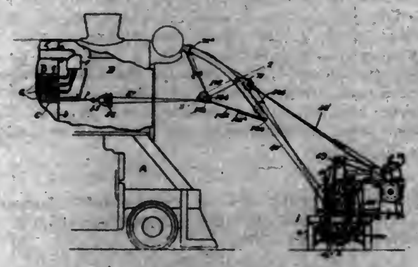
1,753,717. DRAWING PRESS. ROBERT J. PARDEE, Cleveland Heights, Ohio, assignor to The Cleveland Punch & Shear Works Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 8, 1928. Serial No. 283,920. 3 Claims. (Cl. 113—38.)

1. In a press of the kind described, the combination with a frame, a blank holder and a punch, of a crank



shaft carried by said frame, and to which said punch is operatively connected, a slide reciprocally mounted on an end of the frame and operatively connected with the crank shaft, a pair of rock shafts mounted on said frame adjacent the upper end thereof, one of said rock shafts being mounted adjacent the front of the press and the other adjacent the rear thereof, an arm fixedly carried by each of said rock shafts intermediate its ends, another arm carried by each of said rock shafts at an end thereof and extending at an angle to said first mentioned arms, links connecting said first mentioned arms directly to said blank holder, and means connecting said second mentioned arms with said slide, said means including a pair of angled levers on an end of the press adjacent the front thereof mounted one above the other below said rock shafts and above said slide, a second pair of levers similarly mounted adjacent the rear of said press, a pair of connecting rods, one end of each being connected to said slide, the opposite end of one connecting rod being connected to one end of the lowermost lever of the first mentioned pair of angled levers, and the other end of the other connecting rod being connected to one end of the lowermost lever of the second mentioned pair of angled levers, a pair of links, one of said links having one end connected to the other end of the lowermost angled lever of the first mentioned pair and the other end connected to the adjacent end of the upper lever of the first mentioned pair, the other link similarly connecting the levers of the second mentioned pair, a second pair of links, one of said links having one end connected to the other arm of the upper lever of the first mentioned pair and the other end connected to the arm on the end of the adjacent rock shaft and the second link similarly connecting a second pair of angled levers to the other rock shaft.

1,753,718. LUBRICATOR. SHERMAN H. PAXTON, Los Angeles, Calif., assignor to Jay Manufacturing Co., Los Angeles, Calif., a Corporation of California. Filed May 7, 1929. Serial No. 361,121. 12 Claims. (Cl. 123—196.)

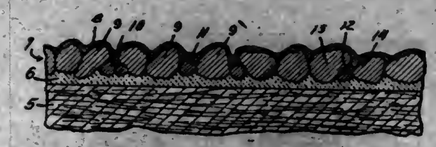


1. A lubricator including a housing having a chamber therein, a pipe connection from said housing to the inlet manifold of an engine whereby said chamber is intermittently subjected to suction when the engine is operated, a container secured to the lower end of said housing, a pan in said housing, an overflow wall to said pan that is arranged around an opening through said pan, and a pump in said housing that is actuated by suction from the engine for transferring lubricant from said container to maintain a constant level in said pan.

1,753,719. BROILER RACK. MAURUS C. RECK, Rochester, N. Y., assignor to Sterling Range & Furnace Corporation, Rochester, N. Y., a Corporation of New York. Filed June 8, 1929. Serial No. 369,352. 20 Claims. (Cl. 53—5.)

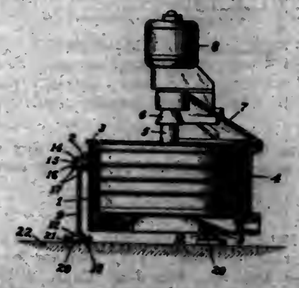
1. A broiler rack comprising a pair of adjacently mounted frames, yieldable means connecting the frames whereby they will accommodate themselves to food portions of various thicknesses placed therebetween, said yieldable means being tensioned to engage different portions of one frame whereby it is held thereon against displacement and means forming a handle for the frame.

1,753,720. INDUSTRIAL TRUCK AND ATTACHMENT THEREFOR. EDWARD H. REMDE, Cleveland, Ohio, assignor to The Baker-Raulang Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 20, 1925. Serial No. 51,498. 6 Claims. (Cl. 212—28.)



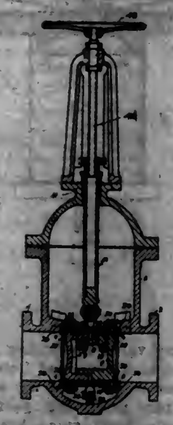
1. In apparatus of the class described, the combination with a frame and supporting wheels therefor, of a boom pivotally mounted on said frame, a flexible member suspended from said boom and carrying a load engaging member, means on said frame for operating said flexible member, and means carried by the boom inwardly of its free end and arranged to engage the suspended portion of said flexible member when said load engaging member is connected to a load disposed outwardly beyond the boom, said guide comprising a swingable arm carrying a sheave with which said flexible member removably engages and a connection between the outer portion of said arm and a portion of the boom therebelow for resisting the pull of said flexible member on said arm.

1,753,721. METAL-PROTECTED ROOFING ELEMENT AND METHOD OF MAKING THE SAME. THOMAS ROBINSON, New York, N. Y., assignor to Anaconda Sales Company, New York, N. Y., a Corporation of Delaware. Original application filed Feb. 10, 1923, Serial No. 618,246. Divided and this application filed May 15, 1926. Serial No. 109,425. 10 Claims. (Cl. 204—8.)



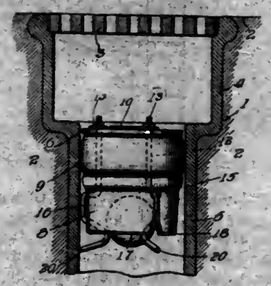
6. A material for roofing and other purposes, comprising the combination of a felted fibrous base of waterproof char-

acteristics, a coating of a plastic material having a high coefficient of expansion applied to the surface of the fibrous base, a layer of non-metallic electroconductive granular material over the coating, the granules being partially embedded therein and presenting an irregular surface, and



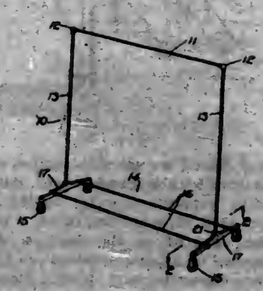
a layer of metal over the conductive layer and conforming to the irregularities of the surface both on its outer and inner faces, such that the layer of metal has an irregular contour substantially corresponding to the contour of the granular layer.

1,753,722. SUPPORT FOR CENTRIFUGALS. CARL SCHAUM, Wyncote, Pa., assignor to Fletcher Works, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 5, 1927. Serial No. 224,161. 7 Claims. (Cl. 210—63.)



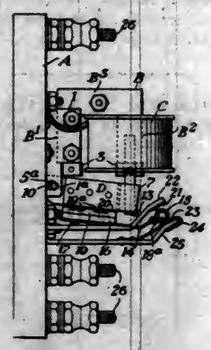
1. A support for a centrifugal comprising a plurality of normally vertically positioned legs, each of said legs provided with a foot, the lower surface of each foot being struck on an arc, the centre of which is above the top of the leg and the top of the legs adapted to fit within projections extending from the sides of the centrifugal.

1,753,723. VALVE. FRANZ SEIFFERT, Berlin, Germany, assignor to the Firm Franz Seiffert & Co. Aktiengesellschaft, Berlin, Germany. Filed Feb. 11, 1927, Serial No. 167,528, and in Germany Oct. 21, 1925. 12 Claims. (Cl. 251—66.)



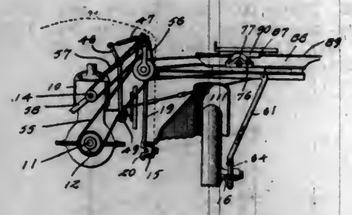
1. A gate valve comprising a casing, a valve body adapted to be displaced in said casing and to cooperate with seats in said casing on opposite sides of said valve body, said valve body comprising valve plates adapted to engage said seats, a rotary member held against axial displacement in said casing and seated on said valve plates, means for imparting rotary motion to said member, and wedge elements on said rotary member and said valve plates in oppositely inclined relationships for translating the rotary motion of said member into opposite axial motion of said valve plates.

1,753,724. AUTOMATIC BACKWATER VALVE. WALLACE W. SHAW, Chicago, Ill. Filed Nov. 23, 1928. Serial No. 321,361. 7 Claims. (Cl. 182—15.)



1. In a device of the kind described, a top plate provided with a central opening, a lower annular member, an expansible packing ring between said members, connecting rods extending up through the top plate and having operative connection with the lower member, nuts on the upper ends of the rods by means of which the two members can be drawn toward each other to expand the packing ring, a ball valve adapted to be lifted by water to close said opening, and the lower end portions of said rods projecting inwardly to prevent the escape of said ball valve.

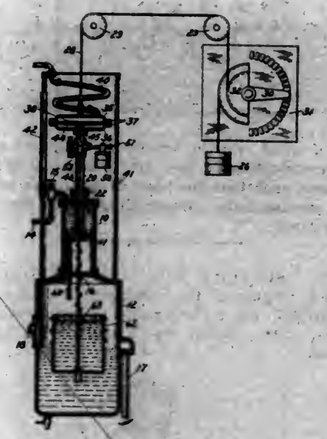
1,753,725. RACK FOR GARMENTS AND THE LIKE. SAMUEL SOLOMON and LOUIS LEVINE, New York, N. Y. Filed Mar. 7, 1928. Serial No. 259,633. 7 Claims. (Cl. 211—182.)



5. In a clothes rack of the character described, in combination, a horizontal supporting member and a pair of upright members supporting said horizontal member, a base frame for said upright members comprising a plurality of horizontal rods and a plurality of cross bars secured to the end portions of said rods and upright members, said bars being hollow and provided with spaced walls and integral cylindrical walls interconnecting said spaced walls forming thru openings for receiving said end portions.

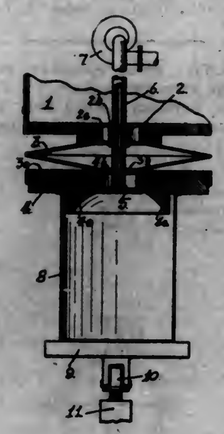
1,753,726. ELECTRICAL RELAY. PAUL P. SOSINSKI, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Nov. 28, 1928. Serial No. 322,543. 4 Claims. (Cl. 200—87.)

1. A relay comprising an inverted U-shaped core having one leg provided with an energizing winding, two brackets one attached to each side of the other leg of said core and each provided with a downwardly projecting lug, a pin passing through said lugs, an armature provided with an elongated hole and loosely pivoted on said pin at said hole, a stirrup riveted to said one leg of the core and passing freely around the free end of said armature to limit the motion of said armature laterally and away from said core, a contact finger attached to said armature but insulated therefrom, and a fixed contact co-acting with said contact finger.



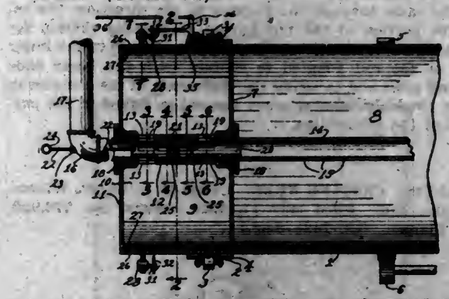
1,753,727. POWER TAKE-OFF. JOSEPH M. SMIGEL, St. Joseph, Mo. Filed Apr. 20, 1929. Serial No. 356,698. 8 Claims. (Cl. 180—53.)

1. In a power takeoff for use with engines of automobiles and in combination with a chassis frame, dash and engine of an automobile, supports mounted on the chassis frame and dash, said dash support comprising a socket member adapted to be mounted on the dash, a shaft mounted in said supports, a driving element mounted thereon, and means for connecting said driving element with the engine to be driven thereby.



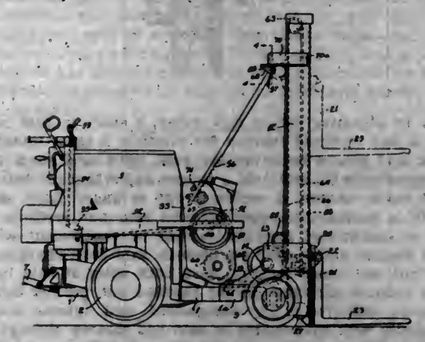
1,753,728. REGULATING APPARATUS. CHARLES M. TEARY, Decatur, Ill., assignor to A. W. Cash Company, Decatur, Ill., a Corporation of Delaware. Filed Jan. 5, 1928. Serial No. 244,651. 15 Claims. (Cl. 121—1.)

1. A regulating apparatus comprising a fluid operated motor having a cylinder and a piston, one of which is movable relative to the other, means for connecting the movable member to an exterior control device, a valve mechanism effective to control the fluid pressure in the cylinder, a chamber movable with and fixed to the movable member of the fluid motor, and a pressure responsive member in said chamber which is connected to the valve



mechanism to operate the same so that any change in pressure in said chamber will result in a movement of the piston.

1,753,729. FILLING VALVE FOR SIRUPERS. ALBERT R. THOMPSON, San Jose, Calif., assignor to Anderson-Barngrover Mfg. Co., San Jose, Calif., a Corporation of California. Filed May 17, 1927. Serial No. 192,078. 8 Claims. (Cl. 226—124.)

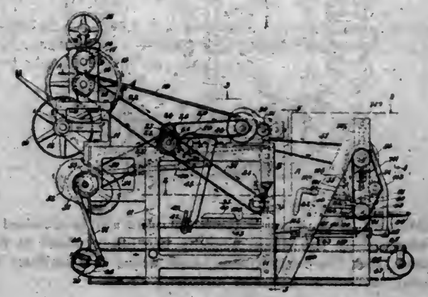


2. A liquid filling valve comprising a hollow resilient body member fitted to a source of liquid supply; an underlying seating member carried by said body member, having a downwardly projecting, ported inverted, dish-shaped hub; an apertured valve head, controlling the port of said hub; and an air vent stem carrying the valve head.

1,753,730. MIXER SHELL FOR TRANSIT MIXERS. EDWARD T. TULLER, Oakland, Calif., assignor to Transit Mixers, Inc., San Francisco, Calif., a Corporation of Nevada. Filed Dec. 17, 1928. Serial No. 326,441. 11 Claims. (Cl. 83—73.)

1. A mixing cylinder comprising an elongated body mounted for axial rotation, said body on its interior provided with a water container rotatable therewith, and valve controlled means for supplying water to the container and therefrom into the mixing cylinder.

1,753,731. INDUSTRIAL TRUCK. EDWARD J. ABBE, Cleveland, Ohio, assignor to The Elwell Parker Electric Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 16, 1927. Serial No. 168,544. 7 Claims. (Cl. 254—3.)



1. In combination with an industrial truck, an upright trackway pivotally mounted on the truck, load engaging means guided by the trackway, power hoisting mechanism with connections to both tilt the trackway and raise and lower the load engaging means, the tilting connection including a rigid oscillatable and reciprocable member pivotally attached to the trackway, there being means movably engaging the member to hold it in cooperative relation to the hoisting mechanism.

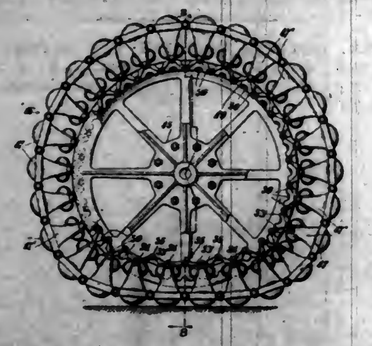
1,753,732. LIQUID EXTRACTOR. WILLIAM K. ACKERMAN, Detroit, Mich. Filed Sept. 2, 1927. Serial No. 217,052. 3 Claims. (Cl. 137—20.)

1. A liquid extractor adapted to be placed in a receptacle to remove liquid from the receptacle, said extractor comprising a siphon member, and spaced pistons on said member adapted to be successively brought into engagement with the inner wall of the receptacle.

1,753,733. FOLDING MACHINE FOR ALIMENTARY PASTES. CONRAD AMBRETTE, Brooklyn, N. Y. Filed Oct. 31, 1925. Serial No. 66,012. 32 Claims. (Cl. 107—7.)

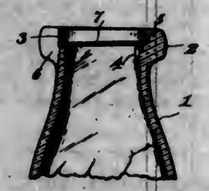
8. In a machine for forming and folding spaghetti, dough feeding means, dough slitting means to form the dough into threads, means to cut the threads into strips of predetermined length, a carriage placed underneath the cutting means and provided with a longitudinal trough to receive a number of strips and assemble them into a bunch, means to reciprocate the carriage, a finger operating means therefor to cause the finger to pick the bunch out of the trough before the carriage retreats and double the bunch upon itself, a receiver for the doubled bunch, said finger operating means causing the finger to release the bunch and deposit it on the receiver, and means intermittently to advance the receiver.

1,753,734. IGNITION-SWITCH LOCK. FREDERICK W. ANDREW, Andalusia, and WILSON HEMINGWAY, Jr., Philadelphia, Pa., assignors, by direct and mesne assignments, to The Electrolock Manufacturing Company, Vicksburg, Miss., a Corporation of Mississippi. Filed Sept. 29, 1927. Serial No. 222,718. 14 Claims. (Cl. 200—44.)



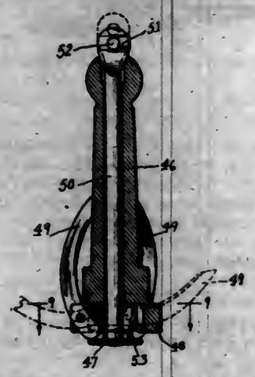
1. In an ignition switch lock the combination of a switch casing, a block of insulating material mounted in said casing, a wedge for retaining the said block within the said casing, said wedge being of semi-circular shape, contacts stationarily mounted upon said block, and a contact slidably movable into and out of contact with the said stationarily mounted contacts.

1,753,735. VEHICLE WHEEL. ISAAC H. ATHEY, Chicago, Ill. Filed July 16, 1926. Serial No. 122,769. 14 Claims. (Cl. 305—6.)



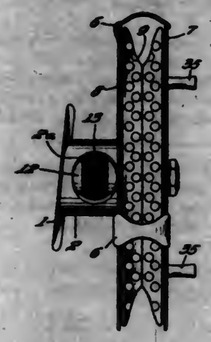
4. A vehicle wheel comprising a series of tread shoes pivotally inter-connected to form an endless band, each shoe having an inwardly projecting rigid suspension arm

carrying a suspension link at its inner end, a rigid inner load supporting wheel having an annular suspension surface of greater diameter than the diameter of a circle de-



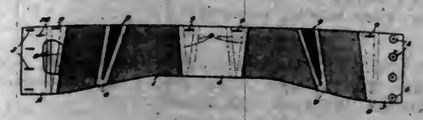
scribing all of the shoe suspension links and positioned to be engaged by the links whereby the inner wheel is suspended from the flexible band, and means for limiting the pivotal movement between adjacent shoes.

1,753,736. BOTTLE. SANFORD J. BLACKWELL, Atlanta, Ga., assignor of one-fourth to Henry Woodfin McLarty, Atlanta, Ga., one-fifth to Cobb Benning, Atlanta, Ga., and eleven-twentieths to Ransom and Company, Inc., Atlanta, Ga. Filed Mar. 7, 1929. Serial No. 344,949. 8 Claims. (Cl. 215—31.)



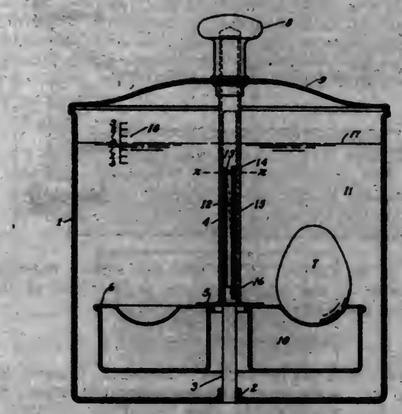
1. A bottle having its side wall formed with a circumferentially extending interior shoulder and further formed in its upper edge with a notch having its bottom wall flush with the upper face of the shoulder, said shoulder extending at an upward inclination from both sides of said notch and having its uppermost portion disposed diametrically opposite to said notch.

1,753,737. ANCHOR AND REEL THEREFOR. STEPHEN F. BOHM, Cicero, Ill. Filed Apr. 2, 1928. Serial No. 266,529. 1 Claim. (Cl. 114—208.)



An anchor comprising a body provided with a longitudinal passage, integral ears at the lower end of the body, arcuate drag arms pivoted adjacent their lower ends to said ears, said arms being movable on said pivots in a direction to cause the upper ends of the arms to bear against the body member, a rod slidable in said passage and having its upper end enlarged to limit the movement of the same through the passage in one direction, the enlarged portion of the rod having an opening therein for attachment to an anchor line, a plate secured to the lower end of the rod adapted to contact with the lower ends of said arms and to swing the upper ends of the arms away from the body member when the rod is moved in the passage by the anchor line.

1,753,738. CASTING REEL. CHARLES A. BOYER, Winona Lake, Ind. Filed May 11, 1928. Serial No. 276,929. 7 Claims. (Cl. 242—84.5.)

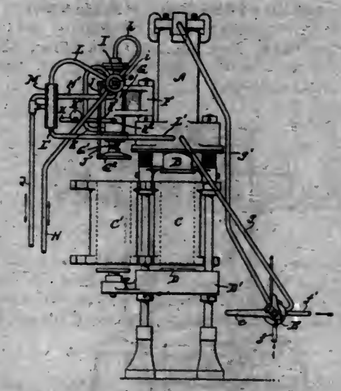


5. In a casting reel, a hub casing, a shaft in said casing, a hub mounted thereon for rotation, a spool integral with said hub, a brake washer loose upon said shaft for engagement with said hub, a tongue adjustably carried by said brake washer, a sectional nut arranged upon said shaft, a spring interposed between said nut sections, a lug at one end of said nut capable of engagement with said washer, and a small lug opposite said first named lug, the nut end being bevelled upon both sides of said lugs in a common direction, either bevelled nut portion being adapted selectively for engagement and release automatically with said tongue as said hub rotates, through a predetermined adjustment of said sectional nut upon its shaft.

1,753,739. ABDOMINAL BELT. GERTRUDE BURNS. New York, N. Y. Filed July 21, 1928. Serial No. 294,490. 4 Claims. (Cl. 2—41.)

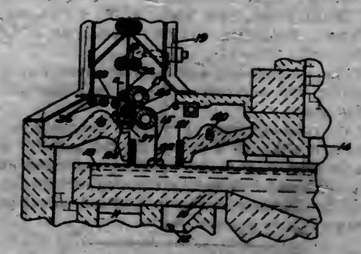
4. A one-piece belt comprising a narrow band of lightweight elastic material adapted to encircle the body of the wearer in the region of the abdomen and increasing in width toward the front ends to largely cover and confine the abdomen, means for fastening the ends of the band together at the front, a plurality of transverse relatively inelastic sections each including a pair of busks having their upper ends spaced slightly apart and their lower ends close together, and a plurality of button-holes disposed about the upper edge of said band in the space between each pair of busks for engagement with buttons disposed about the inner edge of an outer garment such as a pair of trousers.

1,753,740. AUTOMATIC EGG BOILER. PHILIP P. CHAPIN and WILLIAM J. KUPEC, New York, N. Y. Filed Sept. 12, 1927. Serial No. 218,974. 2 Claims. (Cl. 53—1.)



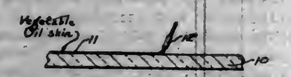
1. An egg boiler having the combination of a vessel for water, an egg carrier in said vessel, said carrier having a floating element to lift it out of the water, guiding means for the vertical movement of said carrier including a vertical slot having a lateral spur, a projection engaging said spur to maintain said carrier submerged contrary to the upward pressure of said element, and a thermostatic bar adapted to flex and align said projection with said slot to permit said element to move said carrier out of the water.

1,753,741. SELF-HEATING DEVICE SUCH AS SOLDERING IRONS. IRVING COWLES, Detroit, Mich., assignor to Union Bank of Chicago, Chicago, Ill., a Corporation of Illinois, trustee. Filed July 13, 1925, Serial No. 43,114. Renewed Sept. 7, 1929. 23 Claims. (Cl. 158—24.)



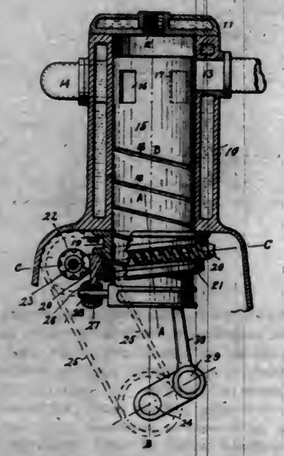
1. A device of the kind specified comprising a combustion chamber, an element to be heated mounted at one end thereof, a member mounted at the other end thereof provided with air supply passage for connecting said combustion chamber with atmosphere, a central mixing chamber in said member having a central discharge duct into said combustion chamber, there being a central gas intake opening at the other end of said mixing chamber, a valve-seat bordering one end of said opening, a valve seating on said valve-seat for controlling the volume of gas fed to said mixing chamber, air passages connecting the gas-intake end of the latter with atmosphere, and a member adjustable in the discharge end of said mixing chamber for coaction with the said valve-seat for controlling the volume of air admitted to said mixing chamber.

1,753,742. HYDRAULIC PRESS. JOSEPH DE FRANCISCI, Brooklyn, N. Y. Filed July 9, 1926. Serial No. 121,290. 21 Claims. (Cl. 138—10.)



1. In a hydraulic press, the combination with a hydraulic extruding ram including a controlling valve for effecting the extruding stroke and the return stroke, and a shiftable material cylinder, of a hydraulic packing plunger operable within said material cylinder for applying pressure for a determined time upon a mass to be compressed whereby the density of said mass is increased prior to the action upon the condensed mass of said hydraulic extruding plunger, and fluid pressure means responsive to a return stroke of the extruding ram for effecting the withdrawal from the material cylinder of said packing plunger.

1,753,743. METHOD AND APPARATUS FOR DRAWING SHEET GLASS. JOHN L. DRAKE, Toledo, Ohio, assignor to Libbey-Owens Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 28, 1927. Serial No. 170,240. 16 Claims. (Cl. 49—17.)



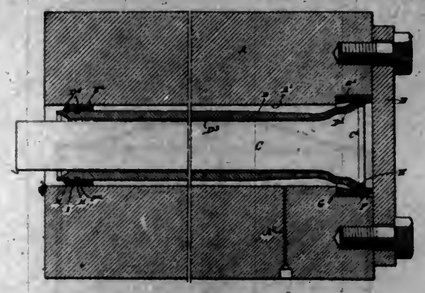
5. In sheet glass apparatus, rotatable means for cutting the edges from a moving sheet as it is being deflected from one plane to another, means for deflecting the said edges out of the path followed by said sheet, means for adjusting said rotatable cutting means transversely of said sheet, and means for adjusting said deflecting means to correspond with the adjustments of the cutting means.

1,753,744. LAMINATED GLASS. FRANK FRASER, Toledo, Ohio, assignor to Libbey-Owens Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Aug. 23, 1926. Serial No. 130,825. 8 Claims. (Cl. 49—81.)

8. As a new article of manufacture, a sheet of laminated glass comprising two sheets of glass, each having a vegetable oil skin thereon, and a sheet of non-brittle material interposed therebetween and united thereto.

1,753,745. VALVE-OPERATING MECHANISM. CLIFFORD S. GOBY, Cleveland, Ohio, assignor of one-half to Alice Myrzie Davis, New London, Ohio. Filed Apr. 18, 1927, Serial No. 184,541. Renewed Aug. 30, 1929. 7 Claims. (Cl. 123—80.)

1. In a device of the class described, a cylindrical valve, means for imparting continuous rotary and reciprocatory motion thereto, comprising a ring surrounding the valve with its axis set at an angle to the axis of the valve, a bearing for said ring supported upon a fixed portion of the device, an arm connecting said ring with said valve, and means for rotating said ring.



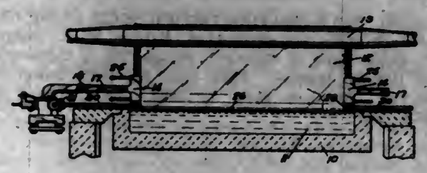
1,753,746. PLASTIC COMPOSITION. ARCHIE R. KEMP, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 3, 1923. Serial No. 678,207. 9 Claims. (Cl. 106—13.)

2. A filler of fused silica in a finely divided amorphous state having the surfaces of individual particles in a crystalline state.

8. In the manufacture of plastic compositions which contain fused silica in a finely divided state as a filler, the step of removing from the filling material adsorbed and occluded gases followed by the step of forming a thin film of tridymite upon the surface of individual particles of the filler.

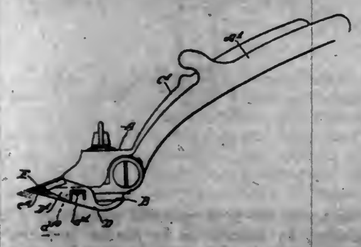
1,753,747. MANUFACTURE AND REPAIR OF CENTRIFUGAL MOLDS. FREDERICK C. LANGENBERG, New York, N. Y., assignor to United States Cast Iron Pipe & Foundry Company, Burlington, N. J., a Corporation of New Jersey. Filed Dec. 29, 1923. Serial No. 329,189. 8 Claims. (Cl. 29—148.)

1. The method of manufacturing a steel mold of improved wearing qualities for the centrifugal casting of tubular bodies which consists in radially contracting and longitudinally elongating a steel tube by fluid pressure



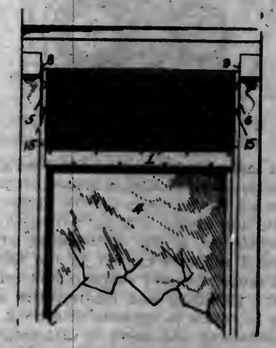
applied to the exterior of the tube and smooth finishing the interior of the contracted tube to the form of the exterior of the casting to be formed therein.

1,753,748. METALLIC ALLOY. HENRY J. LORANG, St. Louis, Mo., assignor of one-half to Frank J. Kuna, St. Louis, Mo. Filed Dec. 24, 1928. Serial No. 328,318. 2 Claims. (Cl. 75—1.)



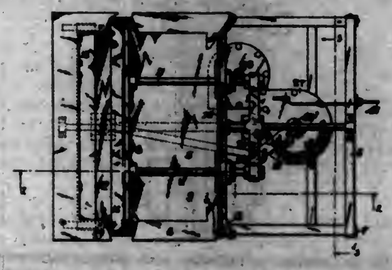
1. A metallic alloy comprising the following metals combined in substantially the proportions stated, viz: copper, 1 1/16 %; zinc, 1 1/16 %; tin, 6 1/4 %; lead, 21 3/4 %; and antimony, 68 3/4 %.

1,753,749. SHEET-GLASS EDGE-FORMING MEANS. LEOPOLD MAMBOURG, Lancaster, Ohio, assignor to Libbey-Owens Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed May 29, 1925. Serial No. 33,708. 16 Claims. (Cl. 49—17.)



1. In sheet glass apparatus, a receptacle containing a mass of molten glass, means for drawing a sheet therefrom, a stationary guide member arranged at each edge of the sheet, and a rotatable member in horizontal alignment with a portion of each guide member and cooperating therewith to assist in advancing glass through said guides.

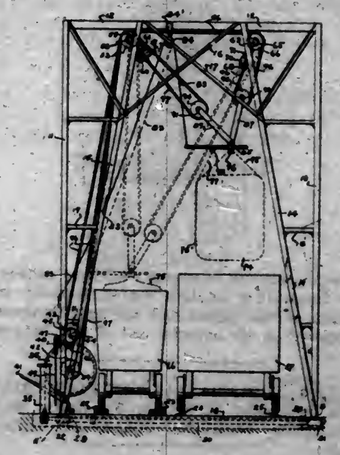
1,753,750. HAIR CLIPPER. MICHAEL W. MCARDLE, Chicago, Ill., and JOHN H. DONNELLON, Evanston, Wyo. Filed Nov. 3, 1927. Serial No. 230,728. 8 Claims. (Cl. 30—1.)



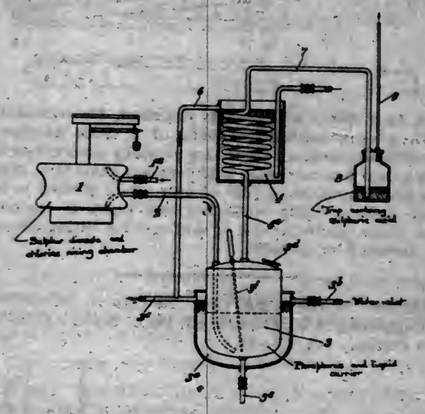
1. A hair clipper and the like comprising in combination with a lower fixed cutter and comb and a reciprocating cutter blade mounted above the same and cooperating therewith for the cutting action, an upper comb mounted above the reciprocating blade and having comb teeth extending forwardly above and coinciding in vertical plane with teeth of the lower comb, and extending respectively with downward inclination over the corresponding teeth of the lower comb forwardly past the vertical plane of the points of the teeth of the lower comb, and means by which said upper comb is rendered adjustable longitudinally of the comb teeth with range of adjustment suitable for carrying the points of said upper comb teeth forwardly of the points of the teeth of the lower fixed comb and below the plane of the cut.

1,753,751. FIXTURE FOR ROLLER SCREENS OR SHADES. EDWARD C. PHILIPPS, Brooklyn, N. Y. Filed Nov. 15, 1927. Serial No. 233,361. 4 Claims. (Cl. 156—24.)

3. A window frame fixture for the Hartshorn rollers of roller screens comprising a base of substantially the same width as the window sash, a raised part thereon having an aperture to receive the roller pin, a prong adjacent each side of said base adapted to be driven upwardly into the top of the frame by striking the lower end of the base with a hammer and a downwardly projecting shank having a single nail hole therein.



1,753,752. WASHING MACHINE. WILLIAM C. REID, Oakland, Calif. Filed Apr. 11, 1928. Serial No. 269,255. 1 Claim. (Cl. 68—19.)

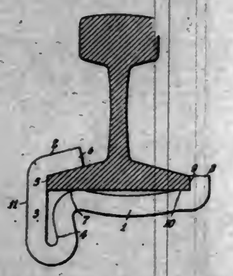


In a washing machine, a receptacle adapted to contain washing fluid and articles to be cleansed, a plunger located in the receptacle and adapted to move with reciprocating motion backward and forward, a motor-driven mechanism for actuating the plunger, and a braking mechanism for giving the motor a load at all times, whereby the plunger may be smoothly operated backward and forward.

1,753,753. HOISTING AND WEIGHING MEANS. HORACE F. RUGGLES, Brooklyn, N. Y. Filed Mar. 26, 1923, Serial No. 627,836. Renewed Sept. 11, 1929. 8 Claims. (Cl. 212—88.)

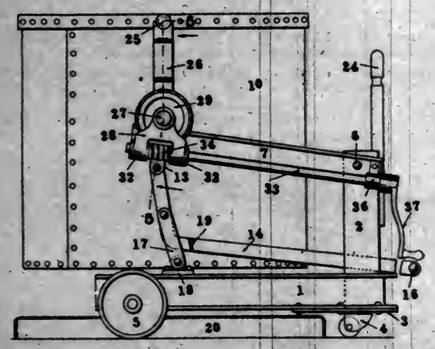
1. In a hoisting mechanism the combination with load carrying means, a support, cables at angles to each other and secured to said load carrying means, means for operating said cables to hoist said load carrying means and means operable independently of the aforesaid cable operating means to vary the tension on said cables due to the weight of the load in order to traverse the said load carrying means, the independent means being capable of operation while the hoisting means is stationary and vice versa.

1,753,754. MANUFACTURE OF PHOSPHORUS OXYCHLORIDE AND THIONYL CHLORIDE. GEORGE J. SCHUDEL, Nitro, W. Va., assignor, by mesne assignments, to Elko Chemical Company, a Corporation of West Virginia. Filed Nov. 18, 1926. Serial No. 149,063. 15 Claims. (Cl. 23—203.)



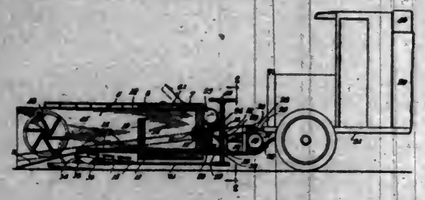
9. The process which comprises producing phosphorus oxychloride by the reaction of a mixture of sulphur dioxide and chlorine on phosphorous contained in a liquid carrier, the sulphur dioxide and chlorine being in the form of a liquid, said liquid carrier being a compound such as formed in the above reaction.

1,753,755. RAIL ANCHOR. CHARLES B. SHEPHERD, New York, N. Y., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Filed May 9, 1928. Serial No. 276,207. 8 Claims. (Cl. 238—330.)



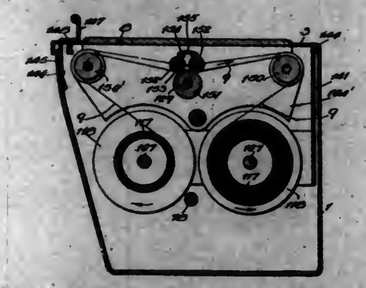
1. A rail anchor comprising a body member, a downwardly depending looped member disposed at one end

thereof, said looped member having legs of unequal length, means adapted to engage the upper surface of the rail base flange disposed on the longer leg, and means disposed on



the shorter leg adapted to engage the under surface of said rail base flange at a location spaced inwardly from the edge surface of said flange and rail base flange-engaging means disposed on the opposite end of said body member.

1,753,756. HOISTING AND TILTING TRUCK FOR TANKS. CHESLEY T. SMALL, St. Louis, Mo. Filed Jan. 12, 1928. Serial No. 246,148. 6 Claims. (Cl. 298—11.)



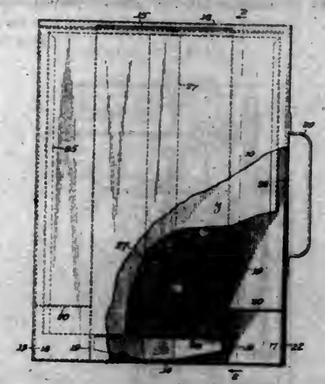
1. In a device of the class described, the combination with a tank having trunnions, of a truck adapted to straddle the tank, a pair of bars pivotally mounted on said truck, bearings carried by said bars and adapted to engage the tank trunnions, a pair of bent levers pivoted to said bars, links pivotally connecting said levers to the truck, and means carried by one of said oars for tilting the tank to discharge its contents.

1,753,757. SNOW REMOVAL. EDWARD A. SMITH, West Englewood, N. J. Filed June 7, 1924. Serial No. 718,484. 3 Claims. (Cl. 37—12.)

2. Snow removal apparatus, comprising a portable snow melting chamber open to receive the snow, a combustion chamber in rear of said melting chamber, a baffle wall between the melting chamber and combustion chamber having flame passages above and below the same, a burner at the rear of the combustion chamber directed against the baffle wall to enable combustion of fuel within the combustion chamber and passage of flame over and under said baffle wall into the forward melting chamber and means for steering the apparatus to direct the open melting chamber according to requirements.

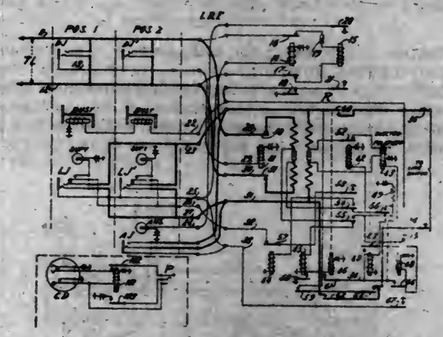
1,753,758. ROAD INDICATOR. THEODORE J. SMULSKI, Chicago, Ill., assignor to The Mileometer Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 11, 1920. Serial No. 416,187. 7 Claims. (Cl. 40—42.)

1. In a road indicator of the kind described and in combination, a casing provided with a hinged cover plate and having an opening therethrough for the display of a tape arranged within the casing, a frame arranged within the casing and movable in or out of the same as desired, a plurality of spool supports carried by the said frame, a tape, spools arranged on said supports and carrying said tape, means for yieldingly and continuously urging said spool supports to rotate in opposite directions, means for detachably maintaining said spools on said supports, means carried by said frame for feeding the tape through the machine from one spool to the other, and mechanism for driving said spool supports and feeding mechanism in a desired manner.



1,753,759. ENGINE. EDWARD A. STALKER, Ann Arbor, Mich. Filed June 1, 1927. Serial No. 195,795. 14 Claims. (Cl. 123—56.)

13. In an engine, a cylinder and piston construction providing a combustion chamber on one side of the piston-head, fuel supply means, means for supplying scavenging air to said combustion chamber at a certain point in the cycle of operations to scavenge burnt gases, and means for supplying a supplementary scavenging flow of air to the combustion chamber arranged so that the first mentioned scavenging flow of air to the combustion chamber causes the supplementary scavenging flow of air by induction.



1,753,760. DRAFTING OUTFIT. WILLIAM E. WHITE, Chicago, Ill. Filed Mar. 23, 1927. Serial No. 177,494. 2 Claims. (Cl. 45—69.)

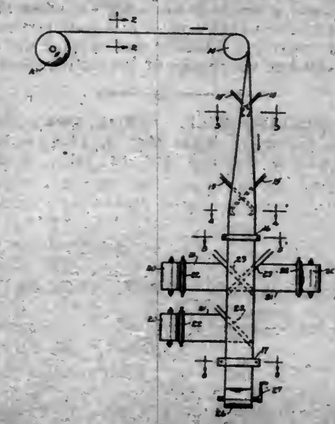
2. A drafting device comprising in combination, a hollow casing, a pad-back having flanges thereon adapted to engage and hold a pad of paper, and a projection on said pad-back, the said casing having an opening in one side

thereof adapted to receive the projection on said pad-back, the said opening conforming substantially to the contour of the said projection.

1,753,761. TELEPHONE SYSTEM. JOHN WICKS, Oak Park, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Sept. 26, 1925, Serial No. 58,680. Renewed Jan. 27, 1930. 24 Claims. (Cl. 179—27.)

10. In a telephone system, a two-way trunk line, a jack and a repeater directly connected to said trunk line at one-end thereof, an automatic switch at each end of the trunk line, means for associating a calling device with said trunk line by way of said jack to control the switch at the other end, and means controlled by the calling device to disconnect the repeater from the trunk line.

1,753,762. SPLICE BAR OR FISHPLATE. LAWRENCE S. WILBUR, Evanston, Ill., assignor to National Rail Joint Corporation, a Corporation of Illinois. Filed Apr. 12, 1929. Serial No. 354,492. 26 Claims. (Cl. 238—243.)



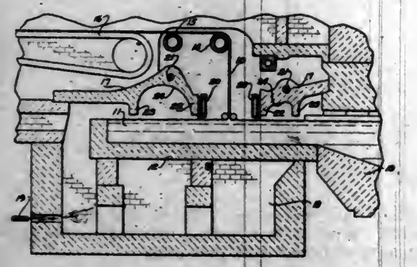
1. A rail joint comprising a splice bar or fish plate having a relatively wide bottom formed with an outer flange, whereby the top of the bar is more flexible than the bottom, and having its top portion curved or bowed inwardly at its middle, when viewed from above, so that when the bar is tightened on the rail joint the ends of the bar are forced inwardly toward the rails, placing the bar under tension, whereby the middle portion of the bar will tend constantly to spring inwardly toward the rails.

1,753,763. SPLICE BAR OR FISHPLATE. LAWRENCE S. WILBUR, Evanston, Ill. Filed June 24, 1929. Serial No. 373,285. 13 Claims. (Cl. 238—243.)

1. In a rail joint, a splice bar or fish plate having an inwardly curved middle portion, and having straight end portions in alignment with each other.

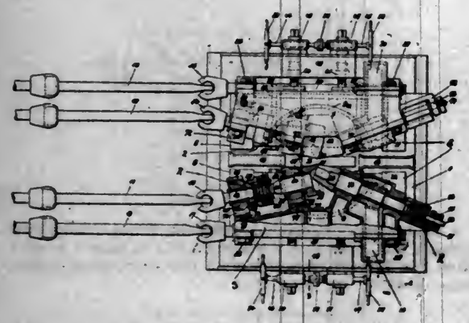
1,753,764. METHOD AND APPARATUS FOR MAKING MANIFOLD FORMS. LOUIS J. WILLARD, Norwalk, Ohio, assignor to The Rotary Printing Company, Norwalk, Ohio, a Corporation of Ohio. Filed Apr. 24, 1929. Serial No. 357,744. 10 Claims. (Cl. 270—41.)

1. A method of making manifold forms, comprising taking a web, gathering it longitudinally to make a fanfold form, and thereafter interleaving long continuous carbon strips between the folds.



1,753,765. COMBINED BELT BUCKLE AND CONTAINER. JOHN B. WITHERS, Oakland, Calif. Filed Apr. 16, 1927. Serial No. 184,189. 2 Claims. (Cl. 224—5.)

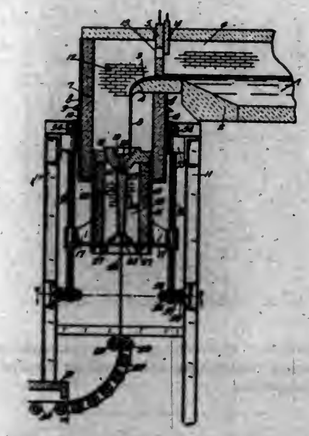
1. In a device of the character described, a moisture proof openable box, a belt buckle providing a receptacle



for the slidable reception of said box longitudinally through an end thereof, means for releasably fixing said box in said receptacle, and means on said box providing a closure for said receptacle when said box is fixed therein.

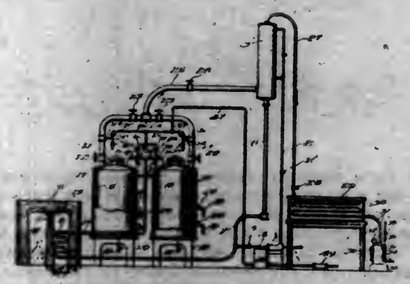
1,753,766. SHEET-GLASS APPARATUS. MIKE ZADOROZNY, Charleston, W. Va., assignor to Libbey-Owens Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 1, 1928. Serial No. 251,071. 4 Claims. (Cl. 49—17.)

4. In sheet glass apparatus, a receptacle containing a mass of molten glass, means for drawing a sheet therefrom, and a lip tile arranged on each side of said sheet, each lip tile comprising a body portion suspended over said molten glass and being supported at one end, a downwardly extending lip portion carried by the opposite end of the body, and a second downwardly extending lip protion arranged between the ends of said body portion, said lip portions creating a chamber for trapping and localizing heat adjacent the surface of the molten glass.



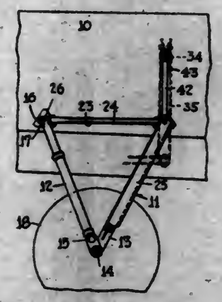
1,753,767. ROLLING MILL. GUSTAV ASBECK, Dusseldorf-Rath, Germany. Filed Mar. 1, 1928, Serial No 258,218, and in Germany Apr. 12, 1927. 9 Claims. (Cl. 80—13.)

1. A rolling mill comprising rolls mounted to engage opposite sides of a piece of material to be worked, the rolls on one side of said material being adjustable towards or from those on the other side and the rolls on each side of said piece of material being adjustable towards and from each other and to vary the direction of their axes of rotation.



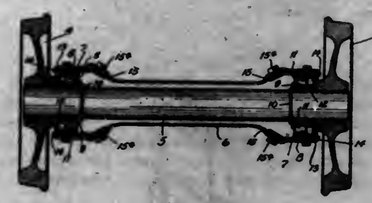
1,753,768. METHOD AND APPARATUS FOR FORMING SHEET GLASS. JAMES C. BLAIR, Toledo, Ohio, assignor to Libbey-Owens Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 25, 1924. Serial No. 708,839. 10 Claims. 49—17.)

2. In apparatus for producing sheet glass, sheet-forming means for catching a stream of molten glass, distributing the glass into sheet form, and suspending a vertically hanging portion of the sheet, a housing for the molten stream, and a housing for the sheet-forming means, the



two housings having telescopic connection with one another, and means for adjusting the latter housing and the sheet-forming means vertically as a unit.

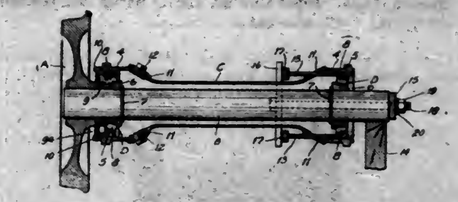
1,753,769. PROCESS AND APPARATUS FOR TREATING PETROLEUM OIL. ARTHUR G. BOGARDUS, New York, N. Y., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Jan. 30, 1925, Serial No. 5,704. Renewed July 2, 1928. 4 Claims. (Cl. 196—58.)



1. A method of treating petroleum oil, consisting in heating the oil, discharging said heated oil into one of a plurality of interconnected zones of reaction, where separation of vapors and precipitation of carbon takes place, removing the vapors, dephlegmating, condensing and collecting same, maintaining a superatmospheric pressure on the said zone, interrupting the discharge of heated oil into said zone of reaction and diverting same to another of the interconnected zones, gradually reducing the pressure in the first mentioned zone while simultaneously causing the system pressure to be imposed on the zone into which the discharge of heated oil has been diverted, preventing leakage of heated oil into the zone of reduced pressure by maintaining a neutral zone of oil in the vapor connection between the zones of reaction at temperature materially below the temperature of the oil being treated, under a pressure substantially the same as the pressure on the system.

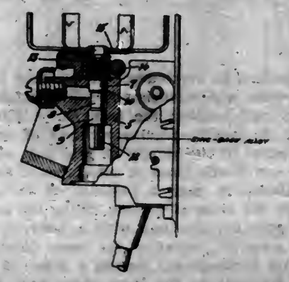
1,753,770. RETRACTABLE LANDING GEAR. DANIEL J. BRIMM, Jr., West Hempstead, N. Y., assignor to Ireland Aircraft, Inc., a Corporation of New York. Filed Nov. 1, 1927. Serial No. 230,242. 12 Claims. (Cl. 244—2.)

6. In a retractable landing gear for aeroplanes, two landing gear supports, two landing gear struts pivotally fastened at their inner ends to said supports, an axle fitting to which both said struts are fastened at one end, an extension provided at the outer end of one of said supports, said extension being pivotally movable with both said struts when and as the landing gear is retracted, braces carried from the outer end of said extension to points above apd below said extension, one of said braces being fastened at its opposite end to said axle fitting, and means engaging another of said braces to retract the landing gear.



1,753,771. PROCESS OF REMOVING BEARINGS FROM AXLES. TRACY V. BUCKWALTER, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed Dec. 27, 1927. Serial No. 242,929. 6 Claims. (Cl. 29—84.)

1. The process of removing the inner raceway member of a roller bearing from a roller bearing axle construction wherein an axle is enclosed within a tubular axle housing and said bearing is interposed between said axle and said housing with its inner raceway member press-fitted on said axle, which consists in moving said axle endwise of said housing towards one end thereof far enough to move said inner raceway member clear of said end, interposing a member between said end of said housing and the adjacent end of said inner raceway member, and then pressing said axle endwise through said inner raceway member towards the other end of said housing while holding said axle housing against movement in such direction.



1,753,772. ROLLER-BEARING-AXLE CONSTRUCTION. TRACY V. BUCKWALTER, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed Dec. 27, 1927. Serial No. 242,930. 2 Claims. (Cl. 295—36.)

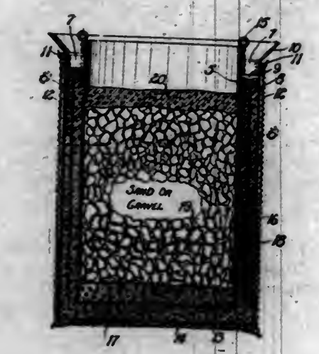
1. In a roller bearing axle construction, an axle, a tubular housing enclosing said axle and having enlarged end portions forming an enlarged chamber at each end of said housing, and a roller bearing located in said chamber with its outer raceway member seated therein and

with its inner raceway member mounted on said axle, the enlarged end portion of said housing having openings therethrough through which access may be had to said bearing.

1,753,773. CHROMIUM-PLATED WORM SHAFT. ALBERT CHAMPION, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed Oct. 1, 1926. Serial No. 138,940. 3 Claims. (Cl. 308—241.)

1. The combination with two parts having frictional engagement with each other, one of said parts having an ingredient tending to alloy with the other, but not with chromium, under the influence of friction, of a coating of chromium on one of said parts.

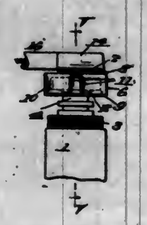
1,753,774. SEALING DOOR. WALTER H. D'ARDENNE, Philadelphia, Pa., assignor to Heintz Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 10, 1927. Serial No. 167,093. 10 Claims. (Cl. 20—35.)



1. A sealing door comprising inner and outer portions and a coupling between the inner and outer portions mounting the former on the latter for limited floating movement in any direction relative thereto.

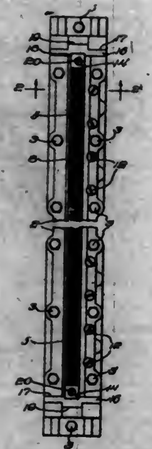
1,753,775. METHOD OF SIZING PAPER PULP. JUDSON A. DE CEW, Mount Vernon, N. Y., assignor to Process Engineers, Inc., New York, N. Y., a Corporation of New York. Filed May 24, 1929. Serial No. 365,798. 11 Claims. (Cl. 92—21.)

1. A method of sizing paper which consists first in making the fibres astringent with a solution of sulphate of alumina and having the solution surrounding the fibres at a pH. of from 5. to 6.8, and later adding a sizing material.



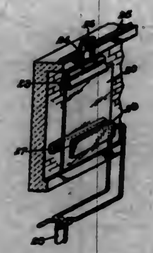
1,753,776. FILLED CONCRETE BLOCK AND METHOD OF MAKING THE SAME. JOHN A. DE VILBISS, St. Louis, Mo., assignor to Alexander P. De Vilbiss, Burlington, Iowa. Filed May 23, 1927. Serial No. 193,494. 10 Claims. (Cl. 25—154.)

1. The method of making concrete blocks for levee and revetment work, which consists in taking a fabric bag open at one end and holding the same in a distended form throughout its length, placing a layer of self-hardening plastic material in the bottom of said bag, placing a confined loose non-plastic mass on said layer of self-hardening plastic material in such a position as to be free from contact with the sides of the bag, filling the space between the loose mass and the bag with a body of plastic self-hardening material, releasing the loose non-plastic material from its confinement, placing a layer of plastic self-hardening material on the loose mass, and, lastly, securing the open end of the bag in closed position.



6. A filled concrete block comprising a central body, a layer of dry material of predetermined thickness surrounding said central body, said layer adapted to become self-hardening after being subjected to moisture, reinforcing material located in said layer of dry material, and a fabric casing for retaining said dry material in position.

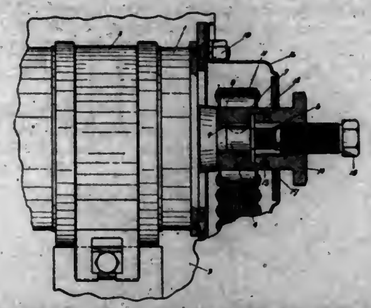
1,753,777. CONNECTER FOR TERMINAL WIRES. JAMES DILLON, Mount Vernon, N. Y. Filed July 28, 1927. Serial No. 209,065. 4 Claims. (Cl. 173—269.)



1. The combination with a spark plug having a thumb nut, of a connecter for terminal wires comprising, a body portion developed into oppositely disposed spring actuated jaws arranged to embrace the opposite sides of the thumb nut, each of said jaws having an inturned portion arranged to project under the thumb nut to prevent unintentional lateral displacement, and a wire holding member formed integral with said body portion and positioned to overhang the thumb nut.

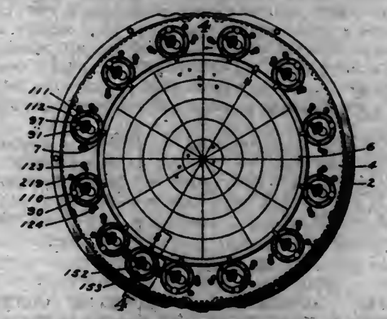
1,753,778. RACK. JOSEPH C. DRADER, Detroit, Mich. Original application filed Nov. 10, 1927, Serial No. 232,226. Divided and this application filed June 19, 1929. Serial No. 372,172. 9 Claims. (Cl. 74—27.)

1. A toothed rack comprising a row of abutting members having corresponding edge portions thereof spaced and fashioned to form rack teeth, and means for applying a clamping stress to all of said members through an application of pressure to the end members of the row.



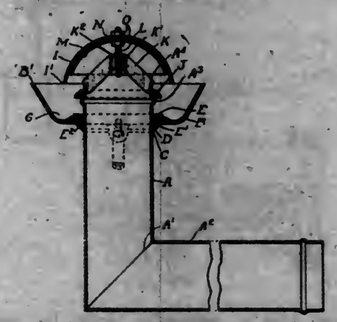
1,753,779. METHOD FOR PRODUCING SHEET GLASS. ENOCH T. FERNGREN, Toledo, Ohio, assignor to Libbey-Owens Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Nov. 1, 1924. Serial No. 747,884. 4 Claims. (Cl. 49—87.)

1. The process of producing sheet glass, consisting in pressing a quantity of glass into sheet form, then placing the sheet in a vertical plane, and simultaneously moving a fire-polishing means and a cooling means in proximity thereto.



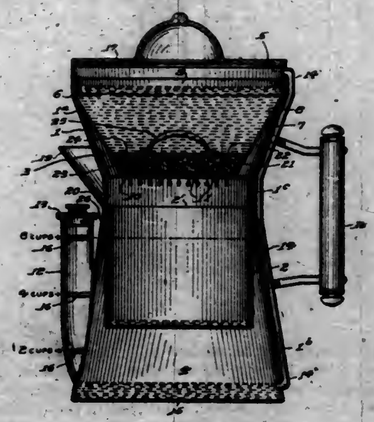
1,753,780. TOOL AND METHOD FOR REMOVING GENERATORS. WALTER S. FISHER, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 30, 1927. Serial No. 179,450. 9 Claims. (Cl. 29—85.)

1. In a machine having a rotatable shaft, a sprocket mounted thereon, and a chain trained about the sprocket; a tool for removing the shaft comprising means adapted to engage and maintain the operative position of the sprocket, and means operatively associated with the engaging means for forcing the shaft out of engagement with the sprocket.



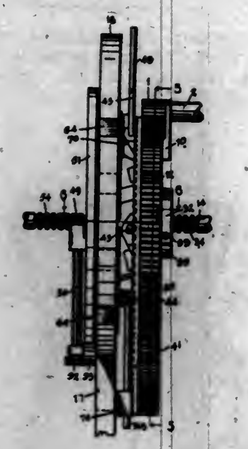
7. A method of repairing a device including a sprocket and chain driven shaft that comprises forcing the shaft out of engagement with the sprocket and thereafter maintaining the position of the sprocket while replacing the shaft.

1,753,781. PLOTTING APPARATUS. HANNIBAL C. FORD, Jamaica, N. Y., assignor to Ford Instrument Company, Inc., Long Island City, N. Y., a Corporation of New York. Filed May 4, 1928. Serial No. 275,195. 19 Claims. (Cl. 33—1.)



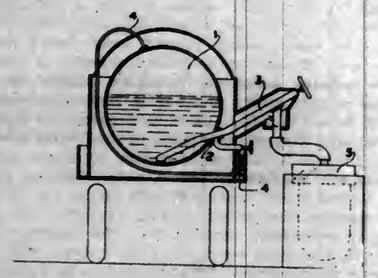
1. In apparatus for indicating the relative position of an object, the combination of an indicator, independent mechanism for driving the indicator in mutually perpendicular directions, light-projecting means associated with the indicator, and a chart upon which said means projects light to represent the relative position of the object.

1,753,782. OIL-BURNING APPARATUS. ALBERT R. GRANT, New York, N. Y. Filed July 21, 1928. Serial No. 294,391. 7 Claims. (Cl. 158—92.)



1. A burner-head of the character described comprising a conduit for air, a basin supported by said conduit, a wick in said basin, means for leading oil to said wick, a cap supported above the upper end of said conduit adapted to deflect air into said basin, and a ring for deflecting air mounted on said conduit below said cap.

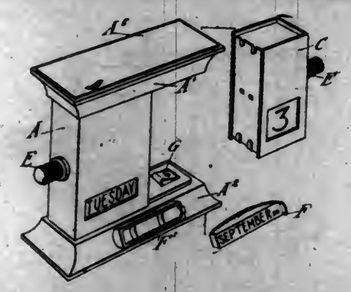
1,753,783. UTENSIL FOR MAKING DRIP COFFEE. JOSEPH A. GUERIN, Sr., and JAMES M. GUERIN, Philadelphia, Pa. Filed Oct. 2, 1929. Serial No. 396,613. 1 Claim. (Cl. 53—3.)



In a utensil for automatically making French drip coffee, the combination with a casing, substantially circular in transverse horizontal cross-section and having an upper section and a lower section, of a drip collecting receptacle having the upper portion of its side wall snugly fitting and secured substantially steam-tight against the inner surface of said casing between said sections and closing said lower section to form a water boiling chamber and closing the said upper section to form a coffee infusing chamber, the side walls of said drip collecting receptacle below the upper margin thereof being spaced from the inner wall of said water boiling chamber, a removable coffee infusing receptacle suspended within the upper section of said casing and having impervious side walls spaced from the side walls of said casing and a pervious bottom wall disposed over said drip collecting receptacle, a filter fabric in said coffee making receptacle lying flat against said pervious bottom, a water elevating pipe rigidly secured to the outside of said casing and having its ends passing through said casing, the upper end thereof being in communication with the coffee infusing chamber above said infusing receptacle and the lower end thereof being in communication with the said water boiling chamber at a substantial distance above the bottom of said boiler, a closure for the top of said casing, a water supply pipe communicating with said water boiling chamber through a side wall of said casing and a removable steam-tight closure for the upper end of said supply pipe, said casing being provided with a minute aperture immediately below the point where said drip collecting receptacle is secured to the interior of said casing, for the escape of low pressure vapor, and the capacity of said infusing receptacle being slightly greater than the capacity of said water boiling chamber above the point where said water elevating tube enters said water boiling chamber and the capacity of said drip collecting receptacle being slightly greater than the capacity of said coffee making receptacle, said casing being also provided with a passage near the top of said drip collecting receptacle for the discharge of the contents of said drip collecting receptacle therethrough.

1,753,784. TRANSMISSION GEAR. CARL W. HERZOG, Toledo, Ohio. Filed Oct. 7, 1929. Serial No. 397,851. 14 Claims. (Cl. 74—34.)

1. In a speed transmission gear, a floating circular member, means for varying the effective radius of the circular member, an element movable over the circular member, and a rotatable element connected to the member and driven by the member according to the speed of rotation about the effective radiant center of the circular member.

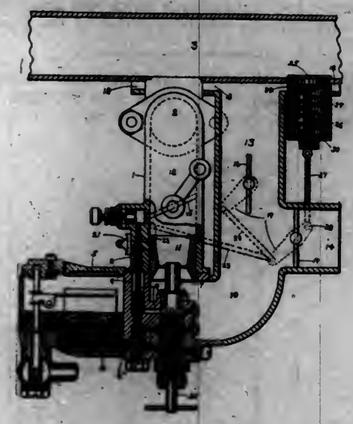


1,753,785. PROCESS OF TRANSFERRING LIQUEFIED GASES FROM ONE CONTAINER TO ANOTHER. CHRISTIAN WILHELM PAUL HEYLANDT, Berlin-Lankwitz, Germany. Filed Mar. 8, 1929, Serial No. 345,259, and in Germany Mar. 2, 1928. 4 Claims. (Cl. 62—1.)

1. The process of transferring liquefied gases from one container to another, which consists in maintaining the liquefied gases at their ordinary boiling temperatures in the first container, and utilizing a portion of the liquefied gases from the first container to apply an artificially increased momentary pressure to the liquefied gases thereby to cause the same to flow at increased speed into another container.

1,753,786. INDICATING DEVICE FOR DISPLAYING VARIABLE INFORMATION. ADAM HINKEL, Offenbach, Germany. Filed Jan. 3, 1930, Serial No. 418,194, and in Germany Jan. 26, 1929. 6 Claims. (Cl. 40—107.)

1. An indicating device of the kind described for displaying variable information, having at least two sets of indicating members which normally move together when the device is turned, said device comprising a main section and a section separable from the main section, one set

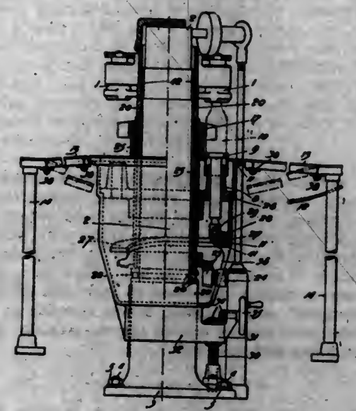


of the indicating members being in the separable section to be turned therewith to effect adjustment of the indications given by the two sets of indicating members.

1,753,787. PROCESS OF RECOVERING ALKALI-METAL XANTHATES. WILHELM HIRSCHKIND, Pittsburg, Calif., assignor to Great Western Electro-Chemical Company, a Corporation of California. Filed Nov. 28, 1924. Serial No. 752,806. 4 Claims. (Cl. 260—106.)

1. The process of obtaining alkali-metal xanthate in the form of a separable precipitate which consists in causing alcohol, caustic alkali and carbon disulphide to react to produce and precipitate a xanthate, and then causing a precipitation from the mother liquor of normally soluble potassium xanthate by the addition of a precipitant comprising an alkali-metal hydroxide, said precipitation bringing down a precipitate in excess of any precipitate due to mass action.

2. The process of obtaining in the form of a separable precipitate alkali metal xanthate, which consists in causing ethyl alcohol, caustic potash and carbon disulphide to react to produce and precipitate potassium xanthate, and adding caustic soda to precipitate a further quantity of potassium xanthate.



1,753,788. AUTOMATIC CARBURETOR CONTROL. WARREN T. HUNT, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed June 22, 1925. Serial No. 38,624. 8 Claims. (Cl. 123—122.)

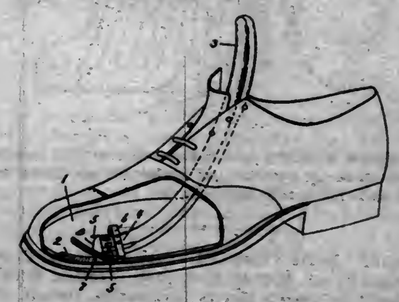
1. In an internal combustion engine, the combination of a carburetor therefor, air and fuel ducts within said carburetor, a jet communicating with both ducts wherein

fuel and air are mixed, a valve for controlling the inlet to the air duct, hot and cold air pipes for said carburetor, a control valve within one of said pipes, an exhaust passage for the burned gases and means whereby the pressure head of the burned gases controls the air duct valve and the control valve within said air pipe.

1,753,789. CAPPING MACHINE. ANDERS JOSEF JONSSON, Linkoping, Sweden. Filed Apr. 17, 1928, Serial No. 270,777, and in Norway Feb. 22, 1928. 2 Claims. (Cl. 226—84.)

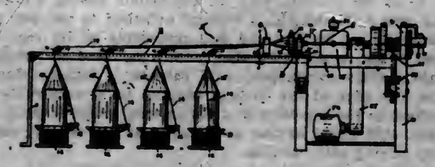
1. In a machine for applying caps to bottles, the combination with capping heads rotating about a central column, of a machine table having supports carrying the bottles and elevating them into said heads, a nave rotating with the latter about the column and carrying the supports for the bottles in upright positions, a frame supporting the nave and machine table, a conveyor for the bottles traversing a portion of the table, and an adjustment device for changing the elevation of the frame and with it the table, conveyor, nave and supports therefor.

1,753,790. METHOD OF PREPARING CONCENTRATED COD-LIVER OIL. KAMETARO KAWAI, Tokyo, Japan. Filed Sept. 28, 1926. Serial No. 138,389. 4 Claims. (Cl. 167—81.)



1. A method of preparing concentrated codliver oil, characterized by saponifying 50 to 75 per cent of the ordinary codliver oil by proper means and then separating and collecting the unsaponifiable matter from the saponified matter as much as possible.

1,753,791. NUT. BERNHARD F. KIESEL, Detroit, Mich., assignor to F. L. McLaughlin Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 27, 1927. Serial No. 228,990. 5 Claims. (Cl. 85—132.)

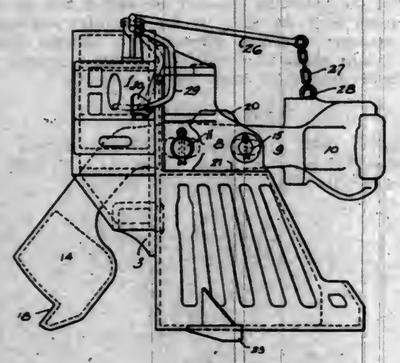


1. Means for structurally positioning a centrally bored and threaded nut body upon a laminary surface, comprising a unitary sheet metal wrapping applied about all of the lateral faces and about selected marginal portions of the end faces of the nut, the initially central portion of the sheathing adjacent one end of the nut being apertured with the edges of the sheathing surrounding the aperture extending outwardly for passage through, and locking engagement with, the laminary element with which the association of the nut is desired.

1,753,792. ART OF MAKING SHOES. EUCLID I. LA CHAPELLE, Brockton, Mass. Filed Apr. 17, 1929. Serial No. 355,785. 1 Claim. (Cl. 12—142.)

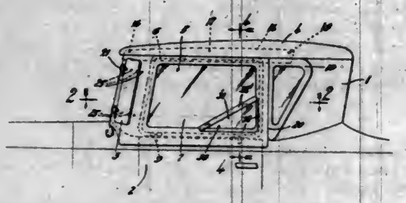
That improvement in the art of making shoes of the Goodyear welt type which consists in reducing the thickness of the marginal forepart portion of an insole in a shoe of that type by cutting off, from within the shoe, a portion of the said insole from a substantial distance of its edge face to and including part of its edge face.

1,753,793. CABLE-FORMING DEVICE. MARTIN H. LANG, Minneapolis, Minn. Filed Feb. 18, 1926. Serial No. 88,000. 23 Claims. (Cl. 153—64.)



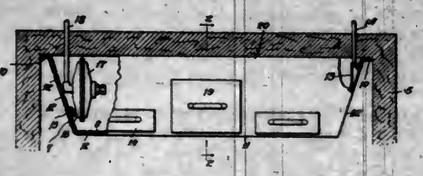
1. A cable forming device including, means for holding a series of wire strand feeding spools, means for directing the strands through a tension member, a forming head having a series of openings for receiving the individual strands and grooves positioned in a manner to cause the strands to pass through said head in a helical shape, a mandrel positioned within said head, and means for pulling the cable through said forming head.

1,753,794. DEFLECTING PILOT STRUCTURE. WILLIAM L. LENTZ, Tuckahoe, N. Y., assignor, by mesne assignments, to General Steel Castings Corporation, Granite City, Ill., a Corporation of Delaware. Filed Aug. 22, 1927. Serial No. 214,600. 15 Claims. (Cl. 213—4.)



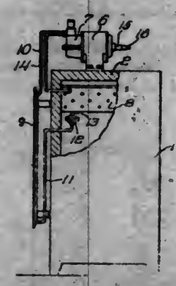
14. In combination, a locomotive pilot beam member, a pilot member mounted thereon, there being an opening extending through said members from back to front, a

coupler device extending through said opening and consisting of shank and counterbalance elements pivoted to



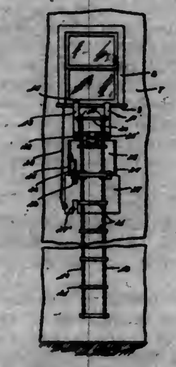
one of said members, said device being pivoted intermediate its ends for vertical and horizontal movement on its pivot and within said opening.

1,753,795. DOOR CURTAIN. CYRUS W. LINN, CLARE G. BIGELOW, and HARVEY O. RAICHE, Lansing, Mich., assignors to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Dec. 13, 1926. Serial No. 154,487. 4 Claims. (Cl. 296—139.)



3. In combination with an automobile having a door, a top and a windshield, a valance attached to the top, permanently at its fore end and removably at its rear end and center, a noncollapsible curtain mounted on the door, said curtain overlapping said valance, a foldable flap at the fore edge of the curtain adapted to be removably attached to the windshield, a transparent panel in said curtain, said panel having an opening at one corner, and a flap closing said opening.

1,753,796. REFRIGERATION. THOMAS J. LITLE, JR., Detroit, Mich., assignor to Copeland Products, Inc., Detroit, Mich., a Corporation of Michigan. Filed June 17, 1926. Serial No. 116,618. 17 Claims. (Cl. 62—95.)

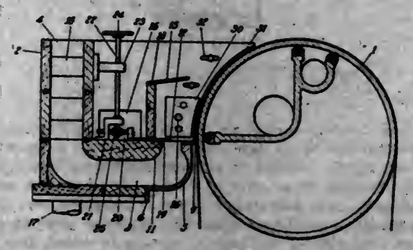


6. In combination, a refrigerator cabinet, and an expansion element therein cooperating with the walls thereof to form a freezing chamber, sealed against air circulation, between said element and certain walls of said cabinet.

1,753,797. REFRIGERATING MECHANISM. THOMAS J. LITLE, JR., Indianapolis, Ind., assignor to Copeland Products, Inc., Detroit, Mich., a Corporation of Michigan. Original application filed Sept. 18, 1926, Serial No. 136,357. Divided and this application filed Apr. 10, 1929. Serial No. 353,910. 8 Claims. (Cl. 62—115.)

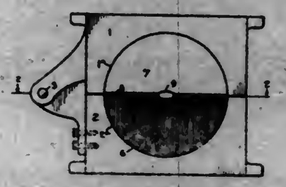
1. In combination, a refrigerating system comprising a compressor, condenser and evaporator operatively connected together, a motor for driving said compressor, a thermostatically operated switch in series with said motor for controlling the operation thereof in accordance with the demands of said system, an inlet check valve for said compressor, a magnet positioned to open said check valve when energised, and switching means operable at will to place either said magnet or said thermostatically operated switch in series with said motor.

1,753,798. FIRE ESCAPE. CECIL E. MARTIN, Detroit, Mich. Filed Apr. 2, 1928. Serial No. 266,499. 2 Claims. (Cl. 228—42.)



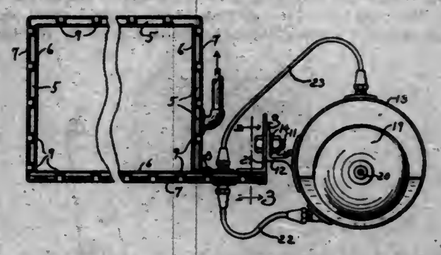
1. A fire escape of the class described adapted for use in connection with a building having a supporting portion, comprising: supporting members secured to said supporting portion and projecting downwardly therefrom in spaced relation; a bar connecting said supporting members adjacent their lower ends; a plate swingably mounted at one edge on said bar; side members projecting outwardly from one face of said plate at its opposite ends, the outer edges of said side members being curved; a curved cover plate swingably mounted on the free edge of said first mentioned plate and adapted for swinging into engagement with the curved edges of said side members; a flexible ladder mounted on said supporting members, said first mentioned plate being swingable into horizontal position and adapted for supporting said flexible ladder; an engagement member secured to and projecting upwardly and outwardly from the upper end of said supporting members; a notch bearing arm mounted on one of said side members and engageable with said engagement member for releasably locking said first mentioned plate in horizontal position.

1,753,799. SUCTION CLEANING APPARATUS. EUGENE F. MARTINET, Cleveland, Ohio, assignor to The P. A. Geier Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 15, 1927. Serial No. 198,957. 7 Claims. (Cl. 15—158.)



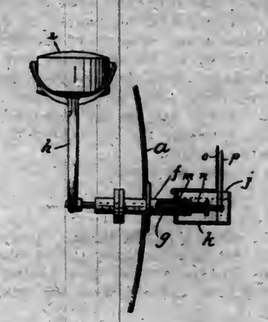
1. The combination with a suction cleaner nozzle of the class described, of a brush member adjustably positioned adjacent the mouth of said nozzle, an actuating member connected to said brush member and extending exteriorly of said nozzle, and a plate having a cam slot, with upper and lower locking branches, engaging said actuating member and adapted to lock said actuating member in two alternative positions to fully extend or fully retract said brush member.

1,753,800. VAT FOR PAPER-MAKING MACHINES. WILLIAM H. MILLSPAUGH, Sandusky, Ohio, assignor to The Paper & Textile Machinery Company, Sandusky, Ohio. Filed Mar. 30, 1928. Serial No. 266,018. 22 Claims. (Cl. 92—38.)



19. In combination with a vat for paper making machines, arcuate deckle holders provided with deckle recesses, deckles adapted to be seated in said recesses, means for adjusting said holders and deckles, means for securing them in adjusted position, and means for maintaining this selected adjustment.

1,753,801. THERMOMETER TUBE AND METHOD OF MAKING THE SAME. MAX E. MOELLER, Brooklyn, N. Y., assignor to A. E. Moeller Company, Brooklyn, N. Y., a Copartnership consisting of Charles E. Moeller, Max E. Moeller, Curt F. Moeller, Paul G. Moeller, Walter G. Moeller, and Otto J. Moeller. Filed July 5, 1928. Serial No. 290,565. 17 Claims. (Cl. 49—81.)



11. The herein described method of making glass thermometer stems which comprises molding the stem in sections with an interior bore for the reception of expansible fluid, uniting the two sections to form a continuous tube and embedding therein a strip of non-transparent material extending laterally from the sides of the bore to the edges of the stem and also incorporating in the stem back of the bore a colored backing element.

1,753,802. REFRIGERATING APPARATUS. GLENN MUFFLY, Detroit, Mich., assignor to Copeland Products, Inc., Detroit, Mich., a Corporation of Michigan. Filed Mar. 3, 1927. Serial No. 172,273. 2 Claims. (Cl. 62—8.)

1. In combination, a refrigerant container and an expansion chamber, a passage connecting the two, a bolt extending through apertures in co-operating brackets on the chamber and container, at least one of said apertures being elongated, and means for securing the bolt in the apertures to hold the chamber and container in adjustable assembly.

1,753,803. LEVEL INDICATOR FOR MINERAL-OIL STILLS. ARTHUR E. PEW, Jr., Bryn Mawr, Pa., assignor to Sun Oil Company, Philadelphia, Pa., a Corporation of Pennsylvania. Original application filed June 19, 1925, Serial No. 38,184. Divided and this application filed Feb. 27, 1926. Serial No. 91,047. 2 Claims. (Cl. 73—82.)

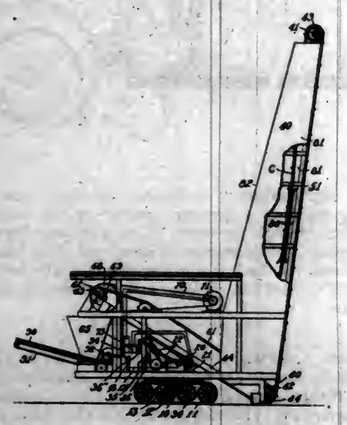
1. The combination, with a vacuum still adapted to contain a pool of oil, of a device within the still movable by and in accordance with changes in the level of the oil, connecting means from said device extending through the wall of the still and movable with said device, a liquid level indicator located outside the still and operable by said connecting means, packing obstructing fluid communication with the interior of the still around said connecting means, a liquid seal container and a liquid seal therein blocking leakage of air around said connecting means through the packing, said liquid seal being exposed to the atmosphere.

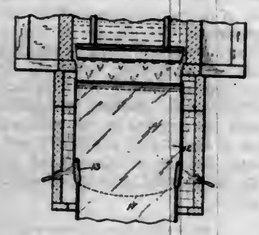
1,753,804. SHALE PLANER. JOSEPH M. POWELL, Brooklyn, Ind. Filed Dec. 3, 1928. Serial No. 323,337. 2 Claims. (Cl. 262—28.)

1. A shale-bank planer comprising a chassis of the double track-laying type, a turn-table mounted on a vertical axis on said chassis, a tower carried by said turn-table, a driving shaft carried by said turn-table substantially at the ground level and in position to clear the track-laying elements of the chassis, an idler shaft carried

CARNEGIE LIBRARY OF ATLANTA

at the upper end of the tower, an endless planer belt supported by said driving shaft and idler, guideways in the tower engaging the active run of the planer belt, an upwardly and rearwardly inclined chute carried by the turn-table with its lower end closely adjacent the planer belt drive shaft, an endless scraper element traversing said chute and engaging said drive shaft, means carried by the turn-table for applying power to said drive shaft through said scraper element, means carried by the turn-





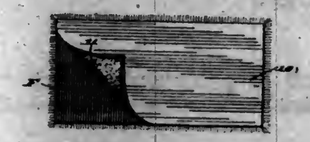


table for rotating said turn-table upon the chassis, means carried by the turn-table for controlling the application of power to the track-laying elements of the chassis, an endless conveyor carried by the turn-table and arranged to receive the discharge from the upwardly inclined chute, means for supporting said last-mentioned conveyor to swing about a vertical axis on the turn-table, and means carried by the turn-table for controlling the application of power to said conveyer.
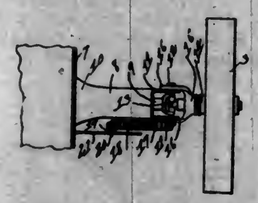
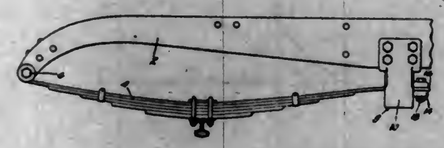
of said power to said conveyor.

1,753,805. DOWN-FLOW SLAB. JOSEPH A. REECE, Toledo, Ohio, assignor to Libbey-Owens Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 9, 1924. Serial No. 742,640. Renewed June 15, 1928. 18 Claims. (Cl. 49—17.)



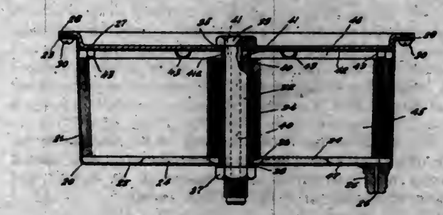
11. The process of forming sheet glass consisting in flowing a plurality of streams of glass downwardly, uniting the streams to form a sheet, and in curling the edge portions of the streams to maintain the sheet to width, the curled edges of one stream extending in a direction opposite to the direction of the curled edges of the other stream.

1,753,806. PROCESS FOR MAKING LAMINATED FABRIC. EDWARD A. ROSS, Chicago, Ill. Filed June 27, 1929. Serial No. 374,153. 4 Claims. (Cl. 154—2.)



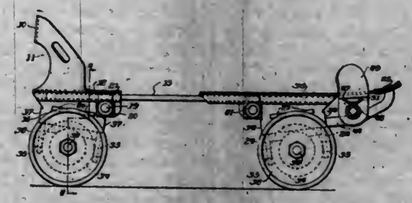
4. The method of reenforcing a pelt, which consists in providing a crinoline protected adhesively coated leather backing, stripping the crinoline from same, and securing said backing by means of heat and pressure to the skin side of the pelt.

1,753,807. LEVELING DEVICE FOR TRACTORS. FREDERICK E. SHARP, Prescott, Wash. Filed May 3, 1928. Serial No. 276,041. 1 Claim. (Cl. 180—41.)



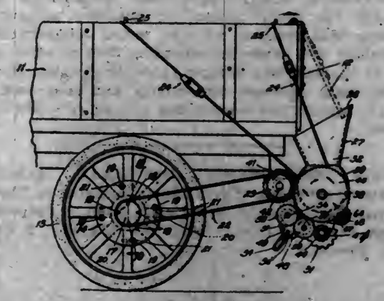
In a leveling device for tractors, the combination with a tractor having an axle, and provided with drive wheels, a boss rigidly secured to and extended from said tractor, and disposed to provide a bearing for the outer end of said axle, said boss terminating at its outer end in extended lips providing horizontally disposed and oppositely positioned pivotal bearings, a housing provided with complemental lips pivotally mounted in the bearings of said extended lips, a universal joint rigidly secured to the end of said axle, and positioned on the pivotal line and within said lips, and provided with a stub axle adapted to carry the drive wheels, a gear sector rigidly secured to said housing for movement with that member, and centered at the pivotal point, and means rotatably carried by the boss to register said sector gear and to operate said gear to rotate said stub axle in a vertical plane.

1,753,808. SPRING SHACKLE. CHARLES R. SHORT, Dayton, Ohio, assignor to General Motors Research Corporation, Detroit, Mich., a Corporation of Delaware. Filed Apr. 9, 1926. Serial No. 100,892. 6 Claims. (Cl. 267—30.)



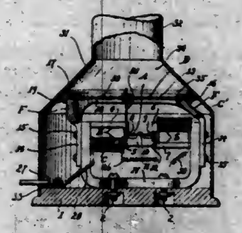
1. In an automobile spring suspension, the combination of a frame, a leaf spring, an annular bracket secured to the frame having an opening of substantially uniform diameter throughout and extending in alignment with the longitudinal plane of the spring, a rubber bushing secured in the opening in said bracket, and a spring end connecting member secured in said bushing, in concentric relation with the bracket, and to which one end of said leaf spring is rigidly secured.

1,753,809. OIL FILTER. CHARLES R. SHORT, Dayton, Ohio, assignor to General Motors Research Corporation, Detroit, Mich., a Corporation of Delaware. Filed July 28, 1926. Serial No. 125,451. 3 Claims. (Cl. 210—164.)



3. In a filter, a filtering material therein, a cover for said filter positioned closely adjacent said material, a flat separating ring between said cover and filtering material, and a plurality of projections on said ring to hold said material away from said cover.

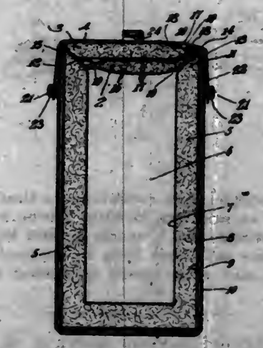
1,753,810. ROLLER SKATE. THOMAS SPACIE, Chicago, Ill. Filed June 25, 1926, Serial No. 118,442. Renewed Feb. 28, 1930. 9 Claims. (Cl. 208—173.)



1. In a roller skate, the combination of a wheel frame, a sole plate, a toe clamp, a clamp screw and a brace bar connected to the sole plate and to the wheel frame, and underlying said screw.

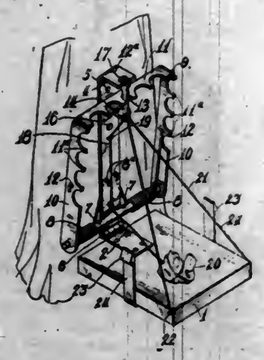
1,753,811. ROAD-MATERIAL SPREADER. FRANK C. STOLLE, Webster Groves, Mo., assignor to Stolle Road Equipment Co., St. Louis, Mo., a Corporation of Missouri. Filed Feb. 29, 1928. Serial No. 257,907. 2 Claims. (Cl. 275—2.)

1. In a device of the character described, a mixing chamber, a spreader, said spreader positioned relative to said mixing chamber so that material placed in said mixing chamber will be fed on to said spreader, a gear mounted on said spreader to rotate the same, a gear secured to said mixing chamber, a driving gear in mesh with the gear on said mixing chamber, an auxiliary pair of gears in mesh with each other and in mesh with the gear on said spreader and means for selectively placing each gear of said pair of gears in mesh with the gear on said mixing chamber.



1,753,812. LOUD-SPEAKING TELEPHONE RECEIVER. ADOLPH ALEXANDER THOMAS, New York, N. Y. Filed July 3, 1922, Serial No. 572,730. Renewed Aug. 10, 1929. 23 Claims. (Cl. 179—119.)

7. In a telephone receiver, a magnet having a pair of upstanding limbs, opposite pole pieces projecting inwardly from said limbs substantially in alignment with each other, a support comprising a pair of non-magnetic plates secured to said pole pieces at opposite sides thereof, an armature centrally pivoted on said support and extending lengthwise from one pole piece to the other, electromagnetic means for producing vibration of said armature about its pivot, and a diaphragm connected to said armature.



19. In a loudspeaker, a magnet structure having two pairs of spaced polar projections arranged to provide a pair of aligned air-gaps, non-magnetic brackets fixed to said polar projections, a centrally pivoted armature arranged between said brackets and extending into said airgaps, a coil mounted in operative relation to said polar projections to cause vibration of said armature, a pair of diaphragms mounted on opposite sides of said polar projections, and means for connecting said armature to said diaphragms.

1,753,813. HEAT-INSULATING JACKET. RICHARD C. WASHBURN, Saugerties, N. Y., assignor to Montgomery-Washburn Company, Saugerties, N. Y., a Corporation of New York. Filed Oct. 25, 1926. Serial No. 143,919. 9 Claims. (Cl. 150—52.)

1. A heat insulating jacket including a body having a heat insulating wall presenting a yieldable beveled top, an inner closure having a yieldable portion beveled to correspond to the bevel on said beveled top, and an outer closure having a yieldable portion beve'ed to correspond to the bevel on said beveled top, said inner and outer closures being movable relative to each other and of such a size that the beveled portions of the inner closure will seat on the lower parts of said beveled top and the beveled portions of the outer closure will seat on the upper parts of said beveled top.

1,753,814. TRAP. FRITZ WELLER, Bonn, Germany, assignor to Paul Von Dey, Chicago, Ill. Filed July 9, 1928, Serial No. 291,211, and in Germany Sept. 9, 1927. 4 Claims. (Cl. 43—81.)

1. In a device of the character described, the combination of a base, an upright support hingedly connected with said base, a pin loosely suspended from the upper end of said support, a striking element under the control of springs and pivotally associated with said support, the pin being adapted to obstruct the path of the striking element to hold it in raised position, and a plurality of flexible means each of which is adapted for moving the suspended pin out of the path of said spring controlled striking element.

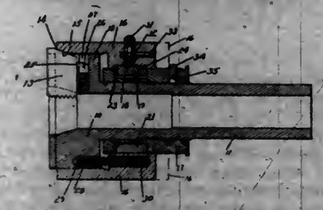
1,753,815. MEAT FORK. ALBERT T. WOODS, Placerville, Colo. Filed May 11, 1929. Serial No. 362,189. 4 Claims. (Cl. 294—53.)

1. A bone gripping fork comprising: a tined fork member, a handle on said fork member, a bone hook pivoted to said fork member and a handle on said bone hook arranged to cause said bone hook to approach said fork member when said latter handle is clamped toward said first handle.

1,753,816. PRODUCTION OF MONTAN WAX. FRITZ ZSCHOCH and HERBERT RODDIAN, Unterroblingen, Germany, assignors to A. Riebeck'sche Montanwerke Aktiengesellschaft, Halle, Saale, Germany. Filed Mar. 13, 1928, Serial No. 261,406, and in Germany Sept. 16, 1927. 11 Claims. (Cl. 196—17.)

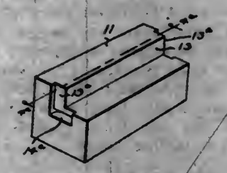
1. Process for obtaining refined montan wax which comprises extracting the resinous constituents from raw montan wax, digesting the remaining wax, in presence of a solid adsorbent decolorizing material, with oxygenated organic solvents not easily dissolving the oxy-acids contained in the raw montan wax, separating the resulting wax solution from the adsorbent, and separating the refined wax from the solution.

1,753,817. AUDIPHONE. JOHN C. ABER, Butler, Pa. Filed Sept. 14, 1928. Serial No. 306,054. 9 Claims. (Cl. 179—182.)



1. The combination with the base of an audiphone receiver, of a cap therefor having a horn-like extension curved upwardly and rearwardly and shaped to fit behind the upper forward portion of the helix of an ear.

1,753,818. VALVE. HENRY E. BRETT, Los Angeles, Calif., assignor to John A. Yerkes, Long Beach, Calif. Filed Mar. 6, 1926. Serial No. 92,805. 10 Claims. (Cl. 121—157.)

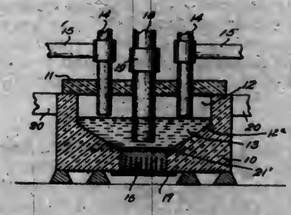


1. A valve for engines, comprising a cylinder provided with fluid passages for communication with the ends respectively of the engine cylinder and provided with an inlet and an outlet, a valve rod, a plunger mounted to reciprocate in said cylinder and through which plunger the engine valve rod extends means on the valve rod for reciprocating said plunger, said plunger including means for controlling said passages when reciprocated to reciprocate the engine piston, an auxiliary plunger surrounding said plunger, whereby initial reciprocation of the plunger will cause the operating fluid to effect movement of the auxiliary plunger to establish communication between said passages respectively and said inlet and outlet to permit fluid to enter and exhaust from the engine cylinder.

1,753,819. SELF-OPENING DIE HEAD. ALBERT F. BEREITENSTEIN, New Haven, Conn., assignor to The Geometric Tool Company, New Haven, Conn., a Corporation. Filed Sept. 16, 1926. Serial No. 135,755. 2 Claims. (Cl. 10—95.)

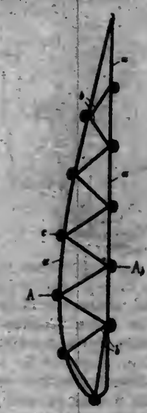
1. A self-opening die-head having a body, radially-movable chasers, a chaser-operating member having chaser-closing, chaser-retracted, and chaser-clearance positions, a locking-member therefor, an adjusting-nut threaded upon the said body and provided with a peripheral slot, an inwardly-yielding stop-member located in the said slot and normally projecting therefrom beyond the periphery of the said adjusting-nut for engagement by the said operating-member to stop the same in its chaser-retracted position and shaped and proportioned to be manually pressed inward below the periphery of the said adjusting-nut to release thes aid member to permit it to move into its chaser-clearance position, and spring means for yieldingly urging the said stop-member into its projected position.

1,753,820. WALL CONSTRUCTION. STANLEY BROZEK, Detroit, Mich. Filed Aug. 7, 1929. Serial No. 384,015. 1 Claim. (Cl. 72—21.)



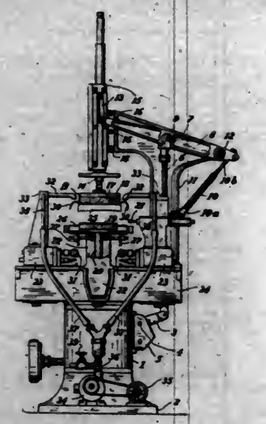
A solid block for building a wall having a brick facing, said block having a height approximating the combined height of a plurality of bricks, said block being provided upon one upper corner with a brick receiving recess extending throughout the entire length of the block and being approximately one-half of the width of the block and having a depth approximately equal to the height of the brick, said block being provided in its ends with vertical slots which extend through the top of the block, said slots terminating near and beneath the bottom wall of the brick receiving recess, said slots passing through the vertical and horizontal walls of the brick receiving recess and leading into the ends of said recess, the ends of the block having finger holes at the lower ends of the vertical slots, are arrangement being such that the hands may be inserted in whole or in part within the brick receiving recesses and the fingers passed through the vertical slots to enter the finger holes.

1,753,821. PRINTING PRESS. WILLIAM C. BUCHANAN, Franklin, Mass., and WILLIAM O. TOURJEE, Providence, R. I., assignors to American Type Founders Company, Jersey City, N. J., a Corporation of New Jersey. Filed June 10, 1926. Serial No. 115,075. 25 Claims. (Cl. 101—287.)



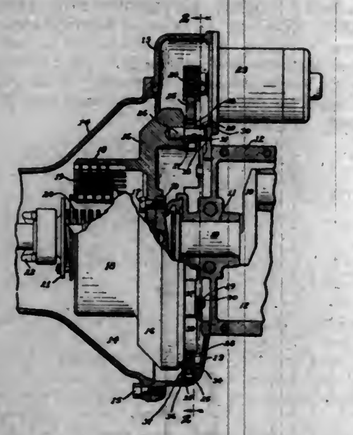
1. Apparatus of the character described including in combination a platen press, a portable sheet handling mechanism supported independently of said press, said press having electric, pneumatic, and mechanical power sources, elements on said mechanism adapted to automatically connect with said sources when the mechanism is attached to the press, and means for detachably locking said mechanism to said press.

1,753,822. FURNACE FOR REDUCING METALS. GEORGE C. COX, Raleigh, and HENRY K. MCINTYRE, deceased, Raleigh, N. C., by Edna Moore McIntyre, executrix, Raleigh, N. C.; John Gardner McIntyre, New York, N. Y.; and Malcom McIntyre, Cranford, N. J., executors. Filed Oct. 5, 1926. Serial No. 139,750. 2 Claims. (Cl. 204—5.)



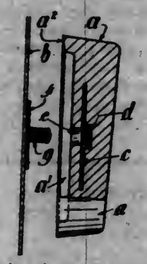
1. An electric furnace comprising a closed electrolyte chamber, the bottom portion of the chamber sloping toward a low portion, a cathode at the bottom of the low portion, an anode located above the cathode, the cathode and anode being the direct current electrolytic electrodes, alternating current electrodes for supplying current energy to provide heat for maintaining the electrolyte at the optimum temperature and having their inner ends over the sloping portions, the alternating current and direct current electrodes being separate and distinct from each other.

1,753,823. METAL ENVELOPE FOR AIRCRAFT PLANES. CLAUDIUS DORNIER, Friedrichshafen-on-the-Bodensee, Germany, assignor of one-half to the Firm: Dornier Metallbauten Gesellschaft mit beschränkter Haftung, Friedrichshafen, Germany. Filed Nov. 27, 1922, Serial No. 603,638, and in Germany Dec. 12, 1921. 5 Claims. (Cl. 244—31.)



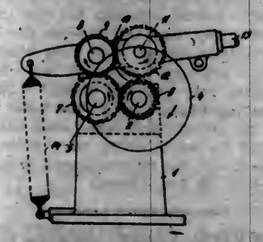
1. A wing construction for airplanes comprising an envelope composed of a plurality of solid sheet metal strips having stiffening means extending outwardly of the surface and longitudinally of the wing, said means constituting air resistance elements acting to increase the carrying capacity of the airplane when in flight.

1,753,824. METHOD OF AND APPARATUS FOR WRAPPING BOXES. THEODORE A. FEDERWITZ, Philadelphia, Pa., assignor to Stokes & Smith Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 12, 1929. Serial No. 339,426. 22 Claims. (Cl. 93—54.)



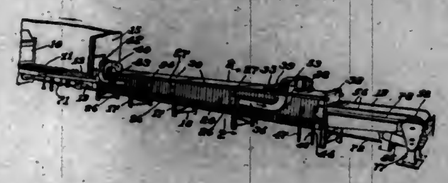
1. The method of wrapping a box which comprises moving a box and a wrapper along a path, at a point or region in said path folding a portion of the wrapper into engagement with a box wall, and applying a force to another wrapper portion to prevent movement thereof into the path of movement of the first portion during said folding operation.

1,753,825. ENGINE. HENRY FORD, Dearborn, Mich., assignor to Ford Motor Company, Dearborn, Mich., a Corporation of Delaware. Filed Feb. 13, 1928. Serial No. 253,908. 2 Claims. (Cl. 74—7.)



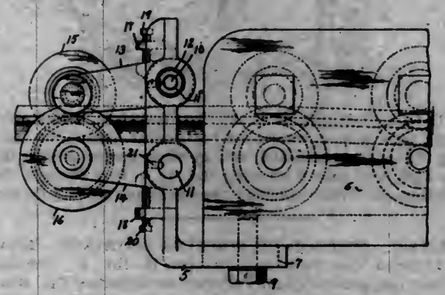
1. In a device of the character described, a flywheel housing having a portion of its interior machined to circular shape and shoulders formed adjacent to said circular portions, a flywheel mounted in said housing concentric with said machined portion, a starting motor mounted on said housing, a gear on said starting motor, a ring shaped gear member journalled in said housing by the engagement of the teeth thereon with the machined and shouldered portions of the flywheel housing, said teeth being in constant mesh with the gear on the starting motor, and means connecting said ring gear member with the flywheel, said means automatically disconnecting said gear member and flywheel when the latter overruns the gear member.

1,753,826. KNEE GRIP FOR MOTOR BICYCLES. LUCIEN GAISMAN, Audenshaw, near Manchester, England. Filed Feb. 4, 1929, Serial No. 337,462, and in Great Britain Feb. 25, 1928. 5 Claims. (Cl. 208—139.)



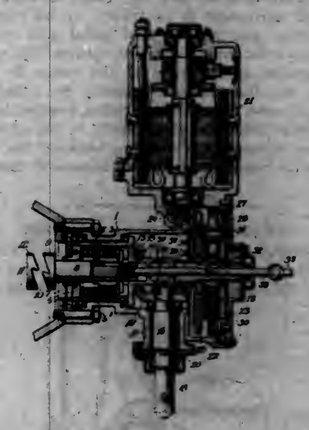
1. Rubber knee grips for motor bicycles provided with an intermoulded metal plate and means by which the plate and grip may be secured to the cycle tank, and the grip being formed so as to allow of its central part being drawn towards the cycle tank after its outer periphery has come into contact with the tank, and thus cause the working face of the grip to be dished—or if already slightly dished to be further dished.

1,753,827. TUBE-CUTTING MACHINE. OTTO GLÄSSER and ERNST FLEMNITZ, Lubeck, Germany, assignors to the Firm: L. Schuler A.-G. Werkzeugmaschinenfabrik, Goppingen, Wurttemberg, Germany. Filed Nov. 30, 1927, Serial No. 236,703, and in Germany Dec. 1, 1926. 8 Claims. (Cl. 164—69.)



1. A tube-cutting machine comprising a frame, a driving shaft in said frame, a rocking carrier fulcrumed on said frame, a shaft supported on said carrier, one of said shafts being adapted to support a tube blank, means on said shafts for operatively connecting said shafts in a given position of said carrier with respect to said driving shaft, a cutter on one of said shafts, a cutter on the other shaft so arranged with respect to said first-mentioned cutter that the cutting edges of both cutters are registering, and an annular resilient pad on said blank-supporting shaft adapted to be engaged by the cutter on the other shaft.

1,753,828. CONFECTIONERY-COOLING TUNNEL. JESSE W. GREER and FREDERICK W. GREER, Cambridge, Mass. Filed June 28, 1927. Serial No. 202,149. 4 Claims. (Cl. 34—12.)



1. A cooling tunnel for cooling confections, comprising in combination, an elongated casing which is closed to the atmosphere and provided with a lower air passage and an upper air passage, means for advancing confections through the casing, blowers arranged near the opposite ends of the tunnel externally of the casing, air conduits between said air passages and blowers for forcing air from one passage to the other and arranged to introduce air into the upper passage and remove it therefrom through the top of the casing, and means for cooling the circulating air.

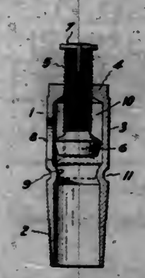
1,753,829. MACHINE FOR FORMING STRIPS FOR STORE-FRONT CONSTRUCTION. FRED HIMMEL and ISIDORE HIMMEL, New Haven, Conn., assignors to The Himmel Brothers Co., New Haven, Conn., a Corporation. Filed May 1, 1929. Serial No. 359,530. 2 Claims. (Cl. 153—54.)

1. Means for overcoming tendency to curvature or to cause curvature in strips of metal, comprising a bending machine bed, a frame adjustably mounted on said bed, yokes adjustably mounted in said frame, complementary rollers mounted in said yokes, and means for effecting upward or downward movement of said yokes.

1,753,830. ENGINE STARTER. RAYMOND P. LANSING, Montclair, N. J., assignor to Eclipse Machine Company, Elmira, N. Y., a Corporation of New York. Filed Oct. 9, 1926. Serial No. 140,458. 8 Claims. (Cl. 123—179.)

1. An engine starter including a drive having a driving member adapted to engage and crank a member of the engine to be started, manually operated starter means operatively connected with said drive, power means for imparting cranking movement to said drive and operating connections between such power means and the drive including means for disconnecting the power means responsive to cranking operation of the manual means for preventing said drive from driving the power means.

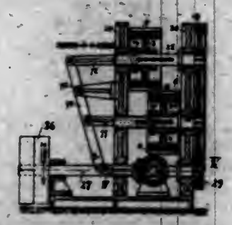
1,753,831. CONCRETE MIXER. ERICH H. LICHTENBERG, Milwaukee, Wis., assignor to Koehring Company, Milwaukee, Wis., a Corporation. Filed June 9, 1927. Serial No. 197,593. 5 Claims. (Cl. 83—73.)



1. In apparatus of the class described, the combination, with a relatively narrow sub-frame, of a relatively wide auxiliary frame disposed upon said sub-frame adjacent one end thereof, and extending laterally beyond opposite sides of the sub-frame, a mixing machine mounted upon said end of the sub-frame and about which the auxiliary frame extends, said auxiliary frame forming a support for the super-structure of said machine, and means rigidly securing the ends of the auxiliary frame to said subframe.

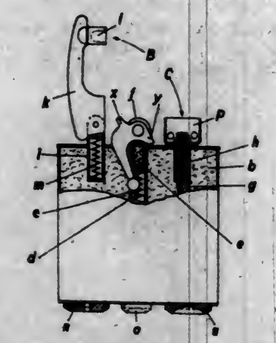
1,753,832. COLLAR CLASP. ALLAN A. MACDONALD, Glen Ridge, N. J., assignor to Sloan & Company, Newark, N. J., a Corporation of New Jersey. Filed July 2, 1929. Serial No. 375,454. 3 Claims. (Cl. 24—81.)

1. A jewelry clasp for collars and the like comprising, oppositely extending resilient tongues of sinuous form having apertures therewithin, a substantially rigid member fixedly attached at its central portion to the inner ends of said resilient tongues, said member extending in the general direction of said tongues, and gripping means provided on said member and adapted to project into said apertures for cooperating with the latter and with said resilient tongues in gripping the parts connected by said clasp.



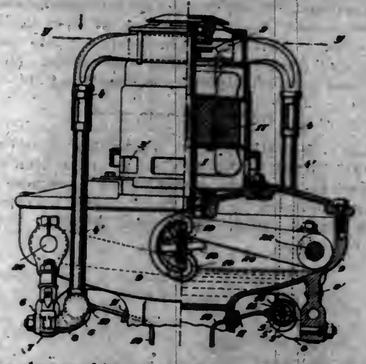
1,753,833. VALVE AND METHOD OF MANUFACTURING SAME. ERVIN H. MUELLER, Detroit, Mich. Filed Apr. 4, 1929. Serial No. 352,449. 5 Claims. (Cl. 29—157.1.)

1. The method of manufacturing shut-off valves which consists in providing a body devoid of any valve seat, and providing a valve and valve stem, inserting the valve and valve stem through the open end of the body to be closed by the valve, and thereafter forming a seat on the body for said valve.



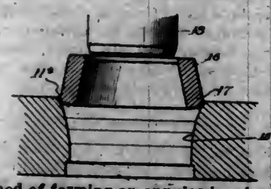
4. A valve comprising a hollow body open at one end and provided with an integral end wall at its opposite end, said wall being formed with a screw threaded opening, a valve, a screw threaded valve stem projecting outwardly through the screw threaded opening in the end wall, and a seat for the valve formed integral with the wall of the body between said valve and the open end of the body, said seat being formed after the insertion of said valve in said body, by distorting the metal of the body to form an interior annular rib.

1,753,834. MACHINE FOR PRODUCING SEAMLESS BODIES, SWEETMEATS, AND OTHERS FROM PLASTIC MASSES. MAX PONISCH, Leipzig-Leutzsch, Germany. Filed June 2, 1926, Serial No. 113,263, and in Germany June 15, 1925. 2 Claims. (Cl. 107—20.)



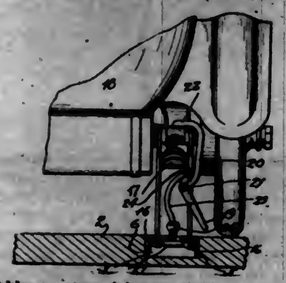
1. A machine for manufacturing seamless bodies from a plastic mass, having side walls comprising in combination two shafts having means to be uniformly driven and mounted in the side walls of the machine at different distances, sprocket wheels shiftably connected with said shafts, endless chain-like elements consisting of joined links carried and actuated by said sprocket wheels for movement in the same longitudinal direction, said links having open molding grooves forming together at the working point full hollow cylinders, and driving elements to be actuated from an intermediate shaft and connected to the front sprocket wheels by means which will give to these sprocket wheels besides the rotating movement an additional shifting movement in axial direction, the shifting movement of the upper spur wheel being oppositely directed to the shifting movement of the lower spur wheels.

1,753,835. PYROPHORIC HAND LIGHTER. KARL FRIEDRICH PROJAHN, Aschaffenburg, Germany, assignor to the Firm: Löwenthal & Weissberger G. m. b. H., Frankfort-on-the-Main, Germany. Filed Dec. 18, 1928, Serial No. 326,748, and in Germany May 25, 1928. 2 Claims. (Cl. 67—7.1.)



2. A lighter comprising a box with a top and sides, a wick at the top of the box, a spark-producing device on the top of the box, including a rotary friction element and a shaft extending crosswise of the box, a handle mounted on said shaft extending downward adjacent the side of the box, a coil spring located between the handle and said rotary friction device, the handle having an arm extending across the top of the box with which said spring engages, an arm carrying a wick-covering cap pivoted to the top of the box, said handle arm having a portion in position to engage the underside of said arm to raise the arm when the handle is moved to wind the spring, a spring device extending from said arm adjacent its pivot downward into the box through the top thereof, said arm having surfaces acted on by said spring device in alternation to hold the arm in either wick-covering or wick-uncovering position.

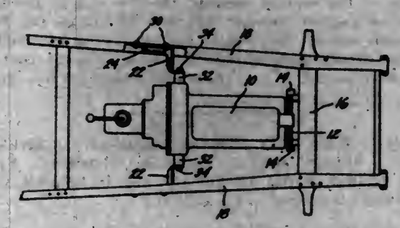
1,753,836. SHOE MACHINE. JULIUS SANDT, Pirmasens, Germany. Filed Apr. 12, 1929, Serial No. 354,563, and in Germany Apr. 3, 1928. 4 Claims. (Cl. 12—78.)



1. In a shoe-machine of the class described, a tool operating upon a shoe, means for heating air, means for heating the tool by the heated air, an electromotor driving the machine, and means allowing the air to flow through the electromotor before reaching the means for heating the air.

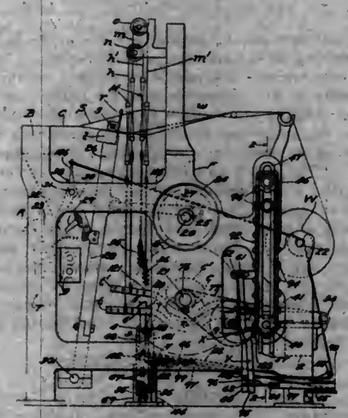
1,753,837. METHOD OF FORMING BEARINGS. LOUIS J. SAUER, Oak Park, and CHARLES H. JOY, Jr., Chicago, Ill., assignors to Charles H. Joy, sr., Chicago, Ill. Filed Oct. 22, 1926. Serial No. 143,490. 13 Claims. (Cl. 29—149.5.)

1. A method of forming an annular bearing member comprising forming a collar from sheet metal, inserting a cylindrical forming member into said collar in such manner that its axial movement is controlled by its engagement with said collar and forcing said collar and cylindrical forming member through a die, and during this operation exerting pressure on the edge of the collar to force it through the die, the distance between the adjacent surfaces of the die and cylindrical forming member being less than the average thickness of the metal in the collar before the operation, whereby the distance between the edges of the collar is increased as the collar is pushed through the die.



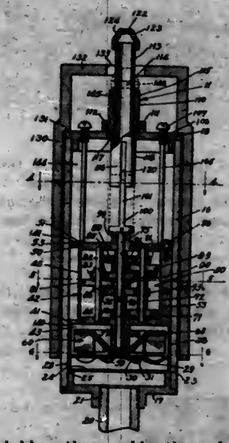
1,753,838. NONADJUSTABLE HOLDDOWN. FAY L. SEELEY, Detroit, Mich., assignor to The Evans Auto Loading Co. Inc., Detroit, Mich. Filed June 3, 1920. Serial No. 388,002. 11 Claims. (Cl. 105—368.)

1. A holddown comprising a rigid nonextensible member engaged with the spring of a motor vehicle when compressed and at the same time interlockingly engaged with a support.



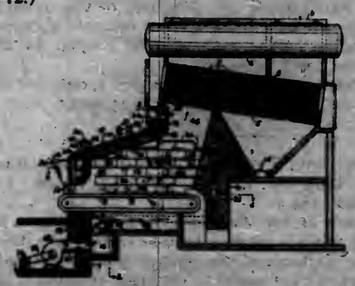
2. A holddown comprising an inverted U-shaped member adapted for engaging a part of an automobile and having side legs, an anchor member with which the lower ends of the legs are engaged, enlarged heads at the lower ends of the legs, and the anchor member having slots therein to receive the enlarged heads and restricted portions in the slots to prevent withdrawal of the holddown legs.

1,753,839. REAR MOTOR SUPPORT. OWEN B. SKELTON, Detroit, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a Corporation of Delaware. Filed Sept. 18, 1926. Serial No. 136,358. 4 Claims. (Cl. 180—64.)



1. A resilient motor suspension comprising in combination, a frame, a spring supporting the front end of the motor at a single point, and a pair of lateral supports at the rear of the motor, each having a single arm connecting the adjacent sides of said motor and frame respectively, said arm being reinforced against flexure in horizontal and vertical planes and susceptible of torsional flexure about an axis longitudinal thereof.

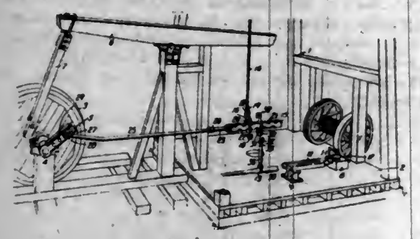
1,753,840. LOOM. JOSEPH THEXTON, Jr., and HENRY TOMLINSON, Fall River, Mass., assignors of one-fourth to Joseph E. Freeling and one-fourth to Frank Riley, Fall River, Mass. Filed Feb. 1, 1928. Serial No. 251,153. 24 Claims. (Cl. 139—24.)



5. In combination with a four harness loom including two pairs of harnesses adapted to weave plain cloth, mechanism whereby the loom is adapted to form checks and broken stripes, said mechanism including two treadles connected respectively to the two pairs of harnesses, one pair of harnesses being connected to all of the warp threads except those which form the stripes, one of the other pair of harnesses being connected to only the warp threads which form the stripes, the other harness of said second pair being yieldingly connected to a fixed support, means for actuating the treadles in opposite directions to each other, means for restraining the first set of harnesses after predetermined periods of plain weaving to permit the laying of a predetermined number of picks to form a bar, means whereby the restraint on the harness is released after laying the predetermined number of picks, means for restraining the second set of harnesses intermittently, said periods of restraint on the second set of harnesses permitting the laying of a plurality of picks on one face of the warp stripes, means for releasing the restraint on the second set of harnesses while a series of single picks are being laid on the upper bar of the warp stripes.

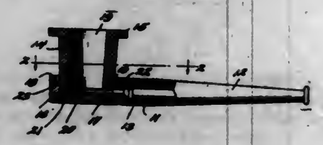
1,753,841. SPRINKLER HAVING PROJECTABLE NOZZLE. WALTER VAN E. THOMPSON, Los Angeles, Calif., assignor to Thompson Manufacturing Company, Los Angeles, Calif., a Corporation of California. Filed May 25, 1925. Serial No. 32,621. 11 Claims. (Cl. 299—61.)

1. In a sprinkler, the combination of: a shell; means for supplying water to said shell; an impeller plate carried in said shell; a rotor arranged adjacent to said impeller plate; a rotor shaft carrying said rotor; a drive shaft; gear mechanism connecting said rotor shaft with said drive-shaft; a drive member carried by said drive-shaft; and a projectable nozzle plunger carried by said shell, said nozzle plunger being driven by said drive member, but being axially movable relative thereto.



1,753,842. FURNACE CONSTRUCTION. FRANK H. WAITE and GEORGE W. DAVEY, Long Island City, N. Y. Filed Nov. 13, 1925. Serial No. 68,878. 4 Claims. (Cl. 110—72.)

1. A furnace construction comprising, in combination, channelled refractory walls and a channelled refractory

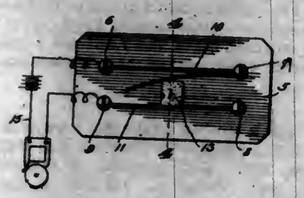


roof forming a combustion chamber, means for admitting fuel to the chamber, an offtake therefrom, a forced draft creating means, air inlet means and outlet means for the channel system of said roof, separate air inlet and outlet means for said wall channels, direct air delivery means from said drafter to said chamber; and means connecting said roof and wall channel systems with said drafter forming indirect air delivery means whereby air from the inlets is forced through said systems, for preheating it and cooling the refractories, and by way of said outlets to the chamber.

1,753,843. TOOL-DRESSING APPARATUS. CLARENCE G. WARREN, Kellyville, Okla., assignor to George Krell, Sapulpa, Okla. Filed Feb. 27, 1928. Serial No. 257,206. 10 Claims. (Cl. 76—5.)

1. Tool dressing apparatus including a ram line, a bar supported by the line, a ram suspended from the bar, means for actuating the bar to operate the ram, and means for adjusting the ram transversely of the line.

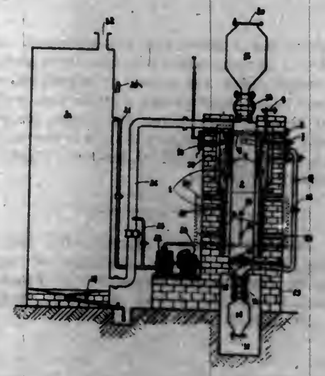
1,753,844. TOBACCO-SMOKING PIPE. POWHATAN A. WEBB, Atlanta, Ga. Filed Mar. 15, 1928. Serial No. 261,861. 7 Claims. (Cl. 131—12.)



2. In a tobacco pipe, in combination, a bowl and a stummel, a circumferential flange at the bottom of said bowl adapted to be grasped to hold the pipe and an annular draft passage within said flange adapted to have atmospheric air drawn therethrough to cool said flange.

1,753,845. FABRIC FOR TECHNICAL PURPOSES. EDUARD V. ASTEN, Eupen, Belgium, and HAROLD NEWLIN HILL, Philadelphia, Pa., assignors to Von Asten & Cie., Societe en Commandite, Eupen, Belgium, a Corporation of Belgium. Filed June 16, 1928. Serial No. 286,062. 5 Claims. (Cl. 139—420.)

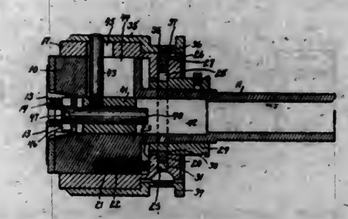
1. A fabric for drier felts, laundry aprons and the like made up of textile elements including agave.



1,753,846. SWITCH. WILLIAM PAUL BRAND, Muskegon, Mich. Filed Dec. 1, 1925. Serial No. 72,560. 1 Claim. (Cl. 200—142.)

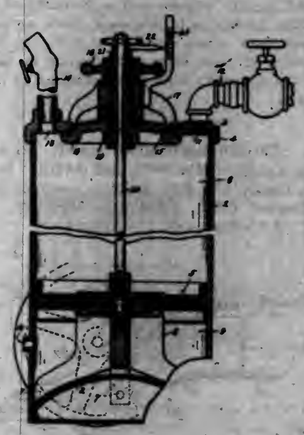
A switch of the class described, including a base, a wide flat contact member secured to the base, the upper and lower surfaces of the contact member being disposed in a plane at right angles to the upper surfaces of the base to provide a supporting surface, a contact member secured to the base and disposed in parallel spaced relation with the first mentioned contact member, bolts for securing the contact members to the base, the last mentioned contact member being formed of resilient material and bent around one of the bolts at a point intermediate

the end of the contact member, the free end of the last mentioned contact member adapted to engage the first mentioned contact member to complete a circuit, and a block of fusible material positioned between the contact members to normally hold the contact members separated.



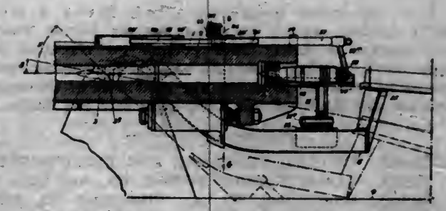
1,753,847. GAS AND STEAM PRODUCER GENERATOR. JULIEN BELLAY, Brussels, Belgium. Filed Aug. 1, 1927, Serial No. 209,917, and in Belgium Aug. 11, 1926. 2 Claims. (Cl. 122—5.)

1. A combined generator-producer for producing water gas, comprising in combination, a producer retort, a steam boiler concentrically disposed with respect to the retort and forming a free space between the boiler and retort, means for feeding the fuel to the retort, and means for removing the ashes and the like from the retort without interrupting the working, a connection between the steam chamber of the boiler and the bottom part of the retort for injecting steam within the fuel in the retort, a gas reservoir or tank for receiving the water gas evolving from the retort, a connecting duct between both retort and water gas reservoir, burners radially crossing the walls of the part which surrounds the free space between boiler and retort and opening into said space for heating the retort and boiler from outside, and means connecting the retort chamber and the burners for feeding the burners and starting the device.



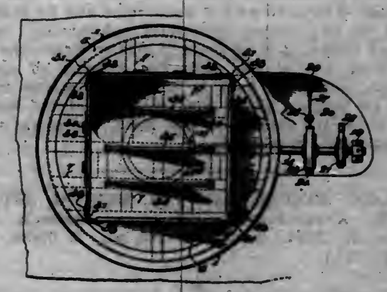
1,753,848. SELF-OPENING DIE HEAD. ALBERT F. BREITENSTEIN, New Haven, Conn., assignor to The Geometric Tool Co., New Haven, Conn., a Corporation. Substitute for application Serial No. 129,868, filed Aug. 18, 1926. This application filed May 18, 1928. Serial No. 278,837. 1 Claim. (Cl. 10—95.)

A self-opening die-head having a body formed with a central longitudinal bore and with a radial clearance-passage intersecting the same, radially-movable chasers mounted in the forward end of the said body, a non-rotary chaser-operating sleeve axially-movable upon the said body and formed with a radial clearance-passage registering with the said radial clearance-passage in the said body, a non-rotary tripping-sleeve axially movable upon the said operating-sleeve and adapted to co-act with an abutment external to the fixture, spring-means for normally urging the chaser-operating sleeve into its chaser-retracted position, a locking-member for holding the said chaser-operating sleeve in position for maintaining the chasers in their cutting positions, a bushing having bearing in the bore of the said body and axially movable therein and itself having a central longitudinal passage intersected by a radial threaded bore, a tripping-rod lo-



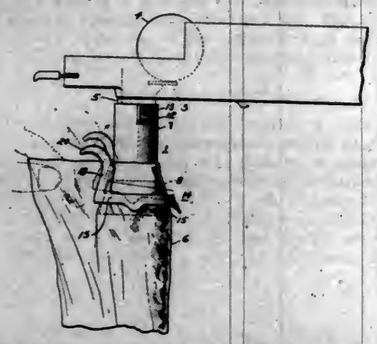
cated in the passage of the said bushing and adjustably slidable therein, and a radially-arranged coupling-screw having its inner end threaded into the threaded bore of the bushing for engagement with the said tripping-rod for clamping the same in position in the bushing and extending radially outwardly through the clearance-passages in the said body and operating-sleeve and into the tripping-sleeve through the periphery of which it is available for being turned to clamp and release the said tripping-rod, whereby the tripping-sleeve and tripping-rod are connected together and the latter may be clamped and released for its adjustment from the outside of the tripping-sleeve, and whereby chips and dirt are excluded from between the sleeves of the die-head.

1,753,849. GREASE DISPENSER. CONRAD R. BUCHET, Los Angeles, Calif., assignor to National Air-Lub Products Incorporated, Los Angeles, Calif. Filed Jan. 18, 1927, Serial No. 161,814. Renewed Jan. 17, 1929. 3 Claims. (Cl. 184—39.)



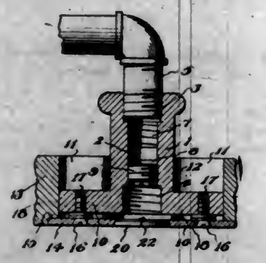
1. A grease dispenser comprising a cylinder, a piston mounted to reciprocate in said cylinder, a piston stem, said cylinder having a fluid pressure inlet below said piston and a grease inlet and a grease outlet above said piston, the head on the upper end of said cylinder having an opening therein, a cap for engaging the inner side of said head over said opening, a spanner engaging the outside of said head and said cap, a bearing bolt extending through said cap and said spanner through which bolt said stem extends, and a nut screw seated on the outer end of said bolt and engaging said spanner.

1,753,850. LOADING DEVICE FOR SEMIAUTOMATIC NAVAL GUNS. ROBERT DE COURSEULLES, Paris, France, assignor of one-half to Schneider & Cie., Paris, France, a Limited Joint Stock Company of France, and one-half to Compagnie des Forges et Acieries de la Marine et d'Homecourt, a Limited Joint Stock Company of Paris, France. Filed Apr. 16, 1928, Serial No. 270,433, and in France June 22, 1927. 11 Claims. (Cl. 89—45.)



1. Loading apparatus for guns comprising, in combination with a gun and cradle and trunnions therefor, a frame pivoted about the trunnion axis, a projectile tray pivotally mounted on said frame about an axis substantially perpendicular to the trunnion axis and adapted to swing into loading position, a cartridge tray carried by said frame, and a stop on said cradle supporting said frame.

1,753,851. CATTLE-KILLING MACHINE. JAMES DEVER, Sioux City, Iowa. Filed Apr. 6, 1929. Serial No. 353,065. 9 Claims. (Cl. 17—1.)

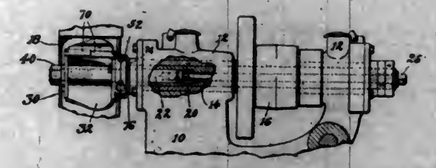


1. A machine of the character described comprising a turntable, an animal enclosure on the turntable, and means to impart rapid rotation to the turntable for the purpose described.

1,753,852. BAG HOLDER. EDWARD P. DONNELLAN, Brooklyn, N. Y., assignor to Standard-Johnson Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Aug. 3, 1928. Serial No. 297,343. 4 Claims. (Cl. 83—26.)

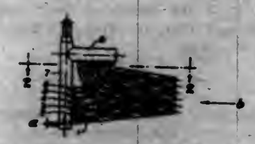
1. A bag holder comprising, a body having a flared lower portion, and a clamping member having means to engage said flared lower portion for clamping the upper part of a bag upon said body, said clamping member being cut away to permit the remainder of the upper part of said bag to extend freely from said bag holder.

1,753,853. OUTLET TERMINAL FOR FLUID-SUPPLY PIPES. ALFRED S. DOTY, Ashland, Ky., and LEON T. RICHEY, Huntington, W. Va. Filed Sept. 22, 1928. Serial No. 307,751. 5 Claims. (Cl. 137—76.)



1. An outlet terminal for a pipe comprising a body formed with a bore having its end portions threaded to receive a supply pipe and a service pipe respectively, the outer end portion being provided with a head non-circular in form and adapted to prevent rotation of the body when the body is engaged with a supply pipe and its head disposed in an opening conforming substantially to the contour thereof, a cover plate of greater dimensions than the outer end of said body for covering an opening through which the body is adapted to extend formed with an opening alined with the bore of the body, a closure for the opening in said plate, and means to secure said plate to said body.

1,753,854. ELECTRO-GALVANIC MEDICAL APPARATUS. ANTON FISCHER, Furtwangen, Germany. Filed Mar. 31, 1928. Serial No. 266,251. 1 Claim. (Cl. 174—177.)



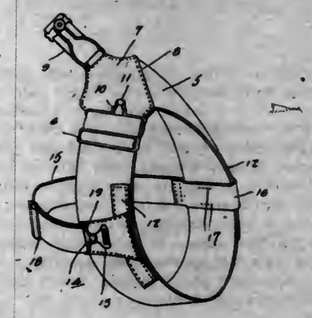
In an electro-galvanic medical apparatus the combination of a casing containing a source of current, a rheostat, a milliamperemeter and a pole-reverser on said casing, said pole-reverser having several positions for switching in stronger and weaker currents and consisting of contact-bolts arranged at certain distances in a circle, a rotary insulating plate, and spring pressed contacts on said insulating plate adapted to close the contact between two adjacent contact bolts.

1,753,855. CUTTER HEAD. ALFRED B. FOWLER, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 10, 1925. Serial No. 22,143. 16 Claims. (Cl. 12—94.)

1. A rotary cutter-head comprising cooperative blade-clamping members, adjustable blades each having a notch in one side edge, means for securing said clamping members against relative rotation, and means arranged to engage said blades in said notches to adjust them relatively to said clamping members.

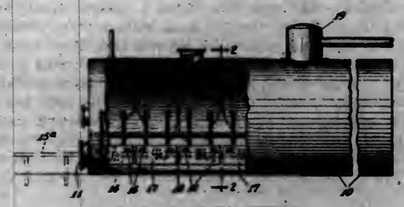
1,753,856. EVAPORATOR FOR REFRIGERATING PLANTS. ERICH FREUNDLICH, Dusseldorf-Oberkassel, Germany. Filed Sept. 7, 1928, Serial No. 304,500, and in Germany Mar. 17, 1928. 9 Claims. (Cl. 62—95.)

1. Vaporizer for refrigerating machines comprising a vertical head for the liquid refrigerating agent, a horizontal head for the vapors and a plurality of superposed substantially horizontally disposed pipes arranged in U-shaped coils bent upwardly at one end, the horizontally disposed ends of said coils terminating in said vertical head and the upwardly bent ends terminating in said horizontal head.



1,753,857. SHOE-STRETCHING LAST. ELIA GALTERIO, DOMINIC CHARLES MARIOTTI, and ANTONIO L. RUGGIERO, Denver, Colo.; said Elia Galterio assignor to Ada Galterio, Denver, Colo. Filed Aug. 10, 1928. Serial No. 298,807. 5 Claims. (Cl. 12—128.3.)

1. A foot stretching last comprising a body portion; width stretching blocks carried in depressions in the sides

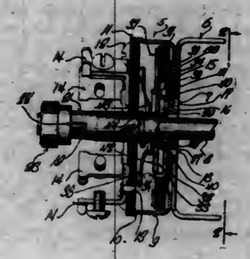


of said body portion; a spring member connecting said blocks through said body portion; means for separating said blocks from said body portion at either or both their forward and rearward extremities, said means comprising a pair of separating plugs slidably mounted in said body portion and adapted to engage the interior faces of said blocks; and wedging means arranged to be forced between said plugs so as to force them outwardly, there being a similar pair of plugs and wedging means adjacent each extremity of said blocks and each side of said spring means so that said blocks can be separated at either or both their forward or rearward extremities, and so that said blocks will hinge about said spring means.

1,753,858. COMBINATION GARMENT SUPPORTER AND COMFORTER. ROY GAY, Memphis, Tex. Filed June 7, 1929. Serial No. 369,211. 1 Claim. (Cl. 241—6.)

A combination drawers' leg supporter and foot comforter comprising an arch supporting band of elastic material, means projecting from the band for attachment to the lower end of a drawers' leg, and an adjustable strap for disposition around the rear portion of the ankle, and having its ends secured to the said band.

1,753,859. TREATMENT OF FLUIDS WITH SOLID SUBSTANCES. THOMAS T. GRAY, Elizabeth, N. J., assignor to Gray Processes Corporation, Newark, N. J., a Corporation of Delaware. Filed Jan. 18, 1926. Serial No. 82,114. 2 Claims. (Cl. 196—25.)

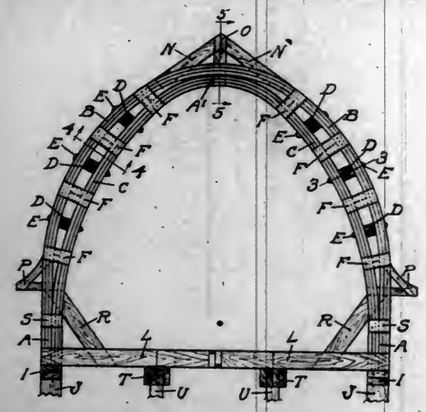


2. The process of refining hydrocarbon oil which comprises distilling the same, contacting the oil with a plurality of treating agents solid at the distillation temperature and confining the treating agents within separate limited spaces thereby preventing intermingling of the agents and the dispersion thereof in the oil.

1,753,860. APPARATUS FOR PRODUCING CANALS OR THE LIKE. WILLIAM F. HAHNEMAN, Puerto Cortes, Spanish Honduras, Central America. Filed Apr. 28, 1928. Serial No. 273,760. 5 Claims. (Cl. 86—21.)

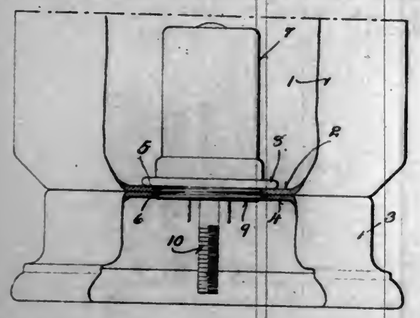
1. An implement for use in explosive engineering, comprising a handle, a socket secured to the end of the handle and adapted to receive a primer, said socket having opening or openings in its side so that the earth may engage with the primer and remove the same from the socket when the socket is being removed from the hole.

1,753,861. SWITCH. EDWARD N. JACOBI, Milwaukee, Wis., assignor to Briggs and Stratton Corporation, Milwaukee, Wis., a Corporation of Delaware. Filed Feb. 20, 1928. Serial No. 255,816. 17 Claims. (Cl. 200—11.)



1. In a switch mechanism, a stationary member having a plurality of recesses therein, switch actuating means rotatably mounted with respect to the stationary member, switch instrumentalities adapted to be operated to different positions by the actuator, ball members nested in the recesses of the stationary member, means for maintaining the ball members in alignment with the stationary member recesses, and spring means whereby said ball members produce a detent action to distinctly define each position of the switch instrumentalities.

1,753,862. ROOF STRUCTURE. ALBERT C. JOHNSON, Fairfield, Iowa, assignor to The Louden Machinery Company, Fairfield, Iowa, a Corporation of Iowa. Filed Dec. 3, 1927. Serial No. 237,485. 6 Claims. (Cl. 108—23.)

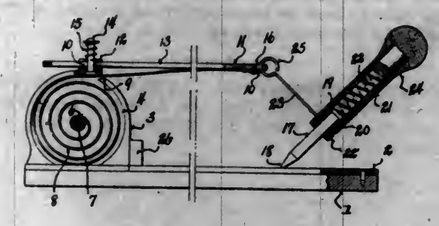


1. In roof structures, the combination of two laminated members, one being placed inside of the other, and both being curved continuously from one side of the roof to the other in an approximately semi-elliptical formation,

the ends and the central portions of the members being placed closely against each other for some distance and securely fastened together, while the side portions of the

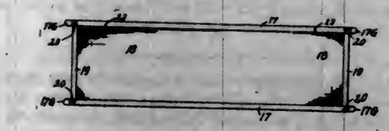
members between their ends and central portions are gradually spaced apart, the spaces being the widest in the middle portions of the sides between their ends and their centers.

1,753,863. ELECTRIC PERCOLATOR. REMUS KOENIG and WALTER S. MARVIN, Two Rivers, Wis., assignors to Metal Ware Corporation, Two Rivers, Wis. Filed Sept. 4, 1928. Serial No. 303,886. 1 Claim. (Cl. 219—44.)



In an electric percolator, the combination of a pot having a bottom, a base member having a transverse upper wall, said bottom and said transverse wall having registered threaded apertures, and an emersion type of electric heater having a flange resting upon the bottom and having a downwardly projecting threaded extension screwed into the registering apertures whereby the base can be removed from the pot without disturbing the relative position of the heater with respect to the bottom of the pot.

1,753,864. BELT BUCKLE. HENRY C. KUHNHEIM, Newport, Ky. Filed Mar. 7, 1928. Serial No. 259,805. 6 Claims. (Cl. 24—191.)

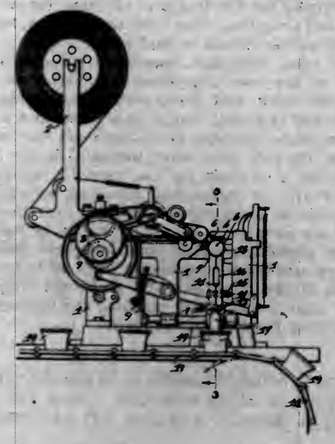


3. A belt buckle comprising a plate having guideways and bearings thereon, and a clamp member pivoted in said bearings and having sides extending in the direction of the plate, one of said sides having spurs extruded from its top and offset relative to the longitudinal center thereof.

1,753,865. STOCKING MARKER. CHARLES T. LA MONT, Milwaukee, Wis. Filed June 25, 1928. Serial No. 288,128. 3 Claims. (Cl. 66—1.)

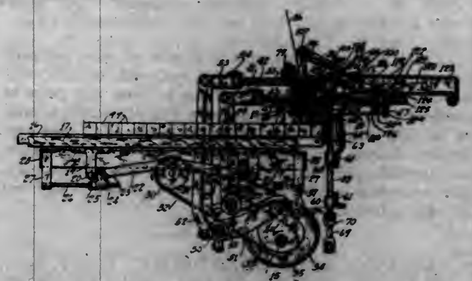
1. A stocking marker comprising a base portion, a yielding bearing plate secured to the upper side of said base portion and upon which a stocking is adapted to be laid, a housing having a concavity therein, a spiral spring carried within said concavity and having an end portion locked with respect to said housing, said housing having a slot and said spring having its outer end projecting through said slot, said housing having a substantially horizontal bearing face, a guide having one face slidably engaged with said bearing face, means for yieldingly urging said slide in contact with said bearing face, a marker positioned beyond the outer end of said guide, and a link connecting said marker and said guide.

1,753,866. SCREEN FOR MOTOR VEHICLES. ALFRED D. MCCORMACK, Mankato, Minn. Filed May 31, 1928. Serial No. 282,010. 1 Claim. (Cl. 156—14.)



In a screen sash for structures having a window opening and a pane movable in vertical window grooves into said opening; said sash comprising a quadrangular screen holding metal frame the top and bottom frame members being resilient and projecting beyond and offset from the vertical members to form guide members adapted to frictionally engage in the window frame grooves and slidable longitudinally therein and close to the pane, said top and bottom members of the screen sash comprising each a metal strip folded longitudinally to clamp the screen therein; said end members comprising plain bars and suitably attached to the corresponding edges of the screen.

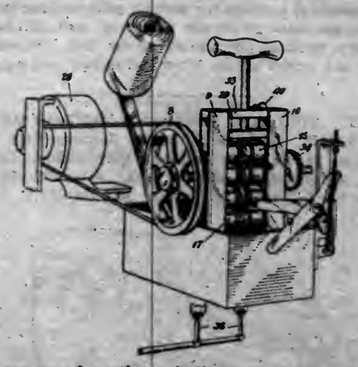
1,753,867. ARTICLE DISCHARGING AND CONVEYING APPARATUS FOR PAPER-CYLINDER-FORMING MACHINES. WILSON R. MYERS, New York, N. Y., assignor to Ice Cream Smack Products Co., a Corporation of Oregon. Filed Dec. 31, 1927. Serial No. 243,878. 6 Claims. (Cl. 93—36.)



1. In cylinder forming machines the combination with a forming mandril and an ejector, of a pivoted stationarily

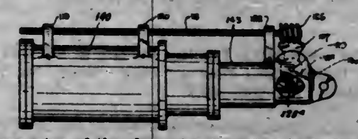
located receiving element into which said ejector delivers the articles from the mandril, means to move said receiv-

ing element on its pivot from a receiving to a discharging position and means at the discharging position to release the article from said receiving element.



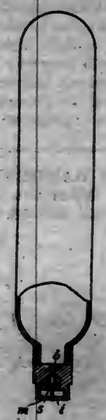
1,753,868. WRAPPING MACHINE. GEORGE D. RATLIFF, St. Louis, Mo., assignor to Pioneer Butter Wrapping Machine Company, Jackson, Miss., a Corporation of Mississippi. Filed Aug. 6, 1925. Serial No. 48,533. 3 Claims. (Cl. 198—219.)

1. In a wrapping machine, in combination, a vertically shiftable platform for successively delivering the articles for wrapping, a slotted table disposed horizontally in operative relation to the platform, the articles to be wrapped being supported upon the table in slot-straddling disposition, a conveyor disposed for movement in the slot of the table, and toggle means comprising a pair of opposed links pivotally connected together at one end and having pivoted connection at their other end with the conveyor for effecting movement of the conveyor in an ellipsoidal path for feeding said articles successively to and upon the platform.



1,753,869. METHOD AND MEANS FOR PREPARING INSULATING SLEEVES. THOMAS C. REED, Covington, Ky., and AUBREY D. ODELL, Cincinnati, Ohio, assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed June 30, 1926. Serial No. 40,615. 8 Claims. (Cl. 154—2.5.)

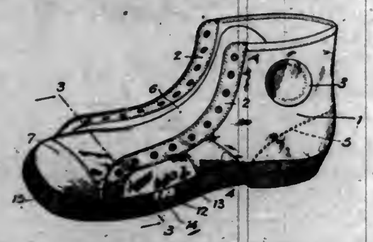
2. In a machine for producing insulating sleeves from a relatively long section of impregnated collapsed sleeving, the combination with an S-shaped mandrel for expanding the sleeving, of a plurality of rollers having grooves therein, the said mandrel lying partly within the



said grooves and partly encircling certain of said rollers, and being held in position by the co-action of other grooved rollers with the said certain rollers.

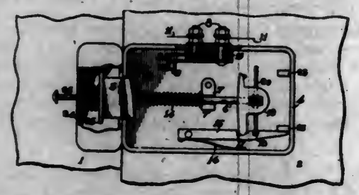
1,753,870. POWER-AMPLIFYING MACHINE. EUGENE LEVERING SCHELLENS, Pointe Claire, Quebec, Canada, assignor to Franklin Railway Supply Company, a Corporation of Delaware. Original application filed Dec. 15, 1924, Serial No. 756,160. Divided and this application filed Aug. 31, 1925. Serial No. 53,623. 5 Claims. (Cl. 137—139.)

5. Apparatus of the character described including a control valve, means for manually actuating said valve including a shaft, means for moving said shaft longitudinally to effect relatively coarse adjustments of said valve and means for rotating said shaft in fixed position longitudinally to effect relatively fine adjustments of said valve.



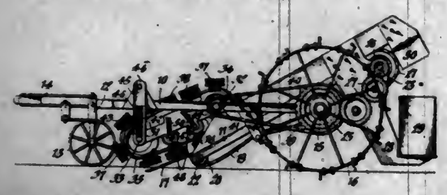
1,753,871. HIGH-PRESSURE GAS-DEVELOPING CARTRIDGE. GUSTAV SCHWORETZKY, Esslingen, a. N., Germany, assignor, by mesne assignments, to the Firm Jffa Ges. m. b. H., Berlin, Germany. Filed Oct. 11, 1926, Serial No. 140,967, and in Germany Oct. 21, 1925. 4 Claims. (Cl. 220—3.)

1. In a high-pressure gas developing cartridge for a portable fire extinguisher a sealing device for the charge



opening, comprising in combination, a tapering bushing with thin bottom, fitting into the tapering bore of the charge opening, a screw for locking said bushing in place, a diaphragm soldered to the mouth of said charge opening, and a striking pin riveted at one end into said diaphragm and guided at the other end in said locking screw.

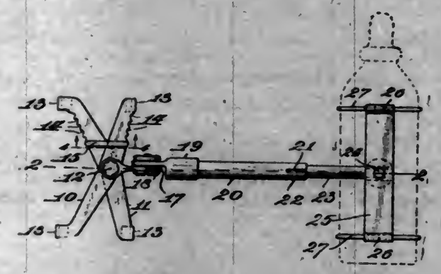
1,753,872. ATHLETIC SHOE AND METHOD OF MAKING SAME. LEONARD L. STEED, Johnson City, N. Y., assignor to Endicott Johnson Corporation, Endicott, N. Y., a Corporation of New York. Filed Feb. 23, 1929. Serial No. 342,185. 11 Claims. (Cl. 36—14.)



1. The herein described method of making vulcanized shoes, comprising attaching the lower edge of an upper to the periphery of an insole with the edge face of the upper terminating in the plane of the lower face of the insole; placing the parts thus formed upon a last; applying a vulcanizable outsole to the insole and over the lower edge of the upper; and vulcanizing the shoe.

1,753,873. VEHICLE LOCK. GEORGE R. SULLIVAN, Oakland, Calif. Filed June 29, 1928. Serial No. 289,253. 4 Claims. (Cl. 200—42.)

4. In a vehicle lock, a casing, a plunger mounted in the casing, contact means mounted on the casing, a contact member carried by the plunger and adapted to engage with the contact means, a spring for moving the plunger in a direction whereby the contact member is disengaged from the contact means, means for locking the plunger against movement whereby the contact member is maintained in a disengaged position with reference to the contact means, and a spring pressed member engageable with the plunger for normally maintaining the plunger in a position wherein the contact member is engaged with the contact means.



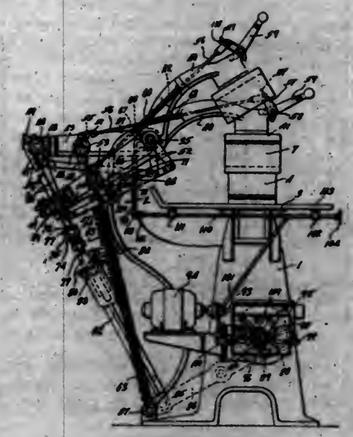
1,753,874. ONION HARVESTER. WILLIAM LLOYD TAYLOR, Elba, N. Y. Filed Feb. 23, 1928. Serial No. 256,241. 4 Claims. (Cl. 55—53.)

2. An onion harvester, comprising a plow, an elevator extending rearwardly from said plow, a frame disposed over the plow for movement toward and from the same, an endless belt journaled in said frame and having its lower stretch disposed in opposing parallel relation to and overlying the full length of the plow for engaging the onions and propelling them onto the elevator, and brushes mounted on the surface of said belt.

8. An onion harvester, comprising a frame, a plow arranged at the front end thereof, an elevator extending rearwardly from said plow, vertically-swinging supports fulcrumed at their rear ends to said frame at a point above the plow, shafts arranged at the front and rear ends of said supports, the rear shaft being journaled in the frame and constituting a fulcrum for the supports, sprockets fixed on said shafts, an endless feed belt engaging said sprockets and having its lower stretch disposed over the plow and part of the elevator to propel the onions across the plow onto the elevator, pendant arms fulcrumed to swing vertically on said frame and having guide ways for receiving the ends of said front feed belt shaft, and means applied to said arms for yieldingly resisting the upward swinging movement of the feed belt supports.

1,753,875. NURSING-BOTTLE HOLDER. HELENE H. BAUMANN, Highland Park, Calif. Filed July 18, 1927. Serial No. 206,468. 4 Claims. (Cl. 248—65.)

1. In a nursing bottle holder, a pair of arms pivotally connected intermediate their ends, both ends of both arms having depending terminal portions to form two pairs of resilient support engaging fingers, a link adjustably mounted on said arms to one side of the point of pivotal connection thereof for clamping said arms upon a support, an extensible arm pivotally connected to said pair of arms, and a nursing bottle receiving member pivotally mounted on said extensible arm.



1,753,876. RETOUCHING DEVICE. PAUL F. BOYD, Chicago, Ill. Filed Dec. 29, 1928. Serial No. 329,147. 8 Claims. (Cl. 95—101.)

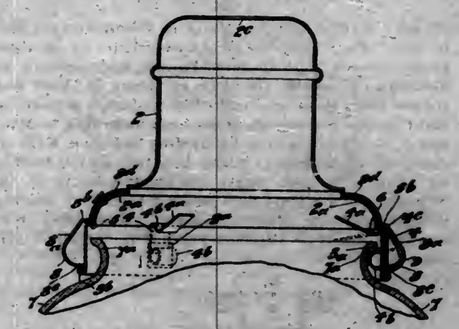
1. A device of the class described, comprising a casing, a plurality of pinions mounted in the casing, a belt for simultaneously rotating the pinions, disks connected with the pinions and having sweeps upon their peripheries, a lead mounted in the casing and extended between the disks and successively engaged by the sweeps during rotation of the pinions.

1,753,877. GARMENT-PRESSING MACHINE. BLUFORD W. BROCKETT, Cleveland Heights, Ohio, assignor to The American Laundry Machinery Company, Norwood, Ohio, a Corporation of Ohio. Filed Nov. 17, 1927. Serial No. 233,935. 12 Claims. (Cl. 68—9.)

1. A garment press comprising a frame, a plurality of bed units carried thereby, a plurality of independent head supports mounted upon the frame and each having movement independent of the others, a press head carried by each head support, a single power means operated from

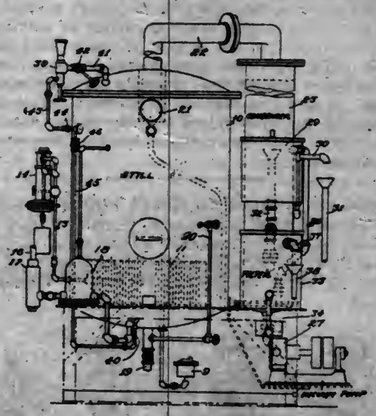
a suitable power source, and operative connections between said power means and all of said head supports for applying power pressure to said heads.

1,753,878. RECEPTACLE FOR SILVERWARE. CHESTER WALBRIDGE BURNHAM, Oneida, N. Y., assignor to Oneida Community, Limited, Oneida, N. Y., a Corporation of New York. Original application filed Nov. 23, 1923, Serial No. 676,471. Divided and this application filed Oct. 29, 1924. Serial No. 746,470. 1 Claim. (Cl. 206—75.)



A two-part receptacle for flat tableware comprising a shallow serving tray having low upwardly extending marginal sides and a removable article carrier snugly mounted therein and provided with a transversely extending rack intermediate the ends of the removable article carrier, said rack provided with notches and having a central portion projecting above the end portions, the whole of the upper surface of the rack and the notches therein projecting above the upper edges of the marginal sides of the tray, and a support disposed upon either side of the rack and projecting above the sides of the tray, said support being located between the rack and the edge of the carrier for engaging and supporting the articles mounted in and projecting from the rack and cooperating with the rack to support said articles above the sides and ends of the tray.

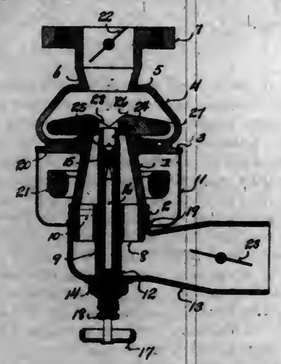
1,753,879. PROCESS OF FRYING BACON. CLARENCE W. CARTER and CHARLES P. STRITE, Minneapolis, Minn. Filed Jan. 26, 1928. Serial No. 249,557. 3 Claims. (Cl. 99—11.)



1. A method of cooking strips of bacon or the like which consists in confining the same in a flat open-ended folder which folds the strips in flat condition, and in subjecting the same to cooking heat applied thereto through said folder.

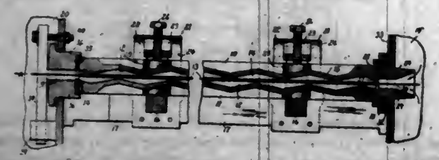
1,753,880. LAMP GLOBE, SHADE, REFLECTOR, OR LIKE SUPPORTING DEVICE. WALTER CURTIS, London, England, assignor to The Sun Electrical Company Limited, London, England. Filed Sept. 9, 1927, Serial No. 218,566, and in Great Britain Oct. 4, 1926. 2 Claims. (Cl. 240—132.)

1. A support for shades or globes having an outwardly extending rim, comprising a shade supporting casing having a cylindrical lower portion connected to the upper portion by an annular transverse portion, a plurality of pivoted shade holding hooks, a rotatable ring having a series of inwardly extending cams corresponding in number to the hooks, the annular transverse portion being provided with a number of slots extending to the upper edge of the cylindrical portion of the casing while the cylindrical portion of the casing is provided with a corresponding number of slots, the hooks being pivoted on pivots formed on the upper edge of the cylindrical portion of the casing by the slots in the annular portion thereof and having shade rim engaging portions extending through the slots in the cylindrical portion and through which they are pushed into engagement with the shade rim by the cams when rotated by the cam ring.



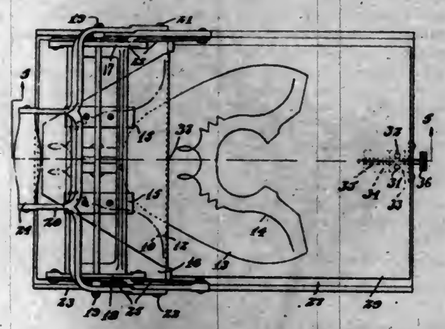
1,753,881. APPARATUS FOR RECOVERING GASOLINE SOLVENT. ANTON LOUIS DOEBNER, Philadelphia, Pa., assignor to Baeuerle & Morris, Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 25, 1927. Serial No. 163,527. 3 Claims. (Cl. 196—15.)

1. An apparatus for recovering dry cleaning solvents and adapted for installation and operation in dry cleaning establishments, said apparatus including, in combination, a vacuum chamber, means for heating the same, a condenser communicating with said chamber, a valveless rotary pump of relatively high capacity and speed of operation having its inlet communicating directly with said



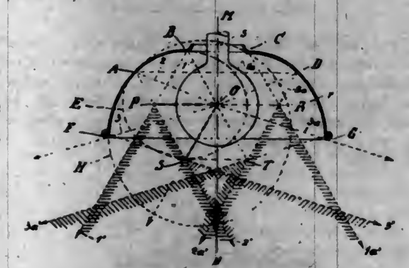
condenser so as to receive the distillate therefrom, and means for introducing steam into said chamber to expel the air therefrom and, by its condensation in said condenser, supply liquid to said pump to enable the latter to draw a vacuum in said chamber.

1,753,882. CARBURETOR. JOHN B. DRAHONOVSKY, Milwaukee, Wis., assignor of one-twentieth to Mathew Ferko, one-twentieth to Mary Puncer, one-twentieth to Ferdinand Klancnik, one-tenth to Henry W. Buer and Hertha Buer, three one-hundredths to Joseph Schweitzer and Caroline Schweitzer, seven one-hundredths to Maurice A. Goldberg, two one-hundredths to Fannie Kollenz, three one-hundredths to Anton Lep, two one-hundredths to William Wagner, forty one-hundredths to A. A. Strelzin, one one-hundredth to John Streichen, and one one-hundredth to Phelep Kinsfogl, Milwaukee, Wis. Filed Oct. 11, 1926. Serial No. 140,850. 1 Claim. (Cl. 261—62.)



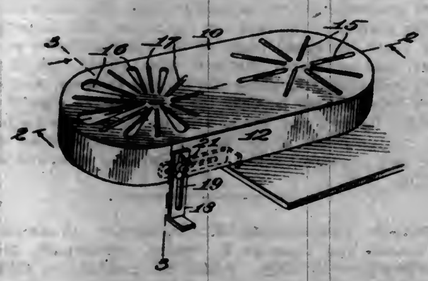
In a carburetor the combination of a central air shell, a float chamber surrounding said shell, a central standard positioned within said shell and supported from said shell, said standard having a hollow interior, the supporting member for said standard having a duct placing the hollow interior of the standard in communication with the float chamber, said standard having a relatively small duct leading upwardly through the upper portion of the standard and controlled by a needle valve and opening into a relatively enlarged cavity in the upper portion of the standard, and a mixing chamber carried by said air shell above the upper portion of said standard, said standard having radial apertures opening into the upper enlarged cavity, and a pair of flaps pivotally mounted within the mixing chamber and adapted to constrict the air passage around the central standard for slow engine speeds, said needle valve being freely adjustable from the exterior of the carburetor.

1,753,883. SCOURING CHAMBER FOR METAL-SCOURING MACHINES. CHARLES A. DREISBACH, New Haven, Conn., assignor to Standard Radial Blast Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 25, 1929. Serial No. 349,701. 7 Claims. (Cl. 51—8.)



1. A scouring-chamber for metal-scouring machines, having a scouring-passage of undulating longitudinal form, whereby a granular abrasive blown through the said passage will be repeatedly deflected against work therein.

1,753,884. MARKING DEVICE. HERBERT E. EDWARDS, Brookline, Mass., assignor to T. J. Edwards, Incorporated, Boston, Mass., a Corporation of Massachusetts. Filed Mar. 12, 1927. Serial No. 174,739. 19 Claims. (Cl. 101—301.)

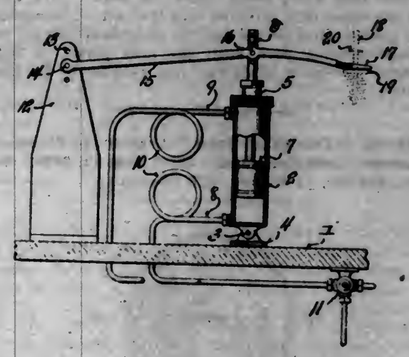


1. A marking device having, in combination, means for supporting an upper blank, and means correlated therewith for inking a legible fancy stitch guide line on the supported blank.

1,753,885. RADIATION APPARATUS. OSCAR GERHARDT, Berlin-Lichterfelde-Ost, Germany. Filed June 7, 1927, Serial No. 197,204, and in Germany June 14, 1926. 6 Claims. (Cl. 240—103.)

1. A radiation apparatus, comprising a source of light, and a reflector having a dim polish in the form of minute strokes radiant from the axis of the reflector.

1,753,886. AUXILIARY TOP FOR GAS STOVES. GEORGE G. GLENN, Long Beach, Calif. Filed Sept. 28, 1927. Serial No. 222,565. 1 Claim. (Cl. 126—216.)

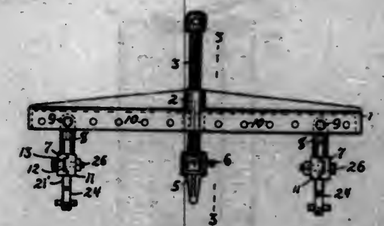


An auxiliary top for gas stoves and the like, comprising a housing having top and bottom plates, a continuous side wall connecting the edges of said top and bottom plates, there being an opening formed through the bottom plate at one end thereof, a series of radially disposed ribs pressed upwardly from the top plate directly above the opening in the bottom plate, there being a series of radially disposed openings formed through the end portion of the top plate opposite from the end from which the ribs are pressed which openings gradually increase in width toward the adjacent rounded end of the housing, and L-shaped supporting legs mounted on the side wall of the housing opposite the end that is provided with the bottom opening and the radially disposed ribs on the top plate, the upright members of which legs are slotted, bolts passing through the side walls of the housing and through the slots in said legs and nuts located on the threaded outer ends of said bolts for clamping the legs to said housing in differently adjusted positions.

CARNEGIE LIBRARY OF ATLANTA

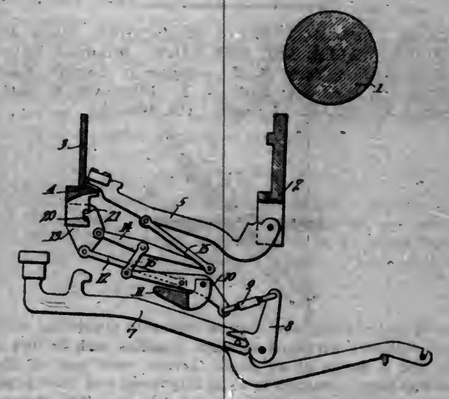
1,753,887. MANUFACTURE OF INSECTICIDES. WALTER HENRY GROOMBRIDGE, Deptford, London, England, assignor to Arthur J. Dickinson Limited, Deptford, London, England, a British Company. Filed Nov. 23, 1927. Serial No. 235,393. 16 Claims. (Cl. 167—14.)

16. In a method of manufacturing colloidal alkali metal silico fluorides the steps of adding 14 parts by weight of ammonium silico fluorides in a solution of 130 parts and 5 parts of caustic soda to 280 parts of soft potash soap having a fatty acid content of 12.6% in water, maintaining the temperature below 30° C. and making up the resulting product to about 3 times the volume of the ammonium silico fluoride solution, the reagents being agitated during mixing.



1,753,888. TOOL FOR COMPRESSING VALVE SPRINGS. ALBAN A. HOLSEN, Two Rivers, Wis. Filed May 21, 1928. Serial No. 279,398. 4 Claims. (Cl. 29—86.3.)

1. A tool for compressing valve springs comprising a support, a cylinder pivoted upon said support, a lever transversely of the cylinder, means for pivotally and adjustably supporting one end of said lever, said cylinder having a piston and a piston rod, means pivotally joining said piston rod with the intermediate portion of said lever, and a fork at the other end of the lever adapted to engage the valve spring.

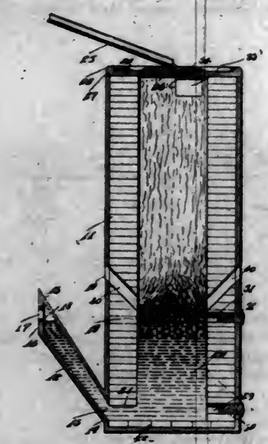


1,753,889. BULLDOZER FOR CHASSIS FRAMES. ROBERT J. JAUCH, Fort Wayne, Ind., assignor to The Utility Strate Mfg. Co., Fort Wayne, Ind., a Corporation. Filed Mar. 10, 1927. Serial No. 174,158. 9 Claims. (Cl. 153—38.)

1. In a bulldozer for straightening damaged chassis frames, a recessed beam having a central boss, and spaced pin holes in each end portion; a jack-screw extending through said boss and having threaded relation therewith; a cross-head on the projecting end of the jack-screw and having swivel relation therewith; a pair of hook members removably and adjustably mounted on said cross-head, one on each end portion thereof; a pair of adjustable cross-heads, one in adjustable connection with each end portion of said beam; and a pair of grapple

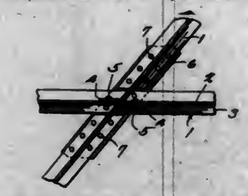
members adjustably mounted in each of said adjustable cross-heads, one in each end portion thereof, there being clamping means provided to prevent turning of the grapple members in their respective cross-heads.

1,753,890. TYPEWRITING MACHINE. CARL A. JOERISSEN, Washington, D. C. Filed May 24, 1928. Serial No. 280,274. 8 Claims. (Cl. 197—25.)



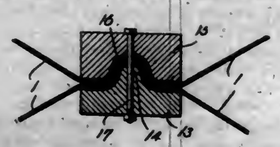
1. In a typewriting machine, the combination of a platen, a series of type carriers, a series of key levers, one for each type carrier, each adapted to effect movement of the associated type carrier to printing relation to the platen, means for checking such movement of each type carrier prior to its reaching printing position including a toggle, one arm of which is connected to the type carrier, a member pivotally mounted in the machine frame and connected to the other arm of the toggle, a common fulcrum rod connecting all of said members with the machine frame, and means for bodily shifting said rod to render all of the checking means inoperative.

1,753,891. APPARATUS FOR THE REDUCTION OF IMPURITIES CONTAMINATING MOLTEN METAL. LLEWELLYN JONES, Muncie, Ind. Filed July 19, 1928. Serial No. 293,963. 1 Claim. (Cl. 266—34.)



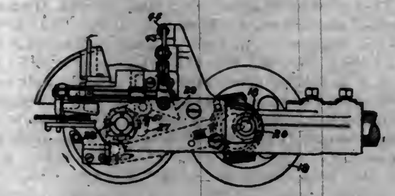
An apparatus for the reduction of the elements from molten metals, which has been run directly from a melting unit comprising an open vessel formed of a metal shell, a refractory lining within the shell, said shell and lining being provided with an outlet passage adjacent the lower end thereof, a discharge spout connected with the passage and tapering from the outer free end thereof towards the inner end where it is connected with the passage in

the shell and lining, the outer free end of the spout being provided with a discharge port, the shell and lining having



air inlet passages opening into the vessels at points above but adjacent a horizontal plane passing through the discharge port of the spout.

1,753,892. SPACE-COVERING STRUCTURE, SUCH AS ROOFS, WALLS, AND THE LIKE. WILHELM KLINGENBERG, New York, N. Y., assignor to Lamella Roof Syndicate, Inc., New York, N. Y. Filed Apr. 8, 1927. Serial No. 182,132. 1 Claim. (Cl. 108—1.)



A space covering and closing structure consisting solely of obliquely arranged separate lamellas each having a web and a flange at an angle thereto, each pair of the lamellas being arranged in axial alignment and their adjacent ends having their webs extended beyond their flanges at the ends, and bent at the extended portions angularly with respect to the axes of said lamellas, said bent portions of the webs of the said pair of lamellas bearing directly against and being secured to opposite sides of the web of the intersecting lamella at a point intermediate the ends of said intersecting lamella, the flanges of the lamellas being in the same plane so that the ends of the flanges of each pair of lamellas are in close proximity to and parallel with the opposite sides of the flange of the intersecting lamella.

1,753,893. SPACE-COVERING STRUCTURE, SUCH AS ROOFS, WALLS, AND THE LIKE. WILHELM KLINGENBERG, New York, N. Y., assignor to Lamella Roof Syndicate, Inc., New York, N. Y. Filed Aug. 2, 1927. Serial No. 210,170. 2 Claims. (Cl. 189—36.)

2. A pair of lamellas arranged in overlapping relation and each having a transverse, substantially semi-circular corrugation forming an inset on one side and an offset on the opposite side, the corrugation of each lamella being of different diameter than and engaged with that of the other so that the corrugations of said pair of lamellas are concentric and means securing said lamellas together at their point of contact, said securing means comprising blocks arranged in opposing relation and shaped on their opposing faces to fit the corrugations of the lamellas and a bolt extending through said bearing blocks and the corrugations of said lamellas and securing them together.

1,753,894. TAPE CUTTER. CARL G. KRONMILLER, Chicago, Ill., assignor to St. Regis Paper Company, New York, N. Y., a Corporation of New York. Filed Apr. 6, 1929. Serial No. 352,943. 4 Claims. (Cl. 164—161.)

1. In apparatus of the character described, a cutter, means to feed past the cutter spaced articles connected by a tape, driving means comprising a member having an alternate working stroke and idle stroke and adapted normally to impart a cutting movement to said cutter during its working stroke, a trip normally in the path of the article approaching the cutter, and a pin actuated by said trip, when moved from the path of the article, said pin being thus actuated into the path of movement of said member and preventing the movement thereof in its normal working path until the next period of normal working movement after the trip returns to its normal position.

1,753,895. STEAMER. FRED P. LARSON and FLORENCE T. LARSON, Ludington, Mich. Filed Aug. 11, 1928. Serial No. 299,032. 1 Claim. (Cl. 53—1.)

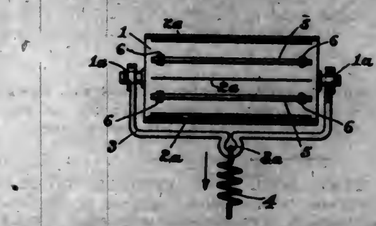
A steam cooking appliance comprising a top plate, a depending spacing flange formed on the marginal edge of said plate, the flange having bent-back triangular shaped wings at spaced points defining V shaped steam escape notches, the portions between said notches being folded back to provide reinforcing means, and a handle connected with said top plate, the bent-back portions of the flange and said wings being in facial abutment with the body portion of the flange.

1,753,896. THERMOINSULATING STRUCTURE AND METHOD OF MANUFACTURING THE SAME. HARVEY B. LINDSAY, Evanston, Ill., assignor to Dry Zero Corporation, Wilmington, Del., a Corporation of Delaware. Filed Oct. 27, 1927. Serial No. 229,254. 2 Claims. (Cl. 144—309.)

1. The method of producing a hermetically sealed joint between flatwise opposed surfaces of elements to be united by an adhesive, one of the elements being flexible and the other a solid indentable body, which consists in rolling a

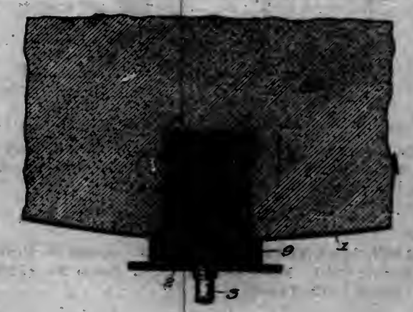
corrugation in the flexible element and into the flatwise opposed portion of said solid indentable body while said elements are flatwise opposed with adhesive therebetween.

1,753,897. HEATER FOR AUTOMOBILES. SIEGMUND LOEB, Berlin-Charlottenburg, Germany. Filed Nov. 15, 1927, Serial No. 233,455, and in Germany Nov. 16, 1926. 1 Claim. (Cl. 158—90.)



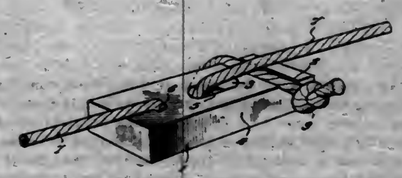
In a device for heating the water cooling system of automobile engines, a container closed by a screened cap, a plate dividing the interior of said container into an upper combustion and a lower supply chamber for liquid fuel, a screen in said plate, a catalyst for flameless combustion of evaporated fuel in said combustion chamber, an insulating member in the wall of said combustion chamber, an electrode passing through said insulating member, another electrode carried by said plate and extending into said catalyst and a binding post carried by said container and in electrically conducting connection with said second electrode.

1,753,898. MANUFACTURE OF AROMATIC THIAZOLE COMPOUNDS. HARRY A. MERKLE, Nitro, W. Va., assignor to The Rubber Service Laboratories Company, Akron, Ohio, a Corporation of Ohio. Filed July 14, 1927. Serial No. 205,851. 8 Claims. (Cl. 260—44.)



1. The method of manufacturing a mercapto-arylthiazole compound which comprises heating an aromatic mustard oil and sulphur under pressure in the presence of water as a reaction catalyst.

1,753,899. STALK CUTTER. JAMES H. MINER, Meridian, Miss. Filed Sept. 6, 1928. Serial No. 304,291. 5 Claims. (Cl. 55—61.)

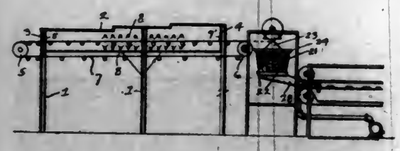


1. A stalk cutter comprising a knife carrier having substantially flat faces, rows of knives disposed perpendicular to said faces and means for causing the knives to descend on the stalks by gravity.

1,753,900. FILTERING MINERAL OILS. DONALD L. NAEF, Wood River, Ill., assignor to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed Mar. 27, 1929. Serial No. 350,219. 3 Claims. (Cl. 210—171.)

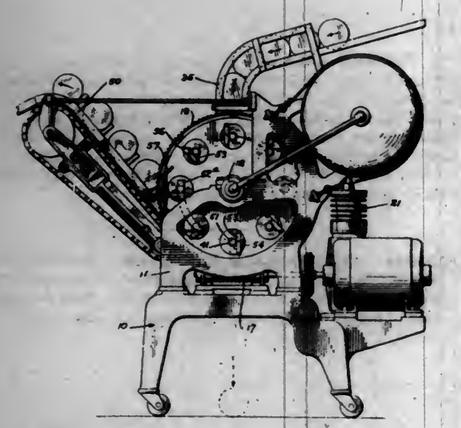
3. The combination with a mineral oil filter tank of the percolator type adapted to contain granular adsorbent material and provided with a depressed outlet well at the lowest point thereof, of a cylindrical perforated filter medium support seated in said well and extending vertically above the bottom of the tank, said support being externally covered with a filter medium, and packing in said outlet well surrounding the base of said support.

1,753,901. CLOTHESLINE FASTENER. FRANKLIN H. NEUBERGER, Endicott, N. Y., assignor of one-tenth to Edwin James Brand, Jeffersonville, N. Y. Filed Jan. 14, 1929. Serial No. 332,401. 1 Claim. (Cl. 24—129.)



A clothes line fastener comprising a block having a slot formed therein, a pin supported by the block and bridging the slot, a pulley rotatably mounted on the pin, said block having a transverse groove formed therein and disposed at right angles to the slot, said groove being spaced therefrom and a line terminal passable through the slot for engagement with the pulley and in the groove, as and for the purpose set forth.

1,753,902. METHOD OF TREATING FRUITS AND VEGETABLES. JOHN J. NEVILLS, Sacramento, Calif. Filed Feb. 5, 1927. Serial No. 166,177. 1 Claim. (Cl. 146—219.)



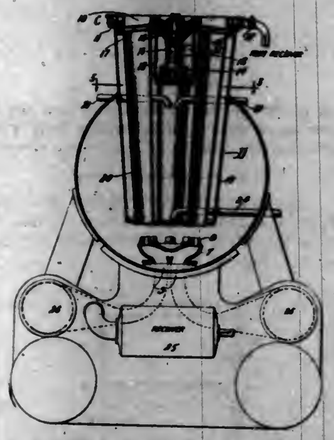
A method of removing the skins from pears consisting of holding the articles to be treated for a period of time

varying from two (2) to five (5) seconds at a temperature varying from four hundred (400) to eight hundred (800) degrees, F., by means of a dry steam that will sear and

loosen the skins of the articles without causing any injury thereto, and thereafter removing the loosened skins from the articles.

1,753,903. CAN-TESTING MACHINE. LOUIS H. PETERS, Oakland, Calif. Filed Apr. 25, 1928. Serial No. 272,617. 6 Claims. (Cl. 73—51.)

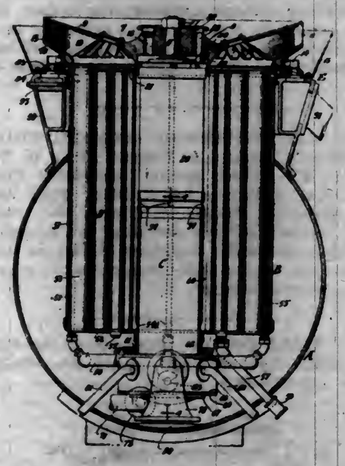
1. An apparatus of the character described comprising can testing means adapted to travel in continuous cycles and to receive a can at a predetermined point in its cycle of operation, said testing means being adapted to cause the end of a can to distend in the event that the can is not sufficiently evacuated, means actuated by the distension of the end of a can being tested to render said distending force ineffective, and means for maintaining said distending force ineffective after the first-named means is actuated until the cycle of operation of the machine on the can being tested is completed.



1,753,904. ACID-RESISTANT ALLOY. CLAYTON E. PLUMMER, La Grange, Ill., assignor to Electro Metallurgical Company, a Corporation of West Virginia. Filed Nov. 3, 1928. Serial No. 317,117. 2 Claims. (Cl. 75—1.)

1. An improved acid-resistant alloy consisting of nickel, silicon, copper and aluminum within the following proportional limits:

Silicon	9.0 to 11.0%
Copper	2.5 to 25.0%
Aluminum	1.5 to 2.0%
Nickel	Balance

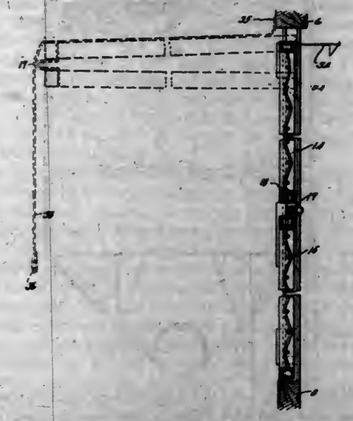


with iron as an impurity less than 1%.

1,753,905. LOCOMOTIVE FRONT END. EUGENE L. SCHELLENS, Pointe Claire, Quebec, Canada, and JOEL S. COFFIN, Jr., Lisbon, N. H., assignors, by mesne assignments, to C-S Engineering Company, a Corporation of Delaware. Filed Aug. 1, 1923. Serial No. 654,075. 26 Claims. (Cl. 110—162.)

1. In a locomotive draft appliance, a stack, a fan, a turbine for driving the fan, and a manifold for supplying an operating fluid disposed annularly of the stack.

1,753,906. LOCOMOTIVE DRAFT APPLIANCE. EUGENE L. SCHELLENS, Pointe Claire, Quebec, Canada, and JOEL S. COFFIN, Jr., Lisbon, N. H., assignors, by mesne assignments, to C-S Engineering Company, a Corporation of Delaware. Filed Dec. 18, 1923. Serial No. 681,450. 21 Claims. (Cl. 110—162.)

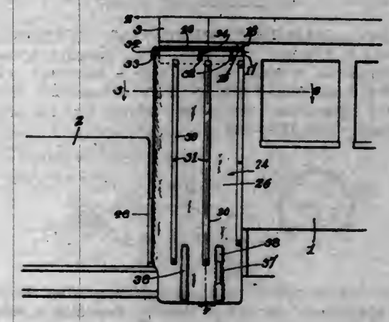


1. In a locomotive draft appliance, a stack and an exhaust-steam-driven centrifugally discharging fan for producing draft, said fan being located at the stack outlet.

1,753,907. REAR DOOR FOR VEHICLE BODIES. JOHN R. SCHERER, Detroit, Mich., assignor to The Abbey-Scherer Company, a Corporation of Michigan. Filed June 27, 1924. Serial No. 722,642. 6 Claims. (Cl. 296—106.)

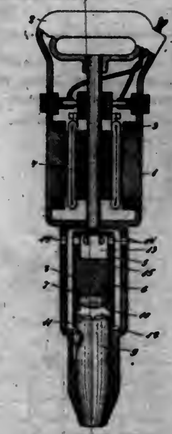
1. A rear door mechanism for vehicle bodies comprising a pair of side guides adapted to be secured to the side

frames of a vehicle body, said guides having inwardly extending abutments adjacent their upper ends, an upper panel having laterally projecting lugs adapted to rest upon said abutments, a lower panel hinged at its upper



extremity to the upper panel and carrying adjacent its lower edges laterally projecting lugs slidable in said guides, and a latch member carried by the upper panel in position to engage the lower panel to hold the panels in raised position.

1,753,908. ADJUSTABLE SHOE-TREE. ANTONIO SCIMONELLI, Brooklyn, N. Y. Filed Nov. 5, 1927. Serial No. 231,327. 11 Claims. (Cl. 12—128.1.)

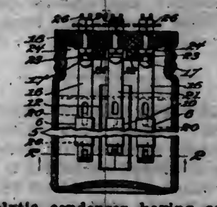


1. A shoe tree comprising heel and toe members, and a slidable hinge member, pivoted at one end of the toe member, and having a right angular portion with a slot engaged by a screw carried by the heel member.

1,753,909. CURTAIN ATTACHMENT. FINIS TALIAFERRO, Coffeyville, Kans. Filed July 16, 1929. Serial No. 378,742. 14 Claims. (Cl. 105—9.)

2. In a curtain attachment for locomotive cabs a pair of foldable side curtains, a foldable back curtain, said curtains for suspension from the top of the rear portion of the cab, each side curtain having its forward part of greater height than its rear part, said rear part for closing portions of the rear end of the cab, and means for detachably connecting said rear part to said back curtain.

1,753,910. STRIKING OR HAMMERING TOOL. ERNST HJALMAR WALODDI WEIBULL, Saltsjobaden, Sweden, assignor to Aktiebolaget Nordiska Armaturfabrikerna, Stockholm, Sweden, a Limited Company. Filed Jan. 14, 1928, Serial No. 246,901, and in Sweden Sept. 21, 1927. 4 Claims. (Cl. 125—33.)

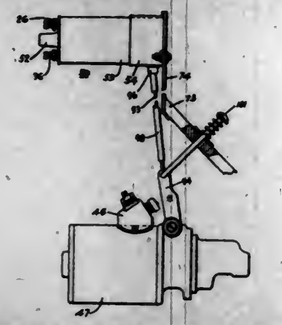


1. In striking or hammering tools of the kind referred to comprising a rotary and reciprocating striking body, an anvil, cooperating faces on said striking body and the anvil whereby upon rotation of the striking body the anvil is given a blow and whereby the striking body recoils backwardly from said blow to move in an axial direction, a chamber located at the end of the striking body formed in part by said striking member in which the air pressure is varied by the axial movement of said striking body on its axial recoil, such change in pressure tending to return the striking body to normal striking position and means to communicate such chamber with the atmosphere when in the last named position.

1,753,911. DESENSITIZER AND PROCESS OF DESENSITIZING LIGHT-SENSITIVE PHOTOGRAPHIC MATERIALS. BRUNO WENDT, Dessau in Anhalt, Germany, assignor to Agfa Ansco Corporation, Binghamton, N. Y., a Corporation of New York. Filed Dec. 28, 1928, Serial No. 329,070, and in Germany Feb. 3, 1928. 24 Claims. (Cl. 95—88.)

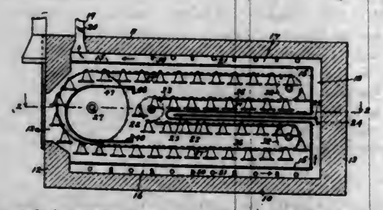
1. A process which comprises desensitizing light sensitive photographic materials by treating them with an aqueous solution of a polynuclear quinone derivative.

1,753,912. ELECTROLYTIC CONDENSER. SAMUEL T. WOODHULL, Winchester, Mass., assignor to The Amrad Corporation, Medford, Mass., a Corporation of Ohio. Filed Sept. 28, 1926. Serial No. 138,168. 9 Claims. (Cl. 175—315.)



1. An electrolytic condenser having an electrolyte, a cathode electrode, a plurality of filming anodes immersed

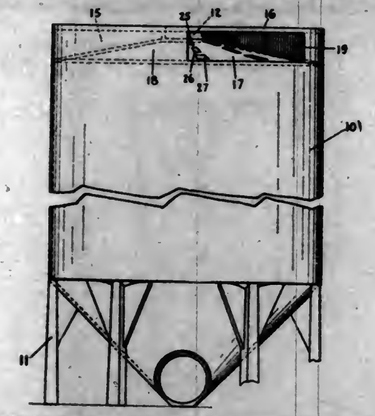
in the electrolyte and adapted to be placed at different electrical potentials, and means for shielding from each other anodes which are maintained at widely varying potentials.



6. An electrolytic condenser comprising a container, an electrolyte, a plurality of filming anodes immersed in the electrolyte and adapted to form different sections of a filter, a negative electrode, and means for isolating the portions of the electrolyte associated with the several anodes from each other to prevent electrical conduction of currents of different filter sections through common portions of the electrolyte.

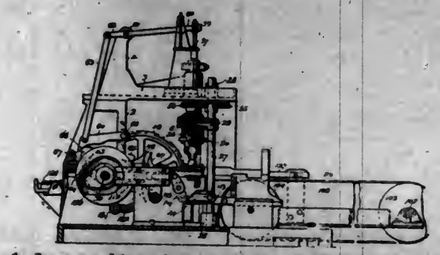
1,753,913. SWITCH CONTROL. JAMES L. ARTHUR, Anderson, Ind., assignor to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Dec. 29, 1928. Serial No. 329,239. 20 Claims. (Cl. 123—179.)

1. In an electrical system for use with internal combustion engines, the combination with, a source of electric current and engine starting means energized thereby, of an ignition circuit also energising from said source and automatic means for decreasing the normal resistance of said ignition circuit coincidentally with the energisation of said engine starting means, comprising a sectionally divisible primary coil, and means for instituting the energization of the engine starting means, and operable to change the relation of said primary coil sections.



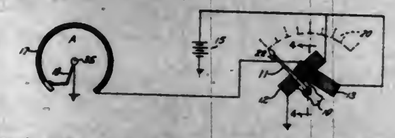
1,753,914. BAKE OVEN. HORACE A. BODGE, White Plains, N. Y., and JOSEPH C. EMLEY, Melrose Park, Pa. Filed Jan. 9, 1928. Serial No. 245,414. 8 Claims. (Cl. 198—154.)

1. In a bake oven, the combination with a carrier provided with a series of detachable trays, a pair of tracks fixedly supported within said oven, oppositely disposed bearing members movable along said tracks, two-part hanger-bars connecting said opposite bearing members together and disposed to receive said trays, and means for detachably securing the sections of the hanger-bars together.



1,753,915. SPRAY-DRYING APPARATUS. WILLIAM SPENCER BOWEN, Westfield, N. J. Filed June 5, 1929. Serial No. 368,602. 9 Claims. (Cl. 159—4.)

1. Desiccating apparatus, comprising a tower affording a closed drying chamber provided with an opening at the top for the admission of a solid-containing liquid, an inlet chamber provided at the top of said tower for a gaseous desiccating medium and surrounding the admission opening, and the said inlet chamber being provided by the top wall of the tower and a bottom wall disposed below the



same within the tower, the said bottom wall having ports circularly arranged and radially disposed therein to admit a gaseous desiccating medium to the interior of the chamber tangentially.

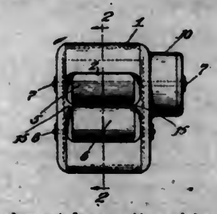
1,753,916. MACHINE FOR APPLYING REENFORCEMENTS TO CLOTHESPINS. SIGMUND BOWER, Brooklyn, N. Y. Filed Dec. 12, 1928. Serial No. 325,530. 39 Claims. (Cl. 140—93.)

1. In a machine of the class described the combination of a chuck adapted to grip and revolve a clothes pin, means for feeding a wire in relation to the clothes pin with the end of the wire projecting into the slot thereof, means for causing the rotation of the chuck whereby the reenforcing wire is wound around the clothes pin, and means for severing the wire and for forcing the severed end into locking engagement within the slot of the clothes pin.

1,753,917. ELECTRIC INDICATING INSTRUMENT. MOSES E. CHENEY, La Crosse, Wis., assignor, by mesne assignments, to Moto Meter Gauge & Equipment Corporation, Long Island City, N. Y., a Corporation of Delaware. Filed Feb. 29, 1928. Serial No. 257,816. 6 Claims. (Cl. 177—351.)

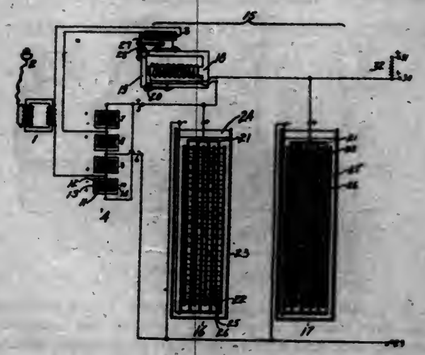
1. In an electrical tank content measuring device, a tank, a source of current, a rheostat including a movable element and a resistor of greater resistance per unit of length at the end corresponding to the empty tank position than at the end corresponding to the full tank position, the full tank position corresponding to the low resistance end of the resistor, an indicator including two coils, one

connected across the source of current and the other in series with said resistor, a movable element positioned to be actuated by the effect of the coils and a pointer operated by said element and having generally increasing increments of scale movement for equal increments of voltage applied to the coil in series with the resistance, a stop pin for suppressing the natural scale movement of the movable element at the empty tank end of the scale, the intermediate resistances of said resistor being graded to produce uniform indicator pointer movements for equal units of tank measure, and means for moving the movable element of said rheostat in accordance with variation of liquid level in said tank.



6. In a liquid level indicator the combination of a float-operated rheostat including a strap-type resistance element having a tapered insulating strip, a coil on said strip, said coil being wound from the narrower part of the strip to the wider part of said strip as far as the turns will remain positioned as wound, and a cooperating wiper arm, the movement of the arm with respect to said resistance being such that the arm passes off of said resistance at a point in its travel adjacent to a limiting float position, with an indicating device including, a coil in series with said resistance, a pointer, a cooperating uniformly graduated scale, and means operated by said coil capable of producing a movement of said pointer from a point beyond one end graduation of the scale to at least the other end scale indication, one current-produced end scale indication being that established by the pointer when the minimum resistance is in series with the indicator, the other current-produced scale indication being established when the maximum resistance is in series with said indicator, means for holding the indicator pointer at the zero scale indication adjacent the minimum current produced scale indication, said zero indication being spaced from the minimum current-produced scale indication an angular distance in accordance with the angular spacings of the remaining scale indications.

1,753,918. STRAP FASTENER. BENEDICT COLAVECCHIO, Providence, R. I. Filed Feb. 20, 1929. Serial No. 341,326. 2 Claims. (Cl. 24—77.)

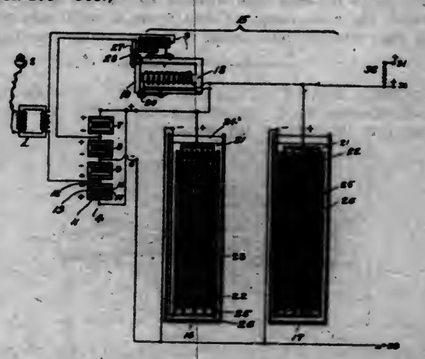


1. In a shoe including straps, an entrant fastening member comprising an oblong back plate fast at one end to one strap, forwardly directed lateral guide flanges upon the plate, a tongue comprising a forwardly directed shank portion integral with the plate between the flanges, a horizontal lip portion upon the shank, and a forwardly inclined free end, a face plate fast to the second strap adapted to abut against the forward edges of the flanges, a loop upon the back of the face plate engageable with the guide flanges adapted to receive the lip portion and bear against the shank portion.

1,753,919. COTTON PICKER. JAMES H. COOPER, Chicago, Ill. Filed Nov. 5, 1927. Serial No. 231,207. 9 Claims. (Cl. 56—32.)

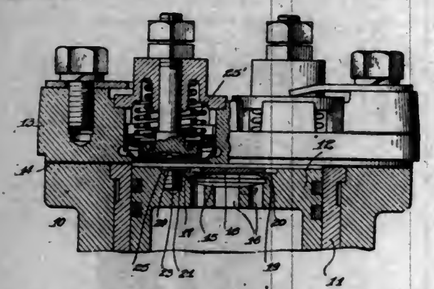
1. A picking element for a cotton picker head comprising a hollow cylindrical roller of soft rubber, and heads of yieldable rubber closing the ends of the roller.

1,753,920. RADIO POWER SUPPLY DEVICE. PHILIP E. EDELMAN, Chicago, Ill., assignor to Ephraim Banning, Chicago, Ill. Filed Jan. 26, 1927. Serial No. 163,734. 14 Claims. (Cl. 175—315.)



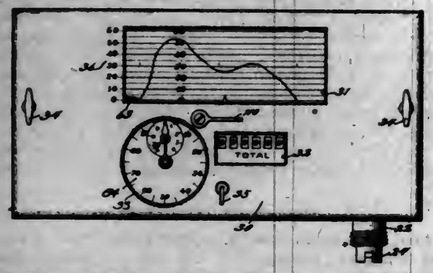
1. In apparatus of the kind set forth, an electrical device comprised of adjacent filming electrode surfaces exposed to cellucotton in which a conducting salt is absorbed and crystallized.

2. In apparatus of the character set forth, aluminum electrodes separated by a thin fabric of fibres saturated with sodium phosphate crystallized therein.



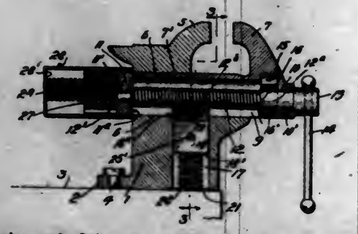
12. An electrical condenser consisting of, in combination, filming metallic sheet electrodes, a thin fibrous spacer sheet extending between and separating said electrodes, and an electric current conducting chemical compound containing a crystalline polarizing electrolyte supported by said spacer sheet and contacting with said electrodes, characterized by the fact that the thickness of said metallic sheet electrodes is proportioned with respect to the thinness of said fibrous spacer sheet to afford a thermal mass for said electrodes greater than the thermal mass of said conducting chemical compound supported by said spacer sheet.

1,753,921. RADIO POWER SUPPLY DEVICE. PHILIP E. EDELMAN, Chicago, Ill., assignor to Ephraim Banning, Chicago, Ill. Original application filed Jan. 27, 1927, Serial No. 163,734. Divided and this application filed Sept. 26, 1927. Serial No. 222,170. 5 Claims. (Cl. 175—363.)



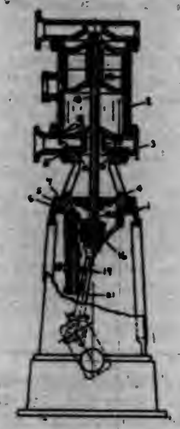
4. As a radio power supply unit the combination of a transformer, means to supply current thereto, a rectifier connected to said transformer, a filter circuit connected to said rectifier and including a load carrying choke coil, and a regulator for said transformer combined with and actuated by said choke coil whereby the output from said transformer is decreased when the load carried by said choke coil is decreased, thereby limiting voltage changes applied to said filter circuit when said load is varied.

1,753,922. COMPRESSOR VALVE. FREDERICK R. EBACH, Detroit, Mich., assignor to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed Dec. 16, 1927. Serial No. 240,409. 2 Claims. (Cl. 230—221.)



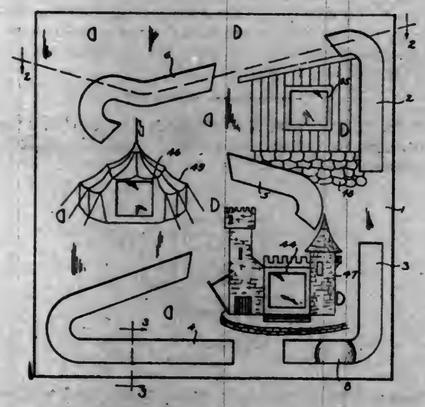
1. In a compressor, a piston provided with a valve port in the face thereof, a relatively movable disk adapted to close said port, and a plurality of screw threaded members secured to said piston in regularly spaced relation about said port and adapted to be engaged by said disk when said disk moves from said port.

1,753,923. SPEEDOGRAPH. FRANKLIN L. FELTY, Chicago, Ill.; Maude M. Felty administratrix of said Franklin L. Felty, deceased. Filed June 25, 1923. Serial No. 647,542. 6 Claims. (Cl. 284—1.)



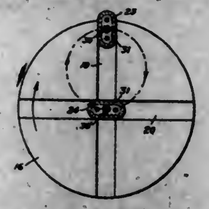
1. In combination with a recorder, a case therefor, a front for said case having a platform on which said recorder is disposed, a tape, a tape winding mechanism, and a latch for said tape winding mechanism adapted to prevent the attachment of said front to said case when said tape winding mechanism is in inoperable position.

1,753,924. SCREW-ACTUATED VISE. WILLIAM GORDON, Union, N. J. Filed Apr. 22, 1927. Serial No. 185,737. 3 Claims. (Cl. 81—36.)



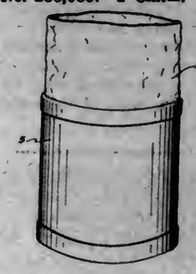
1. A vise embodying, in combination, a supporting body portion, jaw members, one of which is relatively stationary and the other movable relatively thereto, a screw connected with one of such jaw members and mounted thereon for rotary movement only, a sectional nut mounted for vertical movement only and having a connection with the other jaw member and provided with threads arranged to be operatively engaged with the threads of said screw, the threads of said screw and nut having complementary inclined sides arranged to permit a relative sliding movement in one direction, spring means for normally pressing the threads of said sectional nut into engagement with the threads of said screw, whereby direct manual pressure against the movable jaw will permit a clicking of the threads of the screw over those of the sectional nut to produce a quick movement of the movable jaw, means for manually disengaging the threads of said sectional nut and screw, and a spring normally cooperating with the first mentioned spring means to press the inclined threads of the screw into engagement with the inclined threads of the sectional nut and also operative upon manual disengagement of the nut to move the jaws into full open position.

1,753,925. STEAM ENGINE. WALTER B. GOSS, Erie, Pa., assignor to Spinner Engine Company, Erie, Pa., a Corporation of Pennsylvania. Filed Dec. 7, 1927. Serial No. 238,426. 2 Claims. (Cl. 121—194.)



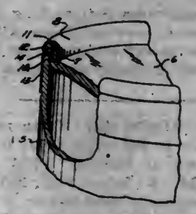
1. In an engine, the combination of a main frame; a cylinder; a connecting frame between the cylinder and main frame having a cylindrical cross head guiding surface at one side, an alining and centering seat for the cylinder, and a support which rests on a seat at the upper end of the main frame; a cross head on the guiding surface; and guide plates extending over the cross head.

1,753,926. TOY. HARRY W. HEPNER, Syracuse, N. Y. Filed Nov. 17, 1927. Serial No. 233,970. 13 Claims. (Cl. 46—37.)



1. In a toy, an enclosure having a picture opening, moving means within said enclosure moved by the movement of the enclosure, and disks moved by said moving means carrying pictures adapted to be displayed through the openings in said enclosure.

1,753,927. POWER-TRANSMISSION MECHANISM. RAY P. HIGBEE, Philadelphia, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 27, 1928. Serial No. 265,204. 2 Claims. (Cl. 74—14.)

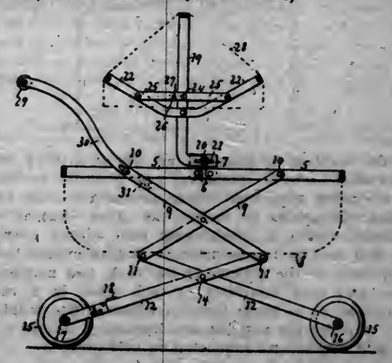


1. In a transmission mechanism, a pair of rotatable shafts arranged with confronting ends, a disk secured to the confronting end of one shaft and having a plurality of crossed grooves in its outer face, a plate secured to the confronting end of the other shaft and means for operatively connecting the plate and the disk comprising a plurality of elongated blocks slidably disposed in said grooves, each of said blocks being constructed of two parts the adjacent edges of which are channeled to form a ball raceway, and a plurality of rotatable balls disposed in the raceway to engage the side walls of the grooves.

1,753,928. CONTAINER. EDWIN F. HULBERT, Owen, Wis., assignor to The Master Package Corporation, Owen, Wis., a Corporation of Delaware. Filed Feb. 17, 1928. Serial No. 255,085. 1 Claim. (Cl. 229—5.5.)

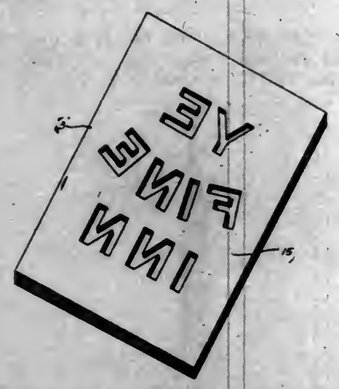
The combination with a shipping drum having fibre siding and a reinforcing metal mouth-band extending over the top edge of said siding, of a tube of flexible material crimped to the mouth of the drum by said metal band, said tube providing an extensible filling mouth and a protective covering for the contents of the drum.

1,753,929. REENFORCED CONTAINER. EDWIN F. HULBERT, Owen, Wis., assignor to The Master Package Corporation, Owen, Wis., a Corporation of Delaware. Filed Feb. 17, 1928. Serial No. 255,086. 5 Claims. (Cl. 229—5.7.)



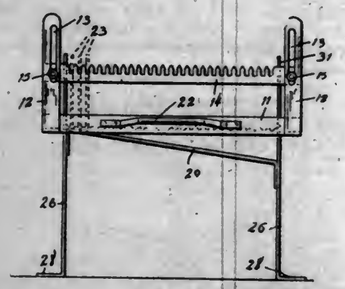
1. In a container, the combination with the head and fibre siding, of a reenforcing metal band associated with said head and siding, and a reenforcing metal band for the outer side of the siding having interlocking rolled, crimped engagement with said first-named band.

1,753,930. APPARATUS FOR PUMPING DEEP WELLS. CHARLES JACOBSEN, Tulsa, Okla. Filed July 5, 1928. Serial No. 290,512. 1 Claim. (Cl. 103—5.)



Apparatus for pumping deep wells including in combination with well casing, a liner in said casing and extending therefrom into the well hole, a packer between the liner and the casing, tubing in the casing resting on the liner and having ports above the packer, a standing valve in the liner, a plunger in the barrel above the standing valve, rods connected with the plunger and extended through the tubing, and means for delivering pressure medium to the tubing through the casing and said ports, the tubing having auxiliary ports below said first-named ports for admitting fluid from the barrel to the casing below said first-named ports.

1,753,931. COLLAPSIBLE BABY CARRIAGE. EDWARD F. LEWIS, Brooklyn, N. Y. Filed Feb. 1, 1928. Serial No. 251,091. 5 Claims. (Cl. 280—41.)

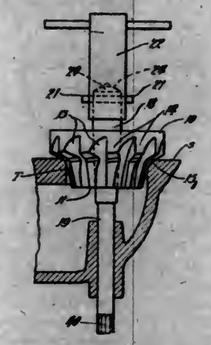


1. In a collapsible baby carriage the combination with a pair of lugs each having a shoulder, of a pair of bowed rail members having the ends thereof pivoted to the lugs and made to impinge on the shoulders so as to limit the opening movement of the rails, wheel carrying lazy-tong leg members connected to the rails, the leg members being adapted to be folded to position one wheel in line with the other, and a hood frame including arms having elbow shaped lower portions pivoted to the lugs whereby the hood frame can be folded parallel with and substantially within the same height as the rails.

1,753,932. ART OF PRINTING. WILLIAM LOSKE, Brooklyn, N. Y. Filed Aug. 20, 1926. Serial No. 130,372. 2 Claims. (Cl. 101—401.1.)

2. The method of manufacturing printing plates which consists in providing a flat surface, arranging a loose type layout on said surface, surrounding the layout with a frame the height of the printing plate desired, pouring a plastic composition over the type, securing a rigid backing member to the composition and finally removing the type after the composition has set.

1,753,933. METHOD AND MEANS FOR UNLOADING ARTICLE CARRIERS. HENRY W. LORMOR, Cleveland Heights, Ohio, assignor to Willard Storage Battery Company, Cleveland, Ohio, a Corporation of West Virginia. Filed Feb. 2, 1929. Serial No. 337,108. 7 Claims. (Cl. 214—1.1.)



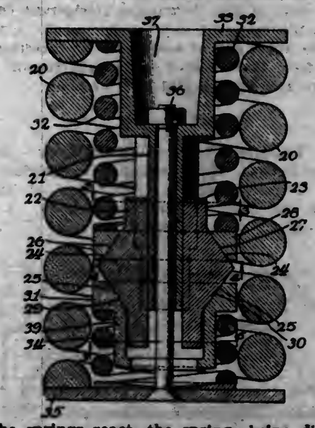
1. The method of transferring spaced articles from a carrier element to an unloading rack element, one of said elements being open from top to bottom and large enough in plan dimensions to enable the other element to be telescoped within it, positioning said carrier over said rack, said rack having an article engaging surface inclined transversely to the articles in the rack, and moving said carrier and rack relatively to each other in a vertical direction so as to cause them to telescope one within the other, whereby the articles are disengaged one at a time from said carrier and supported on said rack.

1,753,934. WINDSHIELD SOLUTION FEEDER. AMBROSE P. LUNNEY and FREDERICK L. PEART, Denver, Colo. Filed June 3, 1929. Serial No. 368,172. 5 Claims. (Cl. 15—251.)

1. A device for supplying liquid to an automobile windshield comprising: a horizontally disposed container; means for supporting said container above said windshield; a discharge spout extending from said container over said windshield; a valve arranged to control the flow of solution through said spout; said supporting means comprising: a U-shaped bracket having downwardly depending legs provided with openings and projections formed on said container and adapted to enter said openings.

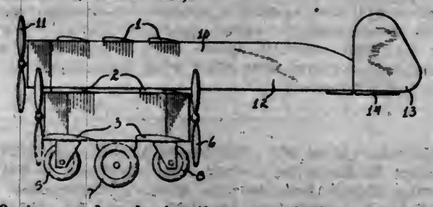
1,753,935. CUTTER. OLIVER M. MAISCH, Chicago, Ill. Filed Apr. 20, 1927. Serial No. 185,086. 1 Claim. (Cl. 90—12.5.)

A toothed cutter for refacing valve seats, the face containing the cutting edges of each tooth lying in a radial plane relative to the axis of rotation of the cutter, each tooth being uniformly relieved rearwardly of its cutting edges to produce faces each of which is uniform in width throughout its length and forms a helical band concentric with the axis of rotation of the cutter, each tooth comprising an upper part and a seat-engaging part, the cutting edge of the seat-engaging part being at an angle and of a width corresponding with the angularity and width of the seat to be refaced, and the cutting edge of the upper part being inclined to the axis of rotation of the cutter at an angle greater than that of the cutting edge of the seat-engaging part.



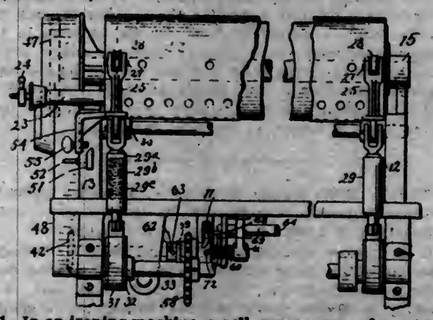
1,753,936. BLOWER FOR POWDERED FUEL. MORTIMER J. P. MOORE, Ridley Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 17, 1926. Serial No. 116,626. 3 Claims. (Cl. 302—37.)

1. In a blower apparatus for handling pulverulent material, a rotor element having blades with indentations therein on the side thereof subject to the abrasive action of said material, said indentations having undercut sides



1,753,937. SHOCK ABSORBER. CHARLES J. NASH, Chicago, Ill., assignor to Universal Draft Gear Attachment Co., a Corporation of Illinois. Filed Nov. 22, 1928. Serial No. 321,054. 8 Claims. (Cl. 267—9.)

2. In a shock absorber in combination, a central friction bar, friction shoes engageable with the bar and each having oppositely inclined wedge faces, wedge elements cooperating with the wedge faces of the shoes, means resisting outward lateral movement of the wedge elements, springs bearing upon both sets of wedge elements, means against



which the springs react, the springs being differentiated in strength, and means for positively arresting the wedge elements cooperating with the weaker spring.

1,753,938. AEROPLANE. CHARLES PETRUNIN, Toledo, Ohio. Filed Nov. 28, 1927. Serial No. 236,097. 5 Claims. (Cl. 244—14.)

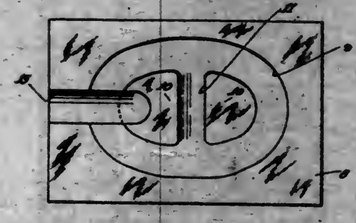
2. An aeroplane having three sets of wings arranged in vertically spaced relation, the middle wing being considerably longer than the remainer and the top wing being longer than the lower wing, and each wing being composed of horizontally spaced relatively narrow plates, two cabins disposed beneath the central wing and spaced from each other longitudinally of said central wing, and a cabin between said central wing and top wing positioned intermediate of said first cabin.

1,753,939. IRONING MACHINE. JOHN PRACHAR, Cleveland, Ohio, assignor by mesne assignments, to Central National Bank of Cleveland, trustee, Cleveland, Ohio, a Corporation of National Banking Laws of America. Filed Jan. 18, 1924. Serial No. 686,948. 3 Claims. (Cl. 68—9.)

1. In an ironing machine, a roll, power means for actuating the roll, a shoe movable toward and away from the roll, a pair of pivotally supported arms connected to the shoe adjacent opposite ends thereof, a shaft having eccentric means thereon, and independent yieldable members connecting the same to the arms.

1,753,940. ICE BLOCK AND MOLD FOR FORMING SAME. SADIE B. REED, New York, N. Y. Filed Jan. 21, 1929. Serial No. 333,810. 8 Claims. (Cl. 62—111.)

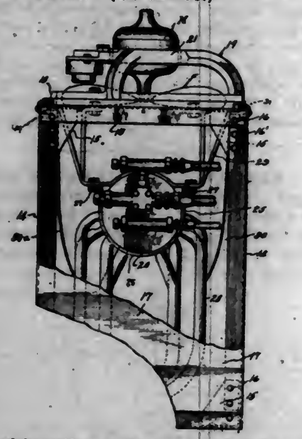
5. A mold for forming ice blocks having a drain opening, said mold having an upwardly convex bottom section and a member extending upwardly from said bottom section.



8. A solid refrigerant adapted for the service of food, provided with a drain opening, and having a recessed portion for holding the food, said drain opening communicating with said recessed portion for permitting water which collects in said recessed portion to drain off.

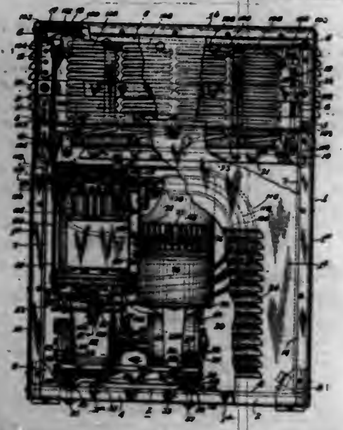
1,753,941. MANUFACTURE OF CHAINS. JAMES REID, Watertown, ALBERT M. LEAHY, Somerville, and CARLTON G. LUTTS, Salem, Mass.; Margaret Swan Reid executrix of said James Reid, deceased. Filed Aug. 10, 1926. Serial No. 128,448. 3 Claims. (Cl. 59—33.)

1. The process of manufacturing chain links which consists in providing complementary link sections, one having a reduced portion and the other a heated recessed portion and then uniting said complementary reduced and recessed link portions by contracting the heated plastic metal of the recessed portion into locking egnagement with the inclosed cold metal of the reduced portion by a single die pressing operation serving to uniformly compress the entire surface of said recessed link portion and thereby provide a completed link of uniform thickness from end to end, with a rounded outer contour entirely devoid of protuberances over the joint between said link sections.



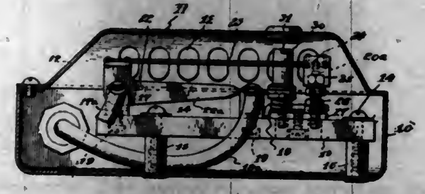
1,753,942. DIE FOR THE MANUFACTURE OF CHAIN. JAMES REID, deceased, Watertown, Mass., by Margaret S. Reid, administratix, Watertown, Mass., ALBERT M. LEAHY, Somerville, and CARLTON G. LUTTS, Salem, Mass. Original application filed Aug. 10, 1926, Serial No. 128,448. Divided and this application filed Sept. 21, 1928. Serial No. 307,510. 2 Claims. (Cl. 59—33.)

1. A die for the manufacture of two-part stud chain links comprising a block having a main elliptical depres-



sion with a secondary depression extending across the minor axis of the main depression, for enclosing, receiving and supporting mating portions of an open link section and a closed stud link section conforming to said depression, one end of said die providing a third depression extending at right angles to the main depression along its major axis for receiving a portion of a completed stud chain link embracing the open link section in said main die depression.

1,753,943. REFRIGERATING APPARATUS. JOHN R. REPLOGLE, Detroit, Mich., assignor, by mesne assignments, to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed Sept. 15, 1926. Serial No. 135,490. 4 Claims. (Cl. 62—95.)



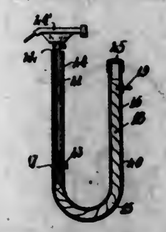
1. In a refrigerating apparatus, a heat transfer structure comprising a housing provided with air inlet and outlet openings, a vaporiser secured within said housing and including a plurality of depending pipe loops, mechanical means for circulating air through said housing, and converging air deflectors positioned on opposite sides of said housing adapted to constrict the air passage therethrough adjacent said pipe loops.

1,753,944. AIR-COOLED REFRIGERATION APPARATUS. JOHN R. REPLOGLE, Detroit, Mich., assignor, by mesne assignments, to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed Oct. 26, 1926. Serial No. 144,249. 6 Claims. (Cl. 62—115.)

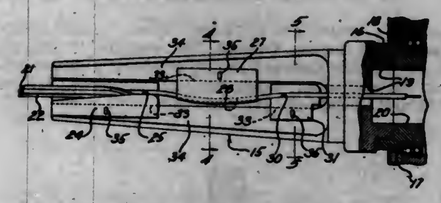
1. In refrigeration apparatus, a casing, a partition therein dividing said casing into upper and lower compartments, an aperture in said partition, a motor having a vertically arranged shaft and a compressor geared to the lower end of said shaft, all located in the lower of said compartments; coils of pipe forming a refrigerant condenser arranged in the upper of said compartments, a fan connected to the upper end of said shaft for directing a current of air from the lower of said compartments through said aperture and around said coils of pipe.

1,753,945. THERMOSTAT CONTROLLER. JOHN R. REPLOGLE, Detroit, Mich., assignor to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed Aug. 22, 1927. Serial No. 214,543. 3 Claims. (Cl. 200—138.)

1. In an automatically actuated switch mechanism, a stationary contact member, a heat responsive member having one end rigidly secured, a contact member carried by the free end of said heat responsive member, said contact members being connected with a source of electrical energy, magnetic means for assisting the effect of heat on said heat responsive member for causing engagement of said contact members, said heat responsive member and said magnetic means being independently adjustable to regulate their effect upon the engagement of said contact members.



1,753,946. LID FOR REFRIGERATING CABINETS. JOHN R. REPLOGLE, Detroit, Mich., assignor to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed Aug. 25, 1927. Serial No. 215,311. 1 Claim. (Cl. 220—29.)

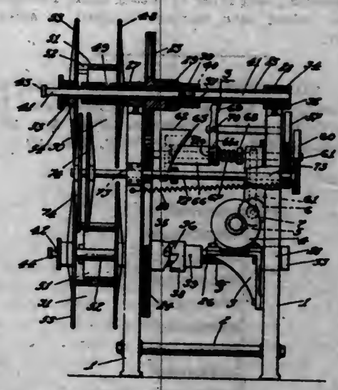


In a refrigerated food storage cabinet having an exterior wall and an interior food storage chamber each of which is provided with an opening to permit access to the interior of the food chamber, a cover structure comprising a primary cover for the opening through the exterior wall, a secondary cover for the opening in the food compartment, said primary and secondary covers being hinged to the exterior wall and interior food storage chamber respectively, and a link pivotally connected to both the primary and secondary covers whereby both covers move in unison in the same direction.

1,753,947. TWO-SIDED WINDOW-CLEANING DEVICE. SIMON SCHAPIRO, New York, N. Y. Filed Oct. 17, 1928. Serial No. 312,965. 3 Claims. (Cl. 15—126.)

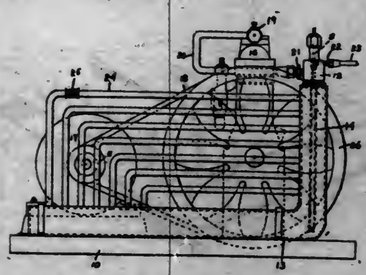
1. A window cleaning device, comprising a U-shaped tube having an inner and an outer arm for being positioned respectively on the inner and outer side of a window, a flexible cable slidable within the U-shaped tube and of a length equal to the U-bend and the inner arm, a window contact member above the free end of the outer arm and connected by a rod with the end of the cable directed towards the outer arm, the said inner arm being formed with longitudinal parallel slots of different lengths connected with each other by transverse slots, and a handle for moving the cable extending thru one of said slots and movable into any of the slots for limiting the amount of motion of the cable.

1,753,948. METHOD OF AND MECHANISM FOR WORKING FIBROUS MATERIAL. JOHN NILSEN SELVIG, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 9, 1929. Serial No. 331,836. 14 Claims. (Cl. 92—41.)



1. In a mechanism for working fibrous material upon a moving core, a carrier, and a member supported thereby for deflecting the moving core from its normal line of travel.

1,753,949. COIN-CONTROLLED CLOCK. WILLIS D. SHAFER, Chicago, Ill., assignor to Shafer-Halligan-Compton, Inc., Chicago, Ill., a Corporation of Illinois. Filed July 5, 1927. Serial No. 203,549. 7 Claims. (Cl. 194—55.)



1. A coin controlled clock having a casing provided with a storage receptacle for the coins, clock mechanism, a lock for preventing the same from being wound, said lock being adapted to be released when pressed by a coin, a hand controlled temporary receptacle for temporarily holding a coin in position to press laterally upon the lock, and a stationary ejector projecting into the temporary receptacle for ejecting the coin therefrom when said temporary receptacle returns to non-acting position.

1,753,950. TAKE-UP MACHINE. FRANK H. SLEEPER, Worcester, and WILLIAM H. BLOUNT, West Brookfield, Mass., assignors to Sleeper & Hartley, Inc., Worcester, Mass., a Corporation of Massachusetts. Filed May 20, 1926. Serial No. 110,531. 7 Claims. (Cl. 242—158.)

1. In a machine of the class described, a traversing mechanism comprising in combination a rotating driving member, a pair of take-up reels adapted to be selectively driven by said rotating member, a cam device, a traversing member common to both of said reels adapted to receive a reciprocatory motion from said cam device, and means for connecting said cam device to said driving member at the will of the operator.

1,753,951. CONDENSER FOR REFRIGERATING APPARATUS. CHARLES C. SPREEN, Detroit, Mich., assignor to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed June 4, 1927. Serial No. 196,409. 4 Claims. (Cl. 257—39.)

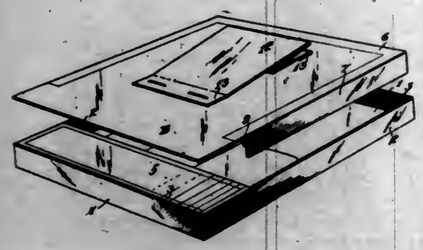
1. A condenser, for refrigerating apparatus, comprising a manifold having a base portion and an upstanding portion, tube sections extending intermediate said manifold portions, and an outlet conduit extending into said upstanding manifold portion.

1,753,952. REFRIGERATOR DOOR. CHARLES C. SPREEN, Detroit, Mich., assignor to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed June 8, 1927. Serial No. 197,248. 3 Claims. (Cl. 20—35.)

1. A refrigerator door comprising a plurality of layers of plywood, a layer of heat insulating material interposed

CARNEGIE LIBRARY OF ATLANTA

between certain of said layers, and a layer of relatively soft rubber completely enclosing said plywood and in-

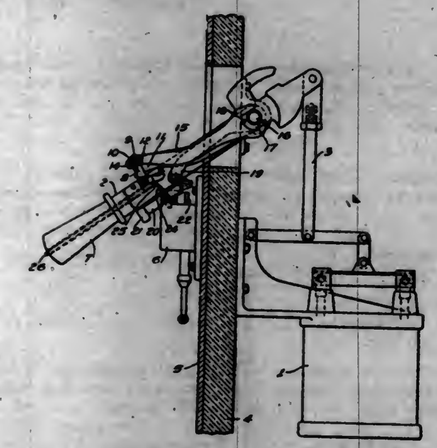


sulating material, said layer of rubber being provided with an integral raised bead member adapted to serve as a door gasket.

1,753,953. CONDENSER. CHARLES C. SPREEN, Detroit Mich., assignor to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed Aug. 31, 1927. Serial No. 216,594. 4 Claims. (Cl. 257—39.)

1. In a heat exchange apparatus for a mechanical refrigerating system, a condenser, and means for causing cooling air to follow a sinuous path of varying cross-sectional area disposed in heat transfer relation to said condenser.

1,753,954. PACKING AND DISPLAY BOX. STEPHEN B. TOWNLEY, Newark, PHILIP B. TOWNLEY, Rumson, and WILLIAM LAING, Montclair, N. J., assignors to Paas Dye Company, a Corporation of New Jersey. Filed Oct. 8, 1928. Serial No. 311,030. 1 Claim. (Cl. 206—44.)



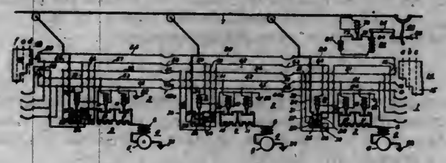
A packing and display box comprising two complemental telescoping sections each serving as a cover for the other when in telescoping relation and each having means adjacent one end thereof to support articles to be packed and displayed and having a space at the other end to receive said means and the articles supported thereby on the other section, one of said sections having a bottom, side flanges and end flanges and the other having a bottom, one end flange and side flanges each of which terminates short of the end of the bottom opposite said article-supporting means to provide a clearance for the article-supporting means of the first section when the sections are telescoped together.

1,753,955. CONDENSER. CHARLES B. TULEY, Glen Olden, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 27, 1928. Serial No. 308,750. 3 Claims. (Cl. 257—43.)

1. The combination with a tubular heat exchanger comprising a shell, a nest of tubes therein, inlet and discharge water boxes for the tubes, and partitions arranged in the water boxes to provide independent circulation systems for passing circulating media through the tubes in parallel, of means for passing circulating media through the independent circulating systems in series, and a common discharge connection on the inlet water box arranged to convey circulating media from either of the independent circulating systems.

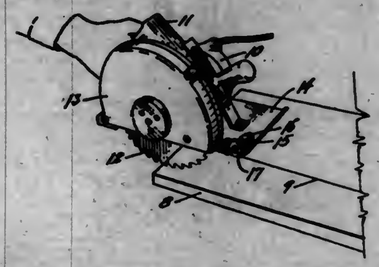
1,753,956. CIRCUIT-INTERRUPTING MECHANISM. ALFRED T. TWISS, Trafford, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 27, 1927. Serial No. 163,913. 7 Claims. (Cl. 200—89.)

1. The combination with a circuit interrupter supported on the rear of a panel, of a tripping mechanism mounted on a cover-plate secured to the front of the panel, an operating member comprising separable elements, a latching means for uniting the separable elements, and a lever system connected to the latching means and to the tripping mechanism.



1,753,957. DISTRIBUTING DEVICE. WALTER BAILEY CHAFFIN WASHBURN, Canajoharie, N. Y., assignor to Beech-Nut Packing Company, Canajoharie, N. Y., a Corporation of New York. Filed Feb. 1, 1928. Serial No. 251,204. 5 Claims. (Cl. 312—42.)

1. A sheet metal distributing device, comprising a holder composed of a vertical chute, a forwardly and downwardly inclined portion extending from the rear wall of said chute and spaced away from the side walls of said

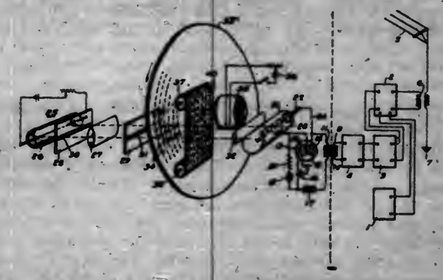


chute and terminating in an upwardly projecting abutment, and legs downwardly extending from the sides of said inclined portion, all of said parts being integral.

1,753,958. CONTROL SYSTEM. DONALD C. WEST, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 7, 1928. Serial No. 290,995. 11 Claims. (Cl. 172—179.)

1. In a control system having a rate of change circuit controlling device for a plurality of motor vehicles, each provided with a propelling motor, in combination, a source of power supply, a controller having a plurality of controlling positions, and means for connecting said motors to said power supply in a predetermined sequence in response to the actuations of said controller to one of said positions.

1,753,959. GUIDE WHEEL FOR WOODWORKING TOOLS. ALFRED WIKSTROM, Albuquerque, N. Mex. Filed Nov. 7, 1927. Serial No. 231,498. 3 Claims. (Cl. 143—157.)

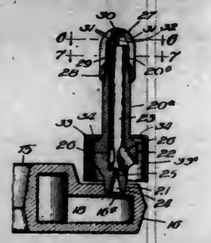


3. Means for guiding a power driven hand saw having a base shoe adapted to rest upon the work comprising: a wheel and means for securing said wheel to said base shoe so that it will project therebelow and travel on said work immediately ahead of said saw.

1,753,960. MARKER FOR PLANTS, FLOWERS, AND THE LIKE. FRANK W. WOLFF, Parnassus, Pa. Filed Nov. 22, 1928. Serial No. 321,249. 4 Claims. (Cl. 40—19.)

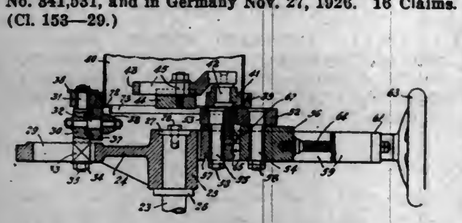
1. A marker of the character described comprising a stake member formed with a receptacle-receiving portion, and a closed label receptacle removably and slidably mounted in the receptacle-receiving portion of the stake member, said receiving portion including yielding elements for frictionally engaging the receptacle.

1,753,961. SIGNALING SYSTEM. VLADIMIR K. ZWORYKIN, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 19, 1927. Serial No. 234,371. 10 Claims. (Cl. 250—8.)



1. The method of signaling which comprises generating a carrier-wave, simultaneously impressing on said wave a plurality of modulating frequencies representative of minor portions of symbols adjacent to one another in a message to be transmitted, radiating said modulated wave, receiving said wave and producing therefrom a perceptible indication of said message.

1,753,962. GAS BURNER. SIMON J. LONERGAN, La Porte, Ind., assignor to Bastian-Morley Company, La Porte, Ind., a Corporation of Indiana. Filed Apr. 5, 1928. Serial No. 267,559. 44 Claims. (Cl. 158—99.)

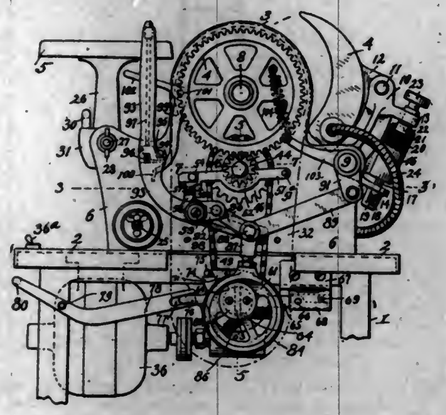


34. In a gas burner, means including a vertical mixing tube for forming a combustible mixture, and means mounted upon said tube for controlling the discharge of said preformed mixture, said latter means comprising a cap so shaped and adapted to fit over the discharge end of said tube in spaced relation thereto that a mixture-receiving chamber of substantially inverted U-shaped in cross section is provided, said cap having narrow, radial slots ex-

tending lengthwise thereof and terminating at its closed end portion, said slots being of such length that they extend in part parallel and adjacent to the side of the tube wall and in part above the end of the tube so that a part thereof is in direct line flow with the discharge end of said tube, and said slots being of such size that the total

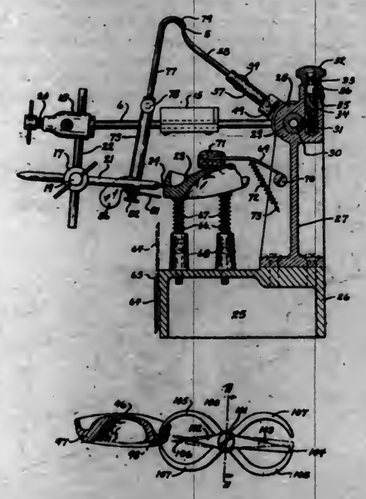
area of that portion thereof in direct communication with the end of said tube is such that under certain gas pressure conditions the mixture discharged from the tube is delivered from said chamber through the direct flow slot portions as fast as it is fed into said portion whereby the mixture will burn, when ignited, at the surface only of said then-active and direct flow slot portions.

1,753,963. METHOD OF AND APPARATUS FOR FLANGING CONTAINERS. ALFONS MAUSER, deceased, Cologne-Marienburg, Germany, by Ferdinand Braun, Cologne, Germany, and RUDOLF EITH, Cologne-Ehrenfeld, Germany, executors. Filed Feb. 20, 1929, Serial No. 341,531, and in Germany Nov. 27, 1926. 16 Claims. (Cl. 153—29.)



1. In an apparatus of the kind described, the combination with a support, of mechanism for supporting a metal container, an abutment member adapted to engage one face of said container near one edge thereof, a movable pressure device for exerting pressure against the other face of said container from its edge to a point on the container adjacent to said abutment and situated between said edge and said abutment, means for producing relative rotation between said container and said pressure device, and means for holding the portion of the container adjacent said edge parallel to the container axis.

14. The method of flanging cylindrical metal containers which comprises holding a container against radial movement at one face thereof at a point spaced from the edge thereof, exerting pressure by means of a pressure device against the opposite face of said container along a line from its edge to a point on the container adjacent said first named point disposed between said edge and said first named point, producing relative rotation between the said pressure device and the container, and simultaneously holding the end portion of the container adjacent to such edge parallel to the container axis.



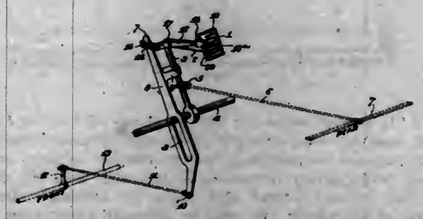
1,753,964. IRONING MACHINE. JOHN PRACHAR, Cleveland, Ohio, assignor, by mesne assignments, to Central National Bank of Cleveland, trustee, Cleveland, Ohio, a Corporation of National Banking Laws of America. Filed Jan. 16, 1926. Serial No. 81,614. 17 Claims. (Cl. 68—9.)

1. In an ironing machine, an ironing roll, a rock shaft extending longitudinally of the roll, a shoe carried by said shaft and pivotally supported adjacent its opposite ends on said shaft, a pair of arms rigidly secured to said shaft and yieldably connected to said shoe, and means for actuating said rock shaft to move the shoe into and out of engagement with the roll.

7. An ironing machine comprising a supporting frame, a roll, a shoe cooperating with the roll, a rock shaft connected with the shoe for actuating the same, a toggle having one of its links releasably connected to the frame and the other connected to said rock shaft for actuating the same, means for driving the roll, and a manually engaged and automatically released mechanism for actuating said toggle from said driving means to shift the shoe into or out of shoe engaging position.

1,753,965. APPARATUS AND METHOD OF MAKING DENTURES. EDWARD D. RALPH, Floral Park, Long Island, N. Y. Filed Feb. 26, 1927. Serial No. 171,225. 18 Claims. (Cl. 32—1.)

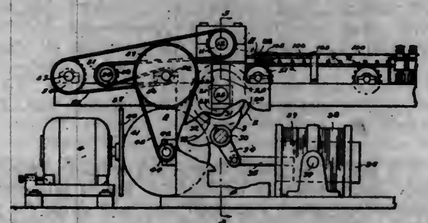
2. The method of manufacturing artificial dentures, consisting in placing the bite wax in the patient's mouth, having him bite on said wax while the wax is in a certain plane with relation to a point corresponding to the center of the curve of Spee, removing the bite wax from the patient's mouth and forming the curve of Spee in said bite wax by means of a knife movable universally about said center of the curve of Spee while the bite wax is held in the same plane with relation to the center of the curve of Spee as when in the mouth of the patient.



3. An apparatus for the manufacture of artificial dentures, consisting of a base, an adjustable arm supported by the base, a portion of the arm being adapted to be adjusted to correspond with the center of the curve of Spee of any particular patient, and a shaping tool adapted to be controlled by the portion of the arm that corresponds with the center of the curve of Spee of the patient to permit the shaping-tool to be moved universally about said center.

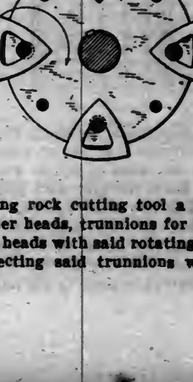
7. A new article of manufacture for assisting in determining the curve of Spee consisting in a combined gauge and carving tool having an adjustable arm, one end of which is adapted to be pivoted at a point corresponding to the center of the curve of Spee.

9. In an apparatus for the manufacture of artificial dentures consisting of a base, and a plurality of plungers forming an adjustable bed or support for a bite wax.



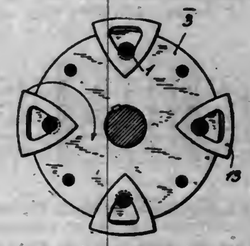
18. A new article of manufacture for indicating the variation to be made in the curve of Spee for irregularity or malformation of the jaw of the patient, consisting of two pivoted arms, and a third arm pivoted on the same pivot as the two arms, one end of the third arm being secured to one of the other arms, the other end being a pointer.

1,753,966. BRAKE-CONTROL MECHANISM. EARL J. W. RAGSDALE, Norristown, Pa., assignor to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 20, 1926. Serial No. 96,118. 4 Claims. (Cl. 188—204.)



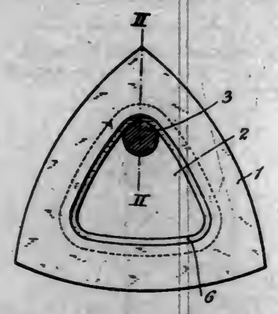
1. The combination with one brake mechanism and the usual lever and pedal for actuating the same, of a second brake mechanism having an actuating lever, said two levers having a common fulcrum, means whereby the second lever is operated by said pedal, and means carried by the said pedal and first lever for shifting the second lever relative to the fulcrum.

1,753,967. VENEER TRIMMER. THOMAS ROBINSON, Everett, Wash., assignor to The Coe Manufacturing Company, Painesville, Ohio, a Corporation of Ohio. Filed Nov. 24, 1925. Serial No. 71,092. 19 Claims. (Cl. 164—68.)



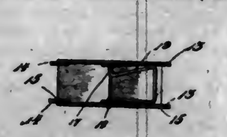
1. In a veneer jointer, a continuously operating feed mechanism, an intermittently operable jointing mechanism, an electrically operated jointing mechanism control, and a timing mechanism operating in unison of rate with the feed mechanism and having jointing mechanism control operating members optionally movable into working position and spaced at unit intervals.

1,753,968. GAS-CONTROLLING DEVICE. RALPH R. ROOT, Lakewood, Ohio. Filed Feb. 8, 1926. Serial No. 86,775. 2 Claims. (Cl. 236—32.)



1. An apparatus adapted to be used with a water heater for controlling the flow of gas therethrough comprising an elbow-like casing adapted to have secured thereto and at right angles to each other a gas conduit and a conduit leading to said heater, said casing having a centrally disposed opening therethrough arranged to extend transversely of both of said conduits, a plug arranged in said opening and recessed adjacent one end, a passage in said casing and said plug connection the conduits through the recess in said plug, a valve in said casing adapted to close said recess, a second casing secured to said first named casing adjacent to one end of the opening therein, said second named casing being divided into two chambers by a flexible diaphragm connected to said valve, a third casing adapted to contain a gas and to be secured upon the device containing the medium to be heated and a tube connecting said second named and third named casings whereby when the gas contained within said last named casing becomes heated and expands the flexible diaphragm in said second named casing will be moved to actuate the valve to close the recess in the plug.

1,753,969. ROCK-CUTTING TOOL. OLE ROLFSEN, Knivso, near Halden, Norway. Filed July 26, 1929. Serial No. 381,286. 3 Claims. (Cl. 125—5.)

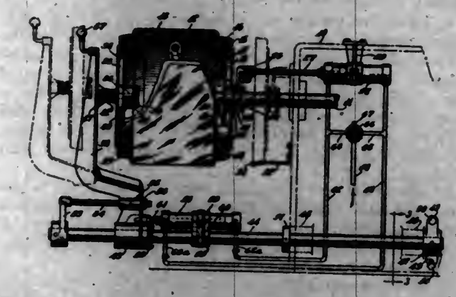


1. In a rotating rock cutting tool a rotating frame, a number of hammer heads, trunnions for rotatably connecting said hammer heads with said rotating frame and elastic means for connecting said trunnions with said rotating frame.

1,753,970. HAMMER HEAD FOR ROTATING ROCK-CUTTING TOOLS. OLE ROLFSEN, Knivsø, near Halden, Norway. Filed July 26, 1929. Serial No. 381,287. 4 Claims. (Cl. 125—5.)

1. In rotating rock cutting tools a hammer head provided with a hole for supporting the hammer head with loose play on a pin or trunnion, the interior surface of said hole being provided with a rubber lining the inner surface of which bears directly against the pin or trunnion on which the hammer head is supported.

1,753,971. BRACELET CHAIN. WILFRED J. ROY, East Orange, N. J., assignor to Gemex Company, Newark, N. J., a Corporation of New Jersey. Filed June 14, 1928. Serial No. 285,378. 3 Claims. (Cl. 59—80.)

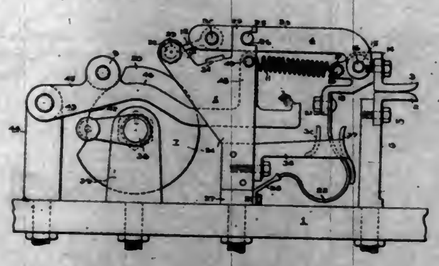


1. A chain comprising a series of units connected together, each unit having spaced substantially parallel side walls, the side walls of one unit having laterally displaced portions at one end thereof, the laterally displaced portions of one unit and the side walls of the adjacent unit being in contacting parallel relation and having registering openings therethrough, and resilient elements having folded ends forming fingers projecting into said registering openings and detachably connecting the units together.

1,753,972. CENTRIFUGAL APPARATUS. JOSEPH MARTIN SCHUTZ, Chicago, Ill., assignor, by mesne assignments, to Centrifix Corporation, Cleveland, Ohio, a Corporation of Ohio. Original application filed Feb. 5, 1924, Serial No. 690,861, Patent No. 1,539,435. Divided and this application filed Mar. 3, 1925. Serial No. 12,899. 2 Claims. (Cl. 183—87.)

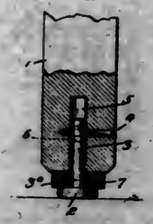
2. The herein described multiply tuyèred ring, comprising a circumferential series of angularly positioned blades all having the same direction, abruptly shouldered interlock spacing lands integral with each blade and successively interlocked one with another, serving to space the blades one from the other and thus forming a corresponding circumferential series of tuyères, and separable fastenings positioned intermediate the ends of the tuyères and serving to fasten each blade to the next blade in series.

1,753,973. TIRE-BUILDING APPARATUS. FRANK SLUSHER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Feb. 6, 1929. Serial No. 337,910. 20 Claims. (Cl. 154—10.)



1. Tire-building apparatus comprising a rotatable tire-building form, a bead-guiding ring normally supported at a position offset from the axis thereof, and means for moving said ring from such position into association with said form whereby it is rotated by said form.

1,753,974. PROGRESSIVE DRY KILN AND METHOD OF DRYING LUMBER. JOHN B. WELCH, New Orleans, La. Filed Oct. 30, 1925. Serial No. 65,763. 9 Claims. (Cl. 34—46.)



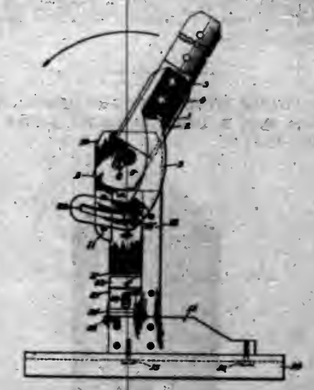
1. In a progressive dry kiln, an elongated heating chamber, heating coils arranged to provide different longitudinally spaced intensities of heat in different sections of the kiln, progressively increasing in intensity from the green to the dry end thereof, and means for causing recirculation of the air in the kiln in different paths from the different sections to the dry end of the kiln.

1,753,975. CONTROL APPARATUS. JOHN T. WELSH, Westfield, N. J. Filed Mar. 2, 1927. Serial No. 172,040 10 Claims. (Cl. 200—67.)

1. A switch comprising cooperating contact members, a single spring pivotally connected to one of said contact members and means associated with said spring for providing a snap opening and closing movement of said contact members through the action of said spring, and for also providing rolling action between said contact members.

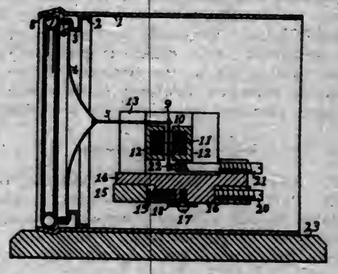
1,753,976. GLIDE. CLARENCE WATSON WHITE, North Bennington, Vt., assignor to H. C. White Company, North Bennington, Vt., a Corporation of Vermont. Filed Sept. 7, 1929. Serial No. 390,928. 4 Claims. (Cl. 16—42.)

1. A tip or glide for movable furniture, comprising the combination with a member having a passage therein, of a glide having a shank loosely entering said passage, an elastic cushion between the glide and the said member and carried by the glide, and means for preventing the glide shank from dropping out of the said passage when the furniture is lifted off the floor.



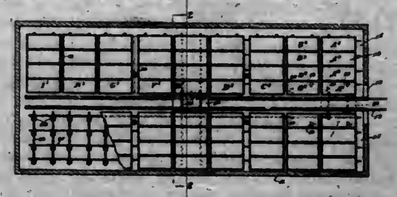
1,753,977. SWITCH. ROBERT K. WINNING, Wauwatosa, Wis., assignor to Clum Manufacturing Company, Milwaukee, Wis. Filed Dec. 5, 1925. Serial No. 73,466. 41 Claims. (Cl. 200—11.)

1. In a device of the character described, the combination with a terminal head of dielectric material and a ring contactor oscillatory with respect thereto and provided with axially embossed segmental contact portions, of a plurality of strip terminals extending through said head in arcuate series and having contact portions disposed flat against said head, and a di-electric support connected with said head and projecting therefrom to a distance substantially equal to the thickness of said contact portions of said terminals and disposed in the arc of said series of terminals and between two of said terminals.



1,753,978. TOY AXLE STAMPING AND CUTTING MACHINE. CHARLES A. WOOD, Clay Center, Kans. Filed Apr. 10, 1929. Serial No. 354,085. 1 Claim. (Cl. 29—34.)

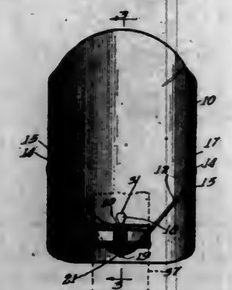
In a mechanism for forming axles for wheeled toys, to trim and flatten the end of the axle, a stamping element comprising two jaws, one stationary and one movable and the movable jaw being separately slidable from the stationary jaw and being propelled toward the stationary jaw by a cam surface on a lever and being retracted from the stationary jaw by reason of a laterally extending pin engaging in an arcuated slot in an arm connected to the lever, and a shearing member propelled past the edge of the stationary jaw in the manner of a cutter and the propulsion of the shearing member being actuated by another cam surface on the lever and being retracted by reason of a laterally extending pin engaging in an arcuated slot in



an arm affixed to the lever and the actuating cam mechanism timed to propel the flattening and shearing members in the same movement of the lever.

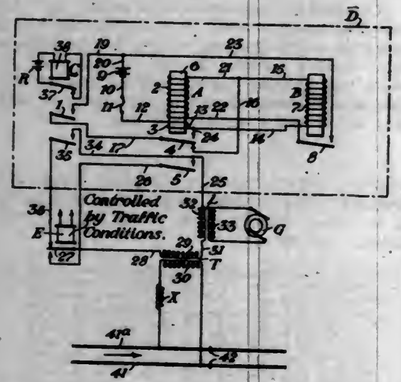
1,753,979. ACOUSTIC DIAPHRAGM AND LOUD-SPEAKER COMBINATION. NATHANIEL BALDWIN, East Mill Creek, Utah. Filed Feb. 10, 1926. Serial No. 87,362. 2 Claims. (Cl. 179—115.)

1. A diaphragm having a cuspidal middle portion and a re-enforcing rim, a housing for said diaphragm, an annular seat for said diaphragm secured to said housing, an annular inclined surface in said housing, and an expansible ring pressing against said inclined surface and against said rim and adapted to put tension on said diaphragm by pressing it against said seat.



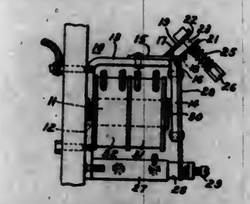
1,753,980. MEANS FOR UTILIZING THE WASTE SPACE IN HOTHOUSES. EMIL BAUMGARTNER, Nanuet, N. Y. Filed May 17, 1928. Serial No. 278,379. 11 Claims. (Cl. 47—17.)

1. In a hot house the combination of a flooring, a rail track, embedded in said flooring, extending longitudinally in approximately the middle of the hot house, a system of side tracks, arranged parallel to each other, disposed perpendicularly and spacedly elevated relative to aforesaid longitudinal rail track, a platform, movably ar-



ranged on aforesaid longitudinal rail track, provided with rails connecting the elevated tracks on the sides of the longitudinal rail track, and a plurality of wheel actuated movable benches spacedly arranged back to back on said elevated tracks.

1,753,981. LAMP SHADE. ROBERT BEARDSLEY, Chicago, Ill. Filed Mar. 5, 1926. Serial No. 92,628. 1 Claim. (Cl. 240—140.)

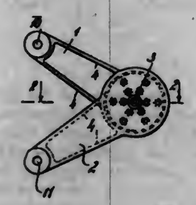


In a device of the class described, the combination of a shade, a clamping means for securing said shade in place, an upright with which said securing means is attached, a cross bar to which said upright is connected, said cross bar being bent intermediate its ends to provide supporting arms, the upright being connected to the cross bar at the bend and projecting in the same direction as said arms, the extremity of each arm being connected with opposite sides of the shade, said upright providing a pivot for an element of the clamping means and providing means for holding one of the elements of the clamping means against movement relatively to the other, and said upright being arranged transversely to said clamping elements.

1,753,982. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. PAUL N. BOSSART, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed July 9, 1929. Serial No. 377,040. 14 Claims. (Cl. 246—34.)

1. In combination, a stretch of railway track, a contact mechanism which is periodically operated, two relays, means controlled by said contact mechanism and by both said relays for energizing one of said relays one time each two times said contact mechanism is operated, a source of train controlling current, and means for supplying current from said source to the rails of said stretch under the control of said contact mechanism or said one relay in accordance with traffic conditions.

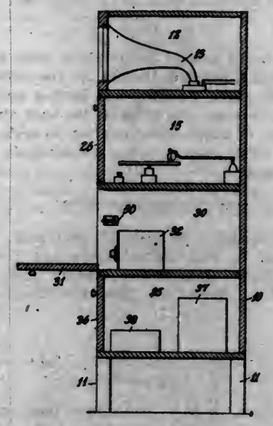
1,753,983. CONTROL SYSTEM. WILLARD G. COOK, Philadelphia, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 13, 1928. Serial No. 305,755. 8 Claims. (Cl. 175—337.)



1. In a relay in combination, a core member, an adjustable spring-biased armature disposed in alignment with the core member, a main coil for magnetizing the core member to effect the operation of the armature, an auxiliary coil disposed to dissipate the residual magnetism in the core member when the main coil is deenergized, thereby to increase the time during which the magnetism of the core dissipates at a rapid rate and the period of time during which positive functioning of the armature may be obtained at any predetermined time interval.

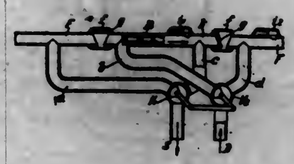
1,753,984. METHOD OF ACTIVATING CHARCOAL. GEORG ENSSLE, Constance, Germany, assignor to Holzverkohlungs-Industrie Aktiengesellschaft, Constance, Baden, Germany, a Corporation of Germany. Filed Feb. 6, 1929, Serial No. 338,019, and in Germany Jan. 13, 1928. 1 Claim. (Cl. 252—3.)

The method of producing activated charcoal which comprises treating charcoal with a mixture of gases, free of oxygen, containing at least 40% of carbon dioxide and a substantial component of a combustible gas.



1,753,985. FLEXIBLE JOINT. GERHARD FLINTERMANN, Orange, N. J. Filed Feb. 18, 1926. Serial No. 89,251. 7 Claims. (Cl. 267—21.)

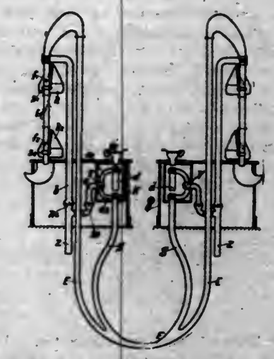
1. A flexible joint comprising two relatively movable members, an intervening body of flexible material, each of said members being a metal stamping having projections drawn or stamped thereon and extending toward said body of flexible material, said body of flexible material having openings to receive said projections, and at least one metallic reinforcing plate adjoining at least one of said members, said plate having projections stamped thereon engaging in the recesses at the back of the projections on said member.



1,753,986. COMBINED ELECTRICAL PHONOGRAPH AND RADIOCABINET. HENRY L. GRIGGS, Pelham, N. Y., assignor, by mesne assignments, to Wm. H. Bristol Talking Picture Corporation, Waterbury, Conn., a Corporation of Connecticut. Filed June 13, 1925. Serial No. 36,854. 5 Claims. (Cl. 179—100.4.)

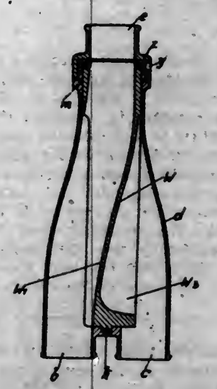
2. A musical cabinet embodying a casing providing a phonograph compartment, a turntable therein and an electrical reproducer unit associated therewith; a radio compartment, and a radio receiving unit therein; a loud-speaking receiver common to both units, and circuits thereto from said units; means to close the respective cabinets; and means controlled thereby for controlling

the circuits to the loud-speaking receiver to complete the one circuit thereto upon opening a corresponding cabinet and simultaneously opening the circuit from the other cabinet thereto.



1,753,987. TUBULAR POSTAL SYSTEM. WILHELM HÖHNE, Berlin-Charlottenburg, Germany, assignor to Deutsche Telephonwerke und Kabelindustrie Aktiengesellschaft, Berlin, Germany. Filed Jan. 31, 1929, Serial No. 336,537, and in Germany Feb. 15, 1927. 13 Claims. (Cl. 243—2.)

1. In a tubular postal system divided into sections the combination with the adjacent ends of the conveying tubes at a division point of a connecting chamber between said adjacent ends, closure members, one for each of the ends of the conveying tubes at the division point and located at opposite ends of said chamber, and means for supplying and exhausting an actuating fluid to and from said chamber.

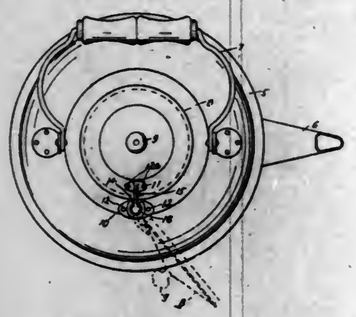


1,753,988. TUBULAR POSTAL DISPATCHING STATION. WILHELM HÖHNE, Berlin-Charlottenburg, Germany, assignor to Deutsche Telephonwerke und Kabelindustrie Aktiengesellschaft, Berlin, Germany. Filed Jan. 31, 1929, Serial No. 336,539, and in Germany Feb. 2, 1927. 9 Claims. (Cl. 243—2.)

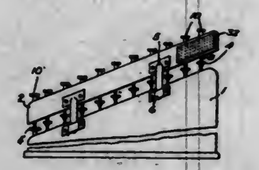
1. In a tubular postal system the combination with a conveying tube of a transmitting chamber located opposite one end of said conveying tube, a closure member for closing the end of said transmitting chamber adjacent the conveying tube, a closure member adapted to close the other end of said transmitting chamber, means for actuating said closure members so that when one is in the open position the other is in the closed position, and means for supplying an actuating fluid to said transmitting chamber

and to said conveying tube, and a closed chamber in which the transmitting chamber and the adjacent end of the conveying tube are located.

1,753,989. SWITCH POINT FOR TUBULAR POSTAL SYSTEMS. WILHELM HÖHNE, Berlin-Charlottenburg, Germany, assignor to Deutsche Telephonwerke und Kabelindustrie Aktiengesellschaft, Berlin, Germany. Filed Mar. 14, 1929, Serial No. 346,876, and in Germany June 23, 1926. 13 Claims. (Cl. 243—30.)



1. A switch point for tubular dispatch systems comprising a casing having a single tube receiving aperture at one end and a plurality of tube receiving apertures at its other end, and a rotatable body mounted in said casing adapted to form communication between the single tube receiving aperture and one of the other tube receiving apertures, and a gear wheel keyed to said body, adjacent one end thereof, said casing having an aperture therein adjacent said gear wheel whereby actuating means may be engaged with said gear wheel.

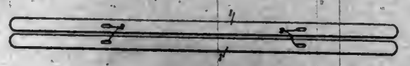


1,753,990. HINGE ATTACHMENT FOR KITCHEN UTENSILS. HENRY KOHLMAN, St. Paul, Minn. Filed Sept. 15, 1926, Serial No. 135,567. Renewed Sept. 6, 1929. 1 Claim. (Cl. 53—8.)

In a utensil of the class described having a cover, a hinge member connecting the cover with the utensil and

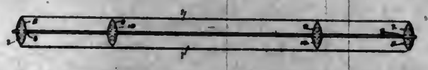
comprising a ball and socket joint of which the socket member is secured to the utensil in proximity to the said cover, said ball member engaged in said socket and including an arched integral arm extending toward and fixed to said cover at a point inwardly of the perimeter of the cover.

1,753,991. KEYBOARD OPERATOR. LEONARD W. LANGFORD, Boston, Mass. Filed Apr. 18, 1927. Serial No. 184,773. 8 Claims. (Cl. 197—19.)



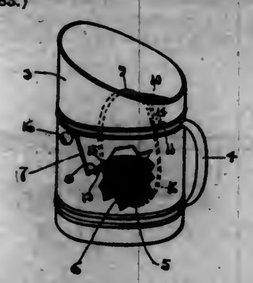
1. A keyboard operator comprising the combination of a frame, means adapted to support the frame over a keyboard to be operated, a plurality of solenoids carried by the frame for respectively operating the keys of the keyboard, an armature in each solenoid, means cooperating with each armature to depress its key when the solenoid is energized, a controlling button on the frame for each solenoid, means cooperating with each button for closing its solenoid circuit when the button is depressed, and means operated by the armature when the solenoid is energized to automatically open the circuit and hold the same open until the circuit has been opened at another point upon return movement of the armature.

1,753,992. SCRAPER FOR VEHICLE TIRES. LOUIS LARSON and DANIEL M. LARSON, Hannaford, N. Dak. Filed Feb. 13, 1928. Serial No. 253,987. 3 Claims. (Cl. 280—158.)



3. The combination with a tire on the wheel of a vehicle, of an arcuate shoe mounted on the vehicle body above the ground engaging surface of the tire to oppose the tire, said shoe having upper and lower end walls extending substantially tangentially respective to the tire in opposite directions, said end walls being in close proximity to the tire and a scraper blade secured to one of said end walls and adjustable tangentially thereon to and from the tire.

1,753,993. BUMPER. EDWARD H. MCCLOUD, Columbus, Ohio, assignor to The Central Brass and Fixture Company, Springfield, Ohio, a Corporation of Ohio. Filed July 26, 1928. Serial No. 295,416. 6 Claims. (Cl. 293—55.)



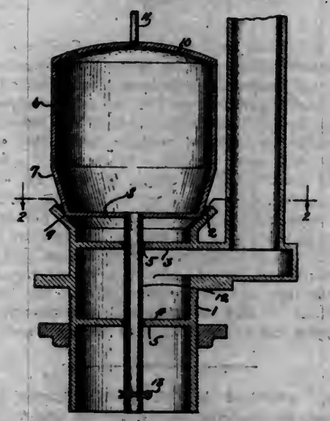
1. In a bumper, a pair of bumper bars, each bar having a series of holes arranged therein in the same relative position to each other, clamp means having studs thereon and projecting through the holes in the bars and adapted to hold the bars in fixed spaced relation to each other, the bars and the clamp means being permanently united to form a rigid bumper.

1,753,994. BUMPER. EDWARD H. MCCLOUD, Columbus, Ohio, assignor to The Central Brass and Fixture Company, Springfield, Ohio, a Corporation of Ohio. Filed July 26, 1928. Serial No. 295,417. 9 Claims. (Cl. 293—55.)

1. In a bumper, a pair of bumper bars arranged in parallel spaced relation to each other, and a plurality of clamp members welded to the bars and holding them in said spaced relation to each other, each clamp member having a spacer lug extending between said bars.

1,753,995. FLOUR SIFTER. THOMAS G. MELISH, Cincinnati, Ohio, assignor to The Bromwell Wire Goods Company, Cincinnati, Ohio, a Corporation of Delaware. Filed June 18, 1926. Serial No. 116,905. 1 Claim. (Cl. 209—283.)

A sifter comprising a body having perforations in the opposite sides thereof, a screen in the body through which to sift the contents thereof, and an agitator in the body adjacent to and adapted to pass over the surface of the screen to promote passage of the body contents through the screen, said agitator consisting of a single piece of wire bent upon itself at approximately the middle of its length to form a journal to occupy one of the body perforations, each branch of the wire adjacent the journal being shaped to the screen and lying in the plane of its cooperating branch, the ends of the branches being bent to lie together loosely and to occupy the opposite body perforation, one of said ends terminating just beyond the perforation and the second end bent beyond the perforation to provide a crank whereby to rotate the agitator.



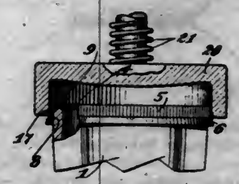
1,753,996. BUST SUPPORTER. DAVID H. MILLMAN, New York, N. Y. Filed Apr, 18, 1928. Serial No. 270,829. 1 Claim. (Cl. 2—42.)

A bust supporter comprising a strip of material adapted to encircle the body of the wearer at the height of the busts, folds extending from the top and bottom edges of the strip inward to form substantially semispherical bust members,

and inelastic lacing connecting the adjacent edges of pairs of folds for changing the distance between the folds for changing the size of the semispherical bust members.

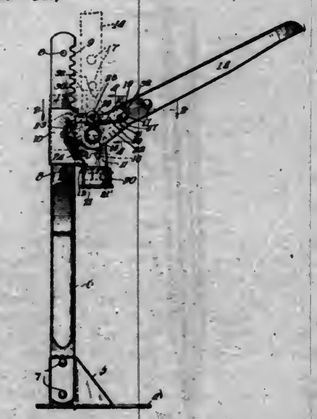
1,753,997. FLUSHING APPARATUS. FREDERICK OPPERMAN, Greenwich, Conn. Filed Nov. 8, 1927. Serial No. 231,819. 6 Claims. (Cl. 4—57.)

5. In flushing apparatus, the combination of a metallic valve having a frusto-conical formation, a tapered seat therefor, the seat being tapered at a greater angle than the valve so as to provide a line contact between the valve and seat below the top of the seat.



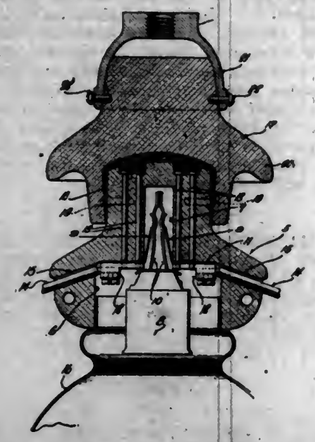
1,753,998. LACQUERING MACHINE AND OVEN. ABRAHAM PODEL, Long Island City, N. Y., assignor to Anchor Cap and Closure Corporation, Long Island City, N. Y., a Corporation of New York. Filed Oct. 18, 1924. Serial No. 744,340. 16 Claims. (Cl. 91—55.)

2. In an apparatus of the class described, in combination, a machine for coating on side of the sheet material, automatic means for feeding individual sheets from a stack to said coating machine, an oven for partially baking the coating on the sheets received from the coating machine, a second coating machine for coating the other side of the sheet material received from the oven, a second oven for receiving the sheets from the second coating machine and for completely baking both sides of the sheets, a source of power for said second coating machine to permit independent operation thereof, a common source of power for the other elements of the apparatus, and devices for controlling certain of said machines connected to the common source of power without affecting other machines.



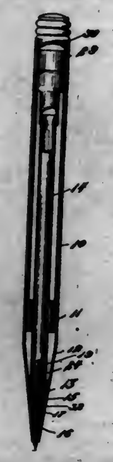
13. In a machine of the class described, the combination of a machine for applying lacquer to one side of sheet material such as tin and the like, an automatic feeding machine for feeding said sheet material from a stored supply individually to said lacquering machine, an oven having a conveyor therein for receiving the sheets from said lacquering machine, a second oven and a lacquering machine between said ovens adapted to coat the other sides of said sheets and deliver them to the second oven, a shaft extending along the sides of said oven operatively connected to drive the conveyors in said ovens, and means for disconnecting the respective conveyors in said ovens from said shaft independently.

1,753,999. HERMETICALLY-SEALED PACKAGE AND METHOD OF SEALING. ABRAHAM PODEL, Bronx, N. Y., assignor to Anchor Cap & Closure Corporation, Long Island City, N. Y., a Corporation of New York. Filed Apr. 21, 1927. Serial No. 185,478. 13 Claims. (Cl. 215—40.)



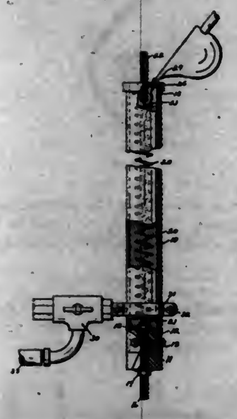
1. A hermetically sealed package comprising a container having a substantially cylindrical side wall, a closure cap having a cover portion and a substantially cylindrical depending skirt, and a gasket in said skirt extending substantially the entire height thereof, the cover portion of said cap being mechanically flexed and permanently set downwardly into the mouth of the container independently of the internal conditions of the container to pull the skirt of the cap toward the side wall of the container.

1,754,000. BOTTLE CAPPER. HAROLD G. RICE, Chicago, Ill. Filed Feb. 1, 1928. Serial No. 251,074. 15 Claims. (Cl. 226—84.)



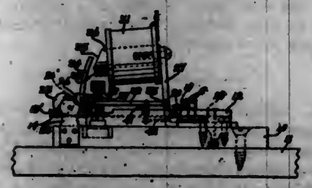
1. A bottle capper comprising a frame, a rider slidable on the frame, a lever pivoted on the rider and engaging the frame to reciprocate the rider, a capping head carried by the rider, means for resiliently urging said lever toward a raised position and means to positively limit the upward movement of the lever below a substantially vertical position.

1,754,001. LIGHTING FIXTURE. ALWIN G. STEINMAYER, Milwaukee, Wis., assignor, by mesne assignments, to Line Material Company, South Milwaukee, Wis., a Corporation of Delaware. Filed Mar. 26, 1927. Serial No. 178,578. 5 Claims. (Cl. 173—365.)



1. The combination with a lighting fixture for use with relatively high voltages having a housing comprising an irregularly shaped body member with a plurality of apertures, which member due to such irregular configuration is formed of insulating material incapable of safely withstanding relatively high voltages, of an insulating member having the capacity to successfully withstand such voltages, means connecting the latter insulating member with the body member of the fixture, and a supporting member for the fixture connected with the second mentioned insulating member.

1,754,002. MECHANICALLY-FED LEAD PENCIL. ROY C. STOWE, Providence, R. I., assignor to A. T. Cross Pencil Co., Providence, R. I., a Corporation of Rhode Island. Filed July 12, 1926. Serial No. 121,771. 3 Claims. (Cl. 120—18.)

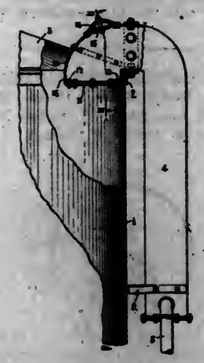


3. In a mechanically operated pencil, a barrel ending in a tapered sleeve portion, a lead propelling movement unit including a tapered bushing in said sleeve portion and a threaded member secured to and projecting beyond said bushing, and a point end member engaging said threaded member for securing said movement in said barrel.

1,754,003. TUBULAR HEATING UNIT. CHARLES T. JOHNSON-VEA and WILLIAM A. BRAUN, Dover, Ohio, assignors to Dover Manufacturing Company, Dover, Ohio. Filed Aug. 14, 1926. Serial No. 129,186. 4 Claims. (Cl. 201—64.)

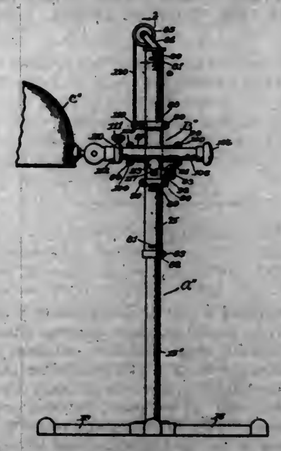
1. The method of making tubular heating units consisting in suspending a resistance element axially within a tube, providing the same with suitable terminals such as binding posts, closing one end of the tube and supporting it in an upright position with the other end uppermost and open, vibrating the tube in a horisontal plane and simultaneously filling it with an embedding material composed of a mixture of granular materials of different sizes and having different melting points whereby the material is capable of being converted into a unitary stone-like nonhygroscopic mass when heated without melting the more refractory portion of said material, and then heating the tube and its contents to melt the less refractory portions of said material and subsequently capping the uncapped end of the tube with the terminals exposed.

1,754,004. SWITCH MECHANISM. LOUIS J. WICK, Highland, Ill., assignor to Wicks Pipe Organ Co., Highland, Ill., a Corporation of Illinois. Filed July 28, 1928. Serial No. 295,940. 7 Claims. (Cl. 200—104.)



1. In a switch mechanism, parallel contact elements, a roller of insulating material, a contact bar mounted longitudinally of said roller and extending from its surface for swingingly engaging said elements to provide a wiping contact, and curved portions on some of said elements to continuously engage said contact bar during its swing, while the other ones of said elements are straight and become engaged by said bar upon the rotation of said roller and the swinging of said bar.

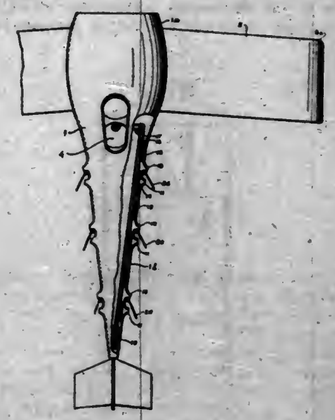
1,754,005. OIL-TANK FIRE PROTECTION. WILLIS D. WITTER, Utica, N. Y., assignor, by mesne assignments, to American La France and Foamite Corporation, a Corporation of New York. Filed Mar. 29, 1926. Serial No. 98,242. 3 Claims. (Cl. 169—4.)



1. In oil tank fire protection systems, the combination of the oil tank, a foam conduit secured to the wall thereof

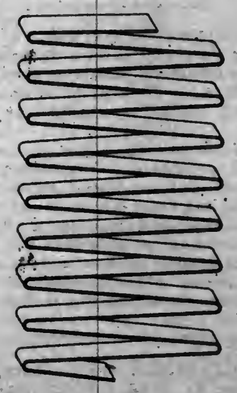
for conducting foam from the outside to the oil inside of said tank, a vapor-excluding diaphragm extending across the path of the foam through said conduit at a point inside of the oil tank, said diaphragm being normally subject to equal pressures on its opposite sides but adapted

to break down and permit foam flow merely by the pressure of the foam thereagainst, a seat provided on the conduit and with which said diaphragm makes a vapor-proof joint, and an access opening and removable cover plate adjacent said seat and through which a person outside of the tank may adjust or renew said diaphragm.



1,754,006. SUPPORT. FRITZ A. ANDERSON, Milton, Wis., assignor to The Burdick Corporation, Milton, Wis., a Corporation of Delaware. Filed Aug. 8, 1925. Serial No. 49,060. 14 Claims. (Cl. 248—5.)

1. In a support the combination of a standard, a bracket-carrying frame including a grooved envelope encircling the standard and a cap on the standard for suspending the envelope therefrom in an axially fixed position, a bracket carried by the frame, and means between the bracket and frame for permitting the bracket to move axially upon the frame and for causing the frame to rotate with the bracket.

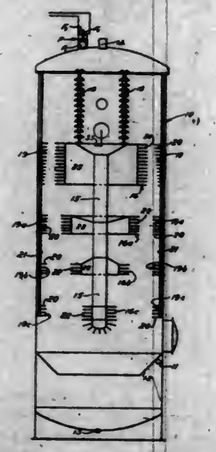


1,754,007. AIRCRAFT. AUSTIN G. BOLDRIDGE, Houston, Tex. Filed July 8, 1927. Serial No. 204,264. 2 Claims. (Cl. 244—18.)

1. An aircraft having a casing substantially conical in form, the base or front end of said casing being open, said casing having longitudinal ports opening laterally and upwardly, and additional ports in its sides and bottom, laterally extending wings on said casing immediately above

said longitudinal openings, the tips of said wings being presented downwardly and outwardly, a propeller positioned within said casing to direct air through said ports, and valves to control the passage of air through said ports.

1,754,008. METHOD OF MAKING DUCTILE IRON CHROMIUM ALUMINUM ALLOYS. VERE B. BROWNE, Brackenridge, Pa. Filed Dec. 19, 1927. Serial No. 241,208. 3 Claims. (Cl. 148—12.)



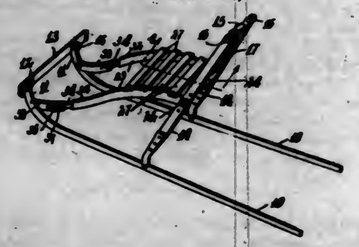
2. The method of making a ductile article from an iron chromium aluminum alloy having a chromium content of about 10–20%, an aluminum content of about 3–10% with the remainder principally iron, which consists in casting an ingot of such alloy, heating the ingot to about 2000° F., reducing the same materially by heating and rolling in successive steps at progressively decreasing finishing temperatures, making a final material reduction at a temperature below 1400° F., and then annealing at about 1400° F.

1,754,009. DEHYDRATION OF OIL AND WATER EMULSIONS. JOHN M. CAGE, Los Angeles, Calif., assignor, by mesne assignments, to Dehydrators Incorporated. Filed Sept. 17, 1927. Serial No. 220,169. 7 Claims. (Cl. 204—24.)

7. Apparatus for the system herein described, comprising a suitable tank with provisions for flowing an emulsion

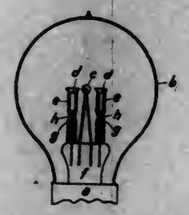
CARNEGIE LIBRARY OF ATLANTA

through it, a series of electrode sets arranged in the path of the flow of emulsion, the spacings of the electrode sets being progressively diminished in the direction of emulsion flow, and said progressive dimunition being directly proportionate to the decreasing conductivity of an emulsion as its relatively electrical conductive component is pro-



gressively removed, and means for applying to the electrode sets as a whole a potential varying inversely as the total conductivity of an emulsion flowing between all the electrode sets, said means including an instrument actuated by the current flowing through the emulsion, and voltage control circuits controlled by said instrument.

1,754,010. ACCELERATOR FOR THE VULCANIZATION OF RUBBER. ADRIEN CAMBRON, Tottenville, N. Y., assignor to The Roessler & Hasslacher Chemical Company, New York, N. Y., a Corporation of New York. Filed Jan. 20, 1926. Serial No. 82,613. 18 Claims. (Cl. 18—53.)



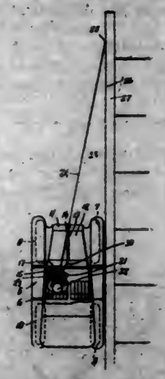
5. A process for treating rubber or similar material, which consists in combining an unvulcanized rubber, a vulcanizing agent, and the product obtained by reacting, under essentially anhydrous conditions and in the presence of a small amount of acidic material, a primary aromatic mono-amine containing not more than two methyl groups attached to the benzene nucleus, and an aldehyde from the group comprising crotonaldehyde and the saturated aliphatic aldehydes containing two to four carbon atoms inclusive.

1,754,011. COLLAPSIBLE SLED. LESTER J. CLARKE, New York, N. Y. Filed July 27, 1928. Serial No. 295,660. 3 Claims. (Cl. 280—23.)

1. In a device of the class described, comprising a pair of runners, upright seat back rods pivotally connected at their lower ends to said runners, a transverse bar supported between said rods, rear leg sections having reduced forward ends, the rear ends of said sections attached to said bar, seat strips carried on said sections, and front leg sections also pivotally attached to said runners and having apertures in their rear ends for adjustably receiving the reduced ends of said rear leg sections, the length of the combined leg sections being therefore adjustable for varying the tilt of said upright seat back rods.

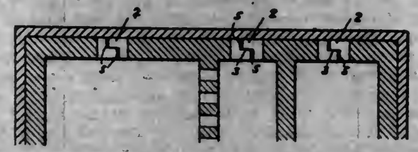
1,754,012. INCANDESCENT-CATHODE RECTIFIER FOR MEDIUM VOLTAGES. BRUNO DÖNATH, Berlin, Germany. Filed Dec. 24, 1927, Serial No. 242,379, and in Germany Jan. 4, 1927. 2 Claims. (Cl. 250—27.5.)

1. An incandescent cathode rectifier for medium voltages having anodes, a cathode, a base supporting the electrodes, non-conducting tubes attached to the base of the rectifier and mounted to screen the anodes one from the other, said tubes surrounding the anodes without coming into contact with them and each having a constricted portion therein between the anodes and the base, and the upper edges of the tubes projecting slightly above the upper edges of the anodes.



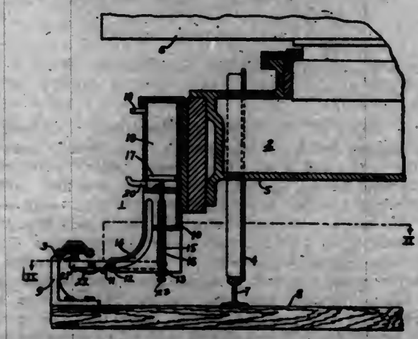
1,754,013. HINGE. JOSEPH FISHER, Beacon Falls, Conn. Filed Jan. 12, 1928. Serial No. 246,368. 1 Claim. (Cl. 16—169.)

A hinge comprising a pair of complementary sheet-metal leaves respectively folded at their adjacent edges to form spaced-apart tubular hinge knuckles, substantially cylindrical in exterior form; a pintle extending through the said tubular knuckles for pivotally-coupling the two said leaves together; and a combined finishing and pintle-retaining finger forming an integral extension from the outer end of one of the said knuckles and having substantially-parallel sides, and folded over the outer end of the said knuckle at a right angle and of a length sufficient to snugly overlie and close the pintle-receiving opening in the said knuckle, and merging symmetrically into the cylindrical exterior form thereof when so folded thereover at a right angle.



1,754,014. INDICATOR FOR PARKING ROAD VEHICLES. CLARENCE BERNARD FOWLER, Queens Village, N. Y. Filed Apr. 21, 1928. Serial No. 271,751. 2 Claims. (Cl. 88—1.)

1. In an indicator for alining road vehicles a predetermined distance from the edge of a road the combination, with a vehicle body carrying a sighting object located in a fixed position relatively thereto, and also carrying a mirror, of a blinder plate disposed adjacent said mirror and provided with a peep hole for indicating to the operator when his head is brought into a predetermined exact

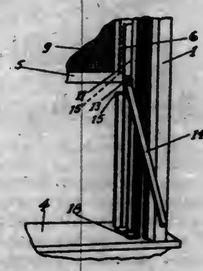


position relatively to said vehicle body and to said sighting object, in order to enable the operator to glance along a definite collimation line grasing said sighting object.

1,754,015. FIRE-BRICK CONSTRUCTION. HERBERT HEITMAN, Woodhaven, N. Y., assignor to The Fred'k Page Contracting Company, Inc., New York, N. Y., a Corporation of New York. Filed June 26, 1928. Serial No. 288,310. 2 Claims. (Cl. 72—107.)

1. An L-shaped fire brick having arms of substantially equal width and adapted in pairs and in opposite disposition with the faces of the intermediate portions in contact and with the faces of the adjacent portions in spaced relation to provide longitudinal gas tight expansion joints in and flush with both faces of refractory linings intermediate of the ends thereof.

1,754,016. CURRENT-COLLECTING DEVICE. DAVID C. HERSHBERGER, Turtle Creek, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 25, 1927. Serial No. 215,393. 9 Claims. (Cl. 191—49.)

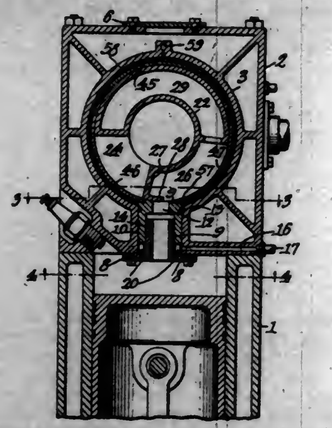


1. A current collector comprising a supporting member provided with a curved guideway, a contact-carrying arm slidably fulcrumed in said curved guideway and means for actuating said contact-carrying arm.

1,754,017. POLYPHASE COMMUTATOR DYNAMO-ELECTRIC MACHINE. ALEXANDER HEYLAND, Brussels, Belgium. Filed Mar. 27, 1925, Serial No. 18,922, and in the Netherlands May 12, 1924. 1 Claim. (Cl. 172—280.)

A nonsalient pole commutator machine having a winding for the stator, the mean resultant winding pitch of which is less than that of the winding for the rotor, the ampere turns of the stator between the phase axes being less than the resultant of the rotor ampere turns between the phase axes, so that between the phase axes the rotor field is greater than the stator field and nonsalient commutating fields are produced.

1,754,018. WINDOW SCREEN. HENRY HIGGIN, Newport, Ky., assignor to The Higgin Manufacturing Company, Newport, Ky., a Corporation of West Virginia. Filed June 22, 1925. Serial No. 38,682. 3 Claims. (Cl. 156—14.)

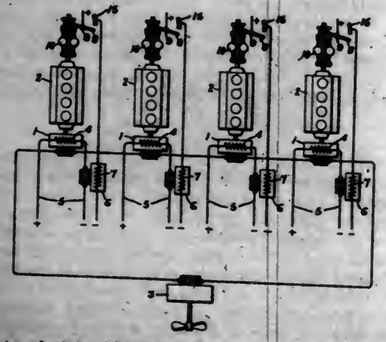


3. A guide for a window screen comprising a back portion and two side portions extending therefrom so as to form a channel, a portion of one of said side portions being free of the back and hinged to the remainder of said side portion so as to swing into and out of channel-forming relationship, and a lock comprising a member extending at an angle from said guide beyond the free end of said hinged portion so as to be cleared thereby, and a second member hinged to the outer end of the first member so as to lie in substantial alignment with it in one position, and in another position to overlie it, the free end of said second member adapted when in the latter position to hold the free end of the hinged portion in channel-forming relationship with said back and the other side member.

1,754,019. ROTARY VALVE. FREDERICK J. HOLMES, Detroit, Mich., assignor to United States Trust Company, Detroit, trustee, a Corporation. Filed June 7, 1928. Serial No. 283,619. 12 Claims. (Cl. 123—190.)

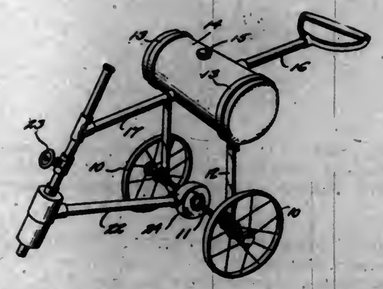
1. In an internal combustion engine the combination with a cylinder block, a head thereon having an interior valve casing, there being a port extending from the interior of the cylinder block into the valve casing, of a rotary valve within the casing, a guide member within and spaced from the walls of the port, a takeup member slidable upon the guide member and within the port, there being a lubricant pocket around the guide member and

back of the takeup member, and resilient means normally submerged in lubricant within the pocket for holding the



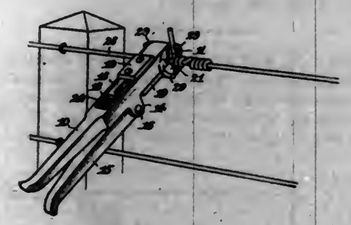
takeup member pressed against the periphery of the valve, said takeup member having an opening for communication with the ports in the valve and with the port in the head.

1,754,020. EGG RACK. ALBERT J. HYDE, Portland, Oreg. Filed May 8, 1929. Serial No. 361,499. 2 Claims. (Cl. 211—13.)



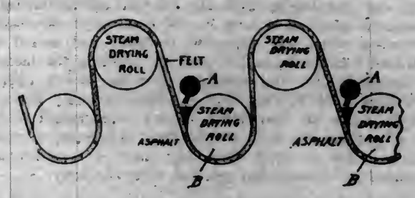
1. A supporting rack including a shelf-like portion provided with a plurality of openings having downturned flanges around them, upstanding plates at the ends of said shelf provided with inturned flanges along their rear edges and at the top edges thereof, an upstanding stiffening flange or apron arranged along the rear edge of said shelf and a downturned flange along the front edge thereof.

1,754,021. ELECTRIC SHIP-PROPULSION SYSTEM. DENNIS E. JEWITT, Old Bilton, near Rugby, England, assignor to General Electric Company, a Corporation of New York. Filed Sept. 2, 1924, Serial No. 735,281, and in Great Britain Nov. 27, 1923. 4 Claims. (Cl. 172—8.)



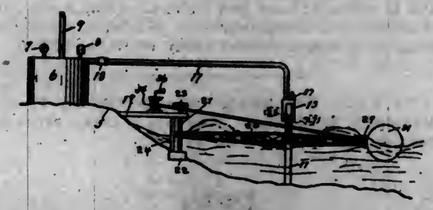
1. An electric ship propulsion system comprising a plurality of generators connected in series with a propeller motor, a plurality of prime movers respectively driving said generators, an exciting circuit for each generator arranged to be connected to a source of supply, and means arranged to be affected by the difference in the torques exerted by a generator and its corresponding prime mover for decreasing the excitation of said generator independently of the voltage of the source of supply when the torque of said generator is greater than the torque of its prime mover.

1,754,022. STUBBLE BURNER. GEORGE A. JONES, Piapot, Saskatchewan, Canada. Filed Aug. 27, 1926. Serial No. 132,011. 1 Claim. (Cl. 126—271.2.)



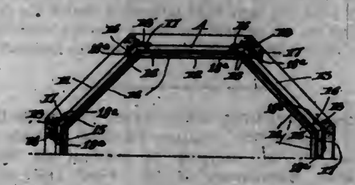
A stubble burner comprising a wheeled frame, a fuel tank supported thereon, horizontally disposed air and fuel supply pipes arranged in spaced superposed relation and projecting forwardly in advance of the machine, and a vertically arranged burner including a body supported by and communicating with said air supply pipe, and a wick receiving tube rising from the body of the burner supported by and communicating with the fuel supply pipe.

1,754,023. WIRE SPLICER. SIDNEY J. JONES, Shannon, Ill. Filed Mar. 12, 1929. Serial No. 346,414. 4 Claims. (Cl. 140—121.)



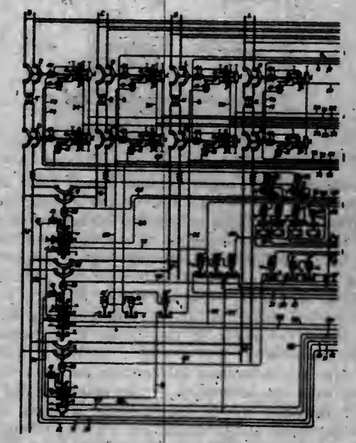
1. A device of the character described comprising a one piece jaw and handle member, a second handle member pivoted at one end to said first handle member, a separate jaw member having guided movement on said first handle member and the jaw on said jaw member thus being movable into and out of cooperative relation to said first jaw, said jaws when brought into cooperative relation being adapted to engage a line wire to enable the swinging of the device around on said wire, coacting means on said second handle member and jaw member for effecting the movement of the jaw member to move the jaw of the latter into and out of cooperative relation to said first jaw, and wire terminal engaging means on one of said jaws adapted to engage a wire terminal for the purpose of wrapping the same around said line wire when the device is swung about the latter.

1,754,024. FIBROUS-SHEET PRODUCTION. CHARLES L. KELLER, Cincinnati, Ohio, assignor to The Richardson Company, Lockland, Ohio, a Corporation of Ohio. Filed Mar. 17, 1924. Serial No. 699,721. 13 Claims. (Cl. 91—70.)



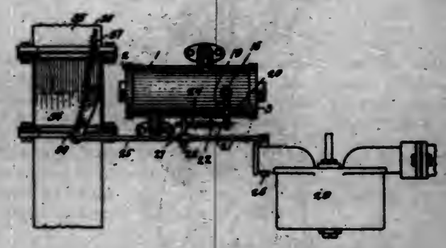
1. The process of saturating a moist web which consists in heating the moist web to partially dry the same, then treating one surface of the web with heated asphalt, then heating the surface of the web to which the heated asphalt has been applied, and then heating the opposite surface of the web.

1,754,025. WAVE-POWER APPARATUS. FRED E. LAWRENCE, Modesto, Calif. Filed June 4, 1928. Serial No. 282,789. 1 Claim. (Cl. 230—66.)



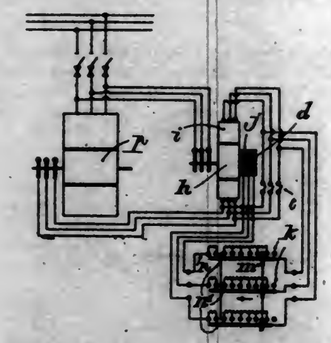
In a wave motor of the character described, a pair of vertically disposed guide members, a boom adapted to move between said guide members, cylinders positioned above said boom and supported by said guide members, pistons positioned in said cylinder, connecting rods extending between said cylinders and said boom, a float pivotally secured to one end of said boom, a nut secured to the opposite end of said boom, a vertically positioned screw rotatably positioned in said nut, means for rotating said screw for anchoring said screw against vertical movement, means for pivotally moving and holding said float in adjusted position with respect to the end of said boom, said means comprising cables secured to the ends of said float, and a drum positioned adjacent the opposite end of said boom and at a point thereabove and having said cables reaved thereabout.

1,754,026. BUILDING CONSTRUCTION. WALTER WAYNE LOY, Saskatoon, Saskatchewan, Canada, and EDWARD JOHN CRUM, Kalispell, Mont. Filed Mar. 10, 1928. Serial No. 260,773. 1 Claim. (Cl. 20—4.)



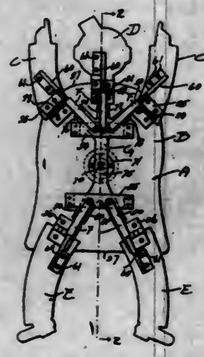
In a building construction, the combination with boards butted to form a corner joint and formed with grooves therein adjacent and extending parallel thereto of an angle metal plate bent to conform with the angle of said joint and provided with ribs, said ribs being adapted to register and engage with the grooves, and extending adjacent and parallel with overlapping protective lips on the sides of the plate, said lips being designed to overlap the grooves when the plate is mounted on said corner joint to provide a protected joint and groove structure.

1,754,027. AUTOMATIC CONTROL SYSTEM. DONALD R. MACLEOD and FREDERIC D. KING, Schenectady, N. Y., and EUGENE L. HOUGH, St. Louis, Mo., assignors to General Electric Company, a Corporation of New York. Filed Mar. 21, 1927. Serial No. 177,196. 18 Claims. (Cl. 171—118.)



1. In combination, a plurality of sources of current, a plurality of load busses, means responsive to predetermined electrical conditions of said sources and load circuits for selectively controlling the connection of certain of said load busses to different sources in accordance with said predetermined electrical conditions, and means operative in response to a predetermined abnormal condition of a source to effect the connection of each normal source to an independent load bus irrespectively of said predeterminad electrical conditions.

1,754,028. CHOKE-CONTROL DEVICE. CARL AUGUST MARTIN and WILLIAM ORTH, Genoa, Colo. Filed May 10, 1927. Serial No. 190,286. 6 Claims. (Cl. 123—106.)



1. A choke control device comprising, in combination with the air valve of a carbureter, an exhaust gas actuated mechanism for adjusting the air valve, and a thermostat arranged to be actuated by the heat of the engine and controlling the extent of the adjustment of the air valve by said mechanism.

1,754,029. POWER-FACTOR CONTROL OF ALTERNATING-CURRENT ASYNCHRONOUS MACHINES. JEAN LOUIS MATABON and CHARLES MICHAEL FOUCAULT, Lyon, France. Filed Sept. 18, 1925, Serial No. 57,116, and in France Sept. 20, 1924. 1 Claim. (Cl. 172—280.)

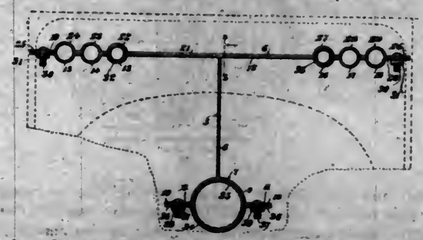
In combination, an asynchronous wound rotor machine, apparatus for the compensation of the powder factor of said machine, comprising an exciter having no mechanical connection with the machine to be compensated, fixed brushes on the commutator of said exciter adapted to impress an E. M. F. on the secondary of the said machine, the exciter having a rotor with two distinct windings, one of normal type for alternating currents connected to slip rings, the other of the closed type connected to the said commutator, and a stator having a winding of normal type for polyphase alternating currents connected in series with the secondary of the said machine and to the said brushes, whose adjustments is such that the tension impressed on the secondary winding of the exciter is dephased 90° in advance of the slip tension in said winding, a starting rheostat inserted in the secondary circuit of the said machine and in the circuit of the exciter for the purpose of starting said machine as a normal asynchronous motor, compensation terminals on said rheostat connected to the said brushes for operating said machine as a compensated asynchronous motor, and a switch for starting the exciter in short circuit and putting it into normal running when open.

1,754,030. TARGET. BERNARD O. MATTSON, Memphis, Tenn. Filed Mar. 8, 1928. Serial No. 260,071. 3 Claims. (Cl. 273—102.)

1. In a figured target the combination of a figure representing a human being comprising a body with members including upwardly extended arms and head pivoted on the body and movable to a collapsed relation therewith, depending legs pivoted upon the body and movable to a collapsed relation therewith, spring means associated with the head and arms to normally move them to an extended relation from the body, a notched extension on each of the pivoted members at the rear side thereof, a flexing detent spring on the body for each of the notched extensions and engageable with the notched extensions at all times and adapted to lock in the notches of the notched extensions when the respective members are moved to a collapsed relation upon the body for holding the members in such relation, and releasing plunger means operable from forwardly of the body to simultaneously move the springs with an increasing flexing engagement thereof out of engagement with the notched extensions to release said members in order that they may be moved from a collapsed to an extended relation with the body.

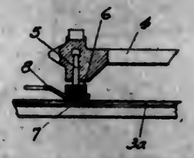
1,754,031. CYCLIC KETONES OF THE AROMATIC SERIES AND PROCESS OF MAKING SAME. FRITZ MAYER, Frankfort-on-the-Main, KURT BILLIG, Hochst-on-the-Main, KARL HORST, Hofheim-on-the-Taunus, and KARL SCHIRMACHER, Hochst-on-the-Main, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Mar. 15, 1927, Serial No. 175,630, and in Germany Mar. 16, 1926. 6 Claims. (Cl. 260—131.)

1. The process for preparing cyclic ketones of the aromatic series, which consists in subjecting an unsaturated fatty acid compound to reaction with an aromatic compound in which at least two adjacent carbon atoms contain hydrogen as a substituent in presence of aluminium chloride at a temperature of about 40° C. to 140° C.



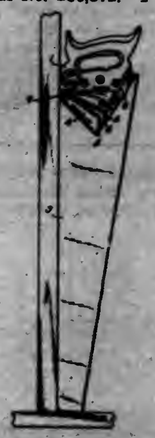
1,754,032. EYE-EXAMINING INSTRUMENT. FAY MCFADDEN, Athol, Mass. Filed May 9, 1927. Serial No. 189,793. 10 Claims. (Cl. 88—22.)

1. In a device of the character described, the combination with an instrument for testing the eyes having a lens through which the operator can observe the eye of the patient, of a light deflecting device immediately behind said lenses in a position for the light from the lenses to enter the eye of the patient, and means at a distance from the first light deflecting device for deflecting the vision of the patient before it reaches said lens in a parallel direction at a distance from the original line of sight.



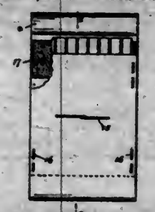
1,754,033. COMBINED RETAINING AND SPACING DEVICE FOR PIPES. GEORGE FRANCIS MCGOOKIN, Middletown, N. Y., assignor of one-half to Walter T. Hawkins, Middletown, N. Y. Filed Dec. 30, 1927. Serial No. 243,686. 2 Claims. (Cl. 248—34.)

1. A retaining and spacing device for pipes comprising a spacer member for a plurality of pipes, said member consisting of a stem and a bar disposed at right angles with respect to each other, said stem having its rear end integral with the front of the bar intermediate the ends of the latter, said bar having a forwardly directed, curved seat positioned between the center and each end thereof, said stem having its forward end formed with a rearwardly directed curved seat, a clamping member coextensive with said bar, positioned against the rear face of the latter and having means coacting with the seat on



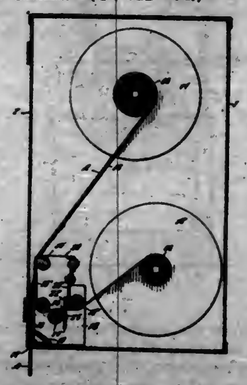
the bar for maintaining a plurality of water pipes in spaced relation, means for connecting said member to said bar, a clamping element positioned against the forward end of the stem and having means coacting with the seat on the stem for clamping a water pipe thereto and for maintaining the latter in spaced relation with respect to the other of said pipes, and means for connecting said element to said stem.

1,754,034. PROCESS OF MANIFOLDING. ALBERT W. METZNER, Dayton, Ohio, assignor to John Q. Sherman, Dayton, Ohio. Filed Sept. 28, 1927. Serial No. 222,666. 5 Claims. (Cl. 101—82.)



1. A process for manifolding, which consists in assembling together a pile of paper webs of which the back of an uppermost web is coated with a non-smudging color, and passing a pin through the pile, with the result of dislodging particles of the color coating and depositing them around the walls of the hole perforated in the paper next beneath said coating.

1,754,035. COMBINATION HANDSAW. WILLIAM JAMES MORREN, Hamilton, Ontario, Canada. Filed Mar. 31, 1928. Serial No. 266,372. 1 Claim. (Cl. 7—13.)

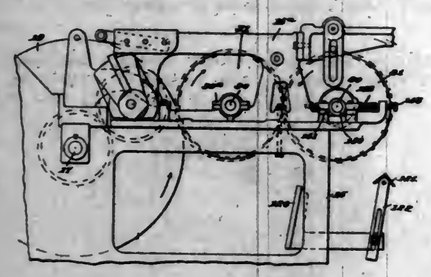


A hand-saw having a slotted handle to secure a steel saw-blade the edge of the handle projecting forwardly of the blade upon the opposed faces thereof and shaped to provide a plurality of angular curved terraces rising vertically in staggered relation to form ridges with the blade, the several angles varying from a right angle to a range of a plurality of joiners' pitches to adapt the tool to form a varied series of angular cuts.

1,754,036. MATCH PACKAGE. ROMAN A. NOVINSKY and EDWARD O. BARTON, New York, N. Y. Filed Oct. 10, 1927. Serial No. 227,201. 4 Claims. (Cl. 206—34.)

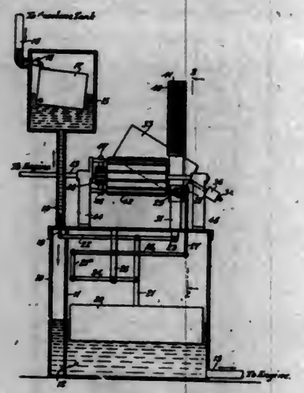
1. A match package, consisting of a case, a supply of paper matches and staples for holding the matches normally in the case, said case being formed with a top and bottom plate, each plate having a covering end flap adapted to fold over the end of the opposite plate, an igniting surface on each of said plates near the respective flaps, the surfaces on one plate extending beyond the end of the opposite plate, said matches being formed as a single sheet having two series of matches with a solid section between said series and a weakened line at the point where the respective series join said solid section, said staples extending through said solid section and both of said plates.

1,754,037. VENDING MACHINE. SIGFRED A. NYSTEDT, Storm Lake, Iowa. Filed Mar. 27, 1928. Serial No. 265,082. 8 Claims. (Cl. 312—74.)



1. A vending device comprising a casing, a pair of rolls therein, for supporting a strip which carries the objects to be vended, said casing having an opening therein, a deflector for deflecting the articles from the strip through said opening, manually operated means for revolving one of the rolls to impart movement to the strip, normally disengaged from the roll, locking means for preventing movement of the strip and means for engaging the manually operated means with the roll by the movement of the locking means to releasing position.

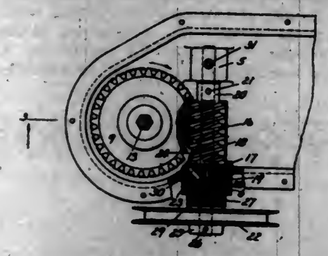
1,754,038. FOLDING DEVICE. HERBERT W. ORNDORFF, New Orleans, La., assignor to The E. V. Benjamin Co., Inc., New Orleans, La., a Corporation of Louisiana, trading as Maginnis Cotton Mills. Filed Sept. 11, 1928. Serial No. 305,247. 7 Claims. (Cl. 270—78.)



1. In a folding machine, a delivery roll, a folding roll, means to drive said rolls together, cooperative folding de-

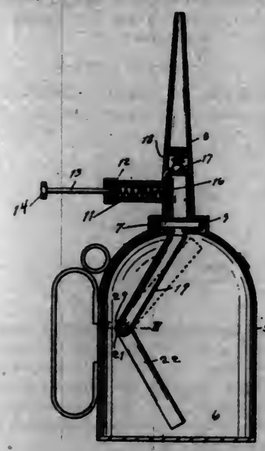
vices on said rolls including gripping members on said folding roll to seize the blank to be folded and thereby establish the line of fold, bearings for said folding roll, means including a cam fixed to and concentric with a bear-

ing of said folding roll to operate said gripping means, and means to permit said folding roll to move toward and from said delivery roll independently of the action of said folding devices.



1,754,039. APPARATUS FOR MEASURING AND INDICATING EFFICIENCIES. OTTO A. PAWLICK, West Orange, and RAYMOND C. GIESS, East Orange, N. J. Filed May 22, 1928. Serial No. 279,807. 12 Claims. (Cl. 235—1.)

5. An apparatus comprising an electrical generator connected to and driven by a gasolene engine, an output circuit including a measuring instrument associated with said generator, the output of the generator being proportional to the speed of the engine, a gasolene chamber connected to the engine, a float in said chamber, a valve actuated by the float to control the flow of fuel into said chamber, movable field poles on said generator, and means connecting said float with said field poles to move them and vary the field flux to the generator as the gasolene consumption of the engine varies.



1,754,040. OIL-CIRCULATING SYSTEM. JULIAN L. PERKINS, West Springfield, and HIRAM D. CROFT, Springfield, Mass., assignors to Perkins Machine and Gear Company, West Springfield, Mass., a Corporation of Massachusetts. Filed Sept. 20, 1928. Serial No. 307,256. 8 Claims. (Cl. 308—122.)

1. In an oil-circulating system, a container for lubricant, a bearing member supported by said container, a conduit leading from said member, a shaft with one terminal journaled in said member, the latter having therein passages opening into the shaft passage and into said con-

tainer and said conduit, a spiral driving member mounted on and secured to said shaft within said conduit, and a driven member intermeshing with said driving member.

1,754,041. OIL CAN. GEORGE PETRAK, Quincy, Wash. Filed May 19, 1928. Serial No. 279,094. 1 Claim. (Cl. 221—51.)

In an oil can, a receptacle, a spout secured to said receptacle, a pipe extending downwardly from said spout into said receptacle and angularly disposed with respect to the spout, a T member horisontally positioned on the end of said pipe, a delivery pipe hingedly mounted in the T portion of said first mentioned pipe, a valve positioned in said delivery pipe, a valve positioned in said spout, a pump secured to said spout at a point between said valves, means for limiting the rotation of said delivery pipe about its hinged connection so that said pipe will not contact said receptacle.

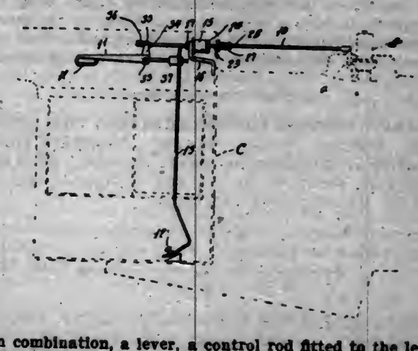
1,754,042. CONNECTING LINK FOR CHAINS. SIDNEY D. PORT, Saxton, Pa. Filed June 13, 1929. Serial No. 370,624. 4 Claims. (Cl. 24—232.)

1. A chain link connector comprising a body link and a lock link pivotally connected to each other at substantially their central portions, each having an elongated slot adjacent each end thereof in a position to align with the corresponding slot of the other, lateral passageways extending from the inner portions of the slots of one of said members to the outer edge thereof, and a lateral passageway extending from the inner end of one of the slots of the other member to the outer edge thereof, the periphery of the other slot of the last named member presenting a continuous wall, all of the other slots being formed by return bend portions of the links adapted to positively engage and exert a pull upon the chain links which they connect.

1,754,043. CONNECTING LINK FOR CHAINS. SIDNEY D. PORT, Saxton, Pa. Filed June 13, 1929. Serial No. 370,625. 3 Claims. (Cl. 24—232.)

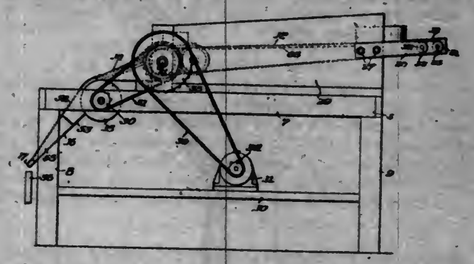
1. A connector of the character described, comprising an elongated body link having a closed longitudinal slot adjacent one end thereof, and an elongated slot and a lateral passageway from the inner end of said slot at the other end thereof, and a lock link having its inner portion pivoted to the body link, one end portion only of the lock link having a longitudinal slot and a lateral passageway formed therein at the inner end of said slot, said slot of the lock link aligning with the corresponding slot of the body link.

1,754,044. SOUND-PRODUCING DEVICE. WILLIAM B. POTTER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 12, 1928. Serial No. 269,519. 6 Claims. (Cl. 181—32.)



1. A conical diaphragm for sound reproducers having a flanged ring attached to its exterior surface intermediate its edge and apex.

1,754,045. TOP-LOCKING MEANS FOR CASKETS, SHIPPING CASES, AND THE LIKE. LAWRENCE A. POWELL, Fort Myers, Fla. Filed Apr. 4, 1927. Serial No. 180,885. 6 Claims. (Cl. 27—35.)

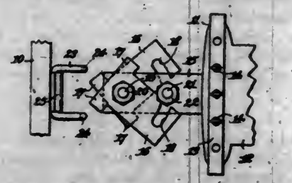


6. In an undertaking device, a body, a horisontally disposed slotted flange formed with said body, a removable top for said body and including a horizontal portion adapted to be arranged in parallelism with said flange, rods mounted for slidable movement between the flange and horizontal portion and carried by said horizontal portion, cam means carried by said rod and movable into and out of said slots, and means threadedly mounted on some of said rods for moving all of said rods and the cam means respectively whereby the latter can be secured in said slots to fasten the top to the body.

1,754,046. LOCOMOTIVE-WHISTLE-OPERATING MECHANISM. CHARLES D. RAFFERTY, Sault Ste. Marie, Ontario, Canada. Filed May 20, 1926. Serial No. 110,580. 1 Claim. (Cl. 187—189.)

In combination, a lever, a control rod fitted to the lever and extending on opposite sides thereof, means operable by hand to actuate the control rod, pneumatic means to operate the control rod pivoted to said lever, the fulcrum of said lever occurring between said pneumatic means and the pivotal connection of the control rod thereto, and means for controlling the pneumatic means located relatively close to the zone of operation of the operating means of the control rod.

1,754,047. COUNTING AND GROUPING MACHINE. JOHN SHEPPARD REAVES, Philadelphia, Pa. Filed June 4, 1923, Serial No. 643,295. Renewed Aug. 29, 1929. 21 Claims. (Cl. 276—2.)

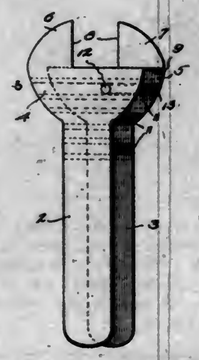


1. In a device of the character described, in combination, a plurality of adjacent oppositely moving conveyors adapted to receive a plurality of articles to be delivered to a predetermined point, outlets for receiving said articles, and means for causing one article at a time to pass through each outlet.

1,754,048. RELEASING COUPLING. FRED W. REIMOLD, Newark, N. J. Original application filed Aug. 22, 1927, Serial No. 214,644. Divided and this application filed July 2, 1928. Serial No. 289,927. 2 Claims. (Cl. 280—33.16.)

1. In a releasing coupling, the combination with a clevis plate, of members means which connects said mem-

bers with said clevis plate for pivotal movement and which subjects said members to a predetermined amount of pressure, means limiting the movement of said members to normally set positions, a relatively fixed coupler mem-



ber, and coacting means on said coupler member and the first mentioned members, said coacting means being disengageable to release said coupler member, by the pivotal movement of the first mentioned members, when all of said members are subjected to an excessive pulling force.

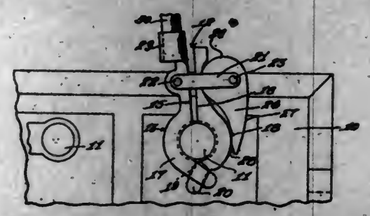
1,754,049. METHOD FOR DETERMINING THE ACTION OF FORCES UPON STATIC CONSTRUCTIONS. CHRISTIAN RIECKHOF, Darmstadt, Germany. Filed Mar. 26, 1924, Serial No. 702,175, and in Germany Mar. 29, 1923. 5 Claims. (Cl. 73—151.)

1. The method of investigating the operation of forces on a statically undetermined support comprising resolving said support into a plurality of statically simpler structural parts which are equivalent in their operation to the undetermined structure by forming a model of said support in reduced scale out of elastic material of equivalent shape, proportion of stiffness, fulcrum conditions and intersection point conditions and bending said model by a force of any dimension and then determining by means of this bent condition the turning points of the bent model.

1,754,050. WRENCH. NAPOLEON B. RIVERS, Ashtabula, Ohio. Filed Apr. 2, 1928. Serial No. 266,797. 1 Claim. (Cl. 81—129.)

A wrench comprising a pair of elongated sliding bodies arranged in contact with each other, jaws carried by corresponding ends of the bodies and extending longitudinally and inwardly from the same, one body being provided with transversely extending dove-tail grooves and with a slot having its inner end closed, the slot being arranged outwardly of and parallel to one of said grooves and opening through the bottom wall of such groove, dove-tail ribs extending transversely of the other body and slidably arranged in said grooves, and a pin extending through said other body into said slot and cooperating with the end wall thereof to limit the opening movement of the jaws.

1,754,051. WELDED JOINT. FRIEDRICH ROSENBERG, Spandau, Germany, assignor to General Electric Company, a Corporation of New York. Filed Oct. 8, 1928, Serial No. 311,097, and in Germany Nov. 22, 1927. 6 Claims. (Cl. 220—61.)

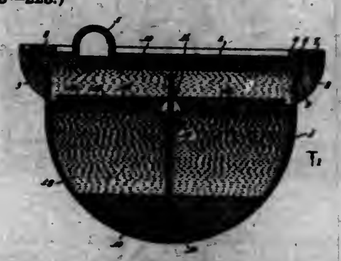


1. A joint comprising a plurality of overlapped parts, a packing therebetween, and a plurality of spot welds spaced along the joint for holding said parts together with the packing in adjusted position therebetween.

1,754,052. COMPOUND FROM INDENE AND PHENOLS. LEO ROSENTHAL, Vohwinkel, and WALTER KROPF, Elberfeld, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed June 22, 1927, Serial No. 200,761, and in Germany June 28, 1926. 6 Claims. (Cl. 260—154.)

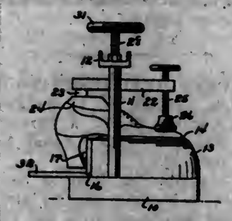
1. The process which comprises causing a halogen acid to act upon a mixture of an indenic compound and a phenolic compound.

1,754,053. DETACHABLE BATTERY TERMINAL. DANIEL H. SCHLABOEL, Wadena, Minn. Filed Dec. 28, 1927. Serial No. 243,168. 1 Claim. (Cl. 173—259.)



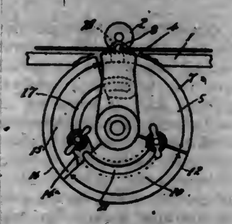
A battery terminal device comprising means for gripping a battery post, cooperating straight portions formed with the post gripping means, links pivotally secured to one of the straight portions, conductor securing means formed with the last mentioned straight portion, a cam pivotally secured to the links and being engageable in a depression formed in the other straight portion for drawing the gripping means together, and said cam having a recess formed on its inner face adjacent its free end to provide a finger grip whereby the cam can be moved to inoperative position to permit spreading of the post gripping means.

1,754,054. TOE-DANCING SHOE. JAMES SELVA, New York, N. Y. Filed June 25, 1927. Serial No. 201,879. 1 Claim. (Cl. 36—1.)



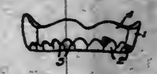
A toe dancing shoe having a relatively stiff sole structure, a relatively stiff toe section on the sole structure and projecting beyond the same which serves to support the dancer's foot, a heel section on the sole structure separate from the toe section, a tongue extending rearwardly from the vamp of the toe section, and an elastic strap whose opposite ends are connected respectively with the opposite side portions of the heel section, said tongue being connected with said elastic strap.

1,754,055. COMPASS. FRANK G. SENTER, Portland, Me. Filed Nov. 5, 1927. Serial No. 231,289. 6 Claims. (Cl. 33—228.)



4. A compass, including a bowl, a central post in the bowl, two liquids in the bowl of different specific gravity, a compass card having a central opening to receive the post and floating on the liquid of heavier specific gravity and immersed in the liquid of lighter specific gravity, said card supported solely by the liquid of heavier specific gravity.

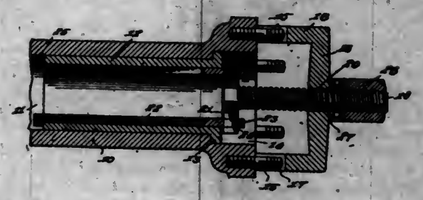
1,754,056. SOLE-CEMENTING MACHINE. WILLIAM H. SHUFFLEBARGER, Indianapolis, Ind. Filed Apr. 17, 1929. Serial No. 355,770. 3 Claims. (Cl. 12—36.)



1. In a shoe sole applying machine, a base, a bag holder mounted upon the base and including side and end walls, one of said walls being removable, a pneumatic bag removably located within the holder with the upper face of said bag exposed for engagement by the sole of a shoe, and means to apply downward pressure to the top of the shoe.

1,754,057. MANIFOLDING DEVICE. JOHN Q. SHERMAN and ALBERT W. METZNER, Dayton, Ohio, assignors, by direct and mesne assignments, to The Standard Register Company. Original application filed Dec. 27, 1920, Serial No. 433,208. Divided and this application filed Jan. 12, 1925. Serial No. 1,858. 3 Claims. (Cl. 271—2.4.)

1. A rotary feed element for machines of the character described, comprising a feed shaft, and a plurality of members mounted on said shaft, one of said members being fast thereon and the other loose, and means carried by the fast member for retaining the loose member in desired positions with relation to the fast member, said members having peripheries formed on the same arc the fast member being the one furthest advanced in the direction of movement of the shaft.

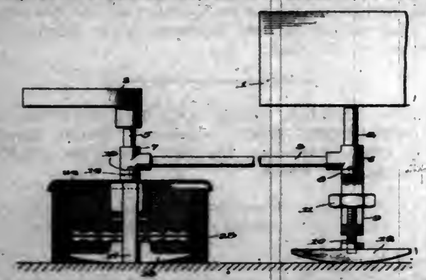


1,754,058. DENTAL PLATE AND THE METHOD OF CONSTRUCTING SAME. GEORGE A. SMITH, Springfield, Ohio. Filed Mar. 19, 1927. Serial No. 176,779. 4 Claims. (Cl. 32—4.)

1. The method of forming a dental plate consisting of preforming a blank of plastic material with an insert of plastic material of different uniform character to form the gum line, pressing said blank and its insert upon a mold equipped with teeth, and thereafter hardening the blank and insert.

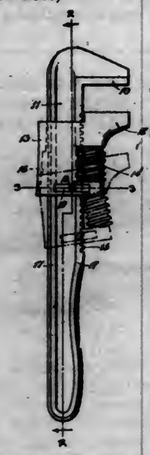
4. As an article of manufacture, a preformed blank for a dental plate consisting of a main portion of plastic material of uniform character throughout and another portion placed on the forward side of the main portion also of plastic material of a uniform character throughout but differing from the characteristics of the main portion of the blank.

1,754,059. LINER PULLER FOR HYDRAULIC PUMPS. MILEY J. STASER, Puerto Mexico, Mexico. Filed Oct. 3, 1928. Serial No. 310,078. 1 Claim. (Cl. 29—88.2.)



A puller for pump liners comprising a bridge plate of U-shape formation having portions removed in the extremities of the legs therefor to accommodate the projecting portions of stud bolts of cylinder heads therefor, a screw threaded shaft passed through an opening in said plate, a nut traveling upon the outermost end of the shaft and engageable with said plate, a cross bar horizontally disposed within the opposite end of said shaft, fingers adapted to be extended within the liners and having sliding adjustable connection at their outermost ends with the extremities of the cross bar, and abutments formed upon the innermost ends of said fingers being adapted to engage the inner peripheries of the liners.

1,754,060. MATCH CARD AND COVER. JACOB STEISS, New York, N. Y. Filed May 31, 1927. Serial No. 195,354. 2 Claims. (Cl. 44—44.)

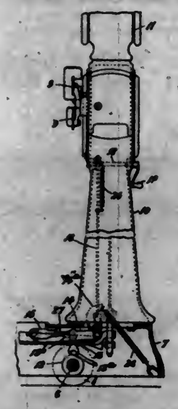


1. In match cards, a card cut into matches at its edge, said matches being twisted so as to have their original outer faces to oppose each other and to have their heads separated.

1,754,061. OIL-WELL CONTROL. WALTER C. STOLLBERG, Quincy, Ill., assignor of one-half to H. M. Sheer Company, Quincy, Ill., a Corporation of Illinois. Filed Apr. 14, 1927. Serial No. 183,807. 14 Claims. (Cl. 236—6.)

1. An oil control of the character described including a burner, a bolt connected with and for supporting the burner, a thermostat receiving the end of the bolt for supporting the burner and bolt, and a rocker upon which said thermostat is mounted.

1,754,062. WRENCH. NATHANIEL B. STONE, Washington, D. C. Filed Apr. 5, 1929. Serial No. 352,682. 3 Claims. (Cl. 81—158.)



1. In a wrench having a fixed jaw on a ribbed bar member, teeth on one edge of the bar; a slide member having a jaw; a screw propeller mounted on the slide member so that its threads intermesh with the teeth on the bar member; said slide having a flared socket to permit rocking movement thereof so as to disengage the screw from the teeth on the bar member; and a spring urged stop mounted in a side wall of the slide member to coact with a rib on the bar member as and for the purpose described.

1,754,063. COATED METALLIC-ARC WELDROD AND METHOD OF MAKING THE SAME. RICHARD STRESAU, Wauwatosa, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Mar. 12, 1925. Serial No. 14,939. 18 Claims. (Cl. 219—8.)

1. A metallic-arc weldrod comprising a metal rod provided with a covering containing a cellulosic flour.

1,754,064. PLATFORM WEIGHING MACHINE OF THE PORTABLE TYPE. CAMERON MCGREGOR SYKES and ARTHUR BINNS, Birmingham, England, assignors to W. & T. Avery Limited, Birmingham, England. Filed Aug. 27, 1928, Serial No. 302,330, and in Great Britain Oct. 4, 1927. 8 Claims. (Cl. 265—72.)

1. A platform weighing machine of the portable type embodying a rotatable supporting means for the machine, a member rotatable with and in association with said supporting means, means for locking the weighing mechanism in an inoperative position, means governed by the aforesaid member for maintaining the locking means in an inoperative position, means for bringing the locking means into operation consequent upon the disturbance of the member due to a bodily movement being imparted to the machine and means for effecting an unlocking of the said mechanism when required.

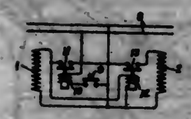
1,754,065. COLORED HEAT-RESISTING GLASS. WILLIAM C. TAYLOR, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a Corporation of New York. Filed June 12, 1925. Serial No. 36,737. 8 Claims. (Cl. 106—36.1.)

1. A colored heat-resisting glass of low coefficient of expansion of not more than .000005 and having high silica contents and containing lithia and boric oxide, and a usual coloring oxide which in a basic glass would produce approximately the color it produces in the heat resisting glass.

1,754,066. ELECTRICAL FITTING. FREDERICK A. TEPPT, Toledo, Ohio. Filed Mar. 1, 1926, Serial No. 91,428. Renewed Feb. 3, 1930. 3 Claims. (Cl. 247—25.)

1. An electric fitting comprising a tubular element having near a terminus thereof a peripheral groove, said groove on a common side of the element having a wall thereof away from said terminus providing a flaring portion and the opposite wall of increased overhang as an arm, and a screw through said arm coacting upon rocking assembly of the fitting through a circular opening in a wall to have the wall about the opening embraced by said groove throughout the groove extent with major clearance of the groove at the flaring portion and arm, said screw there operable toward the flaring portion to engage the opening rim and thereby holding the fitting in groove locking alignment with the opening axis.

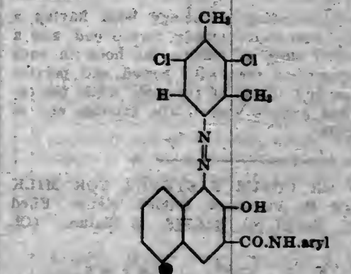
1,754,067. ILLUMINATED NAME AND NUMBER PLATE. ELWIN A. THOMAS and FOREST A. THOMAS, Willits, Calif. Filed Mar. 18, 1926, Serial No. 95,808. Renewed Nov. 14, 1929. 3 Claims. (Cl. 40—132.)



3. A structure of the character set forth, comprising a casing having its front wall provided with a slot and an opening below the slot, panels extending across the slot, and bearing indicia adapted to be illuminated from within the casing, an electric lamp socket arranged within the casing and secured to said wall with its lamp receiving end arranged adjacent said opening, and a closure plate removably secured to said wall over said opening.

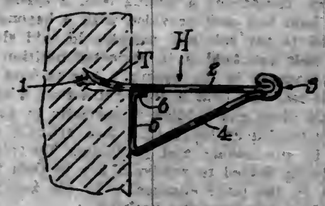
1,754,068. PROCESS OF WATER PURIFICATION. JOHN T. TRAVERS, Columbus, CHARLES H. LEWIS, Harpster, and OLIVER M. URBAIN, Columbus, Ohio, assignors, by direct and mesne assignments, to The Ohio Sanitary Engineering Corporation, Columbus, Ohio, a Corporation of Ohio. Filed Aug. 27, 1928. Serial No. 302,442. 10 Claims. (Cl. 210—9.)

1. A process for eliminating phenols from water, comprising incorporating in the phenol solution a mixture containing hydroxide of iron, calcium hydroxide and a catalyst bearing material, and incorporating the mixture in the solution in such proportions that the hydroxide of iron will be present in the solution in a quantity not less than 4.4 grains per gallon, the calcium hydroxide being present in the solution in a quantity not less than 14.8 grains per gallon, and the catalyst bearing material being present in the solution in the quantity of not less than 80 grains per gallon.



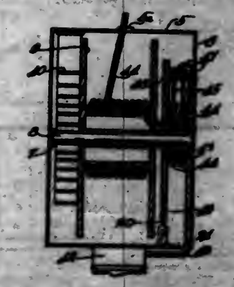
1,754,069. SOLENOID-OPERATED MECHANISM. HENRY TRENCHAM, Ruislip, HERBERT C. HEATH, Wembley, WILLIAM P. HAMLYN, Acton, London, and HAROLD E. COX, Beckenham, England, assignors to General Electric Company, a Corporation of New York. Filed Sept. 8, 1925, Serial No. 55,187, and in Great Britain Sept. 11, 1924. 3 Claims. (Cl. 175—335.)

1. Solenoid operated mechanism comprising a floating lever, an actuated rod pivoted to the lever, a pair of solenoids having plungers pivoted to the lever respectively at spaced points thereon and arranged when energized to move the actuated rod in the same direction, a relay connected to control one of said solenoids, and a relay connected to be controlled by said first relay and to control the other of said solenoids.



1,754,070. AZO DYESTUFF. HERMANN WAGNER, Bad Soden-on-the-Taunus, ERWIN HOFFA, ERNST RUNNE, ERWIN THOMA, and HANS HEYNA, Hochst-on-the-Main, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed July 5, 1927, Serial No. 203,672, and in Germany July 9, 1926. 4 Claims. (Cl. 260—95.)

1. As new products azo dyestuffs having the general formula:



which dyestuffs may be produced on the fiber and yield very fast red tints.

1,754,071. HOOK. CHARLES L. WAID, Palmer, Mass. Filed June 5, 1928. Serial No. 283,070. 1 Claim. (Cl. 248—22.)

A hook formed from strip metal comprising in combination, a driving head, upper shank and lower brace portions extending therefrom in a diverging relation, the end portions of the brace being bent towards said shank intermediate the ends thereof and having its extremity secured thereto, the said head consisting of at least four superposed contiguous portions of the strip provided by bending contiguous portions of the strip forwardly over said shank.

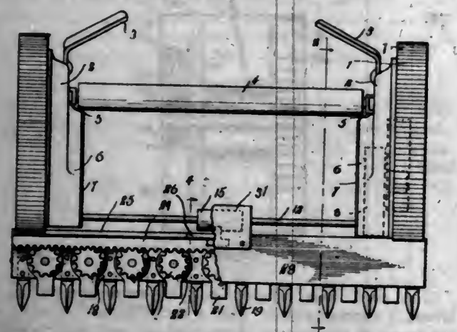
1,754,072. EXTENSIBLE ELECTRIC CONDUCTOR. JOHN T. WATTS, Chicago, Ill. Filed Sept. 22, 1926. Serial No. 137,026. 3 Claims. (Cl. 200—153.)

1. A cord take up and switch device comprising a frame, a current supply cord, a spring-drum journaled in the frame to take-up the current supply cord, and a switch incidental to the operation of the drum rotating at all times with the drum alternately turning on and off the current as the drum rotates.

1,754,073. SPOON HOOK. JOHN C. YATES, Baltimore, Md. Filed Sept. 23, 1927. Serial No. 221,487. 4 Claims. (Cl. 43—45.)

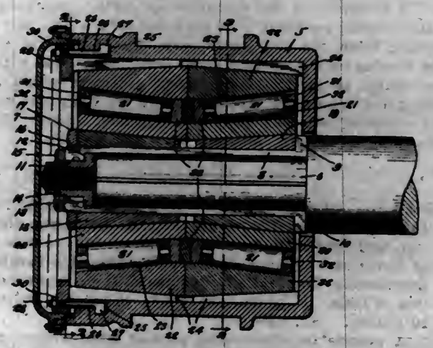
1. A spoon-hook including a springy hook having a bowed end portion and an oppositely turned end, and a spoon having alined slots to receive the hook in such spring-locked engagement that said bowed end portion presses against an end of one of the slots while the oppositely turned end presses against the extreme end of another of the slots.

1,754,074. LID OR COVER FASTENER FOR MILK CANS. ELIJAH B. ATKINSON, Oakley, Kans. Filed Jan. 24, 1929. Serial No. 334,776. 3 Claims. (Cl. 70—74.)



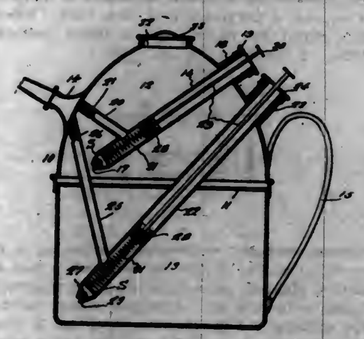
1. A lock, comprising a sliding bolt, a casing slidably mounting said bolt and provided with a bayonet slot, a lug secured to the bolt and movable in said slot to retract the bolt and hold it in retracted position, a plate rotatably mounted in the casing, a lug on said plate to engage the bolt and hold it from retraction, a spring engaging said plate and holding it normally in position to prevent retraction of the bolt, a lock cylinder rotatably mounted in the casing and journaling the plate, said cylinder being slotted to receive a key to turn it, and a projection on the plate engageable by the key to rotate the plate into bolt releasing position.

1,754,075. ELECTROPLATING BATH. JOSEPH BEDO, Cleveland, Ohio, assignor to Permachrome Process Corporation, Cleveland, Ohio, a Corporation of Ohio. Filed July 5, 1928. Serial No. 290,689. 2 Claims. (Cl. 204—1.)



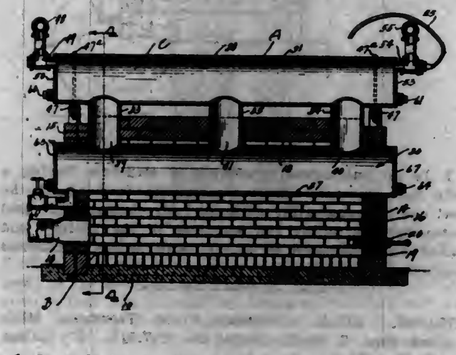
2. An electro-plating bath prepared by mixing sodium thiosulphate and chromic acid.

1,754,076. LAWN MOWER. CHARLES A. BLACKBURN, Washougal, Wash., assignor to Keystone Manufacturing Co., Inc., Chehalis, Wash. Filed Jan. 5, 1928. Serial No. 244,748. 1 Claim. (Cl. 56—262.)



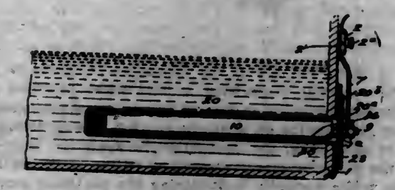
A lawn mower comprising a housing consisting of a transversely disposed base plate provided with an upstanding flange along its back edge, a cover plate secured to said flange and projecting forwardly over the base plate and provided with a depending flange along its front edge, a plurality of guard fingers secured to and projecting forwardly from the base plate, a plurality of oscillatory knives mounted upon the base plate under the cover and having their cutting ends projecting forwardly between the base plate and the cover and arranged alternately with the guard fingers, pinions fixed on the respective knives concentric with the pivots thereof, a rack bar disposed between the base plate and the cover and meshing with the pinions and guided by and between the pinions and the flange at the back edge of the base plate, a cam disposed at the rear of the housing and immediately adjacent the same, means for rotating the cam, and a finger secured rigidly to the rack bar and projecting rearwardly therefrom into engagement with the cam, the back of the cover and the back flange of the base plate being recessed centrally to accommodate the finger.

1,754,077. ROLLER BEARING. GEORGE FRED BLUME, Philadelphia, Pa. Filed Jan. 7, 1929. Serial No. 330,918. 6 Claims. (Cl. 308—207.)



1. In a device of the character described, a housing, an axle extending into the housing, a sleeve supported on the axle, tapered bearing sleeves mounted on the first mentioned sleeve, inner roller races on the tapered bearing sleeves, outer roller races having tapered inner surfaces, roller bearings mounted between the roller races, means for securing the outer roller races in position, and spacing rings arranged between the adjacent ends of the roller bearings.

1,754,078. OIL CAN. FRANK BORZI, Washington, D. C., assignor to Charles R. Summa, Waterbury, Conn. Filed Jan. 23, 1928. Serial No. 248,821. 8 Claims. (Cl. 221—51.)



1. In a liquid dispensing device, a container, a discharge spout for the container, a horisontal partition dividing the container into an upper chamber and a lower chamber, normally closed filling openings for the chambers, a cylinder extending into the upper chamber and having an inlet opening, a second cylinder extending into the lower chamber and also having an inlet opening, a discharge tube extending from each cylinder to the discharge spout, check valves for the inlet openings of the cylinders, spring influenced plungers within the cylinders, rods extending from the plungers to operate the latter, and check valves within the tubes.

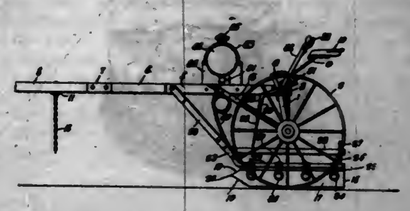
1,754,079. APPARATUS FOR BREAKING UP PETROLEUM EMULSIONS. JOHN D. BRADY, El Dorado, Ark., assignor to Brady Process Company, El Dorado, Ark., a Corporation of Delaware. Filed Dec. 18, 1925. Serial No. 76,339. 4 Claims. (Cl. 196—5.)

1. In a device for breaking up hydrocarbon emulsions the combination of upper and lower tanks, means to intercommunicate the tanks, means for heating the lower tank to a greater degree than the upper tank, means for feeding emulsified hydrocarbon into the upper tank, a single oil outlet in the upper tank for withdrawing oil in the liquid state, means for supplying fuel to the means for heating the lower tank, and means regulated by the temperature of the heated oil in the upper tank for automatically regulating the supply of fuel to said means for heating the lower tank.

1,754,080. CRANK-CASE HEATER FOR MOTOR VEHICLES AND THE LIKE. ADELBERT L. BRIGGS and HENRY SAUERS, Escanaba, Mich. Filed Apr. 5, 1929. Serial No. 352,860. 5 Claims. (Cl. 219—38.)

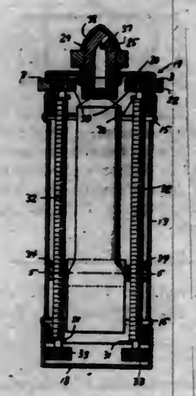
1. In the combination of a crank-case and heater, a casing insertible through a slot in the crank-case, the casing having an open end, a marginal laterally extending flange at the open end of said casing and adapted to abut the wall of the crank-case against the slot therein for limiting insertion of the casing into the crank-case, means for sealingly connecting the casing to said crank-case through the medium of said marginal flange, a heating unit insertible into said casing through the open end thereof, a closure for the open end of said casing, and means for supplying electric current to said heating unit.

1,754,081. COLLAPSIBLE BOX OR CASE FOR HOLDING ELECTRIC AND OTHER BULBS. JAMES BROWNLIE, Dennistoun, Glasgow, and ARCHIBALD HORSLEY, Thornliebank, Glasgow, Scotland. Filed May 7, 1928, Serial No. 275,815, and in Great Britain Dec. 10, 1927. 2 Claims. (Cl. 229—37.)



1. A collapsible box formed from a single blank and comprising four outer or covering wall members A, B, C, D initially arranged in a series side by side, an end member G united to one of said first named members, inner wall members L, M on opposite sides and united to said end member and closure flaps H, I at the outer ends of said inner wall members.

1,754,082. MAST ARM. PHILIP H. CHASE, Bala, Pa. Filed Aug. 14, 1925. Serial No. 50,247. 2 Claims. (Cl. 248—30.)

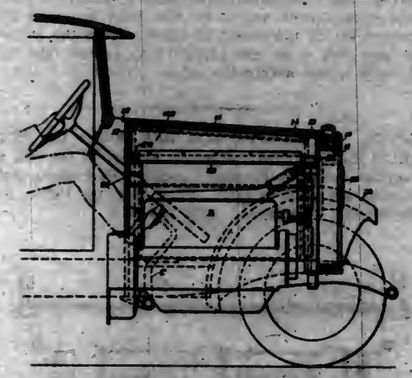


1. A bracket for holding the flattened braces of a mast arm comprising two walls and a pocket therebetween, lugs outside of said walls laterally drilled, pairs of lugs on said walls rearwardly of the first-named lugs arranged in staggered relationship thereto, a bolt passing through the drilled lugs whereby the flattened ends of outside braces are held to the lugs and the flattened end of another in said pocket, the non-flat portions of said first named braces resting between the members of the said pairs of lugs.

1,754,083. INSECT EXTERMINATOR. EUSTACE R. COLLINS, ALLEN B. EBERHART, and WILLIAM A. GILLENTINE, Fort Worth, Tex. Filed May 10, 1929. Serial No. 362,050. 1 Claim. (Cl. 43—144.)

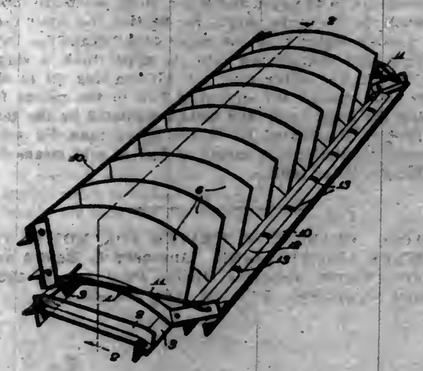
An insect exterminator comprising a wheeled frame, a driver's seat supported thereby, a tongue for said frame, means carried by said tongue for removing insects from plants, burner casings carried by said frame and adjustably mounted with respect thereto, means for adjusting the casings from the driver's seat, said casings including inwardly directed downwardly inclined top walls, outwardly inclined outer walls provided with openings arranged in parallelism and with respect to each other, burners carried by said casings and including burner coils disposed therein adjacent the openings thereof, burner nozzles included in said burners and disposed exteriorly of the casings to direct flames thru the openings and coils, and means for supplying fuel to the burners and carried by said frame.

1,754,084. DISPENSING DEVICE. RICHARD L. CORNELIUS, Paso Robles, Calif. Filed Dec. 31, 1928. Serial No. 329,459. 7 Claims. (Cl. 221—6.)



1. In a dispensing device of the class described, a casing adapted to encase a collapsible container of the class described, said casing being open at its opposite ends, removable and interchangeable closures for said ends, means in said casing for compressing the container to eject its contents, and operating means for said first named means including an actuating element carried by one of said closures.

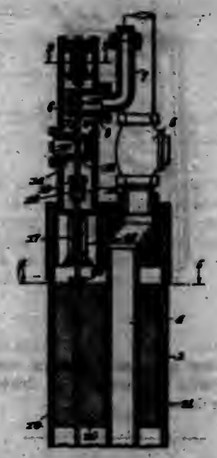
1,754,085. ELECTRIC MEASURING INSTRUMENT. HAROLD T. FAUS, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Sept. 27, 1928. Serial No. 308,729. 2 Claims. (Cl. 171—95.)



1. In an electric measuring instrument, a stationary field magnet provided with an air gap, a movable armature member in said air gap, and means for producing a zero restoring torque for said armature member, comprising a magnetic vane movable with the armature member but mounted outside of the influence of its field together with auxiliary pole pieces for diverting flux from said field magnet through said vane along an axis corresponding to the zero position of the vane, said auxiliary pole pieces being angularly adjustable with respect to the axis of rotation of said armature member to vary the zero setting thereof.

1,754,086. HOOD LEDGE PLATE AND MULTIPLE-COMPARTMENT HOOD FOR AUTOMOBILES. KARL FRILCKE, Toledo, Ohio. Filed July 12, 1928. Serial No. 292,074. 9 Claims. (Cl. 180—54.)

1. In an automobile, a comparted structure having a body compartment, and compartments forward of the cowl and communicating with the body compartment, and means for controlling the operation of the vehicle, said means being disposed in one of said second mentioned compartments.



1,754,087. MOLD. STEPHEN FLAM, Tecumseh, Mich. Filed Sept. 7, 1927. Serial No. 217,913. 11 Claims. (Cl. 25—121.)

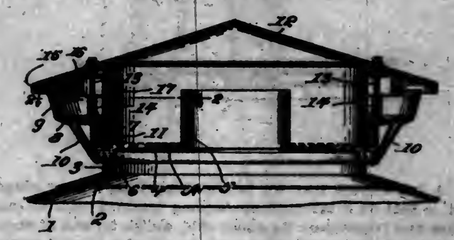
4. A mold for use in the formation of products from plastic material comprising a base plate provided with longitudinally spaced series of transverse slots, partition plates each having at least one ear for loosely fitting into one of said slots, the connection between the base plate and the partition plates permitting tilting of the partition plates while normally maintaining the partition plates in vertical position, means for holding said ears loosely positioned in said slots, and means for maintaining said partition plates in operative position during the molding operation.

1,754,088. PUMP FOR OIL WELLS. CHARLES E. FOLLIS, Allen, Okla. Filed Dec. 10, 1928. Serial No. 325,019. 1 Claim. (Cl. 103—248.)

A pump of the class described comprising a barrel, a lower extension thereon, a discharge pipe extending into the lower part of the barrel, a tubular member in communication with the top of the barrel, said tubular member having a discharge port and an inlet port therein, a supply of compressed fluid connected with the inlet port, a valve stem in the tubular member, valves thereon for controlling the ports, the inlet valve closing its port while the discharge valve is in open position and vice versa,

spring means for giving the valve stem a snap action, a float rod actuated by the float at the extremities of movement of the float, spring means for giving the float rod a snap action and a coupling between the float rod and valve stem for preventing movement of the stem by the float rod until the rod has been moved by its spring means.

1,754,089. TENTERING MACHINE. THOMAS W. FRANCE, Providence, R. I., assignor to H. W. Butterworth & Sons Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 14, 1929. Serial No. 339,988. 8 Claims. (Cl. 26—57.)

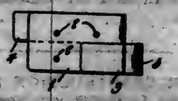


1. In a tentering machine, a frame for supporting a lower set of web tentering mechanism, a frame for supporting an upper set of web tentering mechanism above the lower set, means on the lower frame for supporting the frame for the upper set, means for independently adjusting each set, and means for driving both sets.

1,754,090. POWDER PUFF. LEONARD FRIEDBERG, Brooklyn, N. Y. Filed Oct. 2, 1928. Serial No. 309,818. 4 Claims. (Cl. 132—73.5.)

4. As a new article of manufacture, a powder puff including a face contacting portion, a back formed by a plurality of members, the adjoining edges of which are inwardly disposed and joined by stitchings, and a handle secured between said members of said back by the stitchings which join said members, the ends of said handle extending between said members inwardly parallel to the inwardly turned adjoining edges thereof, said stitchings being disposed on the inwardly extending portions of said members and said handle.

1,754,091. TANK-SEALING DEVICE. EMERY G. FRIEDMAN, Tampico, Mexico. Filed Jan. 4, 1929. Serial No. 330,215. 8 Claims. (Cl. 220—45.)



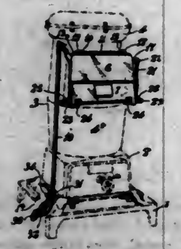
1. In combination with a container having a "breather" passage in its upper part, a gutter in the lower wall of the passage, one wall of the gutter being higher than the other, a flange connected with the top wall of the passage and extending into the gutter, said gutter containing a sealing fluid whereby the sealing fluid offers more resistance to the passage of the gases or air in one direction than it does to the passage of air or gas in the opposite direction, a second gutter connected with the high wall of the first gutter and tubes connecting the second gutter with the first gutter.

1,754,092. THREAD CUTTER. WILLIAM G. FUNK, Covington, Ky., assignor of one-fourth to Stanley G. Clark, Cincinnati, Ohio, and one-fourth to Frank M. Andrews, Fort Thomas, Ky. Filed Nov. 10, 1925. Serial No. 68,204. 8 Claims. (Cl. 10—111.)

3. In thread cutters, a cutter bar having a series of cutting teeth arranged transversely on the end thereof with intervening metal clearance grooved therebetween and the shank or body of each tooth formed in the shape of a truncated bevel and increasingly reduced in transverse area from its cutting point to its other end, the cutting end of each tooth being beveled to a point and undercut to form a thread cutting edge and to provide a shaving clearance recess through which the removed metal is discharged therethrough and through the clearance grooves.

1,754,093. MARKER FOR BANK PASS AND OTHER BOOKS AND HOLDER FOR CHECKS OF CHECK FOLDS. PEARSE A. GETZ, Portland, Oreg. Filed Feb. 16, 1928. Serial No. 254,770. 1 Claim. (Cl. 24—66.)

A book marker made of a single blank of sheet material, the blank being split from one end longitudinally to provide fingers, said fingers being folded against opposite sides of the remainder of the blank, one of said fingers at its free end extending beyond the free end of the



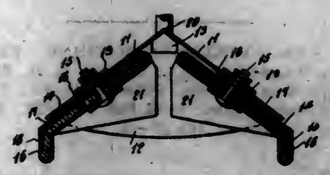
blank, the other finger terminating at its free end short of said free end of the blank, and the latter finger at the fold extending beyond the fold of the other finger.

1,754,094. SELF-SERVING TRAY. GEORGE GLASS, Sr., Erie, Pa. Filed Aug. 4, 1925. Serial No. 48,103. 1 Claim. (Cl. 45—26.)

A self-serving tray for tables, comprising a base adapted to seat on a table, an upstanding spherical boss in said base and recessed on its under side, a disk formed of sheet metal and having an offset portion centrally thereof seated on said boss, said disk provided with a plurality of openings, anti-friction bearing members in said openings and bearing on the base, the sheet metal forming the disk being bent to form a flange around each of said openings to enclose the anti-friction bearings, a platform supported on said offset portion and said bearing members, and a securing member engaging through alined openings in the platform, the offset portion and the boss and permitting rotation of the platform and disk relatively to the base.

1,754,095. DOOR-OPERATING DEVICE FOR STOVES AND FURNACES. CHARLES L. GOHMANN, New Albany, Ind. Filed May 23, 1928. Serial No. 280,054. 11 Claims. (Cl. 110—178.)

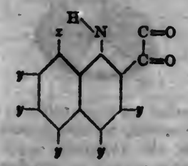
1. In combination, a pair of stove doors comprising an upper and lower door, a link pivotally connecting said doors with each other, a rod pivotally connected to the upper of said doors, a foot pedal attached to the lower end of said rod for opening said doors, a weighted plate slidably mounted relative to the lower of said doors and adapted to exert inward pressure upon said lower door when the latter is in closed position and for exerting downward pressure on said lower door, which in turn exerts upward pressure upon the upper door through said link when said doors are in the closed position, and a foot pedal combined with said first-mentioned foot pedal for closing said doors.



1,754,096. DOOR CONSTRUCTION FOR STOVE CASINGS. CHARLES L. GOHMANN, New Albany, Ind., assignor to Gohmann Bros. and Kahler Company, New Albany, Ind., a Corporation of Indiana. Filed Feb. 4, 1929. Serial No. 337,286. 3 Claims. (Cl. 126—190.)

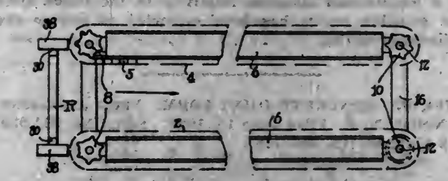
1. In a stove casing having a door opening therein, a pair of doors adapted to close said opening, a pair of rods mounted adjacent said casing upon which said doors are slidably mounted, a pulley adjacent the top of each rod, a pair of chains each connected to said doors, respec-

tively, and passing over said pulleys, respectively, and means whereby said doors may be drawn to open or closed position as desired.



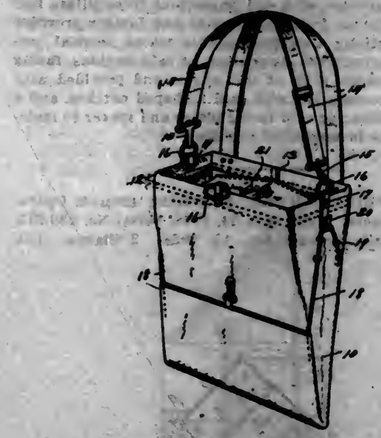
1,754,097. BOLL-WEEVIL AND VEGETATION EXTINGUISHER. WILLIAM R. GREENHAW, Healdton, Okla. Filed Feb. 7, 1929. Serial No. 338,215. 5 Claims. (Cl. 126—271.2.)

1. A device of the class described comprising a hood, a torch to produce a flame interiorly of the hood, an air entrance opening in the hood, and supporting means for the hood adjustable on the hood and having flanges movable by adjustment of said means to vary the extent of said opening.



1,754,098. PROCESS OF MAKING NAPHTHISATIN COMPOUNDS. JOSEF HALLER, Wiesdorf-on-the-Rhine, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Nov. 29, 1926, Serial No. 151,608, and in Germany Dec. 3, 1925. 5 Claims. (Cl. 260—47.)

3. As new products the compounds of the general formula—

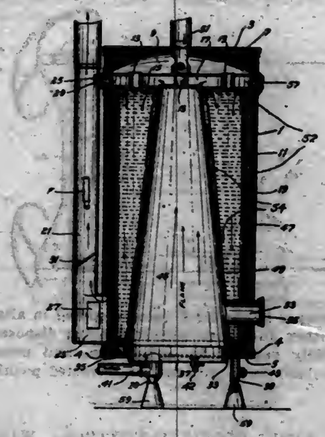


wherein x represents a halogen atom and y represents hydrogen or a monovalent substituent.

1,754,099. TENTERING MACHINE. JOHN H. HAMILTON, Holyoke, Mass., assignor to B. F. Perkins & Son, Inc., Holyoke, Mass., a Corporation of Massachusetts. Filed May 6, 1929. Serial No. 360,736. 7 Claims. (Cl. 26—52.)

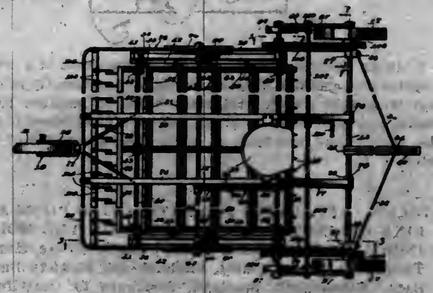
1. A tentering machine comprising in combination, a pair of endless chains for gripping opposite edges of a web, separate driving mechanisms for each chain, mechanism for controlling the relative speed thereof and a detector engageable by a web as it is fed to said chains for actuating said control mechanism.

1,754,100. FRUIT-PICKER'S BAG. HENRY HAMMOCK and GRANT RIDDLE, Boise, Idaho. Filed Jan. 12, 1928. Serial No. 246,224. 4 Claims. (Cl. 150—2.)



1. A fruit picking bag having a baffle of textile fabric secured in the mouth of the bag below the top thereof, the baffle inclining downward from its middle toward its ends and said ends being spaced from the body of the bag to permit the passage of fruit over the ends of the baffle.

1,754,101. INSULATOR AND MOLD FOR CASTING THE SAME. HENRI LOUIS JOSEPH HAQUIN, Voyenne, France. Filed Mar. 15, 1928, Serial No. 261,793, and in Belgium Oct. 10, 1927. 4 Claims. (Cl. 49—65.)

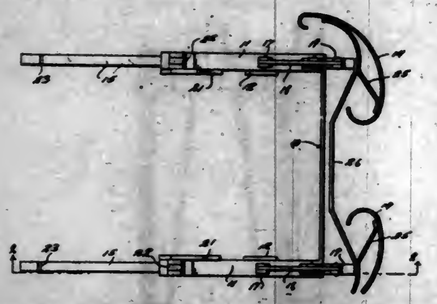


1. A mold assembly comprising in combination a pair of mold members adapted to be moved towards and away from one another, said mold members having a molding cavity formed therein whose surface includes a bridge-like portion extending between two parts thereof, and a pair of bent core members pivotally mounted on a common axis, said core members when inserted in operative position in the mold cavity passing under said bridge-like portion of the latter and contacting thereunder.

1,754,102. BOILER. SAMUEL B. HARDING, Oshkosh, Wis. Filed Mar. 9, 1927, Serial No. 174,045. Renewed Sept. 11, 1929. 8 Claims. (Cl. 122—159.)

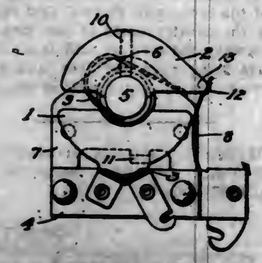
1. A boiler comprising a shell containing water, an inner flue passing from end to end through said shell, a spaced skirt in annular relationship with respect to the water side of the outer wall of said shell and a spaced inner skirt in annular relationship with respect to the water side of the inner wall thereof, said skirts extending substantially the greater parts of the wall lengths, said inner wall forming the wall of said inner flue, the space between skirts being open and free, and a heating flue spacedly surrounding the outer wall of the shell.

1,754,103. HARROW. JOHN M. HJERMSTAD, Red Wing, Minn. Filed Apr. 30, 1928. Serial No. 274,146. 7 Claims. (Cl. 97—46.)



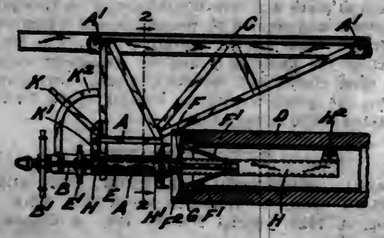
1. A cultivator comprising a frame, an axle carried by the frame, traction wheels mounted on the axle, a plurality of pairs of spaced sprockets, chains trained over pairs of the sprockets, spaced angle bars located in a horizontal plane and carrying the sprockets, bars provided with teeth and secured to the chains and transversely of the frame, means located centrally of the frame for bodily elevating the angle bars and for swingably supporting said bars, chains and sprockets, means operatively connecting the sprockets with the traction wheels for causing a braking action on the chains.

1,754,104. EXTENSIBLE BUMPER FOR AUTOMOBILES. JOHN C. HOFFMAN, Sioux City, Iowa. Filed Aug. 3, 1929. Serial No. 383,199. 4 Claims. (Cl. 293—55.)



1. An extensible bumper for motor cars comprising a tubular element, a bumper, a shank having sliding en-

gagement through the tubular element, arms, one pivoted to the shank of the bumper and the other pivoted to the tubular element, the arms being pivoted to each other, and

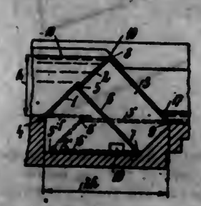


when the bumper is projected being disposed in alignment with each other and when retracted being disposed in a position nearly parallel to each other, and means for locking the shank in a projected or retracted position.

1,754,105. RADIO RECEIVER CONTROL. WALTER E. HOLLAND and DAVID P. EARNSHAW, Philadelphia, Pa., assignors to Philadelphia Storage Battery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 11, 1929. Serial No. 354,234. 5 Claims. (Cl. 175—41.5.)

1. In an electrical condenser, the combination of a rotor, a stator and a switch blade normally held resiliently in contact with said stator, said blade being in position to be engaged by said rotor to break the contact between it and the stator, and establish a contact between it and the rotor.

1,754,106. APPARATUS FOR EXTRACTING PIPES AND LIKE CYLINDRICAL ARTICLES FROM THE MOLDS IN WHICH THEY ARE CAST. JAMES EDGAR HURST, Thorncliffe, near Sheffield, England, and EDMUND BRUCE BALL, Kilmarnock, Scotland, assignors to Centrifugal Castings Limited, Kilmarnock, Scotland, a Registered Company of Great Britain. Filed Dec. 3, 1928, Serial No. 323,465, and in Great Britain Jan. 17, 1928. 6 Claims. (Cl. 22—94.)

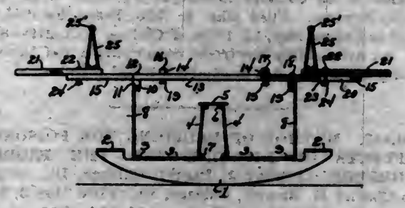


1. In apparatus for extracting cylindrical articles from the molds in which they are cast, the combination of a frame mounted to travel in a longitudinal direction relatively to the mold, a supporting member on the frame, an expansible gripping device on said member, means for expanding and contracting the gripping device and means for moving the supporting member and gripping device in a longitudinal direction relatively to the frame after the gripping device has been expanded to engage the cylindrical casting.

1,754,107. CONCRETE JOINT FORM. PETER JANNARONE, Nutley, N. J. Filed June 18, 1929. Serial No. 371,039. 2 Claims. (Cl. 25—118.)

1. In an expansion joint form of the class described, a laminated structure comprising a central spacer composed of sections provided with end projections to facilitate lifting of the sections from the concrete and further provided with substantially L-shaped notches whose vertical portions open through the lower edges of said sections, facing plates on opposite sides of said spacer and provided with notches for cooperation with said L-shaped notches, and a crown cap embracing said facing plates and spacer to maintain the parts in assembled relation.

1,754,108. WEIR SHUTTER. FRANTIŠEK JERMÁŘ, Opava, Czechoslovakia. Filed May 24, 1928, Serial No. 280,273, and in Czechoslovakia Jan. 18, 1928. 2 Claims. (Cl. 61—27.)

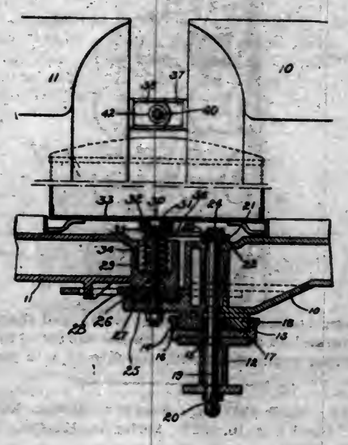


1. A hydrostatic weir shutter of the character described comprising a substructure formed with a well, a normally roof-shaped, collapsible shutter structure supported on the substructure above the well, the low water side and the upper portion of the high water side of the shutter structure being formed of two hingedly connected leaves, pivoted struts supporting the free end of the outer leaf so as to allow the two leaves to collapse into the well, the lower portion of the high water side of the shutter structure being formed of a leaf which is pivoted to the substructure and supported at its free end on the leaf forming the upper portion so as to slide thereon when the shutter is adjusted and so as to cover the same when the shutter is in collapsed position.

1,754,109. ROCKING TOY. HERMAN KITZE, Owen, Wis. Filed June 3, 1929. Serial No. 368,057. 3 Claims. (Cl. 272—56.)

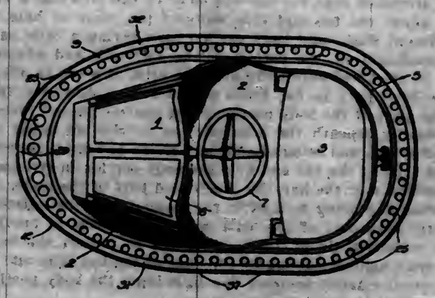
1. A child's rocker designed for use by one, two or three children, comprising a pair of spaced rocker members,

boards connected to the upper ends of the rockers, other boards connected to the upper edges of the rocker but arranged inwardly of the end boards, a seat centrally supported by and arranged above the last mentioned boards, metal uprights secured to the rockers inward of the end boards and outward of the last mentioned boards, transverse wooden plates connecting the uprights, side rails overlying and secured to the ends of the uprights, trans-



verse plates connecting the side rails, plates underlying the inner transverse plates and overlying the outer transverse plates, arranged at the center thereof and removably secured thereto and said plates extending beyond the ends of the rocker and provided, adjacent to their outer ends with elongated slots and a seat arranged over each of the last mentioned plates having a nut engaged bolt passing therethrough and passing through the slots in the said plates.

1,754,110. GREASE ABSORBER. GUSTAV KLEIN, Philadelphia, Pa. Filed Mar. 6, 1929. Serial No. 344,826. 1 Claim. (Cl. 126—299.)

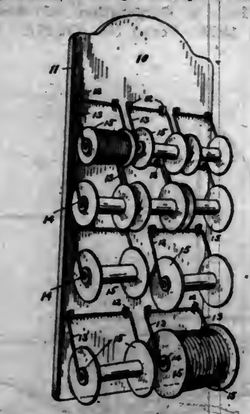


In a grease absorber for gas ranges, the combination with a pipe section to fit the outlet pipe leading from the oven of the range, of a cowl mounted upon and carried by the upper end of the pipe section, said cowl comprising a body tapered toward its upper end in a relatively small angular shape from the front to the back of the cowl, and being of a width substantially equal to and spaced above the upper end of the pipe section, said structural area of said upper end of the cowl constituting a pocket for the reception of metallic wool spaced a substantial distance above and directly over the upper end of the pipe section, the back of the cowl being straight and substantially in the same direction as the back wall of the pipe section, said upper end of the cowl having an apex positioned substantially toward the perpendicular center of the pipe section, the front wall of the cowl being disposed on a relatively steep incline from the apex forwardly and downwardly and overlying the pipe section a substantial distance, whereby the grease may be absorbed by the entangled portions and loose ends of the metallic wool, while the products of combustion free of the grease are deflected downwardly and forwardly, and means extending side ways across the cowl for supporting said metallic wool.

1,754,111. ARTICULATED CAR. ELMER LATSHAW, Philadelphia, Pa., assignor to The J. G. Brill Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 12, 1929. Serial No. 392,176. 15 Claims. (Cl. 105—4.)

13. The combination of two cars, a truck supporting the end of one car, an extension on said car end beyond the truck support forming a bearing, and an adjoining car body pivotally mounted on the extension.

1,754,112. AMUSEMENT-CAR CONSTRUCTION. ROBERT JAKOB LUSSE, Philadelphia, Pa., assignor to Lusse Brothers, Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 25, 1928. Serial No. 308,264. 14 Claims. (Cl. 293—55.)



1. A bumper for vehicles, comprising cushion means, protective means for said cushion means affording an exposed abutting surface for said bumper, and means including a flexible element, whereby said protective means may be secured in operative relation to said cushion means.

1,754,113. MERCHANDISE-DISPLAY APPARATUS. BASIL N. MACGREGOR, Warren, Ohio, assignor to The Packard Electric Company, Warren, Ohio, a Corporation of Ohio. Filed Oct. 21, 1925. Serial No. 63,839. 1 Claim. (Cl. 242—134.)

In apparatus of the class described, the combination of a sheet metal panel having hooks on the face thereof struck up from the metal thereof and arranged in pairs, said

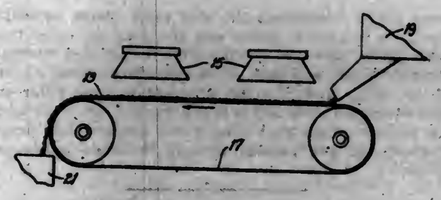
panel having marginal rearwardly extending flanges, hangers arranged on the respective pairs of said books and

comprising horizontally extending pivots, and spools rotatably arranged on said pivots with the flanges of said spool in frictional engagement with the face of said panel.

1,754,114. HAT COVER. STANLEY MANOS, New York, N. Y. Filed Aug. 10, 1926. Serial No. 128,407. 1 Claim. (Cl. 2—187.)

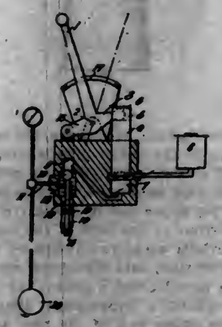
A rain shedding hat cover adapted to be collapsed into small space for carrying in the pocket, comprising a body portion of thin stretchable light waterproof material constructed to the general configuration of a hat and having a crown part with a top wall and a side wall adapted to be stretched over the top and side of the crown of a hat to adapt the top and side walls of the cover to hats of different sizes, said body portion also having a brim part extending from the bottom of the side wall and adapted to be stretched outwardly over the brim of a hat to adapt the brim part to hat brims of different widths, the free edge part of the body portion being contracted and turned inwardly beneath the brim part to provide an under securing flap and being of sufficient width to engage beneath the brim of the hat and hold the body portion in stretched position over the hat, the overturned part of the under securing flap being secured to the underside of the adjacent outer edge part of the brim part of the cover to provide an extension lip of double thickness to protect the body portion against cutting by the edge of the hat brim and to assist the under securing flap in holding the body portion in stretched position over the hat.

1,754,115. ANTIRATTLING DEVICE. DAISY W. MELL, Athens, Ga. Filed Oct. 24, 1927. Serial No. 228,445. 3 Claims. (Cl. 296—44.)



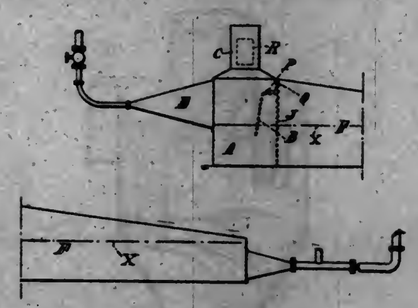
1. An anti-rattling device comprising a forked member of yielding material having parallel limbs arranged to embrace the upper edge of a pane of glass, said members being of a length sufficient to pass between the edge of the glass and the adjacent walls of a casing in which the glass slides when the glass is in fully lowered position, and to wedge the pane of glass tightly in its casing.

1,754,116. ELECTRODE SUITABLE FOR ARC WELDING. FRANCIS MEUNIER, Hyon les Mons, Belgium, assignor to La Soudure Electrique Autogene S. A., Brussels, Belgium. Filed Mar. 8, 1929, Serial No. 345,620, and in France Mar. 12, 1928. 2 Claims. (Cl. 219—8.)



1. An arc-welding electrode, comprising a rod having a coating containing 3–5% of alkali metal nitrates.

1,754,117. METHOD OF REDUCING THE POISONOUS EFFECTS OF NICOTINE AND THE PRODUCT THEREOF. AUGUST J. PACINI, Chicago, Ill., assignor to Charles M. Richter, Chicago, Ill. Filed May 3, 1929. Serial No. 360,256. 3 Claims. (Cl. 131—60.)

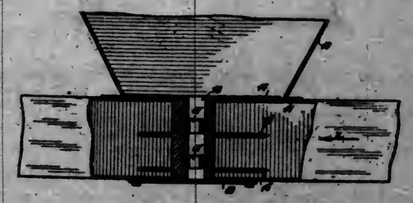


1. The method of treating cured tobacco containing toxic nicotine which comprises artificially irradiating said tobacco, to reduce the toxicity of the nicotine content of said tobacco, and substantially maintaining said nicotine content unaltered.

1,754,118. HYDRAULIC POWER-TRANSMITTING APPARATUS. REGINALD KIRSHAW PIERSON and THOMAS SMITH DUNCAN, Westminster, England, assignors to Vicker's Limited, Westminster, England, a British Company. Filed June 18, 1929, Serial No. 370,672, and in Great Britain Mar. 10, 1928. 4 Claims. (Cl. 60—54.6.)

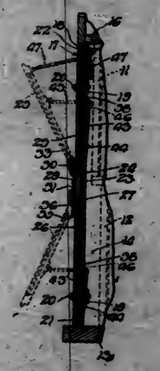
4. Hydraulic power transmitting apparatus comprising in combination a hand-operated plunger pump, a liquid-pressure actuated motor, a pipe connecting said pump and said motor, an unbalanced non-return delivery valve in said pipe, a stem to said valve, at least one stop fitted on said stem, a hand lever for reciprocating said pump plunger, means associated with said hand lever and stop for mechanically holding said valve closed when said plunger is at the end of its delivery stroke and mechanically opening said valve when said plunger is moved beyond the end of its normal suction stroke.

1,754,119. APPARATUS FOR SEPARATING LIQUIDS OF DIFFERENT DENSITIES. FRANK PINK, Portsmouth, England. Filed Mar. 29, 1928, Serial No. 265,713, and in Great Britain Jan. 27, 1928. 2 Claims. (Cl. 210—51.)



1. An apparatus for separating liquids of different densities, comprising a horisontal separating vessel composed of front and rear chambers with communicating openings therebetween, a depending baffle in the front chamber, one way valve means in the baffle and between the chambers opening toward the top of the front chamber, a plurality of parallel conical inlet members located exteriorly of and opening at their base portions into the forward end of said front chamber, a single source of mixture supply connected to the smaller ends of said conical inlet members for delivering the mixture thereto, said conical members proportionately increasing in cross sectional area toward the front chamber to reduce the velocity of the mixture before reaching the chamber to such extent as to prevent turbulent movement of the mixture into and through the horisontal vessel, and means in the upper part of the front chamber for drawing off the segregated lighter liquid from the mixture.

1,754,120. VACUUM ELECTRIC TUBE. ERNEST YEOMAN ROBINSON, Withington, Manchester, England, assignor to Metropolitan-Vickers Electrical Company Limited, a Company organized under laws of Great Britain. Filed June 27, 1924, Serial No. 722,811, and in Great Britain July 16, 1923. 11 Claims. (Cl. 250—27.5.)

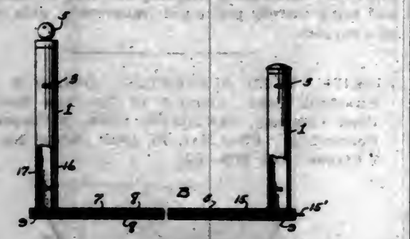


1. For a vacuum space current device, an electrode structure comprising a rigid elongated support, a plurality of electrode carriers having portions engaging said support and constrained to move only in a direction longitudinally thereof to aline said carriers longitudinally and position them transversely of said support, said carriers having electrode-positioning surfaces which are alined when said carriers are alined on the support, and an elongated electrode, which is rectilinear and of uniform cross section throughout its length, said electrode engaging the alined electrode-positioning surfaces of said carriers and being thereby positioned transversely with respect to said support.

1,754,121. FEED APPARATUS. DONALD S. SAMMIS, Stratford, Conn., assignor to The New Haven Sand Blast Company, New Haven, Conn., a Corporation of Connecticut. Filed Mar. 16, 1928. Serial No. 262,241. 7 Claims. (Cl. 302—36.)

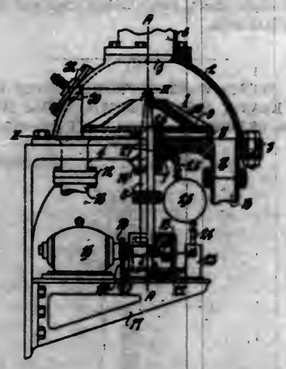
1. In a feed apparatus for finely divided material, a feed plate comprising a hollow shaft, and platforms extending from said hollow shaft, there being openings in said shaft above the platforms.

1,754,122. WINDOW STRUCTURE. JOHN B. SAUNDERS and JOE KRANIG, Park Falls, Wis. Filed May 15, 1929. Serial No. 363,306. 3 Claims. (Cl. 20—55.)



1. In combination with a window structure, a frame, means for securing said frame in said window structure, sash members, arms projecting beyond the vertical edges of said sash members, means on said frame providing sockets in which said extending portions may be pivotally mounted, plates on said frame, arms pivotally mounted on said sash members extended through openings in said plates, and means for retaining said arms in engagement with said sash members with portions thereof extending over said plates.

1,754,123. ELECTRIC TOY FENCE. JOHN P. SCHERY, Pittsburgh, Pa. Filed Dec. 3, 1928. Serial No. 323,330. 5 Claims. (Cl. 46—37.)

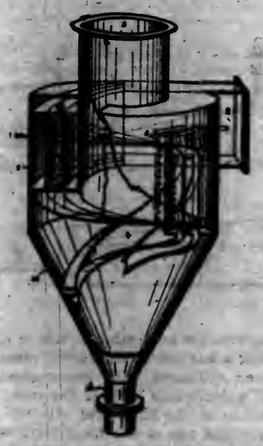


1. A toy fence comprising posts, a sectional base to which the posts are attached, fence sections detachably connected with the posts, lamps carried by some of the posts at their upper ends, socket members at the ends of the base sections, each member having a transversely ar-

ranged socket and a longitudinally arranged socket therein, plugs carried by some of the base sections for engaging the sockets of other sections and means for electrically

connecting the lamps on the posts with the socket members and with the plugs of the sections which carry the lamp supporting posts.

1,754,124. DISTRIBUTION MEANS FOR PULVERULENT MATERIAL. CHARLES SKENTELBERY, Denmark Hill, and GEORGE ROSCOE ALDEN, Westminster, England. Filed May 31, 1928, Serial No. 282,026, and in Great Britain May 9, 1928. 9 Claims. (Cl. 302—28.)



1. A distributor for pulverized fuel comprising a circular chamber having an axially disposed inlet and a plurality of outlets equally spaced apart and equi-distant from the central axis of the chamber, an impeller mounted in the chamber and rotatable about the axis thereof, and means for admitting auxiliary air to agitate the fuel in the region of the junction of the chamber with the supply pipe and before entry into the impeller.

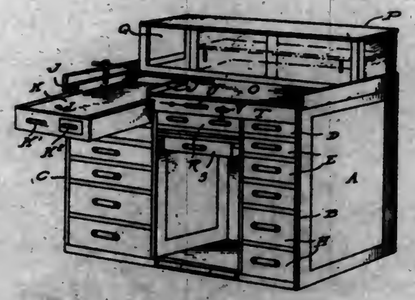
1,754,125. ELECTROLYTIC RECOVERY OF METALS. STANLEY COCHRAN SMITH, London, England. Filed Apr. 19, 1929, Serial No. 356,591, and in Great Britain Mar. 30, 1928. 1 Claim. (Cl. 204—14.)

A process for substantially completely exhausting the nickel by electro-deposition from nickel sulphate solutions of low acidity, which process comprises passing an electric current through the solution at a current density of approximately 17 amperes per square foot of cathode area between an insoluble anode and a cathode, continuing the operation until the solution has become substantially free from nickel, meanwhile converting the sulphuric acid thereby produced in the solution into ammonium sulphate substantially simultaneously with its production, whereby the low acidity is constantly maintained during the entire process, and reducing the current density to approximately 8.5 amperes per square foot when the nickel concentration reaches approximately one per cent.

1,754,126. APPARATUS FOR SEPARATING DUST FROM GASES. ARTHUR STIENENART, Boitsfort, Belgium. Filed Jan. 28, 1928, Serial No. 250,267, and in Belgium Feb. 4, 1927. 11 Claims. (Cl. 183—85.)

3. Apparatus for separating dust from gases by centrifugal force, comprising concentrically arranged compartments for conducting gas, and arranged to effect circuitous travel thereof, an outlet toward which the gas passes after leaving the compartments, a receiver for the separated matter delivered from the discharge ends of the compartments, a plurality of ducts extending toward the said receiver, one said duct being disposed at the delivery end of each compartment except the outer compartment.

1,754,127. PIPE COUPLING. HERMANN SRULOWITZ, Vienna, Austria, assignor to the Firm of Alex. Friedmann, Vienna, Austria. Filed Oct. 1, 1925, Serial No. 59,925, and in Austria Oct. 20, 1924. 7 Claims. (Cl. 285—93.)

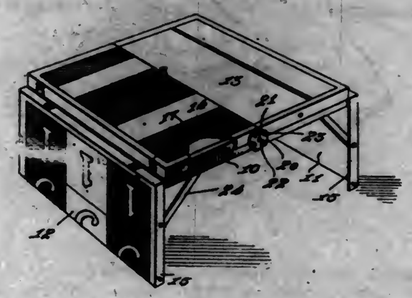


2. In a swivel joint with straight passageways for the pipes or hose of railway cars, two members angularly displaceable relatively to each other, one of said members consisting of two parts with a pivotal connection between them, a sealing means on one part of the composite member, and a spherical bearing surface on the other part of said composite member, the other non composite member co-operating with both parts of the composite member by means of a corresponding sealing means and a corresponding sealing means and a corresponding spherical bearing surface both arranged simultaneously on said member.

1,754,128. WATCHMAKER'S CABINET. ARTHUR S. THOMPSON, Ontario, Calif. Filed Dec. 17, 1928. Serial No. 326,521. 2 Claims. (Cl. 312—160.)

1. A cabinet having a top provided with a compartment at the rear portion thereof for housing a motor and a

recess in said top opposite said compartment, a lathe board slidably mounted in said recess and means for securing said board in various positions of adjustment



with respect to said cabinet, whereby a lathe mounted on said board may be brought to a convenient position of use and the belt driving said lathe from said motor may be tightened.

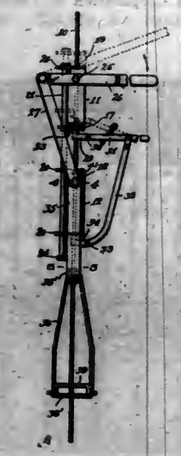
1,754,129. PROCESS OF WATER PURIFICATION. JOHN T. TRAVERS and OLIVER M. URBAIN, Columbus, Ohio, assignors, by direct and mesne assignments, to The Ohio Sanitary Engineering Corporation, Columbus, Ohio, a Corporation of Ohio. Filed July 13, 1928. Serial No. 292,587. 6 Claims. (Cl. 210—2.)

1. A process for purifying water comprising incorporating in the water colloidal matter having no biochemical oxygen demand, raising the hydroxyl ion concentration of the solution to cause the colloids to carry a complete negative charge, and adding an electrolyte characterized by its capacity to dissociate and release positive ions for adsorption by the negatively charged colloids and negative ions for union with the water of the solution to effect a release of nascent oxygen in an amount adequate to satisfy the biochemical oxygen demand of the water.

1,754,130. GAME APPARATUS. EDWARD R. UCHIYAMA, Sacramento, Calif. Filed May 15, 1929. Serial No. 363,845. 2 Claims. (Cl. 273—136.)

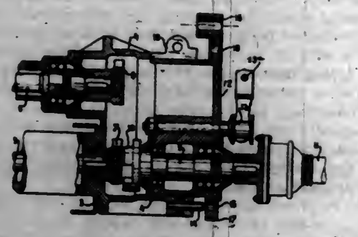
1. A game apparatus comprising a frame, game boards of sectional formation hingedly mounted upon opposite sides of said frame, each game board comprising two sections hinged to opposite edges of one side of said frame and having flange portions carried upon their outer sides to overlie the adjacent portions of said frame, the sections of either game board being movable on their hinges to a position at right angles to the frame to serve as legs for the frame and the other game board, and brace members carried by said frame and adapted for attachment to the leg forming sections.

1,754,131. COKING RETORT OVEN. JOSEPH VAN ACKEREN, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 4, 1923. Serial No. 636,535. 31 Claims. (Cl. 202—143.)



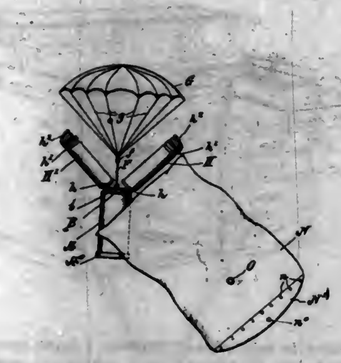
1. In a coke oven battery, in combination: a series of alternate horizontal coking chambers and heating walls therefor arranged laterally of each other, each of said heating walls comprising vertical combustion flues; a plurality of horizontal flues in each of said heating walls and respectively connecting a plurality of the combustion flues of their respective heating walls; the horizontal flues being also communicably connected with the horizontal flues of one of the adjacent heating walls so that the heating walls are operatively connected in pairs; and a series of crosswise regenerators, each as wide as but not as great in vertical dimensions as each of said heating walls, the regenerators being grouped in parallel in pairs of contiguous regenerators, with the alternate pairs operable in alternation with the intermediate pairs for inflow and outflow, each regenerator being connected by forked duct means with combustion flues of both of two adjacent heating walls comprising one heating wall of each of two of the connected pairs thereof, and each of the combustion flues in each of the heating walls having flow connection by said forked duct means with a pair of said regenerators adapted to operate in parallel with each other for gas flow simultaneously in the same direction, each of the pairs of regenerators when operable for inflow being jointly operable for conveying air to the flues or separately operable for conveying air and an extraneously derived gas; substantially as specified.

29. In a coking retort oven battery, the combination with a series of side-by-side coking chambers and intermediate heating walls, having combustion flues, and a series of side-by-side regenerators communicably connected by ducts with said combustion flues and operatively disposed in side-by-side groups adapted to serve in alternation for inflow preheating of fuel gas and air simultaneously and for concurrent waste-gas outflow with masonry partition walls separating said groups, of vent passages in the said partition walls, whereby joints or crevices therein through which gas leakage may be induced from an inflow gas regenerator to an outflow waste-gas regenerator, by pressure differential across said partition wall, may be interrupted by said vent passages and said pressure differential may be thereby broken in said partition wall.



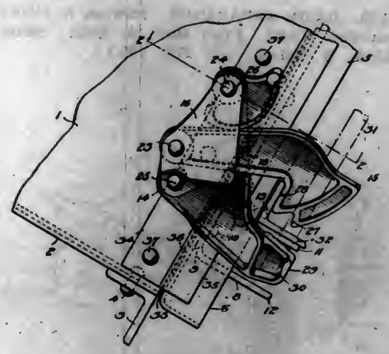
CARNEGIE LIBRARY OF ATLANTA

1,754,132. SCAFFOLD JACK. RICHARD VAN BEKKUM, Marysville, Mich., assignor to Harry van Raaphorst, Port Huron, Mich. Filed Nov. 14, 1928. Serial No. 319,321. 7 Claims. (Cl. 254—135.)



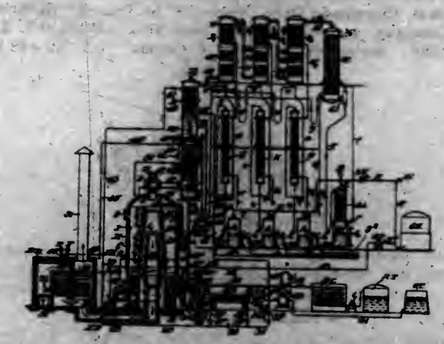
1. In a scaffold jack, means for raising and lowering the jack upon a cable, and a supporting-stirrup for the scaffold swiveled to said raising means so as to swing in either direction laterally.

1,754,133. CHANGE-OVER MECHANISM. HIDDE WIBIUS VAN DER PLOEG, Apeldoorn, Netherlands. Filed Aug. 28, 1928, Serial No. 302,541, and in the Netherlands July 12, 1926. 3 Claims. (Cl. 74—7.)



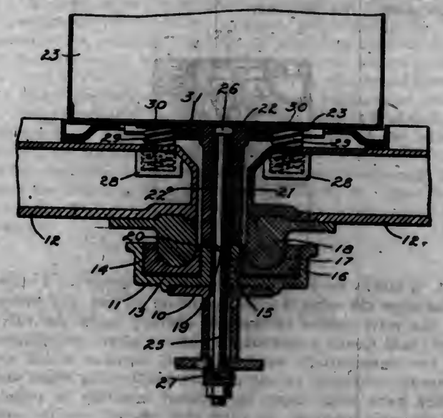
1. In a change-over mechanism, a stationary support, a member mounted to rotate bodily and move axially in said support, an intermediate shaft rotatably mounted in said member and disposed eccentrically relative to the axis of rotation of the latter, a driving shaft, and a plurality of driven shafts, and clutch members connected with certain of the shafts and adapted incident to rotary and axial movement of said member to selectively couple the drive shaft with either of the driven shafts.

1,754,134. MEANS FOR OPERATING AIRCRAFT LIGHTS. SAMUEL D. WILEY, Metuchen, N. J. Filed June 24, 1926. Serial No. 873,828. 14 Claims. (Cl. 102—24.)



14. The method of retarding the ignition of aerial flares which consists in wrapping around the flare casing a band of flexible material which will unwind as the flare falls through the air, finally releasing the ignition means whereby such ignition is effected.

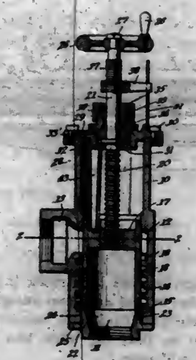
1,754,135. RAILWAY HOPPER CAR. WILLIAM E. WINE, Toledo, Ohio. Original application filed Nov. 16, 1923, Serial No. 675,099. Divided and this application filed Jan. 25, 1929. Serial No. 335,051. 8 Claims. (Cl. 105—308.)



1. In a railway car having a hopper provided with a discharge opening, the combination with a door for closing said opening, of a stiffening bar located on the hopper at the opening and formed of angular contour including a flange lying against the outer face of the hopper side sheet and a portion extending outwardly from the hopper constituting an abutment for the door.

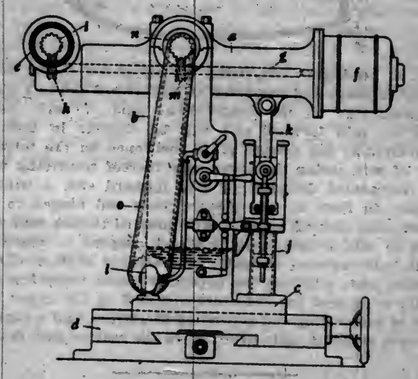
1,754,136. PROCESS AND APPARATUS FOR CONVERTING HEAVY HYDROCARBON OILS INTO LIGHTER PRODUCTS. FRANCIS SALES WOIDICH, Sapulpa, Okla. Filed July 8, 1924. Serial No. 724,865. 14 Claims. (Cl. 196—58.)

11. The process as claimed in claim 8 in which the horizontal surfaces are the surfaces of molten metal.



1,754,137. HIGH-SPEED ARTICULATED CAR. WALTER S. ADAMS, Philadelphia, Pa., and EUGENE SLINGLUFF, Sr., Cleveland Heights, Ohio, assignors to The J. G. Brill Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 10, 1929. Serial No. 391,688. 15 Claims. (Cl. 105—4.)

11. In combination with adjacent car ends supported from a common truck, a drum vestibule arranged above said ends and means axially supporting the drums from the truck.

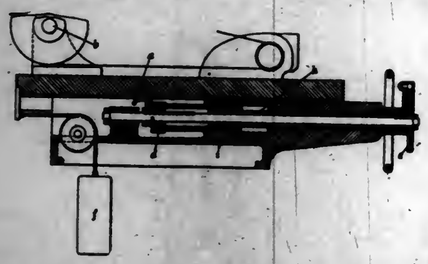


1,754,138. CONTROL VALVE. GEORGE M. AGEE, Owensboro, Ky. Filed Jan. 3, 1929. Serial No. 330,079. 12 Claims. (Cl. 251—84.)

2. In a valve of the class described, a valve body having a main supply passage, and a supplemental supply spiral passage surrounding said main supply passage, inlet and outlet openings communicating with said passages, and a valve controlling the supply through said

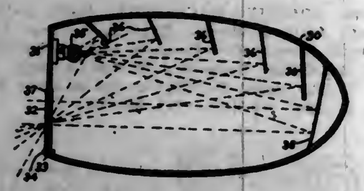
passages and for permitting the supply to pass from said inlet to said outlet openings through said spiral passage when the main passage is closed by said valve.

1,754,139. GRINDING MACHINERY. HARRY HALES ASBRIDGE, Ashton-on-Mersey, England, assignor to The Churchill Machine Tool Company Limited, Broadheath, near Manchester, England, a British Company. Filed Feb. 7, 1929, Serial No. 338,292, and in Great Britain Mar. 3, 1928. 2 Claims. (Cl. 51—55.)



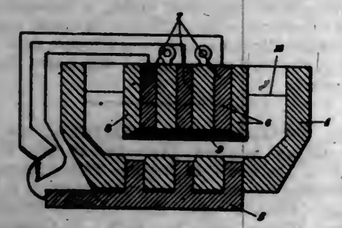
1. In a grinding machine, in combination, a column, a beam pivotally mounted upon said column, a grinding wheel mounted at one end of said beam, an electric motor mounted at the other end of said beam, means driving said grinding wheel from said motor, a hydraulic motor connected to said beam for oscillating the same upon said column, a hydraulic pump supplying pressure fluid to said hydraulic motor, and means driving said pump from said electric motor.

1,754,140. GRINDING OR ABRADING MACHINE. HARRY HALES ASBRIDGE, Ashton-on-Mersey, England, assignor to The Churchill Machine Tool Company Limited, Broadheath, near Manchester, England, a British Company. Filed Mar. 14, 1929, Serial No. 347,090, and in Great Britain Apr. 24, 1928. 2 Claims. (Cl. 51—165.)



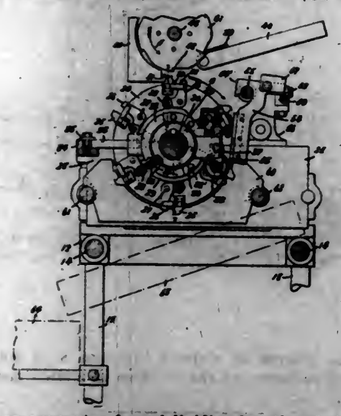
1. In the feeding mechanism of grinding machines, in combination, a grinding wheel, a slide carrying said wheel,

a bed upon which said slide is mounted, a spindle, a cam having a plurality of gaps or recesses in its operative face keyed to said spindle, a ratchet wheel also secured upon said spindle with gaps therein corresponding with



the gaps in the cam, a pawl imparting intermittent movements to said ratchet wheel and cam except when it enters the gaps in the ratchet wheel, and means upon said slide engaging said cam so that the slide has feed movements imparted to it by said cam.

1,754,141. AUTOMOBILE HEADLIGHT. CARSON L. BIGBEE, Los Angeles, and JOHN COUCH, San Mateo, Calif. Filed Oct. 1, 1928. Serial No. 309,585. 2 Claims. (Cl. 240—41.)



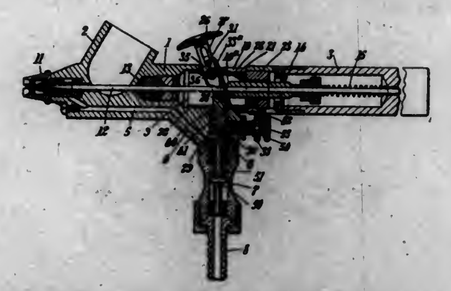
1. A headlight comprising an elongated casing ellipsoidal in shape and truncated at its forward end in a plane perpendicular to the longitudinal axis of said casing whereby said forward end will be circular in form, a semi-circular flat closure plate positioned on the forward end of said casing the lower edge thereof coinciding with the horizontal diameter of said forward end, a window similar in form to said closure plate and hinged to the lower edge thereof, screw means adapted to lock said window to said casing, a light socket adapted to receive a light bulb fastened centrally to the inner surface of said closure plate adjacent the uppermost point thereof, a plurality of spaced flat reflectors attached to the upper surface of said casing and depending therefrom, and a slightly concave reflector plate attached to the rear of said casing.

1,754,142. ELECTRIC FURNACE. EMILIEN BORNAND and HANS ARNOLD SCHLAEPFER, Geneva, Switzerland. Filed Nov. 24, 1928, Serial No. 321,740, and in Switzerland Dec. 8, 1927. 3 Claims. (Cl. 266—1.5.)

1. An electric furnace for metal treating, comprising a furnace chamber adapted to receive the metal to be treated, and a vertically movable electrode adapted to be inserted into the molten metal, the bottom face of said electrode having a cavity formed therein for receiving an additional substance to be incorporated with the molten metal.

1,754,143. MACHINE FOR CUTTING GLASS CANE OR TUBES. CARL A. BROWN and ANDREAS C. NIELSEN, East Cleveland, Ohio, assignors to General Electric Company, a Corporation of New York. Filed Oct. 5, 1928. Serial No. 310,548. 6 Claims. (Cl. 49—48.)

1. In an apparatus for subdividing lengths of glass cane or tubing, the combination of a series of aligned chucks for supporting a length of cane or tubing, a scoring means, a breaking means, and means for causing a movement of said chucks to bring said length successively into engagement with said scoring and breaking means.

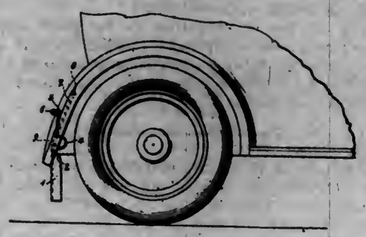


1,754,144. VALVE GUIDE. GEORGE H. BRUTSCHER, Pittsburgh, Pa. Filed May 31, 1929. Serial No. 367,517. 2 Claims. (Cl. 51—262.)

1. A means for providing a temporary guide for a valve stem when the valve is to be ground on its seat, and wherein the valve passes through an opening below the valve seat, said means comprising a tubular sleeve constructed of two substantially semi-cylindrical sections which are hingedly connected at one of their confronting edges and which have their upper ends flared inwardly to permit of the same receiving the valve stem therein and the said sleeve being inserted through the mentioned opening and means connected with the sleeve sections and tending to force the same away from each other and into tight frictional engagement with the wall provided by the opening.

1,754,145. SPRAYING APPARATUS. CHARLES LAURENCE BURDICK, London, England, assignor to The Aerograph Company Limited, London, England. Filed Jan. 28, 1928, Serial No. 250,276, and in Great Britain May 9, 1927. 8 Claims. (Cl. 91—45.)

1. In a spray device having independent air and liquid control valves, a control member mounted for movement in one direction to operate one of the valves and for movement in another direction for operating the other of said valves, and means whereby the control member is



locked against movement in one of such directions until its movement in the other of such directions has been accomplished.

1,754,146. COFFEE FILTER. GIOVANNI CALVINO, Milan, Italy. Filed Sept. 13, 1928, Serial No. 305,697, and in Italy Jan. 31, 1928. 3 Claims. (Cl. 53—3.)

1. A coffee filter, comprising a cylindrical vessel with a perforated fixed bottom whereon pulverised coffee is deposited; a removable perforated disc deposited on top of the coffee and whereon boiling water is poured; and an imperforate piston removably fitting in said vessel above the water and having an airtight sliding engagement with the inner surface of the side wall of the vessel; said piston adapted to be removed from the vessel to enable the introduction of the coffee, the removable perforated disc and water, and then reinserted into and moved downward toward the water to force the latter through the coffee and discharge it through the perforated fixed bottom of the vessel.

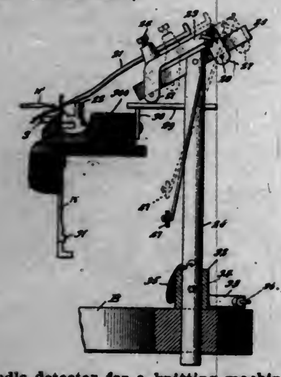
1,754,147. MUD-GUARD ATTACHMENT. WILFRED A. COOKSON, Freeport, Me. Filed Oct. 8, 1928. Serial No. 311,034. 4 Claims. (Cl. 280—153.)

1. A curtain attachment for mud guards comprising a clamp shaped from a single piece of material and bent to define integral hinges and upper and lower clamp portions respectively, a flexible element attached to the upper of the clamps and engageable with the exterior surface of the mud guard.

1,754,148. FUMIGATING COMPOUND AND PROCESS OF PRODUCING THE SAME. KENNETH F. COOPER, Great Neck, N. Y., assignor to American Cyanamid Company, New York, N. Y., a Corporation of Maine. Filed May 24, 1923. Serial No. 641,260. 16 Claims. (Cl. 167—35.)

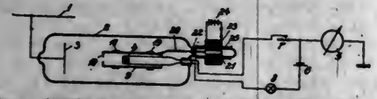
8. As an article of manufacture, a composition of matter which comprises a mixture of inert material with a cyanogen compound of a metal, substantially free from alkali metal compounds.

1,754,149. SHIP. JOHN H. CUMMINS, Dallas, Tex. Filed Feb. 6, 1928. Serial No. 252,213. 5 Claims. (Cl. 115—37.)



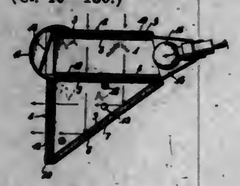
1. In a ship construction a hull embodying spaced fore and aft hull sections connected in longitudinal alignment by a bridge portion and providing a transverse undercut extending between the hull sections beneath the bridge portion, said hull sections being of like external outlines and each having an entrance and a counter, propellers mounted in the counter of each hull section one to each side of the longitudinal center of the hull, and a rudder mounted rearwardly of each counter at the longitudinal center line of the hull.

1,754,150. SPRING CLIP FOR RAILWAY SIGNAL TORPEDOES. THOMAS B. DUTCHER, Versailles, Pa. Filed Aug. 5, 1929. Serial No. 383,583. 5 Claims. (Cl. 246—487.)



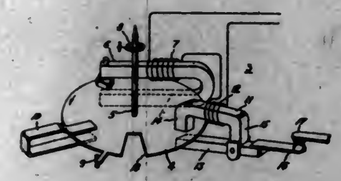
1. A torpedo comprising a case portion, a plate applied to the said case portion having an intermediate transversely extending spring tongue and slots at opposite sides of the said tongue, a torpedo holding member attached to the said plate by deflecting the said tongue portion and passing the holding member between the deflected portion and the said plate, substantially as described.

1,754,151. CIRCULAR-KNITTING MACHINE. FRANK LEONARD ELLIOTT, Hildebran, N. C., assignor to Scott & Williams, Inc., New York, N. Y., a Corporation of Massachusetts. Filed June 17, 1929. Serial No. 371,522. 5 Claims. (Cl. 66—157.)



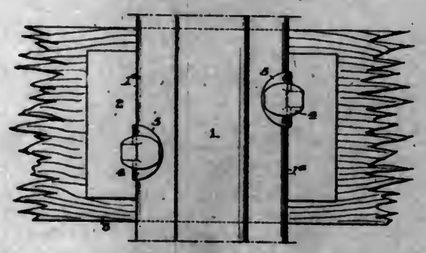
1. A needle detector for a knitting machine comprising a detector member, and a carriage supporting said member, in combination with a slide permitting said member to move simultaneously vertically and radially away from the needles, and means adapted to move said carriage on said slide.

1,754,152. SERIES RESISTANCE FOR ELECTRIC MEASURING INSTRUMENTS. WERNER ESPE, Berlin-Charlottenburg, Germany, assignor to Siemens Schuckertwerke Gesellschaft mit beschränkter Haftung, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed Oct. 19, 1925, Serial No. 63,431, and in Germany Sept. 10, 1924. 5 Claims. (Cl. 175—183.)



5. In a circuit for measuring electric values a measuring instrument having a series resistance comprising a thermionic high vacuum tube having an anode and a cathode connected in series with said instrument and a cylinder within said tube surrounding the cathode for screening it against the anode to raise the saturation voltage of said tube and means for shifting said cylinder, comprising an iron core attached to said cylinder, a solenoid coil movably disposed outside of said tube and surrounding the tube portion within which said core is located, and means for energizing said coil to enable it to hold said core in its interior when the coil is shifted.

1,754,153. SIGN. SAMUEL FISCHER and JAMES J. BRESLIN, Brooklyn, N. Y. Filed June 4, 1928. Serial No. 282,788. 10 Claims. (Cl. 40—130.)



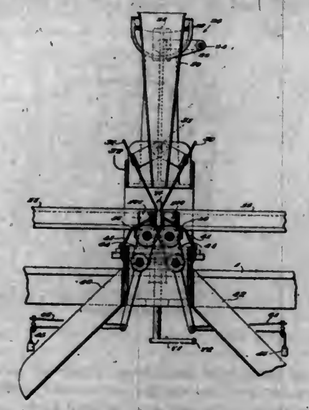
1. A display sign comprising a casing, an opening at the top thereof for the admission of natural light, a plurality of spaced apart transparent plates within the casing adjacent the opening, one of said plates carrying symbols to be displayed, a source of artificial light within the casing positioned approximately between the planes of the plates and means for reflecting both the natural and artificial light through the front of the casing.

1,754,154. ELECTRORESPONSIVE DEVICE. ALAN S. FITZ GERALD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 3, 1928. Serial No. 310,055. 8 Claims. (Cl. 200—01.)

1. A relay including a rotatable disc, a circuit interrupting mechanism including an electromagnet and an armature placed on opposite sides of said disc, means for actuating said armature to a position adjacent said magnet upon a predetermined rotation of said disc, and contacts arranged to be actuated when said armature moves to said position.

1,754,155. RAIL LOCK. FRANK G. FRESEN, Aldan, Pa. Filed July 30, 1929. Serial No. 382,096. 7 Claims. (Cl. 238—315.)

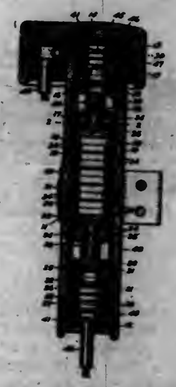
1. The combination with a railroad rail, a tie, and a spike entering said tie for holding the rail thereto, of a locking member arranged to underlie a portion of the head of the spike and be retained thereby against longitudinal movement; said locking member having a portion disposed on each side of the spike for biting engagement with the rail to prevent movement of the latter when said locking member is held in place by the spike.



1,754,156. PRODUCTION OF ACIDS. HERMANN FRISCHER, Cologne-Lindenthal, Germany. Filed May 16, 1927, Serial No. 191,919, and in Germany May 26, 1926. 9 Claims. (Cl. 23—158.)

7. The process of producing an inorganic acid other than sulfuric acid comprising causing sulfuric acid to act at a pressure below normal on a mixture of a salt of the acid to be produced with a small quantity of acid of the kind to be produced.

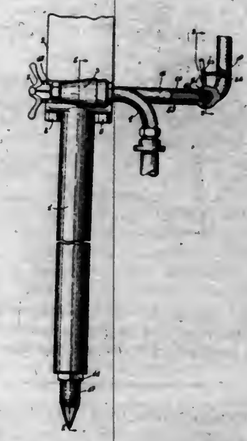
1,754,157. FISH-CUTTING MACHINE. ERNEST A. GALLISON, Watertown, Mass., assignor, by mesne assignments, to Bay State Fishing Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 24, 1927. Serial No. 228,124. 14 Claims. (Cl. 17—3.)



14. A fish filleting machine having, in combination, a pair of band knives having portions thereof running in adjacent planes spaced a short distance apart, and means

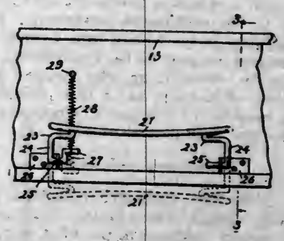
for feeding a fish against said portions of the knives including a guide for the fish, a pair of gripping rolls located

in proximity to the cutting edges of the knives for feeding a fish against the same, and movable supporting members upon which said gripping rolls are mounted.



1,754,158. LIGHTNING ARRESTER. VICTOR E. GOODWIN, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Apr. 13, 1922. Serial No. 552,375. 3 Claims. (Cl. 175—30.)

1. A lightning arrester comprising a resistance rod, a series of spark gaps surrounding said rod and formed of electrodes having extended surfaces arranged substantially along a cylindrical surface, and a cylindrical conductor concentric with said surface and arranged to form a condenser with said surfaces, said conductor being in electrical connection with one terminal of the arrester.

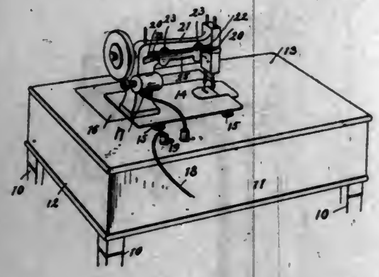


1,754,159. FEEDING MECHANISM. ROBERT T. BANKS, Spokane, Wash., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Jan. 7, 1921. Serial No. 435,764. 11 Claims. (Cl. 121—9.)

1. In a rock drill, the combination with a fluid actuated drilling motor, a pressure fluid actuated feeding device therefor comprising relatively movable cylinder and piston elements, a throttle valve controlling fluid supply to the drilling motor, and a rotation handle projecting laterally from one side of the drill and having a grasping portion at its outer extremity, of feed controlling means comprising ports and passages permitting the passage of pressure fluid to said handle and communicating with said feed cylinder element, and a valve carried by said handle nearer the outer end of the latter than the point of supply of pressure fluid to said handle and operable from said grasping portion for enabling the operator to control

the flow of pressure fluid through said handle to said feeding device in accordance with the requirements of the work while the throttle valve remains in a single position of adjustment.

1,754,160. EXTENSION-CORD RETAINER FOR SEWING MACHINES. CHARLES E. COLEGROVE, Lakewood, Ohio, assignor to White Sewing Machine Corporation, Cleveland, Ohio, a Corporation of Delaware. Filed May 21, 1928. Serial No. 279,455. 4 Claims. (Cl. 242—85.)



3. A retaining member for an extension cord of an electrically-operated device comprising a swinging element adapted to be pivotally connected to a portion of said device and having portions thereof formed to receive the extension cord when the same is not in use, and another portion adapted to be connected to means for maintaining said element in a plurality of different positions.

1,754,161. EXTENSION-CORD RETAINER FOR SEWING MACHINES. CHARLES E. COLEGROVE, Lakewood, Ohio, assignor to White Sewing Machine Corporation, Cleveland, Ohio, a Corporation of Delaware. Filed May 21, 1928. Serial No. 279,456. 3 Claims. (Cl. 242—85.)

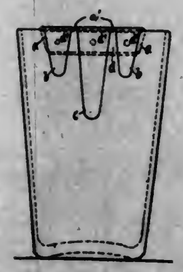
2. In combination with an electrically-operated sewing machine of the type in which the sewing machine head

is lowered during non-use into the machine cabinet, a handle for raising and lowering the head comprising a member

adapted to be secured to the machine head and having spaced cord-receiving and retaining portions about which the extension cord may be wound when not in use.

1,754,162. EXTENSION-CORD RETAINER FOR SEWING MACHINES. CHARLES E. COLEGROVE, Lakewood, Ohio, assignor to White Sewing Machine Corporation, Cleveland, Ohio, a Corporation of Delaware. Filed May 21, 1928. Serial No. 279,458. 2 Claims. (Cl. 242—85.)

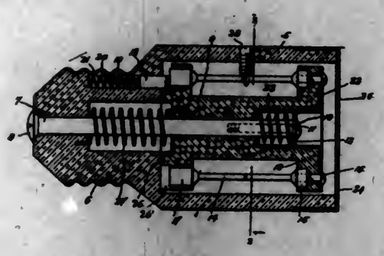
1. In combination with an electrically-operated sewing machine adapted to be connected to a power circuit by an extension cord, a retaining means for said cord when the same is not in use, said means comprising a pivoted member mounted in a recess formed in a portion of said sewing machine and adapted to lie flush therein in one position, means for maintaining said member in either its raised or lowered position, and a fixed member secured to the sewing machine in substantial alignment to said pivoted member but spaced therefrom.



1,754,163. PROCESS FOR STABILIZING BLEACHING LIQUORS. FRITZ DRAISBACH, Ludwigshafen-on-the-Rhine, Germany, assignor to the Firm Joh. A. Benckiser Chemische Fabrik, Ludwigshafen-on-the-Rhine, Germany. Filed Aug. 16, 1926, Serial No. 129,653, and in Germany Jan. 14, 1926. 2 Claims. (Cl. 23—251.)

1. In the art of stabilizing bleaching liquors containing a peroxide bleaching agent, together with an alkali pyrophosphate as a stabilizer, the step which comprises adding an acid salt to the liquor in quantity sufficient to maintain the hydrogen ion concentration of the liquor between the limits P_H 7–P_H 10, said acid salt being an acid phosphate.

1,754,164. PRODUCT FROM ORGANIC DERIVATIVES OF CELLULOSE. CAMILLE DREYFUS, New York, N. Y. Filed Nov. 4, 1926. Serial No. 146,287. 7 Claims. (Cl. 18—56.)

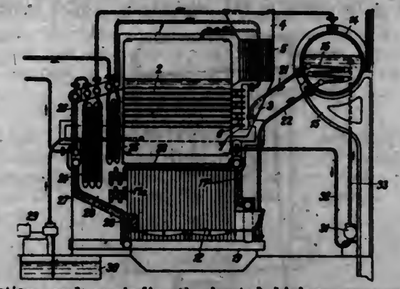


1. A textile material comprising individual filaments of organic derivatives of cellulose, at least some of which filaments are permanently deformed and present a moire design which is permanent.

1,754,165. LIP-PROTECTING HOLDFAST. PAUL FABIAN, Chemnitz, Germany. Filed Oct. 9, 1929, Serial No. 398,442, and in Germany Oct. 22, 1927. 2 Claims. (Cl. 65—13.)

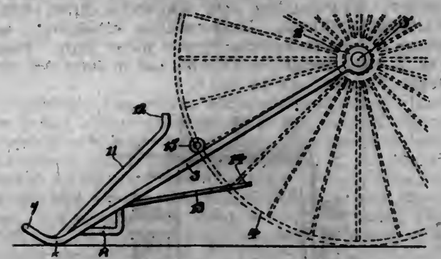
1. A lip protector comprising a curved resilient metal plate formed with openings and spaced resilient fingers extending from the upper edge of said plate, and a rubber strip having lugs to engage in the openings and snugly fitted against the inner surface of the inner plate and spaced from the depending fingers to engage over the edge of a drinking cup.

1,754,166. FUSE. LEE SING FOO, Manchester, N. H. Filed May 7, 1927. Serial No. 189,588. 1 Claim. (Cl. 200—126.)



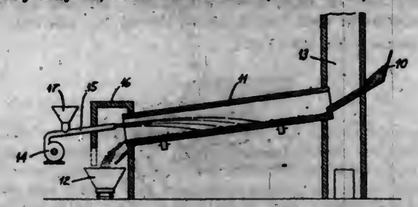
A fuse plug comprising a body having electric contacts arranged therein, a magazine rotatably mounted therein having a tensionally retained spring attached thereto for actuating the same, a plurality of fusable links removably carried by said magazine in constant engagement with one of said contacts, and successively movable into position for engagement with said other contact, a slidably mounted contacting pin carried by the body engaging said other contact and yieldably retained in the path of movement of said links for engagement thereby, and stop means extending through the wall of the body and adjustable from the outside thereof for retaining one of said links in engagement with said contacting pin, said magazine having indicating means arranged thereon associated with the link, whereby to show which of the links is in contacting position.

1,754,167. MARINE BOILER. OTTO H. HARTMANN and HEINRICH PEPPERKORN, Kassel-Wilhelmshohe, Germany, assignors to Schmidt'sche Heissdampf-G. m. b. H., Kassel-Wilhelmshohe, Germany, a Corporation of Germany. Filed June 22, 1927, Serial No. 200,635, and in Germany June 26, 1926. Renewed Feb. 25, 1930. 8 Claims. (Cl. 122—37.)



1. In a marine boiler of the return flue type which is subdivided into two steam generators of different pressure, in combination a fire box, a reversing chamber in

communication with the fire box, a fire tube boiler serving as the low-pressure steam generator, said fire tube boiler being in communication with the exit end of said chamber and thereby heated by the gases after their change in



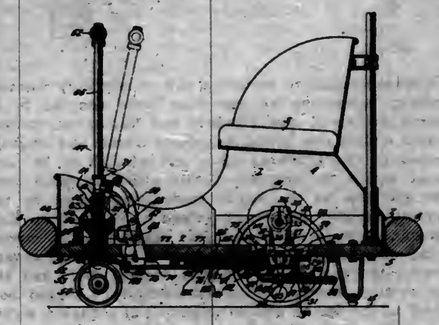
direction, and an indirectly heated high-pressure steam generator having heating elements with heat absorbing parts, the greater portion of said heat absorbing parts being located within the fire box and another portion thereof being located within the reversing chamber.

1,754,168. VINE LIFTER. STANLEY HONEYWELL, Atwater, Ohio. Filed Feb. 28, 1929. Serial No. 342,166. 4 Claims. (Cl. 97—192.)

1. A vine lifter comprising, a supporting element adapted for connection with an axle of a vehicle and projecting forwardly of a wheel of the vehicle, said element being inclined downwardly to provide for a sliding contact with the ground adjacent the forward end of the element, a centrally disposed, rearwardly and upwardly extending deflector element for separating and lifting vines of adjacent rows simultaneously, a pair of spaced deflector elements disposed on opposite sides of said centrally disposed deflector element for removing the vines of adjacent rows respectively from the path of said wheel, and means carried by the supporting element adjacent its point of contact with the ground to provide a support for said supporting element when the forward end of the latter encounters a depression in the ground.

1,754,169. METHOD OF RECOVERING GASIFIABLE METALS AS OXIDES. FRIEDRICH JOHANNSEN, Magdeburg, Germany, assignor to Fried. Krupp Grusonwerk Aktiengesellschaft, Magdeburg-Buckau, Germany, a Firm. Filed Jan. 4, 1926, Serial No. 79,246, and in Germany May 26, 1925. 2 Claims. (Cl. 75—15.)

1. Process of recovering gasifiable metals as zinc, tin, lead, bismuth, antimony, mercury, etc. in the form of oxides from ores, slags, and other metallurgical products of different grading including finely graded material and coarser grade material, which method comprises passing the material of coarser grading through a metallurgical furnace and heating it therein, and contacting and mixing the heated material on its progress through the furnace but not until it reaches the zone proper of reaction with said finely graded material.



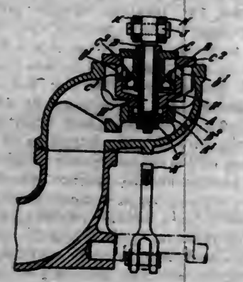
1,754,170. PROCESS FOR TREATING ORES AND METALLURGICAL PRODUCTS, SLAGS, AND THE LIKE. FRIEDRICH JOHANNSEN, Magdeburg, Germany, assignor to the Firm Fried. Krupp Grusonwerk Aktiengesellschaft, Magdeburg-Buckau, Germany. Filed Oct. 14, 1926, Serial No. 141,675, and in Germany Nov. 5, 1925. 3 Claims. (Cl. 75—28.)

1. The process for treating easily fusible ores and metallurgical products which contain volatilizable metals which consists in feeding the charge into a rotary furnace through which it progresses and in which it is continuously agitated, progressively heating the charge in an oxidising atmosphere to a temperature at which the volatilizable metals will be reduced and vaporised, delivering the materials requisite for the completion of the reduction and vaporization of the metals wholly or in part into this highly heated portion of the furnace where the zone of reaction begins where they are continuously mixed with the charge thereby reducing and volatilising the volatilisable metals, and immediately oxidising the metallic vapors so produced, the conditions being so controlled that fusion of the charge in the reduction zone is prevented.

1,754,171. PREPARATION FOR REMOVING OR PREVENTING BOILER SCALE AND OTHER LIKE DEPOSITS. HERMANN KÖPPLINGER, Vienna, Austria. Filed Feb. 10, 1926, Serial No. 87,462, and in Germany Jan. 4, 1926. 5 Claims. (Cl. 87—27.)

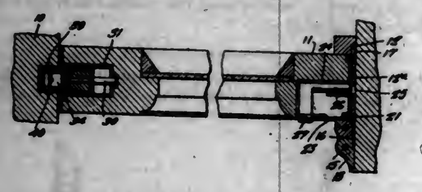
1. Preparations for preventing the scale forming constituents of water from settling as hard deposits and for removing incrustations already formed consisting of artificial mixtures, which simultaneously contain a resinous body, a relatively small per cent of protective colloids having the property of emulsifying the resinous body with the water, and essential oils.

1,754,172. AMUSEMENT CAR. JOSEPH C. LUSSE, Philadelphia, Pa. Filed Sept. 28, 1926. Serial No. 138,299. 14 Claims. (Cl. 180—18.)



1. In combination, a pair of traction elements, a pair of driving elements therefor, steering means, mechanism for establishing a resilient engagement between said driving elements and said traction elements, and means for operatively associating said mechanism and said steering means, so that the force of engagement of said driving elements may be oppositely varied during a portion only of one movement of said steering means and thereafter held substantially constant during a remaining portion of said movement.

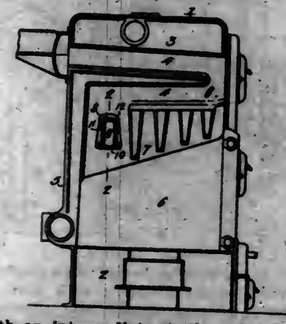
1,754,173. PROCESS OF REMOVING LEAD ARSENATE FROM FRUIT. ARTHUR R. MAAS, Los Angeles, Calif. Filed Dec. 21, 1926. Serial No. 156,265. 2 Claims. (Cl. 146—219.)



1. The process of removing lead arsenate from fruit which consists in subjecting the fruit which is coated with lead arsenate to the action of a non-acid solution of a thiosulphate capable of dissolving lead arsenate, then washing the fruit with water and allowing the same to dry.

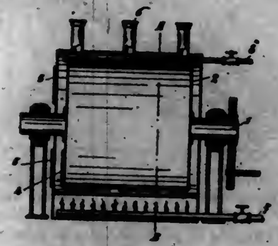
1,754,174. STEAM-REGULATOR VALVE AND THE LIKE. JOHN MITCHELL and JOHN CECIL GEORGE COSSEY, London, England. Filed Oct. 31, 1927, Serial No. 230,082, and in Great Britain Nov. 24, 1926. 2 Claims. (Cl. 277—36.)

1. A steam regulator valve for locomotives or other fluid operated engines, in which the main body contains at least three concentric valves, in which one or more of the valves, or a portion thereof, acts as a piston within another valve.



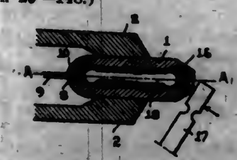
1,754,175. HINGE. CHARLES L. MORGAN, Pittsburgh, Pa. Filed Dec. 28, 1927. Serial No. 243,193. 1 Claim. (Cl. 16—149.)

A hinge adapted to connect a pair of relatively movable members comprising an attaching plate adapted to be secured to one of said members and having an opening therein, a plate also having an opening therein and hingedly secured to the attaching plate and adapted to be positioned within the opening of said attaching plate flush with the face of the latter, guide lugs carried by the hingedly secured plate and extending beyond the face thereof, a second attaching plate adapted to be carried by the other relatively movable member to slidingly engage between the face of the hingedly secured plate and the lugs carried thereby, and a substantially L-shaped bolt guided in the second attaching plate and engaging within the opening of the hingedly secured plate.



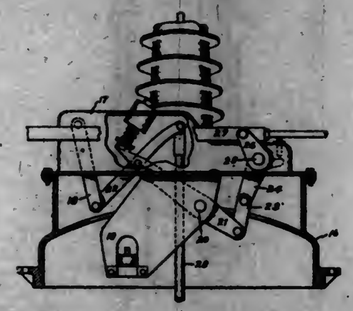
1,754,176. BOILER FURNACE. ABRAM C. MOTT, JR., Lansdale, Pa., assignor to Abram Cox Company, Lansdale, Pa., a Corporation of Pennsylvania. Filed Mar. 4, 1927. Serial No. 172,894. 3 Claims. (Cl. 122—228.)

1. The combination in a boiler furnace, of a base; a series of boiler sections arranged side by side, each section having a body portion extending over a combustion chamber and having a rear depending portion, said depending portions forming the back of the combustion chamber, each section having a flue directly in front of the rear depending portion and having transverse perforations in the walls of the overhanging portion communi-



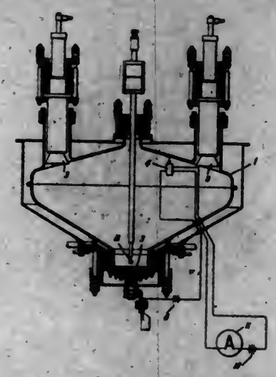
cating with an intermediate portion of the flue; and an air duct extending through the transverse perforations from side to side of the boiler, said air duct having a slot at each side to allow air to pass from the duct to the flue of the boiler furnace.

1,754,177. APPARATUS FOR REGENERATING VULCANIZED RUBBER. ADOLFO MRACH, Milan, Italy, assignor to Societa Italiana Pirelli, Milan, Italy. Filed Oct. 5, 1926, Serial No. 139,710, and in Italy Oct. 31, 1925. 1 Claim. (Cl. 18—2.)



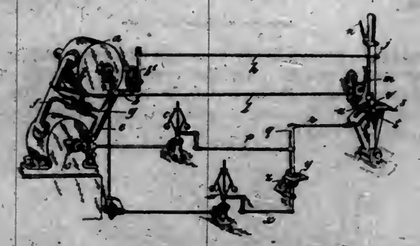
Apparatus for regenerating vulcanized rubber scrap, comprising an outer stationary drum having a chamber in its bottom part; a rotatable inner drum disposed concentrically within the outer drum with its walls spaced therefrom, the inner drum having hollow trunnions on its end walls which project outward through the end walls of the outer drum to connect the interior of said inner drum directly and freely with atmosphere; supporting standards wherein the projecting portions of said trunnions are journalled; driving means connected to one trunnion to rotate said inner drum; and heating means in said chamber for externally heating the inner drum.

1,754,178. PROCESS OF MAKING REMOVABLE EMANATION SEEDS. JOSEPH MUIR, New York, N. Y., assignor to The Radium Emanation Corporation, New York, N. Y., a Corporation of Delaware. Original application filed Jan. 12, 1926, Serial No. 80,851. Divided and this application filed Oct. 7, 1927. Serial No. 224,740. 13 Claims. (Cl. 29—148.)



1. The process of making a removable metal seed having a permanent withdrawal member attached thereto, said seed containing radium emanation, comprising removing metal from one end of the tube, forming a reduced aperture at said end to receive a withdrawal member, inserting the withdrawal member through the large end of the tube and against the walls of the reduced end of the tube, charging the tube with radium emanation through the open end, and then closing the tube to provide a finished seed resistant to the escape of the radium emanation.

1,754,179. STRAIGHT-LINE-MOTION MECHANISM. WILLIAM K. RANKIN, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 4, 1927. Serial No. 210,705. 4 Claims. (Cl. 74—5.)

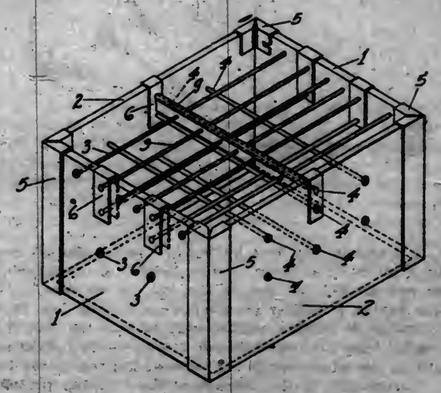


1. Straight line motion mechanism comprising a member having a fixed pivot point adjacent one end thereof, a lever pivoted centrally to the member adjacent the other end thereof, a link having a fixed pivot at one end and pivoted at its other end to one end of said lever, and an operated member attached to the other end of said lever, the central pivot point of the lever being offset from the line connecting the members attached at the opposite ends of the lever.

1,754,180. APPARATUS FOR MEASURING PRESSURE. CAMIL A. SABBAH, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 21, 1927. Serial No. 185,546. 4 Claims. (Cl. 175—183.)

1. The combination of a vapor electric apparatus comprising a cathode and an anode enclosed within an evacuated vessel, current supply means connected between said cathode and anode, and means comprising a pair of electrodes insulated from said cathode and anode and arranged to transmit a current dependent on the positive ion density in the vapor between said cathode and anode.

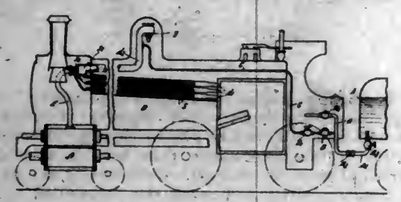
1,754,181. CONTROL MECHANISM FOR POWER-TRANSMISSION GEARING. PEDRO CELESTINO SACCAGGIO, Buenos Aires, Argentina. Filed Nov. 14, 1927, Serial No. 233,244, and in Great Britain Aug. 23, 1927. 11 Claims. (Cl. 74—89.)



1. Power transmission apparatus for propulsion of vehicles, comprising primary and secondary transmission units with associated means adjustable to provide infinite variation of the transmission ratio between said units, a manual or servo control device for operating said adjustable means, a safety stop adjustable in relation to said control device, a speed sensitive device energized in accordance with the instant speed conditions of the secondary unit, and operative connection between said speed sensitive device and said safety stop to adjust the latter with respect to said control device.

1,754,182. COLORED HEAT-RESISTING GLASS. WILLIAM C. TAYLOR, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a Corporation of New York. Original application filed June 12, 1925, Serial No. 36,737. Divided and this application filed June 10, 1926. Serial No. 115,133. 4 Claims. (Cl. 106—36.1.)

1. A heat resisting green glass which shows high transmission of green light and generally good absorption of other parts of the spectrum, and which glass contains boric oxide and lithia, the ratio of boric oxide to total alkali being less than two to one and which also contains a usual coloring oxide or oxides producing in the heat resisting glass approximately the color which it produces in a basic glass.

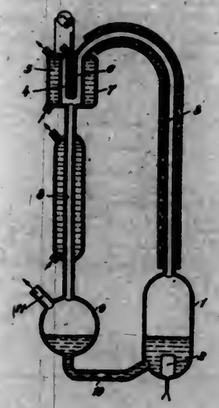


1,754,183. CONTAINER. HENRY WILDBERG, Cincinnati, Ohio, assignor, by mesne assignments, to United Milk Crate Corporation, Cincinnati, Ohio, a Corporation of Ohio. Filed Dec. 16, 1926. Serial No. 155,280. 2 Claims. (Cl. 217—19.)

2. In combination with a crate, a U-shaped piece having a pair of vertically aligned openings, a reinforcing

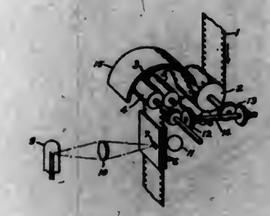
strip comprising a folded piece of metal with a rod extending through it, said rod extending through the lower opening in the U-shaped piece, said U-shaped piece secured to the lower edge of the crate, and having a key shaped slot for retaining the end of said folded piece of metal.

1,754,184. APPARATUS FOR SUPPLYING STEAM TO ENGINES WHEN THE MAIN SUPPLY IS CUT OFF. ROBERT WOOD, Garwick, Isle of Man. Filed May 23, 1927, Serial No. 193,615, and in Great Britain May 27, 1926. 12 Claims. (Cl. 121—137.)



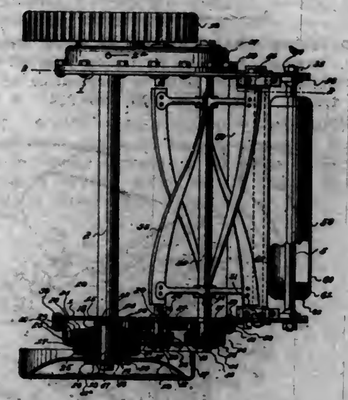
1. In apparatus of the type described in combination;—a steam engine; a supply of steam therefor; a conduit connecting the cylinders of the engine to the said steam supply; a valve adapted to close the said conduit; a supply of water always subject to a pressure less than the fluid pressure necessary to actuate the steam engine; a non-return valve; an injection pipe, one end of which opens into the said conduit between the cylinders and the said valve, and the other end of which is connected through the non-return valve to the said supply of water, so that when the pressure in the said injection pipe rises above that of the water supply the latter is cut-off from the injection pipe; and heating means for vaporising the water supplied to the injection pipe after the said water has passed through the non-return valve.

1,754,185. HOSIERY. JOHN M. ALLEN, Toronto, Ontario, Canada, assignor to Scott & Williams, Incorporated, New York, N. Y. Filed July 2, 1927, Serial No. 203,000. Renewed June 11, 1928. 13 Claims. (Cl. 66—187.)



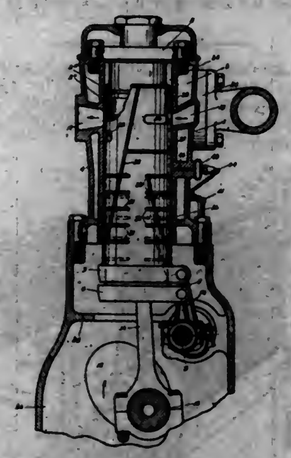
1. A seamless foot hose having a tapering top toe segment, a plurality of insert courses knitted to the tapering sides and around the end of the top toe segment, each course having a number of stitches appreciably less than the number of stitches on the edge of said toe top, the successive insert courses being of a progressively differing length, a diverging bottom toe segment knitted to the insert courses and to the courses of the tapering toe top beyond the ends of the insert courses to meet the lower half of the foot section at the points of commencement of the tapered top segment.

1,754,186. PROCESS OF MANUFACTURING DRYING VARNISHES. HANS BECKER, Berlin-Charlottenburg, Germany, assignor to Siemens & Halske Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed Oct. 7, 1926, Serial No. 140,192, and in Germany May 20, 1925. 6 Claims. (Cl. 204—31.)



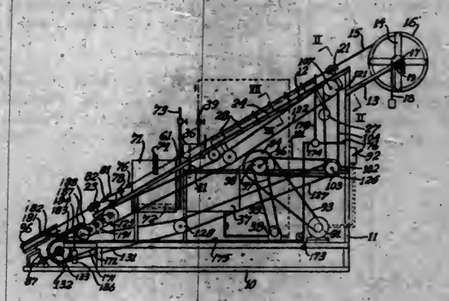
5. The process for the manufacture of drying varnishes, which consists in subjecting hydrated naphthalene to electric discharges, adding the product of the treatment to more hydrated naphthalene, subjecting the mixture to electric discharges and separating the product obtained by distillation from the admixed raw product.

1,754,187. BELT OR STRIP DRIVING ARRANGEMENT. ALDA V. BEDFORD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 3, 1927. Serial No. 230,864. 5 Claims. (Cl. 271—2.1.)



1. Driving apparatus for a belt or strip comprising a driving roller therefor, a member arranged to press the belt or strip against the driving roller, a second driving member for the belt or strip arranged to feed the same into a loop from which it passes to the driving roller, and means adapted to vary with variations in the size of the loop the curvature of the belt or strip as it reaches the roller.

1,754,188. LAWN MOWER. HARRY T. COLDWELL, Newark, N. J., assignor to Philadelphia Lawn Mower Company Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 10, 1926. Serial No. 114,995. 18 Claims. (Cl. 56—249.)



1. In a lawn mower, a pair of gearing housings, each housing having an endless marginal flange and constructed identically the same as the other so that it is adapted for use at either side of the machine.

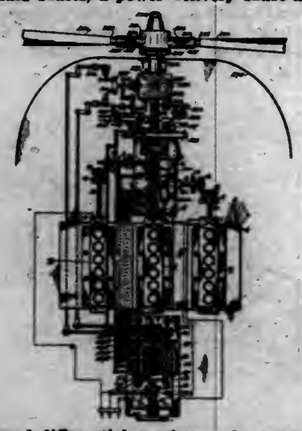
1,754,189. SLEEVE-VALVE ENGINE AND OILING MEANS. WALTER S. FISHER, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 12, 1927. Serial No. 174,895. 18 Claims. (Cl. 123—196.)

1. A sleeve valve engine embodying a cylinder, a piston adapted to reciprocate within the cylinder, and a valve mechanism operated in synchronized relation with the piston comprising a cylindrical sleeve having admission and discharge ports, and means for facilitating the lubrication of the sleeves consisting of a mechanism adapted to supply a gas under positive pressure to the surface of the sleeve.

1,754,190. WIRE-TEMPERING APPARATUS. ARTHUR W. HARRIS, FREDERICK M. SUCHER, and JOHN L. KING, Atlanta, Ga., assignors to Atlanta Harness & Reed Manufacturing Company, a Corporation of Georgia. Filed Apr. 23, 1928. Serial No. 272,320. 22 Claims. (Cl. 266—3.)

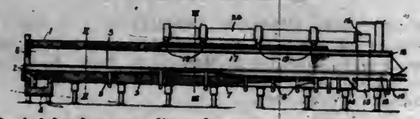
1. In a wire tempering apparatus, means for progressively feeding and drawing the wire through a heating zone, a quenching tank and a tempering bath, tension means within the quenching tank and effective to maintain the wire straight during quenching, a reel upon which the tempered wire is wound and increasing in diameter with each succeeding layer of wire thereon, means for driving the reel, and means interposed between the driving means and the reel for maintaining the peripheral speed of the reeled wire constant.

1,754,191. OIL-CHANGE INDICATOR. ELMER H. SHIELDS and ORVILLE E. SUNTTERLIN, Maryville, Mo., assignors of one-third to William B. Price, Maryville, Mo. Filed Aug. 27, 1928. Serial No. 302,239. 2 Claims. (Cl. 40—96.)



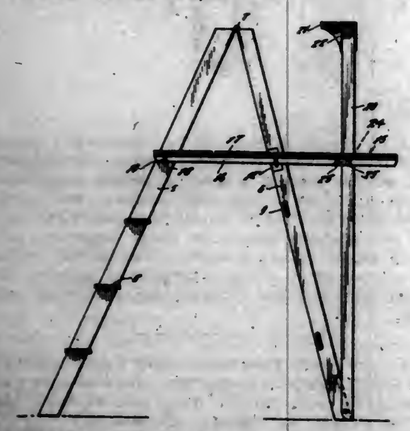
1. An oil change indicator device comprising a casing adapted to be mounted in display position and provided with a window opening, a series of endless bands each provided with a set of indicating numerals, and an expansible spring metal holder fixedly positioned within said casing and providing means for tautly supporting said bands in slightly spaced relation to the interior of the casing and permitting sliding adjustment of the bands for variously displaying the numerals thereon through said opening.

1,754,192. MULTIPOWER-PLANT TRANSMISSION FOR AIRCRAFT AND THE LIKE. JOHN DUMANS VAN VLIET, San Francisco, Calif. Filed Sept. 28, 1925. Serial No. 59,185. 156 Claims. (Cl. 244—25.)



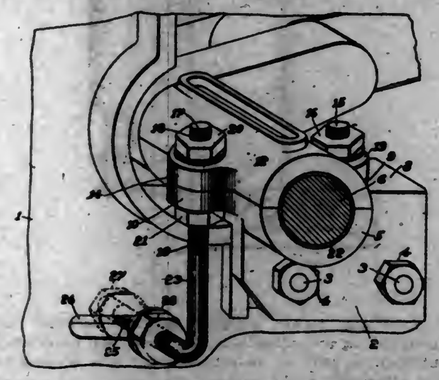
1. The combination of a plurality of power units, a plurality of concentrically mounted rotary shafts, driving means between said power units and said shafts, a

compound differential gearing actuated by and co-operative with said shafts, a power delivery shaft actuated by



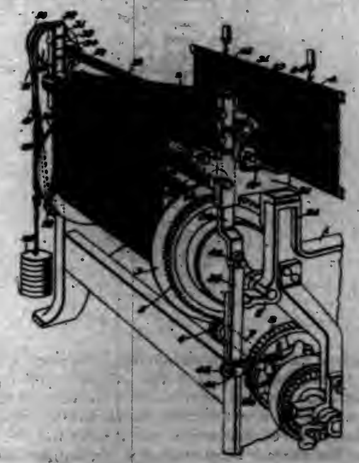
said compound differential gearing, and means associated with said driving means and said rotary shafts for reversing the rotation of said power delivery shaft.

1,754,193. APPARATUS FOR ANNEALING GLASSWARE. THOMAS WARDLEY, Greenford, and HAROLD V. R. M. RENN, West Ealing, England, assignors to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed June 21, 1928, Serial No. 287,201, and in Great Britain June 29, 1927. 10 Claims. (Cl. 49—47.)



2. A lehr for annealing glassware comprising a tunnel, a flue associated with said tunnel, means for passing a temperature controlling medium through said flue, and means for varying the cross sectional area of said flue along a portion of its length including an inclined plate constituting a portion of one wall of said flue.

1,754,194. STEPLADDER. LOUIS BENINTENDE, Woodbridge, N. J. Filed Nov. 16, 1928. Serial No. 319,966. 3 Claims. (Cl. 228—29.)

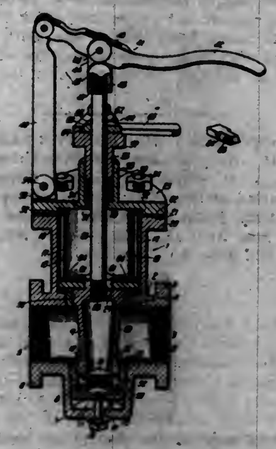


1. A folding ladder of the class described comprising front and rear leg members hingedly connected at their upper ends, a tilting platform pivotally mounted for vertical swinging movement to said rear leg members, said platform having notches formed along its lower edge, a supporting member comprising a pair of legs pivotally connected at the lower ends of said rear leg members, and means carried by the legs of said supporting member and said front leg for receiving the notches of the platform whereby to support the same in a horizontal position.

1,754,195. LOOM CRANK-SHAFT BOX-CAP BEARING. IRA D. BRIDGES, Sanford, N. C., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Apr. 6, 1928. Serial No. 268,024. 4 Claims. (Cl. 308—28.)

1. A lay crank shaft bearing for looms, comprising, in combination, a bracket secured to the loom frame and having a lower bearing for the crank shaft, a box cap, projecting lugs on said bearing and cap, a bolt for securing the box cap at one side of the bearing, an elongated stud bolt adapted to engage said lugs for securing the box cap at the other side of the bearing and having its lower extended end turned laterally, and means for securing the laterally turned end of the elongated stud bolt to the loom frame to cause this bolt to directly support said lugs and resist the strains of lay movement by the crank shaft.

1,754,196. LET-OFF MECHANISM FOR LOOMS. CLARE H. DRAPER, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Nov. 17, 1928. Serial No. 320,142. 19 Claims. (Cl. 139—100.)

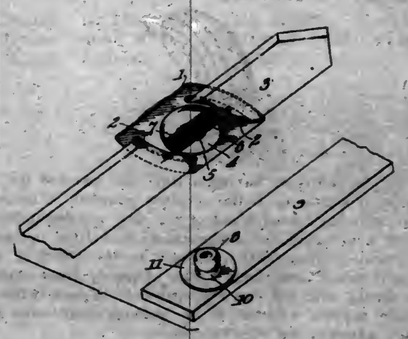


1. In a let-off mechanism for looms, the combination of a warp beam on which the warp is wound, a train of mechanism for positively rotating the warp beam to let-off the warp, a warp tension equaliser supported in a loop of the warp in its travel between the warp beam and front of the loom to maintain a uniform tension on the warp throughout the weaving operation independent of the amount of let-off, and means governed by the movement of the equalizer while its tension on the warp remains constant to vary the operation of said train of mechanism and thus increase or decrease the amount of warp let-off from the warp beam without changing the uniform warp tension.

1,754,197. WEFT CARRIER FOR WEFT-REPLENISHING LOOMS. CLARE H. DRAPER, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Apr. 3, 1929. Serial No. 352,291. 3 Claims. (Cl. 242—126.)

1. A weft carrier for weft replenishing looms having a head portion and a tip, and a weft end holder constituted as a curved spring having a side opening of less width than the tip diameter that the holder may be transversely applied about the tip and over the weft end and manually removed endwise of the tip as the weft end is withdrawn for attachment to a fixed part.

1,754,198. VALVE. VIRGIL L. DU BOIS, Tulsa, Okla., assignor to Du-Ra Valve Manufacturing Company, Tulsa, Okla., a Corporation of Oklahoma. Filed Mar. 8, 1929. Serial No. 345,818. 2 Claims. (Cl. 251—60.)



1. A valve of the character described, including a housing having a flow channel and a bore intersecting the channel, a bushing in said bore having ports communicating with the flow channel, raised bearing surfaces on the inner face of the bushing surrounding said ports and extending transversely around the bushing at opposite sides of the ports, a valve plug movable in said bushing, having circular and annular raised surfaces on its outer surface corresponding with the raised surfaces on said bushing to provide sealing contacts between the ports over limited and like areas on the respective parts.

1,754,199. DISPLAY DEVICE. FRANCIS W. GIBSON, West Roxbury, Mass., assignor to The H. D. Beach Company, Coshocton, Ohio, a Corporation of Ohio. Filed May 20, 1927. Serial No. 193,012. 4 Claims. (Cl. 211—148.)

3. In a display device, a plurality of shelves having slots near their ends, said shelves adapted to overlap each other with their slots registering, overhanging flanges on said shelves and reinforcing pieces affixed to the bottom of said shelves and sockets carried by said reinforcing pieces in vertical alignment with said slots, leg members adapted to enter said sockets and registering slots to units said shelves both vertically and horizontally.

1,754,200. SELF-LOCKING SLIDE FASTENER. EDMUND D. JANES, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Apr. 2, 1929. Serial No. 351,945. 3 Claims. (Cl. 24—77.)

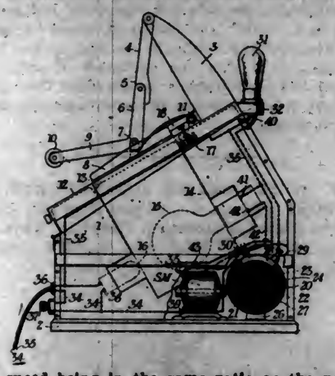
1. A self-locking slide fastener, comprising a plate slotted for adjustment on a supporting article either end leading, and having a depressed center provided with a median opening to permit the passage therethrough of a cooperating head or stud, said head or stud having a constricted neck, and said plate having other openings leading out of the median opening in opposite directions and of less width than the median opening to be engaged by the neck and the overlying head or stud.

1,754,201. BUTTON. GUSTAV JOHNSON, West Roxbury, Mass., assignor to United-Carr Fastener Corporation, Cambridge, Mass., a Corporation of Massachusetts. Filed Feb. 2, 1929. Serial No. 337,034. 7 Claims. (Cl. 24—96.)

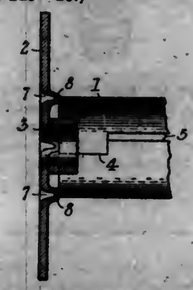
1. A button having a head, a shank beneath said head, a number of attaching prongs extending beyond the said shank for passage through a carrying medium to secure the button to the carrying medium and a laterally extended flange located at a point between where the shank ends and the attaching prongs begin.

1,754,202. PHOTOGRAPHIC-SHUTTER BLADE-ACTUATING MECHANISM. WILLIAM A. RIDDELL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Feb. 15, 1929. Serial No. 340,239. 12 Claims. (Cl. 95—63.)

1. In a photographic shutter, the combination with blade mechanism including a blade controlling connection movable in one direction to open the blades and in an opposite direction to close them, of a master member, an actuating link connecting the blade controlling connection and the master member, said actuating link being pivotally attached to the master member and having a lost motion connection with the controlling connection and a latch pivotally mounted on the link for preventing lost motion on predetermined actuations of the link.



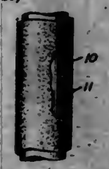
1,754,203. TIME INDICATOR. FRANCIS W. GIBSON, West Roxbury, Mass. Filed May 2, 1929. Serial No. 359,798. 2 Claims. (Cl. 116—133.)



1. A time indicator having a time dial adapted for use on a tire comprising a dial member adapted to be positioned over the curved tread of the tire in offset relation thereto, and means for maintaining said time indicator in vertical position with reference to the tread of said tire, said means comprising a pair of spring arms adapted to be sprung over the tire and spaced from each other by a pintle portion adapted to be engaged with said dial member adjacent the edge thereof.

1,754,204. LIGHT CONTROL FOR PHOTOGRAPHIC-PRINTING MACHINES. NEWTON B. GREEN, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Dec. 31, 1926. Serial No. 158,840. 6 Claims. (Cl. 95—73.)

5. In a photographic printing machine, the combination with a printing panel, of a platen movably mounted with respect to the panel, an electric printing lamp spaced from the panel being adapted to direct actinic light thereto, said lamp being of a type adapted to give different actinic values upon changes in voltage, a source for supplying electric energy at varying voltages, a motor adapted to vary in speed with changes in line voltage, said variations in speed being in the same ratio as the variations in actinic brightness of the lamp, and means under control of said motor adapted to automatically determine the actinic light values passed by the lamp to the printing panel.

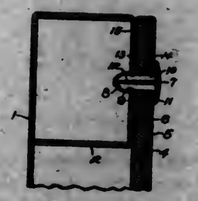


1,754,205. METHOD OF MAKING METAL SPOOLS. JOHN G. JONES, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Apr. 28, 1926. Serial No. 105,287. 5 Claims. (Cl. 219—10.)

1. The process of welding two metal plates of different thickness of metal comprising forming a plurality of cup shaped projections on the heavier metal plate, the bottom wall of said cup shaped projections being of a substantially less thickness than that of the plate of which it is made, and electrically welding an edge of the lighter metal plate to the thin bottom walls of the cup shaped projections.

1,754,206. COVERED WELD ROD FOR ELECTRIC-ARC WELDING. RICHARD STRESAU, Wauwatosa, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Original application filed Mar. 12, 1925, Serial No. 14,989. Divided and this application filed Apr. 18, 1929. Serial No. 356,182. 8 Claims. (Cl. 219—8.)

1. A covered weldrod for electric arc welding comprising a metallic rod provided with an adherent covering containing a starchy material as the principal constituent thereof.



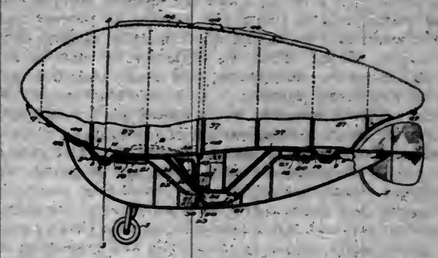
1,754,207. TREATMENT OF RESIDUAL LIQUORS. LINN BRADLEY, Montclair, N. J., and EDWARD P. MCKEEFE, New York, N. Y., assignors to Bradley-McKeefe Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 2, 1921, Serial No. 449,248. Renewed June 26, 1928. 16 Claims. (Cl. 23—49.)

1. The method of treating residual liquor from an alkaline process of treating cellulose bearing materials, which comprises removing organic material therefrom with a reagent containing the sulfate radical and treating the resulting solution, without calcination, to produce a solution containing caustic alkali.

1,754,208. PRODUCTION OF COOKING LIQUOR WHICH CONTAINS SODIUM HYDROXIDE. LINN BRADLEY, Montclair, N. J., and EDWARD P. MCKEEFE, Plattsburgh, N. Y., assignors to Bradley-McKeefe Corporation, New York, N. Y., a Corporation of New York. Filed Oct. 20, 1926. Serial No. 143,014. 41 Claims. (Cl. 23—49.)

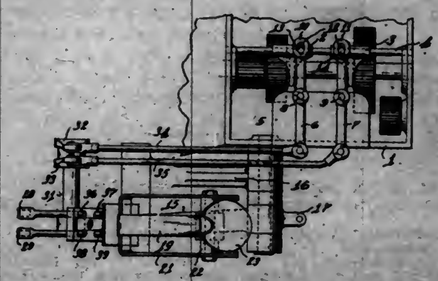
8. The method of producing clarified liquor containing caustic soda from a material containing sodium compounds which comprises subjecting such material to a furnacing treatment adapted to form a non-gaseous furnace product including sodium carbonate and carbon and to minimize losses of sodium compounds with the furnace gases, treating the non-gaseous furnace product, with an aqueous liquor to dissolve sodium compounds therefrom, subjecting the resulting solution containing suspended carbon to a two-stage causticizing treatment, first with calcium hydroxide in amount less than the chemical equivalent of the sodium carbonate contained in the solution and then with an amount of calcium hydroxide in excess of the chemical equivalent of sodium carbonate remaining in the solution, separating from the liquor a sludge containing calcium carbonate resulting from the first treatment with calcium hydroxide, before the final treatment, washing this sludge, and using resulting washings in the process.

1,754,209. FASTENER. FRED S. CARR, Newton, Mass., assignor, by mesne assignments, to United-Carr Fastener Corporation, Cambridge, Mass., a Corporation of Massachusetts. Original application filed Nov. 1, 1924, Serial No. 747,229. Divided and this application filed Oct. 23, 1925, Serial No. 64,845. Renewed Feb. 9, 1929. 3 Claims. (Cl. 24—213.)



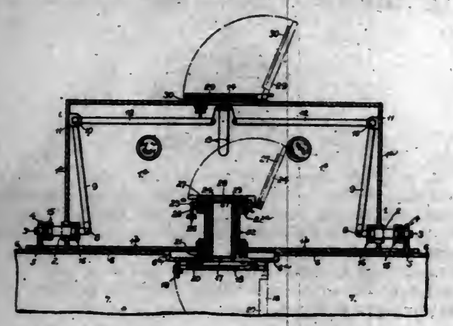
3. A separable fastener stud having a head, a neck and a base, said head and neck being divided by a number of slots to provide a number of yieldable portions between said slots and said yieldable portions being arranged to have the edge of one closer to the edge of another adjacent to the end of the head than at their other ends to permit contact of the said edges adjacent to the head prior to complete contraction of the stud when being engaged with a cooperating socket.

1,754,210. FASTENER. MOSES F. CARR, Lexington, Mass., assignor to United-Carr Fastener Corporation, Cambridge, Mass., a Corporation of Massachusetts. Filed Oct. 5, 1928. Serial No. 310,659. 7 Claims. (Cl. 24—219.)



1. A hollow fastener member having a closed head, at one end thereof, a tubular attaching portion extending axially from said head, axially movable means within the fastener member adapted to contact with and expand said attaching portion to secure the fastener member to a support and depressible means provided as a part of the closed head and adapted when depressed to move said axially movable means.

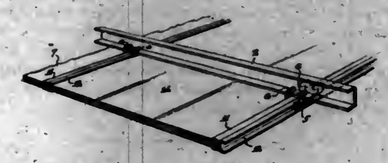
1,754,211. AIRCRAFT. GEORGE W. HARDIN, Greeneville, Tenn. Filed Nov. 7, 1929. Serial No. 405,484. 17 Claims. (Cl. 244—6.)



1. An aircraft comprising a lighter-than-air craft and a heavier-than-air craft, a pilot carrying car secured to the lighter-than-air craft, a connection between said crafts, means in the car for breaking said connection, and means for actuating the controls of the heavier-than-air craft disposed within access of the car when the crafts are connected.

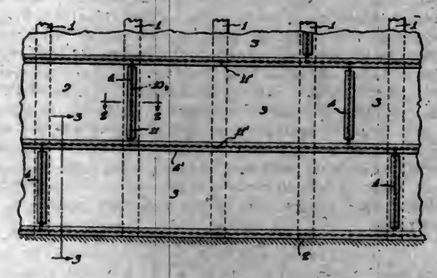
1,754,212. AUTOMATIC GEAR SHIFT. WEBSTER G. JONES, Detroit, Mich. Filed Oct. 19, 1928. Serial No. 313,441. 6 Claims. (Cl. 74—58.)

1. In a gear shifting mechanism, a sliding gear transmission enclosed in a casing, a plurality of upwardly extending pins, connecting means from said pins to said gears whereby movement of one of said pins causes one of said gears to be moved to a driving position, and a clevis pivotally mounted upon a foot pedal and adapted to slide longitudinally on its pivot for selectively engaging said pins whereby movement of said foot pedal causes a selected gear to be moved into a driving position.



1,754,213. SHIP'S LIFE-SAVING APPARATUS. JOSEPH KELLY, Bootle, England. Filed July 5, 1927, Serial No. 203,609, and in Great Britain July 10, 1926. Renewed Feb. 10, 1930. 2 Claims. (Cl. 114—16.7.)

1. In safety structures for ships, submarines and the like, wherein a buoyant carrier may receive and transport human life from the vessel when submerged, and wherein the buoyant carrier is normally mounted on the deck of the vessel, a buoyant carrier having its opposite side walls each carrying a rod-like member movable endwise within definite limits and adapted to prevent leakage of water into the carrier when in either extreme of its movement; means within the container for shifting said rod-like members concurrently, said means including rock-shafts and levers forming a unit individual to the respective rod-like members, and a connection for said units to provide concurrent movement of the units; individual members carried by the deck to receive the outer ends of the rod-like members when the latter are projected; and hatchway means operatively and detachably connecting the carrier and vessel approximately central of the bottom of the carrier, said latter means including a tubular member permanently carried by the carrier and supporting the carrier hatchway cover, and a ring-member carried by the vessel, with said members complementally threaded for quick detachment, said tubular member forming the passageway between vessel and carrier, with the vessel having a hatchway cover for the vessel end of the tubular member.



1,754,214. WALL AND CEILING CONSTRUCTION. GORDON R. WALPER, Royal Oak, Mich. Filed Dec. 10, 1928. Serial No. 324,834. 8 Claims. (Cl. 72—46.)

1. A wall and ceiling construction comprising a frame member, a composition board, clips attached to parallel edges of said board and fastened to said frame member for supporting said board, a channel member fitted over one of said edges, another channel member having its back

secured directly to the back of the first channel member, and another board having an edge received in said other channel member.

1,754,215. WALL OR CEILING CONSTRUCTION. GORDON R. WALPER, Royal Oak, Mich. Filed Feb. 11, 1929. Serial No. 338,913. 3 Claims. (Cl. 72—46.)

1. A wall construction comprising studs, composition boards laid adjacent said studs in edge to edge relation, double channel members or H-sections disposed between adjacent boards to receive abutting edges thereof, each such member engaging at least three studs, and securing members driven between the channels of each double channel member into said studs and having a head engaging the exposed sides of both channel members.

Adverse Decisions in Interference

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,581,701, A. H. Taylor, Piezo-electric-crystal control system, decided January 24, 1930, claims 10, 11, 12, and 13.

Pat. 1,604,556, L. F. Howard, Railway-traffic-controlling apparatus, decided February 26, 1930, claims 1, 2, 3, 4, and 7.

Pat. 1,657,453, Wm. H. Boyd, Furnace walls, decided March 11, 1930, claims 1, 2, 3, 4, and 5.

Pat. 1,697,003, H. L. Fink, Terrazzo strip, decided February 28, 1930, claims 1 and 4.

Adjudicated Patents

(D. C. Mass.) Young patent, No. 1,264,740, for frying apparatus, claims 1 and 4 *Held* not infringed. *A. & H. Pitman Mfg. Co.* v. *Pitman*, 37 F. (2d) 582.

(C. C. A. N. Y.) Ingersoll patent, No. 1,839,395, for booster motor for locomotives, claim 32 *Held* not infringed. *Ingersoll* v. *Delaware & H. Co.*, 37 F. (2d) 465.

(C. C. A. Ill.) Anderson patent, No. 1,360,256, for can opener, claims 1 and 2 *Held* infringed. *Simplex Appliance Co.* v. *Star Can Opener Co.*, 37 F. (2d) 491.

(C. C. A. N. Y.) Ingersoll patent, No. 1,383,633, for booster motor for locomotives, claims 16 and 17 *Held* not infringed. *Ingersoll* v. *Delaware & H. Co.*, 37 F. (2d) 465.

(C. C. A. Ill.) Anderson patent, No. 1,528,178, for can opener, claims 1, 2, 6, and 7 *Held* infringed. *Simplex Appliance Co.* v. *Star Can Opener Co.*, 37 F. (2d) 491.

(C. C. A. N. Y.) Ingersoll patent, No. 1,547,155, for booster motor for locomotives, claims 16, 17, and 21 *Held* not infringed. *Ingersoll* v. *Delaware & H. Co.*, 37 F. (2d) 465.

(C. C. A. Pa.) Stevens patent, No. 1,557,376, for hanger structure for meters, *Held* infringed. *Kitson Co.* v. *Lattimer-Stevens Co.*, 37 F. (2d) 562.

(D. C. N. Y.) Hespe patent, No. 1,561,925, for thermometer, *Held* valid and infringed. *Hespe* v. *Corning Glass Works*, 37 F. (2d) 587.

(D. C. N. Y.) Hespe patent, No. 1,561,926, for thermometer tube, *Held* valid and infringed. *Id.*

(D. C. Pa.) Daily patent, No. 1,580,651, for radiator, claims 1, 2, and 3 *Held* valid and infringed. *James B. Clow & Sons.* v. *Automatic Gas-Steam Radiator Co.*, 37 F. (2d) 611.

Interference Notice

U. S. PATENT OFFICE, *Washington, Mar. 19, 1930.*

Washoff Products Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of George A. Hornbecker, 90 Wheeler St., Waterville, Conn., for registration of a trade-mark and trade-mark registered October 28, 1924, No. 190,851, to Washoff Products Company, Lima, Ohio, and a notice of such declaration sent by registered mail to said Washoff Products Company, at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Washoff Products Company, its assigns or legal representatives, shall enter an appearance therein within 20 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

DECISIONS IN PATENT AND TRADE-MARK CASES

Commissioner's Decision

IN RE KLEIN

Decided March 17, 1930

1. APPLICATION—CONTINUATION—HOW DETERMINED.
   The question whether a second application is a continuation or a continuation in part of an earlier application of the same applicant is to be determined by the disclosure of the two applications and not merely by the scope of the claims of the later application.
2. SAME—CONTINUATION IN PART.
   Where two applications of the same applicant are copending and a substantial part of the disclosure of the first is disclosed, in connection with other matter, in the second, such second application may properly be designated as a continuation in part of the first.

ON PETITION.

INCINERATOR

Messrs. Dyrenforth, Lee, Chritton & Wiles for the petitioner.

ROBERTSON, *Commissioner:*

This is a petition from the action of the Examiner objecting to the statement in the specification that the present application is "a continuation in part" of applicant's earlier application.

In his letter making this requirement final, the Examiner said:

> A continuation in part requires a disclosure of *all* the subject matter of the earlier application in the later one and this subject matter must be *identical* in both.

The term "continuation" apparently was first used as applying to an application in which the prosecution of an earlier application was continued. Sometimes, however, in filing such second application the applicant decided to add to the disclosure of the earlier application some additional disclosure, and the term "continuation in part" was used to identify the relation between these two applications. This latter term, however, has come to be used in a somewhat different sense—namely, as referring to a second application which discloses subject matter taken from the first, and to that extent could be called a division, and additional subject matter not disclosed in the first.

Whether it might have been better to limit the use of the term to its original meaning, it is not thought proper now to attempt to do so in view of the rather general use in the other sense.

In no case, however, should an application be called "a continuation in part" of an earlier application where the one has a different specific disclosure from the other and they are merely related in the sense that both are species of a broader invention, and hence if broad claims are presented in the latter application they will read on the earlier. It is thought that the question whether a later application is either a continuation or a continuation in part of an earlier one should be determined, as is the question whether a second application is a division of an earlier one, by the disclosure and not by the claims.

In *Ex parte Kruse*, 157 O. G. 208, it was said, after stating that a divisional application has been correctly defined as one which has been carved out of the parent application, that a subsequent application may be a continuation of an older one, "when the two have common subject matter," even though the latter may contain matter which is a departure from that shown and described in the original application. It is such an application that is referred to properly as a continuation in part of the earlier.

It does not appear that any such relation as that referred to in *Ex parte Kruse*, supra, exists in this case. In an amendment filed in response to the Examiner's objection to the term "continuation in part," it was stated that the invention was claimed herein "generically and in a specific embodiment" while the claims in the other application "are limited to another species of the invention."

The Examiner's objection to the use of the term "continuation in part" was therefore properly taken, although it is deemed that his holding that such a term could be used only when all the subject matter of the first was disclosed in the second should not be insisted upon.

It is thought that for the sake of consistency and uniformity the terms "continuation" and "continuation in part" should be used only as above indicated. The applicant, of course, can include, as has been done here, a statement in the specification as to the actual relation between the two cases.

The petition is denied.

Court of Appeals of the District of Columbia

MARTIN *v.* ROBERTSON, COMMISSIONER OF PATENTS

No. 4,583. Decided March 3, 1930

1. APPLICATION—ABANDONMENT—RIGHT OF REVIEW BY COURT.
   "The application to revive was addressed to the sound discretion of the Commissioner of Patents. It was for him to decide whether the delay was 'unavoidable'. In the absence of any showing that his action was capricious or arbitrary, no court has jurisdiction to review his action."
2. SAME—SAME.
   Where it appears, from a bill in equity, under section 4915, Revised Statutes, to have the plaintiff adjudged entitled to a patent, that no action was taken on the application during a period of over 20 years except the filing of a petition to revive about 10 years after the application became abandoned, which was denied, *Held* that on the face of the bill it appears that the delay was not unavoidable.

Mr. James V. Martin pro se.

Mr. T. A. Hostetler for the Commissioner of Patents.

APPEAL from the Supreme Court of the District of Columbia. Affirmed.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices

ROBB, *J.:*

Appeal from a decree in the Supreme Court of the District dismissing, on motion of appellee, appel-

lant's bill filed under section 4915, Revised Statutes, to have appellant adjudged entitled to a patent.

The bill discloses the filing of an application in the Patent Office on December 11, 1896, by Augustus M. Herring, appellant's assignor, for a patent on a power-driven aeroplane; that the application became abandoned January 5, 1900; that no action was taken by the applicant for more than 10 years, or until July 1, 1910, when a petition to revive was filed, which petition was denied August 22, 1910. No action was taken thereafter for almost 14 years, until February 11, 1924.

The application to revive was addressed to the sound discretion of the Commissioner of Patents. It was for him to decide whether the delay was "unavoidable". In the absence of any showing that his action was capricious or arbitrary, no court has jurisdiction to review his action. Moreover, on the face of the bill it appears that the delay was not unavoidable, and as suggested in application of Herring, 358 O. G. 577, 57 App. D. C. 95, 17 F. (2d) 683:

> When this applicant permitted his application to become abandoned, other inventors were engaged in the development of this art, and it is common knowledge, as pointed out by the Commissioner, that within a comparatively short time their efforts were crowned with success.

In these circumstances, prompt action was demanded of this applicant. To permit him now, after his long and inexcusable delay, to revive his abandoned application, might result in very serious injustice to those inventors who persevered to the goal of success.

The decree is affirmed with costs.

U. S. Court of Customs and Patent Appeals

IN RE KOEHRING

No. 2,167. Decided January 27, 1930

[37 F. (2d) 431]

DESIGN—PATENTABILITY—CONCRETE-MIXER TRUCK BODY AND FRAME.

A design for a concrete-mixer truck body and frame *Held* patentable.

GRAHAM, Presiding Judge, and GARRETT, Judge, dissenting.

APPEAL from the Patent Office. Reversed.

Mr. J. F. Robb and *Mr. H. C. Robb* for Koehring.

Mr. T. A. Hostetler for the Commissioner of Patents.

BLAND, *J.*:

This appeal from the decision of the Commissioner of Patents, refusing a patent for a design for a concrete-mixer truck body and frame, presents as its main issue the very interesting, and oftimes troublesome, question as to what articles of manufacture may constitute the subject matter of design patents.

The Commissioner, largely upon the authority of *Ex parte Steck*, 1902 C. D. 9, 98 O. G. 228, held that a machine with movable parts is not an "article of manufacture" within the meaning of the design patent law, the pertinent portion of which reads as follows:

> Any person who has invented any new, original, and ornamental design for an article of manufacture * * * may * * * obtain a patent therefor.

The Commissioner, also as a ground of refusal, under the authority of *Smith* v. *Whitman Saddle Co.*, 1893 C. D. 324, and *Northrup* v. *Adams*, 1877 C. D. 322, held that the design involved in this case was not ornamental and that the same belonged "to the mechanical arts and not the esthetic or *fine arts*." The Commissioner, without discussion, also seems to have agreed with another reason assigned for denial of patent by the Examiner, that the design is not a "unitary design"; that is, that the items of the design are not a unit in appearance.

Before us, the Commissioner further urges that the question as to whether the concrete-mixing machinery involved is a proper subject matter for a design patent need not be decided by this court, since it must be held, under *In re Stimpson*, 369 O. G. 731, 58 App. D. C. 86, 24 F. (2d) 1012, that this character of machine is not "inventively ornamental." We think that we must decide both issues.

The riveting machine in controversy in the Stimpson case was held not to be ornamental because the drawing showed that it was "purely utilitarian and without ornamentation of any kind," and for the further reason that—

> there is nothing about the assembled mechanical device which serves to beautify, embellish, or adorn it. The several parts of the mechanism, whether circular, curved, rounded, or spiral, are assembled into an entirety which is lacking in symmetry, wanting in grace, and destitute of any appeal to the senses or emotions. The design has no human interest other than that aroused by the utilitarian nature of the machine.

We will dispose of this contention by saying that if we were willing to follow the strict letter of the language of this decision, we would not regard it as a bar for holding that the machine in issue here possesses ornamentation, since the appearance and general characteristics of the machines radically differ.

Upon the proposition as to what is "an article of manufacture," within the meaning of the design patent law, there have been many decisions of the Patent Office and the courts, some of which are apparently in conflict, but it is readily observable that it has become the settled law that tools and mechanisms which are patentable because of their utilitarian qualities may also properly be the subject matter for design patents if they possess certain qualities which the law requires.

In our view of the case, the beauty and ornamentation requisite in design patents is not confined to such as may be found in the "esthetic or fine arts." It is not reasonable to presume that Congress, in basing a patent right upon the ornamentation or beauty of a tool or mechanical device, intended that such beauty and ornamentation should be limited to such as is found in paintings, sculpture, and artistic objects, and which excites the esthetic sense of artists alone.

In declaring that by the enactment of the design patent law, Congress expressed a desire to promote more beauty, grace, and ornamentation in things used, observed, and enjoyed by our people, the courts have not omitted on frequent occasions to mention the fact that such ornamentation as was intended was an element in the salability of the article. *Franklin Knitting Mills, Inc.*, v. *Gropper Knitting Mills, Inc.*, 15 F. (2d) 375. Notwithstanding the frequency of judicial declaration concerning "attractiveness to purchasers" and increased "salability," it is also a well-settled principle that a design patent may not be used for the purpose of a trademark. *North British Rubber Co.* v. *Racine Tire Co.*, 271 F. 936.

Appellant's design of a truck body and frame for a concrete mixer shows the frame to be so designed as to place the different elements of the whole machine, including the hood, gas tank, mixer, etc., into a more symmetrical and compact whole than was known in the prior art. Aside from this arrangement, which removes much of the unsightliness from the machine, the covering of the motor is made to resemble, in appearance, an automobile hood, and the angular bars and framework of the same are given a rounded or oval appearance. By the plan of assembly of the more or less rounded hood, round gas tank, and rounded frame corners into a compact and more symmetrical whole, an article, possessing more grace and pleasing appearance than existed in the prior art, has been produced. This effect in the design as a whole is ornamental and inventive.

Since it is clear that Congress meant the design patent law to apply to tools and mechanisms of utilitarian character, it follows, we think, that it had in mind the elimination of much of the unsightly repulsiveness that characterizes many machines and mechanical devices which have a tendency to depress rather than excite the esthetic sense. In this mechanical age, when machines, engines and various kinds of mechanisms are transported on our public highways and streets and moved by their own momentum from place to place, it is certainly not undesirable that some of the unsightliness—and, as frequently occurs, frightfulness—of such contrivances be eliminated, if possible. To conclude that Congress, in the enactment of the design patent law, had such a result in contemplation is not unreasonable, since such a purpose is in entire harmony with the declared aim of the legislature.

The law seems to be well settled that the term "*an* article of manufacture" does not include *every* article of manufacture. The courts have declared that certain articles which are more or less hidden from view when in use are not the proper subject matter for design patents. In *Rowe* v. *Blodgett & Clapp Co.*, 112 F. 61, a horseshoe calk, in *Bradley* v. *Eccles*, 126 F. 945, a washer for a thill coupling, and in *Pashek* v. *Dunlop Tyre & Rubber Co.*, 8 F. (2d) 640, an automobile tire tread, were held not to be patentable under the design patent law. Neither do the purposes of the act embrace articles, the ornamentation of which, owing to their nature, could be a matter of concern to no one. *North British Rubber Co.* v. *Racine Rubber Tire Co.*, supra; *Theodore W. Foster & Bro. Co.* v. *Tilden-Thurber Co.*, 200 F. 54. In the last-cited case, in referring to this class of articles, the court said:

> It is also true now, as before the amendment, that among articles of manufacture there are some incapable of being the subjects of design patents, *for want of reason to suppose that their appearance can ever really matter to anybody.* (Italics ours.)

After careful consideration of all the issues and arguments involved in this case, it would seem to us that the only close question involved in arriving at the correct conclusion, is the applicability of the last-quoted rule. The answer to the query, *is the ornamentation of the truck body and frame at bar a matter of concern to anybody, reasonably within the purview of the act*, points to the proper result to be reached. As is indicated above, we must answer this question in the affirmative.

In the Steck case, supra, the Commissioner held that the frame of a water tower with movable parts, for the use of fire departments, was not an article of manufacture, in so far as the design patent law was concerned, chiefly upon the ground that the movement of the parts changed the appearance of the article and that, while the parts might be the subject matter of a design patent, the mechanism as a whole could not be.

In *Ex parte Adams*, 1898 C. D. 115, 84 O. G. 311, it was again said that the design patent law should not apply to structures having movable parts, and a design patent for a truck side frame was denied upon the theory that the movable parts permitted the presentation of a great variety of forms or designs to the observation.

In *Ex parte Klemm and Schreiber*, 218 O. G. 603 (1915), however, a very elaborate and complex chair with adjustable back, book rests, book shelves, writing desk, etc., was held to be the proper subject matter for a design patent. In that opinion, Newton, First Assistant Commissioner, said:

> There seems to be no good reason for laying down a hard and fast rule that design patents cannot be granted to cover devices with relatively movable parts.

The application was allowed notwithstanding the fact that the movable parts of this complex chair permitted a number of designs as far as appearances went.

In an unpublished decision of the Board of Examiners in Chief, dated January 12, 1921, relative to Design Patent No. 57,381, issued March 15, 1921, (on file in the Patent Office and examined by us) for a tractor, the Board, in discussing the question of design patents for machines or machine parts, used the following language:

> The claim for a design in this case was rejected on the authority of *Ex parte Steck*, C. D. 1902, page 9, holding that a machine cannot be the subject of a design patent.
>
> It is our opinion that no arbitrary rule of this sort has been uniformly recognized by the Office or the courts. (Citing *Ex parte Klemm and Schreiber.*)
>
> * * * * * * *
>
> It is certainly true that it is the practice of the Office to grant designs for frames and other parts of machines and we can see no valid reason why a design patent should not be granted for the general appearance of a machine, disregarding any changes in appearance due to moving parts. It is clear that invention can be and often is displayed in so arranging the parts of a machine, irrespective of its mechanical movements, that they shall have a pleasing and esthetic effect and thus enhance their salability. For example, there are, of course, certain mechanical devices necessary to all locomotives, yet the difference in appearance of an English, German, or French locomotive when compared with an American machine is very marked and not at all due to its moving parts, although some of them may be visible at all times. The general form and proportions of automobiles made by different manufacturers are clearly distinguishable and are recognized as features of inventive design.

In *Chandler Adjustable C. & D. Co.* v. *Heywood Bros. & Wakefield Co.*, 91 F. 163, Judge Brown, in the Circuit Court for the District of Massachusetts,

in holding valid a design patent for a furniture support, said:

> The broad proposition advanced by the defendant, that section 4929 of the Revised Statutes was not intended to apply to structures having movable parts, is not supported by the citation of any judicial decision; and, though certain rulings of the Patent Office (*Ex parte Tallman*, 82 O. G. 337; *Ex parte Adams*, 84 O. G. 311; *Ex parte Smith*, 81 O. G. 969; *Ex parte Brower* (1878) C. D. 151) are presented to support this proposition, I am of the opinion that such a construction of the statute calls for an unwarranted and unreasonable limitation of the terms "manufacture" and "any article of manufacture," and leads to absurd and unjust results. For example, such a construction would defeat claims like those in *Burton* v. *Town of Greenville*, 3 F. 642, and *Britton* v. *Manufacturing Co.*, 61 F. 94.
>
> To the objection of the defendant that the parts have no necessary, single, infallible, and fixed relation to each other, it is sufficient to say that the complainant described and shows in his drawing a single and definite arrangement of parts.

In *R. E. Dietz Co.* v. *Burr & Starkweather Co.*, 243 F. 592, Judge Hough of the Circuit Court of Appeals, Second Circuit, in discussing the applicability of the design patent law to a design for a lantern with movable parts and which performed a mechanical function, said:

> While design patents are not intended to protect a mechanical function, or to secure to the patentee monopoly in any given mechanism or manufacture as such, it is immaterial that the subject of the design may embody a mechanical function, provided that the design per se is pleasing, attractive, novel, useful and the result of invention. *Ashley* v. *Weeks, Etc., Co.*, 220 F. at 901, 136 C. C. A. 465. But it is the design that is patented, not the mechanism dressed in the design.

We have cited authorities somewhat at length on the subject of mechanisms having movable parts and performing mechanical functions, in view of the attitude of the tribunals below in regarding the cases of Steck and Adams, supra, as being controlling of the issues before them. In citing the above authorities, it is not our intention to convey the impression that the rule adopted in the Steck and Adams cases may not have appropriate applicability to certain machines which might be sought to be made the subject matter for the application of design patents, and which, by virtue of their characteristics and multiplicity of movable parts, would present to the observer, in their different shapes, such a multiplicity or confusion of designs as to result in there being no definite design. It is sufficient to say that while the concrete mixer, to which applicant's truck body and frame belong, may have movable parts, there is nothing connected with the mechanism before us, or with the machine as a whole, which produces such a multiplicity of designs as to bring it within the rule.

We disagree with the finding of the Commissioner that the items of the design are not a unit in appearance. We think the design of the truck body and frame is composed of units sufficiently adjusted and related to each other as to present to the observer the design of an article, each part of which has a harmonious relation to all other parts. See *Chandler Adjustable C. & D. Co.* v. *Heywood Bros. & Wakefield Co.*, supra.

Some apprehension has been expressed against holding that Congress intended giving a monopoly in designs for articles of manufacture like the article at bar. We comfort ourselves with the reflection that if the monopoly occasioned by a design patent upon such an article did not tend to further the wishes of the legislature, it is not a matter of disturbing consequence, since the holder of such a monopoly could profit nothing by it.

We conclude, therefore, that the truck body and frame at issue is a proper subject matter for a design patent and that the production of the design involved invention. It follows that the decision of the Commissioner should be and is reversed.

Reversed.

GRAHAM, *P. J.*, and GARRETT, *J.*, dissenting:

We are of the opinion that the several tribunals of the Patent Office in refusing the application for a design patent in the instant case reached a correct decision and accordingly we respectfully dissent from the holding of the majority of our court, reversing same.

The Examiner, the Examiners in Chief, and the Assistant Commissioner, acting for the Commissioner, unanimously agreed in the rejection of the application so that we have that uniformity of decision by the Patent Office tribunals which this court should not reverse unless error clearly appears. We are unable to agree that there was such error.

Broadly speaking, their rejection rests upon the ground that the design disclosed and claimed does not represent patentable subject matter under the provision of section 4929 Revised Statutes, USCA Title 35, section 73 the pertinent portion of which is quoted in the majority opinion.

The statute in its present form was derived from the act of July 8, 1870, chapter 230, as amended by the act of May 9, 1902, chapter 783, and is perhaps somewhat broader than the design law which it superseded but not, we think, broad enough to include articles like that here involved.

The present law has been the subject of numerous interpretations, and under it many design patents have been granted. That there have been decisions somewhat conflicting is not surprising since opinions of individuals differ not only as to what is ornamentation, but as to what may be a proper subject matter for the application of patentable ornamental designs.

We think the principle asserted in *Williams Calk Co.* v. *Kemmerer*, 145 F. 928, 76 C. C. A. 466, affirming 136 F. 210, is sound. The subject matter of the claimed design there involved was a horseshoe calk. Letters Patent issued for it and the article became involved in an infringement suit. The court held the patent invalid because "the subject of it is not one patentable as a design" saying:

> An article to be a proper subject for a design patent must be one which by artistic treatment in form and configuration may be given value from an esthetic point of view.

In *North British Rubber Co.* v. *Racine Rubber Tire Co. of New York*, 271 F. 936, the court said:

> Some articles of manufacture are incapable of being the subjects of design patents for want of reason to suppose that their appearance can ever really matter to anybody.

Other authorities, some of which are referred to in the majority opinion, seem to be to the same purport.

Mention is made in the majority opinion of a design patent upon a chair. It seems to us that there is a manifest difference in the necessary or desirable esthetic qualities of an article of furniture for use in the household and an implement such as a horseshoe calk or a riveting machine or a concrete mixer.

It may be true that a search of the Patent Office files would disclose many design patents for articles of manufacture which to our minds would present as few elements of appeal to the esthetic taste as does the article here involved, but, in so far as we can discern from the record, the modern practice in that Office is to more generally restrict such patents and bring them within a narrower scope, requiring that the subject matter shall be one in which ornamentation adds something to the article beyond mere attractiveness for aiding in its sale, and we approve of this later tendency.

Without challenging the opinion that salability may be a legitimate factor for consideration, we can not bring ourselves to agree that a patent may legally rest upon that as the sole factor, and we see little more than this involved in the mechanism in the instant case.

It would be difficult to lay down any hard and fast rule by which it could be declared affirmatively what articles may properly be the subject of design patent, but we experience little difficulty in arriving at the conclusion that a concrete mixer is not one, thus agreeing with the tribunals of the Patent Office in that regard.

We are unable to believe that it was the intent of Congress to patronize the arts and develop the æsthetic sense of the citizenship by giving the monopoly assured by the patent laws to a design for a concrete mixer. It has escaped our observation if the pulchritude of articles like concrete mixers has ever excited any great public consideration.

In the recent case *In re Eifel*, 389 O. G., 533, this court affirmed the decision of the Commissioner of Patents denying an application for a patent for a design for wrenches. We there said:

> • • • but there is no ornamentation possessing originality and beauty sufficient to justify granting a design patent under the statute, *the purpose of which has oftimes been declared to be to encourage art and decoration which* appeals to the esthetic sense, citing *Smith & Co.* v. *Peck, Stow & Wilcox Co.* 262 F. 415; *Ex parte Parkinson* 1871 C. D. 251. (Italics ours.)

We further said there:

> The rejection of the application by the Commissioner seems to be based upon well-settled principles. Nothing has been shown to us to indicate that the decision was erroneous.

We think the reasoning in that case is applicable to the instant case, although the decision there rested upon the design itself rather than the subject matter.

We pretermit any discussion of other and subsidiary matters that may be involved, such as the patentability of a design for a machine of moving parts, the question of whether a unitary design is disclosed, etc., because we are in dissent upon the issue which we regard as being decisive of the right of the case. We think the decision of the Commissioner should be sustained.

U. S. Court of Customs and Patent Appeals

IN RE LAWSON

No. 2,164. Decided December 30, 1929

[36 F. (2d) 525]

1. PATENTABILITY—ANTICIPATION—PRIOR PATENTS.

"The law is well settled that it was not necessary to build a machine, commercially practice the methods, or produce the article disclosed, in order to constitute it a valid reference anticipating appellant's claims."

2. SAME—TUBULAR KNITTED FABRIC AND METHOD OF, AND MACHINE FOR, FORMING THE SAME.

Claims for a tubular knitted fabric, for the method of, and for a machine for, forming such fabric *Held* unpatentable in view of the prior art.

APPEAL from the Patent Office. Affirmed.

Mr. Irving U. Townsend for Lawson.

Mr. T. A. Hostetler for the Commissioner of Patents.

LENROOT, *J.*:

This is an appeal from the decision of the Board of Appeals of the Patent Office, affirming the action of the Examiner in rejecting all of appellant's claims, forty-seven in number.

The specification is very lengthy and the drawings are very intricate. The decision of the Board of Appeals is so complete and so well considered, and so completely covers the issues in the case, that we reproduce it in full. It reads as follows:

> This is an appeal from a final rejection of all claims in the application, forty-seven in number. Claims 1, 17 and 21 are reproduced for illustrative purposes:
>
> 1. A tubular knitted fabric characterised by the formation of partial courses united in a seam or seams extending transverse to the direction of said courses, said seam or seams and fabric external thereto being of substantially equal elasticity.
>
> 17. That method of forming a knitted, tubular, fine gauge fabric, which consists in causing a circular series of spring beard needles to function both for rotary work and for reciprocating split work, and in feeding two distinct yarns thereto at relatively widely spaced points by presenting said yarns to the shanks of the needles very close to the same below the points of the beards under the latter and so as to lie against a multiplicity of said shanks before reaching the knitting point and in both directions of reciprocation, but presenting said yarns sufficiently low to effect the imprisonment of the yarns within the needle beards when depressed notwithstanding the opposing strains from the two fabric sections at the said seams, so as to form from said yarns a fabric of partial courses united in two relatively widely spaced seams of knitted loops formed of said yarns, and in causing said needles to co-act to form said tubular fabric including said seams of substantially uniform appearance and elasticity throughout.
>
> 21. A circular split-work hosiery knitting machine having a circular series of independently movable spring beard needles, independent pressers therefor, primary and auxiliary sets of knitting cams, at substantially opposite sides of the machine, means to rotate and to reciprocate said needles and cams relatively to each other, and means cooperating with said knitting cams at both sides of the machine to effect the production on said needles of split work, said means including means substantially at said sets of knitting cams respectively and positioned very close to the needle shanks to present yarn substantially simultaneously safely below the beards of all the needles in partial courses including the suture needles, each yarn being under tension and fed in opposition to the strain of the partial course knitted at the other knitting cam set, but not presented too low to fail to be imprisoned by the needle beards, when pressed, said means also including means to connect said partial courses in suture seams through manipulation of needles as suture needles.
>
> The references relied upon are:
> Wilcomb, 1,131,583, Mar. 9, 1915;
> Bosworth, 1,154,169, Sept. 21, 1915;
> Ames, 1,262,983, Jan. 8, 1918;
> Pigeon, 1,266,044, May 14, 1918;
> Scott, 1,373,358, Mar. 29, 1921;
> Bosworth, 1,416,257, May 16, 1922;
> Jones, 1,450,814, Oct. 3, 1922.
>
> The claims on appeal are directed to various phases in the production of split work hosiery. Thus claims 1, 2, 3 and 6 to 16, inclusive, are directed to a knitted split work article of manufacture, specifically a stocking, claims 4, 5, 17 to 20, 39 and 40 are directed to a method of knitting the article covered by the preceding group

of claims while the remaining claims on appeal cover an apparatus by which the method may be carried out and the claimed article produced.

The basis of the method and apparatus claims and even of some of the article claims, is the employment of a knitting machine having spring beard needles in the production of the article claimed as distinguished from a machine having latch needles. There are certain admitted advantages inherent in spring beard needle machines. These advantages are set forth in the specification of the application on appeal and are discussed in the statement of the Examiner hence no need exists to set them forth here. So far as the prior art relied on by the Examiner on this appeal discloses, with one exception, split foot stockings have heretofore been produced on latch needle machines. The exception is the patent to Wilcomb, No. 1,131,583. This patent is for a circular knitting machine of the spring beard type and on page 12 of the specification, lines 94 to 119, there is described rather generally the production of split foot stockings and the employment of two yarn feeds. An instance of a circular latch needle knitting machine employed in the production of split foot hosiery is the patent to Bosworth, No. 1,154,169. Circular knitting machines of the spring beard type which the Examiner holds might be modified to produce split foot hosiery without invention are the patents to Pigeon, No. 1,266,044, Scott No. 1,373,358 and Bosworth No. 1,416,257. Generally speaking, the modification necessary to enable the machines of the last noted patents to produce split foot hosiery would be the provision of a secondary yarn guide spaced from the primary guide and likewise the provision of secondary needle actuating or controlling cams. These features, i. e. secondary yarn guides and actuating or controlling cams are usual in circular latch needle knitting machines and are shown in the Bosworth Patent No. 1,154,169, noted above. It is the view of the Examiner that with respect to claims which rely primarily on the employment of spring beard needles to impart patentability thereto it does not involve invention either to substitute spring beard needles for latch needles in a latch needle machine or to modify a spring beard needle machine so as to enable it to do split foot work in view of the teachings of patents like Bosworth No. 1,154,169 for a latch needle machine.

On page 14 of appellant's specification reference is made to a difficulty encountered in the development of split foot spring beard needle knitting. Generally speaking, the difficulty has been in the positioning of the infeeding primary and secondary yarns at the proper points due to the opposing strains set up in opposite sections of fabric. It is stated in the specification that owing to the opposing strains the yarn may be positioned too high or too low with respect to the beards of the needles with a consequent dropping of stitches. In many of the appealed claims the feature of feeding the yarn just at the proper height with respect to the beards of the needles and close to the needles is stressed. This difficulty in yarn feeding is recognized in certain of the patents relied on by the Examiner and provision is made for feeding the yarn close to the shanks of the needles. The patents to Scott, Pigeon and Bosworth No. 1,416,257 are particularly relied on by the Examiner in this connection.

Claims 1, 2, 3 and 6 to 16, inclusive, are directed to an article, specified as a knitted fabric and more specifically recited in some of the claims as a split foot stocking. The claims of this group are rejected on the patent to Ames which discloses a knitted fabric, specifically a split foot stocking. Some of the claims of the group under consideration state that the article is a spring needle split foot stocking. In our opinion the reference to spring needles is not a proper limitation in a claim for a knitted fabric or a knitted split foot stocking. An article of manufacture should be defined by its structural characteristics rather than by a recitation of the character of machine in which it is made. So far as the claims of the group under consideration define structure they are met by the Ames patent. The claims including those specifying spring needles attempt to distinguish from the Ames patent by a reference to elasticity of seams and fabric, uniformity of appearance of seams and fabrics, retention of original elasticity of yarn employed and similar limitations. In the view we take of the matter if the limitations in question can be said to partake of any of the characteristics of structural limitations they are the well known characteristics of spring beard knitting. We do not think patentability of the article claims over the Ames reference can be predicated on knitting the Ames stocking on a machine employing spring beard needles.

The method claims are numbered 4, 5, 17 to 20, inclusive, 39 and 40. Claims 4 and 5 are broad claims. The Examiner rejects these claims, properly we think, on the ground that there is nothing inventive in performing suture seam work with spring beard needles, and further on the Wilcomb patent. Appellant criticizes the Wilcomb patent on the ground of inadequate disclosure and in certain affidavits presented points out that there has been no commercial exploitation of the Wilcomb invention particularly with reference to split foot stocking work. We do not think the Wilcomb patent or the specific disclosure referred to above can be disregarded because of lack of commercial exploitation. Taking the disclosure of the patent with respect to the production of split foot stockings at its face value it presents, in our judgment, sufficient basis for the rejection of claims 4 and 5. Touching the rejection of claims 4 and 5 on the ground that there is no invention in doing suture seam work on spring beard needles we are in accord with the Examiner as to this ground of rejection. As broadly as claims 4 and 5 are drawn no special problem is involved and no difficulty is seen in the employment of machines such as are shown in the patents to Pigeon, Scott, or Bosworth No. 1,416,257 for the class of work indicated. It cannot be successfully urged, we think, that the conception of the possibility of knitting split foot stockings on a spring beard needle machine involved invention since the conception or suggestion is found in the Wilcomb patent. Claims 39 and 40 involve the employment of spring beard needles to form split work fabric and the presentation of the yarns close to the needle shanks and so related to the beards of the needles to avoid dropping of stitches. This last noted feature is disclosed in each of the patents to Scott, Bosworth, No. 1,416,257 and Pigeon. So far as the applicability of these patents to claims 39 and 40 is concerned, it seems to be immaterial whether the yarns are fed in the manner indicated because of opposing strains on the fabric sections or for some other reason. It would appear that the result of the special manner of feeding the yarns would be to cause them to be properly taken by the needles. It is our view that it would be uninventive to modify the structures of Pigeon, Scott or Bosworth No. 1,416,257 so as to permit them to do split fabric knitting. The suggested modification is taught by the latch needle machine of the Bosworth Patent No. 1,154,169.

Claims 17 to 20, inclusive, recite more or less in detail the operation of appellant's machine and are met by the above suggested modification of the Pigeon, Scott or Bosworth No. 1,416,257 constructions, except possibly the limitation in claim 18 to the maintenance of the in-feeding yarns from support on the web holders. For this last noted feature the Examiner relies on the Jones patent, No. 1,430,814. Appellant contends that the Jones patent is not available as a reference because of the fact that the instant application is a continuation in part of an earlier application or applications antedating the filing of the application on which the Jones patent was granted. But the Examiner points out in his report on certain affidavits filed in the case that the early application on which appellant relies did not disclose the features of the Jones patent relied on in the rejection of claims like claim 18. It is accordingly held that the Jones patent is available as a reference for features disclosed therein but not disclosed in appellant's early application. Our conclusion with respect to claims 17 to 20 is that if the Pigeon, Scott or Bosworth No. 1,416,257 patent machines were modified to knit split foot stockings they would meet the claims except for the unpatentable feature disclosed in the Jones patent and included in claim 18. As previously noted the Wilcomb patent suggests the desirability of knitting split foot stockings on a spring beard needle machine and the Bosworth latch needle Patent No. 1,154,169 would teach the modification of the structure of the basic references necessary to permit them to function in knitting split fabrics or split foot stockings by means of spring beard needles.

Of the apparatus claims 21 to 28, inclusive, and 41 to 47, inclusive, most of them closely parallel the more limited method claims, e. g. claims 17 to 20, inclusive. Thus most of the apparatus claims rely for patentability on limitations stated in terms of structure followed by recitations of function corresponding generally to the steps of the method claims. It is our view that the apparatus claims must stand or fall with the more limited method claims and the grounds of rejection applied to the method claims apply equally to claims for the apparatus. Generally speaking, it is our view that if it were desired to use the spring beard needle machines of the Pigeon, Scott or Bosworth No. 1,416,257 patents to knit split foot stockings the structural changes necessary to enable the machines to function for the stated purpose could be made without invention in view of the teachings of the latch needle machine of the Bosworth Patent No. 1,154,169. If it be argued that some suggestion as to the desirability of employing spring beard needles for split foot work is necessary, the suggestion is found in the Wilcomb patent. When specific structural features are involved in the claims we accept the application by the Examiner of the references to the claims for such specific features.

The decision of the Examiner is affirmed.

We agree with the conclusions stated by the Board and its reasons therefor. Most of the questions determined by the board of Appeals were questions of fact, and no useful purpose would be served in reviewing in detail the conclusions of the Board upon such questions.

[1, 2] Appellant insists that the patent to Wilcomb, one of the basic references, not only does not disclose the invention claimed by appellant, but that it should not be considered for the following reasons: that the patentee, Wilcomb, who was an employee of the company of which appellant is president, and whose patent had been assigned to it, had never built the machine described in his patent, nor was it ever built by any one; that appellant's method was never practiced by Wilcomb or by any one, nor was appellant's fabric or article ever produced under that patent. The answer to this contention is that the law is well settled that it was not necessary to build a machine, commercially practice the methods, or produce the article disclosed, in order to constitute it a valid reference anticipating appellant's claims. *Pickering* v. *McCullough*, 21 O. G. 73, 104 U. S. 310; *Taskjian* v. *Forderer Cornice Works*, 14 Fed. Rep. (2d) 414.

Another contention of appellant is that the Ames patent, the other basic reference, has been the property of the company of which appellant is president for about ten years, and that if it had disclosed features now claimed by appellant, his company would not have labored and have gone to the great expense that it did in producing the claimed invention of appellant; that said company has expended more than $100,000 in the development of the machine here claimed, and that expenditure would not have been made had the prior patents named in the references, owned by it, disclosed the invention for which appellant now makes claims, and that these facts show that the invention now claimed was not disclosed in such patents.

These considerations may be important in a doubtful case, but of course in themselves they constitute no evidence of patentability. In perfecting a complicated machine much talent may be employed and much money expended in changes and methods of construction involving only mechanical skill, which do not constitute invention.

Appellant also contends that the Board erred in citing the Jones patent, No. 1,430,814, as a reference to the feature of maintenance of the in-feeding yarns from support on the web holders, and calls attention to certain affidavits in the record which, it is claimed, establish that by reason of the original application of appellant, antedating that of Jones, appellant should be held to be the inventor of that feature and not Jones. This contention is answered by the Board in the statement:

> The Examiner points out in his report on certain affidavits filed in the case that the early application on which appellant relies did not disclose the features of the Jones patent relied on in this rejection of claims like claim 18. It is accordingly held that the Jones patent is available as a reference for features disclosed therein, but not disclosed in appellant's early application.

We find no error in this holding of the Board.

The decision of the Board is affirmed.

Affirmed.

Patent Suits

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922]

Trade-Marks Canceled

97,193. Certain named toilet preparations. The C. B. Woodworth Sons Co., Rochester, N. Y. Registered May 19, 1914. Canceled March 24, 1930.

148,883. Leather shoes. William Lane, Inc., Brooklyn, N. Y. Registered November 29, 1921. Canceled March 7, 1930.

176,256. Leather shoes. E. P. Reed & Co., Rochester, N. Y. Registered November 20, 1923. Canceled March 7, 1930.

203,914. Razors, razor blades, and razor-blade holders. M & M National Laboratories, Los Angeles, Calif. Registered September 29, 1925. Canceled March 24, 1930.

213,567. Bread. The Wardrop Co., Inc., New York, N. Y. Registered June 1, 1926. Canceled March 24, 1930.

227,418. Hosiery and underwear. Harry D. Liebschutz, doing business as The Primfit Textile Co., Cincinnati, Ohio, assignor to The Primfit Textile Co., Inc., Cincinnati, Ohio. Registered May 8, 1927. Canceled March 24, 1930.

227,914. Rusk. Henry Diederich, Brooklyn and Valley Stream, N. Y. Registered May 17, 1927. Canceled March 7, 1930.

241,258. Ladies' and children's shoes. A. M. Legg Shoe Company, Pontiac, Ill. Registered April 17, 1928. Canceled March 7, 1930.

245,489. Cold and grippe tablets. McKesson & Robbins, Incorporated, Bridgeport, Conn. Registered August 14, 1928. Canceled March 24, 1930.

252,297. Pants, coats, overalls, and jumpers and a combination garment of overalls and jumpers. Samuel Labovitz, doing business as Lee Man Co., Minneapolis, Minn. Registered January 29, 1929. Canceled March 17, 1930.

254,923. Certain named electrical apparatus and supplies. Ernest C. Mignon, Rochester, N. Y. Registered April 2, 1929. Canceled March 24, 1930.

256,001. Magazines. Fawcett Publications, Inc., Robbinsdale, Minn. Registered May 7, 1929. Canceled March 8, 1930.

259,845. Paper. The Reynolds Manufacturing Co., Holyoke, Mass. Registered August 6, 1929. Canceled March 7, 1930.

264,807. Pork loaf. Roberts & Oake, Inc., Chicago, Ill. Registered December 3, 1929. Canceled March 24, 1930.

266,486. Bias trimmings and bias tapes. Webbing and Edging Company, New York, N. Y. Registered January 21, 1930. Canceled March 24, 1930.

Disclaimer

1,733,165.—*Donald B. Perry*, Yonkers, N. Y. SYNCHRONIZING ARRANGEMENT FOR MOVING-PICTURE PROJECTORS. Patent dated October 29, 1929. Disclaimer filed March 28, 1930, by the assignee, *American Telephone and Telegraph Company.*

Hereby enters this disclaimer to the said claims of said Letters Patent which are in the following words—to wit:

"2. A control circuit interconnecting two stations, motor driving mechanism for a motion picture machine at each station, vibrating driving forks for each of said motors, means associated with said control circuit at each of said stations and controlled by the frequency of vibration of the fork at one station for controlling the frequency of vibration of the fork at the other station, starting mechanism for each of said motor driving mechanisms, and means associated with said control circuit at one of said stations for simultaneously operating said starting mechanisms.

"3. A control circuit interconnecting two stations, motor driving mechanism for a motion picture machine at each station, vibrating driving forks for each of said motors, means associated with said control circuit at each of said stations and controlled by the frequency of vibration of the fork at one station for controlling the frequency of vibration of the fork at the other station, clutch mechanisms for each of said motor driving mechanisms, relay means associated with said control circuit at one of said stations tuned to respond to oscillations of a desired frequency, an operating circuit for the clutch mechanism at said station controlled by said relay means, and means at the other of said stations for applying to said control circuit oscillations of a desired frequency to operate said relay means and for operating the clutch mechanism at said last mentioned station."

TRADE-MARKS

OFFICIAL GAZETTE, APRIL 15, 1930

[VOL. 393. No. 3]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1

Raw or Partly-Prepared Materials

Ser. No. 293,766. AMERICAN STAY COMPANY, East Boston, Mass. Filed Dec. 17, 1929.

PURITAN

For Leather Lacing of General Application in Spools of Long Continuous Lengths of Lacing and Some of the Uses of the Lacing Being the Fabrication and Ornamentation of Shoes, Pocketbooks, Gloves, and Furniture Upholstery, and Weaving It into Cords for Watch Straps and the Like.

Claims use since Apr. 15, 1929.

Ser. No. 296,518. CARL FREUDENBERG, INCORPORATED, Boston, Mass. Filed Feb. 26, 1930.

HANSA

For Leather.

Claims use since Feb. 14, 1930.

Ser. No. 296,969. THE KOPPERS COMPANY, Pittsburgh, Pa. Filed Mar. 7, 1930.

KOPPERS RAINEY-WOOD COKE

No claim is made to the exclusive right to use the word "Coke" except as shown in the accompanying drawing of the trade-mark.

For Coke.

Claims use since Feb. 22, 1930.

CLASS 3

Baggage, Animal Equipments, Portfolios, and Pocketbooks

Ser. No. 291,073. CHAS. T. WILT COMPANY, Chicago, Ill. Filed Oct. 14, 1929.

The Wiltshire Case

The word "Case" is hereby disclaimed apart from the mark shown on the drawing. Applicant hereby disclaims the word "Wiltshire" apart from the mark as shown in the drawing.

For Suitcases and Traveling Bags Made of Leather and Imitation Leather.

Claims use since July 30, 1929.

Ser. No. 294,253. HOOKLESS FASTENER COMPANY, Meadville, Pa. Filed Dec. 31, 1929.

HOOKLESS

Applicant is the owner of registrations No. 198,412 and No. 263,869.

For Hand Bags, Pocketbooks, Portable Cases for Toilet Articles, Made of Leather or Similar Material, Travelling Bags, Money Belts, Brief Cases, Overnight Bags, Pocket Key Containers Made of Leather or Similar Material, Hatboxes of Leather or Similar Material.

Claims use since Nov. 7, 1929.

CLASS 4

Abrasive, Detergent, and Polishing Materials

Ser. No. 284,606. COURT PAYEN & FALQUE, Marseille, France. Filed May 25, 1929.

All wording appearing on the drawing except the word "L'Abeille" is disclaimed apart from the mark shown.

For Ordinary Soaps, Toilet Soaps, and Perfumed Soaps.

Claims use since Aug. 23, 1871.

Ser. No. 293,765. AMERICAN OIL & DISINFECTANT CORPORATION, New York, N. Y. Filed Dec. 17, 1929.

DRY-O-WET

No claim is made to the exclusive use of the words "Dry" and "Wet" appearing in the drawing except as shown.

For Concentrated Soap for Dry Cleaning and Wet Cleaning.

Claims use since September, 1929.

CLASS 5

Adhesives

Ser. No. 289,976. THE KORKERS COMPANY, Cincinnati, Ohio. Filed Sept. 19, 1929.

For Adhesive Patches for Mending Hosiery and Articles.

Claims use since Aug. 30, 1929.

Ser. No. 295,782. COLUMBIA FASTENER COMPANY, Chicago, Ill. Filed Feb. 8, 1930.

For Mucilage.

Claims use since Dec. 12, 1929.

CLASS 6

Chemicals, Medicines, and Pharmaceutical Preparations

Ser. No. 285,620. EARL R. BRAGG, doing business as Bragg Plaster Company, Monroe, Mich. Filed June 15, 1929

For a Detergent Paste for Use as an Antiphlogistic Poultice.

Claims use since January, 1929.

Ser. No. 291,967. NELLIE ELLISON, INC., Milwaukee, Wis. Filed Nov. 4, 1929.

In the drawing the lining indicates the color green, and the female figure is a fanciful one. The signature used in the mark is that of the president of the applicant corporation.

For Cleansing Cream, Tissue and Wrinkle Cream, Pore Cream, Foundation Cream, Muscle Oil, Cucumber Astringent and Tonic, Special Astringent, Almond Complexion Lotion, Skin-Toning Astringent, Rouge, Face Powder, a Preparation for Darkening the Skin Adjacent the Eyes, Lips Sticks, After-Shaving Powder.

Claims use since Sept. 24, 1926.

Ser. No. 292,146. FRANK WITT, doing business as Witt's Manufacturing Company, Oakland, Calif. Filed Nov. 7, 1929.

The words "Superior Quality Products" are disclaimed apart from the mark as shown.

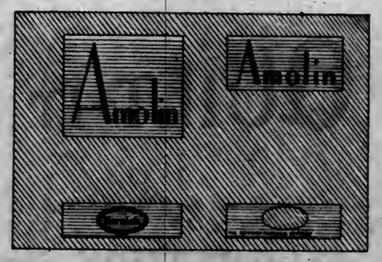
For Shaving Lotion Used After Shaving to Cool and Soothe the Skin, Face Creams, Skin Lotions, and Hair Tonics.

Claims use since on or about Apr. 1, 1929.

Ser. No. 292,709. THE AYER COMPANY, Lowell, Mass. Filed Nov. 22, 1929.

For Medicinal Preparation for Use in the Treatment of Coughs Due to Colds.

Claims use since Oct. 14, 1925.



Ser. No. 294,019. IODINE RESEARCH LABORATORIES, INC., Santa Monica, Calif. Filed Dec. 28, 1929.

ID-OL

For Germicides.

Claims use since about Oct. 2, 1929.

Ser. No. 294,278. THE NORWICH PHARMACAL COMPANY, Norwich, N. Y. Filed Dec. 31, 1929.

The lining on the drawing indicates the colors blue and green. No claim is made to the outline or representation of the label appearing on the drawing. Applicant is the owner of registered Trade-Mark No. 248,261 for the word "Norwich."

For Deodorant Powder, Toilet Powder, Antiseptic Powder, Disinfectant Powder, Foot Powder, Corn Powder, Anti-chafing Powder, Sunburn Powder, Insect-Bite Powder, Body Powder, Baby Powder, Bath Powder, a Pharmaceutical Product in Powder Form Used for the Relief of Irritations of the Skin, Cuts, Sores, and Chilblains; and After-Shave Powder.

Claims use since Dec. 16, 1929.

Ser. No. 294,344. J. C. ELMS EUROPEAN HAIR CO., INC., doing business as J. C. Elms, St. Louis, Mo. Filed Jan. 3, 1930. Under 10-year proviso.

For Hair Washes, Cleansing Powders for White and Gray Switches, Auburn Hair Tints, Hair Dyes, Hair-Curling Preparations, Circassian Oil Suitable for the Hair, Dandruff Preparations, Brilliantine, Chemical Preparations Suitable for Wave Setting, Astringent Elixirs, Emollient Balms, Chemical Preparations Adapted to Prevent Loss of Hair, Eczema Lotions, Medicated Creams for Eczema, Dandruff, Itching of the Scalp, Piles, Chapped or Skin Blemishes, Germicides, Cascara Sagrada, Face Powders, Make-Up Creams, Cold Creams, Face Rouges and Perfumes and Toilet Waters.

Claims use since 1864.

Ser. No. 294,359. DOROTHY LEWIS, Cleveland, Ohio. Filed Jan. 3, 1930.

LAXINE

For Hairdressing Preparations and a Preparation for the Treatment of the Hair and Scalp.

Claims use since Feb. 1, 1924.

Ser. No. 294,663. THE BETTER WAY PRODUCTS COMPANY, Charleston, S. C. Filed Jan. 11, 1930.

QUIET-IT

For Chemical Compound for Removing Carbon.
Claims use since Oct. 1, 1929.

Ser. No. 294,869. WALTER S. COBLE, Brooklyn, N. Y. Filed Jan. 17, 1930.

Rowéna

For Face Powder, Rouge, Lip Stick, Perfume, Toilet Water, and Cold Cream; Cleansing Cream, Vanishing Cream, Lemon Cream, Skin and Tissue Cream, Almond Cream.
Claims use since Sept. 1, 1927.

Ser. No. 294,884. FRIEDRICH MERZ, doing business as Merz & Co., Frankfort-on-the-Main, Germany. Filed Jan. 17, 1930.

Mucaïn

For Anæsthetic.
Claims use since October, 1928.

Ser. No. 294,946. WALTER M. DAVIS, doing business as Davis Chemical Co., Mason City, Iowa. Filed Jan. 18, 1930.

SMOOTH-EM

For Hand and Face Lotion.
Claims use since Oct. 1, 1929.

Ser. No. 295,066. THE BLOSSER COMPANY, Atlanta, Ga. Filed Jan. 22, 1930.

DOCTOR BLOSSER'S CIGARETTES

The word "Cigarettes" is disclaimed apart from the mark as shown on the drawing. The portrait forming a feature of the mark is that of the deceased Dr. Blosser.
For Cigarettes Used for Soothing the Mucous Membrane, for Treating Minor Simple Nasal and Bronchial Irritations Arising From Colds, and for the Temporary Relief of Paroxysms of Asthma.
Claims use since Nov. 28, 1905.

Ser. No. 295,242. JOHN DANIEL SUGASKI, doing business as Jean Chemical Company, Elyria, Ohio. Filed Jan. 25, 1930.

RAT-FUDE "Gets Me"

No claim is made for the descriptive word "Rat-Fude" in this statement apart from the mark as shown.
For Preparation for the Extermination of Rats, Mice, and Gophers.
Claims use since Dec. 1, 1928.

Ser. No. 295,251. JOHN H. BOSSERMAN, doing business as John H. Bosserman Laboratories, Mankato, Kans. Filed Jan. 27, 1930.

OX-SAL-TONE

For Tonic in the Form of a Liquid Composition to be Intermixed with the Bath Water and Used in the Treatment of Lumbago, Rheumatism, and Other Diseases.
Claims use since Jan. 10, 1929.

Ser. No. 295,302. BENJAMIN B. GOLDENBERG, doing business as Clearskin Laboratories, Inc., New York, N. Y. Filed Jan. 28, 1930.

The wording on the drawing is hereby disclaimed apart from the mark as shown.
For Face Cream.
Claims use since Feb. 5, 1929.

Ser. No. 295,331. MITCHELL DAVIS, doing business as Karay Company, Philadelphia, Pa. Filed Jan. 29, 1930.

KARAY

The portrait appearing on the drawing is that of A. Davis, the applicant's father.
For Medicinal and Pharmaceutical Preparations, Particularly a Medicine in Capsules for Headaches, Colds, Neuralgia, Muscular Aches and Pains, Muscular Lumbago, and Throat Irritations; a Medicine for the Treatment of Indigestion, a Throat Gargle; a Liniment for External Use in the Treatment of Rheumatism, Neuritis, Lame Back, Sciatica, Muscular Aches and Pains, Stiff and Aching Joints, Lumbago, Sprains, and Strains; and a Cough Medicine for the Treatment of Coughs Due to Colds, Bronchitis, Hoarseness, and Loss of Voice.

The representation of the pruning shears shown in the drawing is disclaimed as being no part of the mark.
For Pruning Shears.
Claims use since Jan. 5, 1920.

Ser. No. 296,128. MARATHON RAZOR BLADE CO., INC., Irvington, N. J. Filed Feb. 17, 1930.

For Safety-Razor Blades.
Claims use since about Feb. 10, 1930.

Ser. No. 296,312. AMERICAN CITRUS ENGINES, INC., Marysville, Mich. Filed Feb. 21, 1930.

ENSIGN

For Internal-Combustion Engines and Parts Thereof.
Claims use since Jan. 13, 1930.

Ser. No. 296,829. SPEED-E COMPANY, Oakland, Calif. Filed Mar. 4, 1930.

Speed-e

For Food Shredders.
Claims use since Oct. 1, 1929.

Ser. No. 296,911. EISENSTADT MANUFACTURING COMPANY, St. Louis, Mo. Filed Mar. 6, 1930.

PRISCILLA

For Pocketknives.
Claims use since January, 1917.

Ser. No. 296,936. JAMES W. WOOD, Twin Falls, Idaho. Filed Mar. 6, 1930.

GYROCAPOR

For Honey-Melting Machines.
Claims use since Jan. 24, 1929.

Ser. No. 296,959. WILLIAM DIXON, INCORPORATED, Newark, N. J. Filed Mar. 7, 1930.

INVICTA

For Pliers, Engraving Tools, Files, and Saws.
Claims use since Jan. 15, 1906.

CLASS 24

Laundry Appliances and Machines

Ser. No. 295,480. H. KOHNSTAMM & CO., INC., New York, N. Y. Filed Feb. 1, 1930.

No claim is made herein to the registration of the words "Nets, Wear Best," and "Wash Best," apart from the mark shown in the drawing.
For Laundry Nets.
Claims use since Dec. 1, 1929.

Ser. No. 295,806. NATIONAL WASHBOARD COMPANY, Chicago, Ill. Filed Feb. 8, 1930.

OVAL OAKS

For Washboards.
Claims use since 1912.

Ser. No. 295,984. VORCLONE CORPORATION, Milwaukee, Wis. Filed Feb. 18, 1930.

VORCLONE

"DRY BY AIR"

The words "Dry by Air" are disclaimed apart from the mark as shown.
For Drying Tumblers.
Claims use since Jan. 1, 1928.

CLASS 26

Measuring and Scientific Appliances

Ser. No. 293,560. F. & F. SIMS, London, Ontario, Canada. Filed Dec. 11, 1929.

SAFETYSCOPE

For Mirrors and Optical Devices for Sighting Objects Out of the Line of Direct Vision.
Claims use since June 1, 1929.

Ser. No. 295,899. HALL ELECTRIC HEATING COMPANY INC., Philadelphia, Pa. Filed Feb. 11, 1930.

Hallmark HEATING

The trade-mark is formed in red, as indicated by the lines in the drawing. The word "Heating" is disclaimed apart from the mark shown in the drawing.
For Thermostats.
Claims use since Sept. 4, 1929.

Ser. No. 296,018. MARTIN-COPELAND COMPANY, Providence, R. I. Filed Feb. 14, 1930.

SUN-TAN

For Ophthalmic Mountings.
Claims use since Aug. 19, 1929.

Ser. No. 296,137. NATIONAL RECORDING PUMP CO., Dayton, Ohio. Filed Feb. 17, 1930.

APEX METER

No claim is made to the word "Meter" apart from the mark here shown.
For Self-Measuring Gasoline-Dispensing Apparatus.
Claims use since Feb. 7, 1930.

Ser. No. 296,692. CONTINENTAL OPTICAL COMPANY, Indianapolis, Ind. Filed Mar. 1, 1930.

French Cordials

For True Fruit and Imitation Flavoring Extracts for Flavoring Nonalcoholic, Noncereal, Maltless Beverages.
Claims use since July 10, 1928.

269,789. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) RADIOVISION CORPORATION, New York, N. Y. Filed Jan. 25, 1930. Serial No. 295,234.

RAYFOTO

For Light-Sensitive Cells.
Claims use since Apr. 10, 1928.

269,790. (CLASS 45. BEVERAGES, NONALCOHOLIC.) LAIRD & COMPANY, Eatontown, N. J. Filed Jan. 4, 1930. Serial No. 294,891.

FIVE APPLE

For Cider and Pure Apple Juice and Nonalcoholic, Noncereal, Maltless Beverages Sold as Soft Drinks, and Sirups for Making the Same.
Claims use since Sept. 1, 1927.

269,791. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) WEBSTER ELECTRIC COMPANY, Racine, Wis. Filed Jan. 2, 1930. Serial No. 294,328.

WEBSTER

For Audio Frequency Amplifiers Comprising Assembled Units for Amplifying Electric Signals, Audio Frequency Transformers, Choke Coils, Electric Pick-Up Tone Arms, Electric Pick-Up Voltage Controls, Electrical Sockets and Plugs, Electrical Phonograph Pick-Ups, Power Transformers, High-Voltage Ignition Transformers, and Energizing Transformers for Electric Signs.
Claims use since July 22, 1909, on electrical apparatus in general but since 1920 upon the goods specified herein.

269,792. (CLASS 48. MALT BEVERAGES, AND LIQUORS.) VINO SANO CO., San Francisco, Calif. Filed Dec. 28, 1929. Serial No. 294,198.

MALT BRICK

For a Malt Compound in Brick Form for Making Nonalcoholic, Cereal, Malt Beverages.
Claims use since November, 1927.

269,793. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) HASTINGS MANUFACTURING CO., Hastings, Mich. Filed Dec. 18, 1929. Serial No. 293,833.

-DUBL-TEST-

For Piston Rings.
Claims use since Mar. 1, 1928.

269,794. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) HASTINGS MANUFACTURING CO., Hastings, Mich. Filed Dec. 18, 1929. Serial No. 293,832.

DUBL-SLOT

For Piston Rings.
Claims use since Mar. 1, 1923.

269,795. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MRS. WORD LEIGH, Nyack, N. Y., and Key West, Fla. Filed Oct. 29, 1929. Serial No. 291,729.

"Beauty-is-Yours"

For Cold Cream.
Claims use since Sept. 16, 1928.

269,796. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) LOVE & AMOS COAL COMPANY, Nashville, Tenn. Filed Oct. 11, 1929. Serial No. 290,962.

FENTRESS

For Coal.
Claims use since Jan. 1, 1929.

269,797. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) ZEISS IKON AKTIENGESELLSCHAFT, Dresden, Germany. Filed Aug. 11, 1928. Serial No. 270,907.

Zeiss Ikon

For Photographic Apparatus—Namely, Photographic Lenses, Shutters, Light Filters, View Finders, Stereoscopes, Automatic Releases, Tripods, Tripod Heads, Camera Filters, Portable Dark Rooms, Dark-Room Lamps, Sensitized Plates, Sensitized Films, Sensitized Roll Films, Sensitized Film Packs, Sensitized Photographic Papers, Sensitized Photographic Cards, Masks, Vignettes, Finders for Picture Delineation, Plate Slides, Roll Film Slides, Film-Pack Slides, Developing Basins, Fixing Basins, Photographic-Developing Machines, Dropping Bottles, Plate Lifters, Plate Holders, Draining Clamps for Films, Washing and Draining Racks, Washing Vats, Washing Tanks, Printing Frames, Retouching Desks, Retouching Mirrors, Flash-Light Lamps, Scales for Use in the Art of Photography, Weights for Scales, Thermometers, Enlarging Apparatus, Projection Apparatus for Episcopic Projection, Projection Apparatus for Diascopic and Episcopic Projection, Projection Apparatus for Lantern Slides, Projection Apparatus for Microscopic Projection, Cinematographic Moving-Picture Cameras, Cinematographic Projectors and Machines, Cine Printing Machines, Film Rewinders, Film-Examining Machines, Film Counters, Projection Tables, Projection Screens, Slide Carriers Forming Part of Projecting Machines, Condenser Lenses, Prisms, Shooting Cinemas, Hemometers, Exposure Meters, Apparatus for Testing Powders and Explosives, Chronographs, Measuring Instruments for Film Backward Movement, Gas-Pressure Meters; Instruments for Measuring the Tensive Force of Bullets, Barometers, Field Prism Glasses, Telescopes, Microscopes, Densographs, Spectrodensographs, Calculating Machines.
Claims use since Oct. 1, 1926.

269,798. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) NEON TUBE MANUFACTURING CO. INC., San Francisco, Calif. Filed July 25, 1928. Serial No. 270,141.

EVERLAST

For Neon and Other Luminescent Tubes, Electrical Transformers, Electrodes, Neon Gas Signs.
Claims use since May 25, 1927.

269,799. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) CASIMIR BODAN, doing business as Electronic Laboratories, New York, N. Y. Filed June 26, 1928. Serial No. 268,673.

HYWAT

For Electrical Batteries.
Claims use since May 10, 1928.

269,800. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) LEON BAXTER, doing business as Baxter Manufacturing Co., Elmhurst, N. Y. Filed Feb. 4, 1928. Serial No. 261,164.

Electro-Phonic

The drawing is lined to indicate color.
For Electric Pick-Up Devices for Sound Reproduction Employing Electron Tubes for Amplification.
Claims use since Sept. 1, 1926.

269,801. (CLASS 37. PAPER AND STATIONERY.) AMERICAN PAPER EXPORTS, INC., New York, N. Y. Filed Jan. 18, 1930. Serial No. 294,905.

NEPAL

For Ledger, Bond, Mill Board, Writing Bristol, Blotting, Printing, Cover, Thin Typewriter, Wrapping, Mimeograph, and Tissue Paper; Correspondence and Mailing Envelopes, and Papeteries.
Claims use since January, 1927.

269,802. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) LEGGETT SALES CO., INC., New York, N. Y. Filed Dec. 9, 1929. Serial No. 293,485.

DeROSE

For Candy.
Claims use since February, 1929.

269,803. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) ELTON D. KOHR, York, Pa., and Atlantic City, N. J. Filed Mar. 5, 1930. Serial No. 296,878.

Kohr's THE ORIGINAL Frozen Custard

For Frozen Custard.
Claims use since July 1, 1924.

269,804. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) THE WILLYS-OVERLAND COMPANY, Toledo, Ohio. Filed Dec. 4, 1929. Serial No. 293,251.

FINGER-TIP CONTROL

For Electric Switches, Particularly Automobile Starting, Lighting, and Signal-Control Switches.
Claims use since Nov. 22, 1928.

269,805. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) LEEDY MANUFACTURING CO. INC., Indianapolis, Ind. Filed Nov. 4, 1929. Serial No. 291,987.

Leedy

For Band and Orchestra Instruments and Supplies—viz, Drums, Snare Drums, Bass Drums, Drum Stands, Drum Pedals and Beaters, Drumheads, Drumsticks, Drum Slings, Drum Spurs, Drumstick Holders, Drum-Hoop Adapters, Drum Snares, Drum Practice Pads, Snare-Drum Tone Controls, Drum Rods for Snare and Bass Drums, Drum Rods and Parts, Snare Strainers, Drum-Belt Hooks and Eyes, Drum Ropes, Drum Ears, Drum Racks, Drum Roller Cord Hooks, Base-Drum Carriages, Combined Drum Stand and Cymbal Holders, Cymbals, Cymbal Beaters, Cymbal Pads, Cymbal Hangers, Cymbal Holders, Cymbal Straps and Handle, Cymbal Pedals, Cymbal Sticks, Cymbal Sizzle Attachment, Trap Rails, Trap Consoles (Wheeled and Sliding) Trap Holders, Console Trap Holders, Cymbal and Tom-Tom and Gong Stands, Trap Trees, Trap-Tree Trap Holders, Trap Tables, Trap-Table Trap Holders, Tympani, Tympani Heads, Tympani Sticks, Tom-Toms, Tom-Tom Stands, Tom-Tom Heads, Temple Blocks, Temple-Block Stands, Temple-Block Holders, Rattles, Combination Holders for Traps, Cowbells, Cowbell Single Holders, Cowbell Double Holders, Triangles, Triangle Holders, Tambourines, Tambourine Holders, Tambourine Heads, Castanets, Slap Sticks, Jingle Clogs, Clog Mallets, Popguns, Anvils, Whistles, Chimes, Horns (Musettes), Song Whistles, Bird Whistles, Three-Tone Whistles, Wood Whistles (Cuckoo, Two-Tone Locomotive Whistle, Three-Tone Locomotive or Steamboat Whistle, Ocean Whistle); Mimical Instruments for Imitating a Rooster (Dunghill), Rooster (Shanghai), Rooster (Bantam), Hen Cackle, Peacock, Jay Bird, Baby Cry, Bob White, Also Duck Call, Cow Bawl, Dog Bark, and Comedy Howl; and Sleigh Bells, Locomotive and Fire Bell Plate, Locomotive Imitation, Horse Hoofs, Sand Blocks, Jazz Brushes, and Gong Sticks, Mallets for Bell Xylophones, Mallets for Marimba Xylophones, Parade Music Holders, Batons, Bugles, Trumpets, Fifes, Whistles (Drum Majors'), Musical Instruments in the Zylophone Class Having Metal Resonating Bars, Sole-Tone Bells, Standard Bells, Bell Stands, Folding Bell Stands, Tympani Pedals, Tympani Stands, Tympani Pitch Pipes, Xylophones, Xylophone Cases, Xylophone-Mallet Holders, Marimba Xylophones, Marimba Xylophone Mallets, Stands for Xylophones, Wheels for Xylophone Stands, Split Frames and Resonators for Xylophones, Xylophone Resonator Adjusters, Xylophone Legs (Adjustable), Xylophonettes, Chord Chimes, Chord-Chime Racks, Small Chimes, Cathedral Chimes, Chime Mallets, Studio Tuning Bars.
Claims use since Feb. 15, 1903.

269,806. (CLASS 18. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) THE EVERDY COMPANY, Frederick, Md. Filed Oct. 15, 1929. Serial No. 291,086.

SILENT

For Door Closers.
Claims use since Nov. 28, 1927.

269,807. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) MODERN COAL BURNER COMPANY, Chicago, Ill. Filed Oct. 11, 1929. Serial No. 290,964.

MODERN

For Coal Burners and Coal-Feeding Attachments Therefor.
Claims use since Jan. 2, 1928.

269,808. (CLASS 37. PAPER AND STATIONERY.) WILLIAM H. APPLEBY, Newark, N. J. Filed July 26, 1929. Serial No. 287,687.

AD-TISSUE

For Toilet Paper in Rolls.
Claims use since on or about Dec. 1, 1928.

269,809. (CLASS 37. PAPER AND STATIONERY.) PORT HURON SULPHITE & PAPER CO., Port Huron, Mich. Filed June 20, 1929. Serial No. 285,883.

HURON FEATHERWEIGHT BOND

For Certain Named Writing and Printing Paper.
Claims use since Mar. 1, 1929.

269,810. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) PHILIP A. SINGER & BRO. INC., Newark, N. J. Filed June 15, 1929. Serial No. 285,642.

CERTIFIED
BALTIC SEAL
DYED CONEY
DE LUXE

For Dyed Rabbit Skins.
Claims use since January, 1929.

269,811. (CLASS 46. FOODS AND INGREDIENTS OF FOODS. PAUL SCHULZE BISCUIT COMPANY, Chicago, Ill. Filed Apr. 24, 1929. Serial No. 282,946.

MALTED GRAHAMS

For Crackers.
Claims use since February, 1929.

269,812. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) ST. LOUIS SCREEN COMPANY, St. Louis, Mo. Filed Apr. 20, 1929. Serial No. 282,754.

ST. LOUIS SCREEN CO. INC

For Window Screens and Screen Doors.
Claims use since Jan. 1, 1929.

269,813. (CLASS 13. HARWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) ALUMINUM GOODS MANUFACTURING CO., Manitowoc, Wis. Filed Mar. 29, 1929. Serial No. 281,539.

STURDY

For Aluminum Ware—Namely, Baking Dishes, Boilers for Cooking Foods, Cake Pans, Coffee Percolators, Coffeepots, Colanders, Combination Cookers, Combination Poacher, Steamer, and Fry Pans, Combination Roasters, Convex Kettles, Convex Saucepans, Convex Sauce Pots, Cooking Kettles, Covers, Dish Pans, Dish Driers, Double Boilers, Fry Pans, Kettles, Layer-Cake Pans, Lipped Fry Pans, Lipped Preserving Kettles, Lipped Saucepans, Lipped Sauce-pan Sets, Lipped-Stewpan Sets, Mixing Bowls, Mixing-Bowl Sets, Pans, Pie Plates, Pitchers, Preserving Kettles, Pudding Pans, Pudding-Pan Sets, Roasters, Soucepans, Sauce Pots, Skillets, Sink Strainers, Steamers, Stewpans, Strainers, Strainer Kettles, Strainer Pans, Teakettles, Tubed Cake Pans, Washbasins, Water Pitchers, and Windsor Kettles.
Claims use since Feb. 26, 1929.

269,814. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS AND PARTS THEREOF.) THE MINING SAFETY DEVICE CO., Bowerston, Ohio. Filed Mar. 6, 1929. Serial No. 280,370.

NOLAN

For Mine-Equipment Goods Such as Automatic Car Stops and Feeders, Hand-Operated Cages, Hand-Operated Feeders, Semiautomatic Cages, Semiautomatic Feeders, Rotary Dumps, Cradle or Gravity Dumps, Switches, Landing Chairs, Retarders.
Claims use since Oct. 3, 1919.

269,815. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) KOHLER COMPANY, Kohler, Wis. Filed Mar. 1, 1929. Serial No. 280,126.

SELKIRK

For Closet Bowls and Combinations.
Claims use since Feb. 11, 1929.

269,816. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) KOHLER COMPANY, Kohler, Wis. Filed Mar. 1, 1929. Serial No. 280,124.

GRANADA

For Closet Bowls and Combinations.

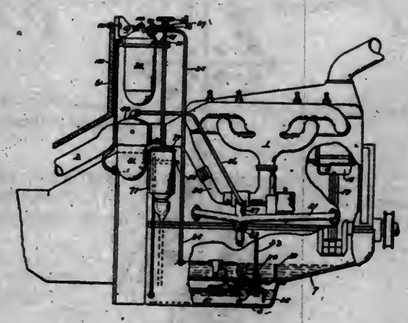
REISSUES

APRIL 15, 1930

17,642. TRAFFIC SIGNAL. PAUL P. HORNI, Newark, N. J. Filed Nov. 12, 1929. Serial No. 406,691. Original No. 1,728,762, dated Sept. 17, 1929, Serial No. 153,618, filed Dec. 9, 1926. 8 Claims. (Cl. 177—329.)

1. A traffic signal comprising a lantern support, a group of a plurality of signal lanterns spaced around said support in a common horisontal plane, all of the lanterns of said group being mounted upon independent vertical axes upon said support and adjustable relatively upon said axes to project the light rays of any two adjacent lanterns in any desired angular relation to each other between parallelism in the same or opposite directions.

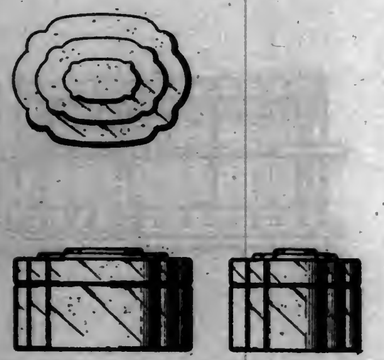


17,643. HEAT-TREATING APPARATUS FOR PACKAGED GOODS. ALBERT R. THOMPSON, San Jose, Calif., assignor to Anderson-Barngrover Mfg. Co., San Jose, Calif., a Corporation of California. Filed Dec. 10, 1924. Serial No. 755,118. Original application filed June 7, 1921, Serial No. 475,643. Divided and application filed May 16, 1928, Serial No. 639,438. Original No. 1,498,765, dated June 24, 1924. 11 Claims. (Cl. 126—272.)

1. An apparatus for heat treating packaged goods comprising a heating shell having an inlet and an outlet; a helically directed fixed rail within the shell about the inner surface of its periphery; a rotatable reel within the shell having a peripheral series of rails parallel with the reel axis and coacting with the helically directed rail to form a path for conducting the goods through the shell from the inlet to the outlet; an imperforate cross plate carried by and within the reel and rotating therewith, said plate dividing the reel into successive com-

partments communicating through the goods path; and means for maintaining different temperatures in each compartment.

17,644. PROCESS OF AND APPARATUS FOR THE CONTINUOUS REFINING OF LUBRICATING OILS OF INTERNAL-COMBUSTION ENGINES. FRED W. MANNING, Berkeley, Calif., assignor, by direct and mesne assignments, to Stewart-Warner Corporation, Chicago, Ill., a Corporation of Virginia. Filed Nov. 27, 1920. Serial No. 410,272. Original No. 1,729,746, dated Oct. 1, 1929, Serial No. 147,481, filed Nov. 10, 1926. 16 Claims. (Cl. 210—138.)

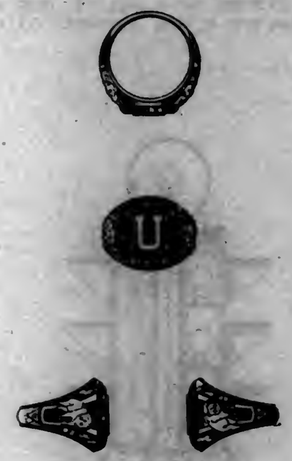


11. The combination of a reservoir for liquid to be filtered, a magazine filter containing a reserve of filter material, said magazine filter connected to receive liquid from said reservoir, and means operable to permit new liquid to be introduced into the reservoir and simultaneously cause the contaminated filter material to be removed.

DESIGNS

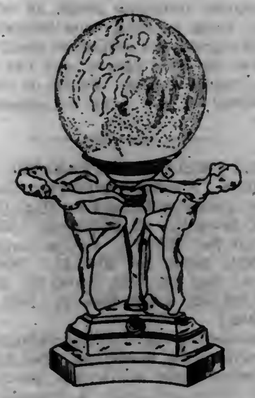
APRIL 15, 1930

80,933. JAR OR SIMILAR RECEPTACLE. NEAL R. ANDREWS, New York, N. Y., assignor to Marinello Company, New York, N. Y., a Corporation of New York. Filed Jan. 27, 1930. Serial No. 34,309. Term of patent 7 years.



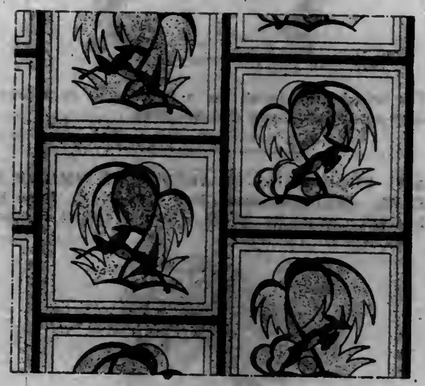
The ornamental design for a jar or similar receptacle substantially as shown and described.

80,934. LAMP OR SIMILAR ARTICLE. CHESTER A. BACHMAN, Los Angeles, Calif. Filed Jan. 14, 1930. Serial No. 34,129. Term of patent 7 years.



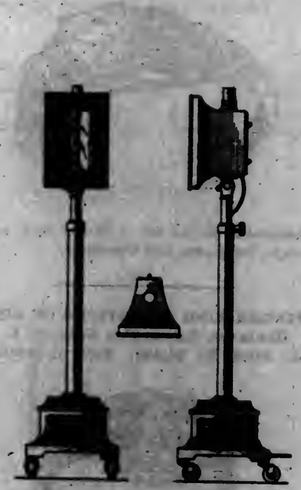
The ornamental design for a lamp or similar article as shown.

80,935. RING. ARTHUR A. CONSTABEL, Norristown, Pa., assignor to The Bailey, Banks & Biddle Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 24, 1930. Serial No. 34,274. Term of patent 7 years.



The ornamental design for a ring, as shown.

80,936. TABLE LAMP OR ARTICLE OF SIMILAR NATURE. PAUL CRICCHIO, New York, N. Y., assignor to Wrought Iron & Art Glass Fixture Co., Inc., New York, N. Y. Filed Jan. 30, 1930. Serial No. 34,346. Term of patent 8½ years.



The ornamental design for a table lamp or article of similar nature, as shown.

80,937. TEXTILE FABRIC. ALBERT DE ROSE, Paris, France, assignor to Cheney Brothers, South Manchester, Conn., a Corporation of Connecticut. Filed Feb. 1, 1930. Serial No. 34,875. Term of patent 14 years.

The ornamental design for a textile fabric, as shown and described.

80,938. LAMP. ANTHONY DI LUCCI, Chicago, Ill., assignor to Applied Research, Inc., Chicago, Ill., a Corporation of Illinois. Filed July 29, 1929. Serial No. 32,241. Term of patent 14 years.

The ornamental design for a lamp, substantially as shown.

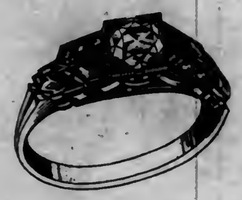
80,940. RADIOCABINET. LOUIS FRANCIS, Asheville, N. C., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed May 27, 1929. Serial No. 31,420. Term of patent 8½ years.

The ornamental design for a radiocabinet substantially as shown and described.

80,941. FINGER RING OR ARTICLE OF SIMILAR NATURE. BENJAMIN GROSS, New York, N. Y. Filed Jan. 30, 1930. Serial No. 34,344. Term of patent 8½ years.

The ornamental design for a finger ring or article of similar nature, as shown and described.

80,942. FINGER RING OR ARTICLE OF SIMILAR NATURE. BENJAMIN GROSS, New York, N. Y. Filed Jan. 30, 1930. Serial No. 34,345. Term of patent 3½ years.



The ornamental design for a finger ring or article of similar nature, as shown and described.

80,943. FINGER RING OR ARTICLE OF SIMILAR NATURE. BENJAMIN GROSS, New York, N. Y. Filed Feb. 10, 1930. Serial No. 34,474. Term of patent 3½ years.

The ornamental design for a finger ring or article of similar nature, as shown and described.

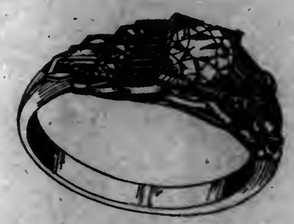
80,944. FINGER RING OR ARTICLE OF SIMILAR NATURE. BENJAMIN GROSS, New York, N. Y. Filed Feb. 10, 1930. Serial No. 34,475. Term of patent 3½ years.

The ornamental design for a finger ring or article of similar nature, as shown and described.

80,945. FINGER RING OR ARTICLE OF SIMILAR NATURE. BENJAMIN GROSS, New York, N. Y. Filed Feb. 10, 1930. Serial No. 34,476. Term of patent 3½ years.

The ornamental design for a finger ring or article of similar nature, as shown and described.

80,946. FINGER RING OR ARTICLE OF SIMILAR NATURE. BENJAMIN GROSS, New York, N. Y. Filed Feb. 10, 1930. Serial No. 34,477. Term of patent 3½ years.



The ornamental design for a finger ring or article of similar nature, as shown and described.

80,947. FINGER RING OR ARTICLE OF SIMILAR NATURE. BENJAMIN GROSS, New York, N. Y. Filed Feb. 10, 1930. Serial No. 34,478. Term of patent 3½ years.

The ornamental design for a finger ring or article of similar nature, as shown and described.

80,948. FINGER RING OR ARTICLE OF SIMILAR NATURE. BENJAMIN GROSS, New York, N. Y. Filed Feb. 10, 1930. Serial No. 34,479. Term of patent 3½ years.

The ornamental design for a finger ring or article of similar nature, as shown and described.

80,949. FINGER RING OR ARTICLE OF SIMILAR NATURE. BENJAMIN GROSS, New York, N. Y. Filed Feb. 10, 1930. Serial No. 34,480. Term of patent 3½ years.

The ornamental design for a finger ring or article of similar nature, as shown and described.

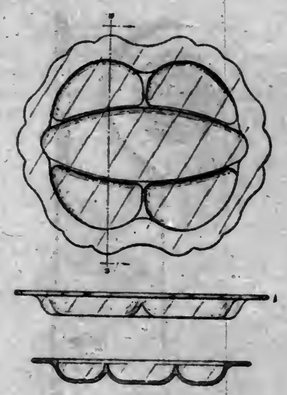
80,950. FINGER RING OR ARTICLE OF SIMILAR NATURE. BENJAMIN GROSS, New York, N. Y. Filed Feb. 10, 1930. Serial No. 34,481. Term of patent 3½ years.

The ornamental design for a finger ring or article of similar nature, as shown and described.

80,951. TAG. HORACE EDWIN HOBBS, London, England. Filed Nov. 16, 1929. Serial No. 33,473. Term of patent 14 years.

The ornamental design for a tag, as shown.

80,952. WALL BRACKET OR SIMILAR ARTICLE. OTTO HOFFMANN, Woodhaven, N. Y., assignor to Art Fixtures, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 22, 1930. Serial No. 34,222. Term of patent 3½ years.

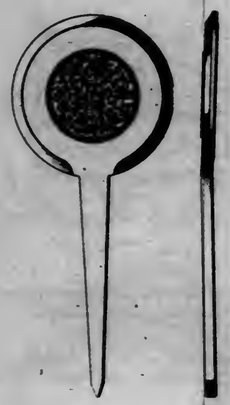


The ornamental design for a wall bracket, or similar article as shown.

80,953. GLOBE HOLDER FOR LIGHTING FIXTURES OR SIMILAR ARTICLES. GEORGE HOCH, New York, N. Y., assignor to Star Chandelier Co., Inc., New York, N. Y., a Corporation of New York. Filed Jan. 28, 1930. Serial No. 34,317. Term of patent 3½ years.

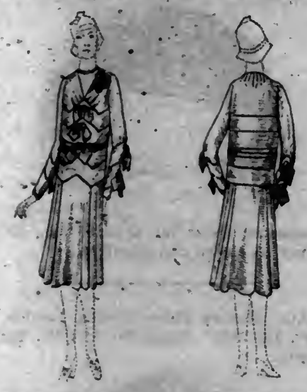
The ornamental design for a globe holder for lighting fixtures, or similar articles, as shown.

80,954. GLASS RELISH TRAY OR SIMILAR ARTICLE. JESS CLAIR KELLY, Cambridge, Ohio, assignor to The Cambridge Glass Co., Cambridge, Ohio, a Corporation of Ohio. Filed Jan. 10, 1930. Serial No. 34,083. Term of patent 7 years.



The ornamental design for a glass relish tray or similar article, substantially as shown.

80,955. VIBRATING-MACHINE CASING. JOHN H. HOLM and LUTHER B. HOLM, Kenosha, Wis., assignors to Holm's Manufacturing Company, Kenosha, Wis., a Corporation of Wisconsin. Filed Nov. 4, 1929. Serial No. 33,335. Term of patent 14 years.



The ornamental design for a vibrating machine casing as shown.

80,956. MIRROR OR SIMILAR ARTICLE. EDWIN B. LANGSDORF, New York, N. Y. Filed Jan. 29, 1930. Serial No. 34,333. Term of patent 3½ years.

The ornamental design for a mirror or similar article substantially as shown.

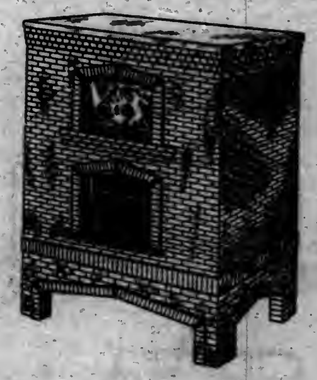
80,957. DRESS. DOROTHY LONG, New York, N. Y., assignor to Franklin Simon & Company, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 12, 1930. Serial No. 34,512. Term of patent 3½ years.

The ornamental design for a dress substantially as shown and described.

80,958. ENSEMBLE SUIT. DOROTHY LONG, New York, N. Y., assignor to Franklin Simon & Company, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 12, 1930. Serial No. 34,514. Term of patent 3½ years.

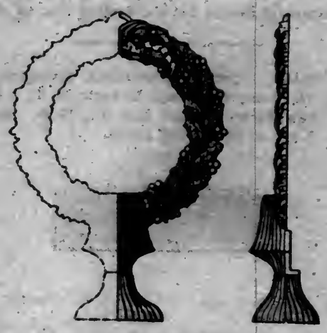
The ornamental design for an ensemble suit substantially as shown and described.

80,959. DRESS. DOROTHY LONG, New York, N. Y., assignor to Franklin Simon & Company, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 12, 1930. Serial No. 34,516. Term of patent 3½ years.



The ornamental design for a dress substantially as shown and described.

80,960. COAT. DOROTHY LONG, New York, N. Y., assignor to Franklin Simon & Company, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 12, 1930. Serial No. 34,520. Term of patent 3½ years.

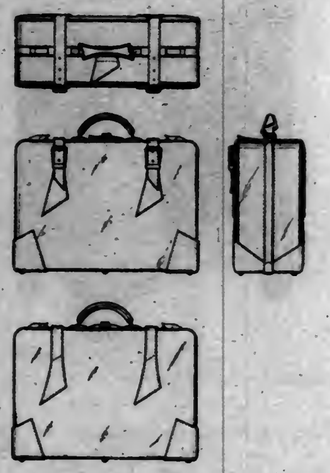


The ornamental design for a coat substantially as shown and described.

80,961. RADIOCABINET. LUDWIG LUXA and ALOIS A. PIMPER, Howell, Nebr. Filed Feb. 1, 1930. Serial No. 34,383. Term of patent 3½ years.

The ornamental design for a radio cabinet, as shown.

80,962. ELECTRIC LAMP. CHARLES W. LOGAN, Kenmore, N. Y. Filed July 15, 1929. Serial No. 32,053. Term of patent 3½ years.



The ornamental design for an electric lamp, substantially as shown and described.

80,963. SHOE. CHARLES MORALI, New York, N. Y., assignor to Delman, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 24, 1929. Serial No. 33,908. Term of patent 3½ years.

The ornamental design for a shoe as shown.

80,964. TRAVELING BAG. STEPHAN PODMAYER, St. Louis, Mo., assignor to Stability Leather Goods Mfg. Co., St. Louis, Mo. Filed Feb. 4, 1929. Serial No. 29,913. Term of patent 14 years.

The ornamental design for a traveling bag, as shown.

80,965. CHAIN. EUGEN PRESTINARI, Irvington, N. J., assignor to Gemex Company, Newark, N. J., a Corporation of New Jersey. Filed Jan. 15, 1930. Serial No. 34,141. Term of patent 3½ years.

The ornamental design for chain, substantially as shown.

80,966. SHOE BUCKLE. ORLANDO RICHARD RECCHIA, Cranston, R. I., assignor to C. G. King & Co., Inc., Providence, R. I. Filed Dec. 23, 1929. Serial No. 33,900. Term of patent 3½ years.

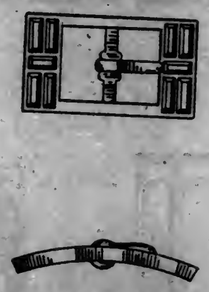
The ornamental design for a shoe buckle as shown.

80,967. SHOE BUCKLE. ORLANDO RICHARD RECCHIA, Cranston, R. I., assignor to C. G. King & Co., Inc., Providence, R. I. Filed Dec. 23, 1929. Serial No. 33,901. Term of patent 3½ years.

The ornamental design for a shoe buckle as shown.

80,968. SHOE BUCKLE. ORLANDO RICHARD RECCHIA, Cranston, R. I., assignor to C. G. King & Co., Inc., Providence, R. I. Filed Dec. 23, 1929. Serial No. 33,903. Term of patent 3½ years.

The ornamental design for a shoe buckle as shown.



80,969. SHOE BUCKLE. ORLANDO RICHARD RECCHIA, Cranston, R. I., assignor to C. G. King & Co., Inc., Providence, R. I. Filed Dec. 23, 1929. Serial No. 33,904. Term of patent 3½ years.

The ornamental design for a shoe buckle as shown.

CARNEGIE LIBRARY OF ATLANTA

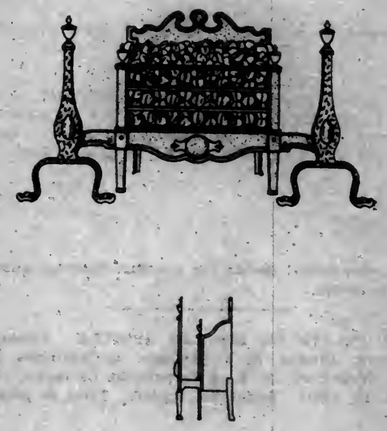
80,970. SHOE BUCKLE. ORLANDO RICHARD RECCHIA, Cranston, R. I., assignor to C. G. King & Co., Inc., Providence, R. I. Filed Dec. 23, 1929. Serial No. 33,905. Term of patent 3½ years.

The ornamental design for a shoe buckle as shown.

80,971. BOWL OR SIMILAR ARTICLE. GEORGE SAKIER, New York, N. Y. Filed Nov. 15, 1929. Serial No. 33,451. Term of patent 14 years.

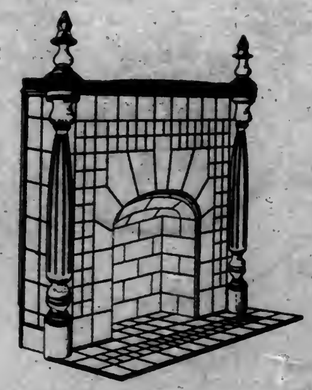
The ornamental design for a bowl or similar article, as shown.

80,972. SHERBET OR SIMILAR ARTICLE. GEORGE SAKIER, New York, N. Y. Filed Nov. 15, 1929. Serial No. 33,452. Term of patent 14 years.



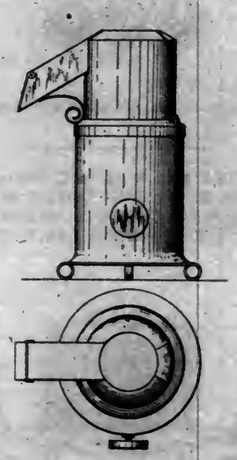
The ornamental design for a sherbet or similar article, as shown.

80,973. EMBROIDERED LACE EDGING. HENRY SCHWARBER, Weehawken, N. J. Filed Feb. 5, 1930. Serial No. 34,411. Term of patent 3½ years.



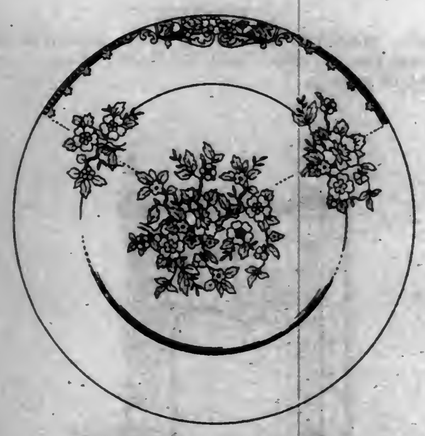
The ornamental design for embroidered lace edging, as shown.

80,974. GAS HEATER. WILLIAM L. SHARP, Steubenville, Ohio, assignor to The Ohio Foundry and Manufacturing Co., Steubenville, Ohio, a Corporation of Ohio. Filed Feb. 6, 1930. Serial No. 34,433. Term of patent 7 years.



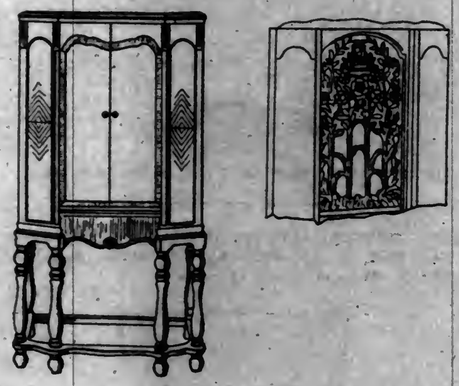
The ornamental design for a gas heater, as shown.

80,975. MANTEL. STANLEY E. SLOSS, Louisville, Ky. Filed Feb. 26, 1930. Serial No. 34,656. Term of patent 14 years.



The ornamental design for a mantel, as shown.

80,976. SUGAR DISPENSER. ALEXANDER N. TSEIFF, Los Angeles, Calif. Filed May 27, 1929. Serial No. 31,428. Term of patent 7 years.

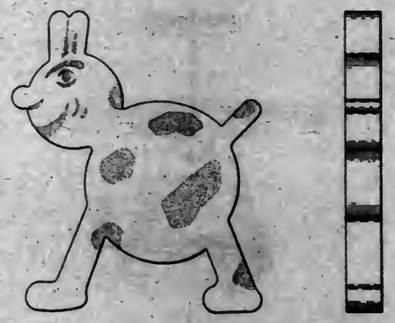


The ornamental design for a sugar dispenser substantially as shown.

80,977. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, Astoria, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Jan. 14, 1929. Serial No. 29,616. Term of patent 7 years.

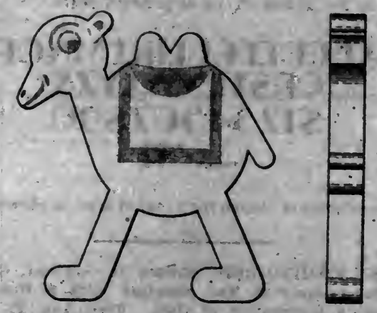
The ornamental design for a plate or similar article, as shown and described.

80,978. RADIOCABINET OR SIMILAR ARTICLE. EVERETT WORTHINGTON, Chicago, Ill., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Nov. 29, 1929. Serial No. 33,575. Term of patent 3½ years.



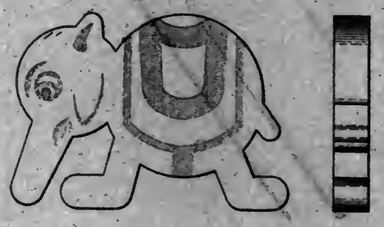
The ornamental design for a radio cabinet or similar article as shown.

80,979. TOY FIGURE. PAUL M. WEAMER, Gladwyne, Pa., assignor to Lee Rubber & Tire Corporation, Conshohocken, Pa., a Corporation of New York. Filed Dec. 27, 1929. Serial No. 33,948. Term of patent 3½ years.



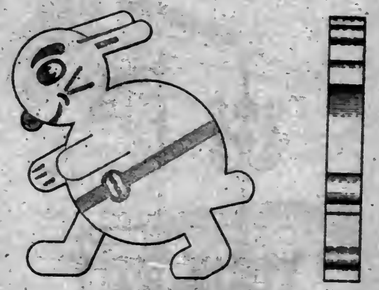
The ornamental design for a toy figure as shown.

80,980. TOY FIGURE. PAUL M. WEAMER, Gladwyne, Pa., assignor to Lee Rubber & Tire Corporation, Conshohocken, Pa., a Corporation of New York. Filed Dec. 27, 1929. Serial No. 33,949. Term of patent 3½ years.



The ornamental design for a toy figure as shown.

80,981. TOY FIGURE. PAUL M. WEAMER, Gladwyne, Pa., assignor to Lee Rubber & Tire Corporation, Conshohocken, Pa., a Corporation of New York. Filed Dec. 27, 1929. Serial No. 33,950. Term of patent 3½ years.

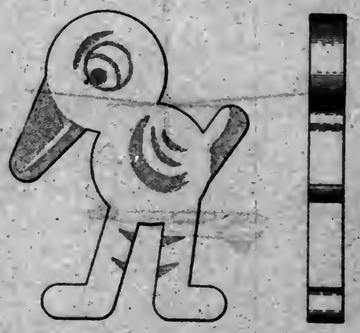


The ornamental design for a toy figure as shown.

80,982. TOY FIGURE. PAUL M. WEAMER, Gladwyne, Pa., assignor to Lee Rubber & Tire Corporation, Conshohocken, Pa., a Corporation of New York. Filed Dec. 27, 1929. Serial No. 33,951. Term of patent 3½ years.

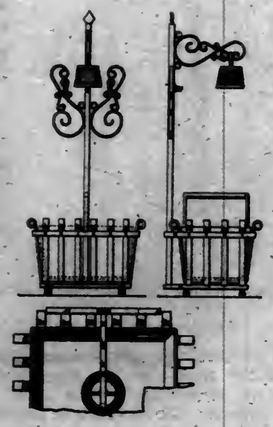
The ornamental design for a toy figure as shown.

80,983. TOY FIGURE. PAUL M. WEAMER, Gladwyne, Pa., assignor to Lee Rubber & Tire Corporation, Conshohocken, Pa., a Corporation of New York. Filed Dec. 27, 1929. Serial No. 33,952. Term of patent 3½ years.



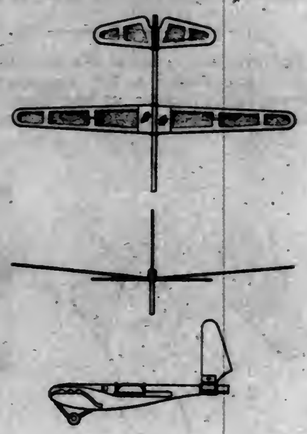
The ornamental design for a toy figure as shown.

80,984. TOY FIGURE. PAUL M. WEAMER, Gladwyne, Pa., assignor to Lee Rubber & Tire Corporation, Conshohocken, Pa., a Corporation of New York. Filed Dec. 27, 1929. Serial No. 33,953. Term of patent 3½ years.



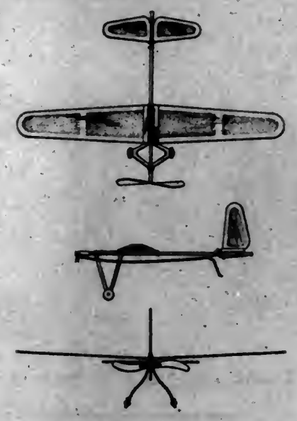
The ornamental design for a toy figure as shown.

80,985. TOY FIGURE. PAUL M. WEAMER, Gladwyne, Pa., assignor to Lee Rubber & Tire Corporation, Conshohocken, Pa., a Corporation of New York. Filed Dec. 27, 1929. Serial No. 33,954. Term of patent 3½ years.



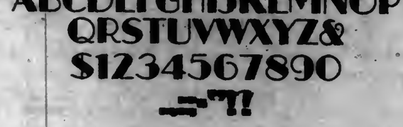
The ornamental design for a toy figure as shown.

80,986. COMBINED FUEL BASKET, FIRE-TOOL SUPPORT, AND FLOOR LAMP. SAM P. WHIDDEN, Bartow, Fla. Filed Jan. 28, 1930. Serial No. 34,316. Term of patent 7 years.



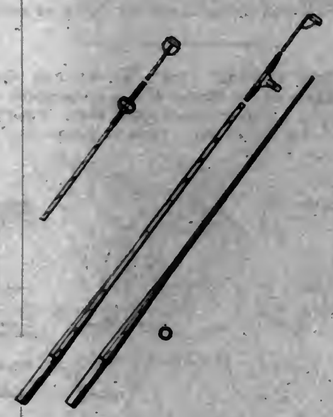
The ornamental design for a combined fuel basket, fire tool support and floor lamp or the like substantially as shown.

80,987. TOY GLIDER. EDWARD B. WILDER, St. Louis, BRYDON BERTRAM BAKER, University City, and WENTWORTH WILDER, St. Louis, Mo., assignors to Wilder Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Jan. 13, 1930. Serial No. 34,113. Term of patent 7 years.



The ornamental design for a toy glider, substantially as shown.

80,988. TOY GLIDER. EDWARD B. WILDER, St. Louis, BRYDON BERTRAM BAKER, University City, and WENTWORTH WILDER, St. Louis, Mo., assignors to Wilder Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Jan. 13, 1930. Serial No. 34,114. Term of patent 7 years.

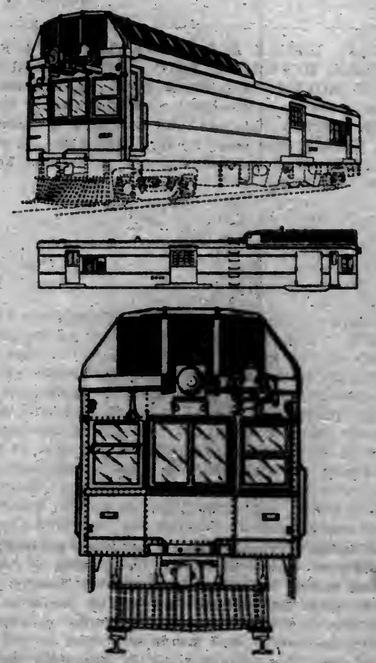


The ornamental design for a toy glider, substantially as shown.

80,989. FONT OF TYPE. JOHN W. ZIMMERMAN, Chicago, Ill., assignor to Barnhart Brothers & Spindler, Chicago, Ill., a Corporation of New Jersey. Filed Dec. 10, 1928. Serial No. 29,210. Term of patent 7 years.

The ornamental design for a font of type, as shown.

80,990. FISHING ROD. ROBERT H. COWDRAY, Geneva, Ohio, assignor to The American Fork & Hoe Company, a Corporation of Ohio. Filed Aug. 22, 1927. Serial No. 28,166. Term of patent 14 years.

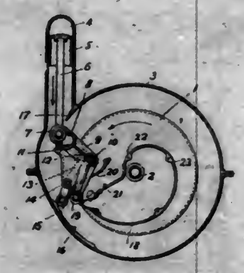


The ornamental design for a fishing rod, substantially as shown.

80,991. SAVINGS-BANK CLOCK CASE. HAROLD B. COLVIN, Port Chester, N. Y., assignor to Bankers Development Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 27, 1930. Serial No. 34,308. Term of patent 3½ years.

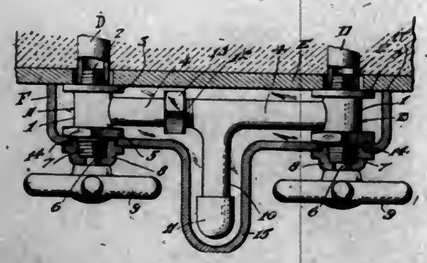
The ornamental design for a savings-bank clock case as shown.

80,992. COMBINATION RAILWAY CAR AND STEAM LOCOMOTIVE. CLYDE B. FAVERTY, Hammond, Ind., assignor to Railway Locomotor Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 3, 1929. Serial No. 32,644. Term of patent 7 years.



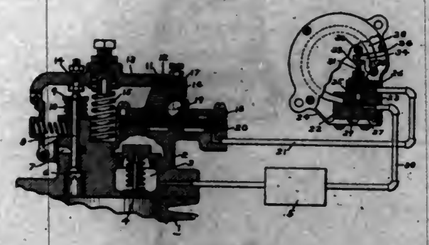
The ornamental design for a combination railway car and steam locomotive as shown.

PATENTS



GRANTED APRIL 15, 1930

1,754,216. DEVICE FOR TRANSFORMING A RECTILINEAR MOVEMENT INTO A CONTINUOUS ROTARY MOVEMENT. EMILE BOUILLON, Brussels, Belgium, assignor of one-third to Walter George Tarrant, Byfleet, Surrey, England, and one-third to Robert Allen, Chiltern Rise, near Reading, England. Filed Feb. 25, 1928, Serial No. 257,031, and in Belgium Feb. 25, 1927. 13 Claims. (Cl. 74—14.)

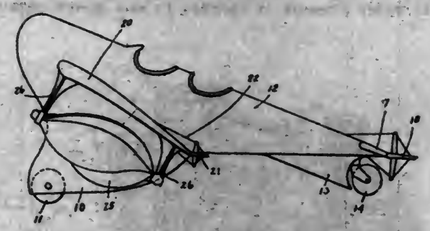


1. A device for transforming a rectilinear movement into a continuous rotary movement, comprising a rotatably mounted wheel, a piston, a rod carried thereby, means whereby upon the reciprocation of the piston said rod will engage said wheel tangentially thereof to impart rotary motion thereto, and means connected to the piston rod and controlled by said wheel for regulating the idling movement of the piston.

1,754,217. MIXING-FAUCET FIXTURE. NATHAN AUGUST, Jr., Newark, N. J. Filed Mar. 16, 1927. Serial No. 175,792. 2 Claims. (Cl. 187—111.)

1. In a plumbing fixture, the combination with a support having a plurality of fittings projecting therefrom and formed with operating stems, of a housing having an open side to slip over all of said fittings with the edges of said open side abutting said support and formed with openings one to receive each of said stems so that said fittings are wholly enclosed by said housing and said stems project through said openings from the housing, and operating handles on said stems, said housing having fastening lugs on its interior and certain of said fittings having fastening lugs to cooperate and separably held by action of gravity in engagement with the first-mentioned lug on said housing for holding said housing in position to enclose said fittings.

1,754,218. COMPRESSOR-UNLOADER GOVERNOR. BURTON S. AIKMAN, Milwaukee, Wis., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed May 31, 1928. Serial No. 281,807. 7 Claims. (Cl. 230—30.)

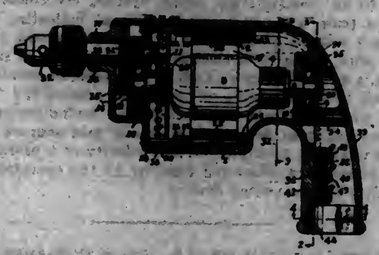


1. The combination with a fluid compressor unloading device having a movable abutment operated by an increase in fluid under pressure for unloading the compressor, of a governor comprising a Bourdon tube subject to the pressure of fluid compressed by the compressor, valve means for controlling the fluid pressure on said abutment, and a member carried by said tube for engaging said valve means, the resiliency of the tube urging said valve means in one direction and the expansion of the tube by fluid under pressure urging said member away from said valve means.

1,754,219. WALL-PAPERING IMPLEMENT. CHARLES D. ALEXANDER, Omaha, Nebr. Filed June 27, 1928. Serial No. 288,738. 2 Claims. (Cl. 216—4.)

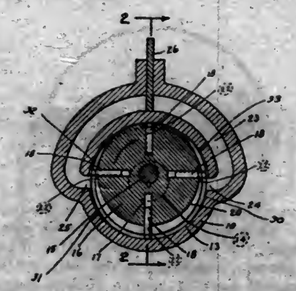
1. A wall papering implement comprising a prop having a cross bar at one end, and a strip arranged longitudinally on the cross bar and having its longitudinal edge serrated, said prop being of spring material so as to tensionally urge the strip against work.

1,754,220. HYDROAIRPLANE. JAMES R. BROWNE, Evansville, Ind. Filed June 18, 1928. Serial No. 286,091. 5 Claims. (Cl. 244—2.)



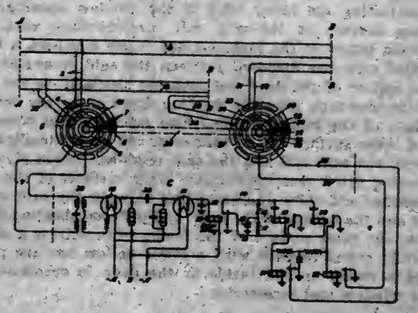
1. In a plane of the character described, the combination of a fuselage, a tapered and spiralled vaned propeller at each side of said fuselage and tapered rearwardly, and a wing construction extending outwardly, rearwardly and downwardly adjacent each of said propellers.

1,754,221. CAR-DOOR-LOCKING MEANS. ARGYLE CAMPBELL, Chicago, Ill., assignor to Enterprise Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed May 2, 1925. Serial No. 27,362. 14 Claims. (Cl. 105—308.)



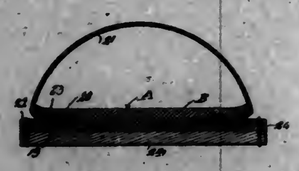
1. In a dump car, the combination with a dumping door having a beam extending adjacent the free edge thereof; of a fixed shouldered bracket on the car; a lever member on the door, said lever being pivotally connected to said beam and mounted to swing in a plane substantially parallel with the plane of the door and projecting beyond the door and adapted to engage the shouldered bracket to maintain the door in locked position, said lever being arranged to transmit the bearing stresses thereon to said beam; and a member pivotally mounted on the bracket for maintaining the lever in locked position beneath the door.

1,754,222. ELECTRIC DRILL. EDWIN L. CONNELL, Cleveland, Ohio, assignor to The Van Dorn Electric Tool Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 18, 1928. Serial No. 254,018. 9 Claims. (Cl. 172—36.)



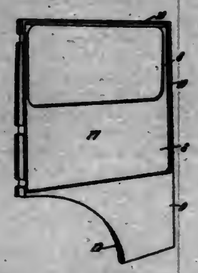
1. A portable motor tool, comprising a housing provided with brush holding members, brushes held by said members, a rotatable motor part mounted within said housing and cooperating with said brushes, and an operating spindle driven by said motor part, said housing in the transverse zone of said brush holding members being recessed to provide finger space.

1,754,223. HYDRAULIC BRAKE. MELVIN E. CROWELL, Franklin, Ind., and WILLIAM E. WHITE, Jr., Redlands, Calif. Filed Sept. 2, 1927, Serial No. 217,090. Renewed Sept. 20, 1929. 7 Claims. (Cl. 188—90.)



1. In combination a body including a cylindrical chamber, comprising two parallel side walls and a cylindrical outer wall, a cylindrical rotor member of less diameter than the chamber and of a width less than the width of said chamber and eccentrically mounted therein, said member and said chamber body having relative rotation therebetween, a plurality of movably mounted vanes supported by said member and engaging the cylindrical wall of the chamber, a shaft extending into the chamber and eccentrically positioned relative thereto and concentrically arranged relative to said member and rigidly connected thereto, a boss upon one flat side of said chamber and extending inwardly into the chamber therefrom and concentric with the cylindrical wall thereof, an annular plate centrally apertured for reception by said boss and of a width sufficient to be simultaneously engaged upon opposite sides by said cylindrical side wall and the rotor member side wall and terminating in a cylindrical periphery of a diameter slightly less than the cylindrical wall of the chamber for forming a cylindrical groove therewith and a laterally extending tongue upon each of said vanes and receivable by said groove for maintaining said vanes in substantial chamber contact in the relative rotation between the body and the member.

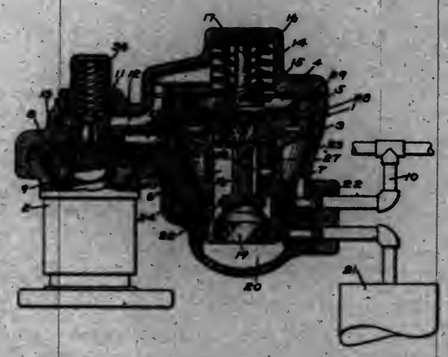
1,754,224. SIGNALING SYSTEM. JOHN DAVIDSON, Jr., Montclair, N. J., and DWIGHT L. MOODY, Hempstead, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Mar. 9, 1928. Serial No. 260,534. 11 Claims. (Cl. 179—41.)



1. The combination of a plurality of operating circuits, a plurality of signaling devices individual to said operating circuits at a given point, a translating device located at said point separate and distinct from said individual signaling devices but adapted to operate in conjunction therewith, switching apparatus for successively connecting said translating device between each operating circuit and its corresponding individual signaling device.

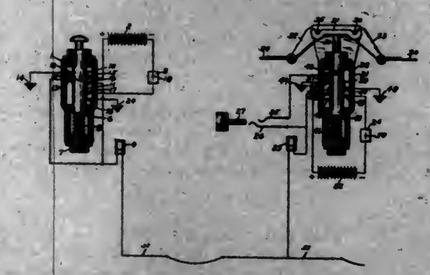
1,754,225. SHOE FILLER. CHARLES C. EATON, Brockton, Mass., assignor, by mesne assignments, to Ernest A. Gray, Augusta, Me. Filed Dec. 30, 1926. Serial No. 158,046. 2 Claims. (Cl. 36—30.)

1. In a shoe, an inner sole having a depending attaching shoulder defining an interior pocket, a welt, an upper, means securing the welt and upper to the inner sole, and an outer wear sole connected to the welt, a filler comprising an integral sheet of sponge rubber disposed wholly in the pocket, and an adhesive connecting the sheet sponge rubber filler to the lower face of the inner sole, the said filler being marginally confined by said shoulder and having its lower face in the same plane as the lower face of the shoulder and engaged by the outer wear sole.



1,754,226. DOOR FOR VEHICLES. ERIC CECIL GORDON ENGLAND, Wembley, England, assignor to Gordon England (1929) Limited, Wembley, England. Filed June 19, 1928, Serial No. 286,629, and in Great Britain July 28, 1927. 5 Claims. (Cl. 296—44.)

1. A door of timber and plywood, comprising timber side frame members rabbeted on the inside, a cross-rail constituting the lower edge of the window opening, the inner surface of the said rail corresponding with the bottom ledges of the rabbeted side frame members, a horizontal cross-bar disposed between the said cross-rail and the bottom of the door and rabbeted similarly to the side frame members, plywood sheeting fitted on to the bottom ledges of the rabbeted side frame members and cross-bar and inner surface of the said cross-rail and extending between the said rail and the said cross-bar, other plywood sheeting fitted over the extreme inner surfaces of the said cross-bar and sides and extending between the said cross-bar and the bottom of the door, and plywood sheeting fitted over the outer surface of the frame to constitute a structurally complete door with a lower hollow box-like panel and a recess on the inside of the door to accommodate the window and accessories.

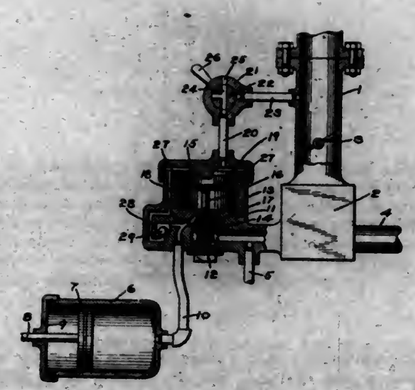


1,754,227. FEED-VALVE DEVICE. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Dec. 10, 1926. Serial No. 153,824. 7 Claims. (Cl. 50—11.)

1. A feed valve device comprising a fluid pressure supply valve for supplying fluid under pressure to an outlet, a piston for operating said valve having a piston chamber at one side, a removable choke plug disposed axially in said piston and having a restricted port through which fluid under pressure is supplied to said piston chamber

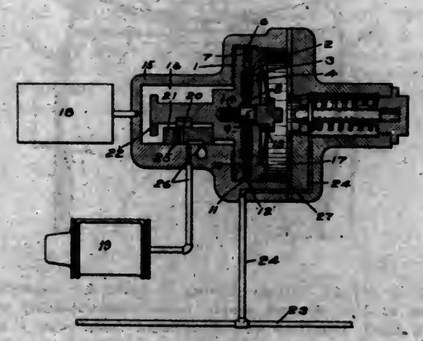
from the chamber at the opposite side of said piston, and controlling means operated upon a reduction in fluid pressure at the outlet for venting fluid from said piston chamber.

1,754,228. ELECTRIC SIGNAL SYSTEM. CLYDE C. FARMER, Pittsburgh, and THOMAS H. THOMAS, Edgewood, Pa., assignors to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Oct. 8, 1927. Serial No. 224,866. 5 Claims. (Cl. 177—352.)



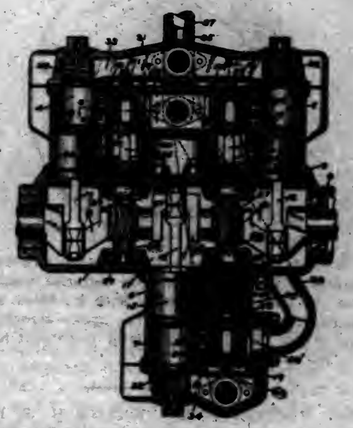
4. In an electric train signal system, the combination with a train wire, of an electric signal indicating device on each vehicle of the train and each connected to said train wire, a source of electric current on each of said vehicles, a switch device on each of said vehicles operative to connect the local source of current to ground and to said train wire to operate said devices, and means for preventing current from flowing from one of said sources to another when the terminals of like polarity of a plurality of said sources are connected together by the operation of a plurality of said switch devices.

1,754,229. VACUUM BRAKE. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Feb. 14, 1928. Serial No. 254,197. 3 Claims. (Cl. 123—127.)



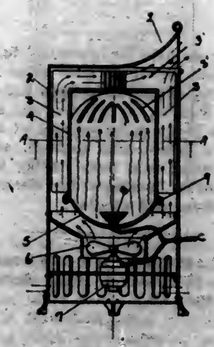
1. The combination with an element actuated by the reduced pressure in the intake manifold of an internal combustion engine for applying the brakes, of means for

connecting said element to the manifold, a member for controlling a communication for supplying motor fuel to



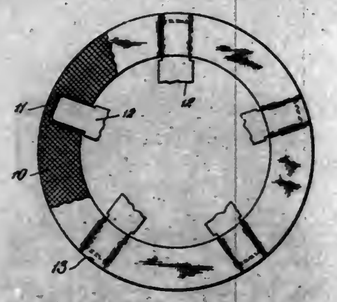
the air passing from said element to the manifold, and a piston operated by the reduced pressure in the manifold for actuating said member to open said communication.

1,754,230. PISTON AND PACKING RING. CLYDE C. FARMER and WILLIAM C. LANDIS, Pittsburgh, Pa., assignors to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Apr. 10, 1928. Serial No. 268,836. 7 Claims. (Cl. 74—109.)



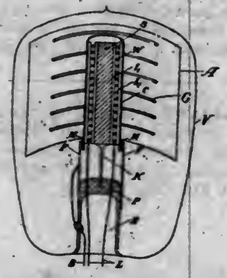
1. A piston comprising a pair of discs adapted to define a packing ring groove, said discs having supported portions and unsupported portions, and resilient means for securing said discs together, said resilient means acting on the supported portions only of said discs.

1,754,231. FLUID COMPRESSOR. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed May 11, 1928. Serial No. 276,856. 8 Claims. (Cl. 230—184.)



1. In a fluid compressor, the combination with a crank shaft, of three piston cylinders, one opposing the other two and fluid compressing pistons in said cylinders, and rods connecting each piston with said shaft.

1,754,232. RADIANT HEATER. ERNEST F. FISHER, St. Louis, Mo., assignor to Fanaire Heater Company, St. Louis, Mo., a Corporation of Missouri. Filed Feb. 4, 1927, Serial No. 165,889. Renewed Feb. 5, 1930. 4 Claims. (Cl. 219—39.)

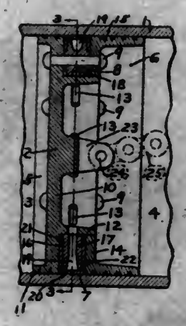


1. A heating apparatus comprising a tight shell formed of material that is capable of freely absorbing and freely emitting thermal radiations, an electrically-operated heating device arranged inside of said shell, means for causing air to circulate over said shell and abstract heat from the same, and a reflector, separate and distinct from said circulating means for gathering heat waves emanating from said heating device and projecting said heat waves onto said shell.

1,754,233. FRICTION ELEMENT. WILLIAM C. FISHER, Middletown, Conn., assignor to Russell Manufacturing Company, Middletown, Conn., a Corporation of Connecticut. Filed Mar. 9, 1927. Serial No. 173,896. 22 Claims. (Cl. 192—107.)

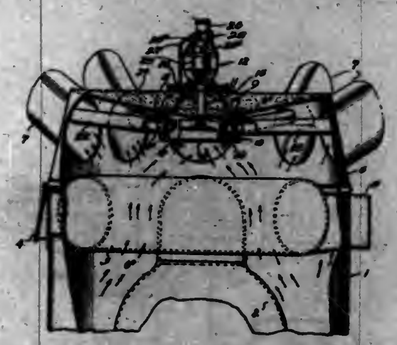
1. A friction element comprising a spoke structure, and a substantially flat ring of friction material mounted directly on the ends of the spokes with its faces substantially parallel to the plane of the spoke structure, the said ring having a limited freedom of movement with reference to the said structure.

1,754,234. VACUUM TUBE. WILLIAM H. T. HOLDEN, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Aug. 18, 1926. Serial No. 130,046. 1 Claim. (Cl. 250—27.5.)



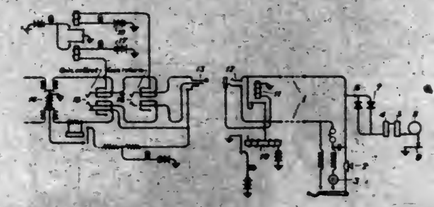
A vacuum tube suitable for operation during a substantial, predetermined period of time after the source of current for heating purposes has been cut off, comprising a bifilar heating winding, a metallic heat storing body of large proportions so as to be capable of storing a large amount of heat, a unipotential cathode, an insulator for electrically separating said heat storing body from said winding, and another insulator for electrically separating said cathode from said winding.

1,754,235. COLLAPSIBLE TOP. WILBERT A. HOURD, Detroit, Mich. Filed May 6, 1927. Serial No. 189,287. 1 Claim. (Cl. 296—98.)



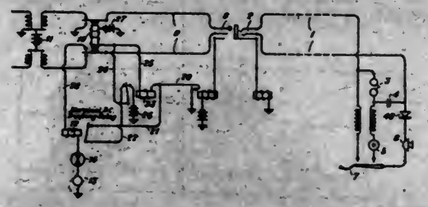
In a collapsible top adapted for use with a vehicle body having a cupola and a swingably mounted seat back rearwardly of said cupola, comprising: a bar extended transversely of said cupola and buckled intermediate its ends at spaced intervals to provide a plurality of loops; a frame mounted on said seat back; a cover mounted on said frame; and hooks mounted on the forward side of said cover for engaging in said loops.

1,754,236. PISTON PACKING. PIERRE L. LOSEE, Wilkinsburg, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Dec. 12, 1928. Serial No. 325,463. 1 Claim. (Cl. 74—109.)



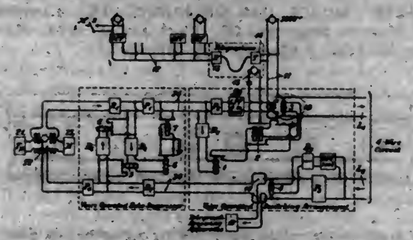
The combination with a brake cylinder, of a piston comprising a part having a web, an annular flange projecting from one side of said web and having openings formed therein, an annular clamping part carried by said flange, an annular spacing member carried by said flange and having spaced sides, the space between said sides being open to atmosphere through the openings in said flange, and packing clamped between said spacing member, web, and clamping member and being subject to atmospheric pressure in said spacing member to cause said packing to expand into close engagement with the inner wall of said brake cylinder when a partial vacuum is created at one side of said piston.

1,754,237. FURNACE. HARRIS B. MARKHAM, Escanaba, Mich. Filed Sept. 22, 1928. Serial No. 307,671. 8 Claims. (Cl. 126—105.)



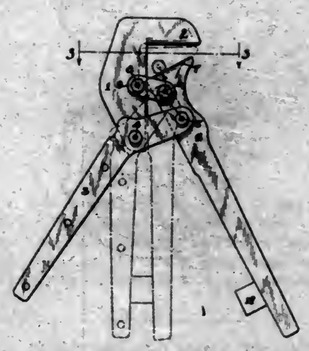
1. A hot air furnace having a warm air connecting hood at the top and supply pipes communicating with said hood, a suction fan attachment comprising a base plate, said hood top having a hole adapted to be closed by said base plate and to form a continuation of the top of said hood, a fan rotatably journalled in said base plate and projecting from the lower face of said base plate, a casing carried by said base plate and projecting into said hood, said casing having a bottom inlet and a plurality of side wall outlets and serving as a housing for inclosing said fan, means for rotating said fan, and pipe sections adapted to be connected to the respective outlets of said casing for communication with the respective heating pipes.

1,754,238. COIN-BOX DEVICE. ELIOT W. NILES, Bloomfield, N. J., and WILLIAM H. EDWARDS, Bayside, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 24, 1928. Serial No. 307,830. 4 Claims. (Cl. 179—6.8.)



1. A subscriber's line terminating at a central office, a responsive device connected to said line, a source of current at said central office of a certain voltage, a second source of current at said central office of a lower voltage, and a device having a negative current-resistance characteristic connected in said line in series with said responsive device and said sources of current.

1,754,239. TELEPHONE SIGNALING SYSTEM. ELIOT W. NILES, Bloomfield, N. Y., and WILLIAM H. EDWARDS, Bayside, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 24, 1928. Serial No. 307,831. 5 Claims. (Cl. 179—84.)



1. A telephone line connecting a subscriber's set with a central office, a source of alternating ringing current at said central office, a tripping relay in series with said source responsive only to unidirectional current, and rectifying means in the talking circuit of said subscriber's set.

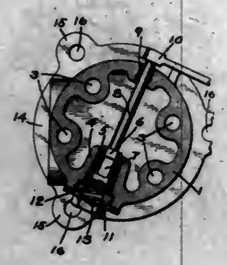
1,754,240. COMPOSITE TELEPHONE AND TELEGRAPH SYSTEM. HARRY NYQUIST, Millburn, N. J., and SMART BRAND, Brooklyn, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 8, 1926. Serial No. 134,266. 13 Claims. (Cl. 179—4.)

1. In a signaling system comprising a transmission line, telegraph apparatus associated with each end thereof, telephone apparatus adapted to be associated therewith, and means for automatically disconnecting the telegraph apparatus and connecting the telephone apparatus on the arrival of telephone currents and a special frequency signaling means at one end of the line to maintain the telegraph apparatus at the other end associated with the line during absence of telephone currents.

1,754,241. CORD-SEVERING IMPLEMENT. HARVEY A. RUSSELL, Madera, Calif. Filed Mar. 27, 1929. Serial No. 350,293. 3 Claims. (Cl. 128—305.)

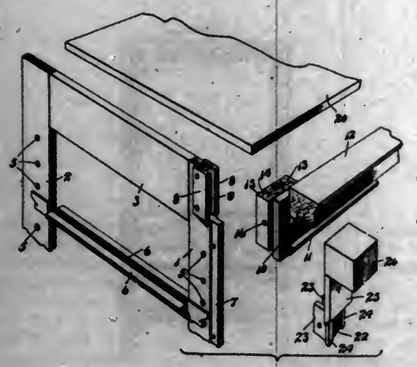
1. A funis severing implement, comprising a carrier member having a jaw on one end thereof, a lever member pivotally attached to the carrier member at its other end, a shank pivotally attached to an end of the lever member, and a link pivotally attached to the shank and the carrier member.

1,754,242. DISPLAY DEVICE. HAIG SARAFIAN, New York, N. Y., assignor to Novelite, Inc., a Corporation of New York. Filed July 25, 1929. Serial No. 380,890. 5 Claims. (Cl. 40—132.)



1. A display device including a plurality of connected outer frame members defining a substantially open panel, a plurality of inner framing members spaced from and connected to the outer frame and cooperating with the latter to form a framed opening, a glass border framed in said opening, said inner framing members also defining within said glass border, a framed opening for a display sign the outer frame and inner framing members having rearwardly facing shoulders defining rearwardly facing ledges against which the edges of the glass panes are secured.

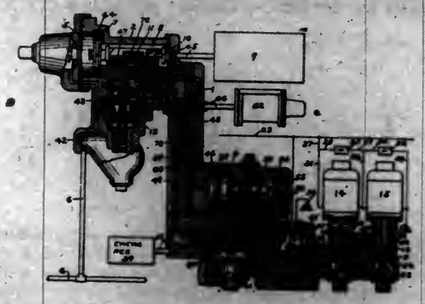
1,754,243. LACQUER COMPOSITION. TEIKICHI SATOW, Tokyo, Japan. Filed Jan. 23, 1926. Serial No. 83,204. 9 Claims. (Cl. 184—26.)



1. A lacquer material comprising a reaction product of urusiol and sulphur.

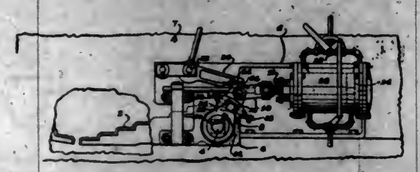
1,754,244. BRAKE-VALVE PEDESTAL. CARLTON D. STEWART, Berkeley, Calif., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Feb. 8, 1928. Serial No. 252,924. 5 Claims. (Cl. 303—84.)

1. The combination with a brake valve device and a pedestal having cored passages and supporting said brake valve device, of a tapered plug valve mounted in a transverse bore formed in said pedestal and an operating stem carried by said plug valve and extending through an opening in said pedestal.



1,754,245. WALL-CASE CONSTRUCTION. MARTIN J. STRAAYER, Grand Rapids, Mich., assignor to Grand Rapids Show Case Company, Grand Rapids, Mich., a Corporation of Michigan. Filed Oct. 4, 1926. Serial No. 139,319. 7 Claims. (Cl. 312—107.)

7. Store furniture comprising, a plurality of spaced apart vertical frames, upper cornices lying between and at the upper ends of adjacent frames, means for receiving said cornices on said frames by direct horizontal movement, a pilaster at the vertical front edge of each of said frames, means for receiving said pilaster on said frame by direct horizontal movement and means for detachably connecting the pilaster to the frame.

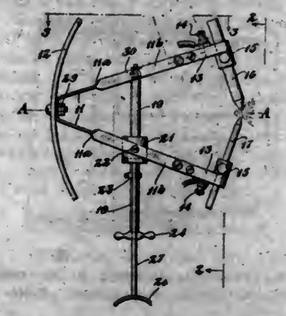


1,754,246. ELECTROPNEUMATIC BRAKE. THOMAS H. THOMAS, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Aug. 31, 1928. Serial No. 303,254. 20 Claims. (Cl. 303—17.)

1. In an electro-pneumatic brake, the combination with means for controlling the brakes electrically and means for controlling the brakes pneumatically, of a plurality of reservoirs, and a valve device having a position for rendering the electric controlling means effective to control the

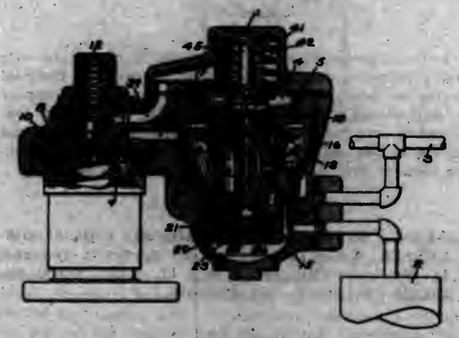
brakes and for establishing communication from one of said reservoirs to the other, and having another position for rendering the pneumatic controlling means effective to control the brakes and for closing said communication.

1,754,247. DUMP GRATE. SIGURD J. A. WIEBE, East Orange, N. J., assignor to International Combustion Engineering Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 2, 1924. Serial No. 753,451. 3 Claims. (Cl. 126—169.)



1. A dumping device of the class described having, in combination, a dumping member, a rock shaft on which said dumping member is mounted, and means for actuating the rock shaft to raise and lower the dumping member comprising an arm mounted on the rock shaft so as to permit pivotal movement of the arm and shaft with relation to each other, and means for securing the arm to the rock shaft comprising a second arm secured on the shaft, and connections between said arms having provision for adjustment to vary the angular position of the rock shaft with relation to the first mentioned arm.

1,754,248. SPLICE BAR OR FISHPLATE. LAWRENCE S. WILBUR, Evanston, Ill. Filed Apr. 1, 1929. Serial No. 351,643. 7 Claims. (Cl. 238—243.)

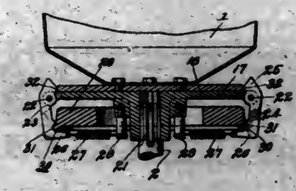


1. A splice bar or fish plate having a crowned or humped middle portion, and having depressions in the top thereof near the ends of the bar, whereby the middle portion of the bar slopes gently toward and into said depressions, while the relatively short end portions of the bar slope toward the middle of the bar and into said depressions, said end portions of the bar being bent outwardly at angles to the middle portion of the bar, which middle portion is straight when the bar in normal condition is viewed from above.

1,754,249. ONE-HAND ARC LAMP. MAURICE J. WOHL, Long Island City, N. Y. Filed Nov. 16, 1925. Serial No. 69,538. 11 Claims. (Cl. 176—103.)

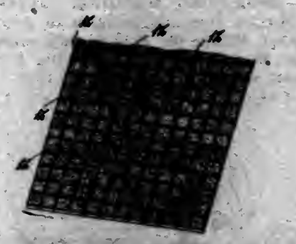
10. In a lamp a pair of arc forming electrodes, arms holding said electrodes in angular relation to each other, means for normally separating said arms, operating means for pressing said arms together and friction means in engagement with said operating means and means cooperating with said friction means to limit the separation of said arms to strike an arc by the release of said pressure.

1,754,250. FEED-VALVE DEVICE. JOHN B. WRIGHT, Wilkinsburg, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Jan. 4, 1927. Serial No. 158,983. 2 Claims. (Cl. 50—11.)



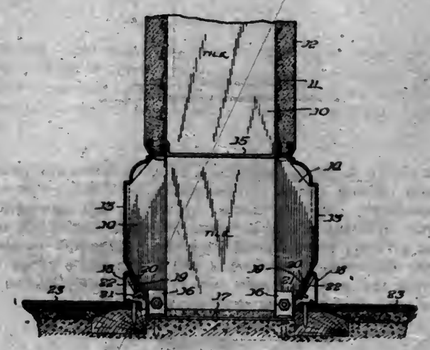
1. In a feed valve device, a supply valve for controlling the supply of fluid under pressure to an outlet, a piston and piston stem for operating said valve, said piston having an axially disposed chamber open to an axially disposed passage through said stem, and a removable plug in said chamber provided with a restricted port to permit the restricted flow of fluid through said passage and said restricted port to the chamber at the outer face of said piston and means operated upon a reduction in outlet pressure for venting fluid from said last mentioned chamber.

1,754,251. PROCESS OF STERILIZATION. JOHN W. YATES, Madison, Wis., assignor, by mesne assignments, to General Laboratories, Inc., Madison, Wis., a Corporation of Delaware. Filed May 9, 1928. Serial No. 276,503. 4 Claims. (Cl. 167—18.)



3. A process of disinfecting or sterilizing surfaces which consists in applying a dilute solution of sodium hypochlorite containing from one hundred to five hundred parts of available chlorine per million parts of water by atomizing the solution in applying the same whereby the carbon dioxide in the atmosphere reacts with the hypochlorite solution to form hypochlorous acid in effective strength for the purpose set forth.

1,754,252. CENTRIFUGAL DRIER. ALPHEUS W. ALTORFER, Peoria, Ill. Filed June 23, 1928. Serial No. 287,713. 5 Claims. (Cl. 210—71.)

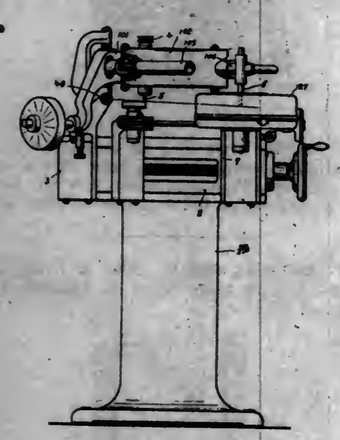


1. In a centrifugal clothes drier, in combination, a receptacle, a driving shaft, a counterbalancing means arranged for an axial sliding connection with said driving shaft, and means on the lower end of the receptacle arranged for driving connection with said counter-balancing means.

1,754,253. FLOORING AND THE LIKE AND METHOD OF MAKING. HENRY C. AVERY, New Brunswick, N. J., assignor to The Flintkote Company, Boston, Mass., a Corporation of Massachusetts. Filed May 10, 1924. Serial No. 712,264. 11 Claims. (Cl. 94—3.)

6. Sheet flooring comprising an asphaltic base having a substantially smooth surfacing layer thereon showing a mixture of asphaltic and granular material, said layer having channels therein defining tile-simulating areas.

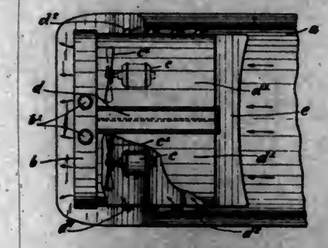
1,754,254. MOLDING STRIP. ISAAC A. BAUM, Chicago, Ill. Filed Dec. 27, 1927. Serial No. 242,630. 5 Claim. (Cl. 16—16.)



1. In a device of the class described, the combination of a metal baseboard, the lower portion thereof being diagonally bent inward, a continuous metal binding strip adapted to substantially close said diagonally inclined opening, and cooperating means on said baseboard and said strip for effecting adjustable positioning of said strip.

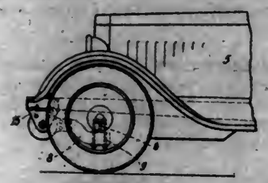
1,754,255. AGITATOR. JOSEPH E. BOND, Appleton, Wis. Filed Mar. 14, 1928. Serial No. 261,554. 3 Claims. (Cl. 259—97.)

1. In apparatus of the class described, the combination of a tank, a division wall in said tank extending from one end substantially the length thereof, a pump having an inlet and an outlet opening in said tank, one on each side of said division wall, an external motor for said pump, and a rotor having blades, said rotor being located in the open space in the tank adjacent to said inlet opening.



1,754,256. ENGRAVING MACHINE. LORENZ KONRAD BRAREN, Munich, Germany, assignor to the Firm Friedrich Deckel, Fabrik für Präsisionsmechanik und Maschinenbau, Munich, Germany. Filed Dec. 4, 1923, Serial No. 678,485, and in Germany Dec. 28, 1922. 40 Claims. (Cl. 90—13.1.)

1. In an engraving machine a parallelogrammatic pantograph, cutting means, guiding means, both carried by said pantograph, pivoting means on which said pantograph turns, different pivoting means at right angles to said first pivoting means, permitting the pantograph to make three dimensional movements and a removable gauge for setting the points of said cutting and guiding means in line with the center of said second pivoting means.

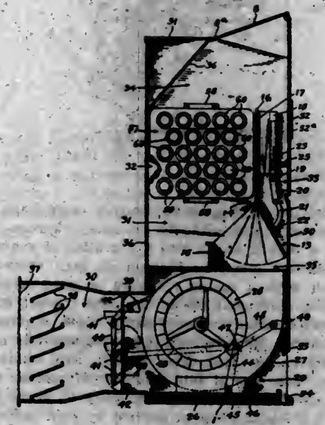


1,754,257. COOLING SYSTEM. BENJAMIN H. BRITT, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 14, 1928. Serial No. 299,510. 3 Claims. (Cl. 257—125.)

1. A cooling system for a vehicle having a control for reversing the movement thereof, comprising a radiator, means for mounting the radiator upon the roof of the vehicle, a hood associated with the radiator, means within the hood for creating a flow of cooling air therethrough,

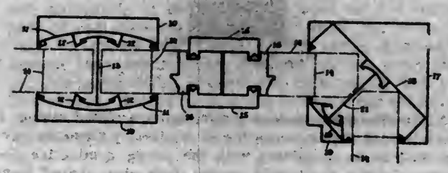
and means to reverse the direction of the flow creating means when the direction of movement of the vehicle is changed.

1,754,258. VEHICLE CUSHIONING AND SHOCK-ABSORBING DEVICE. WILLIAM C. BROADWELL, Brooklyn, N. Y. Filed Aug. 25, 1926. Serial No. 131,318. 10 Claims. (Cl. 267—21.)



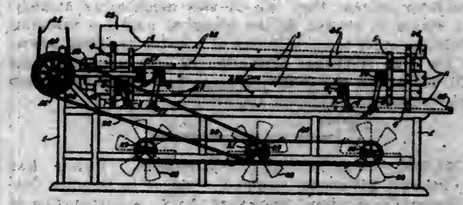
1. In a cushioning device for a vehicle having an axle and a frame, a cushioning element of yieldable material having at least one of its faces anchored with respect to said frame, and an oscillatory lever universally connected to said frame through said cushioning element and having at one end a face-to-face union with said cushioning element and connected at its other end to said axle.

1,754,259. STERILIZABLE SURGICAL LIQUID DISPENSER. CHARLES S. BROWN and ROBERT H. TONTRUP, Jr., St. Louis, Mo. Filed July 11, 1927. Serial No. 204,917. 6 Claims. (Cl. 221—106.)



1. A surgical liquid dispensing device comprising a support adapted to be fixed to a wall and having a plurality of horizontal and outwardly presented pins, a liquid container having a plurality of tubular members slidably and removably mounted on said pins, said bottom being provided with a depending extension having a discharge opening, a revoluble valve disposed in said extension coaxially with said container and operable in one direction to release a given amount of liquid through said discharge opening, mechanism in said container for actuating said valve, and means including a spring disposed in said support and having detachable engagement with said mechanism for actuating said valve, said means being pedally operated by the user to open said valve, said spring being used to return said valve into closed position and restore said means to home position.

1,754,260. LOW-DOWN HEATING AND VENTILATING UNIT. MICHAEL J. CALLAHAN, New York, N. Y. Filed May 14, 1925. Serial No. 15,518. 26 Claims. (Cl. 257—137.)

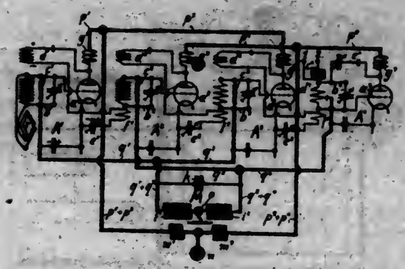


1. A heating and ventilating unit comprising a casing divided into a blower chamber, fresh air inlet chamber, heating chamber, and discharge chamber, the inlet and blower chambers being one behind the other at the bottom of the casing, and the discharge chamber being at the top of the casing; and means for controlling the passage of air from the blower chamber through the heating chamber.

1,754,261. MEANS FOR CONSTRUCTING INTERLOCKING STRUCTURES. THEODORE CARROZZA, Bronx, N. Y. Filed Nov. 9, 1928. Serial No. 318,145. 3 Claims. (Cl. 189—36.)

1. The combination with two metallic posts having inwardly projecting hook portions on their ends of interlocking means adapted to hold them together in spaced relation, said means including a double ended T-shaped section.

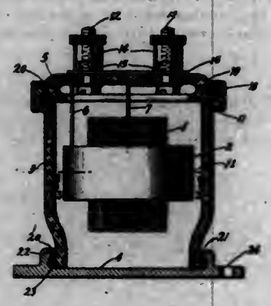
1,754,262. DRIER FOR DOUGH PRODUCTS. FRANK CENZI, St. Louis, Mo. Filed Feb. 9, 1928. Serial No. 253,002. 7 Claims. (Cl. 34—38.)



1. A drier for noodles and the like, comprising, a vertical stack of trays having perforated bottoms, the outside walls of said trays joining at their meeting edges so as to form the outside walls of a vertical shaft, means for shaking said trays, and means for passing air through said shaft.

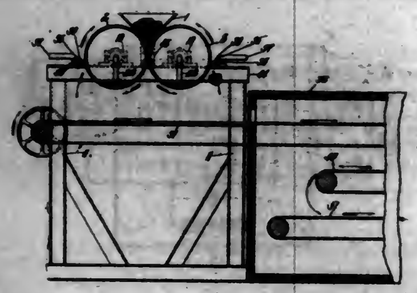
1,754,263. STRINGED MUSICAL INSTRUMENT. ROBERT W. CLAIBORNE, New Canaan, Conn. Filed May 28, 1927. Serial No. 194,876. 4 Claims. (Cl. 84—274.)

1. A stringed musical instrument comprising a longitudinal frame piece, a sound box enclosing an end portion thereof, the other end portion forming a neck, a string anchoring peg having one end extending into an enclosed portion of said frame piece and string tightening means mounted in said neck portion thereof.



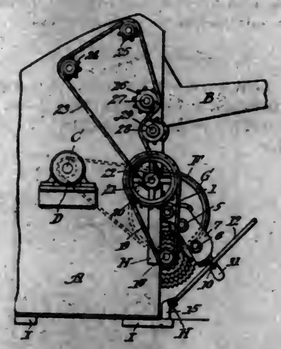
1,754,264. CONTROL MEANS FOR SUPERREGENERATIVE RECEIVERS. RUDOLF ALBAN CLAUSNITZER, Lubeck, Germany. Filed Apr. 15, 1927, Serial No. 184,086, and in Germany Jan. 18, 1927. 1 Claim. (Cl. 250—20.)

A radio receiving system comprising a plurality of amplifying stages connected in cascade, circuit means for super-regeneratively coupling each of said amplifier stages, an oscillator adapted to generate a lower auxiliary fre-



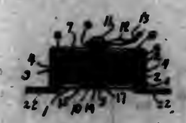
quency and coupled to said amplifier stages, and means for tuning said amplifier stages to a higher harmonic of the frequency of each preceding stage, said superregenerative circuits being so coupled in this auxiliary generator system that one of two neighboring amplifying stages is always in the phase of negative damping, while the other is in the phase of positive damping, whereby the high frequency oscillation in each amplifier stage will not excite the following stage before this oscillation has reached its maximum amplitude.

1,754,265. ELECTRICAL CONDENSER. PHILIP RAY COURSEY, Richmond, England, assignor to Dubilier Condenser Corporation, New York, N. Y., a Corporation of Delaware. Filed June 23, 1926, Serial No. 118,102, and in Great Britain July 3, 1925. 2 Claims. (Cl. 175—41.)



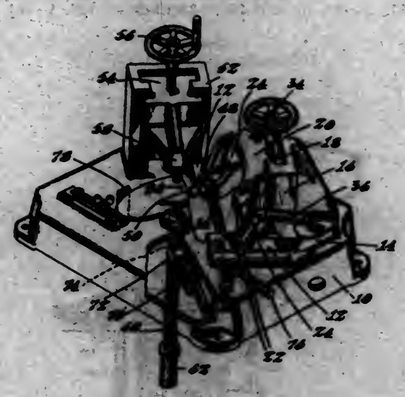
1. A condenser comprising a casing of insulation, a bottom for said casing, the bottom having a flange, and the lower end of said casing being encircled by said flange, the flange projecting towards the casing and the lower end of the casing being extended to project towards the flange to enable the bottom and the body of the casing to be cemented together, the opposite end of the casing having a shoulder, a top for the casing resting upon the shoulder, said top having a groove encircling the rim thereof, the casing having a projecting rib adjacent said groove, cement filling the space between the rib and the rim of the top to secure the top in place and seal the casing, a clamped condenser in the casing, binding posts mounted on the top and conductors attached to the binding posts and to the condenser and suspending the condenser in the casing.

1,754,266. FLAKE-FORMING METHOD. JOHN T. COX, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed May 22, 1926. Serial No. 110,840. 1 Claim. (Cl. 107—54.)



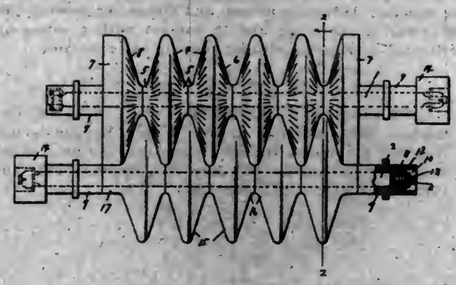
The method of forming flakes from dough which comprises pressing and indenting the dough between surfaces to which the dough adheres in sheet form, drying the dough while it is in contact with said surfaces, progressively separating said surfaces thereby splitting the sheet of dough, stripping the dried dough from said surfaces whereby it breaks apart subetantially along the lines of indentation forming flakes, and then baking the flakes.

1,754,267. GEAR MECHANISM. ABRAHAM M. DELLINGER, Lancaster, Pa. Filed Oct. 29, 1928. Serial No. 315,815. 2 Claims. (Cl. 74—58.)



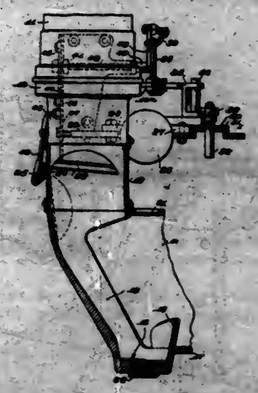
1. A selective speed gear mechanism comprising a drive shaft, a drive pinion slidably mounted thereon to turn therewith, a driven shaft, and a plurality of gears of different diameters mounted thereon to turn therewith, in combination with a casing mounted on said drive pinion for swinging movement about the axis thereof and movable therewith axially of said drive shaft, a plurality of pinions mounted for intermeshing engagement in said casing and driven by said drive pinion, said casing being movable to cause one of said plurality of pinions to mesh with any selected one of said plurality of gears to drive the same, a gripping element carried by said casing, a bar extending parallel to and in fixed relation with, said shafts, a rod mounted on said bar for free swinging movement about the axis thereof and free for sliding movement axially thereof and extending through said gripping means, and means for causing said gripping element to bind on said rod to hold said casing against swinging movement about said drive pinion.

1,754,268. ELECTRICAL CONDENSER. WILLIAM DUBILIER, New Rochelle, N. Y., assignor to Dubilier Condenser Corporation, New York, N. Y., a Corporation of Delaware. Filed May 17, 1926. Serial No. 109,469. 4 Claims. (Cl. 175—41.)



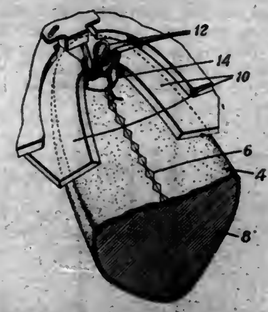
1. An electrical condenser comprising a closed casing, a stack in said casing consisting of conductive elements having their edges in contact with the casing, conductive elements of different polarity having their edges spaced from the casing, insulation between said elements, a compressor member on said stack, means for enabling connection to be made with the elements of small area through said member, and a closure plate for the stack overlying said member, the adjacent edges of said casing being pressed down into engagement with said closure plate.

1,754,269. LAST-ASSEMBLING MACHINE. PERLEY FULLER, Lewiston, Me., assignor to Fits-Empire Double Pivot Last Company, Auburn, Me., a Corporation of Maine. Filed Mar. 1, 1927. Serial No. 171,674. 16 Claims. (Cl. 12—1.)



1. A last assembling machine having means for holding a last part, means for holding a last link, and mechanism for causing a movement of relative approach between a last part and a last link carried by said means, the two said means being relatively adjustable in a direction perpendicular to the longitudinal vertical plane of the last part.

1,754,270. ROLL CONSTRUCTION FOR GRISTMILLS. EDWIN A. HALL, Daggett, Mich. Filed Apr. 20, 1928. Serial No. 271,527. 1 Claim. (Cl. 83—12.)

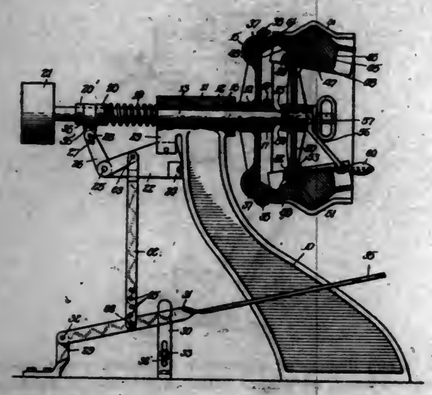


In a roll construction for grinding mills, a pair of parallel spaced non-circular shafts, a reduced threaded spindle formed on each end of each shaft, a plurality of independent operatively beveled disks, arranged on one shaft, a pair of end disks arranged on said shaft, the inner face only of each end disk being beveled, a series of oppositely beveled independent disks arranged on the other shaft for alternately fitting between the disks on the first mentioned shaft, the end disks of the second series having hub extensions on the outer side thereof with which the peripheral edges of the endmost disks of the first mentioned series engage, sleeves having non-circular bores disposed over the respective ends of each shaft, the outer end of each sleeve being formed with an enlarged socket into which the respective spindle extends, a ring surrounding each spindle in each of the sockets, and a nut threaded on each spindle to hold the respective ring against the inner end of the respective sockets as and for the purpose described.

1,754,271. CUP-DISPENSING MECHANISM. HARRY M. HENDERSON, Washington, D. C. Filed Dec. 9, 1927. Serial No. 238,815. 4 Claims. (Cl. 312—44.)

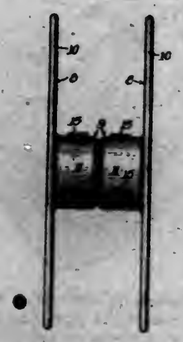
1. A cup dispensing apparatus including a cup holder, a cap releasing mechanism below said holder, a discharge tube depending from said mechanism, a pivoted closure member within, and normally extending across said discharge tube, said closure member being curved to fit the inner surface of the tube and adapted to conform thereto in inactive position, an operating means for said mechanism including a spring-controlled yielding part, and connections from said operating means for shifting said closure member to and from inactive position.

1,754,272. METHOD OF LASTING SHOES. BERNHARDT JORGENSEN, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 29, 1929. Serial No. 367,018. 7 Claims. (Cl. 12—145.)



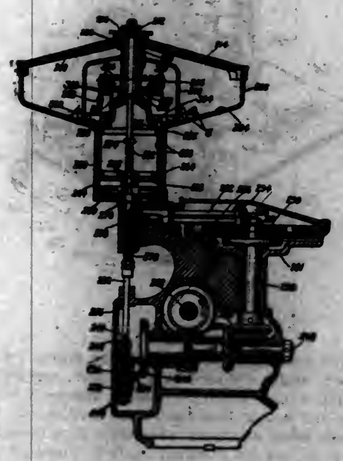
1. That improvement in methods of lasting the toes of felt shoes which consists in gathering the margin of the toe end portion of a felt shoe upper in folds in a substantially central location over the bottom face of the toe end portion of a last, and applying holding means entirely around the gathered margin of the upper in contact therewith on all sides to maintain the toe portion of the upper in lasted position.

1,754,273. COLLAPSIBLE DRUM. VICTOR KARDOWSKI, Idaho Springs, Colo., and WILLIAM C. SMITH, Des Moines, Iowa, assignors to Lake Shore Tire & Rubber Company, Chicago, Ill., a Corporation of Iowa. Filed June 30, 1928. Serial No. 289,488. 8 Claims. (Cl. 154—9.)



1. A collapsible drum comprising drum segments independently mounted for movement, each segment being

pivoted at a location to one side of the center plane of said drum, said pivots being disposed normally to planes

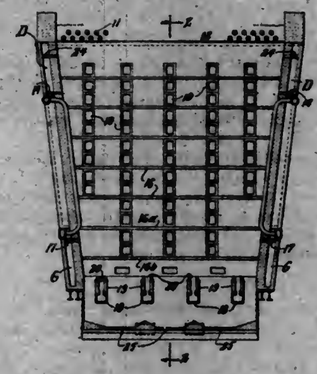


passing through the axis of said drum, and means within said drum for engagment with and movement of each segment.

1,754,274. SPOOL END. JOHN H. KJELLSTROM, Rockford, Ill., assignor to J. L. Clark Manufacturing Co., Rockford, Ill., a Corporation of Illinois. Filed Sept. 8, 1927. Serial No. 217,321. 2 Claims. (Cl. 242—68.)

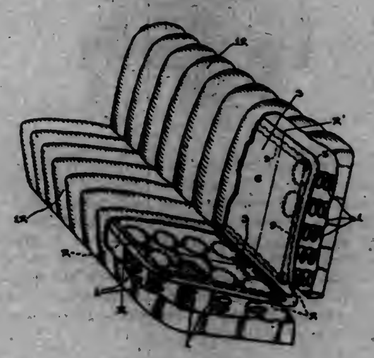
1. A spool end adapted to be attached to a tubular core, said end comprising a disk, a separately formed cylindrical thimble having bottom and side walls and having its open end attached to said disk centrally thereof and extending axially therefrom, said thimble being adapted to fit snugly within the bore of said core and to extend substantially half way therethrough, and a plurality of vane-like projections struck outwardly from the side wall of said thimble and extending longitudinally thereof so as to be embedded in the core when the thimble is placed therein.

1,754,275. FEEDING MECHANISM. ALBERT LATHAM, deceased, Beverly, Mass., by James W. Nourbourn, administrator, Somerville, Mass., assignor to American Button & Fastener Co., Augusta, Me., a Corporation of Maine. Original application filed Nov. 12, 1921, Serial No. 514,621. Divided and this application filed Oct. 27, 1927. Serial No. 229,188. 35 Claims. (Cl. 1—3.1.)



1. In a machine of the class described, an article-receptacle, an article-conveyor leading therefrom, an article-carrying member operating in the receptacle, a plurality of article-positioning members co-operating with the carrying member, delivering means, and means for moving the delivering means along and in contact with a series of positioned articles to advance them to the conveyor.

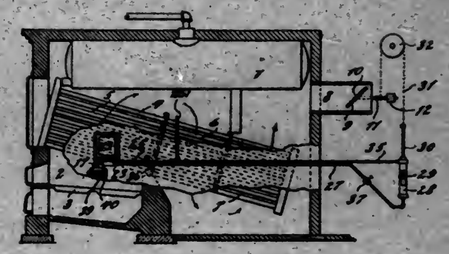
1,754,276. LOADING MACHINE. NILS D. LEVIN, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed July 21, 1921, Serial No. 486,650. Renewed Feb. 19, 1929. 34 Claims. (Cl. 262—28.)



1. In a machine for loading coal in mines, the combination with a supporting frame adapted to rest upon and slide over the mine floor, a conveyor extending longitudinally of said frame adapted to receive material at points adjacent the mine floor and discharge it at a suitable elevation, means upon said frame adapted to bodily move said frame over the mine floor, means to guide the machine in a predetermined path, and a plurality of coal engaging elements adapted to travel along a path extending substantially perpendicularly towards and over the receiving end of said conveyor to engage material upon the mine floor and transfer it to said conveyor.

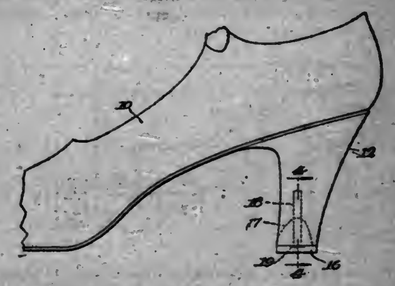
1,754,277. APPARATUS FOR PULVERIZED-FUEL BURNING. EDWIN LUNDGREN, Frederick, Md., assignor to International Combustion Engineering Corporation, a Corporation of Delaware. Filed Nov. 30, 1923. Serial No. 677,900. 6 Claims. (Cl. 110—28.)

5. In a furnace for burning pulverized fuel, a combustion chamber, means for admitting pulverized fuel downwardly thereinto, and air conducting means having spaced slot-like inlets extending across the bottom portion of the chamber for admitting air in an upward direction beneath the fuel and flame stream.



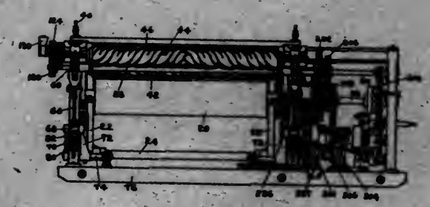
1,754,278. UPHOLSTERED SEAT. CHARLES E. MCCORMICK, Detroit, Mich. Filed Sept. 17, 1928. Serial No. 306,379. 1 Claim. (Cl. 155—181.)

In combination with a seat spring structure having a border wire around its top portion, a pad extending over the spring structure, a woven cover for said pad having a hem on each edge shorter than the edge, and retaining wires inserted through the respective hems and shorter than the respective edges of the cover, said wires having hooks at their ends whereby when the hooks on the ends of meeting wires are interengaged the edge portions of the pad and cover will be drawn over the border wire and held under and at the inner side thereof to be shaped thereby.



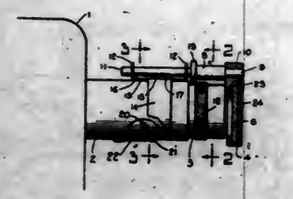
1,754,279. FURNACE AND CONTROL THEREFOR. EMBURY MCLEAN, Brooklyn, N. Y., assignor to The Engineer Company, New York, N. Y., a Corporation of New York. Filed Aug. 4, 1923. Serial No. 655,571. 9 Claims. (Cl. 236—14.)

1. In a boiler furnace, suction draft means for supplying air to the furnace, a regulator subjected directly to and movable in accordance with variations in pressure in said furnace, means operable solely by said regulator for varying the effective area of the outlet flue, and means



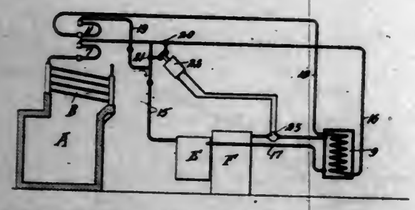
maintaining any desired status in a function of the boiler either constant or variable by automatically changing the adjustment of said regulator.

1,754,280. SHOE HEEL. JOHN F. MCNAMARA, Chicago, Ill. Filed July 9, 1928. Serial No. 291,153. 5 Claims. (Cl. 36—36.)



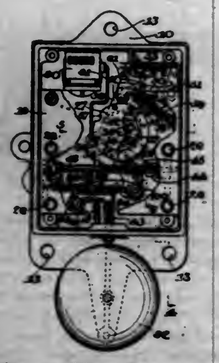
1. In a detachable shoe heel, a heel support built as a permanent part of a shoe and having a plurality of elongated openings therein and a heel body adapted to be attached to the support and having resilient prongs extending into the elongated openings to hold the heel body in position.

1,754,281. MACHINE FOR WORKING LEATHER AND OTHER SHEET MATERIAL. JOHN W. O'DONNELL, Salem, Mass., assignor to The Turner Tanning Machinery Company, Peabody, Mass., a Corporation of Maine. Filed Apr. 10, 1924, Serial No. 705,716. Renewed Jan. 3, 1929. 20 Claims. (Cl. 149—16.)



1. In a machine of the character described, feed rolls for supporting and feeding work, a pair of cylinders, means for causing simultaneous operation of the cylinders on the work at a predetermined pressure, and means under the control of the operator for reversing the direction of feed of the feed rolls while the cylinders continue operating as before, whereby portions of the work may be fed in opposite directions and operated upon repeatedly without withdrawing the work from and re-introducing it into the machine.

1,754,282. COLOR-SCREEN ACCESSORY FOR CAMERAS. FREEMAN H. OWENS, New York, N. Y. Filed Dec. 18, 1928. Serial No. 326,868. 7 Claims. (Cl. 95—81.5.)

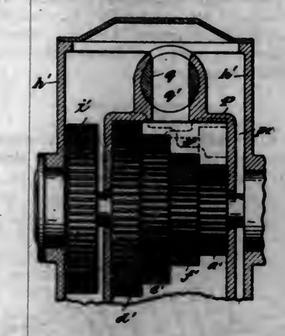


1. An accessory for a camera having a lens casing comprising a fixed section and an adjustable section, said accessory comprising a support for a color screen and parts for detachably engaging the fixed section of the lens casing of the camera for mounting the color screen over the outer end of the movable section of the lens casing.

1,754,283. STEAM-POWER PLANT. EDWIN A. PACKARD, Yonkers, N. Y., assignor to International Combustion Engineering Corporation, New York, N. Y., a Corporation of Delaware. Filed Mar. 1, 1926. Serial No. 91,342. 2 Claims. (Cl. 60—73.)

1. In combination, a boiler, a superheater, a high pressure engine, a pipe leading from the superheater to the high pressure engine, a low pressure engine, a reheater between the engines, a pipe leading from the boiler to the reheater for supplying steam for reheating the exhaust from the high pressure engine, a second superheater, a pipe leading from the reheater thereto, and a pipe leading from such superheater to join with the pipe leading from the first superheater to the high pressure engine.

1,754,284. CONTROL DEVICE FOR MIXING MACHINES. ALBERT H. PLATE, Milwaukee, Wis., assignor to Durant Manufacturing Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Oct. 6, 1923. Serial No. 666,980. 12 Claims. (Cl. 161—1.)

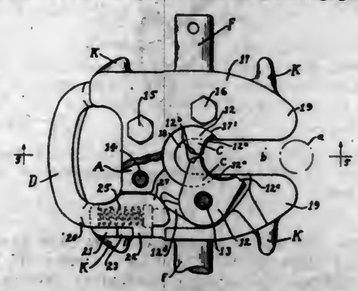


1. In a mixing machine, the combination of timing mechanism including a movable control member, a setting shaft, a clutch including a pawl on said shaft engaging a part of said control member for moving it to a "set" position, a settable member for releasing said pawl from actuating engagement with said control member when said control member has reached the desired "set" position, and means for actuating said control member during its timing period.

1,754,285. NONAQUEOUS DYE BATH. EUGENE R. SCHLATTER, Little Falls, N. J., assignor to Dip-It Inc., New York, N. Y., a Corporation of New York. Filed Mar. 13, 1926. Serial No. 94,590. 11 Claims. (Cl. 8—6.)

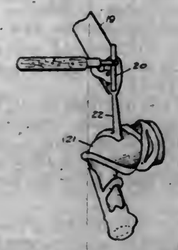
1. An alcoholic dye-bath comprising alcohol, a dye scantily soluble in alcohol but freely soluble in glycerin, and glycerin; the said dye being present in excess of the amount which can be dissolved in the same quantity of a mixture of alcohol and glycerin in the proportions in which they are contained in the dye bath.

1,754,286. TRANSMISSION BRAKE. HENRY B. SHIELDS, Freeport, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Original application filed Mar. 23, 1926, Serial No. 96,677. Divided and this application filed Nov. 21, 1927. Serial No. 234,588. 1 Claim. (Cl. 192—4.)



In a transmission mechanism, in combination, a countershaft, a driven shaft, gears carried with the respective shafts and always meshing with each other, whereby the lubricant may be pumped on rotation of said gears, means to cause selected gears to transmit motion to the driven shaft, a housing enclosing the gears and conforming closely to the outer extremities of the gears, a lubricant outlet in the housing, means permitting the lubricant pumped to return to the suction side of the gears, and means to restrict the flow of the lubricant.

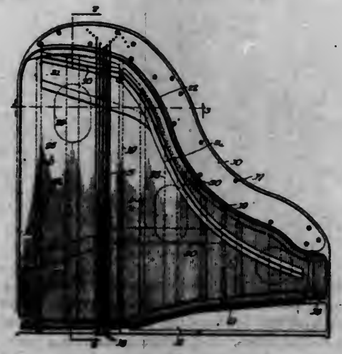
1,754,287. METHOD OF DYEING SHEARLINGS AND THE LIKE. JOHN G. SHOEMAKER, South St. Paul, Minn., assignor to A. C. Lawrence Leather Company, Boston, Mass., a Corporation of Maine. Filed Apr. 4, 1928. Serial No. 267,481. 11 Claims. (Cl. 8—5.)



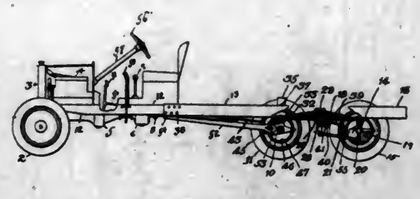
1. The method of dyeing shearlings and furs which consists in applying to the outer portions of the hairs a protective coating, leaving the inner portions of such hairs uncoated, subjecting the hairs to the action of the dye to dye the inner portions of the hairs, and subsequently removing the protective coating from the outer portions of the hairs.

1,754,288. WELL APPARATUS. NELSON K. SMITH, Los Angeles, Calif., assignor to Byron Jackson Co., West Berkeley, Calif., a Corporation of Delaware. Filed Mar. 6, 1926. Serial No. 92,740. 2 Claims. (Cl. 294—91.)

1. A device of the character disclosed, comprising a body provided with relatively movable jaws adapted to receive and accommodate work upon presentation to the work, and means for positively locking said jaws in work-engaging relations and for releasably locking said jaws when in work-receiving relations; said jaws being mounted for movement from one plane when in work-engaging relation to another plane when in work-receiving relation; pockets being provided to that end in said body for said jaws, and cam means being provided for causing the movement of said jaws from plane to plane when said jaws are partially rotated.

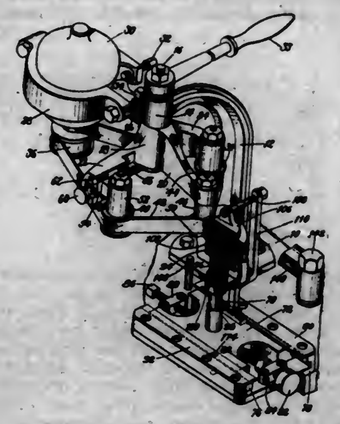


1,754,289. ART OF DECORATING PIPES. GEORGE ST. JOHN, Jr., New York, N. Y., assignor to Wm. Demuth & Co., New York, N. Y., a Corporation of New York. Filed Oct. 8, 1928. Serial No. 311,232. 1 Claim. (Cl. 41—39.)



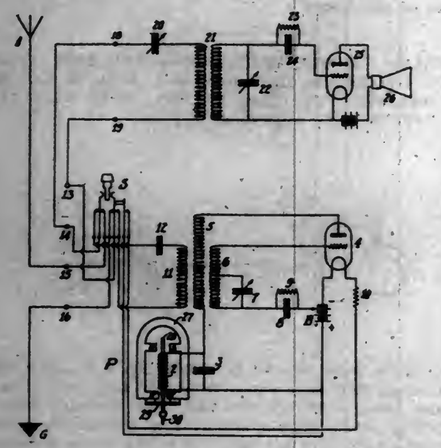
The herein described method of forming designs on pipes, which consists in applying to a pipe surface having no indication of the ultimate design thereon, a ribbon or strand of elastic resist to thereby form any desired design on such pipe surface, and thereafter treating the pipe to contrast the designed surface with that portion of the surface which was covered by the resist.

1,754,290. MUSICAL INSTRUMENT. JOSEPH N. VASEY, Brookfield, Ill. Filed Dec. 27, 1927. Serial No. 242,655. 8 Claims. (Cl. 84—189.)



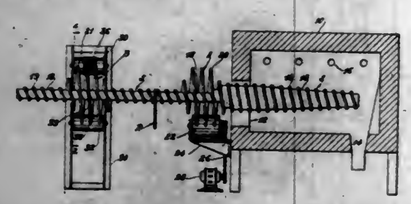
1. In a musical instrument, the combination of a string supporting frame, a sounding body surrounded by said frame, said frame having ledges on which said body is seated at its edges, said body being otherwise free from said frame, strings on said frame spanning said body, and bridge structure on said body engaged by the strings whereby said body is held by the pressure of the strings in position on said ledges.

1,754,291. MOTOR VEHICLE CONSTRUCTION. JOHN G. UTZ, Detroit, Mich., assignor to Otilia H. Utz, Detroit, Mich. Filed Nov. 27, 1925. Serial No. 71,573. 3 Claims. (Cl. 180—22.)



1. In a motor vehicle, in combination, a frame, a pair of closely associated non-steering rear axles, one of said axles being a driving axle and being provided with a housing and the other of said axles being a dead axle, said housing being pivotally connected to said frame by means of a propeller shaft housing, a pair of springs extending longitudinally of said frame between said axles and trunnioned to said frame therebetween, a sliding connection between the front ends of said springs and said housing, and a pivotal connection between the rear ends of said springs and said dead axle, said dead axle being maintained against movement longitudinally of said springs whereby to maintain the wheels on said rear axles in constant approximate alignment.

1,754,292. SCOURING MACHINE. HAROLD WARREN, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 27, 1924. Serial No. 695,558. Renewed Dec. 1, 1926. 29 Claims. (Cl. 51—143.)



1. In a machine for scouring heels, a scouring tool, means for supporting the heel of a shoe for presentation to said scouring tool constructed and arranged to allow movement toward and away from the tool, resilient means urging the heel toward the tool, a gage adjacent to the tool adapted to engage a portion of the shoe to limit the movement of the heel toward the tool, and means for effecting a relative movement of the heel and the scouring tool to present various portions of the heel to the tool.

1,754,293. PHONOGRAPH ADJUNCT FOR RADIO SETS. JULIUS WEINBERGER, New York, N. Y., assignor to Radio Corporation of America, a Corporation of Delaware. Filed June 2, 1925. Serial No. 34,274. 4 Claims. (Cl. 179—100.4.)

4. An electric phonograph including in combination a radio receiving apparatus having an input circuit tunable over a range of frequencies, a radio frequency oscillator arranged to generate oscillations having frequencies within said range, an electro-magnetic pick-up device, said device being adapted to generate electrical undulations in accordance with a record groove device, means to impress said undulations upon said oscillator, whereby to modulate the output thereof, and means to impress said modulated output of the oscillator upon said input circuit.

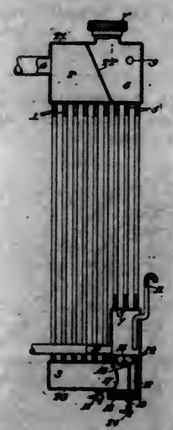
1,754,294. SPIRAL FEED CONVEYER FOR HEAT-TREATING FURNACES. MURRAY WINTER, Wrentham, Mass., assignor to The Surface Combustion Company, Inc., Toledo, Ohio, a Corporation of New York. Filed Sept. 25, 1928. Serial No. 308,314. 8 Claims. (Cl. 198—213.)

1. In a conveyer, the combination of a horizontally disposed rotatable shaft, spiral means on the shaft forming a guide way for objects hung on the shaft, means arranged alongside of the shaft for supporting it for rotation, said supporting means contacting with the periphery of said spiral means below the axis of the shaft laterally of the bottom thereof, an axially fixed element disposed alongside the shaft, and means on the spiral means cooperating with said element to prevent axial displacement of the shaft.

1,754,295. BLADE SHARPENER. SAMUEL M. WIXCEL, Marcus, Iowa. Filed Mar. 18, 1929. Serial No. 347,971. 3 Claims. (Cl. 76—82.1.)

1. A sharpener of the character described comprising a holder formed of a spring metal blank to comprise a hand grip portion, and walls forming a cutting element receiving grooveway, a cutting element in the element receiving grooveway, and means including a bolt and nut for securing the element in the grooveway, said nut being dis-

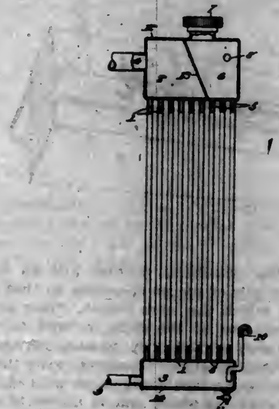
posed relatively to one of the walls which form the grooveway to prevent inadvertent loosening of the nut on said bolt.



1,754,296. PROCESS OF ENHANCING THE FLOW OF OILS THROUGH PIPE LINES. ALBERT H. ACKERMAN, Chicago, Ill., assignor to Catalytic Chemical Company, Denver, Colo., a Corporation of Colorado. Filed Feb. 16, 1927. Serial No. 168,820. 5 Claims. (Cl. 87—5.)

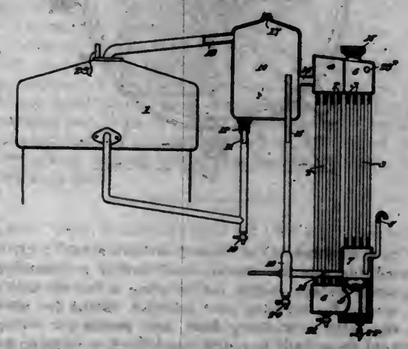
1. In a process for removing deposits from pipe lines used for conveying crude oil, the step of passing through the lines a composition composing naphthalene, anthracene, alkalies and sugar dissolved in oil that is being pumped through the lines.

1,754,297. PROCESS OF TREATING FUEL OILS. ALBERT H. ACKERMAN, Chicago, Ill., assignor to Catalytic Chemical Company, Denver, Colo., a Corporation of Colorado. Original application filed Dec. 14, 1925, Serial No. 75,472. Divided and this application filed Feb. 16, 1927, Serial No. 168,821. Renewed Dec. 8, 1928. 5 Claims. (Cl. 44—9.)



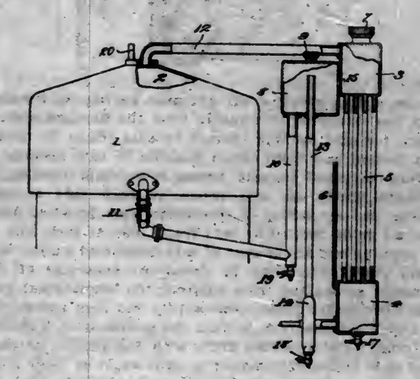
1. The process of treating fuel oil to increase the efficiency thereof which comprises comminuting petroleum coke with a composition of materials comprising naphthalene, anthracene, oil of mirbane, sulfuric acid and sodium hydroxide, and adding the same to the fuel oil and agitating the fuel oil.

1,754,298. CONDENSER FOR INTERNAL-COMBUSTION ENGINES. IRA HUBERT AYRES, New York, N. Y., and HERBERT RIVINGTON PYNE, Bernardsville, N. J. Filed Apr. 13, 1926. Serial No. 101,724. 5 Claims. (Cl. 257—25.)



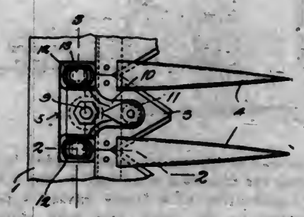
1. An air cooled steam condenser comprising a direct condensing unit having connected upper and lower chambers and a reflux condensing unit having connected upper and lower chambers, the reflux condensing unit being located in proximity to the direct condensing unit, the upper chamber of the direct condensing unit having a steam inlet port and the lower chamber of the reflux condensing unit having a water discharge port and a restricted passage for the escape of the water of condensation from the lower chamber of the direct condensing unit into the lower chamber of the reflux condensing unit.

1,754,299. CONDENSER FOR INTERNAL-COMBUSTION ENGINES. IRA HUBERT AYRES, New York, N. Y., and HERBERT RIVINGTON PYNE, Bernardsville, N. J. Filed Apr. 13, 1926. Serial No. 101,725. 3 Claims. (Cl. 257—25.)



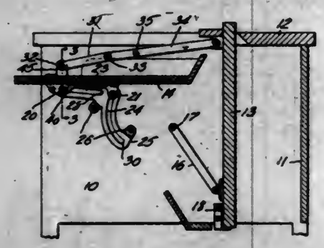
1. An air cooled steam condenser for use in connection with internal combustion engines where the steam generated in the engine water jacket by the heat of the engine is condensed by the cooling effect of the air on the condenser, said condenser comprising direct and reflux condensing passages, the upper chamber of the direct condensing unit having a steam inlet port, the common lower chamber for the direct and reflux condensing units having an outlet port for the water of condensation, and also a water overflow passage having its upper outside end located near the top of the lower chamber and its lower inside end located normally below the water level in the lower chamber whereby any steam which may not be condensed in the direct condensing unit may pass from the lower chamber upwardly into the reflux condensing unit without escaping through the overflow passage.

1,754,300. STEAM-COOLING SYSTEM FOR INTERNAL-COMBUSTION ENGINES. IRA HUBERT AYRES, New York, N. Y., and HERBERT RIVINGTON PYNE, Bernardsville, N. J. Filed Apr. 13, 1926. Serial No. 101,726. 24 Claims. (Cl. 123—174.)



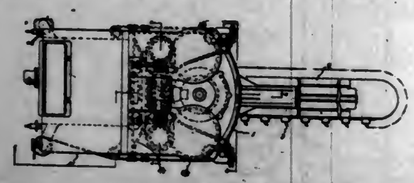
1. In a cooling system for internal combustion engines, a water jacket, a condenser, a reservoir, two circuits, one through the jacket and reservoir and the other through the reservoir and condenser, and means in the last named circuit for lifting the water of condensation from the bottom of the condenser into the reservoir.

1,754,301. COOLING SYSTEM FOR INTERNAL-COMBUSTION ENGINES. IRA HUBERT AYRES, New York, N. Y., and HERBERT RIVINGTON PYNE, Bernardsville, N. J. Filed Mar. 2, 1927. Serial No. 172,081. 17 Claims. (Cl. 123—174.)



1. In a cooling system for internal combustion engines, a liquid reservoir, a condenser and a cylinder jacket in intercommunication, the cylinder jacket having a vapor escape passage leading directly to the condenser, and the reservoir having a liquid supply passage leading to the cylinder jacket, a liquid overflow passage leading to the condenser and a liquid return passage leading from the condenser, and means in the last named passage for raising the overflow and condensed liquid back into the reservoir whereby the liquid in the reservoir may be maintained at a predetermined level to thereby cause the liquid in the cylinder jacket to be maintained by gravity at substantially a predetermined level under normal operating conditions.

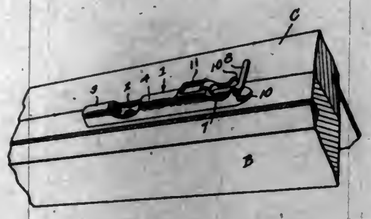
1,754,302. GUIDE CLIP FOR CUTTER BARS. THOMAS J. BARLOW, Albany, Ohio. Filed May 17, 1929. Serial No. 363,863. 1 Claim. (Cl. 56—305.)



The combination with a guard bar and sickle bar of a mower, of a guide clip mounted on the guard bar and overhanging the sickle bar, wings at opposite ends respectively of the clip, each wing having a slot formed with flared walls, and fastening bolts extending through the slots and guard bar, each bolt having a tapered head adapted to be seated in the slot with its top flush with the top of the wing, there being an angular portion at the inner end of the head constituting means for engaging the adjacent structure and preventing the clip from binding upon the guard bar.

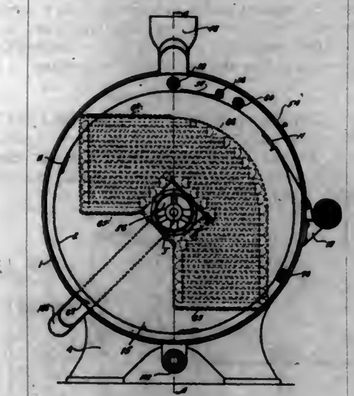
1,754,303. TYPEWRITER DESK. JACOB BODENSTEIN, Herkimer, N. Y. Filed Feb. 12, 1927. Serial No. 167,677. 6 Claims. (Cl. 312—26.)

1. In a typewriter desk, a frame having an opening in its top extending rearwardly from the forward edge, a closure for said opening carried by said frame for movement toward and from closed position in said opening, a platform disposed in said frame below said opening, a horizontal guide on said frame at each side of said opening and extending in directions from front to rear, a second guide carried by said frame also at each side of said opening and at the rear of said horizontal guides, said second guides extending in directions crosswise of the horizontal guides and from adjacent the longitudinal axes of said horizontal guides downwardly and then rearwardly in an inclined direction, so that the guides at each side of the frame form an obtuse angle with one another at their outer ends and approximately a right angle at their adjacent ends, followers carried by said platform and co-operating with said guides to support the platform in an approximately horizontal position when the followers co-operating with the second guides are at the upper ends of those guides, and the followers co-operating when the horizontal guides are well forward on those guides, whereby said platform may be first tilted downwardly at its rear end and then the entire platform shifted rearwardly in said frame, and means connecting said closure to said platform, whereby movement of the closure into closed position causes a tilting of the platform and its rearward movement in the frame to increase the knee space.



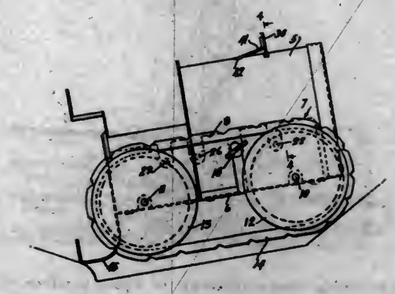
1,754,304. MINING MACHINE. HERBERT A. BUEHLER, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 25, 1926, Serial No. 157,008. Renewed Sept. 12, 1929. 3 Claims. (Cl. 362—30.)

1. In a reversible mining machine adapted to be moved laterally along the face of a mine wall to cut a kerf thereunder, the combination of a frame having a passageway therein opening to the front and both sides of said frame, a cutter bar projecting forwardly of said frame and a detachable element, invertible to close said passageway on either side of said machine allowing the opening on the opposite side of said machine to remain open, said cutter bar remaining in a fixed position relative to said frame.



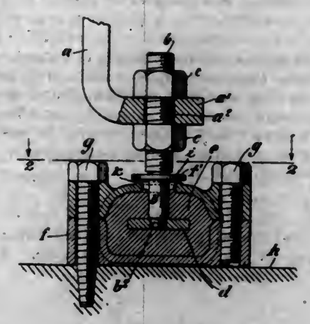
1,754,305. BURGLAR ALARM. WILLIAM BURRELL, Amarillo, Tex. Filed Nov. 22, 1927, Serial No. 235,070. Renewed July 31, 1929. 1 Claim. (Cl. 116—89.)

A burglar alarm comprising a body of substantially semi-circular shape in cross section and having a transverse opening in its top portion adjacent one end of the body, the part between the opening and said end having a bore therein for receiving a cartridge and the opposite wall of the opening having a circular hole therein, a firing pin comprising a cylindrical member having a pointed outer end guided in said hole and a substantially L-shaped stem connected with the cylindrical member and passing through the body, the end of the body farthest removed from the transverse opening having a hole therein through which the stem passes, a spring encircling the stem and



bearing against the cylindrical member and an interior wall of the body, a pair of spaced shoulders on that end of the body through which the stem passes, either shoulder engaging the short arm of the stem to hold the firing pin retracted, a part of the stem passing between the shoulders and a loop pivotally connected with the body and adapted to be swung into engagement with the short arm of the stem when the short arm is moved to a position to free it of the shoulders to hold the firing pin retracted.

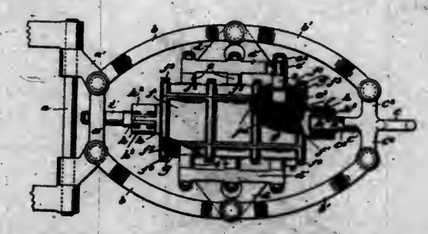
1,754,306. ROTARY RUG WASHING AND FINISHING MACHINE. EMIL J. CARROLL, Norwood, and GEORGE W. JOHNSON, Bond Hill, Ohio, assignors to The American Laundry Machinery Company, Norwood Station, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 15, 1927. Serial No. 213,076. 10 Claims. (Cl. 15—40.)



1. In a machine of the class described, a tub, a cylinder mounted for rotation therein and having a foraminated peripheral surface, means for securing a rug on said surface, means for rotating said cylinder, means for wetting said rug with a washing fluid, and means for wringing said fluid from said rug and comprising a wringer roller mounted in said tub for movement to pressure applying position against said rug during rotation of said cylinder.

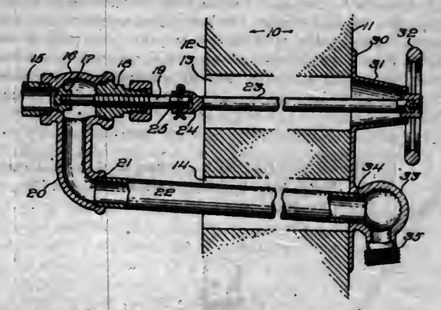
1,754,307. TOY TRACTOR. RUSSELL D. CONROY, Waterbury, Conn., assignor to Ferdinand Strauss, Inc., New York, N. Y., a Corporation of Connecticut. Filed Aug. 2, 1929. Serial No. 382,947. 6 Claims. (Cl. 46—48.)

5. In combination with a toy tractor, a trailer, comprising a plate secured to the tractor body, and a resilient extension on the said plate extending rearwardly of the body, for the purpose specified.



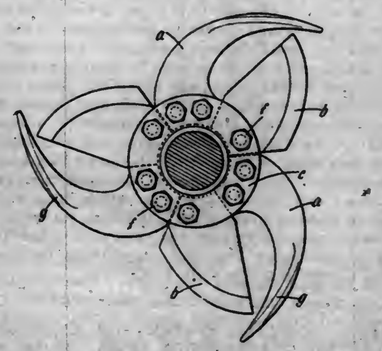
1,754,308. MACHINE-UNIT SUPPORT. ROBERT F. COWELL, Teaneck, N. J., and RODGER W. DAVIS, Flushing, N. Y., assignors to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 11, 1928. Serial No. 269,259. 2 Claims. (Cl. 248—16.)

2. A device for supporting a machine on a base, comprising a housing having a portion adapted to abut against the base and an apertured cover portion adapted to co-operate with the first named portion to form an interior closed except for the aperture, a bracket, a member carried by the bracket and extending through the aperture, yielding, non-metallic material in the housing, common means external of the housing to secure the cover to the housing to place the yielding, non-metallic material under compression and to secure both portions of the housing to the base, and an enlarged portion on the end of said member seated in and surrounded by the yielding, non-metallic material.



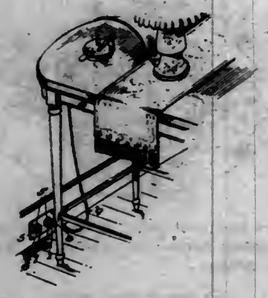
1,754,309. SHOCK-INSULATOR DRAWBAR. ROBERT F. COWELL, Teaneck, N. J., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 30, 1928. Serial No. 322,661. 8 Claims. (Cl. 280—33.9.)

3. A force transmitting connection comprising means to engage a force exerting member, centering means projecting therefrom, means to engage a member upon which a force is to be exerted, centering means projecting therefrom, a plurality of links pivoted to each engaging means, a housing, yielding non-metallic material in the housing, bearing pads received in the yielding material



and pivoted to the pivot point of the links, and yielding non-metallic means carried by the housing and engaging the centering means.

1,754,310. WATER HYDRANT. HENRY C. ELLENBERGER, Detroit, Mich. Filed Feb. 11, 1929. Serial No. 338,995. 5 Claims. (Cl. 251—156.)



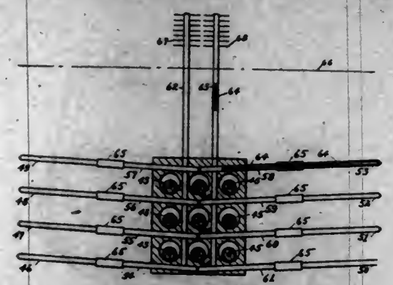
1. A device of the class described comprising a fitting, a valve in said fitting, means for operating said valve adapted to extend through a wall, a conduit disassociated from said valve operating means, releasably connected to the discharge port of said fitting and adapted to extend through a wall, said valve operating means having a disconnectable joint adjacent said fitting.

1,754,311. ROTARY TILLING MACHINE. EDWARD HAMMOND WHALLEY FOOT, Lincolnshire, England. Filed July 3, 1929, Serial No. 375,775, and in Great Britain May 24, 1928. 2 Claims. (Cl. 97—212.)

1. A rotary tilling machine in which a plurality of digging tines and a similar number of cutting blades are arranged alternately in a single bracket on a rotary shaft, the tines and cutting blades both being separate units from the hub on which they are mounted.

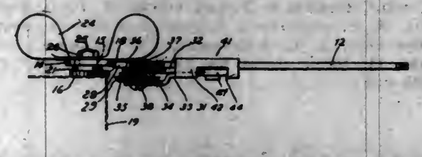
1,754,312. TWO-PIECE ELECTRICAL CONNECTION PLUG. STUART G. GARRETT, Tulsa, Okla. Filed Sept. 25, 1928. Serial No. 308,257. 6 Claims. (Cl. 173—343.)

1. A two-piece electrical plug connection comprising a socket member having electrical terminal recesses, and an annular shoulder formed on the interior wall of the socket, said shoulder having a slot extending therethrough, an annular rim on said socket extending outwardly from said shoulder, and a plug member whose inner end portion fits snugly within said annular shoulder and bears contact prongs, said plug having a radially extending lug to enter into said slot when said prongs register with said terminal recesses.



1,754,313. HARNESS BUCKLE. AMOS L. GARRIS, Greenville, N. C. Filed Nov. 9, 1927. Serial No. 232,139. 1 Claim. (Cl. 54—54.)

A back band buckle comprising a substantially oblong plate provided at the center of its upper edge with an upwardly projecting lug and having a long narrow longitudinal slot spaced from the upper edge adapted to receive a looped portion of a back band to permit the same to be secured to the plate by a pin, a narrow continuous metal strip arranged vertically and secured at one end to the said lug above the slot and at its other end to the plate below the slot and doubled to form upper and lower loops which extend above and below the plate, the latter connecting the terminals of the strip and closing the said loops and extending a sufficient distance in advance and in rear of the strip to accommodate wide back bands, the lower loop being narrower than the upper loop and adapted to receive a trace and prevent the same from twisting, the upper loop being of greater width than the lower loop and forming a rein guide, and means extending across the upper loop to support the reins and connecting the sides of the upper loop and constituting the fastening means for securing the strip to the lug.

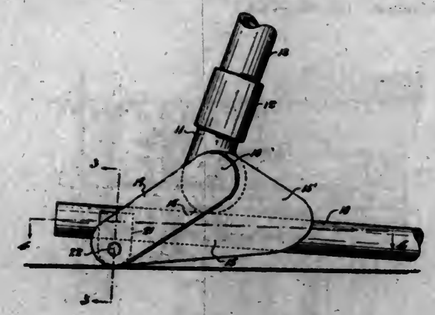


1,754,314. COOLING SYSTEM FOR UNDERGROUND ELECTRIC TRANSMISSION LINES. FRAZER W. GAY, Newark, N. J. Filed Apr. 28, 1928. Serial No. 273,637. 8 Claims. (Cl. 247—3.)

1. Means for cooling electrical conduits comprising, cooling tubes having their lower portions in the proximity of the conduits to be cooled and their upper portions extending away from the conduits for the purpose of conducting heat away from the latter, said tubes being hermetically sealed and containing a volatile liquid and

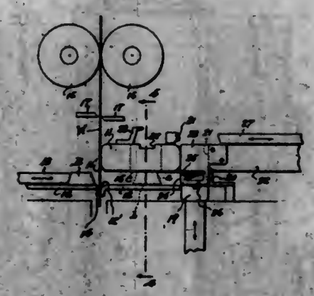
fluid retaining means adjacent the upper portions of said tubes and adapted to retain a cooling fluid for effecting the cooling of the upper portions of said tubes.

1,754,315. CAN OPENER. ALBERT C. GRUNWALD, River Forest, Ill., assignor to Precision Metal Workers, Chicago, Ill., a Corporation of Illinois. Filed Mar. 23, 1925. Serial No. 17,482. 12 Claims. (Cl. 30—3.)



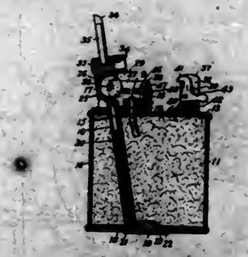
1. In a can opener, the combination of a shank, a feeding wheel pivotally supported adjacent one end of said shank, means for rotating said feeding wheel, a slide mounted on said shank, means for moving said slide towards and away from said feeding wheel, a pivot carried by said slide, a cutting disc on said slide, and an independently rotatable backing wheel on said pivot.

1,754,316. WINDOW CONSTRUCTION. FRED HAMILTON, Beaumont, Tex. Filed Feb. 10, 1928. Serial No. 253,400. 9 Claims. (Cl. 20—49.)



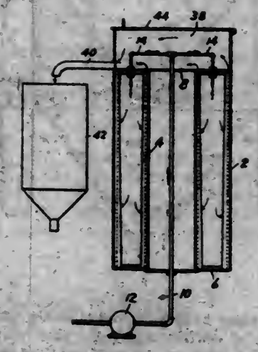
1. A window construction comprising a frame, a sash movably mounted within the frame, means connecting the sash with the frame and adapted for reversing the sash, and counterbalance means connected with said means for assisting in the reversal of said sash.

1,754,317. BENDER FOR THIN-WALL CONDUITS. ROBERT HALSEY HENDERSON, East Orange, N. J. Filed Nov. 21, 1928. Serial No. 320,926. 3 Claims. (Cl. 81—15.)



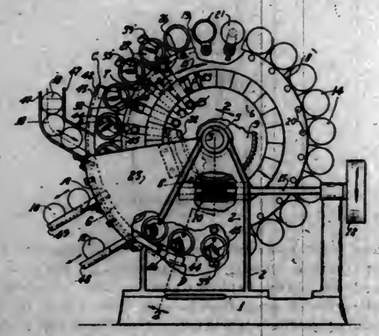
1. A hand bender for thin wall conduit, comprising a curved element having a handle lever extending therefrom, said element having integral side flanges forming therewith a peripheral main bending groove, said flanges being laterally spaced apart for a distance slightly exceeding the diametric elastic limit of the conduit to be bent, said bending groove having clearance spaces intermediate the bottom of its seat where the conduit to be bent impinges and the sides thereof as formed by said spaced flanges; and a supporting member forwardly off-set beyond said main bending groove at a distance equivalent to two to three times the diameter of the conduit to be bent; said supporting member having a bearing groove of substantial length to receive and engage the conduit to be bent, said bearing groove having a bottom contour corresponding to the normal cross-sectional circumference of the conduit to be bent, a width substantially equivalent to the cross-sectional diameter of said conduit, and a depth exceeding the cross-sectional radius of said conduit.

1,754,318. PACKAGING MECHANISM. GEORGE I. HOHL, Newport, R. I., assignor to Cartoning Machinery Corporation, Newport, R. I., a Corporation of New Jersey. Filed Aug. 15, 1928. Serial No. 299,679. 7 Claims. (Cl. 93—2.)



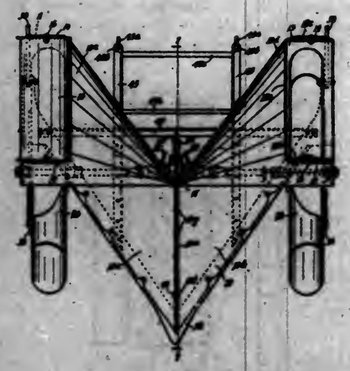
3. In a packaging mechanism, a stationary folder block having a bottom face, a rear side face and a top face respectively bounding successive portions of a path through which an article and wrapper therefor may be moved to produce successive longitudinal folds of said wrapper around the article; means contiguous to the path of movement of said article about said folder block adapted to form end folds of the wrapper; and means for moving said article and its wrapper relative to said faces of the folder block and to the end fold forming means.

1,754,319. LIGHTER. JOHN HOLTZMAN, New York, N. Y. Filed Sept. 8, 1927. Serial No. 218,168. 11 Claims. (Cl. 67—7.1.)



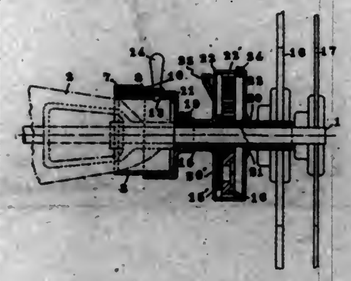
6. In a lighter, a fuel container of substantially rectangular outline having a substantially flat top and bottom, a tube within said container, a block of pyrophoric material yieldably supported in said tube, a pair of parallel spaced projections upstanding from said top near one end thereof, a shaft passing through said projections, an abrading wheel mounted on said shaft between the projections, a wick projecting above said top adjacent said wheel, a cover member for the wheel pivotally mounted on said shaft and having depending sides arranged between said projections and said wheel and having a top to cover the wheel, an extension on said cover member of sufficient length to extend close to the other end of said top, a snuffing cap carried by said extension intermediate of the ends thereof to cover the wick, said extension being shaped at its extreme free end to permit the locking thereof in place, a post at said other end of said top, a spring-pressed element mounted in said post and being substantially enclosed thereby, said element being arranged to be engaged and moved in one direction by the extreme shaped end of said extension when said cover member is swung on its pivot to cap the wick and extinguish the light, and to move automatically in the other direction for engaging and locking said extreme shaped end of the extension.

1,754,320. FILTER. ALFRED HOPKINS, Philadelphia, Pa., assignor to Hopkins-Tull Machinery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 20, 1928. Serial No. 327,321. 3 Claims. (Cl. 210—184.)



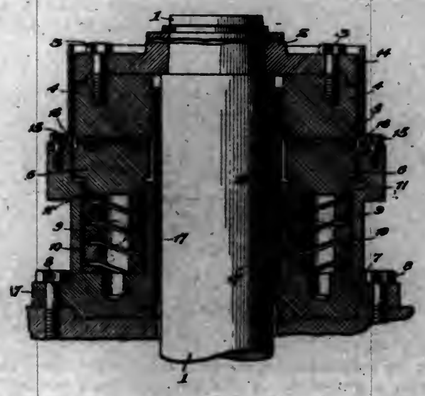
1. A filter comprising a casing including inner and outer walls forming a continuous annular chamber and a discharge chamber above and communicating with the annular chamber, intake piping extending into the casing, and a plurality of filter bags within the chamber constructed to conform to the shape thereof and substantially fill the same, the intake piping communicating with the interiors of the bags and serving to support the same, passages being provided to guide filtrate to the discharge chamber.

1,754,321. CAN-TESTING MACHINE. AXEL JOHNSON, Oakland, Calif., assignor to American Can Company, San Francisco, Calif., a Corporation of New Jersey. Filed Dec. 4, 1926. Serial No. 152,591. 16 Claims. (Cl. 73—51.)



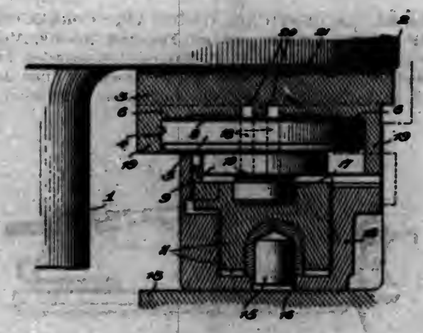
1. An apparatus for testing can or container bodies and separating the leaky from the non-leaky, comprising an endless traveling support, vacuum creating means carried thereby and movable therewith, means within the path of travel of the vacuum creating means for delivering a can to be tested into cooperative relation therewith, means for operating the vacuum creating means for producing a vacuum within the can sufficient to retain the can in suspended cooperative relation therewith, means for operating the vacuum creating means to reduce to approximately normal the initial vacuum produced therein to permit the can to drop by gravity from its operative position should air have leaked thereinto.

1,754,322. SNOWPLOW WITH TOP DISCHARGE. JOHN O. JOHNSON, Minneapolis, Minn., assignor, by mesne assignments, to Enterprise Holding Company, Minneapolis, Minn., a Corporation of Minnesota. Filed July 6, 1926. Serial No. 120,603. 17 Claims. (Cl. 37—43.)



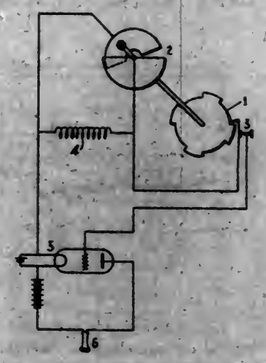
17. A snow plow having in combination, a front prow portion having a central upwardly and rearwardly inclined rectilinear edge, a curved mold board extending laterally and rearwardly from each side of said edge, a semi-cylindrical casing at the outer end of each mold board extending continuous therewith, a vertical plate at the outer side of each of said casings, shafts extending transversely of said mold boards and casings and concentric therewith, rotary snow propelling means carried by each shaft and disposed in said casings and conduits extending vertically from each of said casings open at their upper ends through which snow is discharged by said propelling means.

1,754,323. COLOR-PROJECTION APPARATUS FOR CINEMATOGRAPHS. REGINALD KILLICK, London, England, assignor to The K. & S. Syndicate Limited, London, England, a British Company. Filed Apr. 20, 1923, Serial No. 633,433, and in Great Britain June 26, 1922. 5 Claims. (Cl. 88—16.4.)



1. In combination with a cinematographic device having a revoluble spindle, an attachment therefor comprising, a stationary sleeve member, an angularly adjustable cup-shaped member frictionally engaging said sleeve, an intermediate gear, an intermediate gear support secured to the cup-shaped member on which the intermediate gear turns, a driving gear on said spindle meshing with the intermediate gear, a driven gear meshing with the intermediate gear, an enclosing casing for the gears secured to and revolving with said driven gear, a shutter secured to the casing, and manual means carried by the cup-shaped member for adjusting the position thereof to vary the angular position of the intermediate gear support to position the openings in the shutters.

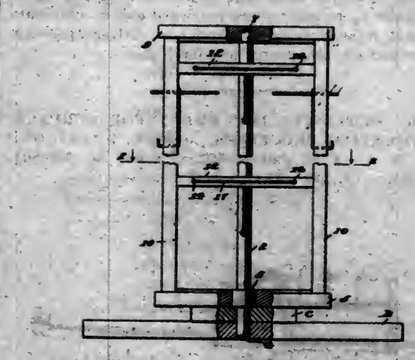
1,754,324. BEARING. ALBERT KINGSBURY, Greenwich, Conn., assignor to Kingsbury Machine Works, Inc., Philadelphia, Pa., a Corporation of Delaware. Filed June 23, 1922. Serial No. 570,380. 41 Claims. (Cl. 308—160.)



1. A bearing including relatively movable bearing members, elastic means supporting one or more of said bearing members in bearing engagement with their relatively movable bearing members, and means to dampen oscillatory movement of said bearing members.

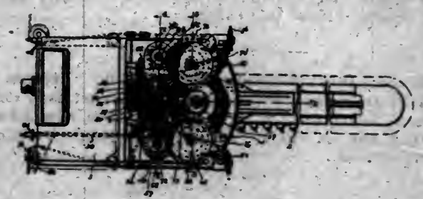
1,754,325. BEARING. ALBERT KINGSBURY, Greenwich, Conn., assignor to Kingsbury Machine Works, Inc., Philadelphia, Pa., a Corporation of Delaware. Filed Apr. 8, 1927. Serial No. 182,112. 37 Claims. (Cl. 308—160.)

1. In a bearing, relatively rotatable bearing members including one or more bearing segments weakened at their backs by a plurality of passages through which oil may circulate.



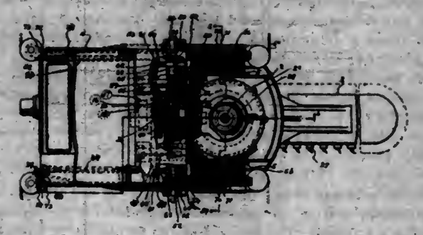
1,754,326. ARRANGEMENT FOR WIRELESS TELEGRAPHY AND TELEPHONY. AUGUST LEIB, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a Corporation of Germany. Filed Mar. 26, 1923, Serial No. 627,828, and in Germany July 4, 1922. 10 Claims. (Cl. 250—27.)

1. In a high frequency receiving system, a resonant circuit, means for varying the tuning of the circuit, a second circuit, and means operated by said tuning varying means for breaking said second circuit to prevent reception at certain wave lengths.



1,754,327. PAPER-BAG HOLDER. CARL A. LEONARD, Bristol, Tenn. Filed Mar. 19, 1929. Serial No. 348,292. 3 Claims. (Cl. 211—53.)

1. A bag holder comprising in combination a rack having a cross bar provided with spaced perforations, a bag holder of U-shape having a front bar which is bent inwardly to engage the face of said supporting member, and thence bent outwardly to form a loop-like handle, a cross bar connecting the inner terminals of said limbs, a forked guide



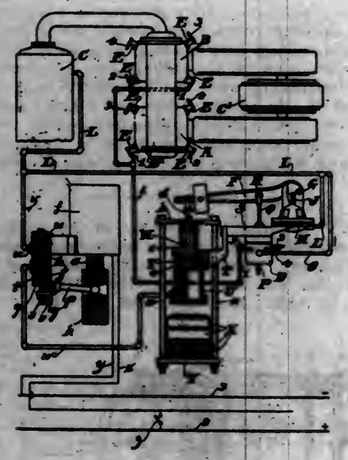
rigidly secured to the back face of said supporting member embracing and guiding said bar, and a spiral spring confined between said supporting member and bar.

1,754,328. MINING MACHINE. FRANK A. LINDGREN, Western Springs, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 25, 1926, Serial No. 157,006. Renewed Sept. 12, 1929. 8 Claims. (Cl. 262—30.)

6. The combination with a kerf cutting mining machine, of feed operating mechanism therefor comprising a driving motor slidable on its bottom on a mine bottom, two rope drums arranged on vertical axes at opposite sides of said machine forward and beneath the uppermost extremities of said driving motor, and a single frictionally controlled variable speed reduction gearing interposed between said motor and said drums for driving each of said drums at the same speed in the same direction.

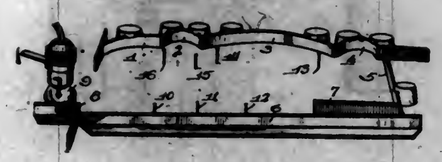
1,754,329. MINING MACHINE. FRANK A. LINDGREN, Western Springs, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 25, 1926, Serial No. 157,007. Renewed Sept. 12, 1929. 10 Claims. (Cl. 262—30.)

1. The combination in a mining machine of a main frame, a bearing shoe on the forward portion of said



frame for supporting said frame for slidable movement on a mine bottom, a motor rearward of said main frame slidable on its botton on a mine bottom and serving as the main supporting means for the rearward end of said main frame, said frame having a bottomless cuttings passageway intermediate said motor and said shoe.

1,754,330. OUTLINING IMPLEMENT FOR SURFACE-ORNAMENTING PROCESSES. JOHN L. LITOMY, Glen Ridge, N. J. Filed July 6, 1928. Serial No. 290,861. 2 Claims. (Cl. 219—21.)



1. A machine of the character described comprising a substantially cylindrical reservoir to receive lumps of wax, a tubular coaxial heat insulating handle secured to one end thereof of a size and shape to be gripped like a fountain pen, an outlet nozzle projecting longitudinally from the other end adjacent one side thereof an electric heater within said reservoir for heating the contents thereof and disposed at one side of the reservoir adjacent said nozzle, and electrical wires connected to said heater and passing through said handle.

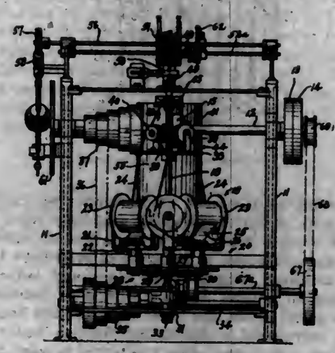
1,754,331. DUAL-PRESSURE UNLOADER. CHESTER W. METZGAR, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 21, 1927. Serial No. 234,698. 9 Claims. (Cl. 230—4.)

1. In a compressor, the combination of a cylinder and compressor piston, an automatic unloader for the cylinder having a movable member responsive to discharge pressure, a regulating cylinder and fluid actuated piston therein located adjacent said movable member, a plunger in said regulating cylinder cooperating with the piston, weights continuously carried by the plunger, a loose connection between the plunger and said movable member, and means for controlling the supply of pressure fluid to said regulating cylinder, whereby the weights may be transferred to the movable member and released therefrom.

1,754,332. ACOUSTICAL STUDY AND CORRECTION OF AUDITORIUMS. RALPH FORBUSH NORRIS, Madison, Wis., assignor to C. F. Burgess Laboratories, Inc., Madison, Wis., a Corporation of Delaware. Filed Apr. 13, 1927. Serial No. 183,343. 14 Claims. (Cl. 35—12.)

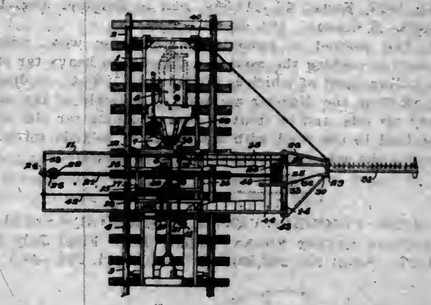
1. An apparatus for showing the paths and intensity of sound waves from a given source in a room, comprising a plane surface on which is mounted a miniature fence-like member having the contour of a cross-section of said room, in combination with a source of light positioned at a point corresponding to the point of sound emanation in said room.

1,754,333. BOLT ANCHOR. HENRY W. PLEISTER, Westfield, and JOHN KARITZKY, Garwood, N. J., assignors to Henry B. Newhall Corporation, Garwood, N. J., a Corporation of New Jersey. Filed Feb. 15, 1929. Serial No. 340,278. 2 Claims. (Cl. 85—24.)



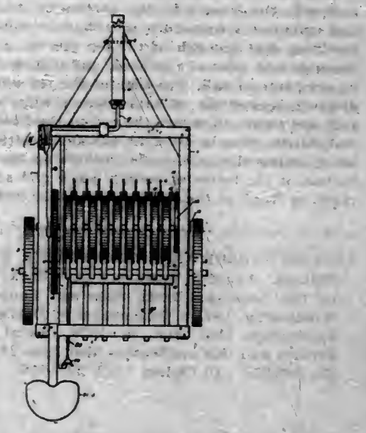
2. A new article of manufacture comprising a ductile anchor, provided with a body member and a plurality of tines and an axial bore, primary longitudinally extending ribs mounted on the interior of the tines, but not extending into the body member, secondary longitudinally extending ribs mounted on the interior of the tines and extending in from the inner end of the bolt anchor in the same direction as the primary longitudinally extending ribs, but of less length, the tines being provided with longitudinally extending grooves or voids, but not extending to the innermost end of the tines, to insure flexibility of the tines and easy entrance into the bolt anchor of a relatively large screw, the innermost ends of the tines being ungrooved to increase the pressure of the anchor against an operating screw and against the surface of a hole, thereby giving a more powerful gripping expansion at the inner end of the anchor away from the face of a support and concentrating the hardest turning of a screw to the minimum number of turns when the screw is about set up.

1,754,334. SURVEYING ROD. JOSEPH QUIGLEY, Norris, Ill. Filed May 18, 1928. Serial No. 278,702. 8 Claims. (Cl. 33—74.)



1. A surveying rod comprising open frame members having a strip of diaphanous material therebetween, said strip having a measuring scale thereon.

1,754,335. CORD MACHINE. HERMAN P. RUF, New York, N. Y. Filed Feb. 8, 1929. Serial No. 338,425. 2 Claims. (Cl. 117—46.)

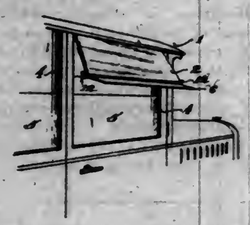


1. A cord making machine comprising a flier, a plurality of strand carrying spools rotatably mounted thereon, means to twist the strands into a cord, means to equalize the feed of the strands from the separate spools, the last mentioned means including separate friction rollers for the strands, and gears interengaging said rollers to cause them to rotate at constant ratio, a main drive for the flier, a gear train interconnecting the spools to rotate the same, a second drive connected to the main drive for operating the gear train, said second drive being adjustable to vary the speed of rotation of the spools, means to pull the finished cord through the machine adjustably connected with the main guide, a can for receiving the finished cord, a rotary support for the can, and means to rotate said support.

1,754,336. RAILWAY MOWER. ERNEST SACK, Waverly, Iowa. Filed Dec. 1, 1927. Serial No. 237,037. 4 Claims. (Cl. 56—232.)

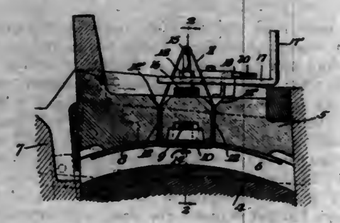
1. In combination, a wheeled chassis, mechanism mounted thereon for propelling it, an elongated frame movable across and upon said chassis to different positions of lateral adjustment, a sickle-device mounted terminally upon said frame to be swung vertically, means for actuating the sickle of said device disconnectibly operatively connected to said propelling mechanism, a cable connected to said sickle-device for eliminating side draft thereon, and a winding-drum on said frame upon which the cable is windable.

1,754,337. BEAN RAKE AND BUNCHER. ROY STAMPFLY, Lansing, Mich. Filed Feb. 14, 1927. Serial No. 168,126. 1 Claim. (Cl. 56—364.)



In a bean rake and buncher, the combination with an axle, of wheels thereon, a frame supported by the said wheels and axle, a tongue, a pivotal connection between the said frame and tongue, hand operated means for tilting the frame with respect to the tongue, a shaft carried by the frame between the said axle and the front of the frame, a cylinder borne by the said shaft and comprising spaced annular flanged members, means driven by the axle for revolving the said cylinder in a direction contrary to the direction of the revolution of the axle, rake teeth located between the flanges of adjoining annular members, revoluble crank rods carried by the said cylinder and having the said teeth attached thereto, a cam carried by the frame near the end of the cylinder, the said rods having rollers cooperating with the cam whereby the teeth are alternately radially held and released, means carried by the axle and cooperating with the said annular members to remove vines from the said cylinder, and vine receiving and dumping devices.

1,754,338. PROCESS FOR REMOVING MARKS ON WOOL. GUILLAUME JEAN MARTIN STEINS and RICHARD HENRI MARTIN STEINS, Brussels, Belgium. Filed Aug. 13, 1927, Serial No. 212,830, and in Belgium Aug. 18, 1926. 6 Claims. (Cl. 87—6.)

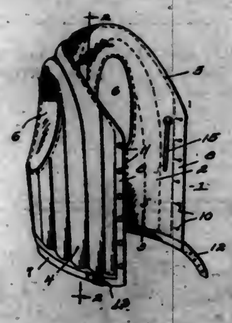


1. The method of removing marks from wool, which consists in soaking the wool in a digester in heavy tar oils the boiling point of which is higher than 100° C., in drawing off from the digester as much as possible of the said heavy tar oils, and in treating the remaining tar oils still contained in the wool with a mixture of volatile solvents whereby the said remaining tar oils are dissolved.

1,754,339. COMBINED VENTILATOR AND SUN SHIELD. RICHARD ERNEST SWANN, Dallas, Tex. Filed July 15, 1927. Serial No. 205,991. 1 Claim. (Cl. 296—44.)

In a device of the type set forth, a hood having a top and ends, the front side edge portion of the top being free and extended downwardly, a U-shaped cushioning member receiving said free side of the top therein, a rod extending through said ends of the hood, and disposed substantially in the plane of said free edge of the top and located at a distance rearwardly of said edge, a wing secured to the rod, and means to secure the rod to the hood ends thereby to hold the wing in different adjusted positions, said wing being engageable with said cushioning member and the bottom of the latter extending below and at a spaced distance in front of the rod to protect the rod.

1,754,340. INSERT-HOLDING DEVICE FOR CASTING MOLDS. JAMES S. THOMPSON, New York, N. Y., assignor to The American Brake Shoe and Foundry Company, Wilmington, Del., a Corporation of Delaware. Original application filed Apr. 9, 1926, Serial No. 100,821. Divided and this application filed June 28, 1928. Serial No. 288,913. 10 Claims. (Cl. 22—116.)

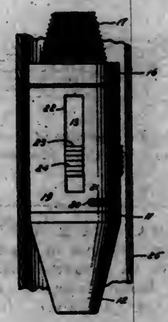


1. A mold for making castings and comprising a cope, means for holding in the cope an insert to be embedded in the casting, and adjustable means operatively engaged with said holding means for tightening the holding means to securely hold the insert rigidly in position.

1,754,341. CONCEALED HINGE. HAGOP PUSANT TEVONIAN, Brooklyn, N. Y. Filed Jan. 25, 1928. Serial No. 249,416. 1 Claim. (Cl. 16—164.)

A hinge comprising a main linkage including side plates, intermediate plates, one end of each of which is pivotally connected to one of the side plates at corresponding ends thereof and the other ends are pivotally connected together, and a controlling linkage including cross links pivotally connected at their centers to centers of said intermediate plates, and connecting links pivotally connected at their outer ends with center points of said side plates, the other end of each connecting link being pivotally connected to one end of one of said cross links, and the other ends of the cross links being pivotally connected together.

1,754,342. SWIMMING JACKET. ANTHONY TUBIOLO, Columbus, Ohio. Filed Aug. 17, 1928. Serial No. 300,323. 3 Claims. (Cl. 9—20.)

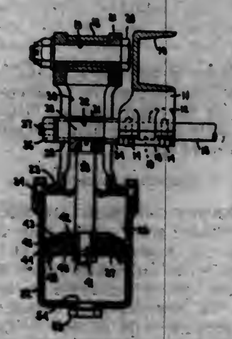


3. A swimming jacket of the character set forth comprising a body of flexible material, said body being formed to include spaced inner and outer layers of water-proof air retaining character, a perforate intermediate layer of material arranged between said inner and outer layers and serving to govern relative movement between said inner and outer layers, the outer layer of said body being vertically corrugated or fluted to diminish water resistance against said jacket when the latter is worn inflated, and a valve for introducing an inflating gas into said jacket carried by the inner layer of the jacket forming material and adapted to be concealed from view when the jacket is applied.

1,754,343. PROCESS OF MAKING FRICTION FACINGS. EDWIN E. WAITE, Framingham, Mass., assignor to Multibestos Company, Walpole, Mass., a Corporation of Massachusetts. Filed Jan. 16, 1929. Serial No. 333,081. 14 Claims. (Cl. 92—21.)

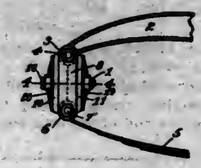
1. A friction facing comprising a shaped body of unwoven felted asbestos fibre and a binder distributed substantially uniformly throughout said body and cured by heat, said facing also having a pulverized lubricating filler distributed substantially uniformly throughout the body portion thereof.

1,754,344. FISHING TOOL. MILLIO FRANK ALOI, Huntington Park, Calif., assignor to John Grant, Los Angeles, Calif. Filed Oct. 3, 1928. Serial No. 309,968. 6 Claims. (Cl. 294—86.)



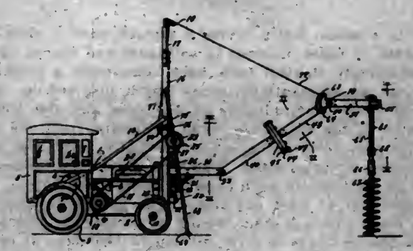
1. A fishing tool comprising; a mandrel provided with a downwardly and outwardly tapered surface, and with a longitudinal peripheral groove extending downwardly from the upper portion of the mandrel; a cage having a longitudinal slot therethrough, outside of the mandrel and rotatable about the axis thereof; and a longitudinally slidable jaw within said slot, normally engaging the tapered surface of the mandrel and adapted for retraction within said groove when the cage is rotated.

1,754,345. CATALYTIC OXIDATION OF AMMONIA. OTTO BALZ, Ludwigshafen-on-the-Rhine, and FRITZ REUSCHER, Mannheim, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed Aug. 3, 1925, Serial No. 48,006, and in Germany Dec. 22, 1924. 3 Claims. (Cl. 23—162.)



2. The process of catalytically oxidising ammonia which comprises passing a mixture of ammonia and oxygen containing about 10 percent ammonia through a heated catalytic mass whereby the ammonia is oxidized to form oxides of nitrogen, withdrawing part of the mixture rich in nitrogen oxides and leading the residual gases over again through the catalytic mass after adding a volume of oxygen and ammonia corresponding approximately to the amount of gas mixture withdrawn.

1,754,346. PNEUMATIC SHOCK ABSORBER. FRANK H. BLAKESLEE, Cleveland Ohio. Filed Mar. 14, 1927. Serial No. 175,118. 3 Claims. (Cl. 267—32.)

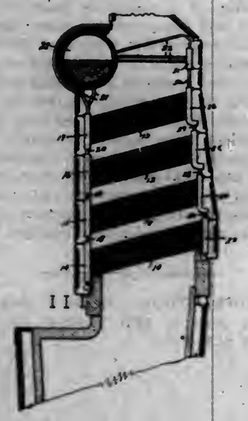


1. In a shock absorber, the combination of a vertical cylinder, an extension on the upper end thereof, means for connecting said extension to a vehicle spring eye, a piston mounted in said cylinder, means guided by said extension and secured to said piston for connecting the latter to the vehicle frame, said means being positioned between the spring eye connection and said piston, a lateral extension at one side of said cylinder providing a hollow chamber, a passageway communicating said chamber with the interior of the cylinder, means including a liquid column acting against the bottom of said piston, and means for maintaining said liquid column under pressure in said chamber.

1,754,347. ANTIRATTLE SPRING DEVICE. HENRY E. BLOMGREN, Brooklyn, N. Y. Filed Mar. 12, 1928. Serial No. 261,072. 6 Claims. (Cl. 267—30.)

1. The combination with a spring shackle formed of side links that connect and support upper and lower sleeve members by bolts, of a composite block of rubber compressed between said two pairs of opposed members on its four outer walls respectively, the block being formed of two complemental sections in engagement on the plane of the sleeve bolts, the composite block being provided with a channel on each of two opposite sides to engage said sleeve respectively, the other two opposite side walls of the composite block being inclined inwardly to the meeting faces of the sections to form a channel for engagement with the side links respectively, the composite block having a central transverse aperture, and a bolt projecting through said aperture to draw the sections together under compression against the said four engaged walls of the shackle.

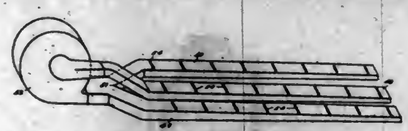
1,754,348. POWER TOOL. LOUIS I. BROWNE, Toledo, Ohio. Filed Apr. 1, 1927. Serial No. 180,179. 7 Claims. (Cl. 255—19.)



1. A vehicle, a mast thereon, a boom from said mast comprising a plurality of sections having adjustable range and angle cooperation therebetween, a tool carrier mounted on the boom, means for adjusting the boom by swinging in a horizontal arc as to the mast, and a power transmission from the vehicle to the carrier for rotating the carrier.

1,754,349. ELECTRIC SWITCH. GOTTFRIED BRÜHLMANN, Baden, Switzerland, assignor to Aktiengesellschaft Brown, Boveri and Cie., Baden, Switzerland. Filed Oct. 29, 1923, Serial No. 671,583, and in Germany Nov. 6, 1922. 9 Claims. (Cl. 200—87.)

1. In an electric switch, a pair of cooperating relatively movable contacts each provided with a series conductor portion in the form of a coil, said coils being similarly-wound, the respective contacts being formed as a split ring connected to the end of its own conductor portion.



1,754,350. STEAM BOILER. HORACE E. BUNKER, Plainfield, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Nov. 21, 1925. Serial No. 70,488. 3 Claims. (Cl. 122—299.)

1. In a steam boiler having a tapered pass, a plurality of banks of tubes disposed in said pass and spaced apart longitudinally thereof, each bank comprising a plurality of tubes of substantially equal length disposed in rows spaced apart longitudinally of the pass and the length of tubes in the successive banks decreasing from one end of the pass toward the other, vertically extending substantially straight water chambers disposed at opposite ends of the tubes in each bank and connected thereto, the chambers on at least one side of the pass being stepped with respect to each other, means connecting the chambers of successive banks to form continuous chambers at opposite sides of the pass, a steam and water drum, and connections from the upper ends of said chambers to said drum.

1,754,351. DRYING KILN. J FORREST COBB, Portland, Oreg., assignor to Moore Dry Kiln Company, a Corporation of Florida. Filed July 21, 1924. Serial No. 727,305. 1 Claim. (Cl. 34—46.)

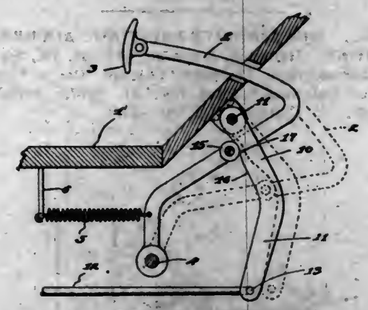
1. In a drying kiln, the combination with enclosure-defining walls, of means for causing continuous circulation of a gaseous drying medium within said enclosure, said means consisting of air delivery and return ducts, and fan mechanism in operative communication therewith, re-

spectively, said ducts consisting of metallic members separably insertable into openings provided in said enclosure for their reception.

1,754,352. RAILWAY-TRACK TIE. JOHN J. DIXON, Fairmont, W. Va., assignor of one-half to Samuel Cornell, Fairmont, W. Va.; Francis J. Hession administrator of said John J. Dixon, deceased. Filed Dec. 18, 1928. Serial No. 326,726. 8 Claims. (Cl. 238—10.)

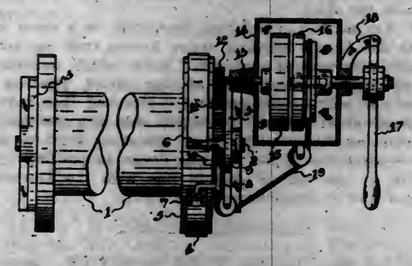
1. In a metallic industrial tie the combination of a tie body having end rail anchoring flanges thereon, the tie body inwardly of each of said flanges in spaced relation therewith having an opening with facing sockets at opposite sides thereof, and clamps having lugs pivoted in said sockets, each clamp including a flange extending from the pivoted portion thereof towards the adjacent flange first mentioned, in overhanging relation with the tie body, and a shank opposite the pivot of the clamp extending beneath the tie body in position to be engaged by the roadbed to hold the flange of the clamp against a rail.

1,754,353. ELECTRIC WELDING TOOL. JACOB ENDEBAK, Chicago, Ill. Filed Nov. 26, 1927. Serial No. 235,914. 6 Claims. (Cl. 219—8.)



1. A control device for brakes, or the like, comprising a rable into sections adapted to be grasped by the hand and a shank, an electrical terminal disposed in each section and the sections of the handle effecting an electrical connection when joined.

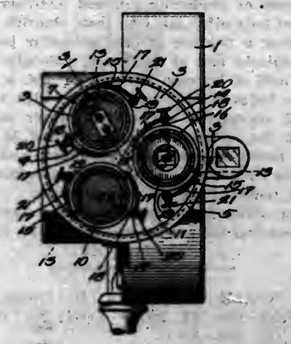
1,754,354. BRAKE-CONTROL MECHANISM. ROBERT S. GANS, Detroit, Mich. Filed July 28, 1926. Serial No. 125,379. 5 Claims. (Cl. 74—81.)



1. A control device for brakes, or the like, comprising a lever, a pivoted link having a cam surface, brake means connected to the link, engaging means on the lever for slidably engaging the cam surface so that movement of the lever rocks the link and actuates the brake means, the said lever and link being positioned and coordinated so that a line drawn through the fulcrum point of the lever, the point of engagement with the cam surface and

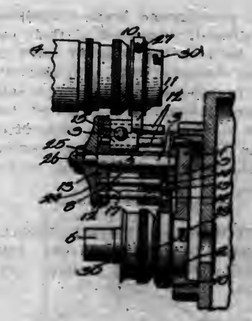
the pivotal point of the link forms an angle which progressively changes and approaches a right angle as the brakes are applied with the line drawn through the fulcrum point of the lever and said engaging means progressively

approaching parallelism with the line of pull by the brake means whereby the brake tension is overcome in the main by the fulcrum point of the lever and pivot point of the link.



1,754,355. BRAKE MECHANISM. WILLIAM JOHN GRESON, Port Colborne, Ontario, Canada. Original application filed Oct. 16, 1926, Serial No. 142,105. Divided and this application filed Dec. 15, 1927. Serial No. 240,220. 1 Claim. (Cl. 188—140.)

In brake mechanism, the combination with a support; a drum rotatably mounted in said support; a brake band adapted to frictionally engage said drum and having one end connected to said support; a lever pivoted intermediate its ends and having one end connected with the other end of said brake band; a gear rotatable with said drum; a rotatable shaft; a pinion rotatable with said shaft and meshing with said gear; a friction disk fast on said shaft; a friction disk rotatable on and slidable axially of said shaft; cable having one end connected to and adapted to be wound on said second mentioned friction disk, the other end of said cable being connected with the other end of said lever; and means for moving said second disk into frictional engagement of the first mentioned disk.

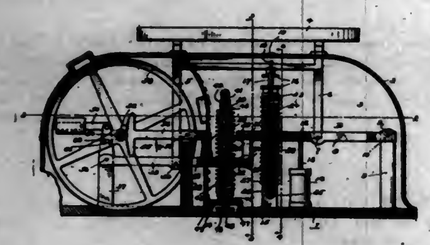


1,754,356. CAMERA. LESLIE S. GORDON, Chicago, Ill. Filed Mar. 16, 1928. Serial No. 262,090. 13 Claims. (Cl. 95—44.)

1. In a camera the combination with the chamber thereof having a light transmitting opening; of a lens tube; a mounting for the lens tube assembled with said chamber and adjustable with respect to said chamber to bring said lens tube into and out of register with said light transmitting opening and with respect to which mounting said lens tube is adjustable along the lens tube axis into alternative positions toward and from the chamber; a justifying pin carried by said mounting and insertible within a socket that is formed in the lens tube and positioned to cooperate with said pin to hold said tube in one of its aforesaid alternative positions; a guiding pin also carried by said mounting and insertible within a

groove that is formed in and along the lens tube and of sufficient length to receive the guiding pin while the lens tube is being moved between its aforesaid alternative positions; and a coupling uniting said pins and constraining the justifying pin to a withdrawn position when the guiding pin is within the aforesaid groove.

1,754,357. CAMERA. LESLIE S. GORDON, Chicago, Ill. Filed Mar. 16, 1928. Serial No. 262,091. 12 Claims. (Cl. 95—44.)



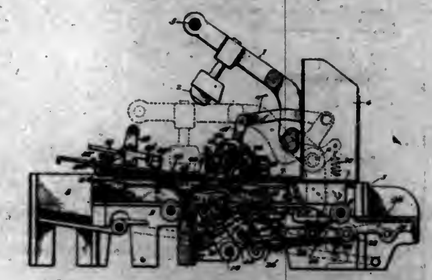
1. In a camera, the combination with the chamber thereof having a light transmitting opening; of a lens tube; a mounting for the tube in which the tube may be turned upon the tube axis and having a support located upon one side of said opening and defining an axis of rotation for the mounting positioned to include the axis of said opening in the circle of rotation of the axis of said tube whereby the tube is adjustable into and out of register with said light transmitting opening, said tube being adjustable along its axis into and out of said opening; cooperating bayonet pin and slot formations, one upon the lens tube and one upon the camera chamber and effectively engageable when the lens tube is in said opening; and coacting stop formations, one upon the lens tube and one upon the tube mounting and relatively positioned to be engageable when the lens tube is positioned and turned upon its own axis to bring the aforesaid bayonet pin and the entrance branch of the bayonet slot into register.

1,754,358. PRODUCTION OF POTASSIUM-AMMONIUM SULPHATE. ROBERT GRIESSBACH, Ludwigshafen-on-the-Rhine, and OTTO SCHLIEPHAKE, Mannheim, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Aug. 23, 1928, Serial No. 301,707, and in Germany Sept. 16, 1927. 8 Claims. (Cl. 23—121.)

7. A process of producing a mixed fertilizer containing nitrogen and potassium but free from chlorids which comprises treating a mixture of one molecular proportion of potassium chlorid and at least one molecular proportion of sulfuric acid of between 50° and 60° Bé. strength at a temperature between 110° and 120° C. with a current of superheated steam the evaporating water being replenished until the hydrochloric acid formed is driven off, drying the resulting potassium bisulphate and treating it with gaseous ammonia at elevated temperature but below the melting point of the reaction mixture.

8. As new article of manufacture potassium-ammonium sulphate corresponding substantially to the formula KNH_4SO_4.

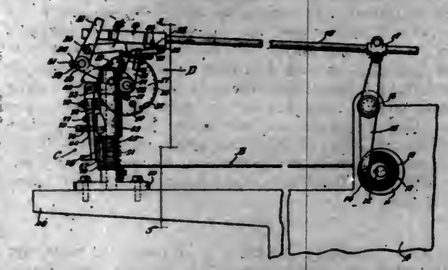
1,754,359. SCALE. NATHAN A. HALLWOOD, Columbus, Ohio. Filed May 17, 1926. Serial No. 109,514. 22 Claims. (Cl. 265—69.)



1. In a scale, a compound beam comprising a pair of lever elements pivotally mounted at their outer ends, a link connection between the adjacent inner ends of said elements, springs connected with said elements and operating normally in opposed relation upon said lever elements to produce substantially balanced tensile forces upon said links, a weight receiver supported from said elements and an indicator mechanism responsive to the deflection of said lever elements from neutral position.

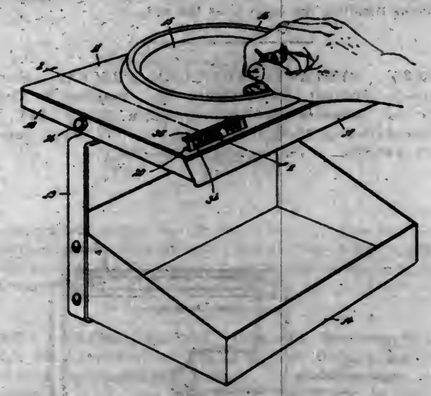
1,754,360. AUTOMOBILE THEFT-SIGNAL SWITCH. FRED H. HENDRICKS, Seattle, Wash. Filed Feb. 18, 1926. Serial No. 88,003. 3 Claims. (Cl. 200—52.)

1. In a theft signal of the class described a housing, means for suspending said housing for swinging movement, a vibratory electrical conductor secured within the upper portion of said housing and extending downwardly along one side, thence across the lower portion, thence upwardly along the other side, thence inwardly to the central axis of said housing, the end of said inwardly extending portion having a horizontally disposed loop formed therein and an electrically conductive suspended pendulum extending through said loop and arranged to make contact with said loop in response to tilting movement of said housing.



1,754,361. DISTRIBUTIVE-PRINTING ADDRESSING MACHINE. HENRY E. HUBBARD, Chicago, Ill., assignor to Addressograph Company, Chicago, Ill., a Corporation of Delaware. Filed Dec. 31, 1927. Serial No. 243,843. 17 Claims. (Cl. 101—47.)

1. In an addressing machine for making impressions from printing devices having a plurality of lines of type characters, the combination of a stamper arm, a platen carried by the stamper arm, means for moving a sheet to be printed in a right line in successive steps through printing position, and means for moving the printing device one type line corresponding with each step movement of the sheet.

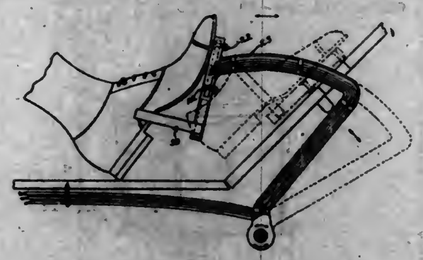


13. The method of printing characters on a sheet in a single line from a printing device having such characters contained in several superposed lines, which consists in superposing the sheet and printing device, printing an upper line only of the printing device and then moving the paper sheet horizontally to one side and also moving the printing device relatively to the paper sheet to position a lower line of the printing device in position to be printed at one side of and in line with the previously printed line of characters on the sheet.

1,754,362. PAPER-CUTTING DEVICE. JOHN E. JOHNSON, Chicago, Ill., assignor to Speedaumat Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Jan. 24, 1923. Serial No. 614,509. 16 Claims. (Cl. 164—48.)

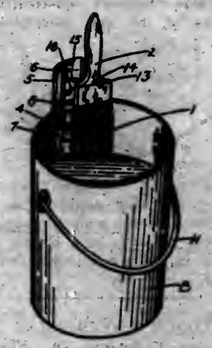
1. In a device of the type described, a knife element, mechanism for operating said knife element at predetermined intervals of time comprising a reciprocating member, a shaft, an arm fixed to said shaft, means for supporting and for periodically dropping said reciprocating member into operative engagement with said arm, a pawl and ratchet for operating said means from said reciprocating member and a second arm fixed on said shaft for depressing said knife element.

1,754,363. COMBINED CHANGE TRAY AND ADVERTISING DEVICE. CHARLES L. KEE, Portsmouth, Va. Filed Sept. 6, 1928. Serial No. 304,221. 4 Claims. (Cl. 40—28.)



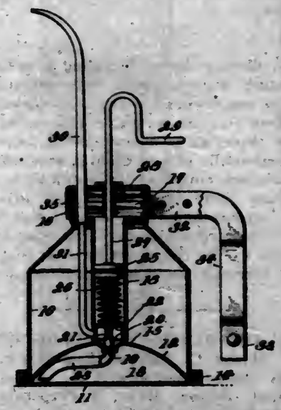
1. In a combined change tray and advertising device, a normally horizontal change tray having a slot adjacent its forward edge, means for supporting said tray for limited tilting movement, and a sign supported by said means and having an upwardly extending sign portion in registry with said slot, said sign being normally beneath and concealed by said tray, and said sign portion extending upwardly through said slot and above the tray when the tray is tilted in the act of removing change therefrom.

1,754,364. BEARING METAL. PAUL KEMP, Vienna, Austria. Filed Jan. 11, 1928, Serial No. 246,090, and in Poland Jan. 17, 1927. 5 Claims. (Cl. 75—1.)



1. Bearing metals consisting of 65–77% lead, 3–14% tin, 10–27% antimony, 0.7–2.5% arsenic and 0.5–3.5% of metals of the class including cadmium and indium.

1,754,365. SIGNALING. GEORGE E. LEE, Cleveland Heights, Ohio, assignor to Hadley F. Freeman, Lakewood, Ohio. Filed Apr. 10, 1925, Serial No. 22,072. Renewed Mar. 6, 1928. 14 Claims. (Cl. 177—339.)



1. Operation indicating mechanism, for automobiles of the types having a foot operated control pedal, comprising: signaling means for indicating turns; and means to effect operation of said signaling means carried by said pedal and having its operating part disposed rearwardly of said pedal and operable, by the rear of a foot of the driver while said foot is in an operating position on said pedal, by pressure exerted by said rear of said foot and definitely out of line with the direction of the pressure by which said foot operates said pedal.

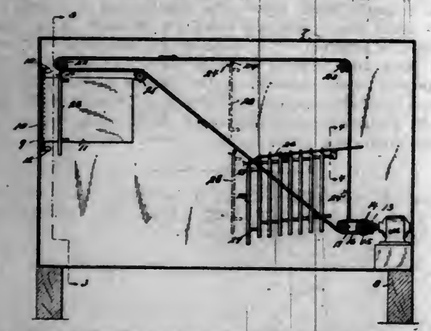
1,754,366. PAINTBRUSH HOLDER. WILLIAM LISBY, Spokane, Wash. Filed Mar. 20, 1928. Serial No. 263,192. 1 Claim. (Cl. 248—49.)

In a paint brush holder the combination of a pair of flat metal plates forming relatively movable jaws, edge flanges on said plates, a coiled spring interposed between the jaws and forming a hinge, said spring having its respective ends anchored in the flanges of the opposite jaws, vertically spaced retaining lugs integral with one of the plates for engagement with the coiled spring, and a brush-supporting prong on one of said plates.

1,754,367. OIL CAN. HENRY H. MORETON, Santa Monica, Calif. Filed May 27, 1927. Serial No. 194,776. 4 Claims. (Cl. 221—51.)

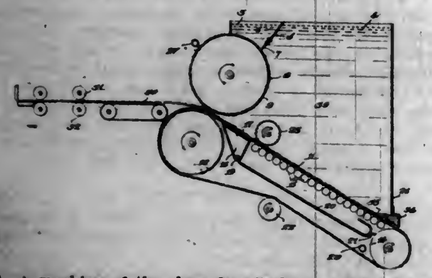
1. An oil can comprising a body provided at its top with a centrally disposed neck, means providing a supplemental chamber in said body, a cup-like member removably mounted in said neck and having a bottom wall constituting a closure, a spout attached to and supported by said bottom wall, a pump cylinder open at its upper and lower ends, said upper end being secured to said bottom wall, its lower end extending into said supplemental chamber, a piston working in said pump cylinder, and a feed tube connecting said cylinder with said spout.

1,754,368. BLOTTER HOLDER. FRED C. PARTELL, Lewiston, Me. Filed Dec. 29, 1928. Serial No. 329,121. 2 Claims. (Cl. 120—24.)



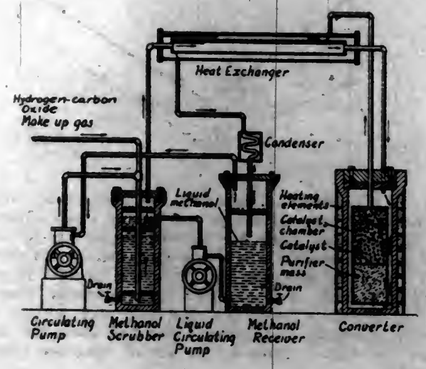
1. A blotter holder comprising a body member having its under side convexly curved from end to end, studs

upon the upper side of the body member, and resilient clips at the ends of the body member each including spaced side portions and laterally directed ends engaging the studs at the respective end of the body member and a loop including side members constituting angularly directed extensions of the first mentioned side portions,



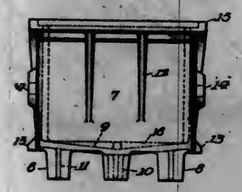
and a connecting bight, the side portions and bight of the loop bearing yieldably against the said under side of the body member at the ends thereof and constituting means for holding the ends of a blotter sheet when such sheet is disposed in surface contact with the said under side of the body.

1,754,369. OUTDOOR ADVERTISING DEVICE. MAURICE F. PHILLIPS, Richmond, Va. Filed Oct. 19, 1928. Serial No. 313,522. 4 Claims. (Cl. 40—36.)



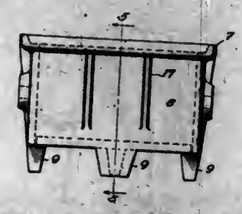
1. A sign display device including a casing having a display opening, a plurality of signs normally supported in said casing and movable successively forwardly thereof, spaced endless sign conveyors in the casing, means for moving said conveyors in unison, means below and means above and rearwardly of said opening over which stretches of said conveyors travel at an inclination toward said opening, means above said opening and adjacent thereto over which substantially parallel stretches of said conveyors travel toward and away from said opening, and means carried by the conveyors for engaging one sign at a time and carrying the same to and from said display opening.

1,754,370. APPARATUS FOR PRODUCING FIBER BOARD. HARRY C. RAYNES, Portsmouth, N. H., assignor, by mesne assignments, to Bemis Industries, Incorporated, Boston, Mass., a Corporation of Delaware. Filed Oct. 29, 1927. Serial No. 229,621. 13 Claims. (Cl. 92—39.)



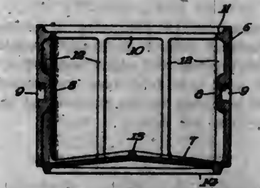
1. A machine of the class described, comprising a pulp vat having an outlet, a pair of compartments in said vat adapted to hold pulp of different characteristics, a pair of movable foraminous surfaces, each having a portion adjoining one of said compartments and adapted to pick up fiber therefrom, the surfaces being arranged in converging relation at the outlet of the vat, one of said surfaces forming the bottom of the vat.

1,754,371. SYNTHETIC-METHANOL PROCESS. LEONARD A. STENGEL, Terre Haute, Ind., assignor to Commercial Solvents Corporation, Terre Haute, Ind., a Corporation of Maryland. Filed Nov. 17, 1926. Serial No. 148,823. 4 Claims. (Cl. 260—156.)



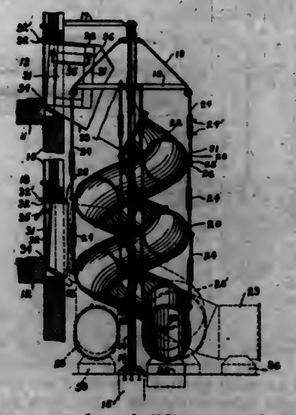
1. In the process of manufacturing methanol by the interaction of hydrogen and carbon oxides containing traces of impurities, in the presence of a catalyst and under the influence of elevated pressure and temperature, the step of removing said impurities from the gases by scrubbing them with liquid methanol.

1,754,372. ANNEALING POT. ROBERT S. STEWART, Chicago, Ill., assignor to The American Brake Shoe & Foundry Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 12, 1927. Serial No. 225,655. 1 Claim. (Cl. 263—49.)



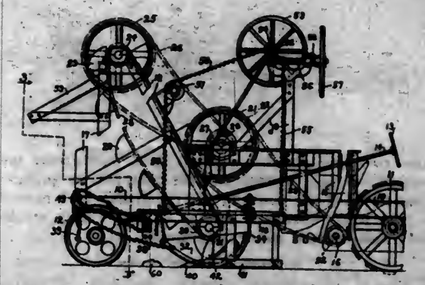
An annealing pot embodying in one integral element, a body and a bottom wall inclined downwardly to a central point, a plurality of legs projecting downwardly from the said bottom at the corners, a leg integral with the bottom wall at said central point, and integral tapered crossed ribs on the inner side of said bottom, the said ribs intersecting at said central point over the centre leg.

1,754,373. ANNEALING POT. ROBERT S. STEWART, Chicago, Ill., assignor to The American Brake Shoe & Foundry Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 12, 1927. Serial No. 225,656. 4 Claims. (Cl. 263—49.)



1. An annealing pot having walls and an open bottom, legs projecting downwardly from the bottom of said walls, a removable bottom for the pot, and means for supporting the bottom in the pot above the legs.

1,754,374. ANNEALING POT. ROBERT S. STEWART, Chicago, Ill., assignor to The American Brake Shoe & Foundry Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 12, 1927. Serial No. 225,657. 2 Claims. (Cl. 263—49.)



1. An annealing pot having walls, oppositely disposed integral projections on the inside of said walls, said projections being recessed on the outside of the walls for receiving trunnion supports for the pot, and ribs on the inside of said walls merging with and integral with said projections.

1,754,375. FIRE ESCAPE OF SLIDING TYPE. ARTHUR H. STURGES, Omaha, Nebr. Filed Dec. 12, 1927. Serial No. 239,415. 15 Claims. (Cl. 227—7.)

1. In a fire escape for a building, a vertical form supporting member, a bracket for connecting said member with the building, a spiral tube connected with said member and consisting of curved sections, stabilising-elements for connecting one section with another section and arranged for longitudinal adjustments, and a straight tube connected with one of the sections for a communication with said building.

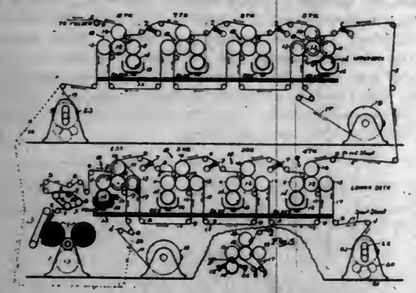
1,754,376. GRADING MACHINE. ARTHUR C. THOMAS, Omaha, Nebr., assignor to Little Red Wagon Mfg. Co., Omaha, Nebr., a Corporation of Nebraska. Filed Feb. 28, 1928. Serial No. 256,266. 3 Claims. (Cl. 37—108.)

2. In a grading machine, a tractor having a power shaft and a frame, masts rising from the forward end of the frame, an endless elevator mounted upon said masts and having buckets thereon, a power connection between said power shaft and the conveyor, a delivery chute mounted on the masts adjacent the conveyor and extending forwardly and downwardly therefrom, a trough carried beneath the tractor, an earth turning implement mounted on the tractor adjacent the trough, and means for adjusting said earth turning implement.

1,754,377. BOTTLED-WATER-DISPENSING DEVICE. FRANK S. TOWER, Boston, Mass. Filed Apr. 30, 1929. Serial No. 359,223. 2 Claims. (Cl. 225—40.)

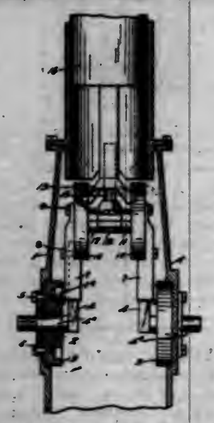
1. A bottled water dispensing device comprising a casing, a lowermost chamber for the reception of a bottle of water, an uppermost chamber for a refrigerant, a cooling coil in the upper chamber, a plunger pump intermediate said chambers and having an operating lever projecting through the casing, the pump being connected with the coil and having a projecting inlet pipe for connection with a tube projecting from the base of the bottle to the top thereof, as and for the purpose set forth, and a water discharge member connected with the coil.

1,754,378. SAW-FILING DEVICE. JOHN A. WALLER, Los Angeles, Calif., assignor to Waller Manufacturing Corporation, Ltd., Los Angeles, Calif., a Corporation of Nevada. Filed Sept. 13, 1928. Serial No. 305,641. 20 Claims. (Cl. 76—31.)



1. A saw filing device comprising supporting means adapted to be mounted in position adjacent the toothed edge of a vertical saw blade and provided with tooth-

engaging members, a file carrying frame mounted to slide horizontally on said supporting means and having means for clamping the opposite ends of a file, handle means at one end of said frame, a swivel member mounted on said

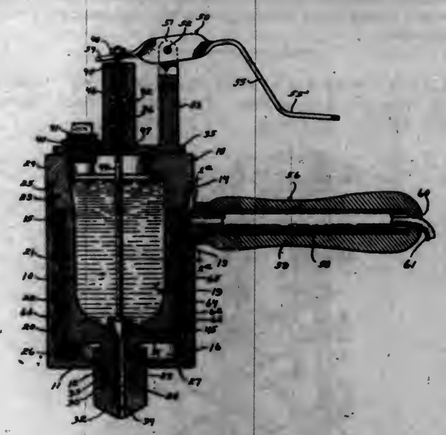


frame to swing about a vertical axis, and lifting means mounted on said swivel member adapted to engage between teeth of the saw and lift the frame with respect to the saw blade during a portion of the sliding stroke of said frame on said supporting means.

1,754,379. PRINTING PRESS. EDWARD A. WALLER, Chicago, Ill. Filed Nov. 1, 1928. Serial No. 316,430. 8 Claims. (Cl. 101—152.)

1. A printing press adapted for quick drying of the impression, and comprising an intaglio cylinder, an offset cylinder journaled in direct peripheral engagement with said intaglio cylinder, a platen cylinder bearing against said offset cylinder for pressing a web of paper thereagainst, a drying element disposed against a portion of the printed web on said platen cylinder, and mutually spaced rolls bearing against said web and drying member and against said platen cylinder at spaced intervals.

1,754,380. CRANK SHAFT AND CONNECTING ROD FOR INTERNAL-EXPANSION ENGINES. LAWRENCE GLEN WEYLANDT, Calexico, Calif. Filed Apr. 15, 1927. Serial No. 184,123. 6 Claims. (Cl. 74—38.)

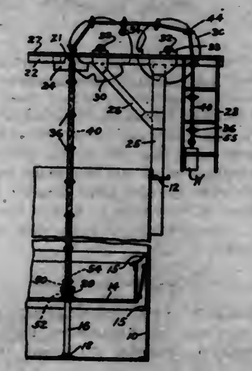


2. In a reciprocating engine, a piston, a crank shaft having variable length crank arms, variable length links attached to the piston, and length-varying means connected to the arms for driving and actuating the variable links.

1,754,381. UNIFORM. RALPH H. WOLFE and MAMIE WOLFE, Kansas City, Mo., assignors of one-half to John M. Lloyd, Independence, Mo. Filed Dec. 19, 1928. Serial No. 327,134. 7 Claims. (Cl. 2—74.)

1. In a garment of the character described, a closed tubular skirt portion folded on spaced vertical lines, a waist portion having vertical edges forming a front opening and aligned with said fold lines, and means including ties having ends attached to the garment at said lines for fitting the garment to the wearer.

1,754,382. SOLDERING TOOL. STEPHEN BARACATT, Troy, N. Y. Filed July 5, 1929. Serial No. 376,161. 6 Claims. (Cl. 219—27.)

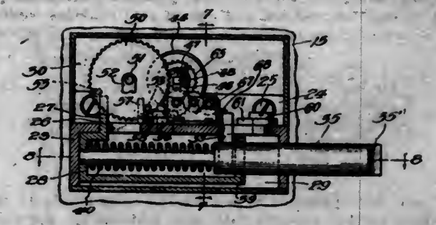


1. A soldering tool comprising an outer casing being open at its upper end and having a flat bottom wall provided with an axial opening, a melting pot slidably fitting into the upper open end of the casing with its flat bottom wall in spaced relation above the casing bottom wall and having an integral coupling extension provided with a feed duct, extending downwardly through the opening in the bottom casing wall, a soldering tip carried by the coupling extension and having a duct communicating with the feed duct, a heating element encircling the pot within the casing, a handle connected to the casing, and valve means controlling said feed ducts.

1,754,383. INDICATOR FOR AUTOMOBILE LUBRICATION. STEWART BROWN, Chicago, Ill. Filed Sept. 4, 1928. Serial No. 303,700. 3 Claims. (Cl. 40—65.)

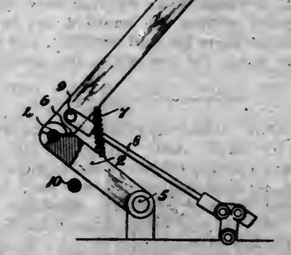
1. An indicator for automobile lubrication comprising a closed receptacle provided with a cover containing a sight opening having an offset bar behind the same which extends lengthwise of the sight opening, and a flexible number displaying strip of greater length than the receptacle slidably mounted between said sight opening and bar and held in place by said bar, said flexible strip being capable of adjustment in a direction transversely of the bar and foldably contained within the receptacle.

1,754,384. LADDER FOR FLOATING-ROOF TANKS. BURDGE OGDEN BUSHNELL, Los Angeles, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a Corporation of California. Filed Aug. 15, 1927. Serial No. 213,018. 30 Claims. (Cl. 228—1.)



30. A construction according to claim 29 wherein the lowermost tread is positively connected to said roof.

1,754,385. SUPPLEMENTAL SUPPORT FOR BRAKE BEAMS. EDWIN G. BUSSE, Chicago, Ill., and WILLIAM JANUS, Webster Groves, Mo., assignors to Chicago Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed July 11, 1927. Serial No. 204,908. 18 Claims. (Cl. 188—210.)

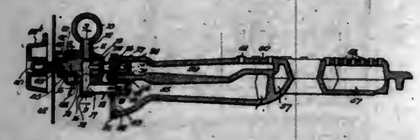


1. A supplemental support for brake beams comprising in combination with a truck part, a bracket secured thereto, a resilient element in said bracket, a safety bar arranged in said bracket on said element and extending underneath the brake beam and a member arranged transversely in said bracket and engaging a seat formed in the top of said safety bar for locking the latter against displacement.

1,754,386. LOCKING ATTACHMENT FOR VAULT DOORS. ANTON EVENSEN, Fox Lake, Ill. Filed May 24, 1928. Serial No. 280,204. 20 Claims. (Cl. 109—3.)

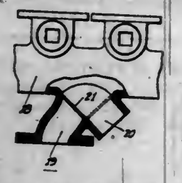
1. Locking mechanism for vault doors for locking the door in almost completely closed position relative to its frame, including frame-engaging devices movably mounted on the door, and arranged to engage the frame before the door is completely seated therein, means for putting the frame-engaging devices under tension, means for maintaining the same under tension, means for holding said frame-engaging devices in retracted position, means for automatically tripping the holding means, and means for releasing the tension on the frame-engaging devices.

1,754,387. BRAKE-ACTUATING MECHANISM. FREDERICK HAROLD HALL, Holford, England. Filed Aug. 3, 1928, Serial No. 297,347, and in Great Britain Aug. 9, 1927. 6 Claims. (Cl. 74—110.)



1. A variable-leverage brake-actuating mechanism comprising a two-part lever consisting of an inner member pivoted to a fixed part and an outer operating member pivoted to the inner member, in combination with a brake-actuating member attached to the outer member of the lever, the two lever members moving together as a unit to take up slack and until the brake is engaged, and then the outer member turning relatively to the inner member, the said inner member being disposed at an angle to the brake-actuating member such as to ensure the said inner member being inherently restrained against return movement during application of the braking force without the use of supplementary external constraining means.

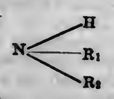
1,754,388. GAS BURNER. PHILIP S. HARPER, Chicago, Ill. Filed Apr. 4, 1928, Serial No. 267,222. Renewed Feb. 27, 1930. 14 Claims. (Cl. 158—105.)



12. A double gas range burner comprising means having two mixing tubes therein, each of said mixing tubes leading to a separate burner section having burner ports therein, a gas cock having a casing with at least two substantially parallel gas nozzles thereon, each having a restricted orifice discharging each into one of aforesaid

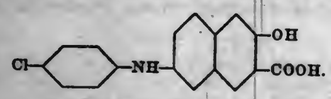
mixing tubes, said casing having a plug receiving passage with a single rotatable plug in bearing therein, said plug receiving passage having at least three gas passages connecting therewith, two of said gas passages leading each to one of said two nozzles, and one of said passages leading to a means of gas connection on said casing, at least two

of said three passages in said casing terminating in the bearing surface between said plug and casing, aforesaid plug having a taper so that it is larger at one end of its bearing surface than at the other, and a spring holding said plug in seated relation to the bearing surface, said spring being positioned toward the end of said plug having the larger bearing surface diameter.



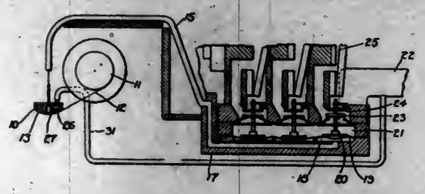
1,754,389. INTERNAL-COMBUSTION MOTOR. LOUIS B. HARVEY, Sacramento, Calif. Filed Mar. 27, 1928. Serial No. 265,016. 2 Claims. (Cl. 123—75.)

2. In an internal combustion motor, a cylinder, a piston therein, means for reciprocating the piston through a predetermined stroke, a port communicating with the cylinder above the bottom position of the piston, a manifold open to the atmosphere and with which said port communicates, a check valve opening only toward the cylinder, disposed between the manifold and port, a pair of separate intake ports for said manifold, and selectively operable valve means for controlling the opening of said ports.



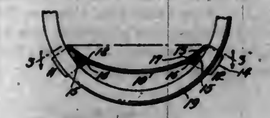
1,754,390. NEW DERIVATIVES OF 2.3-HYDROXYNAPHTHOIC ACID AND PROCESS OF MAKING SAME. BRUNO HEYN, Offenbach-on-the-Main, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Feb. 28, 1929, Serial No. 343,554, and in Germany Feb. 27, 1928. 8 Claims. (Cl. 260—109.)

1. A process which comprises heating 2.6-dihydroxynaphthalene-3-carboxylic acid with a compound of the general formula:



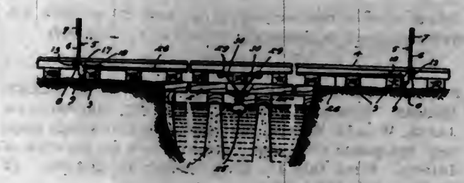
wherein R_1 and R_2 means hydrogen or alkyl- or aralykl- or aryl radicles.

8. As a new compound 6-parachlorphenylamino-2-hydroxy-naphthalene-3-carboxylic acid of the formula:



1,754,391. PLAYER PIANO. FREDERICK T. KENT, East Orange, N. J. Filed Feb. 13, 1928. Serial No. 253,879. 2 Claims. (Cl. 84—151.)

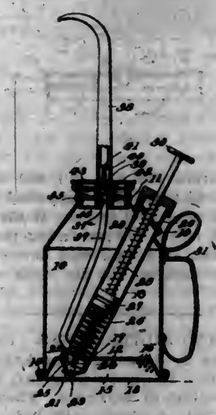
1. A tracker bar of the class described having longitudinally spaced suction ports, an auxiliary by-pass suction chamber arranged longitudinally of one side of the bar and opening outwardly through said side, means for placing said chamber in communication with each of said



ports, a rod-like closure member countersunk in said bar for closing the open side of said chamber, means for holding said closure member in place and one end of said member being pivoted to one end of said bar.

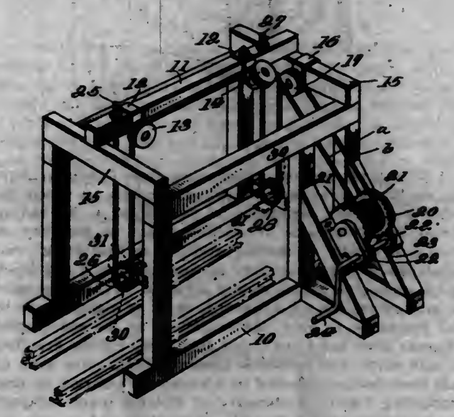
1,754,392. FINGER-RING GUARD. HARRIS LEVIN, Freeport, N. Y., assignor to The Lion Safety Pin Clutch Co., Inc., New York, N. Y., a Corporation of New York. Filed May 12, 1928. Serial No. 277,134. 4 Claims. (Cl. 63—17.)

1. A finger-ring guard, comprising an elongated, flexible, metallic member and metallic jaw-members at the ends thereof and opening outwardly away from the ends of the elongated member for engagement with the shank of a ring to retain the guard on the ring, the back of a pair of the jaw-members at one end of the elongated member having a connection with the elongated member which is of less width than the elongated member and the space between the jaws of such pair to form a line of weakness at that point transversely between said back and the elongated member.



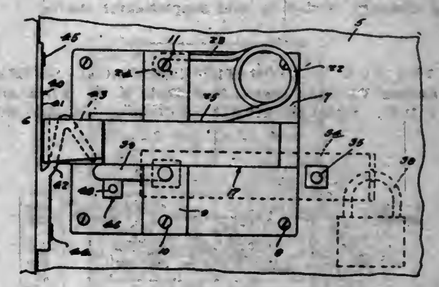
1,754,393. HIGH-WATER SIGNALING APPARATUS. JOSHUA J. MCCANDLESS, Hennessey, Okla. Filed Nov. 30, 1929. Serial No. 410,846. 5 Claims. (Cl. 116—118.)

1. A signal of the character stated, comprising a pivoted sign normally occupying a lowered position, a latch bolt holding the sign in said position, a spring maintaining the latch bolt in engagement with the sign, a float controlled lever connected to the latch bolt and adapted when moved in one direction to retract the latch bolt, and means adapted to raise and support the sign on the retraction of the latch bolt.



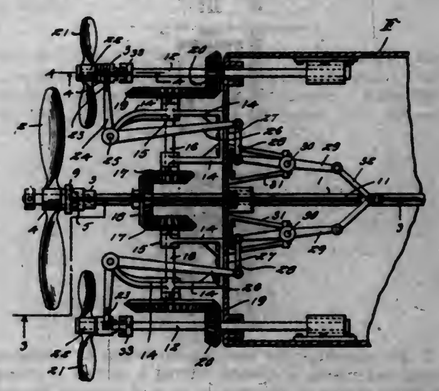
1,754,394. OIL CAN. HENRY H. MOUNTON, Santa Monica, Calif. Filed May 27, 1927, Serial No. 194,775. Renewed Jan. 6, 1930. 8 Claims. (Cl. 221—51.)

1. An oil can of the character described comprising a can body having an opening in its top, and a supplemental chamber in its bottom portion, a pump mounted within said can body and communicating with said supplemental chamber, operating means for the pump extending through the upper portion of the can body, a cup-like member secured in the top opening of the can and having openings in its bottom wall, a feeder tube connected at one end



with the pump casing and the other end extending through the bottom wall of said cup member, a closure engaging said cup member, and a spout carried by said closure, said spout having a portion telescoping with an end of said feeder tube.

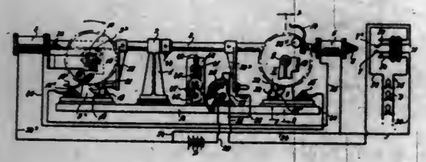
1,754,395. APPARATUS FOR INVERTING MINE CARS. JOHN THOMAS MORRIS, Glen Morrison, W. Va. Filed June 15, 1927. Serial No. 199,011. 8 Claims. (Cl. 214—1.)



1. An apparatus for inverting cars comprising car supporting attachments each having means for removably engaging the ends of the car to be inverted and each provided with a relatively rotatable sheave, and hoisting apparatus provided with spaced apart parallel cable loops positioned to engage said sheaves so that by shortening or lengthening said loops said car may be raised or lowered, said attachments having non-rotative engagement with the car so that while the car is suspended by said loops it may be inverted by rotating the attachments with respect to the sheaves while said sheaves are held against rotation by said loops.

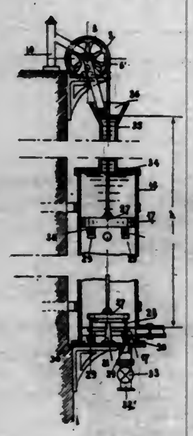
1,754,396. DOOR LOCK. CARL PETER NELSON, Firth, Idaho. Filed May 6, 1929. Serial No. 360,741. 2 Claims. (Cl. 292—228.)

1. A door lock of the character referred to comprising a flat plate adapted to be rigidly secured on the inner side of a door, a yoke shaped guide strap mounted on the outer face of the plate, a combined latch and handle rockably mounted on the plate and slidable in the guide, a forked spring having one leg rigidly secured to the plate and the other in abutment with said combined latch and handle, a keeper adapted to be mounted on a door jamb, and having an arm projecting outwardly for engagement with said combined latch and handle, an operating rod adapted to extend through the door and having its inner end rotatably supported by said plate and guide strap and its outer end terminating exeriorly of the outer face of the door, a cam arm rigidly mounted on said rod between said plate and guide strap and abutting said combined latch and handle, an abutment rigidly secured to said plate to limit the movement of said cam, a hasp adapted to be rigidly secured to the outer side of said door, a second handle rigidly secured to the operating rod for rotating the latter, and detachable means connected with the hasp and handle for locking the latter against movement.



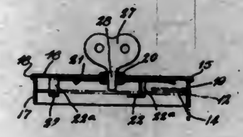
1,754,397. AEROPLANE. ISIDOR NEUSTATTER, Tucson, Ariz. Filed July 16, 1929. Serial No. 381,536. 8 Claims. (Cl. 244—25.)

1. In combination with the propeller drive shaft of an aeroplane and a propeller freely mounted thereon, a clutching element carried by the shaft, means for adjusting the propeller into or out of engagement with the clutching element, supplemental shafts at opposite sides of the drive shaft, an operative connection between the drive shaft and the supplemental shafts for rotating the supplemental shafts at a greater speed than the rotation of the drive shaft, braking propellers freely mounted on



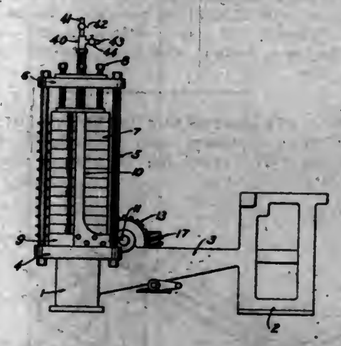
the supplemental shafts, clutching members carried by the supplemental shafts, and means operated by the first named means to move the propellers on the supplemental shafts into or out of engagement with the clutching elements carried by said supplemental shafts.

1,754,398. AUTOMATIC ELECTRICAL SWITCH. ROBERT VAUGHAN OWEN, New York, N. Y. Filed Aug. 2, 1927. Serial No. 210,031. 2 Claims. (Cl. 200—90.)



1. A device of the character described, comprising a switch rod formed with two rack sections, a solenoid at each end of the rod and adapted to move the same endwise, switch wheels, one for each solenoid and adapted for movement into closing and breaking relation to said electrical circuit, a pinion for each rack section of the switch rod, ratchet and pawl connections interposed between each pinion and the appropriate switch wheel, and throw-out means for the pawls.

1,754,399. UTILIZATION OF THE FORCE OF GRAVITY AND RELATIVE APPARATUS. GIUSEPPE PASCUCCI, Genoa, Italy. Filed Nov. 23, 1926, Serial No. 150,335, and in Italy Jan. 20, 1926. 6 Claims. (Cl. 230—48.)



1. An apparatus for the transformation of mechanical energy comprising a cylinder having a bottom, a cylinder discharge means in the bottom of said cylinder normally closed, a piston within said cylinder, a piston discharge means therein also normally closed, a pulley having a cable capable of being wound thereon, said cable being attached to said container to intermittently raise the same, fluid inlet means in said cylinder below said piston in raised position, compressed fluid outlet means and means for opening said piston discharge means and said cylinder discharge means when said piston is in lowermost position.

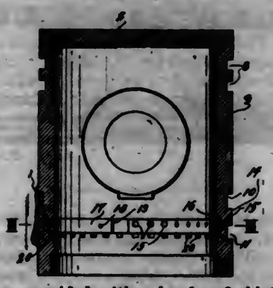
1,754,400. LOCK DEVICE FOR DIAL TELEPHONES. ROUVIME B. POLIAKOFF, New York, and EMMANUEL I. LANDRESS, Brooklyn, N. Y. Filed July 1, 1927, Serial No. 202,821. Renewed Feb. 10, 1930. 15 Claims. (Cl. 179—189.)

1. The combination with the call dial of a telephone, of a lock device mounted and supported in connection with and adapted to control the use of the operative element of said dial, means for preventing the displacement of said device from said dial, said device comprising a cup-shaped body mounted directly upon and encircling said dial.

1,754,401. TIPPING FILTER PRESS. PAUL W. PRUTZMAN and VICTOR C. BENJAMIN, Los Angeles, Calif., assignors to Contact Filtration Company, San Francisco, Calif., a Corporation of Delaware. Filed Jan. 4, 1928. Serial No. 244,536. 1 Claim. (Cl. 210—188.)

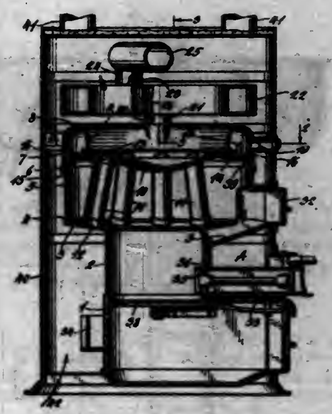
A filter press for separating solids from liquids by forcing the liquid through a foraminous medium on which the solid is retained, comprising; a bed block, a cap having thrust screws passing therethrough and a plurality of standards rigidly connecting said cap to said block; two substantially horizontal side extensions to said bed block and a supporting frame rigidly attached to the outer ends of said extensions; a horisontal shaft at right angles to and journalled on said side extensions at the end thereof adjacent said bed block; two side arms rigidly attached to said shaft and revoluble therewith, the outer ends of said arms being supported in a horisontal position by said supporting frame; a plurality of filtering plates adapted to be covered with a foraminous medium and to rest between said arms; lugs projecting from opposite sides of said plates adapted to support said plates in a vertical position on said arms when said arms are in a horisontal position; a bottom plate adapted to rest on said bed block and rigidly attached to the inner end of said arms; a top plate adapted to receive the thrust of said thrust screws for forcing said plates into non-leaking contact; means acting on said shaft for raising and lowering said side arms and the assemblage of said plates; means removably attached to said top plate for introducing a mixture of solid and liquid onto the upper side of said foraminous medium, and means for efflux of liquid passing through said medium.

1,754,402. DETACHABLE SHOE HEEL. LEON A. REISENFELD, Cincinnati, Ohio, assignor of one-half to Simon M. Illy, Cincinnati, Ohio. Filed Dec. 8, 1928. Serial No. 324,663. 1 Claim. (Cl. 36—42.)



In a detachable heel structure for shoes comprising a base plate, the upper part thereof forming a peripheral groove and said base plate being secured to the sole continuation of the shoe, a dove tail notched bar centrally located upon the base plate, having a groove in one of the raised ends adapted to receive a key, a heel portion grooved on its outside to pass into the peripheral groove of the base plate, and a dove tail groove in the heel bottom for passage over the dove tail notched bar, a lock in the heel bottom, and a spring actuated keeper mounting the lock, whereby the grooved heel portion when pushed into the peripheral groove portion of the base plate allows the keeper to drop into the notch of the dove tail bar, thereby locking the heel rigidly onto the base plate and whereby when a key is inserted the portions may be unlocked.

1,754,403. COLLAPSIBLE CONTAINER. ROBERT F. REUBUSH, Philadelphia, Pa. Filed May 21, 1928. Serial No. 279,417. 1 Claim. (Cl. 221—60.)



A collapsible container of the character described, comprising a clip infolding and clamping the edges of the rear end of the said container to close the same, one side of said clip being provided with an extension constituting a plate overlying an adjoining portion of the said container, the said plate and the opposing wall portion of the said container being adapted to be compressed to effect displacement of the material located therebetween and the said plate providing means about which the collapsed portion of the said container may be folded.

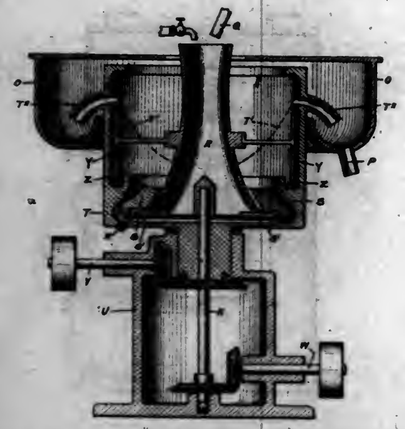
1,754,404. OIL-PUMPING-PREVENTION PISTON MEANS. DENT SANDFORD, Toledo, Ohio. Filed Feb. 7, 1929. Serial No. 338,124. 5 Claims. (Cl. 74—108.)

3. A piston provided with a head and skirt, there being ports through the skirt inclined inward away from the head, and an expansible check valve ring at the inner portions of said ports.

1,754,405. COMBINED COAL AND GAS FURNACE. LOUIS E. SHARP, Denver, Colo. Filed Apr. 19, 1929. Serial No. 356,382. 7 Claims. (Cl. 126—116.)

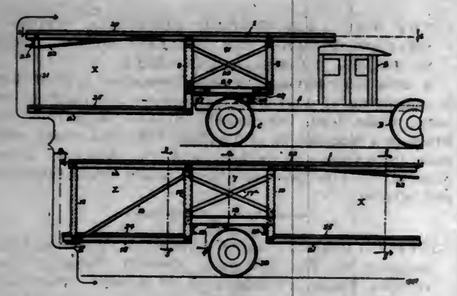
1. A furnace having a fire pot, formed in part by a cylindrical member (5) and a dome member (10), said dome member having its outer edge in close proximity to but spaced from the inside of the cylindrical member whereby an annular passage is formed for the passage of flue gases, said dome member having its outer edge provided with openings and means for varying the effective area of said openings.

1,754,406. RAZOR-STROP DRESSING. WALTER O. SNELLINGS, Kingsville, Tex. Filed Dec. 10, 1927. Serial No. 239,256. 1 Claim. (Cl. 51—288.)



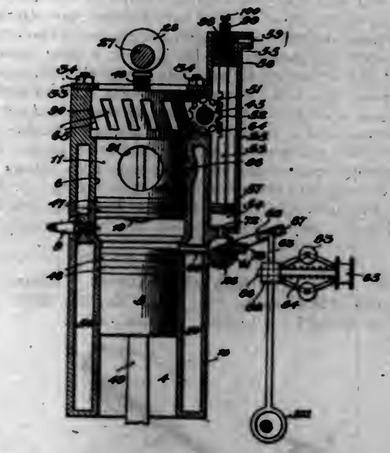
A razor strop having a dressing compound applied thereto consisting of a primary composition of Venetian red, rosin, white lead, raw linseed oil and turpentine, over which is a composition of Venetian red, alum, rosin, white lead, turpentine and varnish, and over which is a composition of Venetian red, rosin, white lead, turpentine and varnish.

1,754,407. DOLLY. LLOYD STEARMAN, Wichita, Kans., assignor to The Stearman Aircraft Company, Inc., Wichita, Kans., a Corporation of Kansas. Filed Sept. 12, 1929. Serial No. 392,064. 14 Claims. (Cl. 244—1.)



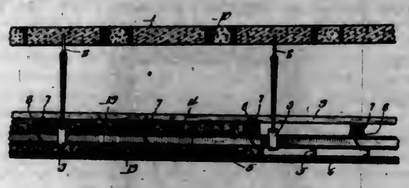
11. The combination with an airplane skid wheel structure having projecting members, of a dolly having side members open to receive said projecting members of the wheel skid structure and retractible means on said dolly for temporarily confining said side members in non-detachable engagement with said side members, said means being releasable from a point removed from the point of engagement of said side members with the projecting members.

1,754,408. PROCESS AND APPARATUS FOR SEPARATING METALLIC VALUES. ELBRIDGE WEBSTER STEVENS, Baltimore, Md. Filed Dec. 20, 1929. Serial No. 415,435. 8 Claims. (Cl. 233—7.)



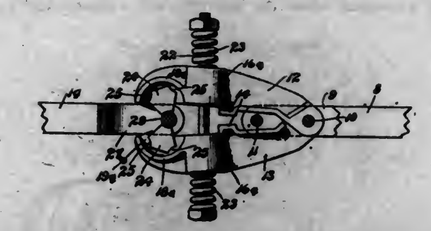
1. The process of separating heavy metallic particles from a colloidal solution which comprises centrifuging the same through an annular vertical Venturi nozzle.

1,754,409. DOUBLE-DECKED SEMITRAILER. FRANK W. WILT, Portland, Ind. Filed June 18, 1927. Serial No. 198,450. 1 Claim. (Cl. 280—33.1.)



In combination with a truck, a double-decked semi-trailer to be drawn and partly supported thereby, said trailer consisting of a front minor section, a central main section, a rear minor section, and a rear main section, including two spaced apart upper channeled-bars extending the full length of all of said sections together and projecting forward beyond the front section, cross-bars connecting said upper bars at the points of termination of each of said sections, certain of said cross-bars being of greater length than the others and projecting outwardly beyond the two upper channeled bars, posts extending down from each end portion of each of said cross-bars, main lower side bars connecting the lower ends of each pair of said posts on each side of the trailer and forming the lower parts of the main central section and the main rear section, auxiliary side-bars connecting the posts of each minor section and located on a higher plane than the lower side-bars of the said main sections, a single brace for each side of the main rear section, a pair of crossing braces for each side of each of the two minor sections, a removable vertical post on each side of the main central section and located in the center, longitudinally, thereof, ground wheels mounted underneath the rear minor section, means for pivotally mounting the minor front section on the truck, a floor for the lower part of the rear section, a floor for the lower parts of the main section, said two floors forming the main deck, and an upper deck extending over all of the sections and projecting forward from the front minor section and projecting out at each side beyond all of said sections, substantially as shown.

1,754,410. VARIABLE-COMPRESSION INTERNAL-COMBUSTION ENGINE. STEPHEN SEYMOUR ALLWILL, Washington, D. C., assignor to Robert Lee Gray, Washington, D. C. Filed Apr. 23, 1928. Serial No. 272,288. 19 Claims. (Cl. 123—48.)

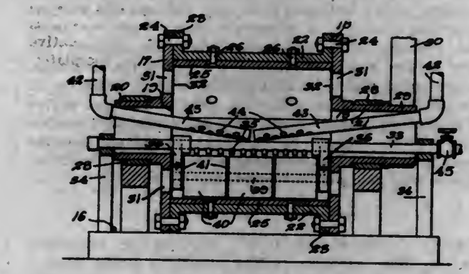


1. A variable compression internal combustion engine comprising a cylinder; a power piston in said cylinder; a floating piston slidably mounted in the uper part of the cylinder and having teeth and grooves therein; means provided around said floating piston having teeth and grooves meshing with the teeth and grooves of the floating piston; and means for automatically actuating said first-named means to provide an approximate constant pressure for the compressed fuel charge.

1,754,411. SOUND-INSULATING CONSTRUCTION. BRUNO E. BALDUF, Chicago, Ill., assignor to The United States Gypsum Co., Chicago, Ill., a Corporation of Illinois. Filed Nov. 10, 1927. Serial No. 232,229. 4 Claims. (Cl. 20—4.)

1. A system of sound insulated construction for suspended ceilings, comprising a plurality of parallel ceiling members, metallic suspension connectors adapted to suspend one ceiling member from a second member, and a dry, fluffy, pulverulent, non-combustible, insulating fill between said ceiling members surrounding said connectors and adapted to prevent the passage of sound from one ceiling member to the other.

1,754,412. SAFETY HITCH. GERRIT DEN BESTEN, Holland, Mich. Filed Apr. 30, 1928. Serial No. 273,808. 7 Claims. (Cl. 280—33.16.)



6. A hitch comprising, two jaw members pivotally connected together and lying alongside of each other, spring means normally holding the jaws together, and a rotatable member mounted on the movable end of each jaw, each of said rotatable members being of substantially triangular shape and adjacent sides of the triangles contacting each other by pressure of said spring means.

1,754,413. FIBROUS WALL BOARD. HARRY E. BROOKBY, Evanston, Ill., assignor to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 5, 1927. Serial No. 166,274. 7 Claims. (Cl. 92—8.)

7. The process of manufacturing a fibrous material from cornstalks and peat by first shredding the cornstalks, cooking the stalks under an elevated pressure with a solution containing a chemical which will soften and hydrate the fibres, pulping the cornstalks until sufficiently fine, adding a quantity of peat and pulping the mixture until it is intimately mixed and pulped, forming a fibrous mass by removing a portion of the water, pressing the mass, drying, and re-pressing.

1,754,414. PENDULUM ROLL MILL. FRANK L. BUCHANAN, Los Angeles, Calif. Filed Sept. 24, 1928. Serial No. 307,828. 4 Claims. (Cl. 83—9.)

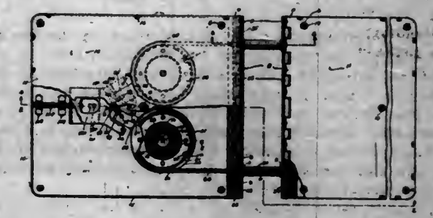
1. A roll mill comprising a revolvable drum having tubular trunnions on the ends thereof a fixed bar extending longitudinally through said drum and projecting from said trunnions; rollers suspended from said fixed bar so as to make contact with the interior of said drum as it revolves; feed pipes extending through said trunnions into said drum, and means attached to one of said trunnions for revolving said drum.

1,754,415. LOAD-BEARING TOOL. THOMAS F. CONNORS, Columbus, Ohio, assignor, by mesne assignments, to Charles G. McGhie, St. Catharines, Ontario, Canada. Filed July 1, 1927. Serial No. 202,839. 2 Claims. (Cl. 306—41.)

1. In a load bearing tool, the combination of a tool proper; an elongated metallic shank extending from the said tool proper; a handle comprising an open-ended tubular metallic socket member; and means for securing the free end of the said shank within the said socket member comprising a wooden plug tightly fitting within the tubular socket member and having an elongated axially arranged recess formed in the outer end thereof receiving

the free end of the said shank, a metallic cap closely fitting over the inner end of said plug, a securing rivet extending through the socket member, cap and plug, and a second securing rivet extending through the socket member, plug and shank.

1,754,416. PHONOGRAPH TURNTABLE. LE BONSIEUR, Elyria, Ohio, assignor to The General Industries Company, Elyria, Ohio, a Corporation of Ohio. Filed Apr. 29, 1927. Serial No. 187,502. 2 Claims. (Cl. 274—39.)

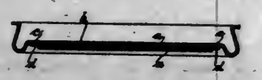


1. A phonograph disk record turntable, comprising a pressed sheet metal disk, a supporting hub therefor, a disk of relatively soft surface material secured to and covering the major portion of the disk, said metal disc being formed with concentric spaced folds, the outer one of said spaced folds providing an annular groove in the metal disk adjacent its periphery dividing the metal disk into a relatively narrow border and inner portions into which the edge of the soft surface extends, said edge closely engaging the outer wall of the groove and depressed below the level of the turntable border portions, and a depending annular reenforcing flange on the periphery of the disk.

1,754,417. EXPLOSIVE AND SOLVENT THEREFOR. TENNEY L. DAVIS, Norwell, Mass. Filed Nov. 8, 1927. Serial No. 231,981. 5 Claims. (Cl. 52—18.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)

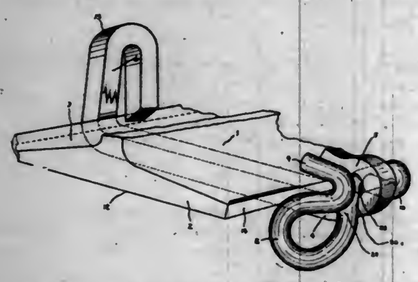
1. An explosive comprising nitro-guanidine and an aliphatic nitro-amine.

1,754,418. LOOSE-LEAF BINDER. NORMAN CLAYBAUGH DE LOSS, Shaker Heights, Ohio. Filed June 23, 1927. Serial No. 200,787. 5 Claims. (Cl. 129—18.)



1. A brake mechanism for a retracting mechanism of a loose leaf binder, comprising a brake shoe and means to normally force the shoe into contact with the retracting mechanism to effect a braking action thereon, said shoe having a projecting portion adapted to be engaged by the finger of an operator when opening the binder to release the brake.

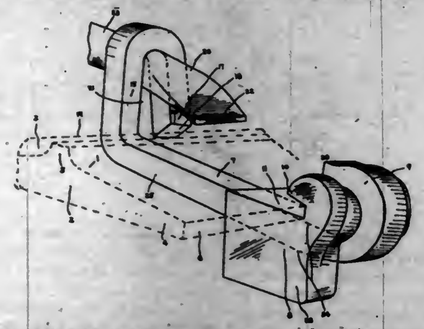
3. In a loose leaf binder, the combination with a pair of relatively movable covers, a pair of clincher bars, said



covers hingedly connected to the clincher bars, pairs of telescopable tubes secured to said clincher bars and aligned with apertures therein and adapted to permit the clincher bars to be moved away from each other, drums journaled in a cover, retractile springs in said drums and operatively connected thereto, and a plurality of flexible straps extending through said tubes and said apertures, having an end anchored to one of the clincher bars, and the opposite end thereof secured to the drums, said springs normally exerting a pressure upon the straps to draw the covers towards each other.

1,754,419. EYEPIECE FOR GAS-PROTECTIVE MASKS. ALEXANDER BERNHARD DRÄGER, Lubeck, Germany; Elfriede Dräger, née Stange, executrix of said Dräger, deceased, assignor to Heinrich Otto Dräger, Lubeck, Germany. Filed Apr. 22, 1926, Serial No. 103,678, and in Germany June 10, 1925. 1 Claim. (Cl. 2—14.)

In an eye-piece for gas protection masks in which a lens is secured to a mounting of non-vitreous material, the combination of two outer disks of glass and an intermediate disk of non-vitreous material secured between said glass disks and projecting beyond the peripheries thereof to form an exposed annular flange, said disks being in surface engagement, the mounting of non-vitreous material being fixed in surface engagement with said annular flange to form a gas tight fit between the mounting and the intermediate disk of non-vitreous material.

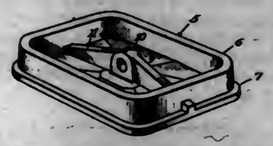


1,754,420. RAIL ANCHOR. ALBERT F. FIFIELD, St. Catharines, Ontario, Canada, assignor to The American Fork & Hoe Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 26, 1928. Serial No. 315,164. 13 Claims. (Cl. 238—329.)

1. In a rail anchor, a spring steel reach bar having an intermediate portion adapted for disposition below a rail base and extending transversely thereof, provided at one end with a pair of jaws adapted to embrace one of the rail base flanges, and terminating at the other end in an upstanding, inverted loop, said loop terminating in a free end disposed for engagement with an upper surface of the opposite rail base flange only by a twisting effort imparted to the intermediate bar portion.

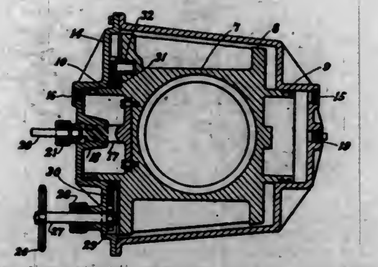
1,754,421. RAIL ANCHOR. ALBERT F. FIFIELD, St. Catharines, Ontario, Canada, assignor to The American Fork & Hoe Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 26, 1928. Serial No. 315,166. 5 Claims. (Cl. 238—329.)

1. In a two-piece rail anchor, the combination with a bar having a hooked end and a retaining shoulder at its other end, said retaining shoulder adapted for engagement with the lateral edge of a rail base flange, a jaw element adapted to be fixed to the opposite rail base flange and interposed between said opposite rail base flange and said hooked portion of said bar, said shoe having a portion extending below the rail base and between said rail



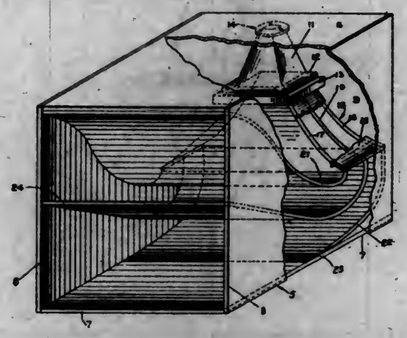
base and said intermediate bar portion, and a portion pendant therefrom and engageable with a relatively fixed abutment for the railway, said pendant portion having portions embracing the lateral surfaces of said bar, said shoe carried on said bar as a unit therewith.

1,754,422. SKI BINDER. LOUIS D. GIBSON, Norway, Me., assignor to W. F. Tubbs Company, Norway, Me., a Corporation of Maine. Filed Apr. 17, 1928. Serial No. 270,674. 6 Claims. (Cl. 208—184.)



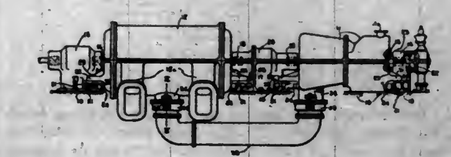
1. In a ski binder in combination with a ski or the like, toe plates including lateral attaching portions and vertical supporting portions, a clamping plate, said toe irons being provided with transverse slots intermediate the lateral portion and a plurality of notches in the rear edge, said clamping plates being provided with a plurality of holes adapted to align with said slots in said toe plates and a plurality of downwardly extending lugs, said notches adapted to be engaged by said lugs to prevent relative movement between said clamping plate and said toe plates, means to hold said binder to said ski.

1,754,423. ANNEALING POT. MICHAEL W. GLEISNER, Racine, Wis., assignor to The American Brake Shoe & Foundry Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 14, 1927. Serial No. 226,126. 2 Claims. (Cl. 263—49.)



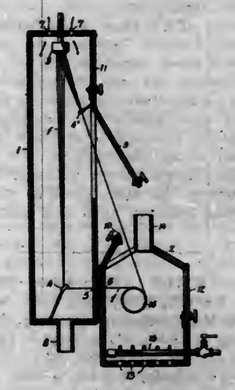
2. An integral cover plate for annealing pots comprising a body having an upstanding annular flange on the top thereof spaced from its periphery, a pick-up eye lug on the top of the body at the center thereof and within the confines of the top of said flange, and oppositely disposed tapered ribs merging with said eye lug at the top thereof and extending from the eye lug through the annular flange to the periphery of the cover plate.

1,754,424. VALVE MECHANISM. DAVID D. GOLDBERG, Chicago, Ill. Filed May 22, 1920. Serial No. 110,070. 8 Claims. (Cl. 137—78.)



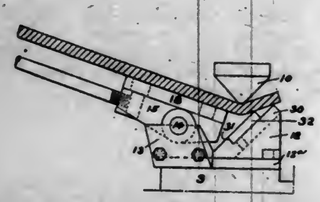
4. In a valve, the combination of a valve-casing having a passage therethrough and a conical valve-seat, a conical valve-plug cooperating with said seat and having a passage therethrough adapted to be turned into and out of register with said casing passage, means to turn said valve-plug automatically to close the passage through the casing upon the occurrence of predetermined conditions, and means to open said valve-plug an adjustable amount without interfering with the operation of said automatic closing means.

1,754,425. SOUND AMPLIFIER. FRANK C. HINCKLEY, Stratford, Conn., assignor to Columbia Phonograph Company, Inc., Bridgeport, Conn., a Corporation of New York. Filed May 28, 1926. Serial No. 112,250. 4 Claims. (Cl. 181—27.)



4. In combination, an amplifier comprising an enclosure including side portions and a bottom portion, a horn-like structure at the entrance end of said enclosure, a resonance chamber communicating with the outlet end of said horn-like structure, said resonance chamber including a curved bottom section, which with the bottom of the enclosure provides the lower limitation of the resonance chamber, a curved part forming the top of said resonance chamber, said top and bottom sections contacting at their edges with the side portions of the enclosure whereby said side portions form the side walls of the resonance chamber, and said top contacting along its rear edge with the lower edge of one wall of said horn-like structure and curving for a slight distance downwardly and forwardly and then extending upwardly for a predetermined distance and then curving upwardly and forwardly on an arc struck on a large radius, whereby a bell-like mouth portion for the resonance chamber is produced, said resonance chamber being provided with a partition, and said partition being reversely curved but to a degree different from the curvature of the top of said chamber and dividing the chamber into two substantially equal compartments having exit openings of approximate equal area.

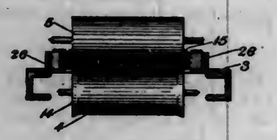
1,754,426. POWER INSTALLATION. FRANCIS HODGKINSON, Swarthmore, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 31, 1927. Serial No. 179,042. 8 Claims. (Cl. 60—65.)



8. In a power installation, the combination of a supporting structure, a pair of steam turbine elements arranged horizontally and connected in tandem relation to one another; means for securing the turbine elements to the supporting structure and including means providing for a slight axial movement of the turbine elements with relation to the supporting structure; and conduit means connecting the exhaust of one of the turbine elements with the inlet of the other turbine element and providing for the transmission of slight axial movements of either of the turbine elements to the other turbine element; said conduit means including a flexible fluid-tight connection comprising a diaphragm disposed in a plane disposed transversely of the adjacent portions of the conduit means and parallel to the axis of the turbine elements.

1,754,427. PROCESS AND APPARATUS FOR THE MANUFACTURE OF ARTIFICIAL THREADS OF DERIVATIVES OF CELLULOSE. KONRAD HOFFMANN, Kreis Heinsberg, Germany. Filed Mar. 11, 1926, Serial No. 94,000, and in Germany Mar. 12, 1925. 7 Claims. (Cl. 18—8.)

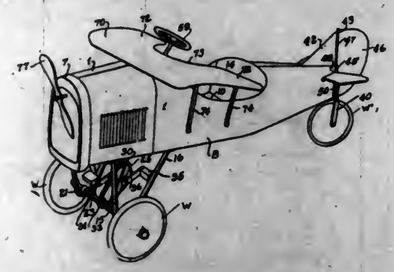
2. The process of manufacturing threads from derivatives of cellulose according to the dry stretch method, which comprises dry-stretch spinning the threads in an unheated cell and passing the threads to a separate closed heated cell.



1,754,428. METHOD AND MACHINE FOR FLANGING PLATES. JOHN HUBER, Los Angeles, Calif. Filed Feb. 3, 1926. Serial No. 85,700. 11 Claims. (Cl. 153—21.)

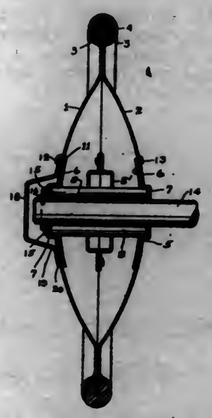
1. The method of flanging a metal plate including bending the flange part with its side away from the direction of bend concave and then flattening the flange to finished form.

4. A plate flanging mechanism including a hammer die, and two base dies, one stationary and the other movable, the stationary die having an angularly disposed part adapted to support a face plate to engage the flange forming portion of he plate.



1,754,429. PLASTER-WALL-BOARD CONSTRUCTION. OLIVER M. KNODE, Winnetka, Ill., assignor to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 25, 1922. Serial No. 590,358. 1 Claim. (Cl. 154—2.)

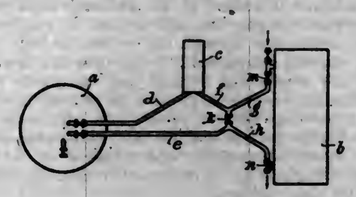
The method of constructing raw edge plaster wallboard having inclined, longitudinal edges, comprising the continuous advancing of a bottom sheet, depositing a mass of plastic material thereon, forming the plastic material evenly upon said sheet, applying the top sheet over said plastic body, forcing one only of the cover sheets at an angle along its longitudinal edges toward but not abutting the other sheet, the edges of the two sheets being separated a substantial distance to expose a portion of said plastic material along the edges of the wallboard, and supporting said exposed plastic material by a belt moving at substantially the same speed as the wallboard in contact with said material until said material has hardened and set.



1,754,430. JUVENILE AIRPLANE CONSTRUCTION. HERMAN L. KRAEFT, Cleveland, Ohio, assignor to The Murray Ohio Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 9, 1928. Serial No. 284,159. 17 Claims. (Cl. 208—42.)

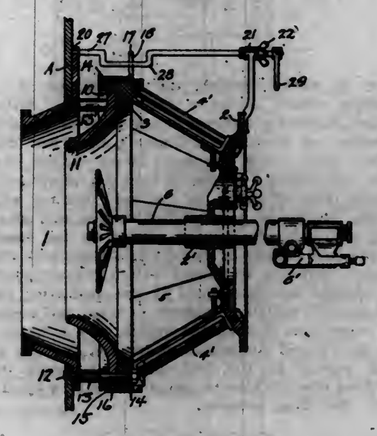
1. In a child's wheeled vehicle, a body simulating the fuselage of an airplane, said body having a top opening and being recessed to receive the child in sitting position, a front drive construction comprising brackets extending downwardly from the body sides forwardly of the body of the child, a driving axle supported by the brackets, a pedal driving mechanism, within reach of the feet of the child in the aforesaid position, including a pedal shaft, sprockets and a chain, one sprocket being arranged to turn with the pedal shaft, the axis of the shaft being above the axle, and there being a support depending from

the body substantially centrally thereof and having a rigid connection at its lower end with said brackets, for supporting said driving mechanism.



1,754,431. WHEEL CONSTRUCTION. HERMAN L. KRAEFT, Cleveland, Ohio, assignor to The Murray Ohio Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Original application filed Nov. 14, 1927, Serial No. 233,022. Divided and this application filed June 9, 1928. Serial No. 284,160. 2 Claims. (Cl. 301—5.)

2. In a wheel construction of the type employing wheel-body forming separated discs, a hub construction comprising a pair of plates, one for each disc and disposed inwardly therefrom toward the center of the wheel, said plates being adapted and arranged to support an axle and bearings therefor, a plurality of lugs upstruck from one of the plates, openings in the adjacent discs to receive the lugs, and a hub cap arranged to conceal the end of such axle and having a flange extending close to the lugs, the lugs being bent inwardly toward the axis of the wheel over said flange to hold the cap in place.

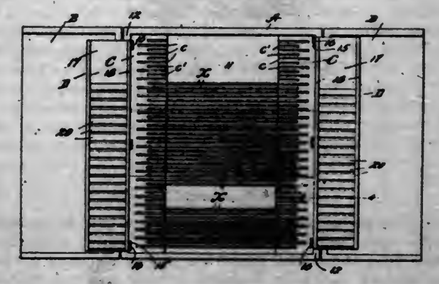


1,754,432. PROCESS AND APPARATUS FOR THE FILTRATION OF BEER WORT FOR FURTHER TREATMENT, AND FOR THE FILTRATION OF BEER AND OTHER FOAMING LIQUIDS. LEOPOLD NATHAN, Zurich, Switzerland, assignor to The Corporation of Hansena A.-G., Glarus, Switzerland. Filed Sept. 6, 1927, Serial No. 217,586, and in Germany Sept. 7, 1926. 9 Claims. (Cl. 210—177.)

1. The method of forming filtering layers, by the flotation method for foaming liquids such as wort and beer, which comprises mixing together under pressure the liquid to be filtered and the filtering medium until a uniform suspension is obtained, forcing such mixture through a

filter chamber to deposit a filtering layer therein, and circulating the liquid repeatedly under pressure until the filtering medium has been completely deposited in a substantially uniform layer.

1,754,433. DOUBLE-PORTED REGISTER FOR FUEL BURNERS. ERNEST H. PEABODY, Pelham Manor, N. Y., assignor to Peabody Engineering Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 8, 1923. Serial No. 611,410. 7 Claims. (Cl. 158—1.5.)



1. In a fuel burning apparatus the combination of an atomizer, a substantially frusto-conical mixing chamber, an air register, a frusto-conical ring located between the air register and the mixing chamber, fastening means connecting the mixing chamber, ring, and air register, spacing means carried by said fastening means for maintaining the ring and mixing chamber in spaced relation, and means for controlling the entrance of air between the mixing chamber and the ring.

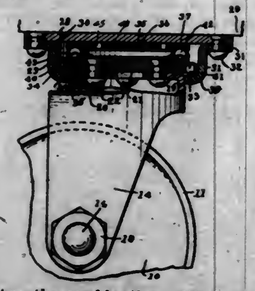
1,754,434. PROCESS OF MANUFACTURING A VEGETABLE ALIMENTARY EXTRACT. JOSEF PERINO, Stettin, Germany. Filed Oct. 18, 1927, Serial No. 227,057, and in Germany Oct. 22, 1926. 9 Claims. (Cl. 99—11.)

1. The process of manufacturing a food product which comprises exposing vegetable, alimentary material substantially with the exclusion of oxygen, and in the presence of soluble phosphates and at a reduced pressure to irradiation by ultra-violet rays, and heating said material to a temperature of approximately not above sixty degrees centigrade during such irradiation.

1,754,435. FILING CABINET FOR PHONOGRAPH RECORDS. CHARLES T. RAY and DONALD MCDONALD, Jr., Louisville, Ky., assignors to B. F. Avery & Sons, Louisville, Ky., a Corporation of Kentucky. Original application filed May 11, 1927, Serial No. 190,442. Divided and this application filed Jan. 25, 1929. Serial No. 335,078. 2 Claims. (Cl. 312—10.)

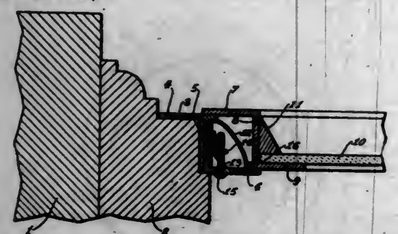
2. In a filing cabinet for phonograph records, a case having means therein to support the records in a staggered relation, a cover comprising oppositely opening sections, a pair of index holders respectively hinged to opposite sides of the case and flexible connections between the index holders and the cover section, respectively.

1,754,436. PRESSURE GAUGE. JOSEPH PERCY REMINGTON, Philadelphia, Pa. Filed Aug. 8, 1924, Serial No. 730,834. Renewed July 10, 1929. 11 Claims. (Cl. 73—110.)



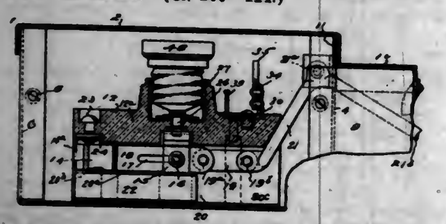
1. A gauge comprising a pointer; a coordinating dial over which the pointer moves; an arbor for the pointer having an integral cranked porton; a motion-multiplying bell-crank having a lateral extension cooperative with the cranked portion; pressure responsive means directly contacting with one arm of the bell-crank to swing the pointer in one direction; and a spring with means for varying its torsion co-operative with the other arm of said bell-crank to oppose the action of the pressure responsive means.

1,754,437. PROCESS OF CONDITIONING CELLULOSIC FIBER FOR THE MANUFACTURE OF RAYON. GEORGE A. RICHTER, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed July 13, 1926, Serial No. 122,271. Renewed June 28, 1929. 5 Claims. (Cl. 260—100.)



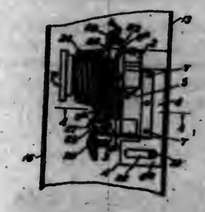
1. A process which comprises beating a pulp which undergoes disintegration if soaked in unbeaten sheet form in a solution of caustic soda, sheeting the beaten pulp, treating the sheeted pulp with caustic soda solution, and converting the treated sheet into viscose.

1,754,438. CASTER. MAYO E. ROE, Elyria, Ohio, assignor to The Colson Company, Elyria, Ohio, a Corporation of Ohio. Filed June 18, 1927. Serial No. 198,847. 5 Claims. (Cl. 16—21.)



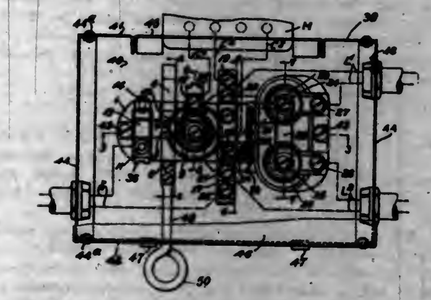
1. In a caster, the combination with a pair of opposite means comprising a swivelable caster wheel supporting caster yoke and a load support, a pair of elements providing opposed co-axially disposed annular grooved bearing races, and bearing balls between the races, one of said elements supported by the yoke, the other of said elements adapted to carry a load, one only of said elements directly engageable with one of said means and being freely shiftable laterally relative thereto, the other of said elements being restrained from free lateral movement relative to that one of said means directly engaging said shiftable element, said elements with their interposed bearing balls being interposed between the yoke and the load to be supported thereon.

1,754,439. WINDOW. JOHN F. RUTH, St. Louis, Mo. Filed June 23, 1928. Serial No. 287,659. 20 Claims. (Cl. 189—65.)



1. In a window having a frame and a sash movable to abutting engagement with said frame, a sealing strip of flexible material on one of said members and having a part extending along the line of movement of the cooperating edge of the other member so as to be wiped thereby and fastening means for said strip accessible for operation from an exposed face of one of said members.

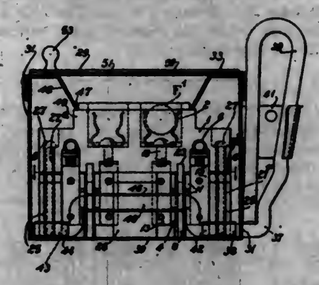
1,754,440. ELECTRIC-CIRCUIT-CONTROLLING APPLIANCE. JOSEPH SACHS, West Hartford, Conn. Filed Oct. 30, 1924, Serial No. 746,911. Renewed Jan. 20, 1930. 14 Claims. (Cl. 200—114.)



1. In an electric switch, the combination of an insulating base, means for holding the said base in fixed relation to a supporting surface with the back of the base facing the said surface, a stationary switch contact connected with the base adjacent the back thereof, a movable conducting switching element located between the main body of the base and the plane of the said supporting surface and normally engaging the said contact to establish an electrical connection through the switch, a body of insulating material supplemental to the base and interposed between the conducting element and the plane of the said supporting surface in position to prevent movement of the conducting element toward the said plane, and means for rectinearly moving the said conducting element in either direction parallelly with the plane of the aforesaid supporting surface to disengage it from or reengage it with the said contact.

1,754,441. ELECTRIC-CIRCUIT-CONTROLLING APPLIANCE. JOSEPH SACHS, West Hartford, Conn. Filed Aug. 23, 1926. Serial No. 131,043. 24 Claims. (Cl. 200—168.)

1. In an electric switch, the combination of a rear supporting means having a forward facing surface, a switching member positioned at the front of the supporting means and movable rectilinearly in either direction parallelly with the said forward facing surface, the said member comprising a relatively thin flat insulating plate arranged perpendicularly to the said surface with its rear edge positioned to be guided thereby and also comprising a conducting element carried by the insulating plate and held thereby in spaced relationship with the said surface, a normally stationary switch contact positioned to be engaged and disengaged by the conducting element of the movable switching member to make and break electrical connection through the switch, and a means additional to the said supporting means and the said switch contact carried by the said supporting means in normally fixed relation thereto and constituting a front guide for the switching member.



1,754,442. ELECTRIC-CIRCUIT-CONTROLLING APPLIANCE. JOSEPH SACHS, West Hartford, Conn. Filed Nov. 24, 1926, Serial No. 150,586. Renewed Jan. 20, 1930. 8 Claims. (Cl. 200—114.)

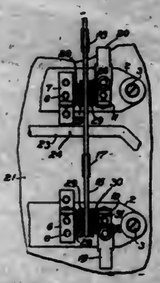
5. In an electric switch, the combination of an insulating base, means for holding the said base in fixed

relation to a supporting surface with the back thereof facing the said surface, two stationary switch contacts carried by the base at the back thereof, a movable conducting switching element located at the back of the base and normally engaging the said contacts to establish an electrical connection between them, an insulating element upon which the conducting element is mounted, the said insulating element being located at the back of the base and directly engaging the said base so as to be guided thereby independently of the supporting surface and independently of the contacts for rectilinear movement parallel with the plane of the said surface, and means for moving the insulating element and the conducting element as aforesaid in either direction to disengage the last said element from or reengage it with at least one of the said contacts.

1,754,443. ELECTRIC-CIRCUIT-CONTROLLING APPLIANCE. JOSEPH SACHS, West Hartford, Conn. Filed Dec. 10, 1926. Serial No. 153,966. 53 Claims. (Cl. 200—50.)

1. In a fused switch appliance, the combination of an insulating base, a pair of fuse receiving contacts mounted on the base, two stationary switch contacts immediately associated with the base and electrically connected respectively with the said fuse contacts, a switching member slidably engaging the base and guided in part thereby, the said switching member including two contact elements insulated from each other and adapted respectively to normally engage the said stationary switch contacts, and means for slidably moving the switching member to disengage the movable contact elements thereof from the stationary switch contacts or to reengage them therewith whereby the circuit is broken or re-established at both sides of the fuse.

1,754,444. ELECTRIC-CIRCUIT-CONTROLLING APPLIANCE. JOSEPH SACHS, West Hartford, Conn. Original application filed Dec. 10, 1926, Serial No. 153,966. Divided and this application filed June 29, 1929. Serial No. 374,727. 10 Claims. (Cl. 200—114.)



1. In an electric switch, the combination of an insulating body having a passage extending entirely therethrough, a switching member comprising an element located in part in the passage and guided for rectilinear movement longitudinally thereof and having a transverse slot therein beyond one end of the passage and the said member also comprising a transverse conducting element carried by the first said element near the opposite end of the passage, two stationary switch contacts mounted in normally fixed positions on the body near the last said end of the passage and spaced apart transversely of the direction of movement of the switching member, the said stationary contacts being positioned to be each engaged and disengaged by the conducting element of the switching member as the said member is moved rectilinearly, and a pivoted operating member supported independently of the body and having a cranked portion entering the transverse slot in the first said element of the switching member and serving upon being pivotally moved to move the switching member rectilinearly as aforesaid.

1,754,445. ELECTRIC-CIRCUIT-CONTROLLING APPLIANCE. JOSEPH SACHS, West Hartford, Conn. Filed Feb. 3, 1927. Serial No. 165,645. 54 Claims. (Cl. 200—114.)

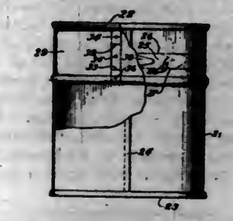
1. In an electric switch, the combination of a pair of stationary switch contacts electrically insulated from each other when the switch is open and respectively having opposite parallel contact faces facing toward each other, and a switching member movable substantially rectilinearly between the said contacts and comprising an insulating element having opposite parallel surfaces and a contact element carried by the insulating element and having opposite parallel contact faces spaced laterally outward from the respective planes of the opposite surfaces of the insulating element and adapted upon rectilinear movement to engage and disengage the contact faces of the stationary switch contacts to make and break electrical connection between them, the said switching member when in the "off" position being entirely free for limited lateral movement perpendicular to the planes of the said contact faces and when in the "on" position being controlled as concerns lateral adjustment solely by the stationary switch contacts.

1,754,446. ELECTRIC-CIRCUIT-CONTROLLING APPLIANCE. JOSEPH SACHS, West Hartford, Conn. Filed Jan. 18, 1928. Serial No. 247,781. 2 Claims. (Cl. 200—16.)

1. In an electric switch, the combination of a movable switching member comprising an insulating element and a conducting element having opposed contact surfaces respectively adjacent opposite faces of the insulating ele-

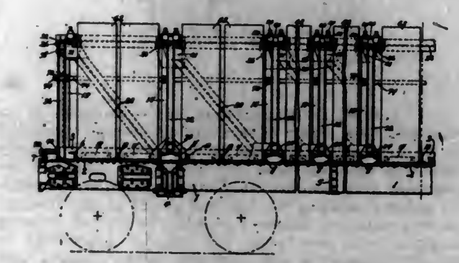
ment, a pair of opposed electrically insulated stationary switch contacts located at opposite sides of the switching member so that the conducting element thereof is moved into and out of engagement with them to make and break electrical connection between them, each of the said contacts being formed of a strip of resilient sheet metal having at least two oppositely disposed U-shaped bends which provide an inner section with an inward facing contact surface in position to be directly engaged by the corresponding contact surface of the switching element and which provide at least two other integrally connected resilient supporting sections substantially parallel with the inner section, and stationary means associated with the stationary switch contacts and serving to guide the switching member for rectilinear movement in either direction, the said guiding means leaving the switching member free for lateral adjustment perpendicularly to the contact faces of the stationary contacts so as to be controlled as concerns such adjustment solely by the said contacts.

1,754,447. ATTACHMENT OF KEYS TO CANS. CHARLES STOLLBERG, New York, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed July 23, 1024. Serial No. 727,640. 6 Claims. (Cl. 220—52.)



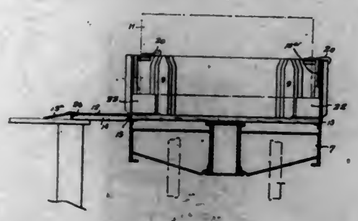
1. A can, having a portion set off by score lines and provided with a tongue adapted for engagement with a key to remove said portion to open said can, and a key for engaging said tongue, said key having an end flattened and offset from the body and formed with a projection 18' welded to said can, said key having a weakened part adapted to be broken across to permit its use in opening the can.

1,754,448. DRAWER SLIDE. JENS VAALER, Chicago, Ill., assignor to The Clemetsen Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 26, 1926. Serial No. 90,756. 11 Claims. (Cl. 45—77.)



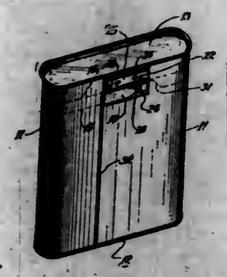
1. An extensible drawer construction comprising relatively movable members slightly spaced apart, an inner guide carried by one of said members and having opposed guide faces, an intermediate member having portions overlying both faces of the inner guide, said overlying portions each having opposed guide faces one of which is in opposition to the adjacent face of the inner guide, and a third guide having portions overlying both portions of the second member each portion forming an opposed guide face adjacent to the other guide face of the intermediate member and rotatable members interposed between all of said guide faces, said opposed guide faces being proportioned to provide different contacting surface areas for the rotatable members.

1,754,449. INTERIOR-COLLAR CAN. MAGNUS E. WIDELL, Cincinnati, Ohio, assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 26, 1924. Serial No. 688,641. 3 Claims. (Cl. 220—54.)



1. A container, comprising a body scored circumferentially to provide a side tearing strip, a top secured to said body, and a collar secured to the body beneath said tearing strip and extending thereabove, said collar having its ends overlapped and welded together to form a continuous member fitting snugly within the body of the container, the body being one piece of metal extending down past and below said collar.

1,754,450. MULTIUNIT TANK CAR. VICTOR WILLOUGHBY, Ridgewood, N. J., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 26, 1928. Serial No. 315,233. 21 Claims. (Cl. 105—366.)

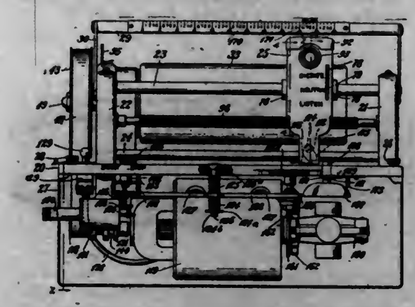


2. In a tank car, longitudinal sills, longitudinally and transversely extending members carried by said sills and having inwardly directed flanges and vertically arranged tanks mounted on said flanges.

1,754,451. INTERCHANGEABLE-CONTAINER FREIGHT CAR. GRAHAM C. WOODRUFF, Bronxville, N. Y., assignor to The L. C. L. Corporation, a Corporation of Delaware. Filed Apr. 24, 1928. Serial No. 272,471. 5 Claims. (Cl. 105—366.)

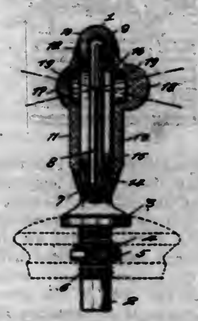
1. In a car of the class described, the combination with an underframe, of a plurality of bulkheads extending from side to side of the underframe thereby dividing the car into a plurality of stalls open at each end, at both sides of the car, a plurality of side sections swingingly mounted to the car one at each end of each stall, said sections when lowered being adapted to serve as gangways, a locking means carried by each side section adapted to interlock with the ends of the bulkheads to hold the sections in raised position.

1,754,452. CONTAINER. JOHN M. YOUNG, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 4, 1924. Serial No. 753,764. 13 Claims. (Cl. 220—54.)



1. A can, comprising a body having a tearing strip beneath the top thereof, and a hinge consisting of a piece different from the metal of the body and applied to the exterior of the can body and connected with the body above the line of the tearing strip, and also below the line of the tearing strip, the body having a continuous one-piece wall including said tearing strip as an integral part.

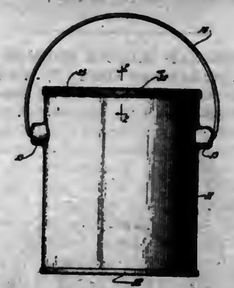
1,754,453. METHOD OF REMOVING CARBON IMPURITIES FROM TANTALUM. CLARENCE W. BALKE, Highland Park, Ill., assignor to Fansteel Products Company, Inc., North Chicago, Ill., a Corporation of New York. Filed Sept. 2, 1926, Serial No. 133,305. Renewed Feb. 28, 1929. 5 Claims. (Cl. 75—17.)



1. The process of removing the carbon impurities from tantalum which consists in mixing a predetermined amount of magnesium oxide with the tantalum and carbon, and heating the mixture in a vacuum to a temperature at which the carbon will be oxidized and the residual magnesium volatilized.

1,754,454. PHONOGRAPH STOP. ALFRED V. BODINE, Bridgeport, Conn., assignor to Dictaphone Corporation, Bridgeport, Conn., a Corporation of New York. Filed May 1, 1926, Serial No. 105,989. Renewed Sept. 7, 1929. 12 Claims. (Cl. 192—124.)

2. A phonograph comprising a frame; a motor; mechanism mounted on the frame driven by the motor; a saddle resiliently mounted on the frame and movable relatively thereto; a clutch carried by the motor for connecting the motor to the mechanism which it drives; a clutch shifter mounted on the saddle; operating means for the clutch mounted on the frame; and flexible connections between the clutch shifter and said operating means to permit movement of the resiliently mounted saddle to prevent the transmission of vibration from the saddle to the frame.



1,754,455. ILLUMINATION AND MAGNIFYING MEANS FOR MOTOR HEAT INDICATORS. HARRISON HURLBERT BOYCE, Jericho, N. Y. Filed May 26, 1927. Serial No. 194,285. 9 Claims. (Cl. 73—52.)

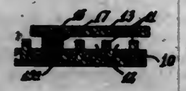
5. In a device for indicating the heat condition within an automotive radiator, a light-gathering lens, and a magnifying lens so positioned that their focal points substantially coincide on a portion only of said device.

7. In a device for indicating the heat condition within an automotive radiator, an indicating device having a tubular indicating element, means for concentrating light rays upon a portion only of said indicating element corresponding to the dangerous heat condition, and means for magnifying said concentrated light rays.

1,754,456. PAIL. CONVERSE B. CADWALLADER, Chicago, Ill., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 16, 1925. Serial No. 62,704. 2 Claims. (Cl. 220—27.)

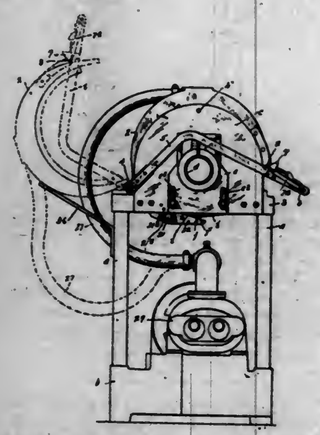
1. A container comprising a body having a portion of its wall near the top end of the body bent inward to form a shoulder, and a frangible closure having its margin resting on said shoulder and extending upward in a flange close to the interior of the body above the shoulder all around the interior of the can, the top marginal edge of the body wall being curled inward, downward and outward and incorporating in said curl the edge of said frangible closure, and stretching the same against said shoulder and radially outward all around the container.

1,754,457. NONCORROSIVE ALCOHOLIC SOLUTION. WILLIAM S. CALCOTT, Penns Grove, N. J., and HERBERT W. WALKER, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 20, 1928. Serial No. 307,328. 12 Claims. (Cl. 28—239.)



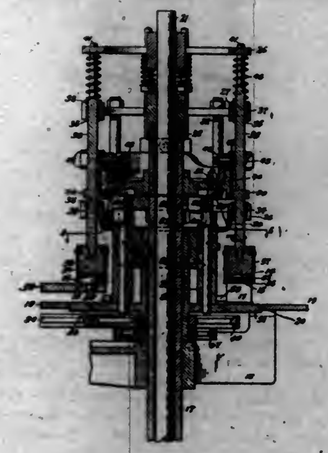
1. A non-corrosive aqueous solution of a polyhydric alcohol containing a primary aromatic diamine.

1,754,458. MUSICAL EDUCATIONAL TOY. IDA CASH, Brooklyn, N. Y. Filed Nov. 13, 1928. Serial No. 319,128. 4 Claims. (Cl. 84—471.)



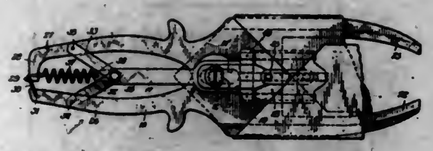
3. A musical educational toy, comprising a baseboard with a musical staff thereon and longitudinal grooves on the lines of the staff and between the lines of the staff, and movable musical symbols on the baseboard and provided with slides engaging in the grooves for positioning of the symbols, the baseboard being provided with openings communicating with the grooves for the withdrawing of the slides intermediate the ends of the grooves, said slides being suction cups capable of assuming fixed positions in the grooves.

1,754,459. MUSICAL EDUCATIONAL TOY. IDA CASH, Brooklyn, N. Y. Filed Dec. 31, 1928. Serial No. 329,598. 4 Claims. (Cl. 84—470.)



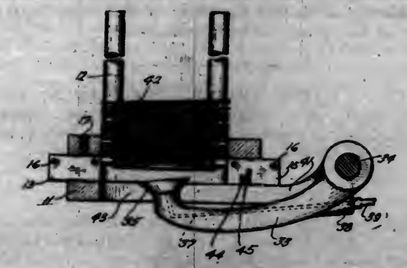
4. A device of the class described, comprising a flat base with parallel projecting ribs spaced to provide grooves, and a musical symbol with a pair of projecting resilient members adapted to engage on the ribs or in the said grooves, said resilient members being rubber tubes attached on the bottom of the symbol.

1,754,460. COMBINED MATRIX FORMER AND DRIER. ALBERT W. COCHRAN and HENRY W. DEWEY, Portland, Oreg. Filed Aug. 4, 1927. Serial No. 210,681. 15 Claims. (Cl. 34—16.)



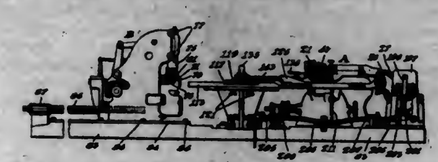
1. In the drying of a matrix, the method of preventing warping and buckling consisting in holding the matrix firmly, by a vacuum, against a firm, true surface during the drying period, and holding the perimeter margins of the matrix against said surface by applying resilient mechanical pressure to said margins.

1,754,461. BOTTLE-CAPPING MACHINE. ROBERT N. CUNDALL, Blasdell, N. Y., assignor to Cundall, Powell & Mosher, Inc., Buffalo, N. Y., a Corporation of New York. Filed July 25, 1922. Serial No. 577,418. 8 Claims. (Cl. 226—88.)



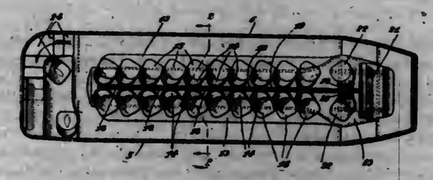
1. A machine for applying a cap to a bottle comprising a continuously rotatable cap feeder having a cap holder, a continuously rotatable bottle feeder having a jaw adapted to carry a bottle, a continuously rotatable turret moving past said cap and bottle feeders, a cap gripping chuck mounted on said turret and movable laterally by the same from said cap feeder to said bottle feeder, and means for moving said gripping chuck toward and from said cap feeder, and toward and from said bottle feeder.

1,754,462. VALVE-BAG CLOSING AND SEALING TOOL. ARTHUR L. CURRIER, Ashburnham, Mass., assignor to Cornell Multi-Wall Valve Bag Company, Fitchburg, Mass., a Corporation of Delaware. Filed June 9, 1928. Serial No. 284,235. 5 Claims. (Cl. 226—56.)



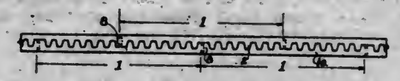
1. A device for closing openings of bags comprising means for entering a bag opening, said means having relatively movable elements contacting portions of the wall of said opening, said means being constructed to move said elements in a manner to cause opposite walls of said openings to approach each other, and means for depositing adhesive between said approaching walls.

1,754,463. COVER FEED. GEORGE C. ERB, Roselle Park, N. J., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 22, 1928. Serial No. 263,807. 7 Claims. (Cl. 113—114.)



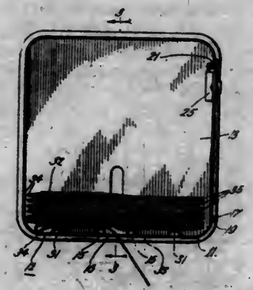
1. In a can end feed device and in combination therewith, a plurality of supporting and separating units, each unit comprising a plurality of spring-pressed blocks retractible to permit the passage of can ends, and means for releasing said units and for securing them in desired positions relative to the can ends.

1,754,464. APPARATUS FOR OPERATING UPON PARTS OF SHOE UPPERS. JOSEPH FOSSA, Danvers, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 10, 1926, Serial No. 115,113, and in Great Britain May 11, 1926. 61 Claims. (Cl. 12—51.)



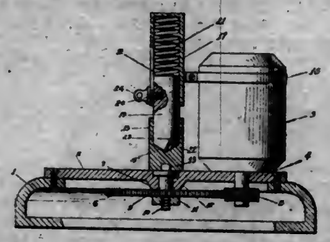
1. Apparatus for finishing the edge of a blank and for perforating the blank having, in combination, shrinking mechanism, perforating mechanism, and means for presenting a blank to and feeding it successively past said mechanisms.

1,754,465. UPPER-DECK SEATING ARRANGEMENT FOR BUSSES. CONRAD T. HANSEN, Philadelphia, Pa., assignor to Hale & Kilburn Co., a Corporation of Delaware. Filed July 3, 1926. Serial No. 120,276. 4 Claims. (Cl. 296—64.)



1. A bus body having a lower deck and an upper deck, a partition constituting the ceiling of the lower deck and the flooring of the upper deck, said partition having a longitudinally arched center portion and substantially horizontal aisle portions at each side of the bus, a rail extending longitudinally of said arched portion, brackets supported by and extending laterally from said rail and individual seats carried by said brackets and disposed in rows on opposite sides of the rail in angular relation to each other.

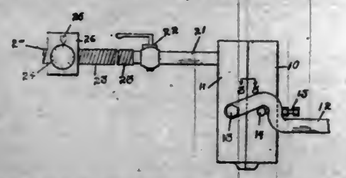
1,754,466. MATERIAL STRIP FOR USE IN THE MANUFACTURE OF LOCK WASHERS. RICHARD T. HOSKING, Wilmette, Ill., assignor, by mesne assignments, to Shakeproof Lock Washer Company, Incorporated, Chicago, Ill., a Corporation of Delaware. Filed Dec. 16, 1927. Serial No. 240,394. 1 Claim. (Cl. 29—148.)



A base material strip for use in the manufacture of lock washers, comprising a ribbon of flexible metal capable of being bent to annular form in its own plane and hardened, said ribbon formed along a longitudinal edge with regular prongs having end portions, whose width and thickness are substantially equal, said prongs alternating with spaces substantially equal in width to the width of the prongs, said prongs twisted around their longitudinal axes to present biting edges that project beyond the planes of the faces in the strip, in opposite directions.

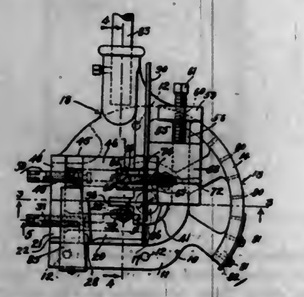
1,754,467. TOWEL-DISPENSING CABINET. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 24, 1927. Serial No. 162,952. 2 Claims. (Cl. 312—60.)

1. A dispenser for folded sheets of paper and the like, which are superimposed one on the other in a gravitating pile, with their folds arranged at the opposite sides of said pile, comprising, an enclosing receptacle of sheet metal formed of substantially rectangular end members and side wall portions double seamed to said end members, the edges of the bottom portions being cut away to leave interruptions in said double seam, the material of said bottom wall portions at said interruptions being bent inwardly of the receptacle in curved form to provide support for said pile.



1,754,468. MORTAR AND PESTLE. FREDERICK G. JELLISON, Georgetown, Mass. Filed Nov. 5, 1928. Serial No. 317,318. 3 Claims. (Cl. 83—10.)

1. A mortar having its lower wall cut angularly from two of its opposite sides to its end, a pestle designed to be



freely received in the mortar and having its active end cut angularly from two of its opposite sides, spring means influencing the pestle into the mortar, means for holding the pestle from turning and means for rotating the mortar.

1,754,469. FILLING MOLD. AUGUST KADOW, Toledo, Ohio, assignor of one-half to Wilber Owen and Charles W. Owen, Toledo, Ohio. Filed June 19, 1926. Serial No. 117,013. 14 Claims. (Cl. 22—73.)

1. The method of introducing material into a mold by differential pressures upon the material outside the mold and inside the mold, the mold having a cavity of such shape and size that a constant differential pressure sufficient to fill the mold results in cavities within the casting, which consists in gradually increasing the differential pressure as the mold fills up.

1,754,470. BENDING MACHINE. JAMES R. KERLIN, Los Angeles, Calif. Refiled for abandoned application Serial No. 267,054, filed Dec. 16, 1918. This application filed June 18, 1924. Serial No. 720,875. 10 Claims. (Cl. 153—20.)

1. In a metal bending machine, a base member provided with an abutment, a bending member pivotally mounted on said base member, a pair of clamping jaws slidably mounted on said bending member for independent adjustment thereon, the work face of one of said clamping jaws being adapted at all times to slide in a radial direction with respect to the center of rotation of said bending member, the work face of said abutment being in substantial alignment with the opposed work faces of said clamping jaws before the bending operation, and means for adjusting said abutment out of such alignment.

1,754,471. LOOSE-LEAF BINDER. ERIK L. KRAG, Chicago, Ill. Filed Mar. 31, 1928. Serial No. 266,154. 5 Claims. (Cl. 129—17.)

1. A loose leaf binder comprising a frame having two hinged parts, a slidably mounted strip in one of said parts, a plurality of prongs fixed to said strip, a finger fixed to said strip and projecting into said frame part, a member movably mounted in said frame and adapted to coact with said finger, resilient means for holding said member against said finger, and a shoulder on said member adapted to prevent movement of said finger until the force of the spring has been overcome.

1,754,472. WATER HEATER. OTTO JOHN KUENHOLD, Cleveland, Ohio, assignor to The Dunham Company, Berea, Ohio, a Corporation of Ohio. Filed Mar. 5, 1926. Serial No. 92,397. 10 Claims. (Cl. 122—156.)

9. A water heater comprising, a concentric vertical shell and flue device connected adjacent their ends to provide an intermediate water chamber, said flue device having alternate enlargements and contractions throughout its length, a vertical series of transverse water passages traversing the respective enlargements of said flue and communicating at their ends with said water chamber, said alternate enlargements except the uppermost one and contractions being of successively decreasing cross-sectional area in the direction of the flow of gases and the uppermost enlargement being laterally protruded to a greater extent than the immediately adjoining lower enlargement.

1,754,473. MANUFACTURE OF CALCIUM HYPOCHLORITE. ROBERT B. MACMULLIN and JESSE A. GUYER, La Salle, N. Y., assignors to The Mathieson Alkali Works, Inc., New York, N. Y., a Corporation of Virginia. Filed Aug. 4, 1926. Serial No. 127,168. 9 Claims. (Cl. 23—86.)

4. A process of making calcium hypochlorite which comprises chlorinating a lime slurry and promoting the separation of calcium hypochlorite by the addition of sodium chloride, and employing the solution remaining after separation of the calcium hypochlorite as a diluent in connection with the addition of sodium chloride to promote the separation of calcium hypochlorite in the process.

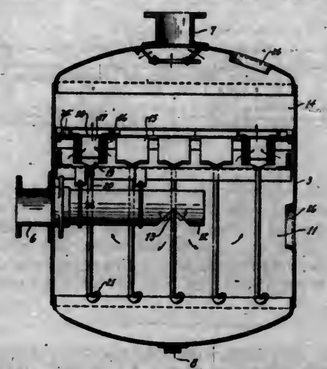
8. A process of making calcium hypochlorite which comprises chlorinating a lime slurry containing not more than about 37 lbs. of water and not less than about 24 lbs. of water per 10 lbs. of lime and promoting the separation of calcium hypochlorite from the chlorinated mixture by the addition of sodium chloride.

1,754,474. PRODUCTION OF NEW HYPOCHLORITE COMPOSITIONS. ROBERT B. MACMULLIN and MAURICE C. TAYLOR, Niagara Falls, N. Y., assignors to The Mathieson Alkali Works, Inc., New York, N. Y., a Corporation of Virginia. Filed Dec. 29, 1928. Serial No. 329,308. 9 Claims. (Cl. 23—86.)

8. The method of producing a new hypochlorite compound which comprises adding sodium chloride to a chlorinated lime solution containing calcium hypochlorite and calcium chloride while maintaining the solution at a temperature not substantially exceeding 0° C. to precipitate a triple salt of calcium hypochlorite, sodium hypochlorite and sodium chloride.

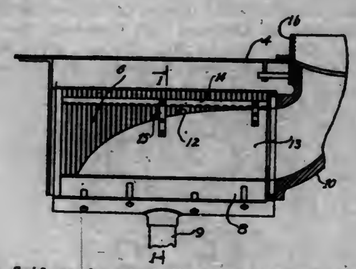
1,754,475. PRODUCTION OF NEW HYPOCHLORITE COMPOSITIONS. ROBERT B. MACMULLIN, Niagara Falls, N. Y., assignor to The Mathieson Alkali Works, Inc., New York, N. Y., a Corporation of Virginia. Filed Sept. 27, 1928. Serial No. 308,885. 6 Claims. (Cl. 23—86.)

6. The method of producing a new hydrochlorite compound, which comprises chlorinating caustic soda, and calcium hydroxide in the proportion of two equivalents of the former to one of the latter, in a solution saturated with respect to sodium chloride and the triple salt $Ca(OCl)_2.NaOCl.NaCl.12H_2O$ under conditions of temperature and concentration such that only sodium chloride precipitates during the chlorination, separating precipitated sodium chloride and, after such separation, adding caustic soda and calcium hydroxide in the same proportion, to the chlorinated solution and continuing the chlorination under conditions of temperature and concentration such that a triple salt of calcium hypochlorite, sodium hypochlorite and sodium chloride will precipitate, precipitating and separating this triple salt from the chlorinated solution and reusing the mother liquor from which the precipitated triple salt has been separated in the chlorination of further quantities of caustic soda and calcium hydroxide in the process.



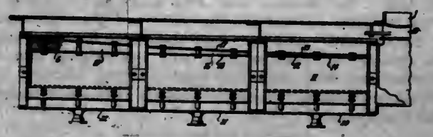
1,754,476. SALT-CAN SPOUT. DONALD G. MAGILL, Chicago, Ill., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 16, 1926. Serial No. 102,407. 9 Claims. (Cl. 221—11.)

1. A device of the class described comprising a container provided with a cover having an aperture therethrough, a spout comprising a lid portion adapted to normally close the aperture in said cover and having pivotal portions overlying said cover, said spout having members adapted to normally extend within the container, said members having portions adapted to cut through the edge portions of the aperture of the cover when said members are inserted through the aperture, said cutting portions constructed and arranged to normally lie on the under side of the cover and to cooperate with said pivotal portions of the lid to permit a nondetachable hinging movement of the spout.



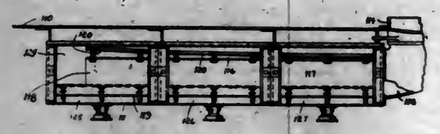
1,754,477. SEPARATOR. ABRAHAM L. MENZIN, San Francisco, Calif., assignor, by direct and mesne assignments, to Blaw-Knox Company, Blawnox, Pa., a Corporation of New Jersey. Filed June 29, 1925. Serial No. 40,193. 7 Claims. (Cl. 183—113.)

5. A steam purifier system comprising a hollow casing, a steam inlet and a steam outlet mounted in the walls of said casing, and a horizontal diaphragm mounted in said casing between said inlet and outlet and forming a partition between the upper and lower portions of the casing, said diaphragm having openings therethrough, and a steam purifier fixed to said diaphragm adjacent each of



the said openings and with its steam outlet registering with the opening, and a liquid drain connected with each of said purifiers, the aggregate capacity of said openings being many times as great as the capacity of the casing outlet.

1,754,478. STEAM SEPARATOR. ABRAHAM L. MENZIN, San Francisco, Calif., assignor, by direct and mesne assignments, to Blaw-Knox Company, Blawnox, Pa., a Corporation of New Jersey. Filed May 22, 1926. Serial No. 111,078. 12 Claims. (Cl. 183—11.)

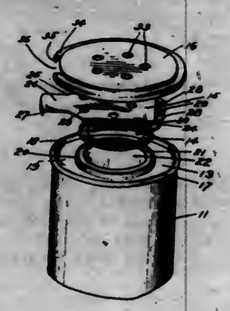


4. A fluid receiver including an elongated passageway having an outlet near one end, and a fluid inlet extending substantially from one end to the other thereof, one edge of said inlet curving from one end to the other, the curve of said curved edge being substantially a conical section.

1,754,479. FLUID SEPARATOR. ROGER W. ANDREWS, Pittsburgh, Pa., assignor, by mesne assignments, to Blaw-Knox Company, Blawnox, Pa., a Corporation of New Jersey. Filed Dec. 5, 1925. Serial No. 73,317. 3 Claims. (Cl. 183—111.)

1. A fluid separator comprising a passageway having an inlet and having an outlet adjacent one end, said inlet comprising a plurality of sections, the width of each section of said inlet varying as the change in distance from the end of the inlet of that section varies, but the rate of change per unit of length of such variations in one section being unlike the rate of change in the other sections.

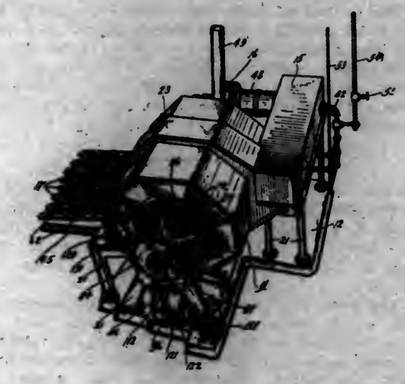
1,754,480. FLUID SEPARATOR. HARRY E. BOYRIE, San Francisco, Calif., assignor, by mesne assignments, to Blaw-Knox Company, Blawnox, Pa., a Corporation of New Jersey. Filed Apr. 29, 1925. Serial No. 26,566. 8 Claims. (Cl. 183—111.)



5. A fluid receiver comprising an elongated casing, said casing having an outlet, an interior conduit in said casing, said conduit having an elongated inlet extending substantially from one end to the other, the end of said conduit most remote from said outlet being open and being spaced a material distance from the adjacent end of said casing.

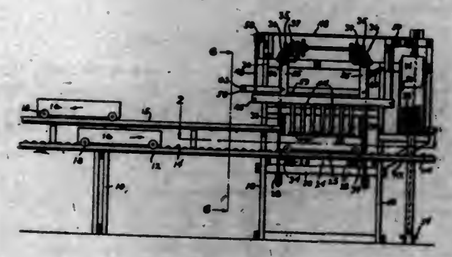
1,754,481. PROCESS FOR PROTECTING EASILY-OXIDIZABLE METALS SUCH AS THOSE HAVING A BASE OF MAGNESIUM, ALUMINUM, CALCIUM, ETC. GILBERT MICHEL, Bagneux, France. Filed Mar. 8, 1928, Serial No. 260,256, and in France Mar. 12, 1927. 4 Claims. (Cl. 148—6.)

8. A process of protecting a magnesium article which comprises coating the same with a varnish composition containing a free phenol which will react with the surface of the metal, and a soluble phenol-aldehyde condensation product which is of resinous consistency.



1,754,482. CONTAINER. HENRY M. NICHOLLS, Chicago, Ill., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed May 31, 1928. Serial No. 281,664. 5 Claims. (Cl. 221—62.)

1. A sifter top for containers, comprising an inner top member having a pouring opening, an outer top member having sifter openings, a perforated slide operating between said members, and a gasket interposed between the inner top member and said slide and adapted to press the slide against the top plate and prevent passage of the contents except through the sifter openings when the slide is manipulated for sifting and to hold said top member and said slide in tight yielding contact, and means for holding the gasket against sidewise movement with the slide.

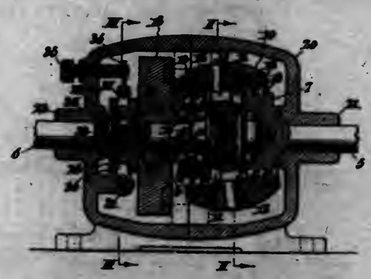


1,754,483. ROTARY CAN-END DRIER. HORACE J. PAYNTER, Maplewood, N. J., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 2, 1927. Serial No. 165,302. 45 Claims. (Cl. 34—28.)

1. An apparatus for drying can ends, comprising, means providing a drying chamber, means for positioning can ends in the chamber for a predetermined period of time, a carrier conveying the can ends in circular paths about a horisontal axis in said drying chamber, and means for circ-

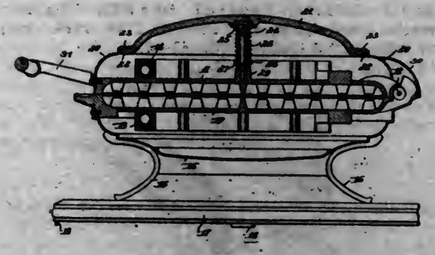
culating heated air through the chamber to dry the can ends and means for heating the air as an incident to the circulation thereof.

1,754,484. BLOCK-EJECTING MACHINE. JOHN C. PELTON, Santa Barbara, Calif. Filed Dec. 27, 1926. Serial No. 157,206. 2 Claims. (Cl. 25—2.)



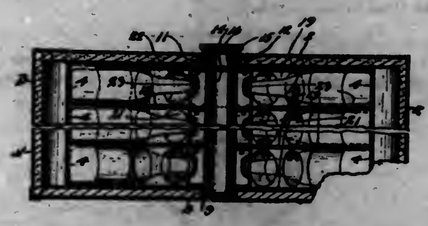
2. A brick making apparatus comprising a pair of tracks arranged one above the other, said tracks having oppositely disposed openings, a movable track section normally disposed in the opening of the lower track, a form having a separable pallet adapted to be moved along said tracks, means to elevate the movable track section with the form into the opening of the upper track, plungers adapted to engage the blocks in said form as the sectional track is elevated, supporting means for said plungers adapted to be elevated from the form after the ejection of the blocks for freeing the form from said plungers, the empty form being returned over the upper track after an ejectment of the blocks therefrom, and means to lower the sectional track into normal position on the lower track.

1,754,485. VARIABLE-SPEED GEARING. JOSEPH PERCY REMINGTON, Philadelphia, Pa. Filed Jan. 25, 1929. Serial No. 334,874. 6 Claims. (Cl. 74—14.)



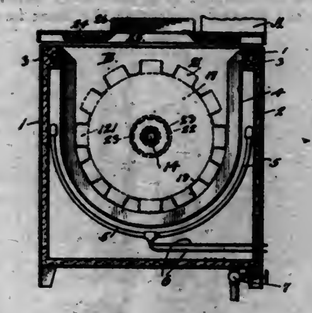
1. A variable speed transmission comprising coaxial eccentrics, one driven from a source of power and the other freely rotatable; a member engaged with both of said eccentrics to be oscillated by them; a fulcrum for

said member permitting oscillation thereof by said eccentrics; transmission means for transmitting rotation of



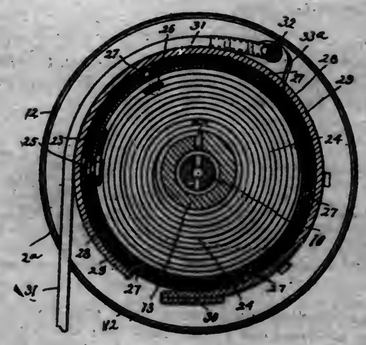
said member due to its coaction with said eccentrics and fulcrum; and means for controlling and varying the resistance to rotation of said freely rotatable eccentric.

1,754,486. WAFFLE IRON. HOWARD H. SCHOTT, Rochester, N. Y., assignor to Robeson-Rochester Corporation, Rochester, N. Y., a Corporation of New York. Filed July 1, 1929. Serial No. 374,984. 15 Claims. (Cl. 53—10.)



1. In a waffle iron, the combination with upper and lower grids, of a casing above the upper grid, a casing below the lower grid, and an electric heating element within each casing for heating the associated grid, said upper casing having a substantial portion thereof constructed of ceramic material and said lower casing being constructed substantially entirely of material having higher heat conductivity than that of said ceramic material.

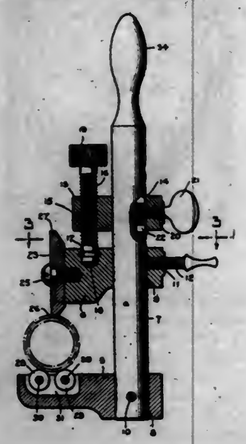
1,754,487. BOTTLE HOLDING AND DISPENSING CABINET. JOHN J. SCHWEITZER, Sandusky, Ohio. Filed Sept. 29, 1927. Serial No. 222,768. 4 Claims. (Cl. 312—36.)



1. Bottle dispensing mechanism of the class described, comprising, in combination, a cabinet, bottle holding units supported in said cabinet, a cover for said cabinet, said cover being provided with openings through which bottles may be dispensed, and a mounting for the cover on the cabinet rendering the same movable out of the path of travel of any of the bottle holding units when they are to be removed from the cabinet.

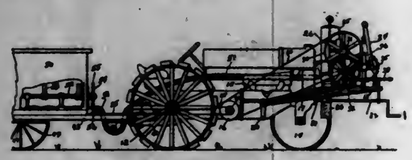
4. Bottle holding and dispensing mechanism of the class described, comprising, in combination, a cabinet, a bottle holding unit, a shaft therefor, means on one side of the cabinet for slidably and rotatably receiving said shaft, another side of said cabinet having an opening therein to receive the shaft, and means associated with the shaft and cooperating with the said last named side of the cabinet for retaining said shaft in its operative position.

1,754,488. SHOCK ABSORBER. JACOB R. SNYDER, Cleveland, Ohio. Filed Aug. 9, 1924, Serial No. 731,017. Renewed Sept. 12, 1929. 9 Claims. (Cl. 267—10.)



1. In a shock absorber, a rotatable friction member having a strap connected thereto so as to be wound onto and unwound therefrom, and a stationary expansible and contractible friction member between the strap and the rotatable member, one of said last mentioned parts being faced with friction material.

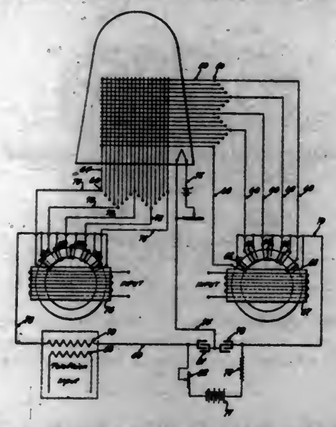
1,754,489. SCREW-THREAD CHASER. THOMAS K. STEVENSON, New York, N. Y., assignor to Francis Van Blarcom, New York, N. Y. Filed Sept. 15, 1926. Serial No. 135,530. 1 Claim. (Cl. 10—1.)



A screw thread chaser comprising a shank terminating at one end in a handle portion, a stationary jaw member secured to the opposite end of the shank and extending at right angles thereto, aligned spaced roller bearing members carried by the stationary jaw, a sliding jaw member mounted on the shank, a thread shaper detachably connected to the sliding jaw member and having serrated opposite end portions either of which is adapted to mesh

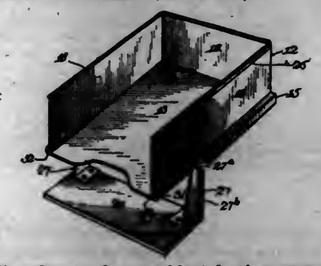
simultaneously with successively disposed sections of the thread to be chased, and means for adjustably securing the sliding jaw member at various distances from the stationary jaw member, said means including a block adjustably mounted on the shank, means including a set screw carried by the block and adapted to be selectively seated in spaced sockets in the shank for securing the block in any of its

adjusted positions on the shank, an adjusting screw connection between the block and the sliding jaw and disposed at right angles to the block-securing means, and means carried by the sliding jaw and cooperating with the support to secure the sliding jaw in any of its adjusted positions, the last-named means being arranged at right angles to the adjusting screw.



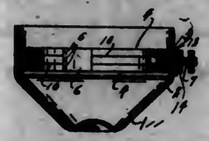
1,754,490. SPRAYING MACHINE. SAMUEL C. STEWART, Hunting Creek, N. C. Filed Feb. 17, 1928. Serial No. 255,020. 8 Claims. (Cl. 299—45.)

1. In a spraying apparatus, a motor propelled frame, a pump on the front end of the frame gear and belt connection between the pump and the motor for driving the pump, a wheeled frame pivotally secured to the rear end of the tractor for lateral movement, a tank mounted on the pivoted frame, a longitudinally disposed shaft mounted in the tank, agitating devices mounted on the shaft, a pulley mounted on the front end of the shaft, a belt mounted on the pulley and running through other pulleys to the said motor, pivoted means holding a portion of the pulleys to preserve a uniformity of tautness in the belt while the tractor is being turned at an angle to the pivoted wheeled frame secured to the rear end thereof, and a hoseline leading from the tank to the pump.



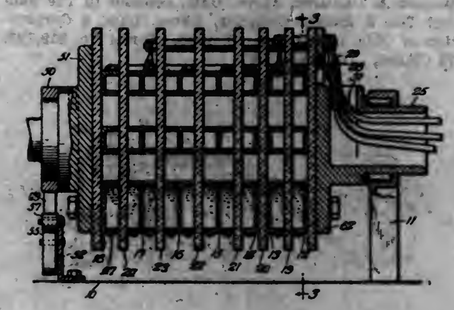
1,754,491. SYSTEM FOR TRANSMISSION AND RECEPTION OF TELEVISION. GEORGE WALD, Belleville, Ill. Filed Mar. 18, 1929. Serial No. 347,792. 10 Claims. (Cl. 178—6.)

1. A system of television comprising a receiving element including a plurality of intersecting anode and cathode elements enclosed in a gas-filled tube and adapted to produce, at selected intersecting points of varying brightness, circuits for receiving impulses of separated frequencies connected respectively with the anode and cathode elements to impress thereon varying potentials, and a tele-



vision input circuit whereby additional potential is impressed at selected intersections of the anode and cathode elements responsive to a television controlled sending circuit.

1,754,492. FILING-CABINET DRAWER. PETER A. WETZEL, Springfield, Ill. Filed Dec. 18, 1926. Serial No. 155,582. 5 Claims. (Cl. 45—7.)



5. A filing drawer for a cabinet having grooves in the sides thereof, said drawer comprising a pair of sides, a bottom and runners projecting laterally from the side margins of the bottom and adapted to slide longitudinally in the grooves in the cabinet-sides, the sides, bottom and runners of the drawer being formed integrally with each other and bent from a single plate of sheet metal, and a drop front provided with rearwardly extending brackets pivotally connected to said drawer-sides, the plate from which the sides, bottom and runners are formed being cut away so that the front ends of the runners terminate adjacent the rear ends of the brackets, and embodying flanges adjacent the cut away portions for securing the front ends of the sides to the bottom.

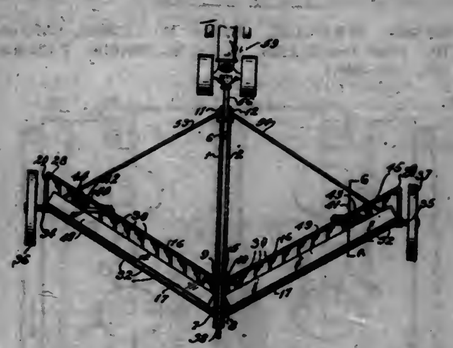
1,754,493. LAMINATED TIMER INSULATION. LOUIS A. ALEXANDER, Toledo, Ohio. Filed Jan. 4, 1926. Serial No. 79,124. 1 Claim. (Cl. 200—19.)

A multi-terminal timer housing, peripherally spaced sectional insulation end grain segments, and terminals between the segments completing with the segments an annular path.

1,754,494. ELECTRIC SWITCH. CARL A. ANDERSON and JESSE C. OSBORN, St. Joseph, Mich., assignors to Reliance Elevator Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 26, 1927. Serial No. 178,722. 7 Claims. (Cl. 200—152.)

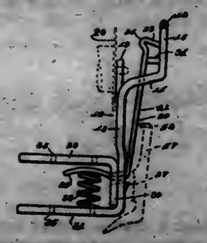
1. A device of the character described comprising a plurality of plates having recesses in the side faces thereof, insulating disks separating said plates and covering said recesses, bodies of mercury in said recesses normally insulated from each other by said disks, means for connecting said bodies of mercury to electric circuits, certain of said disks being provided with ports therethrough connecting the adjacent recesses, said ports being normally spaced from the mercury in said recesses, and means for changing the relative position of said mercury and said recesses to bring the adjacent bodies thereof into contact through said ports.

1,754,495. GOLF-BALL HOLDER. OLAF A. ANDERSON, Hamilton, Ohio; The Citizens Savings Bank & Trust Company, executor of said Olaf A. Anderson, deceased, assignor to Josephine Anderson, Hamilton, Ohio. Filed Apr. 22, 1927. Serial No. 185,801. 6 Claims. (Cl. 150—1.5.)



2. In an article of the class described, a container, a cover therefor, said cover having openings in the lower side thereof into which golf tees may be inserted with their heads down, and means for releasably retaining said tees in said cover.

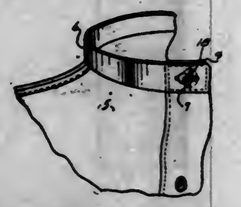
1,754,496. DISPENSING TUBE. EDWIN H. BARKER, Moylan, Pa., assignor to A. H. Wirz, Inc., Chester, Pa., a Corporation of Pennsylvania. Filed Feb. 9, 1928. Serial No. 252,998. 9 Claims. (Cl. 221—60.)



1. A two-part collapsible dispensing tube comprising a fibrous body portion and a dispensing terminal molded to one end thereof.

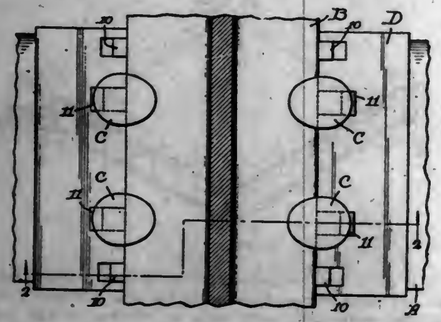
1,754,497. GRAIN DRILL. WALLACE BOUCHER, Minneola, Kans. Filed Mar. 12, 1928. Serial No. 261,022. 8 Claims. (Cl. 111—56.)

1. A grain drill comprising a central longitudinal draft-bar, two gang frames fastened to the rear portion of the draft-bar with their outer ends in advance of the rear ends of the gangs, tie-bars connecting the outer ends of the gang frames to the forward end of the draft-bar, discs connected to the gang frames and grain feeding mechanism above the discs.



1,754,498. TUBE FRAME FOR WEAVING. JAMES J. BROGAN, Hightstown, N. J. Filed Mar. 26, 1929. Serial No. 350,100. 2 Claims. (Cl. 139—10.)

1. In a tube frame for weaving, the combination with a chain having links formed with lateral openings, of a

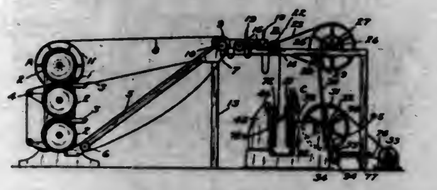


hanger comprising a chain engaging member, a spool bearing member, a spring pressed latch adapted to normally engage said chain engaging member and a pin carried by said latch adapted to enter the lateral opening in the link of said chain to retain said chain on said chain engaging member.

1,754,499. NECKBAND CONSTRUCTION. ALBERT A. BROWNSTEIN, Walnut Park, Calif. Filed Oct. 20, 1928. Serial No. 313,744. 2 Claims. (Cl. 2—128.)

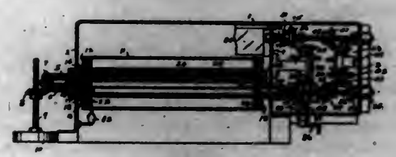
2. As a new article of manufacture, a collar-band having a buttonhole and a piece of material stitched along its edges to said collar-band and having a slit formed therein at right angles to said buttonhole and crossing it to permit the passage therethrough of a collar-button so that the base thereof will rest upon a semi-united surface of said material.

1,754,500. TIE-PLATE. BYRON M. CHENEY, Chicago, Ill. Filed July 2, 1928. Serial No. 289,649. 7 Claims. (Cl. 238—304.)



1. The method of manufacturing a tie plate adapted to support railroad spike heads away from a rail base which comprises producing a standard plate body and then forming projections on said plate body for engaging under the spike head.

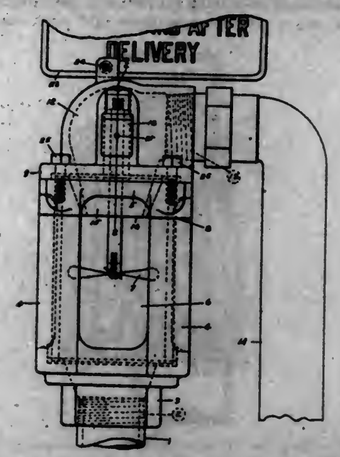
1,754,501. FOLDING SEAT. ERNEST G. COVELL, Los Angeles, Calif., assignor to Cameo Refrigerator Corporation, Los Angeles, Calif. Filed Aug. 3, 1927. Serial No. 210,266. 6 Claims. (Cl. 155—83.)



1. In combination a frame, a seat including two pivotally connected sections, means connecting the inner end of the seat and the frame for relative movement, and means whereby the seat is set against movement relative to the frame when the seat sections are in operating position, said last mentioned means including a locking member actuated by the outer seat section.

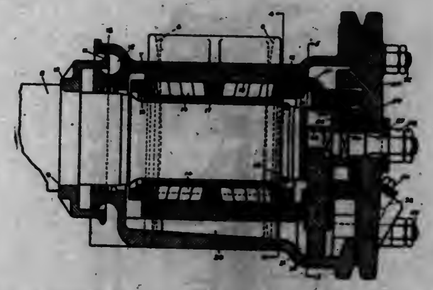
1,754,502. METHOD OF AND APPARATUS FOR THE MANUFACTURE OF INNER TUBES AND THE LIKE. HAROLD A. DENMIRE, Akron, Ohio, assignor to The General Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 16, 1928. Serial No. 319,795. 15 Claims. (Cl. 18—19.)

3. A machine for making annular tubes comprising a rubber mill for delivering rubber stock in sheet form, a festooning roller over which the sheet is delivered from the mill, means for accumulating slack in the sheet adjacent said roller, tube forming dies beneath the festooning roller, means for reciprocating one of the dies toward and from the other, means above the dies for supporting an end of the sheet, and means for intermittently actuating said roller to festoon the sheet between the dies.



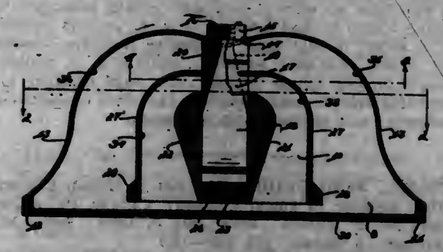
1,754,503. INDICATOR AND RECORDER. WALTER K. DWELLE, Houston, Tex., assignor of forty per cent to John T. Deaver, twelve and one-half per cent to James Lawlor, and seven and one-half per cent to C. C. Cunningham, Houston, Tex. Filed Oct. 17, 1927. Serial No. 226,715. 1 Claim. (Cl. 234—81.)

A recorder adapted for use on motor vehicles and including a rotatably mounted record receiving element, means for imparting a rocking movement to said element which varies as the speed of the vehicle varies, a record making means co-operating with said element, means for moving said record making means, relative to said element, and at a constant rate of speed and means for automatically reversing the direction of movement of said record making means and means for automatically stopping the movement of said record making means at the end of a cycle of its movement.



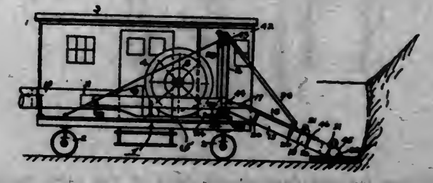
1,754,504. GASOLINE PUMP. EARL E. EICKMEYER, Dayton, Ohio, assignor to The Dayton Pump & Mfg. Company, Dayton, Ohio, a Corporation of Ohio. Filed June 23, 1927. Serial No. 200,785. 5 Claims. (Cl. 221—100.)

1. In a sight glass mechanism, the combination of a gasoline supply and exit line, a sight glass, a dome member mounted on said sight glass, and means on the dome forming an air passage and extending to a point within



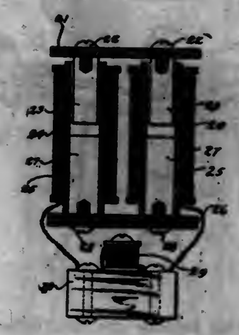
said sight glass which is visible therethrough to admit air and said dome having means near the top thereof for connection to the exit line.

1,754,505. RAILWAY TRUCK. CHARLES J. ELLIS, Cincinnati, Ohio, assignor, by mesne assignments, to The Cincinnati Car Corporation, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 14, 1929. Serial No. 339,815. 12 Claims. (Cl. 105—49.)



7. In combination in a vehicle of a bearing casing, a bearing therein, an axle supported thereby, a brush plate supported by said casing adjacent the end of the axle having an aperture, a brush mounted therein and means to cause said brush to yieldingly engage the end of said axle.

1,754,506. SOUND AMPLIFIER. CHARLES C. FLYNN, Detroit, Mich. Filed May 14, 1928. Serial No. 277,467. 4 Claims. (Cl. 181—27.)

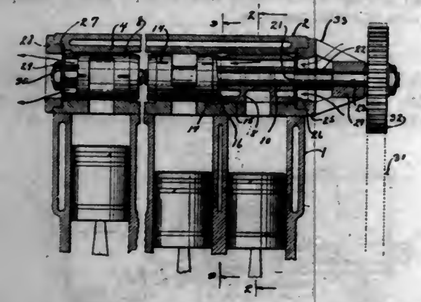


1. A sound amplifier of the class described, comprising: a housing having side walls; supporting plates mounted on said side walls; a covering for said side walls; a sound passage extending inwardly of said housing, projecting beyond said supporting plates; a pair of coverings, each positioned on said supporting plates at oppostie sides of said passage, said supporting plates cooperating with said sound passage for dividing said housing into a plurality of pairs of outlet passages.

1,754,507. PNEUMATIC EXCAVATOR AND CONVEYER. HENRY A. FROHM, Aetna, Ind. Filed Sept. 26, 1924. Serial No. 740,029. 2 Claims. (Cl. 302—17.)

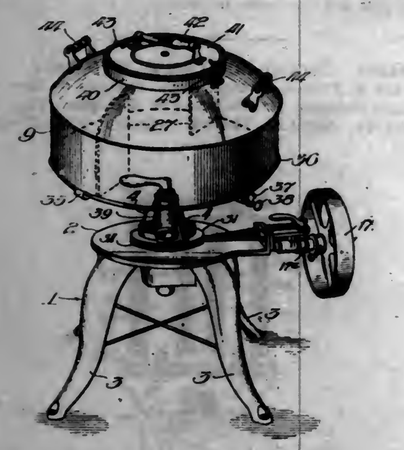
2. In pneumatic systems, a blower mounted on a movable frame, an intake opening in operative relation to the blower, an exit therefrom, a swingable pipe, a fixed pipe connected to the exit of the blower, a universal joint connecting the two pipes, an elongated nozzle supported by the outer end of the swingable pipe, means for actuating the blower to draw material into the nozzle and deliver it where desired, and means for manipulating the swingable pipe and the nozzle in unison.

1,754,508. SECONDARY CLOCK MOVEMENT. ROLLAND S. FULTON, Detroit, Mich., assignor to Time Systems Company, a Corporation of Michigan. Filed Dec. 1, 1924. Serial No. 753,243. 1 Claim. (Cl. 175—338.)



In a secondary clock mechanism for operation on commercial alternating current supply lines and having a pivoted escapement lever, a solenoid for connecting to an alternating current supply, a core in the solenoid, metallic rod retarding means connected to the escapement lever and extending into the solenoid to coact therewith, and current-surge-absorbing means connected in parallel with the solenoid.

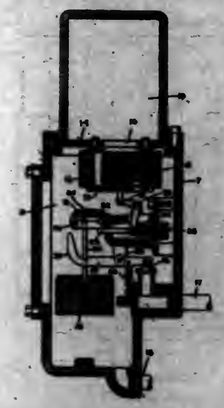
1,754,509. ROTARY VALVE. PETER J. GILBERT, Manitowoc, Wis., assignor to Arthur A. Eisenman, Manitowoc, Wis. Filed Feb. 9, 1927. Serial No. 166,927. 2 Claims. (Cl. 123—59.)



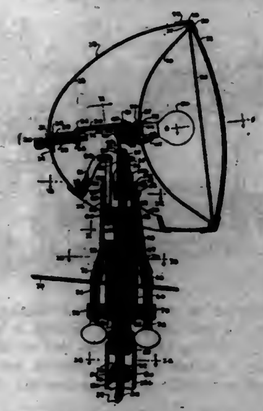
1. A multiple cylinder internal combustion engine having a continuous cylinder block closing the ends of the cylinders and provided with a cylindrical valve casing, said valve casing having diametrically arranged inlet and exhaust ports and an intermediate cylinder port, a composite rotary valve mounted within said casing and consisting

of a plurality of cylindrical valves arranged with their ends in abutting relation, each valve having a longitudinally extending ventilating opening forming a continuous opening from one end of the composite valve to the other,

and ring-like end caps at the ends of the valve casing have openings therethrough, whereby a current of air may be passed through said composite valve from one end to the other.



1,754,510. WASHING MACHINE. LOUIS GREENBERG, Chicago, Ill. Filed Jan. 14, 1925, Serial No. 2,334. Renewed May 20, 1929. 19 Claims. (Cl. 259—72.)

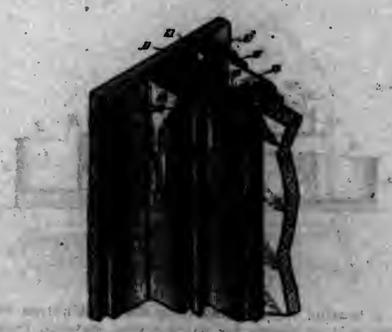


1. In a washing machine, the combination with a container, of a gimbal joint structure carrying the container for tilting movement in all directions, said joint structure including a pair of gimbal joint members, one of which serves as a seat for the container, and means operable from below the container for effecting the universal tilting of the container on said joint.

1,754,511. ACCELERATOR FOR DRY-PIPE VALVES. FRANCIS H. GRIFFITHS, Yonkers, N. Y., assignor to The Reliable Automatic Sprinkler Company, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 26, 1928. Serial No. 670,859. 4 Claims. (Cl. 169—20.)

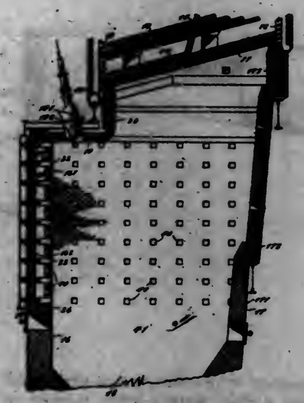
1. An accelerator for dry pipe valves comprising a casing, a syiphon bellows within the casing dividing the latter into two chambers, said syiphon having a restricted orifice forming a restricted communication between the chambers, means connecting one chamber to the system side of a dry pipe valve and also connecting said chamber to the neutral chamber of said valve, a valve normally closing the latter connection, a weight which by its falling movement opens the valve, means including a sliding spring-pressed latch for normally holding the weight elevated, and a connection between said latch and the syiphon bellows, whereby a reduction of pressure on the system side of the dry pipe valve will cause the syiphon bellows to actuate the spring-pressed latch and release the weight.

1,754,512. SPOTLIGHT. JOHN S. GULLBORG, Chicago, Ill., assignor to Alemite Die Casting & Mfg. Co., Woodstock, Ill., a Corporation of Illinois. Filed Mar. 15, 1928. Serial No. 261,725. 9 Claims. (Cl. 240—61.)



1. A device of the class described comprising in combination an electric lamp, means for rotating said lamp comprising a flexible tube operatively connected therewith, a rigid guiding member within said tube, means for rotating said tube, an electric conductor passing through said guiding means to said lamp, a terminal on said conductor, a socket in said lamp, conducting members between said socket and said terminal, comprising a resilient member having sliding contact with said terminal for permitting relative rotary motion, and arms conductively associating said members with said socket.

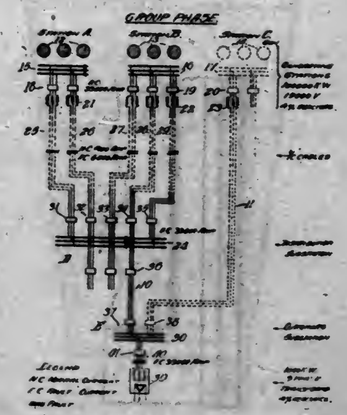
1,754,513. SASH GUIDE. WILLIAM S. HAMM, Elkhart, Ind., assignor to Adlake Company, Chicago, Ill., a Corporation of Illinois. Filed July 5, 1929. Serial No. 375,956. 5 Claims. (Cl. 189—75.)



1. In a sash guide, the combination with a strip adapted for fixed attachment to a jamb, and a sash-retaining strip

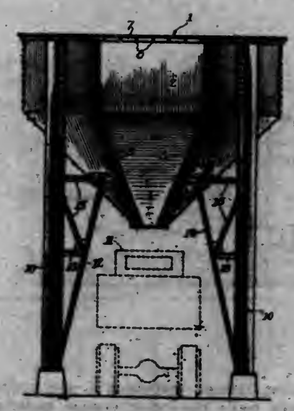
removably carried by the fixed strip, of a thin readily yieldable strip of spring metal also carried by the fixed strip in opposition to the removable strip for resiliently

yieldable engagement with a sash in the guide with the outer edge of the spring in outwardly converging line contact with the sash.



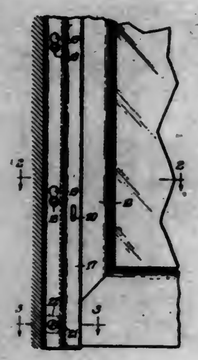
1,754,514. FURNACE WALL. JAMES C. HOBBS, Painesville, Ohio. Filed Dec. 5, 1925, Serial No. 73,813. Renewed Sept. 10, 1929. 21 Claims. (Cl. 110—1.)

1. In a furnace wall, an inner wall, an outer wall, means for maintaining the two walls in spaced relation, and yielding means for permitting relative movement of the two walls in a direction substantially at right angles to the planes of said walls, the parts being constructed and arranged to permit relative motion between the two walls in a direction parallel to the planes of said walls.



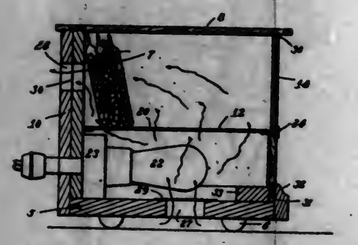
1,754,515. ELECTRIC POWER DISTRIBUTION. BERTRAND G. JAMIESON, Hollywood, Ill., assignor, by mesne assignments, to General Electric Company, a Corporation of New York. Filed Aug. 11, 1924. Serial No. 731,268. 8 Claims. (Cl. 171—97.)

1. A three-phase alternating current transmission system comprising a central station and a consumers station, bus bars at the central station protected by phase isolation, a single-phase transformer at the consumers station for



each phase and isolated phase conductors connecting the bus bars with the transformer, said conductors comprising single phase underground cables.

1,754,516. BIN. CHARLES S. JOHNSON, Champaign, Ill. Filed Apr. 27, 1928. Serial No. 273,210. 8 Claims. (Cl. 189—8.)

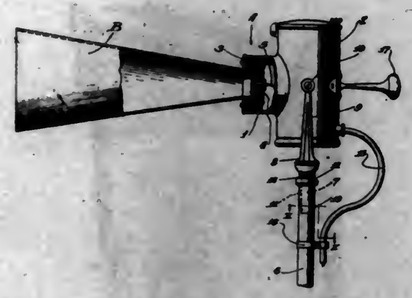


1. A loading bin adapted to straddle a drive-way so that vehicles may be moved thereunder to be loaded therefrom, said bin comprising a plurality of duplicate side sections arranged to form an octagonal bin, said sections having sloping bottom portions which converge inwardly to form a bottom discharge opening, a plurality of columns, one attached centrally to each alternate side section, and brace members attached one to each of said columns and extending inwardly toward the center of the bin and arranged to brace said converging bottom portions centrally thereof.

1,754,517. SASH GUIDE. WALTER E. KELLER, Elkhart, Ind., assignor to The Adlake Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 31, 1929. Serial No. 336,628. 8 Claims. (Cl. 189—75.)

1. In a sash guide, a fixed member, a removable member, projections carried by one of said members, heads on the projections for interlocking coaction with keyhole slots formed in the other of said members, and releasable means for maintaining said members in interlocking engagement.

1,754,518. VENDING CABINET. W. CARL KINNIE, Rockford, Ill., assignor to F. H. Ward Co., Rockford, Ill., a Firm composed of Hattie B. Kinnie. Filed Oct. 22, 1926. Serial No. 143,368. 2 Claims. (Cl. 312—114.)

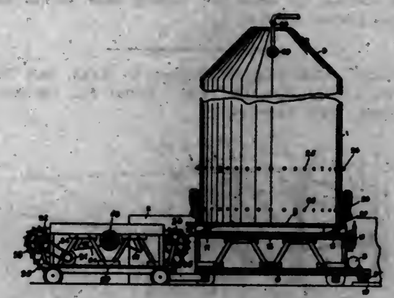


1. A vending cabinet comprising a case having the bottom and back walls thereof of opaque material such as wood, said bottom wall providing a marginal recess along the front and along the two ends of said case, and said back wall providing a rabbet extending the height of the case at the two ends thereof in alignment with the aforesaid recess, glass enclosure walls for the front and two sides of said case, the two side pieces engaging in said recess at the ends of said case and also in said rabbets while the front piece engages the ends of the side pieces and also is seated in the recess along the front of the case in said bottom wall, a single band piece fastened to the back wall and extending along the sides and across the front of the case to hold the glass enclosure pieces in place without necessitating fastening through the glass pieces, and a top for said case.

1,754,519. BEATING APPARATUS. CHARLES H. KIRCOAF, Philadelphia, Pa., assignor, by mesne assignments, to The Lang Company, Gloucester, N. J., a Corporation of New Jersey. Filed May 17, 1924. Serial No. 713,981. 7 Claims. (Cl. 92—24.)

1. A beating engine comprising the combination with a beating roll, of means for withdrawing material from the roll, a channel to which the withdraw material is delivered, and means controlling delivery from said channel into said engine.

1,754,520. METHOD OF AND APPARATUS FOR DIRECTIONAL RECORDING. ORLANDO R. MARSH, Wilmette, Ill., assignor to Marsh Laboratories, Inc., Chicago, Ill., a Corporation of Illinois. Filed Feb. 27, 1929. Serial No. 343,163. 7 Claims. (Cl. 181—26.)



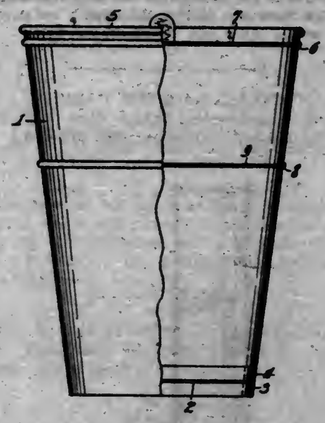
1. The method of recording sound with sound collecting devices from a given setting which consists in collecting said sound with certain of said devices arranged about said setting in such a manner as to have relatively low sensitivity to the source of sound, supplementing the sound collected by said devices with that of another sound collecting device arranged to be highly sensitive to the sounds from said source which are to dominate the resultant reproduction and combining the sounds collected by all of said devices into a reproducible form.

1,754,521. SOLUBLE ALBUMIN AND PROCESS OF PRODUCING IT. ELIZABETH M. MEYER, New York, N. Y. Filed Oct. 20, 1925. Serial No. 63,766. 9 Claims. (Cl. 99—11.)

1. The process of preparing water-soluble albumin which consists in agitating a thoroughly washed milk casein in a large amount of water containing a low percentage of suspended hydrate of lime, and separating the settleable material from the residual substantially clear solution.

1,754,522. STRAW WILTER. CHARLES R. OSGOOD, Monroe, Mich. Filed Jan. 16, 1929. Serial No. 332,828. 8 Claims. (Cl. 92—7.)

1. In a straw wilting tank, a removable plate for closing the bottom of the tank, a raking belt, and a movable frame for supporting the belt and connected to the plate.

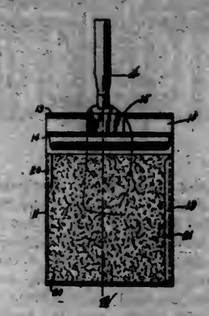


1,754,523. SELF-GRINDING VALVE. CHARLES S. POPE, Chicago, Ill., assignor to Central Valve Mfg. Co., Chicago, Ill., a Corporation of Delaware. Filed July 14, 1928. Serial No. 292,633. 1 Claim. (Cl. 251—38.)

In a self-grinding valve, a body, a bonnet secured to the top of the body, a threaded stem extending down through the bonnet into the body, a block mounted non-rotatably between stops in the bonnet in screw-threaded engagement with the stem, a compressed spring above the block, a packing between the stem and the bonnet, a packing gland on the stem below the block, and a nut screwed onto the bonnet against the gland for compressing the packing.

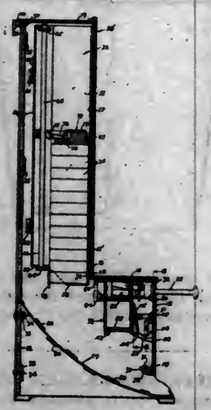
1,754,524. PAPER CONTAINER FOR FROZEN CONFECTIONS. GEORGE L. PORTER, Steubenville, Ohio. Filed Apr. 11, 1928. Serial No. 269,221. 1 Claim. (Cl. 206—47.)

A paper confection container composed of a body having a top and a permanently closed bottom, and having an integral annular channel opening into the body interior and disposed between said top and bottom, a disk adapted to be sprung into the channel to form a pair of compartments one to receive a frozen confection and the other a liquid dressing for the frozen confection, said disk having liquid tight engagement with the body so as to prevent the dressing from contact with the frozen confection and being removable so as to allow both the frozen confection and the dressing to be removed through the top of the body, and a removable closure for the top of the body.



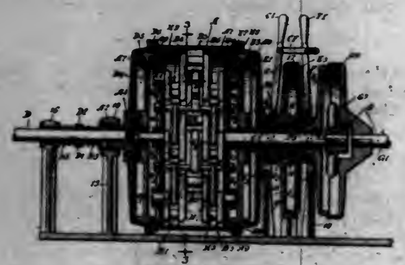
1,754,525. EXPANDING REAMER. EDWARD F. RAYMOND, Los Angeles, Calif., assignor to John Grant, Los Angeles, Calif. Filed Jan. 18, 1928. Serial No. 247,582. 7 Claims. (Cl. 255—76.)

1. In an expanding reamer or the like, a plurality of swinging cutter carriers mounted to swing on longitudinal axes which are spaced around a central axis of the body, each carrier having a cutter carrying end to one side of its swinging axis and having a tail end extending to the other side of its swinging axis, and each carrier having at its cutter-carrying end a surface engageable by the tail end of an adjacent carrier.



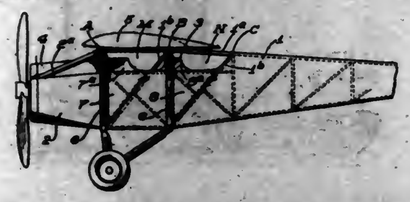
1,754,526. KNIFE SHEATH. ERNEST W. RITTLER, Quincy, Ill. Filed May 21, 1928. Serial No. 279,498. 2 Claims. (Cl. 224—2.)

2. A device of the character described comprising a metallic knife sheath adapted for frictional engagement



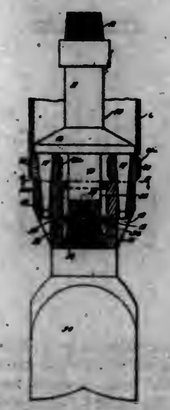
with a knife inserted therein, means to secure the sheath to the wearing apparel of the user, and means extending from one face of the sheath for contact with said apparel to normally force one end of the sheath outward beyond the plane of the other end.

1,754,527. VENDING-MACHINE CABINET. WILLIAM H. ROWE, Los Angeles, Calif. Filed Mar. 21, 1927. Serial No. 176,847. 5 Claims. (Cl. 312—35.)



1. A vending machine cabinet comprising a pair of L-shaped side walls, a back member, a closure door and a front plate, a top member for said cabinet, said back member being secured on said side walls, means to hold said back member rigid when said top member is in a closed position, said top and said closure door being hingedly mounted, means for securing said closure door in a closed position, means on said closure door coacting with said top member for retaining said top member rigid when said closure door is in a closed position, said front plate being secured on said side walls.

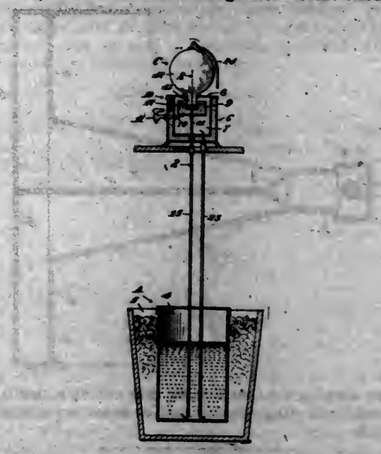
1,754,528. POWER-TRANSMISSION APPARATUS. JOHN J. O. RULIANCICH, New Kensington, Pa. Filed Nov. 7, 1924. Serial No. 748,452. 15 Claims. (Cl. 74—34.)



1. A transmission apparatus, comprising aligned driving and driven shafts, a crank on the driving shaft, an inner gear mounted on said crank, a drum coaxial with said shafts enclosing said inner gear and providing an internal gear surface co-operating therewith, a constraining member rotatably mounted on the driving shaft within said drum, stub shafts on said constraining member, cranks connecting said stub shafts with the inner gear and having the same throw as the first-mentioned crank, a clutch member fixed on the driven shaft located within the drum and adapted to engage the drum and the constraining member alternately, a second clutch member located within the drum and adapted to engage the drum and the constraining member alternately, means located outside the drum for operating said clutch members, and releasable means located outside the drum for locking said second clutch member against rotation.

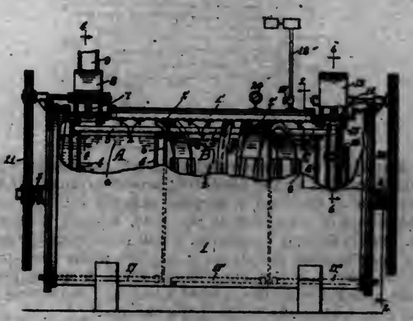
1,754,529. AEROPLANE. TUBAL C. RYAN, San Diego, Calif. Filed Jan. 13, 1927. Serial No. 160,994. 4 Claims. (Cl. 244—14.)

2. In a monoplane, a wing, a fuselage, comprising a main portion including upper longérons extending forwardly to a line near the forward edge of said wing and contiguous with the lower surface thereof, cockpits positioned within said main portion below and rearwardly of said wing, and a nose portion extending forwardly of said wing, the upper surface of said nose portion being offset downwardly with respect to said wing allowing a clear view between said wing and said nose portion from said cockpits.



1,754,530. EXPANDING REAMER. JAMES J. SANTIAGO, Los Angeles, Calif., assignor to John Grant, Los Angeles, Calif. Filed Dec. 24, 1928. Serial No. 328,125. 13 Claims. (Cl. 255—75.)

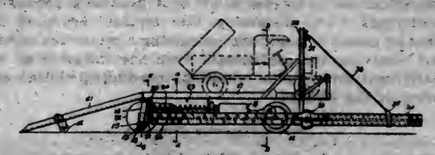
1. In an expanding reamer, a central vertically extending body with an enlarged head above its lower end, a plurality of vertically extending mandrels dependingly supported from the body head and spaced around the body below the head, cutter elements around the mandrels, and a follower surrounding and movable vertically on the body below the cutter elements.



1,754,531. LIQUID DISPLAY AND DISPENSING APPARATUS. FORREST G. STANFORD, Los Angeles, and HERBERT L. GLAZE, South Pasadena, Calif.; said Glaze assignor of his entire right to George H. Hyland, Los Angeles, Calif. Filed Jan. 31, 1928. Serial No. 250,745. 9 Claims. (Cl. 235—21.)

1. In an apparatus of the character described, a main reservoir, an auxiliary reservoir from which liquid may be dispensed, a communicating conduit between said reservoirs, and means maintaining intermittent circulation

of liquid to and from said reservoirs back and forth through said communicating conduit, by intermittent suction induced in said auxiliary reservoir.

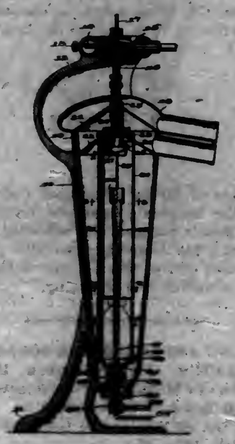


1,754,532. APPARATUS FOR STERILIZING CANNED GOODS. ALBERT R. THOMPSON, San Jose, Calif., assignor to Anderson-Barngrover Mfg. Co., San Jose, Calif., a Corporation of California. Filed Sept. 29, 1920. Serial No. 413,587. 38 Claims. (Cl. 126—272.)

1. An apparatus for sterilising canned goods comprising a fluid tight shell divided interiorly into a plurality of compartments successively communicating; means for supplying the canned goods to the first compartment; means for discharging them from the last compartment; means for advancing them through the compartments successively; a temperature-imparting medium in each compartment, the temperature of the medium in the first compartment being higher than that required for sterilisation, and the temperature of the medium in the succeeding compartment being that required for sterilisation; and means for preventing the interchange of heat through the communications of said compartments.

1,754,533. CONCRETE MIXER AND DISTRIBUTOR. LYNDON J. VAN KIRK, Milwaukee, Wis. Filed Jan. 21, 1929. Serial No. 333,776. 6 Claims. (Cl. 94—39.)

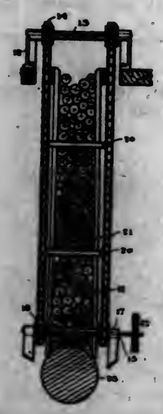
5. In a wheeled structure of the character described, an elevated vehicle body upon which a loaded truck may be positioned, a hopper opening downwardly below the body to receive the load when dumped by the truck, a rotating propeller in the said hopper for forwardly feeding the substances therein, a mixing chamber for receiving



such substances, a mixing propeller in the said chamber for moving the mixed substances rearwardly, means for rotating the said propellers, and a laterally movable distributor swiveled to the chamber for distributing the mixed substances.

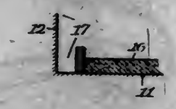
1,754,534. PLANT SUPPORT. GLEN VOUGHT, Unadilla, N. Y. Filed Mar. 16, 1928. Serial No. 262,191. 8 Claims. (Cl. 47—47.)

3. As a new article of manufacture, a cord carrier for plant supports comprising spaced stake receiving loops, a substantially Z-shaped bowed resilient arm connecting the loops, means adjacent one of the loops to secure one end of the cord, and oppositely extending means also adjacent said loop for detachable engagement with the cord, whereby the latter may be conveniently looped about a plant.



1,754,535. PURIFYING AND CONCENTRATING LATEX. WILLIAM B. WESCOTT, Boston, Mass., assignor to Rubber Latex Research Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Dec. 28, 1927. Serial No. 243,166. 14 Claims. (Cl. 18—50.)

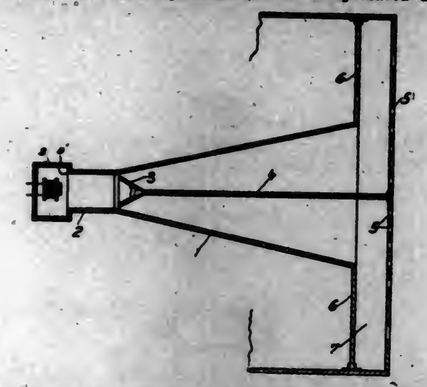
4. A method of preparing concentrated and purified permanent dispersions of isolated rubber latex particles, which



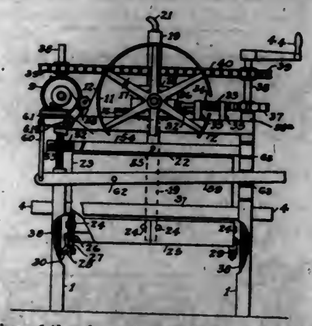
comprises removing from commercial latex all suspended matter greater than 6 mu in diameter, adding to the latex an agent effective to accelerate the separation tendencies of the particles without increasing coagulation tendencies, subjecting the so-treated latex to a gradually increasing centrifugal force, displacing the natural serum of the latex by means of a solution containing a protective colloid, and removing the concentrate from the influence of the centrifugal force under conditions precluding violent agitation of the effluent.

1,754,536. MAGAZINE GRINDER FOR WOOD PULP. AMBROSE H. WEITZ, Bronxville, N. Y. Filed Jan. 12, 1928. Serial No. 246,342. 7 Claims. (Cl. 83—75.)

1. In a pulp wood grinder, a vertically disposed magazine and means for conveying pulp wood in batches through the magazine and feeding same to the grindstone, said means comprising transverse members separating said batches and movable longitudinally of the magazine to apply uniform pressure to the batch located in advance of said members, suitably supported endless chains connected by and carrying said members and means for operating said chains.



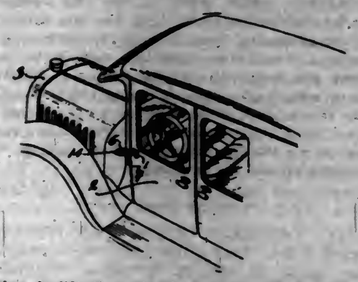
1,754,537. FLOOR AND THE PROCESS OF LAYING THE SAME. LAWRENCE S. WILBUR, Evanston, Ill., assignor to Johns-Manville Corporation, a Corporation of New York. Filed Nov. 3, 1927. Serial No. 230,764. 7 Claims. (Cl. 94—23.)



1. The process of laying bituminous concrete which includes installing temporary margins, laying the flooring up to the temporary margins and allowing it to cool and shrink, removing the temporary margins and laying the marginal portions of the flooring, and subjecting them to pressure during cooling and shrinking.

1,754,538. TONE AMPLIFIER FOR SOUND-REPRODUCING APPARATUS. FRITZ WILHELM, Berlin-Halensee, and KARL JOHANN MÜLLER, Berlin-Grunewald, Germany; said Wilhelm assignor to said Müller. Filed Feb. 18, 1926, Serial No. 89,148, and in Germany Feb. 23, 1925. 4 Claims. (Cl. 181—27.)

1. A sound reproducing apparatus, comprising a sound reproducing member, a sound collecting member located adjacent said sound reproducing member, a rectilinear rod carrying said collecting member, and an apertured diaphragm member connected with said rod at a point away from said collecting member and disposed transversely of said rod.

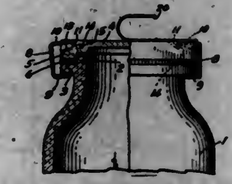


1,754,539. STONECUTTER. ALLEN W. WOLFE, Beechwood, W. Va. Filed Aug. 20, 1927. Serial No. 214,289. 1 Claim. (Cl. 125—20.)

A machine of the character set forth, comprising a head, cutters carried by the head, feed screws arranged at opposite sides of the head, a member engaged with the screws and pivotally connected to the head, a shaft with which the head is slidably associated, means connecting the screws for simultaneous movement, a ratchet wheel fixed to one of the screws, a cam fixed to the shaft, a spring pressed pawl engaged with the ratchet wheel and contacting with the cam, and means for rotating the shaft.

1,754,540. VISION ATTACHMENT. FREDERICK BEHRENDT, Cleveland, Ohio. Filed Feb. 21, 1927. Serial No. 169,959. 1 Claim. (Cl. 45—97.)

A vision facilitating attachment for vehicle comprising a reflector, plates having tabs clamping the reflector, said

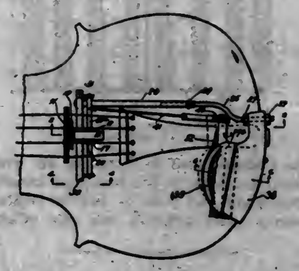


plates having upstanding eyes, a supporting rod extending through said eyes and having a shoulder engaging one of the eyes, means for clamping the plates together and to the rod against said shoulder for retaining the reflector on the rod and one of said plates being provided with a supplemental eye embracing said rod.

1,754,541. EGG-CASE FILLER. MARGARET M. BENOIT, Chicago, Ill. Filed Nov. 8, 1928. Serial No. 317,987. 2 Claims. (Cl. 217—33.)

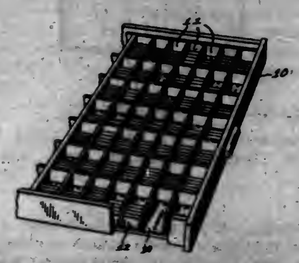
1. A filler having cross walls one of which is edge-notched to interlock with the other wherein is a D-slot through which the first wall is extended, the edges defining the D-slot presenting a bowed portion the ends of which are shouldered and extended past a connecting straight portion to accommodate the notched wall when bowed without catching upon the notches in the edges thereof and to support the notched wall when straightened between the straight and shouldered portions which lie upon opposite sides of said wall.

1,754,542. JAR CLOSURE. WILLIAM E. BROWN, Los Angeles, Calif. Filed Jan. 23, 1928. Serial No. 248,657. 2 Claims. (Cl. 215—90.)



1. A vessel having an undercut shoulder, closure means for the vessel having an upper surface flat throughout its entire area except for circumferentially spaced radially extending depressions therein at its outer periphery, the side walls of said depressions being substantially perpendicular to the flat upper surface of the closure means, the bases of said depressions forming inwardly and upwardly sloping cam surfaces terminating in downwardly extending notches, and retaining clips adapted for engagement beneath said undercut shoulder and having spring arms terminating in depending lips, the said spring arms being adapted for reception in said depressions so that the depending lips ride along the cam surfaces and finally engage in said notches for fixing the clips in tensioned position tightly seating the closure means on the vessel.

1,754,543. KNIFE HANDLE. PRESTON D. CALLUM, Baltimore, Md. Filed Sept. 9, 1925. Serial No. 55,211. 2 Claims. (Cl. 30—9.)

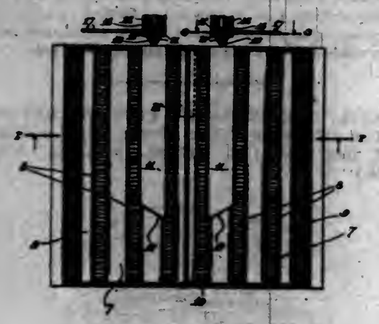


1. A knife comprising a blade portion and a handle portion, said handle being formed of two symmetrical sections, each of said sections being of hollow cast construction and being provided with inwardly extending tubular projections adapted to engage a portion of the knife blade, and means extending through said projections and knife blade to retain the latter in fixed relation to said blade, a guard portion formed on the forward portion of each section, said guards being formed to extend in all directions from the assembled handle a distance sufficient to prevent the user's hand slipping onto the blade.

1,754,544. COMBINED CHIN REST AND MUTING DEVICE. CLAIBORN CLARK, Wilmar, Calif. Filed June 22, 1926. Serial No. 117,695. 3 Claims. (Cl. 84—310.)

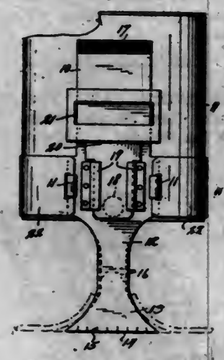
1. In combination with the bridge of a stringed musical instrument, a chin rest mounted upon and insulated from the body of the instrument and movable thereon substantially in a plane parallel to the body of the instrument, a damper connected to the chin rest and adapted by movement of the chin rest to move to and from the bridge substantially in a plane parallel to the body of the instrument.

1,754,545. INDICATOR CARD FOR TYPE FONTS. THOMAS CROSBY, New Britain, Conn. Filed Sept. 10, 1928. Serial No. 305,033. 1 Claim. (Cl. 276—44.)



In a device of the character described, a set of indicating cards corresponding in size and shape to fit in the bottoms of the compartments of a font case, each of said cards having a number at one end to indicate the width of the matrix contained in its compartment, said number being visible from above, and centralized indicia adapted to be straddled by the feet of the matrix describing the character of the matrix.

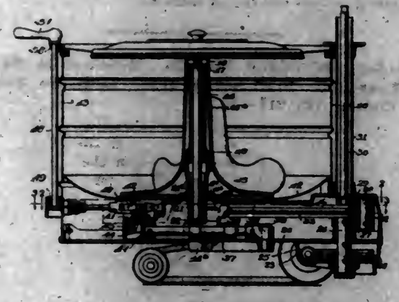
1,754,546. FLUID-FUEL COMBUSTION. PAUL R. DELLING, Haddon Township, Camden County, N. J. Filed May 22, 1926. Serial No. 110,836. 3 Claims. (Cl. 158—30.)



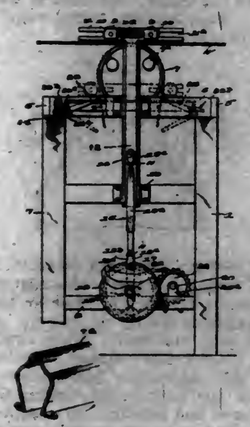
1. In a fluid fuel combustion system, the combination of a burning grate having its vents arranged in a ver-

tical plane, means forming a mixing and distributing chamber associated therewith, a mixing tube delivering downwardly to said chamber, a source of fuel supply under pressure, a fuel nozzle connected thereto and delivering

to said tube and arranged to introduce air with the fuel by the inductive action of the fuel, and means for causing an independent and positive flow of medium from a different source under pressure into said mixing tube.



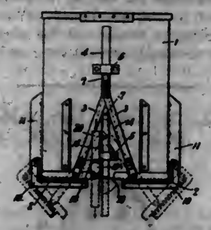
1,754,547. CEMENT SPREADER FOR LAYING LINOLEUM. LEWIS W. DUERNER, Fargo, N. Dak., assignor, by mesne assignments, of one-fifth to The Service Company, Fargo, N. Dak., a Corporation. Filed June 12, 1928. Serial No. 284,759. 7 Claims. (Cl. 91—67.4.)



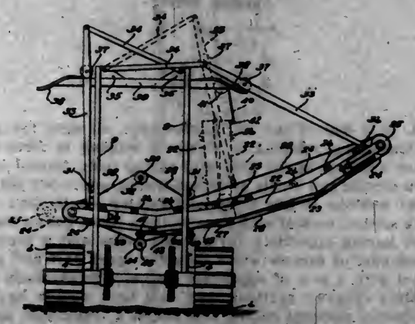
1. A linoleum cement spreader comprising a body portion formed to clamp around a cement container and having an opening adapted to communicate with the interior of the container and having a gate controlling the flow through said opening, the body being provided with a downwardly extended cement conducting portion onto the outer face of which the opening discharges and having a spreading edge at its lower end.

1,754,548. OPERATING GEARING FOR WASHING MACHINES AND THE LIKE. IRVING H. DUNN, Fairfield, Iowa, assignor to The Dexter Company, Fairfield, Iowa, a Corporation of Iowa. Filed June 18, 1928. Serial No. 286,273. 2 Claims. (Cl. 74—14.)

1. In a gearing for washing machines and the like, a drive shaft, an operating shaft, a pinion fixed to said operating shaft, a rack bar for engagement therewith, a pivoted rod on which said rack bar is slidably mounted, means connecting said rack bar and drive shaft for reciprocating said rack bar on said rod, a rock shaft at the free end of said rod, an arm on said rock shaft operatively engaged with said rod, and a plug capable of rotative movement in which said rock shaft has eccentric bearing.

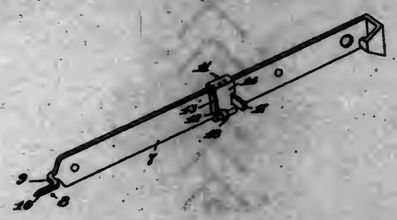


1,754,549. WOOD-BENDING MACHINE. CHARLES W. ELLIOTT, Seymour, Ind. Filed July 8, 1927. Serial No. 204,284. 10 Claims. (Cl. 144—262.)



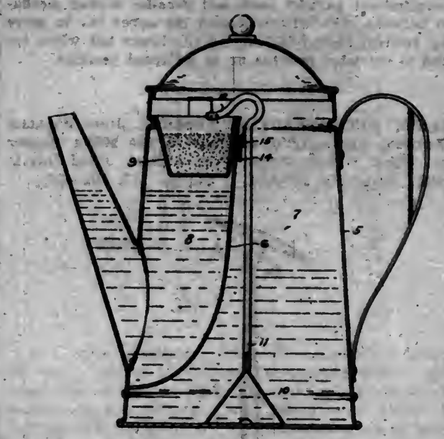
1. A machine of the class described comprising a frame, work bending means comprising a former carried by said frame, a movable element, one of said elements being of the shape to which it is desired to make the work conform, means for actuating said movable element against the work and said other element whereby the work will be caused to conform to the form of said shaped element, and swingably supported work holding members having work engaging portions extended toward said former and lying in the path of movement of the sides of the work, means for yieldably supporting said work holding members with their ends disposed toward said former, and the sides of the work moving under the influence of said movable element pushing the ends of said work holding members aside whereby said yielding means may actuate the same to engage the outer surfaces of the work to hold it in close contact with the former at the completion of the bending operation.

1,754,550. BATCH BOX. EUGENE P. FORRESTEL, Buffalo, N. Y. Filed Apr. 4, 1929. Serial No. 352,528. 8 Claims. (Cl. 294—71.)



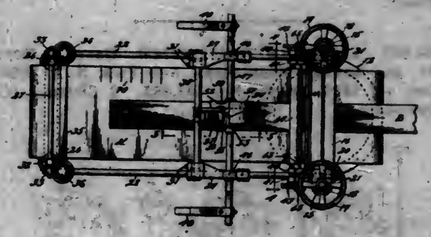
1. A batchbox having drop bottom doors, a water compartment in said batchbox, means connected to the doors for opening and closing the same, and means connected with said first-mentioned means for allowing the escape of water from said compartment when the first said mentioned means are operated.

1,754,551. EXCAVATOR. GEORGE H. GREIMAN, Garner, Iowa. Filed Feb. 11, 1928. Serial No. 253,691. 9 Claims. (Cl. 198—113.)



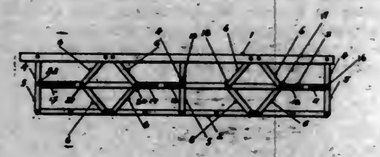
1. In an excavator, the combination with a frame, of a transverse conveyor, and compensating connections suspending the conveyor at each end from the frame for swinging movement on the line of a curve transversely of the frame and permitting the conveyor to be projected on either side of the frame and to cause the same to raise on the side of the frame on which it is being projected and in which the connection on the raising end of the conveyor automatically and progressively lengthens during the outward movement of the conveyor to progressively flatten the curve on which the conveyor is being moved.

1,754,552. CAN OPENER. JOHN H. GRUEN, Pasadena, Calif., assignor to Lewis B. Eyer, Los Angeles, Calif. Filed Aug. 31, 1927. Serial No. 216,561. 1 Claim. (Cl. 30—8.)



In a can opener, a handle, means on one end of said handle for effecting pivotal connection with the can top, a sleeve slidable longitudinally of said handle, and a blade projecting from said sleeve, said blade extending diagonally with relation to said handle with its cutting edge extending away from the end of the handle carrying the can top engaging means, said cutting edge tending to cause the cutter to move tangentially, and a guide projecting in advance of the cutting edge of said blade and adapted to engage the inner side of the peripheral flange of the can top thereby opposing the tendency of said cutter to move tangentially.

1,754,553. COFFEE PERCOLATOR. ROBERT WILLIAM HAGEL, New Orleans, La. Filed Mar. 8, 1929. Serial No. 345,469. 2 Claims. (Cl. 53—8.)

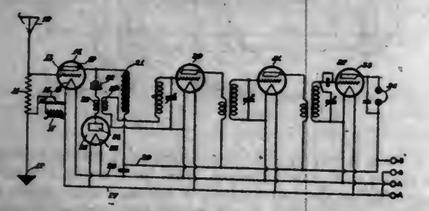


1. A device of the character described, comprising a clear water compartment and a made coffee compartment, a cup for the reception of ground coffee, above the made coffee compartment, and a water circulating element comprising a hood, and a tube leading therefrom provided with a perforated return bend disposed above said cup, the terminal end of said tube lying within the clear water compartment.

1,754,554. BELT PLANE. WILLIAM HAGSTROM, Lindsborg, Kans. Filed Oct. 25, 1926. Serial No. 143,885. 14 Claims. (Cl. 69—15.)

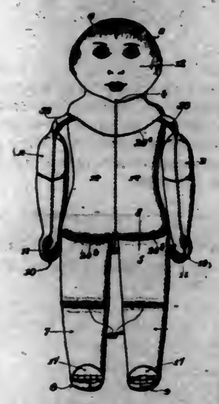
1. In a device of the class described, a clamp arranged to hold a belt at a desired position on a board, a tool for operating on the belt so held, a carriage upon which the tool is supported, handles by which the carriage is manually reciprocated, and means cooperating with the handles by which the operator may use said handles to control the cutting action of the tool as the carriage is reciprocated.

1,754,555. LUGGAGE OR STEP CARRIER TO BE ATTACHED TO AUTOMOBILES OR OTHER VEHICLES. JAY B. HALL, Portland, Oreg., assignor to Wilbur E. Hall, Saskatoon, Saskatchewan, Canada. Filed July 17, 1922. Serial No. 575,632. 17 Claims. (Cl. 224—29.)



12. A collapsible luggage carrier adapted for attachment to the running board of a vehicle comprising a plurality of longitudinal parallel bars, and parallel motion mechanism between said bars to compel the upper bar to move along vertical lines relatively to the lower bar when operated to extended position or to collapsed position.

1,754,556. PLUG-INSERTING NEEDLE. JOHN WILLIAM HODGSON, Akron, Ohio, assignor to The Miller Rubber Co., Akron, Ohio, a Corporation of Ohio. Filed July 2, 1928. Serial No. 289,986. 1 Claim. (Cl. 152—27.)



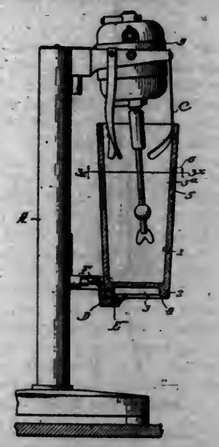
Means for repairing a tire puncture comprising a needle having at one end an open helix, a tubular sheath removably inclosing said helix, and means for limiting the movement of the sheath on the needle in the direction of the helix.

1,754,557. STRAY-LIMITING DEVICE. HAZEN L. HOYT, Jr., and BOWDEN WASHINGTON, New York, N. Y. Filed Oct. 16, 1926. Serial No. 141,982. 2 Claims. (Cl. 250—20.)

1. In a stray limiting circuit for radio reception, a three electrode vacuum tube, means for operating the tube near the upper bend of the grid-voltage, plate-current characteristic curve, an aperiodic input circuit for said tube, an output circuit for said tube containing a condenser, a rectifier and the primary of a radio frequency transformer connected in series, a periodic amplifying system connected to the secondary of said transformer, and means including a choke coil for supplying unidirectional voltage to the anode of said vacuum tube.

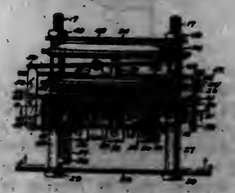
1,754,558. DOLL. MINNIE M. IVEY, Valdosta, Ga. Filed Nov. 4, 1927. Serial No. 231,108. 4 Claims. (Cl. 46—40.)

4. In a doll of the soft stuffed type, an open top and bottom casing adapted to receive a stuffing to form the trunk and legs of the doll, said casing being formed of a back section and a pair of corresponding, oppositely slitted front sections of less width and greater length than the back section, each of said front sections formed of an upper part having oppositely curved side edges and a tapered lower part of greater width than the upper part and provided with a pair of oppositely disposed, transversely extending cutaway portions, and said back section having oppositely disposed curved side edges, a lengthwise opening intermediate its ends having its edges connected together, a dart at its upper end having its edges connected together and a cutout portion at its bottom formed with convex edges connected together, the side edges of said back section being connected to the outer side edges of said upper parts, the inner side edges of said upper parts being connected together, and the side edges of each lower part being connected together.



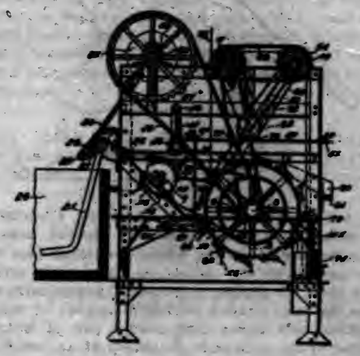
1,754,559. WINDOW VENTILATOR. CLAUDE R. JOHNSON, Guymon, Okla., assignor to The Claudeson Laboratory Inc., Wilmington, Del. Filed Sept. 30, 1927. Serial No. 228,075. 1 Claim. (Cl. 98—99.)

In a window ventilator of the character described, a pair of U-shaped leg members, the leg portions of one



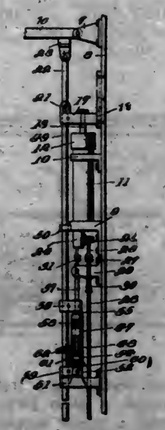
member being hollow and adapted to receive the leg portions of the complementary member in telescopic relation, a plurality of detachable pivotal shutter units arranged horizontally within said frame, said shutter units each consisting of a pair of slidable sections, said sections being substantially V-shaped in cross section and each having one of its ends pivotally connected to one end of the frame, said sections being provided with its edge portion bent inwardly in spaced relation to itself, and the other section being slidably engaged at its free end portion within the inwardly bent edge portion of the complementary section, whereby the frame shutter unit may be extended.

1,754,560. COMBINED MIXING AND SERVING GLASS FOR DRINK MIXERS. JULIUS H. KARLSON, Chicago, Ill. Filed Feb. 25, 1927. Serial No. 170,762. 2 Claims. (Cl. 259—108.)



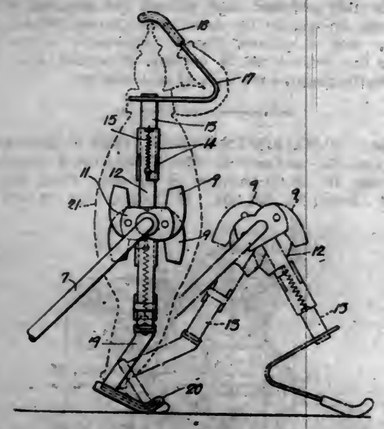
1. In combination, a drink mixer, and a container; said drink mixer comprising an electrically actuated agitator, means for receiving and holding the upper portion of the container when assembled with the agitator, a step receiving the lower end of and supporting the container in such assembly with the agitator, a stud interlocking the container with the step, and a switch controlling the supply of current to the agitator, in position to be engaged by the container when so interlocked; and said container being constructed with a hollow bottom with an internally beveled defining wall through which it engages with said stud; said container and all of its structural features being made of glass.

1,754,561. CIRCUIT CONTROLLER. ARTHUR J. KERCHER, Berkeley, Calif., assignor to Wesix National Company, San Francisco, Calif., a Corporation of Delaware. Filed Sept. 29, 1923. Serial No. 665,704. 6 Claims. (Cl. 200—122.)



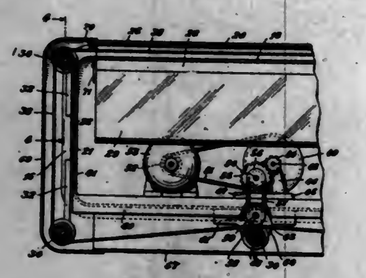
3. In a circuit controller, a stationary contact, a pivoted lever, a cooperating movable contact supported on said lever, a link pivoted to one end of the lever, a pivoted rod adapted at one of its ends to move the link and thereby rotate the lever to closed position, a latch to maintain the lever in this position, said pivoted rod adapted at its other end to engage the latch and thereby release the lever, a pair of opposed thermal responsive devices for moving the pivoted rod in opposite directions, and electrical heating means for each of said devices.

1,754,562. DEHAIRING MACHINE. JOHN W. KOHLHEPP, Chicago, Ill., assignor to The Allbright-Nell Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 8, 1927. Serial No. 231,864. 17 Claims. (Cl. 17—18.)



1. A carcass dehairing machine comprising a plurality of rotary beater mechanisms embodying flexible beater arms and of varying diameters arranged to rotate about centers so disposed that said beater arms follow non-intersecting paths and so that horizontal lines tangent to said paths at their highest points are approximately coincident.

1,754,563. DOOR-OPERATING MECHANISM. PHILIP LANG, Cedar Falls, Iowa, assignor to Wagner Manufacturing Company, Cedar Falls, Iowa. Filed Feb. 10, 1925. Serial No. 8,287. 12 Claims. (Cl. 303—6.1.)



1. The combination with a movable member, of a reciprocating dash pot for retarding the movement of the said member in one direction, and a stationary dash pot for retarding the movement of the said member in the opposite direction.

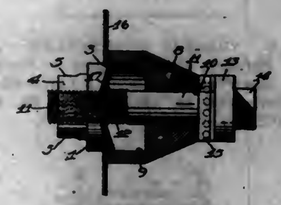
1,754,564. TOY. WILLIAM M. LISTER, Kenilworth, N. J. Filed Jan. 29, 1929. Serial No. 335,887. 6 Claims. (Cl. 46—40.)

2. In a toy of the character described, a surface engaging member, a figure supporting element associated with the member above the surface engaging face of the member and forwardly thereof, a figure unit rotatably mounted upon the member and including automatic means to cause its own rotation during movement of said motive member, said means comprising a pair of units composing the figure, each unit consisting of an inner member rotatable upon the supporting element, and an outer member slidably associated with the inner member, one of said outer members simulating the upper portion of the figure body and the other the lower portion of the figure body, means normally urging these members in an outward direction so that the ends thereof will be normally below the surface of the motive member when in a downturned position, and means between the inner end of each slidable member and the pivoted end of the opposite unit inner member to cause the upward swinging of that unit when the sliding member of the opposite unit is forced upwardly by pressure against the supporting surface.

1,754,565. DAYLIGHT SIGN. EDWARD MCCOLLUM, New York, N. Y. Filed Sept. 13, 1928. Serial No. 305,619. 12 Claims. (Cl. 40—82.)

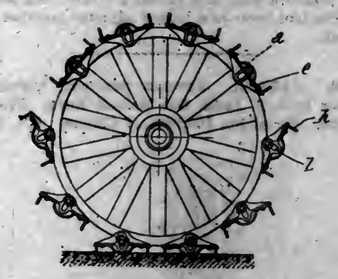
1. A daylight sign, comprising a front and rear frame held in spaced relation, a glass plate supported across the top of the frames, a mirror supported at an inclination across the lower portion of the front frame and the upper portion of the rear frame, rollers supported across the corners of the front and rear frames, a flexible translucent continuous sign engaged over the rollers, and end casings extending over the ends of the frames for closing the ends of the device.

1,754,566. WELDING. WILBER B. MILLER, Flushing, N. Y., assignor to Oxweld Acetylene Company, a Corporation of West Virginia. Filed Jan. 27, 1926. Serial No. 84,241. 1 Claim. (Cl. 219—10.)



The process of welding ferrous metals which comprises fusing the metal and depositing the same under a molten slag containing manganese silicate, and introducing into said fused slag an unoxidized element of said silicate at such a rate that the deposited metal is effectually degasified and the fluidity of the slag is not destroyed.

1,754,567. FISHING GEAR. GWENDOLAN NEWELL, San Francisco, Calif. Filed Sept. 26, 1927. Serial No. 222,067. 2 Claims. (Cl. 43—42.)

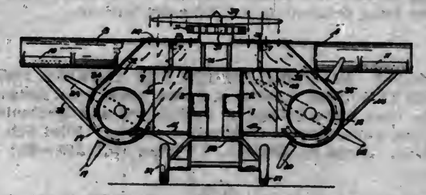


1. In a fishing gear of the character described a leader for a fish hook having a sinker slidable thereon, a spacing tube extending from the sinker toward the hook in encircling relation to the leader, a stop limiting the sliding movement of the tube relative to the hook and a tail of attractive material extending from the sinker in encircling relation to the tube but clearing the hook.

1,754,568. DRAW PUNCH. JOHN CHRIS NISCHAN, Evanston, Ill. Filed Sept. 12, 1927. Serial No. 219,064. 5 Claims. (Cl. 164—101.)

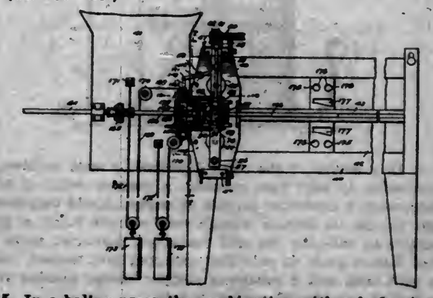
1. A device of the type described comprising a punch, a die arranged to receive said punch, a drawbar rotatably carried by said die and having a threaded end, said punch having a threaded opening arranged to receive the threaded end of said drawbar, means carried by said drawbar whereby said drawbar may be rotated for moving said punch within said die, and means disposed between said drawbar and said die for aiding in the rotation of said drawbar.

1,754,569. TRACTION DEVICE FOR WHEELS. CARLO PASSEGA, Paris, France. Filed Aug. 21, 1925, Serial No. 51,659, and in Belgium Dec. 2, 1924. 5 Claims. (Cl. 305—13.)



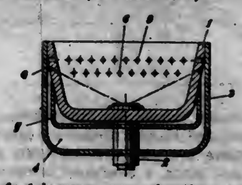
2. A traction device for application to the tread surface of the metallic rim of a vehicle wheel, comprising a pair of flanges, members longer than the width of the wheel rim connecting said flanges adjacent their ends, each of said flanges having between its ends a part extending substantially at a right angle to said flange and directed toward the corresponding part of the opposite flange, each of the latter parts of said flanges having a tooth shaped cavity in its inner face, and each of said flanges having an elongated slot substantially in alignment with the tooth shaped cavity in its angular part and of which the longer dimensions are in the form of cycloidal curves, and a suspension block having on its rear face means for rigidly securing it to the tread surface of a wheel rim, and having its front face adjacent its ends shaped substantially correspondingly to the tooth shaped cavities in the angular parts of said flanges and adapted to mesh with said tooth shaped cavities, said block further having a pin extending from each of its ends into the slot of one of said flanges.

1,754,570. FLASH LIGHT. JOHN P. PICKETT, Camden, S. C. Filed Feb. 19, 1929. Serial No. 341,253. 2 Claims. (Cl. 240—59.)



1. A portable flashlight of the character described comprising a finger ring having an integral socket member formed on one side thereof and projecting forwardly therefrom and having an internally threaded end portion, a light bulb detachably mounted in the threaded end portion of the socket member and a manually operable spring controlled electric contact member disposed for sliding movement through the opposite end of the socket member for engagement with the contact of the light bulb for illuminating the same.

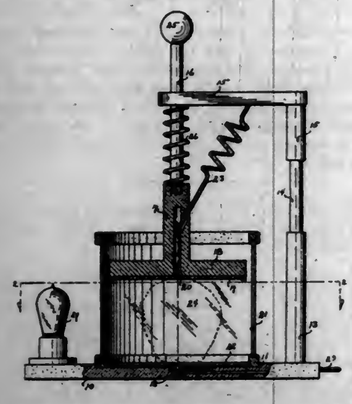
1,754,571. AEROPLANE. HENRY PODOLSKY, San Francisco, Calif. Filed July 29, 1929. Serial No. 381,868. 5 Claims. (Cl. 244—15.)



4. An aeroplane comprising a hollow wing structure, a central opening in the top wall of said wing, a propeller mounted on said wing above said opening, openings in the bottom wall of said wing each side of, and spaced from said central opening, deflectors adapted to deflect air from said propeller down through said wing, and up under the bottom surface of the wing, and means to drive said propeller.

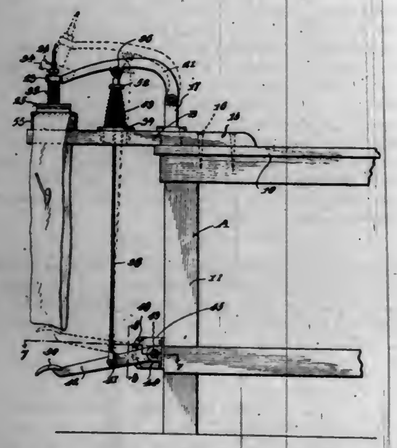
1,754,572. BALE TIER. HUGH RICHARDSON, Nelson, Mo. Filed Jan. 18, 1928. Serial No. 247,652. 20 Claims. (Cl. 100—20.)

5. In a baling press the combination with a body structure and a dividing block movable therein by material being compressed, of a frame structure, means for automatically coupling said structure to the block for movement therewith, needle mechanism carried by one side portion of the frame structure, twisting mechanism carried by the opposite side portion of the frame structure, a continuously operating driving element, means released by the dividing block while coupled to the frame structure for automatically connecting the needle mechanism to the driving element thereby to rotate the needle mechanism to bring it into operative connection with the piston mechanism and to withdraw it therefrom while the frame structure is coupled to the dividing block, means controlled by the needle mechanism for uncoupling the frame structure from the dividing block after the completion of the tying operation, and means for automatically returning the frame structure to its initial position when uncoupled from the block.



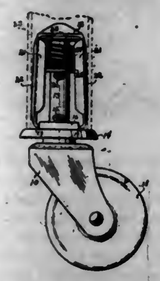
1,754,573. LIQUID-FUEL BURNER. WALTER RUEGSEGGER, Lugano, Switzerland, assignor to A. G. Prior Patentverwertungs-Gesellschaft, Glaris, Switzerland. Filed July 3, 1928, Serial No. 290,156, and in Germany July 4, 1927. 1 Claim. (Cl. 158—91.)

In a liquid fuel burner, a combustion cup in communication with a fuel supply, and two ranges of air inlet



apertures in the side walls of the combustion cup near the open upper end thereof, the upper range of apertures being horizontally disposed and the lower range of apertures being downwardly and inwardly inclined.

1,754,574. ELECTRIC DEVICE FOR COOKING FOOD OR THE LIKE. LENORE E. SATER, Ames, Iowa, assignor to Iowa State College of Agricultural and Mechanical Arts, Ames, Iowa, a Corporation of Iowa. Filed Feb. 1, 1929. Serial No. 336,903. 8 Claims. (Cl. 219—40.)

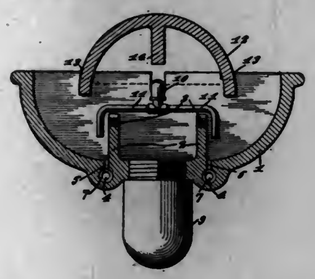


1. In a device of the class described, a base member, a depression in said base member, a contact point in said depression, a container capable of engaging said depression and having its bottom engage said contact point, a disk capable of entering the said container, a contact point in said disk, a plate on said disk engaging said contact point in said disk, and a source of electric energy making contact with one of said contact points.

1,754,575. VULCANIZER. ARTHUR W. SCHARFF, La Crosse, Wis. Filed Sept. 10, 1928. Serial No. 305,049. 2 Claims. (Cl. 18—18.)

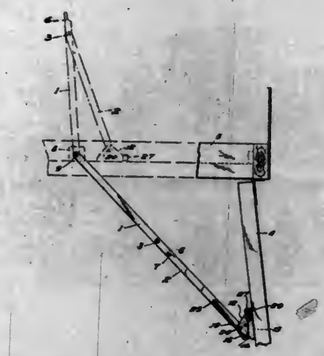
1. In a device for vulcanizing inner tubes, a work bench, a base block secured to and projecting laterally from the bench, an arcuate pressure arm rockably secured at its inner end to said block, a combined pressure and heating head resiliently carried by the outer end of said pressure arm, means for swinging the arm on the block and the head toward and away from the tube to be vulcanized including a pivoted foot lever secured to said bench, a connecting rod operatively connecting said pressure arm to the pedal, resilient means for normally holding the pedal and the pressure arm in a raised position, and means for holding the foot lever in a locked adjusted position against movement.

1,754,576. CASTER. EDWARD SCHULTZ, Chicago, Ill., assignor to J. B. Ladd, Des Moines, Iowa. Filed Sept. 14, 1928. Serial No. 305,980. 7 Claims. (Cl. 16—44.)



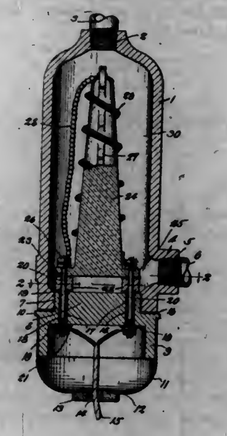
1. In a device of the class described, a surface engaging member having a pintle, a member rotatably and slidably mounted on said pintle, an engaging member secured to said loosely mounted member designed to frictionally engage the hollow portion of a load object, a stop on said pintle for limiting the movement of said rotatably and slidably mounted member on said pintle to one direction, and a coil spring functionally engaging said engaging member and said pintle for yieldingly holding said pintle in such a position that said stop will be in contact with said rotatably and slidably mounted member.

1,754,577. ROOT-CANAL FILLER. JULIUS WALDO SMITH, Madison, Minn. Filed Aug. 17, 1928. Serial No. 300,389. 2 Claims. (Cl. 106—6.)



1. A dental cement comprising oil of cloves and the sodium salt of tetra-iodo-phenolphthalein.

1,754,578. OIL BURNER. EARL D. SOANBERGER, Harrisburg, Pa. Filed Apr. 17, 1929. Serial No. 355,892. 3 Claims. (Cl. 158—92.)



1. An oil burner of the class described comprising a bowl, a pair of upright partitions therein spaced from the center thereof, said bowl having passages in its bottom and a slot connecting each passage with the interior of the bowl, each slot being adjacent the outer side of a partition, a pilot burner for igniting the oil flowing from each slot, means for introducing air into the space between the two partitions and a cover member seated on the bowl above the parts thereof carrying the partitions and leaving spaces at the sides of the bowl.

1,754,579. DOOR STAY. CHARLES F. SPONSLER, Philadelphia, Pa. Filed July 11, 1929. Serial No. 377,574. 8 Claims. (Cl. 292—263.)

1. A door stay device comprising a plurality of pivotally connected arms, means forming a fixed pivot for one end of one of said arms, a bracket to which the other of said arms is pivotally connected, a lever rotatably mounted on said bracket, means for actuating said lever, means for limiting the extent of rotation of said lever, and a spring interposed between said lever and the arm pivotally connected to said bracket.

1,754,580. ELECTRIC WATER HEATER. MILES E. STALEY, Tacoma, Wash., assignor to Red Spot Electric Company, Tacoma, Wash., a Corporation of Washington. Filed Mar. 11, 1927. Serial No. 174,542. 8 Claims. (Cl. 219—39.)

1. An electric water heater including a housing providing a water compartment having an inlet and an outlet, a tapered insulating core supported within and spaced from the housing, a coiled wire heating element extending spirally around the core, terminals at the base of the core, one end of the heating element being connected to one of the terminals, an uncoiled wire extending from the other end of the heating element to the other terminal, and flexible insulating means on the uncoiled wire.

1,754,581. APRON. PETER SIEBEL, New York, N. Y. Filed May 1, 1929. Serial No. 359,682. 2 Claims. (Cl. 2—48.)

1. An apron comprising a body portion, corners folded to bring the upper edges of the folded portions of the body into juxtaposition, a fold laterally of the body adjacent the lower edges of said folded portion, and means on said lateral fold for retaining the folded corners in position.

1,754,582. PEN AND PENCIL CLIP. RICHARD V. SPENCER, Los Angeles, Calif. Filed Aug. 23, 1929. Serial No. 387,944. 1 Claim. (Cl. 24—11.)
